Once the process of digestion and separation of the subtle aspect of the food (i.e. its life-sustaining nutrients) from the grosser aspects (e.g. the sweat, urine, blood etc.) is complete, the Samaana wind takes over. In association with the Pran wind (i.e. the breath), it takes the vital nutrients thus segregated to all the corners of the body via the medium of the Naadis. The Pran wind meanwhile moves in and out of the body in the form of the breath. [It will be noticed here that the Pran wind, or the breath, acts like a pump that works from the surface and provides the other winds the necessary suction power to move against the forces of gravity and lift the nutrients as well as certain of the grosser parts of the food that are important for the body, such as the blood, the mucous, the bile and other juices, the hormones etc. to the upper parts of the body against the usual downward pull of gravity. This upward pull exerted by the Pran wind also helps the Apaana wind, whose natural inclination is to move downwards and out of the body, to remain inside the body and even move upwards to keep the fire element lighted, besides being able to activate the Kundalini during the process of Yoga.]

The vital winds eliminate the wastes present inside the body, such as the stool, urine, sweat etc., through the nine openings of the body into the space outside it. [The nine openings of the body are called its Doors, and they are the following—two nostrils, two ears, the hair follicles, the pores of the body, one mouth, one anus and one urinary organ which doubles up as the reproductive organ as well.]

[Now, the functions of the vital winds are being enumerated—] The Pran wind is responsible for breath and expelling mucous in the form of cough.

The Apaana wind is responsible for expelling stool and urine from the body.

The Vyaana wind is responsible for accepting or giving away anything.

The Udaana wind is responsible for lifting the body.

The Samaana wind is responsible for nourishing the body (as it takes the nutrients to all the parts of the body).

The Naag wind is responsible for belching and excreting of contaminated or polluted wind through the throat and mouth.

The Kurma wind is responsible for closing and opening of the eyelids.

The Krikar wind is responsible for hunger and appetite.

The Devdutta wind is responsible for creating laziness, lethargy and inertia.

The Dhananjay wind is responsible for creating cough and other types of mucous that help to expel infection from the body (in association with the Apaana, the Naag and the Pran winds (13).

14. In this way, a wise and erudite practitioner should first become well acquainted with the Naadi complex and the Pran complex before attempting to cleanse, purify or de-clog the Naadis (14).

-----*****-----

Canto 1/Section 5

[This section outlines the rules to be followed by a spiritual aspirant who wishes to clean the Naadis and undertake to do Yoga. The process of Pranayam is outlined as well.]

1. A person who wishes to practice the teachings of this Upanishad (that pertain to the cleansing and detoxification of the Naadis and the activation of the Kundalini so as to help him realise Brahm) should first make himself eligible for it by observing the tenets of Yam and Niyam (as outlined in sections 1 and 2 respectively of this Canto 1). He should discard all company and step on the path of truthfulness (i.e. take the exclusive recourse of truth in the pursuit of one's objective in life, even if it entails the greatest of hardships and problems).

The spiritual aspirant should learn to exercise control over anger, remain ever diligent in serving the Guru (moral preceptor, spiritual guide and teacher), remain obedient to and under the guidance of one's parents, and learn the practical aspects of spiritual life, how to observe the various religious sacraments, keep the different vows, do the various fire sacrifices etc. by staying near someone who is very careful himself in observing the laws of conduct sanctioned by the scriptures for the Ashram (phase of life) to which he belongs (i.e. a person who is conscientious and upright in his behaviour and thoughts, and who diligently follows the laws of Dharma and strictly adhered to religious conduct).

Then he should go to a 'Tapovan'—i.e. a forested or any green area that is serene and pleasant as well as conducive to doing Tapa (austerity, penance and other spiritual practices). This area should be rich in fruits, edible roots and water—as these are needed to sustain one's self in the absence of facilities that were available in the household, as also to prevent the hassle of worrying for basic needs of food and water.

The aspirant should select an auspicious place here in the Tapovan which is open and wide enough so that it can resonate with the loud chanting of hymns dedicated to Brahm, the Supreme Being, and where other people of the same temperament and spiritual bent of mind live. The place should be well-endowed with fruits, edible roots and stems, flowers and water etc. It should be near a shrine or a river bank.

Should he be inclined to establish a permanent place for himself and also to help other like-minded people who cannot endure the hardships of a forest life but

wish to lead a life of frugality and austerity nevertheless, he must select a place that can foster a spiritual environment and erect a monastery there. It could be in a quiet area of a village or a town.

The place selected should be of even dimensions—i.e. it should neither be very high nor too low (i.e. it should be on even ground), and also neither should it be too long nor too wide (i.e. it should be, as far as possible, a square piece of land).

The place of his residence should have a small door. It should be plastered with cow's dung mixed with the cow's urine, and should be completely safe.

The aspirant should live in such a pleasant and comfortable place and start studying the Vedas and other scriptures along with practicing Yoga on a regular and sustained basis (1).

2. He should first worship and pay his obeisance to Lord Ganesh, and then to his chosen deity (Godhead) by bowing before him and offering his oblations to him.

Then he must sit in one of the Aasans described earlier (in Canto 1, section 3). He should sit on a soft seat, face towards the east or the north, and strive to master the art of doing the various Aasans successfully.

Then he should sit erect with the neck and the head in a straight line, and focus his sight on the tip of his nostrils. He must strive to visualize the presence of the Chandra Mandal in the region of the forehead that lies between the two eyebrows (i.e. he should mentally perceive the subtle presence of the Moon with its glorious moonlight in this area of the head, which is called the Agya Chakra).

Simultaneously, he should enjoy the vision of the essence of Amrit (ambrosia) through his eyes. [When he is engrossed in concentration as described in the aforesaid stanzas, tear-drops emerge in his eyes, and these are likened to the drops of nectar that gives bliss and happiness.]

[Now the three phases of Pranayam, or breath control exercise, are being described—] The practitioner should then inhale air through the Ida Naadi (left nostril) gradually over the duration of twelve Matras.

[The word 'Matra' means a measurement of time, a fraction or part or quantity of the whole. That is, the time taken for inhalation is the approximate time that one would take to repeat the Beej Mantra of the chosen deity twelve times. For instance, if one is worshipping Lord Ram, then the time taken to inhale air should be the time taken to silently repeat the Beej Mantra 'Raam/Raan(g)' for Lord Ram. Ordinarily, one Matra is equivalent to one second. Hence, the total time taken for inhalation is twelve seconds. The process of inhalation is known as 'Purak'—meaning to supply and overcome deficit. Here the body is being supplied with a fresh stream of oxygen-rich air.]

The inhaled wind is retained in the stomach (i.e. inside the body) and the practitioner should visualize its mixing with the fire element present inside the body. This fire element has flames leaping from it, and is complete with the Reff and the Bindu.

[This esoteric reference to the 'Reff' and the 'Bindu' pertains to the sound of OM which is the cosmic vibration that resonates in the body when it is full of air. The OM is the cosmic vibration that exists in the ether in the outer space of the sky, but when the body is filled with wind it resembles this sky filled with ether, and therefore the reverberations of the cosmic sound are replicated inside the body as well. The best evidence of the presence of this cosmic sound in the body is when one closes one's ears with the fingers. A sort of distant roar is heard which resembles the roar heard near a raging fire. This roar is created by the clash of the fire element and the wind element. It is akin to the cosmic vibrations in ether and hence compared to

OM. It is this sound which is heard during the second phase of Pranayam when the inhaled wind that is now trapped inside the body clashes with the internal fire element. The 'reff' or 'reph' referred to here is a burring, a whirring and a guttural sound represented by the sound of the letter 'R' which is the Beej Mantra or the basic Mantra of the fire element in its primary form. The word 'Bindu' is indicative of the point source, the 'dot' from which the spark of life emerged in creation. Hence it refers to the pure cosmic Consciousness that lives subtly in the body of the creature as his Atma. This second phase of Pranayam is known as Kumbhak—or filling the pot. The 'pot' here is the abdomen, and the 'filling' is done with the wind.]

Finally, the withheld wind is exhaled through the Pingla Naadi or the right nostrils.

[This is the third phase of Pranayam, and is known as Rechak or purging wherein the polluted air from within the body is purged by exhalation. It is 'purging' because this wind takes all the pollutions that it can gather from the inside of the body as it moves out just like the chimney of a factory removes toxic fumes from the premises.]

The process is reversed now—with the Purak (inhalation) being done through the Pingla, followed by the Kumbhak (holding the wind inside the body), and the Rechak (exhalation) being done through the Ida. [Refer also to verse no. 1, section 7 of this Canto 1.] (2).

3-4. This exercise of Pranayam should be continuously practiced for a period of forty-three days, or for three, four or seven months, or for one full year.

It should be done thrice daily during observation of the sacrament of 'Sandhya'—i.e. at dawn, at noon, and at dusk. During each cycle, Pranayam should be done three, four or six times. [In other words, Pranayam is done thrice daily, and each time it is done three times, or four times, or six times.]

This practice helps to clean and purify the Naadis. [That is, Pranayam helps to de-clog the congested Naadis in the body and helps in easy flow of Pran forces in them. This results in re-energizing the worn-out tissues of the body, and re-activates its dormant vigour and vitality. In other words, the body is rejuvenated.]

The benefits are immense—the body feels light, the face becomes radiant and glows, and the internal fire element is revived (and this shows in the form of renewed vigour, vitality, strength and energy as well as restored appetite). From the spiritual perspective, the practitioner is able to hear the Naad (as described in verse no. 2 above in the context of Kumbhak) (3-4).

-----*****-----

Canto 1/Section 6

[This section continues with the topic of Pranayam and Naadi cleaning initiated in previous section no. 5.]

1-2. Pranayam is to bring together the Pran and the Apan winds. It has three phases called the Rechak (exhalation), Purak (inhalation) and Kumbhak (holding the breath inside the body). Since the ethereal word OM too has three syllables (A, U and M) and it is the supreme Mantra that is universally used for doing mediation and contemplation, Pranayam is deemed to be equivalent to OM. [The Mantra used for Pranayam is OM.] (1-2).

3-4. The practitioner should sit in the Padmasan or any other Aasan (described in Canto 1, section 3) convenient to him and meditate, or focus the attention of his mind, as follows—There is divine goddess known as Gayatri who has a divine presence at the tip of the nose. She is surrounded by a halo of silvery white radiance that resembles the brilliance of moonlight. Her countenance is reddish in hue. She is sitting on a divine Swan. She holds a Danda (a scepter or small baton indicating her authority and power) in her hand. She is of a young age, and is an image that represents the first letter ‘A’ of the divine and ethereal Mantra OM. [The goddess referred here represents Brahma the creator. She is the female manifestation of Brahma and represents his Shakti or divine cosmic powers to create. The letter ‘A’ of the word OM also symbolizes the initial phases of creation. The colour red or copper-colour represents the Raja Guna, the second of the three primary qualities in this world, and it creates a tendency for creation and production. That is why the colour of the blood is red.]

The second letter ‘U’ of this Mantra OM is manifested in the form of the goddess known as Savitri; she represents the second phase of OM. She has an auspicious body that has a white or fair countenance. She is also of a young age and sits atop the legendary bird known as Garud. [Garud is the heron or eagle who is regarded as the vehicle or mount of Lord Vishnu.] She holds a Chakra in her hand. [The Chakra is a serrated discus held by Vishnu and is his weapon. Hence, this goddess is deemed to be a female manifestation of Vishnu; she represents the dynamic powers of the Supreme Being to sustain and protect what has been created. The colour white represents the Sata Guna, the best of the three primary qualities in this world, and it creates a tendency for sustenance, development and protection.]

Finally, the last letter of the Mantra OM, which is ‘M’, has assumed an image of a goddess known as Saraswati; she represents the final phase of OM. She has a dark countenance, rides a bull, is aged, and holds a trident in her hand. [Obviously, she represents Lord Shiva, the God who is assigned the task of bringing the creation to a conclusion. This is clearly evident in the fact of her holding a trident. The colour dark or black represents the Tama Guna, the lowest of the three primary qualities in this world which creates destruction and ruin.] [3.]

So we see that the three letters A, U and M constitute the divine and ethereal Mantra OM, and their symbolic representations in the form of the three goddesses encompass the entire creation because they represent the three phases of creation—origin, development and conclusion respectively.

Though the word OM has been hypothetically divided into three letters but when said or pronounced it is deemed to be a monosyllable and pronounced as one single uninterrupted primordial sound ‘OM’. Hence, OM is known as the ‘Ekaskshar’—literally meaning ‘one letter’. [It is like the rumble of the cloud’s thunder—it is an unbroken sound that arises in the vast bowls of the sky, spread out, and gradually subsides to finally vanish into the bowls of the sky. No one can describe this sound except in general terms, and no one can segregate it into compartments.]

In a similar manner, the single source of this entire creation is also an entity that is one non-dual and universal, but which is visualized as having various phases or dimensions. This cosmic and universal divinity which is represented by the Mantra OM is also known as the ‘Ekaskshar’—literally meaning here ‘one that is imperishable; an entity that is one, non-dual, immutable, indivisible, eternal, infinite and imperishable’. It is in the form of a supreme source of ‘light’ that is self-illuminated and universally present. [4.] (3-4).

5. [Now, the process of Pranayam is being described.] Once one is able to successfully focus one's mind and contemplate in the manner outlined above (in verse nos. 3-4), he should inhale air through the Ida Naadi (the left nostrils) in a time that is equivalent to sixteen Matras (i.e. sixteen seconds)*. During this time, he should focus his attention on the first letter 'A' of the word OM.

The Khumbhak (holding of the air inside the body) should be done for duration of sixty-four Matras (i.e. sixty-four seconds)*. During this time, one must focus one's attention on the second letter 'U' of the word OM.

Finally, the air should be exhaled through the Pingla Naadi (right nostrils) in a time that is equivalent to thirty-two Matras (i.e. thirty-two seconds)*. During this time, one must focus one's attention on the third letter 'M' of the word OM. The letter 'M' is to be visualized in the form of an image. [This applies to all the three phases, and the images that are to be visualized are described in verse nos. 3-4.]

This cycle must be repeated again and again. [Earlier, verse no. 2 of section 5 of this Canto 1 has said that the inhalation and exhalation must be alternated between the right and the left nostrils, and verse nos. 3-4 have described the frequency of doing Pranayam—i.e. it should be done for 43 days, or for 3, 4 or 5 months, or for one full year. It should also be done thrice a day—dawn, noon and dusk, and each time the cycle is to be repeated 3, 4 or 6 times.] (5).

[Note—*Compare with verse no. 3-4, section 5, and verse no. 2, section 7 of this Canto no.1. It should be understood that the varying figures as to the number of Matras, or the duration for which the various phases of Pranayam ought to be done, is to indicate that there is no rigid rule which is inviolable and which must be strictly adhered to, but one should adjust his timing as per his convenience and aptitude for Yoga. This fact has been expressly endorsed in verse no. 7 of section 7 of this Canto 1. As a general rule, the timing for the Purak, the Kumbhak and the Rechak phases follow the following ratio—1:1:1; or 1:2:1; or 1:4:2; or 1:2:3.]

-----*****-----

Canto 1/Section 7

[This section describes Pranayam and its benefits in substantial detail.]

1. When the practitioner has sufficiently mastered the art of doing various Aasans and breath control exercises (as outlined in the above sections), he should simultaneously endeavour to dry up or burn the various impurities and grossness that clog his Sushuma Naadi. [This clogging of the Sushumna Naadi hampers the free flow of the vital life-sustaining factors such as the various vital winds called the Prans from freely flowing inside it, besides blocking the rise of the Kundalini energy from the lower end of the body to the head. In other words, when this chief Naadi is blocked due to any cause, the body suffers from free flow of vital life-forces inside it.]

This is brought about by diligently doing regular Yoga (meditation and contemplation) accompanied by constant practice of exercising self-restraint over the sense organs of the body, by being of a broad and compassionate heart as well as having a kind temperament and a graceful disposition that seeks well of all the creatures, and by eating in moderation (i.e. by exercising control over one's taste buds, observing fast and other restraints to help the body get rid of its accumulated toxins).

One must sit in the 'Baddha Padmasan'¹ and inhale air through the Chandra Naadi (i.e. the Ida Naadi; the left nostril). This air should be held inside the body during the phase of Khumbhak according to one's abilities, and then exhaled through the Surya or Sun Naadi (i.e. the Pingla Naadi; the right nostril).

Then the Purak (inhalation) should be done through the Surya Naadi, followed by the Kumbhak phase, and finally the Rechak (exhalation) should be done through the Chandra Naadi. In this way, the Purak and Rechak should be alternated between the Chandra and the Surya Naadis, and the Kumbhak phase lies in between them. [Refer verse no. 2, section 5 of this Canto 1.]

There is the following verse in this regard—'First the Purak should be done through the Ida Naadi and Kumbhak accomplished. It should followed by the Rechak through the Pingla Naadi. Then the process should be reversed by doing Purak through the Pingla Naadi and Kumbhak accomplished. It should followed by the Rechak through the Ida Naadi.

By diligently and constantly practicing Pranayam daily in the above manner, all the Naadis of the ascetic are thoroughly scrubbed clean and purified or detoxified in a wholesome manner in a period of three months (1).

2. Kumbhak should be practiced four times during the course of a day—in the morning (dawn), at noon, in the evening (dusk) and at midnight. The time taken for Kumbhak should be around eighty Matras (roughly eighty seconds)¹ (2).

[Note—¹Compare with verse no. 3-4, section 5, and verse no. 5, section 6 of this Canto no.1. It should be understood that the varying figures as to the number of Matras, or the duration for which the various phases of Pranayam ought to be done, is to indicate that there is no rigid rule which is inviolable and which must be strictly adhered to, but one should adjust his timing as per his convenience and aptitude for Yoga. This fact has been expressly endorsed in verse no. 7 of section 7 of this Canto 1. As a general rule, the timing for the Purak, the Kumbhak and the Rechak phases follow the following ratio—1:1:1; or 1:2:1; or 1:4:2; or 1:2:3.]

3. In the lower form or initial or primary stage of Pranayam, sweat breaks out on the body of the practitioner. In the middle or second stage of Pranayam, the body begins to shake or shiver. And in the higher or evolved stage of Pranayam, the body of the practitioner lifts from the ground (i.e. it begins to levitate) (3).

4. When the sweat breaks out on the body as a result of the strenuous efforts of Pranayam, the practitioner should rub it on the body itself (instead of wiping it off with a cloth) as this has beneficial effects for it makes the body of the ascetic strong and robust besides making it light (4).

5. In the earlier stages of practicing Pranayam, milk and clarified butter are prescribed as the best food for practitioners of Yoga. Later on when one becomes steady in one's practice, no rigid rules are needed for food. [This is because by that time the practitioner would have experienced the benefits of milk and its products, and develop a special liking for them, so much so that he would not want anything else even if given a choice. He would not need to coax his mind and body anymore to accept milk or its products; rather they would willingly accept them.] (5).

6. Even as a lion, an elephant or a tiger can be gradually tamed over a period of time by perseverance and patience, the vital winds too can be reined in by the practitioner of Pranayam in a gradual manner, and by persistence and constant practice.

On the other hand, if a man is impatient and wishes for a quick result, the winds would do more harm than good to him; they would ruin him; they would make him diseased (6).

7. Hence, one should feel at liberty to do Rechak according to one's natural convenience and inclination. Similarly, Kumbhak and Purak should also be according to one's comfort and aptitude. By practicing Pranayam in a manner that suits one is the best way to do it, and it also produces better results in a comparatively lesser time (7).

8. By doing Kumbhak according to one's abilities, the fire element inside the body is strengthened, the cosmic Naad (which is the ethereal sound that reverberates in the cosmos) is heard due to the de-clogging and cleansing of the different Naadis, and the body is made disease-free (refer verse no. 13/6).

[The composite process of Pranayam helps to scrub the Naadis clean. These Naadis are like the ventilation ducts of the body. When they are scrubbed clean, the flow of Pran or vital winds is aided. This stokes the fire element present in the body and strengthens it. This fire was weakened and hitherto suppressed due to overburdening of the body by rubbish and toxins. The raging of the fire whips up currents of air, and anyone standing near such a fire can hear a roar or whirring sound. This is heard by the practitioner of Yoga, and it is visualized as the cosmic sound that is produced in the ether by the wind that blows in the deep recesses of the sky. It is conceptualized as OM. In the higher stages of Yoga, it is this whirring sound that is heard by the ascetic, and it is created by the rekindling of the dormant fire element that is already present inside his body.] (8).

9. By doing Pranayam in a systematic and regular manner, all the different Naadis present in the body of the ascetic become cleaned and purified (i.e. they are scrubbed and detoxified).

The vital wind then is able to easily open the mouth of the Sushumna Naadi and enter it (9).

10. When the vital winds become steady in the body (i.e. when the practitioner is able to control them through the three phases of Pranayam), the Mana (mind) too becomes steady and gets rid of its inherent restlessness.

When the Mana is steady it is called the state of 'Manomani'—literally the state of mind when it is not subject to fluctuation, when it is not in a flux, and when it is as controlled as the wind. [Both the mind and the wind have a natural tendency to be restless. They are like two sides of the same coin. So when one is controlled, its counterpart is also reined in.] (10).

11. [Now, the different Bandhas are being described. These Bandhas are the closing of the various apertures of the body by which the wind can escape during Pranayam. Some of the Upanishads that describe the various Bandhas are the following—Yoga Kundalini Upanishad, Canto 1, verse no. 41-52; Varaaha Upanishad, Canto 5, verse nos. 44-45, 68; Dhyan Bindu Upanishad, verse nos. 73-78 ½; Yogtattva Upanishad, verse nos. 112-121; Yogshikha Upanishad, Canto 1, verse nos. 101-111, Canto 5, verse nos. 37-39.]

The practitioner should do Jalandhar Bandha¹ at the end of the Purak (inhalation). [That is, this Bandha should be done during the time of Kumbhak so that the trapped wind does not escape outside.]

The Uddiyan Bandha² should be done at the end of Kumbhak and the beginning of Rechak (exhalation) (11).

[Note—¹The *Jalandhar Bandha* has been described in the Yoga Kundalini Upanishad, Canto 1, verse no. 51 of Krishna Yajur Veda tradition which says that it is the constricting of the muscles of the throat that is done at the end of Purak (inhalation of breath or air) so that the inhaled air is prevented from escaping. Refer also to Yogshikha Upanishad of Krishna Yajur Veda tradition, Canto 1, verse nos. 109-111.

²The *Uddiyan Bandha* has been described in the Yoga Kundalini Upanishad, Canto 1, verse nos. 47-50 of Krishna Yajur Veda tradition. To quote—“To do Uddiyan Bandha, one should sit steadily in the Vajra Aasan posture and put the hands on the bent legs. The heels are pressed against the genitals from below and this helps to exercise great pressure on the Kanda area—i.e. the Mool Kanda, or the area around the groins. While doing this, the muscles of the abdomen are forcefully pulled inwards and upwards along with similar attempt to constrict the muscles of both the throat and chest. In brief, attempt is made to constrict the entire muscular system of the lower part of the body and the chest area so that great pressure is exerted on the wind that has entered the Sushumna Naadi, thereby facilitating its upward movement in this Naadi.

By practicing this exercise, the Pran (vital winds) are able to get absorbed in the tissues of the abdomen in a gradual manner. This helps to eliminate all diseases of the stomach and abdomen. This is because this exercise tones up the muscles and invigorates them, providing them with new energy and strength to function with renewed vigour. When the tissues are well ventilated and energized, when their toxic wastes are removed by the scrubbing affect of the Pran rubbing against them, they would too regain their lost strength and energy to function in a prime shape. That is why this exercise should be practiced regularly and persistently.” Refer also to Yogshikha Upanishad of Krishna Yajur Veda tradition, Canto 1, verse nos. 106-107.]

12. In order to restrain the wind from moving out of the body, the aperture at the lower end of the body (the anus) is constricted along with the simultaneous constriction of the throat. When the abdominal muscles are pulled in from the anterior side of the abdominal cavity towards the spine, the Pran Vayu (the vital winds) can enter the Brahm Naadi (the Sushumna Naadi) and flow in it.

[The Sushumna Naadi is called the ‘Brahm Naadi because it leads up to the top of the head where the Brahm-Randhra is situated, and where the practitioner can experience the ecstatic feeling of Brahm-realisation.] (12).

13. When a skilled ascetic is able to lift the Apan wind (which is naturally located in the lower end of the body, especially the intestines) from the lower end of the body along with the simultaneous lowering of the Pran wind (i.e. the breath which is naturally located in the upper region of the body, especially the chest), the two mix and create a situation that helps to harmonize the various functions of the body and its tissues. The evident benefit for the aspirant ascetic is that he is able to overcome the crippling effects of old age and remain in a perpetual young age of roughly sixteen years. [His body is rejuvenated, his internal organs are revitalized, and his latent energy, vitality and vigour represented by the fire element that had become cold due to the debilitating effects of aging is re-kinkled—refer verse no. 8. The combined

affect on the body is that all its internal organs regain their toned condition like that of a young man of roughly sixteen years.] (13).

13/1. The practicing ascetic should sit in the Sukhasan (i.e. a sitting posture that is convenient to him) and draw in air (i.e. do Purak) through the right Naadi (i.e. the right nostril) and fill every pore of the body from the tip of the hair on his head to the tip of the toe nails (i.e. he should do comprehensive Kumbhak). After that, the air should be let out (i.e. he should do Rechak) through the left Naadi (i.e. through the left nostril).

This process helps in scrubbing and cleaning of the skull along with all the Naadis of the body (13/1).

13/2. Another way of doing Pranayam in practical terms is to inhale wind slowly through both the nostrils simultaneously while making a muttering and humming sound. [This is the first step of Pranayam called Purak. The sound referred to here has two meanings—one, it is the repetition of some Mantra, e.g. OM, and second, it might refer to the sound produced during the normal breathing process but is not paid attention to under normal condition. The idea here is to focus one's mind on doing Pranayam inspite of remaining busy in the hustle and bustle of life. In fact, the Pranayam that is being prescribed here is meant for doing throughout the day, and it implies that the practitioner of this holistic way of doing Pranayam may be externally engaged in so many varied activities of life but internally he is at peace with himself because such concentration of mind is only possible when the mind and the inner-self are calm and undisturbed.]

Then Kumbhak should be done according to one's ability to hold the air inside the body conveniently. Finally, the air should be exhaled through the Ida Naadi (i.e. the left nostril).

This process can be done even while standing or walking. It helps to overcome excessive cough and ignite the fire of the stomach (i.e. increase the dormant appetite) (13/2).

13/3. The third method of doing Pranayam is to accept or inhale air (i.e. do Purak) through the mouth (instead of the nose) while making a hissing sound. Then Kumbhak is done according to one's convenience and ability. Finally, Rechak (exhalation) is done through both the nostrils simultaneously (instead of through one of the two nostrils).

This helps in overcoming excessive hunger and thirst, as well as laziness and drowsiness (13/3).

13/4. The fourth method of doing Pranayam is to accept or inhale air (i.e. do Purak) through the tongue. [The mouth is wide open and the tongue is protruded out. This sort of inhalation is done by a panting animal or a man after he has done some vigorous activity. The moist surface of the tongue directly absorbs oxygen from the air and it is a quicker method of ventilating the body and oxidizing the tissues.]

Then Kumbhak is done according to one's convenience and ability. Finally, Rechak (exhalation) is done through both the nostrils simultaneously (as done during the third type of Pranayam described in verse no. 13/3).

This helps in controlling and curing a number of diseases such as enlargement of glands and inflammation of skin, spleen diseases, fever, bile, disturbed hunger and appetite etc. (13/4).

13/5. Now, the two aspects of Kumbhak are being described. Kumbhak is of two types—(i) Sahit (inclusive; in association with another entity), and (ii) Keval (exclusive; standing alone).

The ‘Sahit Kumbhak’ is one that is linked with the other two phases of Pranayam, viz. Purak (inhalation) and Rechak (exhalation). In other words, the Sahit Kumbhak is one that is flanked by Purak and Rechak; it is in between these two phases of Pranayam. It does not persist for any length of time as it has to give way to Rechak. And it also depends upon the Purak for drawing in air for the purpose of filling the body.

On the other hand, the ‘Keval Kumbhak’ is a stand-alone process that is independent of the other two steps of Pranayam. [That is, the wind is allowed to remain inside the body and circulate in it for protracted periods and for as long a duration as the ascetic wants it to remain inside the body. He does not feel the need to exhale or inhale. The Kumbhak of this sort may extend for many hours or even days together when the body is in a state of suspended animation. Since breathing is stopped, an ascetic who is skilled in Keval Kumbhak might be buried in the ground for long periods but he would not die, for when he comes out of the ground he would be able to revive his sense organs and resume all the external activities of the body by resuming breathing.]

Till the time one becomes an expert in doing Keval Kumbhak he must regularly and diligently practice the Sahit form of Kumbhak. Once the ascetic is able to master the art of Keval Kumbhak, there is nothing that is not accessible to him in all the three worlds (i.e. in the terrestrial world, in the heavens and in the nether world), or there is no mystical power that is not within his reach.

The Kumbhak is so powerful and effective that it is alone capable of activating the Kundalini¹ (13/5).

[Note—¹The Kundalini is the coiled subtle energy center at the base of the spine. Under ordinary situation it blocks the lower end of the Sushumna Naadi, thus preventing the vital winds called Pran from freely rising up this Naadi and reaching the upper reaches of the head where the ascetic is able to experience the bliss of Brahm-realisation. In more practical terms, since this Naadi is the main nerve passing through the spinal cord, its blocking impedes the free circulation of vital impulses from the various organs of the body to the brain and back to those organs. Naturally, this hinders the proper functioning of the body and creates a sort of log-jam. It is just like the case of the main ventilation duct of a house being clogged by soot or other impurities which has a negative effect on the freshness of the air inside the entire house.]

The Kumbhak phase, when done systematically and for a prolonged period of time, helps to heat the wind trapped inside the body and build up pressure. The result is that the Kundalini is jerked and vibrated sufficiently enough to prod it into life. It straightens and opens the mouth of the Sushumna Naadi so as to allow the subtle energy of the Kundalini to enter it along with the heated Apan and other winds which push it from below. This energy and winds then travel upwards towards the head, and on the way they rupture or open other Chakras or energy centers of the body. The cumulative affect is that all the hitherto closed energy centers of the body are opened and a huge burst of subtle energy that was dormant and latent is now released. The result is obvious to imagine—the practitioner experiences renewed vigour and vitality surging through his veins and nerves.]

13/6. Once this process is mastered and the ascetic becomes skilled in doing Keval Kumbhak, his body becomes lean and muscular (i.e. he loses excess flab and becomes

vigorous, full of vitality, agility and sprightliness). His face and general countenance becomes cheerful and pleasant. His eyes become clear (i.e. his vision improves, both physically and metaphorically). He can hear the Naad (i.e. he can hear the cosmic primordial sound roaring in his hears—refer verse no. 8). He becomes free from all the diseases. He is able to exercise full control over the 'Bindu' (literally meaning a 'drop' and but implying control over one's sexual impulses, i.e. he is able to practice continence and sexual abstinence by being able to control the flow of his sperms). The fire burning in his stomach becomes robust and re-activated (i.e. he regains his lost appetite and is able to digest food properly) (13/6).

14. The 'Vaishnavi Mudra' (posture of one or the other individual organs of the body) is one in which the ascetic's internal sight (i.e. his thoughts and sub-conscious mind) is focused on his spiritual objective, and his external sight is fixed in such a way that his eyelids stop flapping (closing and opening). This is the Mudra that is recognized and lauded by all the scriptures dealing with Tantra form of ritualistic worship as the secret of spiritual success and the one that aids the aspirant in obtaining his objectives (14).

15. The ascetic whose vital winds and sub-conscious become one while his thoughts are focused internally in contemplation during meditation (i.e. when he adopts the Keval Kumbhak and stops to breathe; when he is not even aware whether or not his body is inhaling or exhaling air so much is he submerged in meditation), and at the same time his motionless and half-open eyes look blankly downwards at an imaginary spot in his front, but do not see anything else—verily, this state is called the 'Khechari Mudra'.

[In other words, during this Mudra, the internal component of the mind called the sub-conscious, and the external component called the conscious aspect of the mind are both in a state of non-activity and neutrality. The ascetic is so lost in meditation and contemplation that he forgets to even breathe, and though his eyes are half-open he sees nothing because his mind is defunct. It is the mind that registers any sight when it interprets the incoming sensory impulses gathered by the organ of sight known as the eye. The eye merely gathers the impulses that are analyzed and interpreted in the brain as a 'sight' of an object. It is the brain or the mind that actually 'sees' something, and the eye is merely an instrument to gather information about objects that have a physical form, colour and dimension, and then transfer this information to the brain and let it interpret as sight of that object.]

Since during this Khechari Mudra the ascetic is focused on the 'self' which is the auspicious Atma and the pure consciousness, since his inner being and external being have merged into one unit and harmonized with each other, this Mudra is also known as Vaishnavi Mudra. [In other words, both the terms apply to the same Mudra, and in both the cases the aim of doing this Mudra is auspicious and holy.]

When this Mudra is successfully done, the practitioner is able to experience the presence of the supreme and self-illuminated divine entity that is so unique and paradoxical that it cannot be limited by either defining it as being a 'Shunya' or as being 'A-shunya'.

[The divine entity that is implied here is the 'consciousness' that resides in the subtle inner self of all living beings as their Atma or their pure 'self'. The word 'Shunya' literally means a void or vacuum or non-existence, implying something that is as subtle and sublime as for instance the air element or the sky element that are surely present but cannot be seen, touched or grasped to ascertain their physical

existence. On the other hand, the word 'A-shunya' is the opposite of 'Shunya'—i.e. it is an object that is not subtle, and therefore it is gross. In other words, the entity referred to here is so unique that it possesses paradoxical qualities—it is both subtle as well as gross, and at the same time it is neither subtle nor gross. It is beyond definitions; it transcends fixed boundaries and criterions. Its existence cannot be denied, but at the same time there is no method of physically testing it in material terms to prove its existence. All these criterions apply on the Atma—it is a subtle entity that no one can ever see but without which both the gross body consisting of the external sense organs, as well as the subtle body consisting of the mind-intellect complex of the creature would be of no consequence. The vital winds that are called Pran remain active in the body because of this undefined 'consciousness'. A dead body too is filled with the wind, but does it show any life? A balloon is filled with air, but can it be called a living being?

Hence, the supreme essence of life that 'illuminates' this dark world by infusing it with 'life' is the divine entity experienced when the ascetic is successful in doing Vaishnavi or Khechari Mudra.] (15).

[Note— The word Khechari is derived from the root 'Khe' which stands for the sky, and 'Chari' means to move, to wonder or to roam. Therefore, the combined word 'Khechari' means one who can move in the sky.

This Mudra has been graphically described in Gherand Sanhita, Chapter 3, verse no. 25-28, besides the Yogshikha Upanishad, Canto 5, verse nos. 40-42, the entire Canto 2 of the Yog Kundalini Upanishad; and Dhyani Bindu Upanishad, verse nos. 81-93 of Krishna Yajur Veda; as well as in Yogchudamani Upanishad, verse nos. 52-64 of the Sam Veda tradition, in Mandal Brahmin Upanishad, verse no. 2/1/8 of Shukla Yajur Veda tradition, and in Shandilya Upanishad of Atharva Veda, Canto 1, section 7, verse nos. 14-15.

The *Khechari Mudra* is amongst the best and toughest body postures that can be adopted by any ascetic, but at the same time it can empower the practitioner with stupendous mystical and occult powers and potentials. It involves elongation of the tongue by constantly pulling it out and making it flexible by constant flexing, rolling and shaking from side to side. The nerves and veins at the lower end of the tongue, i.e. in its tendon, are cut so as to make them senseless. To obtain success in this, the tongue is smeared with butter and stretched by holding it with an iron tong. This results in the tongue getting sufficiently elongated as to reach the inner opening of the mouth by inverting it backwards, and then it is tucked at the base of the upper palate to close the opening of the nostrils at the roof of the mouth cavity. When the elongated and backwards bent tongue is stuffed here, these openings of the nostrils are closed by it, thereby blocking the flow of air (breath). Meanwhile, the sight is fixed unwaveringly at a point midway between the two eyebrows.

It is believed that the Khechari Mudra, along with the Vajroli Mudra, was made popular by sage Matyseyanandranath (10th century CE), the great ascetic of medieval times and the moral preceptor of the famed ascetic Guru Gorakhnath.

The *Beej Mantra* of Khechari Yoga has been described in Yog Kundalini Upanishad, Canto 2, verse nos. 17-20, and Canto 3, verse no. 1.

The *benefits* of Khechari Yoga have been listed in—(i) Shandilya Upanishad of Atharva Veda, Canto 1, section 4, verse nos. 15-17, 39-42/2. (ii) Yog Kundali Upanishad, Canto 2, verse nos. 1-4, 21-24, 49. (iii) Yogchudamani Upanishad, verse nos. 52-64. (iv) Dhyani Bindu Upanishad, verse nos. 81-93. One such practical benefit is the natural way of contraception as clearly described in Yogchudamani Upanishad, verse nos. 52-64; and Dhyani Bindu Upanishad, verse nos. 81-93.]

16. An ascetic who remains steadily concentrated on his meditative posture (of Khechari Mudra as outlined in verse no. 15) as evident from his unblinking and half-

open eyes, with the mind and the sub-conscious focused on his spiritual objective, and the sight steadfastly fixed on the tip of the nose, is able to attain steadiness and stability in his meditation. When he is successful in attaining this stage, he is now deemed to be ready to exercise control even over his Surya Naadi (i.e. the Pingla Naadi or the right nostril) and the Chandra Naadi (i.e. the Ida Naadi or the left nostril) so much so that the flow of life-forces (vital airs) through them is stopped by him and they become defunct for all practical purposes.

[In other words, once Khechhari Mudra is successfully practiced, the ascetic is now able to implement the next phase of Yoga—and it is to stop the flow of air or wind through the nostrils. He can now stop breathing, and this means that he can exist in a state of perpetual ‘Keval Kumbhak’ (refer verse no. 13/5) when the inhaled air is held inside the body for prolonged periods of time without the need to exhale it. The ascetic does not feel suffocated or bloated at all. The trapped vital winds begin to circulate freely inside the body.]

The extremely sublime, most subtle and indefinable entity on which the ascetic has focused his attention while undertaking this process of Yoga, which is the aim of his spiritual pursuit for which he has stepped on this path in the first place, is a divine entity, a sublime essence called the ‘Tattwa’ that is self-illuminated, radiant and glorious. This ‘Tattwa’ (the sublime essence) is devoid of all forms of grossness that are associated with all external things in this world of material sense objects.

Oh Shandilya! You must know it in this truthful way (16).

17. The ascetic focuses the pupils of his eyes on the sublime light or illumination that glows on the tip of his nose during his meditative posture as described above. He is in a completely relaxed state of the mind, and when he views this glorious light and focuses his eyes on it, the eyebrows are slightly raised in a stance that indicates his extreme sense of stunned astonishment and exhilaration at being able to visualize this sublime light that is not ordinarily visible, and at being able to experience the thrill and ecstasy that accompanies this exalted state of existence.

This is the preliminary stage of his spiritual practices, and it helps him to obtain the ‘Unmani’¹ state in a short time (17).

[Note—¹The *Unmani* state is a higher and exalted state of existence of the consciousness when it rises above the mundane and the gross, and lives in a sublime state. The word itself has two connotations—one is to rise and lift up, and other is to become indifferent to things that are gross and unattractive. The ascetic who practices the form of Yoga outlined in this Upanishad is able to ‘lift’ his ‘self’ from the gross level of existence, ‘rise up’ and reach an exalted state of existence when he is able to ‘see’ the sublime Tattwa, or experience the presence in his own inner self the eclectic entity that is the essence of existence and which in common parlance of Vedanta and metaphysics is known as the ‘conscious self’ or the pure conscious Atma. This Atma is the essence or the Tattwa that is self-illuminated and that is witnessed in the higher stages of Yoga as described in this verse. It is the realisation of this Atma that is the aim of all spiritual pursuits, and it is this realisation of the Atma that is the cosmic Truth known as Brahm which gives the feeling of unmatched exhilaration and ecstasy to the ascetic. That is why he is stunned and his eyebrows are raised in a crooked stance. He had never ever experienced this scintillating source of light earlier in his life, and when he actually ‘sees’ it, he is taken by surprise and utterly stunned and dazzled by its mere presence.]

17/1. Since this eclectic state is easily reached when one successfully practices the Khechhari Mudra, it is advisable for all spiritual aspirants to implement this Mudra.

He first reaches the Unmani state of eclectic existence, and then progresses to reach a higher and more sublime state of exalted existence called 'Yog-Nidra'¹.

A successful aspirant who has achieved the state of Yog-Nidra—or when he can assume the virtual state of remaining asleep vis-à-vis this gross world and the gross body while being active in doing Yoga—acquires such stupendous mystical powers and potentials that he no longer remains under the jurisdiction of Kaal, or the factor of time and circumstance. [In other words, the state of beatitude and felicity that he reaches, the bliss and spiritual ecstasy that he experiences are not limited to the time till he does Yoga. They become perpetual for him; they become a part of his life. He can conquer death and decay because he can now control his breath and remain in the state of Keval Kumbhak as described in verse nos. 16 and 13/5 respectively.] (17/1).

[Note—¹The word 'Yog' of course means meditation and contemplation, while the word 'Nidra' means to sleep. Hence, the combined word *Yog-Nidra* implies that eclectic state of existence in which the aspirant is virtually 'asleep', i.e. he is in a state of suspended animation when all his external organs are literally defunct, his mind does not register any external impulses, and his sub-conscious too goes into hibernation while doing Yoga. He is not actually sleeping in the conventional sense because he is actively doing Pranayam and Khechari Mudra of Yoga, but 'virtually' sleeping. This 'sleeping' or 'Nidra' state that is obtained as a result of 'Yoga' is named after the latter—i.e. it is called 'Yog-Nidra'. While in the case of ordinary sleep the man's mind is active as it might dream of an imaginary world, but in the case of Yog-Nidra, there is no such world. Hence, the latter closely resembles the third state of conscious existence called the Sushupta state because in both the cases the mind and the sub-conscious are defunct or relegated to the background and the man lives in a state of virtual non-existence.

The difference between the Yog-Nidra and the Sushupta state of existence are two-fold—(i) One is that while the latter case is part of the process of physical sleep when the eyes are closed shut and the man neither visualizes or experiences anything, in the former case this is not true as the eyes are half-open, the practitioner sees a source of light at the tip of his nose, and he is not asleep in the conventional sense of the term 'Nidra'. While a man is actually asleep during the Sushupta state, also called the 'deep sleep state of consciousness', as this state is reached after crossing the Swapna or dreaming state of a man's sleep, in the case of Yog-Nidra the body is not asleep and even the eyes are half open.

And (ii) the Sushupta state is short-lived as sooner or later the sleeping man reverts to his old ways of life when he wakes up, being subjected to all sorts of mental turmoil and agonies, remains engrossed and submerged in the material world of grossness and has no idea of spiritual ecstasy and bliss, but in the Yog-Nidra state this situation does not arise. Since here the breath is stopped as described in verse no. 16, and the ascetic is able to maintain a stable state of the vital winds by being in a Keval Kumbhak state as described in verse no. 13/5 as a result of stoppage of breath, the Yog-Nidra can last indefinitely. Since this stage is reached by practice of certain stringent exercises of Yoga, e.g. the Khechari Mudra and Pranayam, the ascetic becomes trained enough to maintain the calmness and peace of his mind even when he is not actually practicing the Yoga or is in the eclectic state of Yog-Nidra.

In other words, the experience of bliss, the state of mental peace, the sense of spiritual ecstasy, beatitude and accomplishment etc. that he finds in the Yog-Nidra state becomes natural to him and it lasts even if he wakes up from his meditative trance as compared to ordinary sleep when he might reach the Sushupta state or the deep sleep state of consciousness for some moments but when he wakes up to the realities of this physical world he forgets his earlier state of peaceful existence and begins to be tossed and turned by the events of this world.]

18. Oh Shandilya! Concentrate your mind and remain focused on the eternal source of spiritual energy that resides in your own self (i.e. remain submerged in meditating upon the pure consciousness that shines inside).

Keep the mind and its sub-conscious aspect energized and actively involved in this practice. Look at the subtle and sublime aspect of yourself by employing your faculties of mind and intelligence, and turn inwards instead of outwards in order to attain success in your spiritual endeavours. This would help you to remain happy and joyous; this will enable you to lead a cheerful life full of contentedness and bliss.

[That is, do not allow yourself to lose sight of your spiritual goal that is eternally divine and sublime by nature, and never lose guard and become involved in things that are gross and impermanent. Never lose hope by initial setbacks, but persevere and remain focused. Strive to realise the pure consciousness that is eternal and sublime by nature with the aid of Yoga, and this realisation would illuminate your inner-self with a glorious light by removing the darkness of ignorance and delusions regarding the Truth that has mired your existence till now. By following and implementing the teachings of this Upanishad you would be able to live a fulfilled life full of spiritual contentedness, happiness and cheer. You would not want anything of this perishable gross world as you would have tasted the supreme nectar of eternal spiritual bliss and happiness that would make all the pleasures and comforts of this material gross world taken together as tasting bitter, sour or bland in comparison.] (18).

19. One must visualize that the Atma or pure consciousness is established in the subtle space of the sky (i.e. in the subtle heart). As a result, this subtle sky or heart becomes illuminated and sublime due to the august presence of this divine and holy entity.

This noble and grand idea must be extended to cover the entire creation; it should be holistic in its import and reach. Hence, one must practice to cultivate the eclectic idea that everything in this existence or creation is filled with the same subtle space of the sky, and therefore the same Atma is also established in the entire creation. In other words, the Atma that resides in the subtle space of one's own heart is the same that resides uniformly throughout the length and breadth of this existential world. Think that there is nothing besides it (a vacant space and the Atma) in this world or creation (19).

[Note—There is spin-off of this notion of the Atma living in a subtle sky at the macro level of creation. The sky is a vacant space; it has no solid existence like wood or iron. To say that the entire creation is filled with the space of the sky and that the Atma, which is pure consciousness, lives uniformly in it is a metaphoric way of saying that the world is hollow from the inside, there is nothing worth bothering in it, and the only thing that is of any consequence in this void is the pure conscious Atma. If the Atma is removed from this creation the latter would be reduced to a huge vacant space with no life in it.

It is just like the case of candle burning inside a large empty hall—where the 'candle' is the self-illuminated Atma, the pure consciousness, and the 'emptiness of the hall' is the vast creation which would be dark, empty and foreboding without this only source of light called the Atma.]

20. A wise ascetic should not worry or bother about the external world (i.e. the gross exterior world of material sense objects and the equally gross body and its sense organs) as well as the internal world (i.e. the subtle world of the mind and intellect

along with the various internal needs of the body). That is, he should become absolutely neutral and indifferent. He must abandon all sorts of worries and remain submerged in the thoughts of the eternal consciousness. [Since it is the mind that is the cause of all worries and thoughts, when it is focused on the Atma during meditation and contemplation it is natural that all worries, real or imaginary, would have no existence. The result would be that the ascetic would be in a perpetual state of bliss and happiness.] (20).

21. Even as camphor vanishes put in fire and salt when it is put (and gets dissolved) in water, the mind and the sub-conscious of an ascetic who is perpetually submerged in doing Yoga, who remains in a state of meditative trance, who is ever contemplative, also merges and becomes one with the supreme Tattwa or essence of creation, the universal Truth and Reality of creation. [This Tattwa is the pure super Consciousness that is the universal Truth of life and existence. Without this Truth the creation is null and void.] (21).

22. The term 'Mana' applies to being aware of or conscious of anything that is worthy of being known, or to perceive something that can be learnt by the application of the mind and sub-conscious.

Therefore, in the state of existence when the mind becomes defunct or non-active as during Yoga, the ascetic would not perceive anything, he would not be aware of anything. Except by neutralizing the faculty of the mind that makes a creature aware of anything or perceive something in this world, and at the same time diverting one's attention from the world with its countless sense objects and temptations as well as tribulations, there is no other way of becoming neutral, detached from, indifferent to and unaffected by the circumstances of existence; there is no other path by which one can remain emotionally steady, calm and unmoved; there is no other way by which all worries and concerns could be overcome; there is no other options that can help one to remain focused on one's spiritual goal without being subjected to innumerable distractions and disturbances that constantly bombard one's mind and the inner-self. [That is, it is of paramount importance that one exercises stellar control over one's Mana.] (22).

23. By voluntarily and purposefully eliminating the objects that attract the attention of the mind, one is able to free the latter from the former's hooks. This helps one to get rid of the Mana; it helps the ascetic or any spiritual aspirant to dissolve the Mana. [When the attention is diverted away from the object of desires, the mind would stop thinking about it, and this is equivalent to eliminating the Mana—i.e. the thoughts of the mind and emotional attachment of the heart with the object of desire—from interfering with one's spiritual resolve, and attempting to tamper with it or break it.]

When the Mana is eliminated or dissolved, what remains is only one sublime entity known as 'Kaivalya'. [When all desires pertaining to this body and the world, both at the gross level as well as the subtle level are done away with, what remains is the sublime entity called pure conscious Atma and the Truth. Since it is one of its kind and non-dual, it is honoured by the epithet 'Kaivalya'—literally meaning exactly this, 'one and only one'.] (23).

[Note-- How the Mana creates the world has been explained in Yogshika Upanishad of Krishna Yajur Veda tradition, Canto 6, verse nos. 58-61, 70.

How the Mana acts as a fetter has been elucidated in the Yogshika Upanishad of Krishna Yajur Veda tradition, Canto 1, verse nos. 59-61.

How the Mana can be controlled or dissolved or disassociated from its involvement with the world has been explained in the following Upanishads of the Krishna Yajur Veda tradition also—Kathrudra Upanishad, verse nos. 39-40; Yogshika Upanishad, Canto 1, verse nos. 62-65, 69-71.]

24. Oh great sage! There are two important ways to eliminate or dissolve the ‘Chitta’—the sub-conscious, the memory and the aspect of the mind that thinks and focuses on anything or event. One is ‘Yoga’, and the other is ‘Gyan’.

Yoga in this context is to destroy or eliminate the various ‘Vrittis’ of the Chitta. [The word ‘Vritti’ refers to the numerous natural inclinations and tendencies of the mind that are inherent in all the living beings. It is these Vrittis that hook the mind to the material objects of the world. Once the Vrittis are done away with, the mind would no longer be attracted to the world and its material sense objects.]

Gyan is to see the truth about anything in its essential form; Gyan is to have the deep insight into things and be able to see or peer behind the veil to uncover the secret that lies behind it; Gyan is to see beyond the apparent and realise the hidden truth and unravel the esoteric secret of an entity. [In the context of one’s spiritual pursuit this means that one is able to see the falsehood and impermanence of the gross world along with its deluding and entrapping nature, and on the other hand realise the ‘truth’ about the subtle and sublime entity known as the Atma which is the pure consciousness that is not visible or tangible in the conventional sense but is nevertheless the only worthy thing that is honoured by the title of being the ‘Absolute Truth’ in this entire creation. The obstacle in this realisation are the vagrant Chitta and fickle Mana that do not know what to pursue and what not to. Hence, once they are controlled the aspirant’s spiritual path becomes free from all impediments, and self-realisation or Truth-realisation becomes a reality.] (24).

[Note—The Tejobindu Upanishad of Krishna Yajur Veda, in its Canto 3, verse no. 67 describes how to overcome the various habitual faults of the mind, called the Chitta Vrittis.

Chitta is an integral component of the Antahakaran or the ‘inner self’ of a living being. This has been described in—(a) Krishna Yajur Veda’s Shaarirako Upanishad of, verse no. 4; Tejobindu Upanishad, Canto 5, verse nos. 101-102; (b) Shukla Yajur Veda’s Paingal Upanishad, Canto 1, verse no. 9, Canto 2, verse no. 3; Trishikhi Brahmin Upanishad, Canto 1, verse no. 6.]

25. When the Mana (mind) is brought under one’s strict control, when one establishes and asserts his authority over its wayward nature and natural habit of remaining restless and in a constant state of flux, it is certain that the Mana can be calmed down and tamed. In other words, it is not that one cannot tame or control the Mana; the Mana cannot supersede one’s will-power and determination should one decide to put the Mana under leash.

As soon as the restless and fidgety nature of the Mana is calmed down or brought under control, the world with its tempting material objects and their charms is automatically eliminated. [Verse nos. 23-24 above describes how.] (25).

26. Just like the case that the world would gradually come to an end should the sun’s movement across the sky stop or when it stops shining, so is the case with the world that would also come to an end or cease to exist as soon as Vairagya (total renunciation, detachment and dispassion towards the material world and its sense objects) sprouts in the heart and mind (the Mana) of an aspirant as a result of company of scriptures (i.e. by studying them) and by the communion of wise and

realised saints (where these scriptures are explained and discussed so as to clarify doubts about them in the mind of the spiritual aspirant).

[This is because it is the mind that is actually responsible for making the creature aware of the world. This is evident when we are lost in our thoughts—the world flows by but we are totally oblivious of it. Suppose a man is thinking of something, then he might appear to be intently looking at a particular object because his eyes are directed towards it but his mind does not register the sight and therefore the man does not actually ‘see’ that thing in spite of his eyes being wide open and directly looking at it. It is the mind that actually sees, hears, tastes, feels or smells anything, it is the mind that actually inspires a man to do anything, to go anywhere, to accept or reject anything, to speak or not to speak anything, and so on and so forth. It is the mind that tells him that the world is attractive and must be sought; the same mind can create distaste for the world or outright hatred for it if it is not favourably inclined towards the same world.]

Hence, when the man develops detachment from the world and its illusionary charms that comes with understanding of its true nature, he would be disenchanted with it and develop disinterest in it. The man seeks this world and its material objects with the main objective of finding happiness, joy, pleasure and comfort. When he discovers that he is being taken for a ride by the illusionary charms of the equally illusionary world, when he learns that whatever happiness or comfort that he finds in this world are inherently transient and impermanent as well as illusive by nature, when he is enlightened that this world is delusory and hollow from the inside, and there is nothing of any worthwhile in it—it is then that he loses his interest in it, and instead turns his attention towards the entity that would give him eternal, sustainable, truthful and real happiness and peace, real tranquility and bliss. He then strives to find out the truth, and for it he turns towards the scriptures that expound upon this Truth. He also seeks the company of wise and enlightened souls who have understood the scriptures and have implemented their teachings in their personal lives to actually verify and establish this Truth. This is how true Vairagya or renunciation and detachment towards everything that is delusory and impermanent develop in the spiritual seeker’s heart and mind—i.e. his Mana and Chitta combine.] (26).

27-29. First of all, one must develop total and sincere disinterest in all the attractions of the material world and its sense objects. He must control his various Vrittis which are nothing but the natural tendency of the mind to swerve towards the comforts, pleasures and charms of the world along with the desire to gratify the urges of the sense organs of the gross body. [These Vrittis are inherent to all the living beings and an integral part of their overall mental setup. Refer verse no. 24 above.]

Then, as a second step, the aspirant should practice constant, consistent and persistent ‘Dhyan’—i.e. he should focus his mind and its faculties on the Truth and always contemplate upon it and remember it. [27.]

This is to be accompanied by having a firm faith and unwavering conviction in the existence and the truth of the universal ‘Tattwa’—literally the only universal essence and the inviolable elementary spiritual truth of existence. [This ‘Tattwa’ is the Atma or the pure consciousness that is the only spiritual ‘truth’ in creation. This ‘consciousness’ is called the subtle and sublime Atma when it resides in the body of the individual creature, and it is known as the supreme transcendental almighty and all-pervading Brahm when it is considered in its macrocosmic and all-encompassing form. The word ‘Tattwa’ means something that is fundamental to and at the very foundation of everything else; something that is basic and essential because without it

all the rest of the things would lose their meaning and existence; something without which nothing else matters.]

Regular and persistent practice of Dhyan and meditating upon the Tattwa, i.e. regularly doing meditation and contemplating upon the spiritual Truth with a firmness of mind, faith in the scriptures and advice of learned people, and steadiness of purpose, it is possible that the movement of the Pran (vital winds) inside the body stops. In other words, the Pran Vayu, the vital winds present inside the body as well as the breath, is brought under one's control. The air is pulled in (inhaled) gradually by the process of Purak (as described in verse no. 5, section 6, and verse nos. 1-2, 13/1-13/4) and then retained inside the body for prolonged periods of time in the state of Kumbhak. That is, the practitioner reaches the state of 'Kaivalya Kumbhak' (as described earlier in verse no. 13/5, 17/5). [28.]

In this way, constant focusing of attention on meditation and contemplation helps the spiritual aspirant to remain in a perpetual state of meditation when the mind is completed annihilated and all its activities stopped. That is, the Mana is brought under one's control (as described in verse nos. 18-25).

When the aspirant utters or repeats the Mantra OM in the later and higher stages of Yoga as described herein above, he is actually able to experience the reverberations of the subtle vibrations emanating from this cosmic sound of OM. He is able to experience the resonance of OM throughout his being; he feels submerged in a sea of cosmic vibrations surging all around him. This helps him to realise and learn about the essential meaning of the term 'Sushupta' state of consciousness which is also called the deep sleep state.

He becomes so exhilarated and consumed by the thrill and ecstasy produced by the resonance of OM that he forgets about the movement of the vital winds in his body. These vital winds called Pran come to a standstill because of the sudden surge of thrill radiating through the being of the spiritual aspirant. [The stoppage of the flow of the vital winds here is caused by the spasmodic tautness of the muscles due to excessive thrill and ecstasy that comes with titillation created in the body by the vibrations of the nerves by the sound of OM.]

For so long as the aspirant continues to chant or repeat OM, the thrill and its accompanying ecstasy continues unabated, and with it follows the holding of the breath and its natural spin-off in the form of Kaivalya Kumbhak. [29.] (27-29).

30. When the 'Ghanti' (the epiglottis) located at the rear end of the palate, i.e. the root of the tongue, is pressed carefully by the tip of the tongue (by inverting the latter—a process described in detail in Yog Kundalini Upanishad of Krishna Yajur Veda, Canto 2, verse nos. 29-49), the Pran Vayu (the vital wind; the breath) is controlled and its movement stopped. It can now be diverted into the cavity of the skull, i.e. the Pran Vayu enters the upper part of the head. [When the flap covering the wind pipe is carefully pressed, the air in the lower part of the body is eased into the cavity of the skull instead of moving out of the nose.] (30).

31. Gradually by constant practice, the Pran (breath; the vital wind) loses its vigour, force and strength while it moves in the area between the 'Ghanti' described above and the tip of the nose, a distance of roughly twelve fingers. [That is, by constant practice of Yoga, the breath is so trained that it begins to move progressively slowly while being inhaled and exhaled. This happens because the metabolic rate decreases during, and as a result of, Pranayam and other Yogic exercises when the breathing becomes shallow and slows down considerably.]

So, the flow of the Pran can be controlled by constant and persistent practice (31).

32. When the sight of the ascetic or practitioner of Yoga becomes fixed at a hypothetical point in the vacant sky situated at a distance of roughly twelve fingers away from the tip of the nose, it is said that then the movement of the Pran Vayu becomes still.

[This refers to the Unmani Mudra described in verse nos. 16-17. It is a virtual trance-like state of the mind when it registers nothing and goes virtually into hibernation. With the metabolism almost at a standstill, the practitioner feels no need for breathing vigorously. The breath first moves slowly, almost in an imperceptible manner, and with practice it can be completely stopped. The latter state is the 'Keval Kumbhak' Mudra described earlier in verse no. 13/5.] (32).

33. When the spiritual aspirant is able to have a divine vision of the 'Tarak Brahm' (i.e. when he is able to experience the supreme ecstasy and bliss of conscious realisation) that comes when the mind is focused in the region of the forehead located between the two eyebrows (the area of the cerebrum) while practicing Yoga, all the activities that are related to this gross world are stopped, and the mind begins to find its rest and peace. All the numerous desires, wishes, aspirations and longings of the mind are eliminated; it wants nothing more.

[This is because it is the mind that actually receives and analyses the different inputs having their origin in the external world. It is the mind that then instructs the body to do anything in response. It is the mind that motivates the aspirant to perform deeds and act in a particular way in this world. With the mind becoming defunct, or when it becomes absolutely calmed down and loses all interest in the external world, it is obvious that the activities of the world would come to a naught.

Secondly, when the mind remains focused in doing Yoga, when its attention is fixed on something in which it begins to find greater and more enduring bliss and enjoyment, it would no longer wander here and there in the external world like a vagrant. The mind swerves towards this material world of sense objects because it finds happiness and joy in it; it finds pleasure and comfort in it. When the mind, on the other hand, keeps its self busy in concentrating in doing Yoga and finds a greater source of comfort and bliss in it than what it got out of the external world, it would easily turn towards this new source. So, when the mind finds that by focusing its attention and efforts in the various meditative exercises give it a greater degree of bliss and ecstasy, it would stick to them and abandon the world.] (33).

34. When the ascetic is able to experience that supreme transcendental cosmic Consciousness that is most auspicious by nature, that is revealed only in the form of Pranav (represented by the cosmic sound of OM), and in which there is no trace of doubts or confusions whatsoever—it is then that the Pran is said to stop its movement.

[When the practitioner of Yoga hears the cosmic Naad, which is visualized and described in the form of the monosyllabic word OM, while meditating, he is so overwhelmed by the thrill created by its resonance that he experiences a stupendous amount of spiritual bliss surging through his entire being, overflowing him and completely submerging him in its tide.

He becomes absolutely certain about it because of the fact that he has experienced it first hand and not only heard of it.

The Pran's movement stop because of the ecstasy that accompanies the hearing of OM and the titillation that it creates in the nerves, as the practitioner is so absolutely stunned and dumbstruck by this experience that his muscles and brain stop functioning. This may be a momentary experience in the beginning, but over time and practice it becomes robust and permanent.] (34).

35. Oh sage! When the spiritual aspirant is able to experience the presence of the vacant space of the subtle sky in the region of the heart, the Mana (here referring to the 'heart' because it is the latter that is associated with emotions, sentiments and various longings and infatuations that a creature has or develops in life) becomes free from all Vasanas, and instead begins to gain composure and calmness of demeanours.

When the heart too becomes vacant of emotions and desires along with the annihilation or dissolution of the mind, it is then that all the worldly Vasanas (worldly desires, passions, yearnings and longings) are truly dispensed with. It then becomes possible to remain focused on one's spiritual goal.

When this stage is reached, the movement of the Pran, or the vibrations of the Pranic energy inside the body of the ascetic, stops.

[The word 'Mana' here refers to the heart as well as the mind. It is the heart that shows various emotions and sentiments; it is this aspect of the heart that endears something to a man or makes him long for it or be infatuated with it. If the heart is not involved, the mind would not be fully able to focus its self on anything. Even those things that are the direct function of the mind and are its exclusive domain too depend on the heart. For instance, study and learning are functions exclusive to the mind, but then it is normal to say 'learn a thing by heart'. But the heart depends on the mind too. Even if the heart is very fond of anything or strongly longs for a particular thing, the mind can always supersede it and firmly deny access to the much-wanted thing should it decide that it is not in the interest of the creature.

So, it is during the higher stages of Yoga that the heart too becomes vacant of emotions and desires along with the annihilation or dissolution of the mind. When they work in tandem it is then that all the worldly Vasanas (worldly desires and longings) are truly dispensed with. It then becomes possible to remain focused on one's spiritual goal of self-realisation and Brahm-realisation.] (35).

36/1. In the above manner, there are a number of ways prescribed by different wise men by which a spiritual aspirant can exercise control over the movement of his Pran. In other words, by constant practice and employing a method best suited for his individual needs and temperaments, he can control the flow of the vital winds, and along with them the various life-factors that require regulation and regularization (36/1).

36/2. The aspiring ascetic should constrict the Kundalini and pull it upwards. This would open the hitherto-closed door for his Moksha (liberation and deliverance).

[This refers to the activation of the Kundalini and opening of the clogged Naadis in the body. The Kundalini is a coiled subtle cosmic energy center of the body that lies at the lower end of the spinal cord, blocking it with one of its ends. The subtle energy of the Kundalini represents the dynamism of the consciousness present in the body of the living being. The Naadi is the general term used for all the tubular ducts present inside the body through which all the life sustaining energy and impulses flow in the body. During Yoga, when the vital winds are heated and activated, they shake the Kundalini and loosen it up. Then they push up through the Kundalini which opens

the blocked mouth of the Sushumna Naadi, the main nerve of the spinal cord, and snakes up it to finally reach the top of the head.

The combined force of the vital winds and the dynamic energy of the Kundalini opens-up or unties the various Granthis (knots) and Chakras (subtle energy centers of the body lying between the lower end of the body and the top of the head) en-route to the top of the head. With these openings, a burst of immense spiritual energy is experienced by the ascetic. The Pran or life-consciousness reaches the top of the head, and when all the conditions are favourable and enough pressure is built up, it finally escapes out of the body through the Brahm-Randhra, the hair-like slit present on the top of the skull. It is called 'Moksha', because the Atma, the consciousness present in the gross body of the ascetic, finds its permanent freedom by breaking free from the fetters of the gross body and escaping into the vast fathomless sky much like a caged bird finding its freedom when it escapes through the trap-door of the cage.

It is called 'Moksha' also because it is the final escape of the consciousness along with the vital winds or Pran which, having escaped from the confines of the gross body through the Brahm-Randhra, merges with the cosmic wind or the air element present outside the body to become one and inseparable from it. The 'Pran' will no longer re-enter the body—meaning its liberation is once and for all; it is its final freedom from confinements and limitations which are against its natural temperament and habit of being free and unbound. [A simple illustration would help explain this concept. When we blow air (breath) into the rubber balloon, it swells up and acquires a shape quite different from its original form as a piece of lifeless latex. The fully blown balloon jumps and hops to indicate that the air that is trapped inside is restless to get out of its prison in the form of the body of the balloon. If we leave this balloon for a long time we would observe that the air gradually seeps out of it on its own. If we keep the air agitated by constantly punching and kicking the balloon, it burst out with force. The point of the matter is that the air resists being bounded and butted, it needs freedom—this is because the air or the wind element is habituated to being free, unshackled and unbound; it is its natural habit and temperament to be free and unshackled.]

The Atma, which is the 'true self' of all living beings and is pure consciousness, is also a synonym of Pran, along with the vital wind and other life-factors in creation which are generally regarded as Pran of a creature, as both the terms mean 'life'. Hence, when it is said that the 'Pran' escapes from limitations or confines of the gross body to enlarge and expand to cover the whole space of the sky once it comes out into the open sky outside, it is implied that the Atma—the 'self' of the ascetic—too has found its Moksha.

Prior to this final freedom, when the Pran had reached the area of the forehead between the two eyebrows en-route to the Brahm-Randhra the aspirant is able to experience a thrilling sensation which gives the aspirant extreme bliss and ecstasy. This is the moment of self-realisation when the ascetic experiences the bliss that is associated with being near and close to the cosmic source of beatitude and felicity called Brahm. This experience is a fore-runner and acts as a prelude for the final bliss, beatitude and felicity that awaits him when his Pran would escape from the Brahm-Randhra to give him freedom from all his agonies and torments.] (36/2).

36/3. The Kundalini lies in a dormant or sleeping state by covering and blocking the mouth of the path (i.e. the Sushumna Naadi) through which it would have to finally move out in the aspirant's ultimate quest for Moksha, or spiritual liberation and deliverance, emancipation and salvation.

The Kundalini wraps around this path like a serpent coiled around a tube, tightly clasping it in its embrace and blocking its opening with its hood.

[As stated in verse no. 36/2, the Kundalini represents the dynamic aspect of the consciousness present in the body of the creature. Normally for the un-initiated creature it is lying in a 'sleeping state' which is a metaphoric way of saying that the ignorant creature is unable to know or recognize his true astounding potentials. He does not know that a mighty source of spiritual and mystical power is hidden inside his own body much like the musk hidden in the belly of the musk-deer. It only requires igniting and then nothing would be beyond reach. This ignorance is the reason why the creature is always under pain and suffers from this or that agony; this is the reason why he feels that he is powerless and crippled; this is the cause of his fetters and bondages to this world and the body; this is why he needs the prop of various rituals and doing so many things in order to find ways to free himself from the shackle of this body and the world.

But once enlightenment and awareness dawns upon him he realises that should he fire up this Kundalini by means of the process described in the Upanishads, his deliverance and freedom is certain and within his reach. This ignorance of one's spiritual potentials is metaphorically called the 'sleeping Kundalini', while its removal and the dawn of enlightenment and awareness of one's inherent spiritual strength is called the 'rising of the dormant spiritual energy' in the form of the awakened Kundalini.

The Kundalini is visualized in the form of a snake that lies coiled when asleep. When it is coaxed with a stick it rises up and holds its hood to hiss violently. The same thing happens with the Kundalini. When it is coaxed with the heated vital winds during the process of Yoga that is especially designed to activate the Kundalini, the latter is shaken and stirred. It stands up like a snake holding its hood high and hissing. The heat and the pressure exerted by the vital winds help to push the energy of the Kundalini into the Sushumna Naadi. This is called the opening of the pathway to Brahm because this Naadi leads up right up to the top of the head where the ascetic experiences the bliss of Brahm-realisation.] (36/3).

36/4. An ascetic who practices regularly to make the Kundalini activated, and keep it activated, is able to attain Mukti (liberation and deliverance as narrated above).

If the Kundalini (i.e. the subtle cosmic energy that is present inside the body as the dynamism of pure consciousness) rests in the area above the throat, the ascetic is able to find Mukti. Such an aspirant finds enlightenment and self-realisation.

On the other hand, if the Kundalini remains below the throat the aspirant remains mired in ignorance and delusions. Such a man remains trapped and bonded in fetters of ignorance. He cannot find freedom from his spiritual shackles.

[In other words, if the ascetic is able to focus his attention in the forehead and contemplate upon the supreme consciousness that is a fount of extreme bliss and happiness, he finds liberation and deliverance from the uncountable torments and agonies that are inherent to this gross world. This is because he would have reached the sublime state of self-realisation; he would have risen above the mundane world and meditate on the sublime consciousness by focusing his mind on higher goals of life symbolized by the upper part of the body above the throat, as it is 'head' or 'chief' area of the body where the commanding centre called the brain is situated. He is able to attain enlightenment and self-realisation.

On the other hand, if he remains mired in the lowly affairs of the gross world as symbolized by the attention being focused in the lower part of the body below the

throat, the aspirant is deemed to be living in a spiritual void surrounded by delusions and ignorance. Such a man would be more concerned with filling his stomach, looking after the needs of his body and enjoying the pleasures of the sense organs rather than pursuing anything of higher value in spiritual terms. The enlightened man on the other hand would be least bothered about the grosser aspects of creation represented by the lower part of the gross body, and more concerned with noble and auspicious thoughts and pursuance of sublime goals of life symbolized by the upper part or the head where the brain is located. It is here that Brahm is said to have his symbolic abode in the body of the creature.] (36/4).

36/5. The Kundalini energy rises up and arrives at the head through the Sushumna Naadi instead of the other two paths open to it, i.e. the Ida and the Pingla Naadis. Therefore, the Sushumna Naadi is the one that takes the aspirant to the divine and supreme abode of Lord Vishnu.

[The Sushumna Naadi goes right up to the top of the skull, while the other two Naadis stop much below it. Refer verse no. 11 of section 4 of this Canto no. 1. It is in the region of the head that the supreme transcendental Brahm is said to have his abode. Lord Vishnu is none other than Brahm personified. So, since the Sushumna Naadi helps the ascetic in his 'self' realisation and Brahm realisation, it is said to be the pathway that leads one to the divine abode of Lord Vishnu. This is why the Sushumna Naadi is also called the Vishnu Naadi as well as the Brahm Naadi.

Besides this, meditation and contemplation are exercises that require intense concentration of the mind and intellect. When the combined efforts of the mind-intellect lead to self-realisation and experiencing of bliss, it is most convincing for the ascetic. This is true enlightenment as it does not require further testing and proving. It is a sublime state of consciousness that is a metaphor for Brahm-realisation.] (36/5).

37. The entire process of meditation (Yoga) involving the vital winds (Vayu) should be done with true dedication and faith, with proper coordination of the mind-intellect, the heart and the gross organs of the body. A wise and erudite practitioner should not allow his mind to swerve towards anything else or think of anything other than concentrating on the process of Yoga. He should not allow the mind to be distracted by anything that would disturb its focus and meddle with its concentration on Yoga. He should restrain the natural tendency of the mind to be attracted towards material comforts and pleasures of the world, or to strive for gratifying the sense organs of the body, and avoid the rigors demanded by Yoga, especially the process of Pranayam, or the process by which the vital winds are control and their powers harnessed for the purpose of reaching one's spiritual goal.

[In other words, the process of Pranayam which involves control of the vital winds and harnessing their stupendous powers and potentials to help the spiritual aspirant realise the glorious consciousness with its radiant splendour should involve a proper coordination between each individual unit of the body. It should be taken in a holistic manner and done with firm determination to reach one's desired spiritual objective. Yoga should be done with full concentration and sincerity, and not just to while away the time. It should be done with faith and conviction, and not merely to test its efficacy or veracity.

Besides this, the aspirant must watch out for any signs of distractions of the mind and the heart which together are called the 'Mana', or any indication that they are not fully focused on and committed to his spiritual goal. This is important because the Mana is the instrument which is needed by the aspirant to succeed in his spiritual

endeavours, and if this instrument is blunt and not working in its prime shape, reaching one's objective would be impossible. If the vehicle is rickety, if its parts are not working properly, reaching one's destination becomes uncertain and riddled with problems. Hence, if the mind is not fully controlled and focused in Yoga, if the heart is not fully involved and committed to Yoga, the result would be far below expectations, and the efficiency with which the vital winds can be controlled to aid in one spiritual pursuit would also suffer in equal proportion to the degree of distraction.] (37).

38. It is wrong to suggest or say that one should not worship Lord Vishnu on a particular day or night. Rather, Lord Vishnu should be worshipped at all times, and not only in the day-time or in the night-time. [In other words, it is incredulous and nonsensical to suggest that worship or honouring of the Supreme Being is prohibited on any particular day or night as it is inauspicious for such worship or honour. The Lord can be shown respects anytime, at all times. Whenever the Lord is shown respect that time itself becomes auspicious. Again, it is equally incongruous to say that the Lord should be worshipped only in the day, or only at a fixed time of the day. The Lord can be worshipped and paid obeisance to any time of the day or night.] (38).

39. Oh Shandilya! The divine entity (here referring to the pure consciousness called the Atma) that lives in the subtle space of the heart is the one that drives the five sense organs, and is also the entity that kindles enlightenment and wisdom in the aspirant.

[The gross body has five sense organs of perception such as the eye, the ear, the nose, the tongue and the skin. These sense organs are made functional and active only as long as there is 'life and consciousness' in the body, for a dead body does not see, or hear, or smell, or taste, or feel anything though all these five organs are present in it. Hence, it is the pure conscious Atma, which incidentally is also the 'true self' of the creature that actually makes these five organs work and carry on with their assigned duties or functions. The same argument applies to the five organs of action such as the hand, the leg, the mouth, the genital and the excretory.

Similarly, it is the Atma, the pure consciousness residing inside the gross body, that inspires a man to think, to ponder, to contemplate, and to research the 'truth'. A dead body or one from which the consciousness has left would not think or meditate. Hence, it is the Atma residing in the subtle space of the heart that is responsible for a creature's desire to acquire truthful spiritual knowledge, and to be successful in actually acquiring it. In other words, it is the Atma that kindles the desire in a man to become wise, erudite and enlightened, and abandon the darkness of ignorance and delusions.]

The Khechari Mudra is also dependent upon this divine entity that resides in the subtle space of the heart of the spiritual aspirant. [Again, it is the consciousness present in the body that not only inspires but actually enables the man to undertake the arduous exercise of doing Khechari Mudra, which incidentally is the toughest of all the Mudras of Yoga, and then gives him the courage, energy and strength to persevere with it till success is completely achieved.

In short, it is the pure conscious Atma that provides the impetus for all that the creature does. It is the Atma that not only drives his gross body but also his spiritual inclinations.]

Hence, you (Shandilya) must always strive to remain focused on this divine entity. In other words, you must never lose sight of the pure conscious Atma that

resides in the subtle heart while you do anything in this world. This Atma must be your spiritual goal in all meditative and contemplative exercises (39).

40. The vital wind (breath or Pran) flows continuously between the left and the right Naadis (i.e. between the Ida and the Pingla Naadis representing the left and the right nostrils respectively). In other words, the vital life-consciousness flows in the Sushumna Naadi as it lies between the Ida and the Pingla Naadis that lie to its left and right respectively.

The Khechari Mudra is also focused on this area. That is, the mind is focused on the life-consciousness that flows through the Sushumna Naadi while one does the Khechari Mudra. The point where the mind is to be focused during the Khechari Mudra is the tip of the nose as well as the central point between the two eyebrows that lies at the root of the nose. There is no doubt about it (40).

41. The area between the Ida and the Pingla Naadis is like the yawning depths of the fathomless cosmic sky which devours anything that falls in it. This air or wind that enters this area is devoured by it. In other words, when the ascetic is deeply engrossed in doing the Khechari Mudra when his mind is totally focused in the area mentioned here, his breathing stops. The ascetic enters in a deep trance-like state. [Refer verse no. 15-19 of this section no. 7. The area referred to here is the point in the forehead that lies between the two eyebrows and at the root of the nose. It can be compared to the cosmic 'black hole' which is so mysterious and powerful that it swallows even the light that attempts to pass through it. It is a complete vacuum which would not allow anything to escape its grasp.]

The Khechari Mudra is also established there or done there, and it is here that the 'Truth' is also found. [The 'Truth' referred here is the awareness of the self and the pure consciousness that is realised when the mind is focused in the area referred to in this verse. The Khechari Mudra is the meditative posture that helps the ascetic in this realisation and experiencing the glorious radiance and magnificence of the Atma and the 'self'. This is why the 'third eye of wisdom' is said to be located in the forehead between the two eyebrows and at the root of the nose. Refer verse no. 42/1 below.] (41).

42/1. Between the Chandra (Moon) Naadi and the Surya (Sun) Naadi is situated an area that hangs in space without support. It is a vacant sky, and the Khechari Mudra is symbolically established there, or it is here that one focuses one's attention while doing the Khechari Mudra. It also implies that when one mind and attention are focused in the area between the Chandra and Surya Naadis while one does the Khechari Mudra, he is so lost in meditation that this world and the body cease to exist for him. He becomes light and subtle to such an extreme that all his sense organs, along with the mind itself, goes into a virtual sleep-like state called the 'Sushupta state' when nothing matters for the ascetic; it is the state of existence when he is completely neutral and disinterested in everything in this gross world. He is like a man suspended in the void of the deep sky high above the earth between the moon and the sun. It is a state of total numbness of the senses that are accustomed to being attracted towards the grosser aspects of this creation.

[The idea expressed in this verse is exactly the same as in verse no. 41. The 'Chandra Naadi' is the Ida Naadi, and the 'Surya Naadi' is the Pingla Naadi—refer verse no. 11 of section 4 of this Canto 1. The area between them is neutral as the heat of the Sun is neutralized by the coolness of the Moon. It is like the center of a bar

magnet which is neutral, and it neither attracts nor repels anything. When the ascetic becomes focused on this area, he lives in a state of trance which is like living in suspended animation. It is like being in the deep space of the sky much above the earth's gravitational pull when everything is suspended in mid-air.

The word 'Khechar' refers to someone who lives or moves in the vacant space of the sky, e.g. the bird. The metaphysical import of this vacuum is that when the ascetic is successful in doing the Khechhari Mudra, he becomes emotionless and completely neutral. He loses all interests in the world and its material sense objects. He is totally oblivious of his own body. He is just like an object hanging without support in the sky; he is like the earth hanging without support between the sun and the moon.

Modern science has established that all the celestial bodies of the solar system, such as the earth, the moon etc. stay in their respective position in the bottomless bowls of the cosmos due to some invisible force of Nature called the mutual gravitational pull exerted by one on the other, and by the sun on all of them. The sun itself is held in position by some greater force operating at the level of the milky-way or the galaxy of which the entire solar system is a minute and fractional part.

Hence, a delicate balance is established between the gross and the subtle. The invisible force that helps to establish this balance is the 'Truth' that even modern science has accepted. Even as science endeavours to find the grand Truth behind all physical phenomena, metaphysics too strives to find the Truth behind all mystical experiences and observations. It is this mystical and unexplained 'Truth' that is being referred to in verse no. 41 above.] (42/1).

42/2. The Khechhari Mudra is successfully accomplished when the tongue is sufficiently elongated and made flexible by a complicated process of piercing it, rubbing it and pulling it over time so that it can be inverted and tucked inside the throat, and then made to wriggle into the cavity of the skull from the inside. During this arduous enterprise, the eyesight is fixed in the central point of the eyebrows. [The detailed process of elongation of the tongue and how it is tucked inside the throat to accomplish the Khechhari Mudra is described in Yog Kundalini Upanishad of Krishna Yajur Veda, Canto 2, verse nos. 28-49.]

When both the tongue as well as the subtle aspect of the mind are focused in the subtle sky represented by the hollow space of the skull, and when the tongue develops a natural tendency to move up instead of downwards, it is only then the aspirant can hope to taste the nectar of Amrit.

[In other words, if the tongue derives pleasure in talking about spiritual matters or about things concerning higher, sublime and subtle values of life, when the tongue desires to taste the nectar of spiritual bliss and ecstasy that drips during moments of self-realisation when the pure consciousness is experienced or witnessed first hand, when the tongue wishes to talk about the eclectic and sublime consciousness and ways to realise it instead of wasting time in talking about mundane matters of the deluding and material world which is perishable and entrapping, when the tongue has no interest in either talking about worldly things or has any desire for tasting delicious things of this gross world, it is only then that the spiritual aspirant can ever hope to find truthful bliss and happiness.

As long as the tongue has a tendency to move 'downwards', which is metaphoric way of saying that the aspirant is attracted to this gross world for he wishes to taste its delicious things and talk about its material gross things, but as soon as the aspirant develops a taste for higher values of life and wishes to taste the nectar or

Amrit of eternity, bliss and beatitude got from self-realisation which is experienced when he gets acquainted with the pure consciousness that resides in his inner-self, the tongue is metaphorically said to be moving 'upwards'. While the latter tendency of the tongue is a metaphor for the aspirant's Mukti or liberation and deliverance from the gross world, the former tendency is equivalent to his remaining bound in fetters and shackled to the deluding world and its temptations.] (42/2).

42/3. [Verse nos. 42/3-42/4 describe the Yoga exercises that aid in attaining success in the Khechari Mudra.]

The practitioner should sit in posture so that the left leg is bent inwards from the knee and its heel presses against the anus, while the right leg is stretched straight out. This right foot is then grasped by both the hands. [This is called the Mool Bandh.]

Air is first filled inside the body (i.e. Purak is done) by inhaling it through both the nostrils, and then its flow is stopped by constricting the muscles of the throat (i.e. Kumbhak is done). [This is called the Jalandhar Bandh.]

This helps to establish the vital air that is held up in the upper part of the body. [When breathing is stopped, the air inside the body remains static and trapped in the upper part of the chest. This is called the Uddiyan Bandh.]

This process helps to destroy all torments and miseries (i.e. it helps to eliminate all bodily ailments by helping to cleanse the Naadis, oxidize the tissues, revitalize them, detoxify the body, and rejuvenate the dormant energy inside it). Having successfully mastered this technique, even poison can be neutralized by the internal powers of the body. [In other words, the body becomes so strong and robust internally that it can fight infections and harmful chemicals that might gain entry in it by any means. The immune system is bolstered and the body rarely falls ill.]

Such grave diseases as tuberculosis (or the decay disease), inflammation or enlargement of glands or any other organ or tissue of the body, tumors, piles, fistulas, fissures or any other disease of the anus or rectum, as well as incurable diseases of the skin are cured by this method.

In fact, this Yoga exercise by which the practitioner is able to control the vital winds enables him to completely eliminate the fear of death. [This is achieved for two reasons—one is that the body becomes strong and cleansed of impurities, its nerves and veins are de-clogged, its vitality, vigour and energy are restored, its immune system gets a boost, it becomes strong and robust internally so much so that it can easily withstand the rough and toil of the rigours of life without falling prey to various diseases that drain the body of its strength and cause pre-mature aging. With regular and persistent practice of Yoga, the natural decay process of the body is controlled, and though the aspirant's age increases with the normal passage of time, the body still retains its younger form of his early years without showing signs of aging.]

The second reason is that self-realisation and enlightenment is a natural accompaniment or natural reward of Yoga when the practitioner realises that his body is not his 'true self', but the latter is the Atma or the pure consciousness that resides in the body. This Atma is an eternal and imperishable entity; it is sublime and subtle as opposed to the body which is gross and perishable. It is the body that dies, and not the Atma. Hence, there is no question of either fearing from death or actually dying.] (42/3).

42/4. [The next step is a modified version of the exercise described in verse no. 42/3.]

The next higher stage of controlling the vital winds and adopting the Bandhas described above in order to attain success in Khechari Mudra entails folding in of the left leg from the knee joint and pressing its heel against the testicles from below. The right leg is bent from the knee and placed on the thigh of the left leg. The vital air (breath) is filled inside the body (i.e. Kumbhak is done), the chin is pressed on the left side of the chest in the region of the heart (so that the muscles of the throat are naturally constricted and breathing restricted), and the mind is focused on contemplating upon the Atma, the pure conscious 'self' that resides in one's inner-self.

This contemplative and meditative exercise helps the spiritual aspirant to attain mystical powers that are invisible and intangible but divine and super-natural (42/4).

43. The air should first be inhaled or pulled in from the outside (i.e. Purak should be done), and then it should be held in the stomach (i.e. Kumbhak should be done).

After that, instead of exhaling this air, it should be consciously diverted to the region of the navel, the tip of the nose and the big toes of the two legs. This would need concentration of mind and great effort (43).

44/1. A practitioner of Yoga who does this exercise (described in verse no. 43) daily during the evening hours (i.e. at dusk) is freed from all diseases besides feeling relaxed and rejuvenated (44/1).

44/2. By fixing the sight (i.e. the attention of the mind) in front of the nose it is possible to control the flow of air (i.e. it is possible to control breath).

When the vital air/wind is made to remain concentrated in the center of the navel (or when the practitioner of Yoga focuses his mind in the navel and imagines that the inhaled air is circulating in the navel during the phase of Kumbhak), all the diseases are eliminated.

When this vital air/wind is consciously moved down from the navel and made to remain concentrated in the big toes of the legs (i.e. when the practitioner of Yoga uses the powers of his mind to visualize that the vital wind moves down from the navel, and instead of getting exhaled through the nose it goes to the big toes and gets localized there during the next phase of Kumbhak), the body feels very light. [This is the reason why, according to Hindu tradition, a string is tied tightly around the two toes of a man's dead body to prevent the legs from lifting from the ground. Obviously, should this ever happen it would be extremely embarrassing and awfully frightening for all those present around the dead body.] (44/2).

45. A man (who practices Yoga and) who always draws in air (virtually 'drinks or imbibes' air) through the tongue, and is able to consciously taste the nectar-like sweetness of the fresh air, is never tired, never feels exhausted or weary.

[This practice refers to an aspirant who practices Pranayam by inhaling air through the mouth instead of the normal system of inhalation done through the nose, and consciously experiences the flow of wind over the tongue, enjoying the massage that this flow gives to the nerves and tasting its refreshing pristine taste rich in rejuvenating natural gases and pure micro-elements, is able to fine-tune his body faster and more effectively than the conventional method of the normal breathing process. His tissues are rapidly oxidized and re-energized. This is because the fresh air that is drawn in through the mouth comes in contact with the wet surface of the

tongue which is rich in veins and nerves. The oxygen and other re-vitalizing elements in the air are absorbed faster and directly in the blood supply of the body when they come in contact with the wet surface of the tongue that is rich in veins. Similarly, the nerves too get instant massage and feel refreshed with a surge of renewed energy.

This process of direct dissolving of rich gases into the blood stream is expressed in the terms of the tongue tasting the nectar-like taste of fresh air. It is also a metaphoric way of saying that the practitioner is able to enjoy the benefits of regulated Pranayam instantly and with vivid results. This instantaneous rejuvenation process helps the body to overcome fatigue and listlessness faster as compared to the normal process when the same oxygen and other re-vitalizing elements would get absorbed in the blood supply in a long-drawn process after entering the body. This is why when a man has done some strenuous exercise such as lifting a heavy weight he pants with an open mouth.]

When such breathing is done regularly, the practitioner never feels hot; he does not have a burning sensation in the body. [This is also because of regular and faster ventilation of the body. Open mouth and wet tongue helps to keep the body cooled.]

All his diseases are eliminated soon. [When the body is well oxidized, when its tissues are well-detoxified, when they work in their prime condition, when the body is well ventilated, it is natural that infections and diseases would be kept at bay.] (45).

46. A Brahmin (or any wise, learned and self-disciplined man) who drinks fresh air (as described in verse no. 45) at least twice a day regularly, at dawn and at dusk, the patron Goddess of speech and knowledge makes her auspicious appearance in his speech within a period of three months. [That is, an aspirant who practices Pranayam by inhaling air through the mouth instead of the normal system of inhalation done through the nose, is able to fine-tune his faculty of speech and the organs associated with it so much so that his voice becomes sweet, he is able to coordinate his thoughts and speech so that he speaks articulately and effectively, he is able to keep the mind and intellect pruned and well organized, and is honoured and praised as a good orator and preacher.] (46).

47. If this exercise is practiced by an aspirant for a continuous period of six months, all his diseases are eliminated or at least ameliorated.

A wise and seasoned practitioner of Yoga (i.e. Pranayam) who drinks air through the tongue (i.e. who inhales air with the mouth open) and keeps it localized or focused at the root of the tongue (i.e. who practices the Jalandhar Bandh and keeps the vital winds called Pran focused in the upper part of the body, especially the region of the forehead) is able to drink or imbibe Amrit, the nectar of spiritual realisation and enlightenment (i.e. he is able to experience the bliss and ecstasy that comes with enlightenment and realisation of the consciousness in higher stages of successful Yoga).

This success bestows all-round auspiciousness to him; it provides him with welfare and stands him in good stead (47).

48. If the aspirant (i.e. the practitioner of Yoga) is able to hold the vital air that flows through the Ida Naadi (i.e. the left nostril) and concentrate it in the middle of the two eyebrows so that the mind becomes focused here—and he does this exercise regularly, then he is entitled and empowered to break through all hurdles or barriers in

his spiritual pursuits. He is also entitled and empowered to partake of all the food meant for the exalted Gods¹. [Refer also to verse no. 50 herein below.]

Besides this benefit, he is able to get rid of all diseases from which he might be suffering at that time (48).

[Note—¹The food eaten is digested by the juices in the body and made available to the various organs and tissues. By carelessness and unorganized lifestyle the body's functioning becomes worn-out, its immune system takes a beating, it becomes disease-riddled, and the digestion is weakened. With Yoga these shortcomings are taken care of and the body is rejuvenated. With improved digestion the body gets better and proper nourishment. The Gods are said to reside in the different organs of the body of the man because the body is a microcosm of creation. Whatever the man ate was eaten by these Gods. These facts have been explicitly mentioned in the Aiteriya Upanishad of Rig Veda tradition, in its Canto 2, verse nos. 3-5. Now therefore, the intention of this verse is that by doing Yoga the man's body starts working properly and all that he eats is properly digested and its nutrients duly absorbed by the tissues. This helps the Gods living inside the body in a subtle form fully satisfied, and this is depicted by the man remaining happy and cheerful as well as free from all diseases.]

49. If the aspirant (i.e. the practitioner of Yoga) inhales air through both the Naadis (i.e. through the Ida and Pingla Naadis symbolizing the left and right nostrils respectively) and keeps this air/wind localized in the two halves of the pot-like abdomen (i.e. holds the breath in the two lobes of the lungs which occupy the two sides of the abdominal cavity) for a suitable period of time, he is freed from the shackles of all his diseases (i.e. his ailments are eliminated, and he regains his health) (49).

50. An aspirant (i.e. the practitioner of Yoga) who practices the exercise of drawing in or attracting air through the tongue and keeping it held in the abdomen three times a day (dawn, noon and dusk) for a continuous period of three months is entitled and empowered to break through all the hurdles or barriers in his spiritual pursuits. He is also entitled and empowered to partake of all the food meant for the exalted Gods. [Refer above to verse no. 48 and its accompanying note also.] (50).

51. A person who does regular Yoga by holding the vital air/wind on the tip of the nose with full concentration for a period of one Muhurta (roughly for period of one hour and forty-eight minutes) daily, all sorts of fevers from which he might be suffering are calmed down and got rid of. All sorts of poisons or toxins in the body are neutralized. Spiritually, all the sins and their negative affects that have accumulated for many generations are eliminated (51).

52. [This verse describes the various benefits got by learning to exercise restraint over the different organs of the body, both the gross organs as well as the subtle ones.]

By exercising restraint over the pupils of the eye and visualizing the presence of consciousness there one is able to gain all types of knowledge. [This means that one must see only things worth seeing, and pay attention to details even in things that are seen in order to learn from what is seen or observed. On the other hand, if the sight is focused on wrong things one would learn things that are demeaning for the soul.]

By focusing the mind on the tip of the nose (as done during meditation as described in earlier verses of this Canto, especially in reference to Pranayam and Khechari Mudra), and visualizing the presence of consciousness there, one is able to

have knowledge of the Indra Loka. [Indra is the king of Gods according to the Purans, and from the perspective of metaphysics he is the chief Pran or vital life-forces of the body that control its independent units. This is because the word 'Indra' is derived from the word 'Indri' meaning 'organs of the body'. Hence, Indra Loka refers to the comprehensive knowledge of the mundane gross world as well as the sublime subtle world.]

By focusing the mind below it and visualizing the presence of consciousness there one is able to gain knowledge of the Agni Loka. [This refers to concentration on the point in the forehead between the two eyebrows. It is here that one experiences the radiance and splendour of consciousness shining through and lighting the inner-self of the spiritual aspirant. The concentration of the 'Chita' or the mind and its sub-conscious during meditation and contemplation helps one to become 'enlightened and self-realised', and this is equivalent to removal of darkness of ignorance and delusions. Since darkness can only be eliminated by 'light and illumination' which are an integral part and characteristic feature of the fire, it is metaphorically said here that when one is successful in concentrating one's attention 'below the tip of the nose', i.e. at the root of the nose and at the point where it meets the two eyebrows, one is enlightened and self-realised. All his ignorance and delusions are burned in the 'fire' of knowledge.]

By focusing the mind in the eyes and visualizing the presence of consciousness there one is able to have knowledge of the world. [This is obvious. The implication is that the eyes are able to see and register anything seen only as long as the mind pays attention on the thing seen. If the mind is not focused on the object seen, the eyes may be looking intently at it but for all practical purposes the man would not see it and would not be aware of it. The eyes are able to see only the grosser aspect of the world, that aspect which has a form and size. Hence, this stanza has two meanings—one is that with the eyes the aspirant is able to see not only the external features of the world but also the truth behind the external façade which is often misleading, and two, that he also able to have a deep insight and develop a foresight.]

By focusing the mind on the ears and visualizing the presence of consciousness there one is able to have knowledge of the Yam Loka. [The word 'Yam' refers to death as well as self-restraint of passions. The phrase 'Yam Loka' also refers to hell and its sufferings, as well as the world after death. Now, a man is able to hear anything only by the organ of the ear. The ears make him aware of the wailings and cries of suffering creatures, which in turn would enlighten him of the pain and agonies that are so characteristic of this mortal world. The ears help him to hear and then learn about the cause of these sufferings on the one hand, and the ways out of it on the other hand. In other words, the ears make him aware of the sufferings if one is not following the rules of Nature and allows himself to be indulgent in this mortal gross world of material sense objects on the one hand, and then it also makes him aware of what is good and what is not when he hears the teachings of the scriptures through the medium of the ears on the other hand. But all these are made possible only as long as the mind registers what the ears hear, and enables the ears to pay attention at what is being heard or said. If a man is so stupid that he does not grasp what he hears, or if he does not understand the profound meaning of the various scriptures being preached or explained to him, then he may have spent his whole lifetime hearing them but it is as good as not having heard them at all. Similarly, if a man hears the cries and wailings of all those suffering around him, but still have no awareness of the reality of this horrifying world, then he too has not heard anything.]

By focusing the mind on the side of the ears and visualizing the presence of consciousness there one is able to have knowledge of the Raksha Loka. [The word 'Raksha' refer to the devils and demons. In other words, if a man has a natural tendency to be cunning and find pleasure in attempting to secretly hear what other people are saying, if he enjoys spying and eavesdropping unnecessarily and without any justified reason, then he is virtually hearing things not meant for him, and such deceitful and improper behaviour makes him no less than a devil in disguise. Such people are suspicious of everyone and can never be relied upon much like demons and devils. They are backstabbers and backbiters; they create ill-will by spreading rumours and divulging things that are supposed to be kept under wraps. Words that are not meant to be heard or paid attention to by one but still registered by the mind and the sub-conscious are like words of ghosts and phantoms, and therefore the ear that hears such words are hearing demons and devils speak. In brief, this stanza teaches the spiritual aspirant not to pay attention on things not meant for him or heard by him, not to waste his energy and precious time on hearing nasty and deceitful things, or things that are not within the definition of righteousness, propriety and probity.]

By focusing the mind on the back of the body and visualizing the presence of consciousness there one is able to have knowledge of the Varun Loka. [Varun is the patron God of water. This stanza refers to the positioning of the kidneys which lie in the posterior side of the lower abdomen. This stanza refers to the awareness in a man which sub-consciously tell him when the urinary bladder is full and needs to be emptied.]

By focusing the mind in the left ear and visualizing the presence of consciousness there one is able to have knowledge of the Vayu Loka. [Sound travels through the medium of air. So, this statement refers to the fact that if the mind is attentive enough it can hear anything that is said or any sound that is made even at a long distance as the air would carry it to his ear. Special reference to the left ear may also refer to the leftist social principles of which a man is aware. It implies that he is concerned about the welfare of all in the society and not self-centered and selfish. Besides this, it is pertinent to note here that inhaling vital air first through the 'left' nostril or the Ida Naadi while doing Pranayam is stressed in Yoga. Hence, the reference to the 'left' ear also means that the aspirant begins to hear the roar of the cosmic wind blowing in the distant horizon when he is in deep contemplative state of Yoga.]

By focusing the mind in the throat and visualizing the presence of consciousness there one is able to have knowledge of the Chandra Loka. [The word 'Chandra' means the moon. The reference here is to the Jalandhar Bandh when the aperture of the throat is closed during Yoga and the Pran or the vital winds move through the Ida Naadi, which is also called the 'Chandra Naadi', to reach the Agya Chakra located in the forehead between the eyebrows where the ascetic experiences extreme ecstasy and bliss that comes with awareness of the pure and sublime consciousness that resides in the body itself. This is equivalent to his tasting the nectar of bliss that drops from his head into the throat during this stage of Yoga. This nectar is called Amrit and it is stored in the moon which is regarded as the heavenly pitcher of Amrit, the elixir of eternal and undiluted bliss and happiness that the Gods drink. Hence, this stanza refers to the experiencing of extreme bliss and ecstasy of spiritual realisation when one is successful in meditation and contemplation. It also might refer to the fact that the ascetic's words become full of wisdom and erudition besides being sweet and pleasant to hear as symbolized by the presence of Goddess Saraswati on his

tongue as referred to in verse no. 46 above in this section no. 7 of the present Canto 1.]

By focusing the mind on the left eyes and visualizing the presence of consciousness there one is able to have knowledge of the Shiva Loka. [Lord Shiva is the God who brings about the conclusion of creation. The term ‘left’ refers to one being adversely inclined towards anything, or not being favourable to any given thing or event. It is only when the mind is not in favour of anything or situation that the man would think of eliminating it or concluding it. Since Lord Shiva is the patron deity of conclusion of the world, the symbolism is clear—that if the mind is not favourable to anything, or when one does not see anything favourably, he would be inclined to eliminate it by shunning it completely. When the mind does not register anything, it is as good as being concluded as far as the creature is concerned in spite of its presence and the creature actually looking at it.]

By focusing the mind on the head and visualizing the presence of consciousness there one is able to have knowledge of the Brahm Loka. [This has reference to the area of the head where the brain is located. The brain is the only entity in the body that thinks and has intelligence; hence it is a symbolic abode of the Supreme Being. The Aiteriya Upanishad, Canto 1, section 3, verse no. 12 describes how Brahm, the Supreme Being, had entered the body of the man at the time of creation by entering it through a hair-like slit on the skull, which came to be known as the Brahm-Randhra. Yoga Upanishads describe how the Pran of the ascetic experiences the presence of Brahm, the cosmic Consciousness, when it enters the region of the head above the root of the nose. It is then that the practitioner of Yoga becomes self-realised and enlightened. When the time comes, the Pran escapes through this Brahm-Randhra into the outer sky, thereby providing the man with his final liberation and deliverance, called his Mukti. Hence, this stanza refers to Brahm-realisation, or experiencing the presence of cosmic Consciousness leading to enlightenment and self-awareness when the mind is focused on doing Yoga in its heightened and most refined form.]

By focusing the mind on the sole of the foot and visualizing the presence of consciousness there one is able to have knowledge of the Atal Loka. [The genesis of creation describes that the lower worlds were created from the feet of the Viraat Purush who is the all-encompassing macrocosmic form of the Supreme Being. This stanza refers to this fact because the human body is a microcosm of the same Viraat Purush. In more practical terms it means that one feels the ground below one’s feet only because the mind enables the soles to be aware of its presence, or only as long as there is conscious life in the soles. When the mind is diverted somewhere else one would not be aware of the ground on which one walks.]

By focusing the mind on the toes of the leg and visualizing the presence of consciousness there one is able to have knowledge of the Vital Loka. [The Vital Loka is an extension or projection of the Atal Loka, and is a part of the seven types of lower worlds. The toes are like the feelers of the leg which resemble the shortened tentacles of an insect by the help of which it gets the hang of things in its front. The idea here is that even though the soles of the feet might have life in them that enables a man to feel the ground under his feet, but the toes might be paralyzed and unable to feel any sensation at all, as happens during frost bite. In short, the idea is that each unit of the man’s body is kept alive and functioning only as long as the mind and its sub-conscious decides it to be so. Otherwise that particular organ is as good as dead. From the metaphysical perspective it means that the creature’s body or any of its organs is worth its while only as long as there is life-consciousness in it.]

By focusing the mind on the ankle-joints and visualizing the presence of consciousness there one is able to have knowledge of the Nital Loka. [This is the third of the seven lower worlds.]

By focusing the mind on the calf and visualizing the presence of consciousness there one is able to have knowledge of the Satal Loka. [This is the fourth of the seven lower worlds.]

By focusing the mind on the knee-joint and visualizing the presence of consciousness there one is able to have knowledge of the Mahaatal Loka. [This is the fifth of the seven lower worlds.]

By focusing the mind on the thighs and visualizing the presence of consciousness there one is able to have knowledge of the Rasaatal Loka. [This is the sixth of the seven lower worlds.]

By focusing the mind on the hip-joint and visualizing the presence of consciousness there one is able to have knowledge of the Talaatal Loka. [This is the seventh and the last of the lower worlds.]

By focusing the mind on the navel and visualizing the presence of consciousness there one is able to have knowledge of the Bhu Loka. [This is the terrestrial world. The 'Bhu Loka' is the first of the seven upper worlds. The probable reason to say that by focusing the attention on the navel one is able to have knowledge of the Bhu Loka is that it is through the navel that the man's body derives its nourishment when it is in the mother's womb, and the navel is said to be the center from where all the Naadis (nerves and veins) originate and then radiate to all the parts of the body. These Naadis make a man aware of the world around him and enables him to live in it. All the internal gross organs of the body, such as the intestines, the kidneys, the pancreas, the genitals, the liver, the heart, the lungs etc. are also located in the area of the body of which the navel is the epicenter. Hence, the navel is the part of the body that makes a man aware of the terrestrial world around him.]

By focusing the mind on the stomach or the cavity of the abdomen and visualizing the presence of consciousness there one is able to have knowledge of the Bhuvaha Loka. [The 'Bhuvaha Loka' is the second of the seven upper worlds. This is the world above the earth and is the lower heaven. It is here that the sky has its beginning above the surface of the earth. The cavity of the stomach and the abdomen are like this sky because they are nearer to the navel which represents the terrestrial world or the surface of the earth.]

By focusing the mind on the heart and visualizing the presence of consciousness there one is able to have knowledge of the Swaha Loka. [The 'Swaha Loka' is the third of the seven upper worlds. This is the middle heaven where the junior Gods live. The heart is emotional and is easily taken for a ride. It rarely thinks of spiritual matters though it is here in its subtle sky that the 'spirit' lives in the form of the Atma of the man. The Gods that live in the heaven are also noble 'spirits' who have not found total emancipation and salvation because had they achieved this ultimate destination they would not have existed as 'Gods' in the first place. These Gods are also emotional and have their own passions, longings, preferences and biases like the heart of the man. Just like success in any venture in this material world is said to be quite dependant upon the help provided by these Gods, the involvement of the heart is absolutely necessary if one needs to be totally focused on the task at hand. Otherwise he would be doing it 'half-heartedly'. The involvement of the heart in the process of learning is also evident when we say that the subject is to be learnt 'by heart', though technically it is the brain that actually does the learning job.]

By focusing the mind on the upper area of the body above the heart and below the throat, and visualizing the presence of consciousness there one is able to have knowledge of the Maha Loka. [The 'Maha Loka' is the fourth of the seven upper worlds. The word 'Maha' means 'great or greater' like we have 'Greater London'. It is an extension of the Swaha represented by the heart. The probable reason of equating the upper area of the chest above the heart to this 'Maha Loka' is that the broader face of the cone-like heart faces up while its tapering end is pointing downwards.]

By focusing the mind in the Kantha or the throat region and visualizing the presence of consciousness there one is able to have knowledge of the Janaha Loka. [The 'Janaha Loka' is the fifth of the seven upper worlds. It refers to the area of the world which is inhabited by creatures who speak, as the voice is located in the throat. A man is made conscious of the presence of life in any part of the world only when he hears about it, or when it is spoken about. Similarly, one makes companions and expands his reach in this world by using the faculty of speech to make his views and intentions known. Hence, it is appropriate to call the throat as being the medium by which one becomes aware of the Janaha Loka, and gains knowledge of it.]

By focusing the mind in the middle of the two eyebrows in the forehead and visualizing the presence of consciousness there one is able to have knowledge of the Tapaha Loka. [The 'Tapaha Loka' is the sixth of the seven upper worlds. The word 'Tapa' refers to observing stringent austerity, doing penance and suffering hardships for some noble cause. Meditation and contemplation envisages strict control over the numerous dalliances of the body and its natural desire for seeking gratification as well as pleasures and comforts of the material world. To do Yoga, especially the one of higher spiritual dimension as described in this Canto which involves concentration of mind in the forehead between the two eyebrows so that spiritual awakening is made feasible and one can experience the presence of the consciousness there (refer verse nos. 17-23, 33, 48), is equivalent to doing Tapa as it requires strict discipline and self-control. Those spiritual aspirants who do Yoga are actually doing Tapa for their spiritual liberation and deliverance.]

By focusing the mind in the head (i.e. the upper area of the head where the Sahastraar Chakra and the Brahm-Randhra are located, and where Brahm is said to have his divine abode in the man's body), and visualizing the presence of consciousness there, one is able to have knowledge of the Satya Loka. [The 'Satya Loka' is the seventh and the last of the upper worlds. It is called 'Satya' meaning 'truthful' because it is here that the ascetic comes face to face with the cosmic 'Truth' in the form of Brahm. More practically it refers to the brain with its intellect and the faculty of thought with its magnificent ability to separate the wrong from the right, to distinguish between what is false and what is true, to show the creature the right and auspicious path to his welfare and good. It is the higher level of the intellect that distinguishes a man from an animal, and an evil and sinful man from a noble and holy one. No other organ, singularly or in conjunction with others has this ability. So, since intelligence and consciousness go hand in hand, and since the Supreme Being is the most wise and intelligent entity in creation, the head is regarded as the abode of Brahm. The mind and intellect drive all the activities of the man, and are regarded as the 'captain' or the 'chief commander' of the entire setup known as the body of the man just like the Supreme Being is the chief commander of the vast creation. From the metaphysical perspective, when the aspirant realises the presence of this cosmic divinity in the form of pure consciousness residing in his inner-self along with the understanding that his 'real self' is this sublime consciousness that is eternal and

imperishable, and not the gross body in which this consciousness lives, as also the fact that both the body as well as the rest of the world are gross, perishable and therefore false and deluding, he is deemed to have realised the spiritual 'truth' of existence. When this happens it is metaphorically said that he has had knowledge of the 'Satya Loka' or the truthful nature existence.]

By focusing the mind on what is Dharma and what is Adharma (i.e. when the mind is able to distinguish what is right and proper, and what is not), the man is able to know of the past and the future. [When he analyses his present situation, good or bad, and researches on the factors which result in creating a similar situation, he can intelligently trace back to his past to visualize what he must have done sometimes long ago due to the effect of which he is in a particular situation today. This would also help him to predict his future as every action has a predictable result, and thereby help him devise methods to improve his future based on his present experience and its analysis. This has a solid scientific backing when one can confidently deduce the past as well as precisely predict the future course of events if one knows the present and has the statistical data as well as the knowledge of the various equations and reactions necessary for such deductions. In the metaphysical realm, the scriptures provide the information on what actions produce what results. This is the meaning of 'Dharma and Adharma' here. While 'Dharma' refers to things that are auspicious, proper and righteous, Adharma means just the opposite. When a man is wise he would study the scriptures and would immediately come to know which right or wrong action or deed of his in the past has landed him in his present situation, and what he must do now to determine the future he wishes for himself. Hence, the meaning of this stanza becomes abundantly clear and obvious to him now.]

When the man's mind is focused on and pays attention on the voices of different creatures, he is not only able to know what they are saying but also learns different languages, accents and dialects. [This stanza also means that when one closely listens to what others are saying he is able to have an in-depth knowledge of things yet not known to him as well as understand the hidden meaning of what is being said.]

When a man is able to focus his mind and pay attention to the theory of deeds and their consequences, and how they affect a man's destiny and future, he is able to learn about his past life. [When a wise person gains knowledge of how various deeds and their cumulative results affect a person's present life, he can look back and confidently deduce about his past life based on the present situation of his life. For instance, if he learns that a particular disease is caused by overeating or indulging in something and finds that he is suffering from the same disease, he can very safely deduce that he had been committing the same mistake in some time in the past. And, he also becomes wized to the fact that even if he is healthy now but commits the same mistake that produces a particular disease then he is sure to suffer from it in the future. In other word, a wise and erudite man can determine with logical and statistical certainty what his future and destiny would be depending upon what his deeds are, or what his past life was based on his present.]

By thinking the way others think, a wise and erudite man is able to know and analyse their thought processes, and even predict their behaviours based on this analysis.

By fixing the mind on the physical characteristics of others, a man begins to imitate them. [For instance, if a man thinks that wearing a particular set of clothes would make him look smarter, he would start wearing them himself. If he thinks that walking in a specific manner with a particular swagger would make him appear cool

and modern, he would adopt it. The simple implication in all these stanzas is that a man becomes what he thinks of, where his mind is focused.]

By fixing the mind on acquisition of strength, a man acquires bodily strength and physical prowess like the one possessed by Hanuman and other strong beings. [Hanuman is a character from the legendary story of Ramayana. He was instrumental in Lord Ram's search for Sita and the victory of the demon Ravana. Hanuman is regarded as singularly one of the most brave and strong companions of Lord Ram. This happens because when the mind is focused on physical strength and fitness, it would strive to make the man do everything to make the body strong and fit. Like any other decision of the man when it is the mind that decides what he does and what he shuns, it is the mind that is instrumental in his attaining strength and physical fitness.]

By focusing the mind on the Sun, a man acquires knowledge of all the Bhuvans (worlds) that are lighted by the Sun. [This is a metaphoric way of saying that if a man looks up and gets interested in astrology and astronomy he will be able to learn about the higher worlds above the earth, about the solar system and other celestial bodies in the heaven. The Sun lights up the entire sky, and not only the earth. Hence, he would gain knowledge of the worlds and subtle forms of life beyond the earth.]

Similarly, if his mind is focused on the Moon, he would acquire knowledge of the stars and other heavenly bodies of the sky during the night.

By focusing the mind on the Dhruv star (the Polar Star), a man is able to learn about the movement of stars and other planetary bodies in the sky. [This technique was used in earlier times to navigate during the night. The locations and movements of the different constellations in the sky are deduced with relation to the Polar Star.]

When the mind is focused in one's own welfare he is able to find out the truth that serves his purpose. [From the metaphysical angle this is very important observation. When a man wishes to find out what is really good for him, he discovers the truth of the Atma and the real path to his spiritual liberation, deliverance, emancipation and salvation. He also discovers that the world which he finds so real and pleasurable is actually playing spoil-sport as far as his true spiritual welfare is concerned as the world would keep him trapped in its endless net of delusions and temptations. By remaining enamoured by this cunning enchantress, the man can never find true peace and happiness. The knowledge of this 'truth' is what really serves his self interest, and this knowledge like any body of knowledge comes only when the mind is focused and alert.]

By focusing the mind on the Nabhi Chakra (i.e. the whirling subtle energy center located in the region of the navel), one is able to have knowledge of the construction of the physical body. [This is because the embryo derives its nourishment from the mother through the placenta attached to the navel. All the Naadis have their origin in the Nabhi Chakra. It is the de-facto center of the physical body as all the major organs, both internal as well as external, are located in the region of the abdomen around the navel. If the abdomen is removed, nothing would remain of the body.]

By focusing the mind on the pit of the throat, thirst and hunger are controlled. [This refers to the process of Pranayam and its accompanying benefits as described earlier in verse nos. 13/3-4 of this section no. 7, Canto no. 1. It also refers to the Khechari Mudra and the Jalandhar Bandh as described in verse nos. 11,30, 42/2-3.]

By focusing the mind on the Kurma Naadi, one obtains stability and restfulness. [Refer Canto 1, section 4, verse no. 13 which describes the functions of different Naadis. The Kurma Naadi is responsible for the opening and closing of the

eyelids. The obvious inference here is that when one is able to control his eyes he would be able to control what he sees of the world, and thereby control his awareness of the world itself. Besides this, it is required in the Khechari Mudra of Yoga that one keeps his eyes fixed without blinking on the tip of his nose as well as remain mentally focused on the central point of the eyebrows. The practitioner is supposed to keep his eyes in a half-open and half-closed position in order to attain higher echelons of spiritual bliss—first it is done consciously as a special effort, and in due course it becomes natural to him. Refer above to verse nos. 15-18, 32-34, 44/2 of this section no. 7.]

By focusing the mind on the pupils of the eye, one is able to attain mystical powers. [Refer verse no. 17 of this section 7, Canto 1.]

And finally, by focusing the mind in the subtle sky or subtle space present inside the body, a man is able to move in the greater sky of the creation. [This refers to the process of controlling of the vital winds through Pranayam and diverting the energy of the Kundalini upwards, as well as to the Khechari Mudra that is described in detail in this section above. Refer specially to verse nos. 39, 42/2.]

In this way, by focusing the mind and visualizing the presence of consciousness in various units of the body, the aspirant is able to have different experiences of the same divinity in different forms with different dimensions. He obtains access to various mystical experiences by focusing the mind on different levels of existence (52).

[Note—Refer to last stanza of verse no. 1 and full verse no. 2 of section 8, Canto 1 of this Upanishad below in the context of the present verse no. 52.]

-----*****-----

Canto 1/Section 8

1. Now the concept of 'Pratyahar' is being described. It is of five types as follows—

Generally speaking, Pratyahar is to exercise restraint on the sense organs of the gross body by preventing them from naturally moving outwards towards their respective sense objects in the external world and remaining indulgent or engrossed in them. Pratyahar is to consciously and diligently strive to turn the efforts and energy of the sense organs of the body inwards towards one's inner being, towards one's truthful 'self', towards realisation of the truth of the Atma, the pure conscious Spirit, by being meditative and contemplative in a purposeful and fruitful manner.

In order to make this happen, the aspirant should understand and inculcate the wisdom that whatever is seen is nothing but the Atma or pure consciousness, and that if anything lacks the Atma then it is not the truth. The awareness that whatever is perceived in the external world by the organs of perception in the body is due to the presence of Atma or consciousness or 'life' in these organs, and that this world exists only as long as there is Atma in it (i.e. as long as there is life in the body as well as the world in which it lives) is known as Pratyahar.

Not to be interested in and bothered or concerned about the results of the deeds done daily by the aspirant is known as Pratyahar. [In other words, one is observing Pratyahar if he is not worried about the rewards or punishments of the deeds that he does as a matter of his duty. He should do deeds in this world without expecting any fruits from them. This is doing deeds with exemplary detachment and dispassion. Since all deeds are done by the gross organs of the body, being detached from the deeds, or not being mentally involved in them, is equivalent to having

restrained the organs from involvement with the external world of sense objects because these organs would not expect any self-gratification or deriving any personal gain as a reward of doing these deeds. Neither would the organs shun doing any deed for the fear of punishment. The net effect would be that the man would do all his duties with the greatest neutrality and in an un-biased way. He would be more interested in doing his duties diligently and to the best of his might and abilities so that the thing done is perfect as far as possible rather than having half his attention fixed on their results, and getting nervous and distracted as a consequence.]

To be completely free from all sorts of Vasanas (passions, lust, desires, aspirations and yearnings) regarding the various material sense objects of this mundane world is also called Pratyahar. [Vasanas are generated when the sense organs find the world succulent and juicy. When the man trains himself to become dispassionate and detached from all temptations and enchantments of this deluding and entrapping world, it is natural that the organs lose interest in the world. It is the mind that directs the organs of the body to do anything, and when the mind has decided that it is worthless to pursue this material world, and that no permanent peace, bliss and happiness is ever possible in this world and its material sense objects, it would direct the organs to keep themselves away from all involvement with this world.]

To focus the mind and its sub-conscious in the eighteen subtle places of the body so that the energy and dynamism inherent in the living being are directed to nobler causes of the spirit instead of frittering them away in pursuing this illusive and demeaning gross world is also known as Pratyahar. [The eighteen subtle points are listed in verse no. 2 below. This edict is an extension of the first one that ordains restricting the sense organs of the body from moving outwards towards the gross world of material sense objects, and instead turning those organs inwards and directing their efforts to aid the aspirant in his spiritual practices such as meditation and contemplation.] (1).

2. The eighteen points where the mind should be focused and consciousness visualized to be pulsating (i.e. present in a vibrating form) during meditation are the following—the big toe of the foot, the ankle, the calf, the knee, the thigh, the anus, the genital, the navel, the heart, the pit of the throat, the palate in the mouth, the nostril, the eye, the center of the eyebrows, the forehead, and the top of the head.

One must concentrate on all these points of the body and experience the pulsations of life-consciousness in them. [In this context, refer verse no. 52, section 7, Canto 1 above of this present Upanishad.] (2).

-----*****-----

Canto 1/Section 9

1. Now, the concept of ‘Dharna’ (to bear; to have a firmness of conviction and belief) is being narrated. It is of three types as follows--

To focus one’s Mana (thinking mind and emotional heart) on the Atma or the pure consciousness that is the true inner-self of the aspirant, and to be unwaveringly firm in this belief that the Atma is one’s true self, is called the first type of Dharna.

To have a firm belief and be convinced that the subtle space of the heart, called the ‘Hridaya Akash’, is the same as the eternal, vast, infinite and fathomless sky present outside the body, called the ‘Vahaya-kash’, is the second type of Dharna.

To be convinced that the five principal elements of creation, viz. the earth, the water, the fire, the air and the sky which, though subtle in themselves, are the ones that have revealed themselves in the gross form of all that exists in this creation is called 'Dharna'. In other words, to be able to have a firm belief that all that is visible in this gross world are nothing else but the same five subtle elements of creation appearing in these myriad and varied forms is called Dharna. Hence, Dharna is to have a firm conviction that all that is visible in this world are actually images of these five primary elements of creation that have assumed different forms. [By extension, Dharna is to have a firm belief that all life and all creatures that exist in this world are nothing but the same cosmic Consciousness called the Atma that is revealed in each of their forms.] (1).

-----*****-----

Canto 1/Section 10

1. Now, the concept of 'Dhyan'¹ is being described. It is of two types as follows—

The first is called 'Saguna Dhyan' and the second is called 'Nirguna Dhyan'.

'Saguna Dhyan' is to think about, contemplate upon and remember something as having a physical form with specific features; it is to think of the divine Being in the form of an image having gross physical features and characteristic attributes.

'Nirguna Dhyan' is to think of and contemplate upon the same sublime divinity in its subtle form that is invisible and is known as the Atma or pure consciousness. This Atma is in the form of an ethereal spirit that has no grossness, physical features or characteristic attributes to define it (1).

[Note—¹*Dhyan*— The word *Dhyan* literally means 'to think or to cogitate'. It is profound and abstract meditation that revolves around reflection and thoughts that are focused on the Divinity said to be concealed inside the bosom of all the creatures as their pure consciousness that in turn is the supreme cosmic power in creation known as Brahm. Usually the energy of this cosmic Consciousness is lying latent and unused in the own body of the creature simply because it is in a dormant form and un-ignited much like the fire lying dormant in the firewood or charcoal and needing some prodding to leap back into life with all its glorious potentials and splendour. Dhyan envisages the concentration of the stupendous powers of the faculties of the mind to deeply contemplate and fixedly ponder on the great spiritual truths of creation as envisioned by the scriptures to unravel their enigmatic secrets. This is done by fixing the powerful forces of the mind which is aided by the physical contribution of the body in this auspicious endeavour in the form of various meditative exercises, onto a spot called the 'Bindu', literally the point source of spiritual energy located in the heart as the 'Atma or soul' of the creature, as also in the centre of the eyebrows as 'awareness and enlightenment', from where the great mystical powers in creation spring out and spread into the outside world. It envisions the use of various Yoga techniques to contemplate and meditate upon the various aspects of spiritualism with the objective of unfolding the magnificent treasure of spiritual enlightenment and unleashing of the astounding mystical powers that are inherently present in the Atma but tacitly concealed hitherto, leading to self and Brahm realisation, to the awakening of the universal powers of the Spirit.

Dhyan means both contemplation as well as meditation. The word also means 'attention; focus'. So this word is generally understood in common parlance to be similar to contemplation and meditation, concentration and focusing of the conscious mind. It covers both the terms in its ambit.

The appropriate word for contemplation in Sanskrit would be 'Manan and Chintan' which will roughly mean 'deep thought, reflection, pondering and application of mind'. The Upanishads stress on this 'Chintan-manan' aspect of the mind-intellect when it talks about 'Dhyan'. Greatest of scientific discoveries were made more by intuition than anything else. That is why intuition is closely related to the so-called 'sixth sense' in a man, i.e. a state when the intuitive man knows what is the correct path to chose from a variety of options, and more often than not, he is correct. We can say that this 'intuition' is the guidance provided by the subtle soul/Atma of the creature. Not everybody is equally intuitive by nature; this is because some persons, by virtue of their past actions and deeds have a thicker layer of Vasanas and Vrittis surrounding their Atma while others have a thinner layer so that the voice coming out of the Atma is easily heard in the latter case while it is muzzled and suppressed in the former case.

The great exponent of Yoga, sage Patanjali, in his magnum opus 'Yogsutra' has described 'Dhyan' as concentration. Dhyan is that state in which the inner mind tries to see the reality behind things. This 'thinking' process links it with contemplation while concentration function links it with meditation. According to Agni Puran, contemplation with a calm mind is Dhyan while Garud Puran has defined it as concentration on the Brahm. Dhyan, therefore, leads to enlightenment. Woodworth, in his book 'Psychology', writes that the mind concentrates on one impulse at a time and neglects others. So, Dhyan in this context means 'to become alert and activated for doing a work or seeing an object exclusively'. Dhyan is momentary in the beginning, but it becomes permanent later on with practice. Sidney Smith defines Dhyan as 'to forget everything else except the main objective'. Charles Dickens views Dhyan as 'useful, harmless, definite and a beneficial process of the mind'. According to Bergansa, 'suppression of external distractions is essential for the deepening expansion of Dhyan'. Edgar Casey says that 'Dhyan brings to the fore the latent powers of creativity in a person. This creativity improves and enriches his physical, mental and spiritual aspects'. John White in his renowned work 'The meeting of science and spirit' has enumerated many benefits of Dhyan— promotion of physical health, reduction of tension, anxiety and aggressiveness, it leads to self realisation and self improvement and development. He further says that the benefit of meditation are the following— feeling of tranquillity, freedom, reduction of tiredness and depression, relief from pains, increase in positive traits such as sympathy and empathy for others, believe in divinity and purity of self etc. Michael Murphy and Steven Donovan, in their research work titled 'The physical and psychological effects of meditation' have mentioned that meditation/Dhyan helps to regulate and control electrical and chemical activity of the brain, the rhythm of the heart, regulates blood pressure, the skin's ability to resist infection and it regulates general metabolism.

The great philosopher sage Sankaracharya has explained that the many Vedic rituals such as sacrifices had been transformed as mental concepts for contemplation and meditation by Chandogya Upanishad because any defect in the performance of a ritual according to the Vedas, however small and inconsequential, could devalue and derail the whole process. Further, elaborate rituals required huge preparation and expenditure. So he prescribed that meditation was far better, safer and surer means of attaining the same benefits that elaborate sacrifices offered. Contemplation and meditation are equally efficient in spiritual pursuit of the aspirant. Nevertheless, the former (contemplation) has intellect and mind as its main focus while the latter (meditation) concentrates on the mind and body to be effective. Sacrifices, as compared to them, are merely physical rituals.

As is evident, the chariot moves in the proper direction when all the horses are controlled simultaneously. So a holistic and an all-inclusive, well synchronized and homogenous approach is needed by a seeker/aspirant to attain success in his endeavour to get liberation and deliverance from the horrible torments agitating him as well as to attain emancipation and salvation for its soul from this world.

The concept of Dhyan has been described in detail in *Chandogya Upanishad*, Canto 7, section 6 and 18 of the Sam Veda tradition, and *Dhyan Bindu Upanishad* of the Krishna Yajur Veda tradition which is expressly dedicated to it. Verse no. 1 of Dhyan Bindu Upanishad refers to the concept of Dhyan Yoga and gives its spiritual importance. The *Naradparivrajak Upanishad* of the Atharva Veda, Canto 7, verse no. 8 says that the Hans and the Param Hans Sanyasis are required to do only Dhyan as a means to obtain Mukti or spiritual salvation. Refer also to the *Tejobindu Upanishad* of Krishna Yajur Veda, Canto 1, verse no. 36.]

-----*****-----

Canto 1/Section 11

1. Now finally, the concept of ‘Samadhi’ is being narrated in brief.

It is a state of exalted and sublime existence when the Jiva-Atma and the Parmatma have become one—i.e. when the individual soul has become indistinguishable, inseparable and indivisible from the cosmic Soul of creation.

It is an exalted and sublime state when there is no distinction between the three basic units of creation that makes one aware of its existence—viz. the one who is the observer or seer of anything, the thing observed or seen, and the medium used in the process of observing or seeing. [For instance, when a man sees an object such as mountain, he is the seer, the mountain is the object seen, and the eye and its faculty of sight is the medium used in this process. Similarly, when a man hears some music, he is the one who hears, the music is the object heard, and the ears are the medium to complete the circuit or make hearing possible. During Samadhi all these three merge into one point—the spiritual aspirant reaches a state when all barriers between his individual self and the cosmic Self are removed and his Atma becomes one with the cosmic Atma that is all-pervading in this creation. The gross body which separates them is relegated to the background and rendered inconsequential; the Atma transcends the grossness of the body and assumes its primary cosmic form which is all-pervading and free from all encumbrances. It is like the air trapped in a mud-pot merging with the outer air when the pot is broken. Hence, Samadhi is a transcendental state of dissolution when all artificial distinctions and illusionary boundaries are done away with.]

Samadhi is marked by a state of extreme blissfulness, felicity and beatitude when all that remains and matters is the pure and sublime consciousness (1).

-----*****-----

Canto 2/Section 1

[This and the following Cantos are an exposition of the concept of ‘Brahm Vidya’—or the sublime knowledge pertaining to the supreme transcendental Divinity known as Brahm.]

1. When sage Shandilya had studied all the four Vedas but still could not grasp the Brahm Vidya¹, i.e. inspite of delving deep into the four primary scriptures he could not understand what Brahm stood for and what is its form and nature, he approached the most exalted sage Atharva and requested him—‘Oh Lord! Please preach me on

Brahm Vidya (i.e. enlighten me about the concept of Brahm) so that I can have spiritual welfare and derive benefit from it.’ (1).

[Note—¹*Brahm Vidya*—All the Upanishads are basically dedicated to this eclectic philosophy. It is called ‘Brahm-realisation’ and it marks the culmination of one’s spiritual quest. However, besides the present Upanishad, some of the other Upanishads which can be cited here are the following—(a) Krishna Yajur Veda’s Kaivalya Upanishad, Brahm Upanishad, Panch Brahm Upanishad, Akchyu Upanishad, Tejobindu Upanishad, Varaaha Upanishad, Canto 1-5, and Brahm Vidya Upanishad. (b) Atharva Veda’s Mundak Upanishad, Mundak (Canto) 1, section 1; Mundak (Canto) 2, section 1; Mundak (Canto) 3, section 1-2; Atma Upanishad; Tripadvibhut Maha Narayan Upanishad, Canto 1, paragraph no. 4; Canto 4, paragraph no. 1. (c) Sam Veda’s Chandogya Upanishad. (d) Shukla Yajur Veda’s Brihad Aranyak Upanishad.]

2. Upon this request, sage Atharva began his discourse—‘Oh Shandilya! Brahm¹ (the supreme transcendental and divine Being; the super Consciousness; the principal Authority and the Supreme Being of creation; the absolute and the only truth of creation) exists or is revealed not only in the form of ‘Satya’ (Truth) and ‘Vigyan’ (truthful and in-depth knowledge) but also in the form that is ‘Anant’ (endless, infinite) as well as other forms. [There is another way of reading this verse as follows—Brahm has endless and infinite forms, and one of them is Truth, and the other is Knowledge.] (2).

[Note—¹Brahm is a most enigmatic, esoteric and mysterious entity of creation, an entity that is the object of all metaphysical research and discussions. All the Upanishads as well as the primary scriptures known as the Vedas are primarily focused on Brahm and attempt to understand it, but the fact is that they all fail in this attempt. All they say at the end is ‘neti-neti’—i.e. Brahm is neither this nor that; ‘Brahm is not this, it is definitely not this’, they declare.

There are legends of Upanishads that do not tire in enumerating the grandness and the majesty of Brahm and its divine and unparalleled virtues. Some of these Upanishads are the following, though it cannot be concluded that this is a complete list because all the 108 Upanishads deal with this single divine entity—(a) Krishna Yajur Veda’s *Yogshikha Upanishad*, Canto 2, verse nos. 15-19, Canto 3, verse nos. 17-22; *Kathrudra Upanishad*, verse no. 12, 27-28, 30-31, 42; *Taittiriya Upanishad* Valli 3, Anuvak 10, verse no. 2-5; *Skanda Upanishad*, verse no. 13; *Dhyan Bindu Upanishad*, verse no. 4; *Varaaha Upanishad*, Canto 2, verse nos. 16, 20-21, 26, 29; Canto 3, verse no. 2; and Canto 4, verse nos. 31-32; *Yog Kundalini Upanishad*, Canto 3, verse no. 35; *Saraswati Upanishad*, verse no. 50-52; *Shwetashwatar Upanishad*.

(b) Atharva Veda’s = *Mundak Upanishad*, Mundak 1, section 1, verse no. 6; Mundak 2, section 2, verse no. 7, 9-11; Mundak 3, section 1, verse no. 3-5, 7-9; *Atharvashir Upanishad*, Kandika 4 (full); *Naradparivrajak Upanishad*, Canto 8 which is fully dedicated to enumerating the grand virtues of Brahm; Canto 9, verse nos. 3, 19-22; *Tripadvibhut Maha-Narayan Upanishad*, Canto 1, paragraph 4, Canto 4, paragraph no. 1; *Shandilya Upanishad*, Canto 2, section 1, verse nos. 2-5, and Canto 3, section 1, verse nos. 1-8, 11-14; *Annapurna Upanishad*, Canto 4, verse no. 27-31, 67; Canto 5, verse nos. 10, 20-21, 65-67; Canto 5, verse nos. 72-73, 76-77, 113; *Atma Upanishad*, verse nos. 1-D and 1-E, verse nos. 2-4, 9, 30-31; *Pashupata Brahm Upanishad*, Canto 1, verse nos. 11, 13-16; Canto 2, verse nos. 13-16, 26, 28-30, 44; *Tripura Tapini Upanishad*, Canto 5, verse no. 6, 8-9, 16-17, 22; *Ram Purva Tapini Upanishad*, Canto 1, verse no. 7.

(c) Shukla Yajur Veda’s following Upanishads—*Adhyatma Upanishad*, verse nos. 61-64; *Brihad Aranyaka Upanishad* Canto 2, Brahman 3 describes this Brahm’s two forms in detail.

(d) Sam Veda's *Chandogya Upanishad*, *Keno Upanishad* and *Avyakta Upanishad*.]

3. Brahm is an indefinable and incomprehensible divine but most esoteric and mysterious entity that surrounds everything in existence, in which everything is submerged. It is from this divine entity that everything comes into being, and it is in it that everything would finally collapse and end.

It is one by knowing which everything else becomes known.

It has no hands and legs, no eyes, does nothing, has no tongue, and neither does it have any form of physical gross body.

It is an entity so subtle and ethereal as well as mysterious, enigmatic and esoteric that it cannot be grasped, physically (because it has no gross body and form) as well as metaphorically (because he defies all understanding and transcends definitions).

Hence, it (Brahm) cannot be described or explained in any way whatsoever. [Any attempt to do so is only scrapping the surface without even being able to peel the first layer fully.] (3).

4. The speech and the mind return empty-handed in their failed attempt to have access to it (Brahm). [That is, the faculty of speech fails miserably in its attempt to describe Brahm, and the mind too fails equally miserably in its attempt to know or understand about Brahm.]

That (Brahm) which can only be known by the medium of true Gyan (enlightenment and self-realisation), that from which ancient wisdom and knowledge first came into being and then developed and spread, that which is unique, unparalleled and non-dual, that which is all-pervading, all-encompassing and omnipresent like the sky, that which is most subtle and sublime, that which is honoured by the epithet of 'Niranjan' (i.e. one that is without any blemishes and taints of any kind; one that is faultless and free from darkness), that which does not do anything or gets involved in any kind of deeds or actions on the physical plane of existence (though nothing happens without it or its inspiration), that which is the only and ultimate Truth and Reality in the entire creation, that which is an embodiment of pure and dynamic consciousness, that which is an image of extreme bliss, happiness, beatitude and felicity, that which is only one, immutable and indivisible, remaining ever steady and unchanging, that which is auspicious, holy, sublime and divine, that which is extremely calm, peaceful, serene and tranquil, being unruffled and unaffected by anything, that which is eternal and imperishable—verily, it is this unique divinity that is known as the supreme transcendental Brahm.

Indeed it is you (Shandilya). Come to realise it (the truth about yourself as well as about Brahm) through acquisition of Gyan. [The 'true self' of all living beings is their Atma, the pure, subtle and sublime consciousness residing in their gross physical body. Brahm is also the same 'consciousness' but on a grand scale of the entire creation. The individual creature is Brahm in its microcosmic form. It must be emphasized here that when we talk of the individual creature we mean his 'Atma' and not the gross body. Hence, it is obvious that statement 'it is you' refers to the Atma, the 'true self' of sage Shandilya, and not his gross body. The gross body is erroneously regarded as the identity of the creature because of the simple reason that it is visible and easy to understand, while the Atma is invisible and non-tangible entity difficult to perceive and understand. Once this truth—that the 'true self' is the Atma, and that the Atma is a universal entity that uniformly pervades throughout this

world—dawns upon the mental horizon of the aspirant, he becomes ‘self-realised’. And since the ‘self’ is the pure conscious Atma, it follows that when one becomes ‘self-realised’ he is deemed to be ‘Brahm-realised’ too.

The statement ‘you are Brahm’ which leads to the realisation ‘I am Brahm’ are one of the few Mahavakyas, or the great spiritual truths, proclaimed by the Vedas.] (4).

5. It is one supreme Lord whose dynamic Shakti (spiritual energy) has been revealed in the form of the powers of the Atma.

He is all-knowing and omniscient in all matters.

He is the Lord of all that exists.

He is manifested as the Atma living in the inner-self of all living beings, and therefore he is a secret resident in the inner-self of all the creatures in this creation.

He is the origin of all living beings (as he is the supreme and ultimate Creator who has created even the Trinity Gods consisting of Brahma, Vishnu and Shiva).

He can only be known by Yoga (meditation and contemplation).

Being the supreme Lord and Creator he is the one who creates, sustains and then concludes this creation and everything in it himself (without any help).

Verily, this Lord (i.e. the supreme transcendental Brahm, the cosmic Consciousness) is known as the Atma or soul of the entire creation. You must be wise enough to understand that the supreme Brahm exists in the form of the Atma, the pure consciousness. [In other words, if Brahm is removed from this world nothing would remain. It is the ‘soul’ or the most essential and primary requirement for the creation to come into existence and to remain existing. Even if it ends, it is from Brahm that it would re-emerge in due course of time. It is said that Brahm is all-pervading, all-encompassing and omnipresent uniformly in this creation, and this refers to the Atma that secretly lives in the inner-self of all living beings. The Atma is the essence of life and existence; it is a metaphor for life and existence as much as is Brahm. Atma and Brahm are synonymous with each other.] (5).

6. Do not have any regrets, fears or consternations. Don’t think that Brahm is beyond your reach. You can overcome all your frustrations and dismay by acquiring specialized knowledge of the Atma, as it would enlighten you about Brahm.’ (6).

-----*****-----

Canto 3/Section 1

1. Having acquired the above knowledge from the exalted sage Atharva, sage Shandilya asked him once again—‘Oh Lord! How has this world come into being from that Lord who is so esoteric, mysterious and secret that nothing is known about him, the Lord who is known and represented by the ‘Akshar’ (here referring to the ethereal word OM which is a monosyllabic sound having no forms; the word also means one who is imperishable and not subject to decay and destruction), who does not do anything, who is most auspicious, divine, sublime and holy, who is the only supreme Authority in this creation, and who is revealed in the form of the Atma, the pure consciousness? How is this creation established in him, and how does it finally vanish or dissolve in him at the end?

It is very important to solve this riddle for me; it is necessary for me that I am enlightened to these facts.’ (1).

2-3. Hearing his earnest plea, the exalted sage Atharva replied—‘Oh Shandilya! It is true that the supreme transcendental Brahm is neutral and does nothing. It is also true that it is in the form of an ‘Akshar’ (here referring to the ethereal word OM which is a monosyllabic sound having no forms). In spite of these, Brahm has three subtle forms—called ‘Sakal’ (meaning Brahm having a visible form; or Brahm that has specific attributes), ‘Nishkal’ (having no visible form; having universal virtues in their most sublime form), and ‘Sakal-Nishkal’ (having both the characteristics of a Sakal and a Nishkal Brahm; a composite of both the values) (2-3).

4. Now, the ‘Nishkal’ form of Brahm is being outlined.

Brahm that is an embodiment of Truth, that is an image of extreme bliss, happiness, beatitude and felicity, that does nothing and remains motionless, that is honoured by the epithet of ‘Niranjan’ (i.e. an entity that has no taints, blemishes, darkness and faults of any kind), that is universal and uniformly all-pervading and omnipresent, that is most subtle, atomic and microscopic, that has his mouth in all the four directions (i.e. is able to see, hear, feel, smell and taste everything that exists in any point in this physical world; one from whom nothing is hidden or kept secret), that is indefinable and indescribable, and that is eternal, imperishable and infinite—verily, this subtle, sublime, ethereal, universal, all-encompassing and all-inclusive divine formless appearance or revelation of Brahm is called its ‘Nishkal’ form (4).

5. Now, the form of Brahm known as ‘Sakal’ is being described.

Brahm that is identified with natural Avidya (ignorance), Mool Prakriti (primary Nature) and Maya (delusions), that which is said to have subtle qualities represented or symbolized by the three colours of red, white and black (standing for the Raja Guna, the Sata Guna and the Tama Guna respectively).

When the unqualified, formless and attribute-less divine Being (i.e. Brahm) is visualized as being surrounded by Maya (delusions), he is said to have acquired different colours, such as dark and yellow.

[It is like viewing something with tinted glasses. It is obvious and natural that the thing viewed would adopt the colour of the glass through which it is being viewed. Similarly, when the immaculate and ‘Niranjan’ Brahm is viewed through the veil of Maya around it, the colours of the latter would naturally affect the former, though of course these colours are not the natural and inherent colours or traits of Brahm.]

Assuming these two colours, the same Brahm is called Maheshwar or Lord Shiva (who is responsible for concluding this creation) and Isha or Lord Vishnu (who is responsible for sustenance and protection of the same creation).

[This stanza can be interpreted and read as follows as well—The same Brahm is seen as having a yellow colour to emphasize his role as the sustainer and protector of creation, and as having a dark colour to emphasize his role as the concluder of creation. That is why he is called ‘Maheshwar’ or the Great Lord because he performs two opposite functions simultaneously—one of sustenance and the other of conclusion of creation. The ‘yellow’ colour stands for sustenance and protection, while the ‘dark’ colour stands for destruction. They go hand-in-hand to suggest that what has come into being and so meticulously sustained and looked after would not escape destruction and conclusion in due course of time.]

This is the ‘Sakal’ form of Brahm (5).

6. Finally, the ‘Sakal-Nishkal’ form of Brahm is being described now.

The supreme transcendental Brahm had a wish to empower himself to expand and reveal his non-dual, single and unqualified form that was invisible and most subtle into numerous forms that had various qualities, were gross and visible. To make it possible he did Tapa (penance and austerity) for empowerment.

It was then that the triad of creation came into being due to this Tapa. This 'triad' assumed many forms, such as the three 'Akshars'¹, the three 'Vyarihitis'², the 'Gayatri Chanda' having three steps³, the three primary Vedas⁴, the three Varnas⁵, and the three Agnis or sacred Fires⁶.

This supreme Lord who is known as 'Bhagvan'⁷ is the supreme Authority in creation. He is endowed with all glories and majesties; he is all-pervading, omnipresent, all-encompassing, universal and uniformly distributed throughout the whole creation; he resides in the subtle heart of all creatures (as their Atma); he is full of maverick tricks and his ways are mysterious and unknown.

It is this Lord who has revealed himself as Brahma the creator of the visible world, as Vishnu the sustainer and protector of creation, as Rudra who concludes this creation (so assiduously created by Brahma and so diligently sustained by Vishnu), as Indra (the king of Gods), as all other Gods as well as all types of living creatures in this creation.

It is this Lord that is present everywhere in this creation—in the front, in the rear, in the north (zenith), in the south (nadir), below and above, and everywhere else. In this holistic way, it is he who is everything and everyone in this creation.

It is this Lord who does everything out of his own free will and using his own powers (without any help whatsoever), and he is ever so graceful and benevolent towards his devotees.

It is he who had revealed himself as Lord Dattatreya⁸ who was glorious to look at, remained naked, was delicate and pure as the petals of the lotus flower, had four arms, was not at all fierce and fearsome, was free from all sins and evils, and was self-radiant with the glow of holiness and divinity.

Indeed, the above described form of Brahm is a composite of its Sakal as well as Nishkal forms. [All the glorious virtues of Brahm that are there in existence but cannot be physically perceived are its 'Nishkal' form, while that form which can be seen is its 'Sakal' form. For instance, the Atma is its Nishkal form while the creature is its Sakal form; Lords Vishnu, Brahma and Shiva are its Nishkal form while Lord Dattatreya is its Sakal form; the ethereal word OM is its Nishkal form while the Vedas are its Sakal form; the Vyarihitis are its Nishkal form while the earth and the sky is its Sakal form. The meaning is now abundantly clear. Both these forms compositely make up this vast creation—it has things that are visible as well as things that are there but not visible (6).

[Note—¹The word *Akshar* literally means a letter. Hence, the three Akshars are the three 'letters' of the word OM that stands for Brahm—viz. A, U and M, that symbolized the three aspects of the would-be creation—its origin, its expansion and growth, and its conclusion respectively.

²The three *Vyarihitis* are the first words pronounced by Brahma the creator at the beginning of creation—viz. *Bhu* from which the terrestrial world came into being, *Bhuvaha* from which the sky and the lower heaven came into being, and *Swaha* from which the vast heavens came into being.

³The *Gayatri Chanda* having three steps refers to the first and primary method of composition of verses having three lines in which the Vedas were originally revealed.

⁴The three primary *Vedas* are the *Rig/Rik*, the *Sam* and the *Yajur Vedas*.

⁵The three *Varnas* are the three classes in the society—viz. the Brahmins, the Kshatriyas and the Vaishyas.

⁶The three *Agnis* or sacred Fires are the following—the ‘Garhyapatya Agni’ which is the fire of the household hearth; the main fire of the formal fire sacrifice, the ‘Dakshinagni’ which is the fire used as a witness to making charities or any other religious festivity; the fire lit at the site of a sacrificial fire ritual, near its south end, and the ‘Ahavaniya Agni’ which is the fire to invoke the Gods during a ritualistic sacrifice.

⁷The word *Bhagwan* refers to an enlightened being who possesses certain divine qualities not possessed by ordinary human beings, and which are even difficult for the Gods to have. The word has two parts—‘Bhag’ and ‘Wan’. The 2nd part ‘wan’ means ‘one who possesses’, while the 1st part ‘Bhag’ means ‘one who is like the receptacle or womb’ that harbours the following six qualities or virtues—(1) to have ‘Aishwarya’, which means to possess all the virtues that come under the category of having majesty, powers, wealth, fortune, opulence, flourish, supremacy, sway, dominance, glory, grandeur, omnipotence and other divine faculties in existence; (2) to have all Dharma, which means to possess all virtues that come under the ambit of righteousness, probity, propriety, virtuousness, and nobility of thought and conduct; (3) to possess all the glories and majesties that come under the definition of the word Yash, i.e. to have great fame, glory, majesty and renown; (4) to have Sree, i.e. to possess all wealth, prosperity, pomp and circumstance, to have prestige, dignity, respect, honour, splendour and glory, as well as all other factors associated with those qualities mentioned in serial no. 1-3 above; (5) to have complete and comprehensive Gyan, i.e. to have true, deep, incisive, complete and all-incorporating knowledge, erudition, wisdom, skills, expertise and enlightenment; and (6) at the same time to have immaculate and the highest degree of Vairagya, i.e. to have complete renunciation, detachment, indifference and dispassion towards everything in this world. Hence, anyone who is endowed with the above six divine, eclectic and exemplary qualities is called a Bhagwan.

Conventionally, the word is used as a synonym for the words ‘Lord, God, Supreme Being’, and is used for someone who is glorious, divine, holy, majestic, honoured and revered.

⁸Lord *Dattatreya*—Lord Dattatreya is a fractional incarnation of Lord Vishnu. Verse no. 8 of this Canto establishes that Dattatreya was a manifestation of the Supreme Being.

A detailed life-sketch of Lord Dattatreya is given as a note of verse no. 4 of the Dattatreya Upanishad which is included in this volume as Chapter no. 30.]

-----*****-----

Canto 3/Section 2

1. Sage Shandilya once again asked the exalted sage Atharva—‘Oh Lord! Why is the supreme and transcendental Brahm recognized as being only having ‘One Rasa’ (i.e. having only of form inspite of it being manifested in the form of so many uncountable forms with as many uncountable attributes in this creation), and why is it known as nothing else but an embodiment of the Truth, Consciousness and Bliss?’ (1).

2. Sage Atharva replied—‘Oh Shandilya! Brahm expands or spreads its self without any external aid, and it is the one that makes other entities in this creation expand and spread when it so wishes. This is the reason why Brahm is honoured by the epithet of being ‘supreme’.

[In other words, Brahm does not need any help to fulfill its wishes to accomplish anything, and whatever happens in this creation is because of Brahm. It is Brahm that provides the inspiration, the impetus and the drive to do anything and

reach a destination. Brahm is most subtle, atomic and microscopic in its primary form, but it 'spreads and expands' to assume the form of this vast and endless world. Though Brahm is only 'one and non-dual', it metamorphosed into so many countless elements in this creation which are so varied and different from Brahm that they have no resemblance to Brahm in any way whatsoever but are Brahm revealed in their forms nevertheless. This is a unique achievement, and this is why Brahm is called 'supreme'. Though Brahm lives in this creation and is an integral part of each single unit of it, yet Brahm transcends all definitions by which this creation is known. Hence, Brahm is honoured by the epithet of being 'transcendental'.] (2).

3. [Then Shandilya asked—] 'Why is Brahm known as the Atma?' (3).

4. [Sage Atharva replied—] 'It (i.e. Brahm) lives inside each individual creature of this creation (in the form of pure consciousness and the true 'self' of the individual living being, as the quintessential element known as the soul of the Jiva, the living being, without which the latter cannot survive)¹, is the one entity that provides uniformity and non-duality to this creation², and is the one who accepts everything and dissolves them into one single indivisible whole³. This is why it is called the 'Atma' (4).

[Note—¹The word Atma means the 'soul' of any given entity, the essence and the fundamental aspect of anything without which that thing loses its existence, identity and bearing. The Atma is the fundamental essence in the body of all living beings, and without it no body would have any relevance in this creation. The entire existence of the Jiva revolves around the presence of the Atma. For instance, when a thing needs to be expressed or explained, different people would use different words and sentences and expressions to say it, but what matters is the essence of what is being said. This essence is the 'soul' of the thing said. If the soul is removed then all that is said is simply a jumble of words. Similarly, the body of a creature has any value only as long as it has life and consciousness in it, otherwise the gross body begins to decay rapidly, and no one would want to have anything to do with it.

Since Brahm is synonymous with 'consciousness and life' in this creation, and since the entity that infuses these basic characteristics into the body of the creature to make it possible for it to be called a 'living and conscious' being is known as the Atma, Brahm and Atma are obviously the same, albeit at different levels of creation. That is, while Brahm is 'consciousness and life' at the macrocosmic level of creation, its counterpart in each single unit of this living creation at the micro level is known as the Atma. Since this Atma is the essence of life and creation, it is the 'soul' of creation.

²Brahm in the form of the Atma is a universal entity because it is undiluted and elementary 'consciousness'. Let us take an example to understand this phenomenon. Water molecule consists of two atoms of Hydrogen and one atom of Oxygen. This universal fact would never change no matter in which form water exists—as ice, liquid water, vapour, steam, cloud, river, ocean or glacier, or in the fundamental essence of anything that is in fluid form. Similarly, it is the Brahm in the form of the Atma that is the only unchanging element in the otherwise most fascinating world where no two things are exactly alike.

³Since everything has its origin in one single point from which they develop and expand, when they have to retract they would revert to this single point. To understand this concept we can take the example of a line or any other figure drawn on a piece of paper. When the pen touches the paper, it first makes a dot at the point where it first comes in contact with the paper. Then the pen moves on the paper and drags this point to any length and any shape or form one wishes to draw. But when one wishes to retrace these lines one would come back to the first point where the pen

had first touched the paper. Likewise, though the creation has progressed from its original place and assumed so varied a form that it defies description, yet when it begins its regression it would come back to this single point. This 'single' original point is Brahm. It is Brahm from which this entire creation emerged, then developed and expanded, and it is in this Brahm that it would finally collapse and merge to become one with it.

The instance of the water cited above can also explain this concept. Though water assumes so many forms and is known by so many names, its basic point of origin in two atoms of Hydrogen and one atom of Oxygen would not change. If a molecule of sea water is compared with that of the rain water, no difference would be found. In other words, they all revert back to their parent form as two gaseous elements known as Hydrogen and Oxygen.]

5. [Then Shandilya asked—] 'Why is Brahm known as the Maheshwar (literally the great Ishwar or Lord)?' (5).

6. [Sage Atharva replied—] 'It (i.e. Brahm) is known as Maheshwar because it exercises control and establishes its authority over even those who are most powerful and great in this world by the virtue of the inherent strength and astounding powers and potentials possessed and exhibited by words¹, by sound², and by the stupendous dynamic powers and subtle energy inherently possessed and exhibited by the pure consciousness (that is present in all the creatures as their Atma)³.

Brahm is the superseding cosmic almighty Authority in creation. All other Gods and Goddesses are but merely manifestations of this Brahm, and they are only fractions of Brahm. Therefore, these Gods and Goddesses cannot match Brahm in the least. They can, at the best, represent some or the other divine qualities or virtues of Brahm, but not Brahm in its entirety. Brahm is the God of all Gods; he is the supreme Authority; he is the Supreme Being.

This ability makes it (Brahm) superior to all others in creation, and that is why it is honoured by the epithet of being called a 'Maheshwar'—literally meaning the 'Great Lord' (6).

[Note—¹Brahm's first dynamic revelation was in the form of the cosmic ethereal sound which was heard by ancient sages and seers during their meditative sessions and which they conceptualized in the form of the word OM. It was a cosmic vibration reverberating and resonating in the ether, and it is the first sign of energy being generated and some dynamic activity and movement taking place in the otherwise neutral and static cosmic gel prior to the beginning of creation. These vibrations produced 'sound' which in its primary form is encapsulated by the monosyllabic word OM. This basic sound was analyzed and underwent the process of refinement to yield the alphabets of the language. These alphabets then formed words, and from the words came into being the scriptures and the spoken language. Both the scriptures and the spoken language helped Brahm to disseminate information and knowledge. Sound is still regarded as the basic sign of life anywhere. That is why when a patient is recovering from coma or some serious illness where he had lost consciousness, doctors ask him to say a word or two to be certain that everything is well with him. All the knowledge of this creation would have been null and void had there been no word to teach them or divulge them.

Huge armies are commanded by words; the teacher controls his students by words. Even the Lord himself is worshipped and shown respects by hymns or prayers which are nothing but words.

²Words need sound to be transmitted from the speaker to the target audience. It is sound that makes words reach others so that they can come to know what one wishes to express. Hence, dissemination of information and knowledge needs not only words

but sound as well. This sound has manifested itself as voice and the faculty of speech. Even if one were to assume that huge body of knowledge could still exist in the form of words written in the scriptures, but how would one explain then without the power of sound revealed in the form of voice and the faculty of speech, and how would the listener listen to what is being said if there was no such thing as sound to enable the latter to hear what is being spoken?

The importance of sound over words can be understood by one simple example. When the bell rings in a school, all the students know for instance that they are supposed to attend a particular class or that it is time to go on recess, though no one actually tell them to do so. If one hears a lion roaring in the forest one is chilled to the bone out of fear though the lion is not directly threatening him or speaking any specific language. When the army hears the bugle sound it knows that it is time to charge or do any specific duty as expected to be done when this sound is heard. When one hears the trundle of a train speeding past, even a blind man can know what is happening though no words are spoken.

Therefore it is clear that the supreme Lord exercises his overall control and authority in this creation by the way of sound and words.

³The power of the consciousness needs no introduction—because the very ability to speak comes from the power of the consciousness residing in the body of the speaker, and the power to understand what is being spoken too comes because of the same consciousness present in the hearer. Ascetics are known to possess stupendous mystical powers that are super-natural in nature. They remain silent but achieve stupendous spiritual powers that are simply miraculous by nature. In fact, abstaining from speaking and remaining silent for a certain period of time, for instance doing meditation and contemplation, is certainly more rejuvenating for a man than speaking for this length of time. It is known that some holy men who had no formal knowledge of the scriptures, i.e. who were not ‘lettered’ or good ‘speakers’ either but had attained self-realisation and kindled their latent spiritual energy were able to influence the course of human history by their silent lives and examples they set for others. It is said that if one faces an adversary with the strength of the soul at his command it is certain that the opponent would yield ground and the person would be able to win him over.]

7. [Sage Shandilya asked—] ‘Why is it (Brahm) known as Lord Dattatreya?’ [Refer last stanzas of verse no. 6 of section 1 of Canto 3.] (7).

8. [Sage Atharva replied—] ‘It is because sage Atri did very severe Tapa (austerity and penance) to wish for a son. Pleased by his sincerity and devotion, the splendorous and self-illuminated ‘Bhagwan’ (Lord God; the Supreme Being) blessed the sage and offered himself as his son. Thereafter, the Lord himself revealed as a son to sage Atri and his wife Anusuiya. In this way he (the Lord) became famous as Lord Dattatreya¹ (8).

[Note—¹The word ‘Dattatreya’ has two parts—‘Datta’ and ‘Treya’. The first half ‘Datta’ refers to the Lord who gives boons, and the second part ‘Treya’ refers to something that has three dimensions.

This latter part ‘Treya’ again has the following meanings—(1) It refers to Lord Shiva who has three eyes, and hence called ‘Trinetra’, because Shiva is also known as ‘Maheshwar’, the great Lord by which epithet the Supreme Being is honoured (refer verse no. 5-6). (ii) It refers to the supreme transcendental Brahm which has three forms known as Sakal, Nishkal and Sakal-Nishkal which incorporates in their ambit the entire creation, both the visible and the non-visible, the gross and the subtle (refer Canto 3, section 1, verse nos. 2-6).]

9. A wise, erudite and learned aspirant who comprehends the hidden meaning of what has been said in this Upanishad, and understands the meaning of the various esoteric names of the supreme transcendental Brahm, is able to unravel the mysteries of Brahm. He is indeed able to understand and know everything in this creation. [This is because everything in this creation is a revelation of Brahm; whatever that exists is Brahm in that form.] (9).

10. Once this enlightenment dawns on the aspirant he is able to have a comprehensive knowledge of the 'self' and realise that his 'true self', i.e. his pure conscious Atma, is nothing else but Brahm personified. [This is because the term Brahm is synonymous with the cosmic Consciousness.]

Hence, a wise, erudite and enlightened spiritual aspirant who worships and pays his obeisance to the supreme Lord with this full wisdom and knowledge (about the Atma being Brahm personified) is able to understand and realise the truth of the eclectic statement 'I am the supreme Atma'. That is, he becomes 'Brahm-realised'. [This is because Brahm is the cosmic Atma or soul of creation. The word Atma refers to the essence of creation, the basic element without which nothing matters, nothing exists, nothing has value, and nothing else besides it is therefore true. This basic element and essence of creation is 'consciousness', and it is a synonym of Brahm at the cosmic and macro level of creation as well as of the Atma at the micro level of creation.]

A person who knows or is enlightened about Brahm in the above described form, and then makes the declaration as stated above is indeed able to truthfully say anything about Brahm. [Only a person who has personally attended an event is called an eye-witness to it. Similarly, a person who has personally experienced the presence of the cosmic consciousness known as Brahm in his own inner-self as the Atma, and realised that this Atma is his 'self', implying that 'he' is none but 'Brahm' himself personified is indeed fully qualified and in his right to teach and say anything about Brahm. Only a teacher who is well-versed in any subject is eligible and competent enough to teach on that subject, for the rest who pretend to know and teach the subject are nothing but imposters who are playing fool with others.] (10).

11. The following verses (Shlokas) are especially dedicated to the supreme Brahm and enumerate his divine glories—'The supreme transcendental Brahm is the Lord who had revealed himself in the form of Dattatreya and Lord Shiva. [For Dattatreya being a manifestation of the Supreme Being, refer to verse nos. 7-8 above. As far as Lord Shiva is concerned, the reason why he is known as 'Maheshwar' or the 'Great Lord' is because he is the Supreme Being, i.e. Brahm, personified.]

The manifestation of the Supreme Being as Dattatreya or Shiva has a body which is most holy, auspicious and divine ('Shivam'), is of a calm, blissful and peaceful countenance ('Shanta'), has a blue complexion like that of the gem known as 'Indra-Neel-Mani' worn by Indra (the king of Gods, hence named after him; the blue sapphire), and is the Lord of all ('Prabhu').

The Lord lives in the Atma or the inner-self of the living being; he resides in the inner-self all creatures as their Atma or soul.

Both in the form of Dattatreya as well as Shiva, the Lord is in the form of an 'Avadhut'. ['Avadhut' is the highest category of Sanyasi or an ascetic who has reached the highest echelons of spiritual realisation. This concept has been especially elucidated upon in the Avadhut Upanishad of the Krishna Yajur Veda, being its 24th Upanishad.].

As an Avadhut he remains naked ('Digambar'). [An Avadhut has developed the level of spiritual realisation when he deems himself to be as expansive as the sky, and therefore wraps his gross body not with artificial clothes but with the sky that surrounds him on all the sides.] (11).

12. In the form of Dattatreya and Lord Shiva, the Lord has ash of the sacred fire smeared all over his body, wears matted lock of hairs on the head, and is honoured by the eclectic title of 'Vibhu'—i.e. one who is almighty, omnipresent, all-pervading, all-encompassing, magnanimous, eternal, infinite, all-powerful, immovable, constant and immutable.

He has four arms. [This refers to Lord Vishnu, the second of the Trinity Gods and the sustainer and protector of creation. It ought to be noted that the word 'Vibhu' applies to both Shiva as well as Vishnu.]

He is of a cheerful disposition and countenance.

His eyes are like lotus flowers (12).

13. The Lord is a treasury of Gyan (truthful knowledge and wisdom, enlightenment and realisation) and Yoga (meditation and contemplation). [That is, nothing is not known to the Lord as he is omniscient and all-knowing on the one hand, and well-versed in the art and skill of doing meditation and contemplation, and remains deeply involved in it on the other hand.]

The Lord is the universal Guru (teacher, guide and moral preceptor).

He is very dear to Yogis (ascetics) and is their patron God.

He is always very benevolent and magnanimous towards his devotees and worshippers.

He is the universal witness of all in this creation; he is a witness to everything and every event in this creation.

He is the one who is served, honoured and worshipped by all mystics and those who have attained spiritual realisation (13).

14. The Lord is indeed eternal and truthful. He is the Lord of all the Gods. He is worthy of being always praised and worshipped; he is the only one who should be honoured and sought by all.

In this way, a person who constantly, consistently and persistently remembers and honours this Lord is able to certainly obtain Mukti (freedom, liberation and deliverance) from all sins and their consequences (14).

15. This is indeed the truth. This truth is endorsed by this Upanishad; it is this truth that this Upanishad preaches. Amen! (15).

Chapter 15

Param-Hans Parivrajak Upanishad

This Upanishad describes the special eclectic and divine qualities and unique characteristics of a Parivrajak (i.e. a Sanyasi; a renunciate ascetic, monk, mendicant or friar who had completely renounced the world) who has reached higher state of spiritual realisation when he becomes self and Brahm realised, is internally very pious, pure and holy, and hence honoured by the epithet of being a 'Param Hans'. This title draws its name from the legendary Swan which is regarded as pure, holy, discriminatory and the wisest amongst birds because it has the mystical ability to pick up water and leave behind water, or pick up pearls from an assortment of gems. The Swan lives in clean water and none of the impurities of the water ever affects it.

The Upanishad outlines the necessary qualities that entitle a spiritual aspirant to be called a 'Parivrajak' (a Sanyasi), and then elevated to the stature of being called a 'Param Hans Parivrajak' which is a rare honour, the method of attaining this exalted state of existence, his way of life, what his state of mind is, how he thinks and behaves, what is the significance and symbolism of his renouncing everything in this world, including the important signs of religion such as the sacred thread, the tuft of hair on the head etc., and other such relevant topics.

It also describes how the Sanyasi reaches the climax of his spiritual pursuit by obtaining Mukti or Moksha which is liberation and deliverance from delusions and ignorance that leads to emancipation and salvation of the soul by realizing who or what the supreme transcendental Brahm essentially is, and how his own 'self' is this Brahm personified.

The text is in the form of an interrupted long prose. Therefore, for the purpose of this narrative it has been divided into seven paragraphs based on one major central idea that is covered in a particular paragraph.

It is a revealed Upanishad as it was preached by the primeval Lord known as Adi-Narayan (i.e. the primary form of Lord Vishnu which is also known as the Viraat Purush) when he was approached by Brahma, the creator of this world, to learn about the concept of a Param-Hans Sanyasi.

There are a number of Upanishads that deal with the concept of Parivrajak or Sanyas and various related topics. Some that are obviously very relevant to this present Upanishad of ours are the following—Param Brahm Upanishad, Brahm Upanishad, Narad Parivrajak Upanishad, Sanyas Upanishad, Yagyawalkya Upanishad, Bhikshuk Upanishad, and Hans Upanishad.

-----*****-----

-----Shanti Paath-----

Please see appendix no. 1 for the English of this Shanti Paath.

1. Once upon a time, Brahma (the creator of this world) went to his father, the Lord known as Adi Narayan¹, bowed reverentially before him, and asked, 'Oh Lord! I have come to learn about the four Varnas (classes in Hindu society²) and the laws governing them by hearing about them from you.

Now I wish to learn about the qualities and characteristic features of those exalted people who are called ‘Param Hans Parivrajak’³ (literally meaning a class of enlightened and realised ascetics, monks, mendicants or hermits who have totally renounced this world and its delusions, and have reached an exalted state of spiritual awareness which makes them both ‘self’ as well as ‘Brahm’ realised). Who is eligible to become a Parivrajak (or a renunciate person who has renounced all his attachments with the material world of sense objects and has therefore become completely detached from it and dispassionate towards it; such persons are called a ‘Sanyasi’)? What are the special characteristics and virtues of a Parivrajak (Sanyasi)?

Out of them, who is called a ‘Param Hans’ (literally meaning someone who has risen above the ordinary class of being a Sanyasi, and has reached the pinnacle of spiritualism when he becomes so holy and pure that he is compared to the divine Swan⁴ and given the honourable title of a ‘Param Hans’), and why is he called so?

How does one achieve the stature of being called a true Parivrajak; what is the way or the method to reach this most exalted state of existence for a spiritual aspirant (who wishes to obtain liberation, deliverance, emancipation and salvation for himself)?

Please be kind and gracious to tell me all about it.’

Hearing this earnest plea of Brahma, Lord Adi Narayan began to preach as follows—(1).

[Note—¹Lord *Adi-Narayan* refers literally to Lord Narayan who is the most ancient and the primary as well as the primordial Lord of creation. Here the term refers to the Viraat Purush, the Supreme Being in the form of Lord Vishnu from whom Brahma, the creator, was born atop a divine lotus that emerged from Vishnu’s navel as he reclined on the bed of the coiled body of Sheshnath, the legendary serpent who floated on the surface of the Kshirsagar, the cosmic ocean of milk.

²*Varnas* = References—(i) Atharva Veda’s = Brihajjabal Upanishad, Brahman 5, verse no. 8; Narad Parivrajak Upanishad, Canto 1, stanza no. 2, Canto 2, stanza no. 1, Canto 5, verse no. 1; Ashram Upanishad. (ii) Krishna Yajur Veda’s = Kathrudra Upanishad, verse no. 3. Reasons for classification—The Niralambo-panishad of Shukla Yajur Veda, in its verse no. 10 states the reason for the classification of the society in four classes.

The Subalo-panishad of Shukla Yajur Veda tradition, in its Canto 1, verse 6, and Canto 2, verse 1 describes the origin of these four classes in society.

The Hindu society has been divided into four sections or classes by ancient sages to regulate its functioning by delegation of authority and clearly specifying the jobs each section is supposed to do to maintain order and system in the world, to prevent overlapping of functions and avoid anarchy and chaos. These four sections are— (a) Brahmins*—the learned and teaching class; a wise one well-versed in the knowledge of the ultimate Truth about the supernatural Being called Brahm. They also presided over religious functions as priests, because these functions were central to life in the Vedic period; (b) Kshatriyas—they were the warrior, fighting, kingly class. They were assigned the job of giving protection to the society, dispensing justice and maintaining general law and order. (c) Vaishyas—they were the trading and farming class responsible for commerce and wealth generation. They provided for the necessities for a comfortable life. And finally (d) the Shudras—the service class of people whose main function was to free the other three classes from the humdrums of daily chores and concentrate their energies to the particular jobs assigned to those classes to which they belonged.

Yajur Veda 31st Chapter, 11th Mantra says that Brahmins are the mouth of society, the Kshatriyas are its arms, Vaishyas are its stomach or abdomen, and Shudras are its legs. The body is regarded as a symbol of the society. As is obvious in this analogy, all these four units of the body must function properly and in close

cooperation with each other in order that the body can survive and live comfortably and carry on with its assigned duties in an orderly fashion. The mouth is important because it is the medium by which the body takes food and speaks; the arms procure food and gives protection to the body against enemies; the stomach digests food and supplies the whole body with the energy needed by it; the abdomen holds all the internal organs; and the legs carry the body wherever it wants to go such as the place where food is available. Since food is the basis necessity of life, this instance is cited here. And the logic can be extended to everything else. Each component of the society must work properly in order that the whole society survives; each component is as vital as the other; each has its own importance in the bigger picture.

*The salient features of Brahmins are the following—they should possess these noble qualities—(1) 'Riju'-be expert in the Rig and the Yajur Vedas, (2) 'Tapa'-should be involved in doing penances, observing austerities and enduring sufferings for the welfare of the soul and the society, (3) 'Santosh'-be contented and satisfied, (4) 'Kshamaa'-to be forgiving and tolerant, (5) 'Sheel'-to have such virtues as good character, dignity, decorum and virtuousness, (6) 'Jitendriya'-to have self control over the sense organs, (7) 'Data'-to be a giver, one who sacrifices his own interests for the benefit of others, (8) 'Gyani'-one who is well learned, wise, enlightened and erudite, (9) 'Dayaalu'-to be merciful and compassionate. [Shatpath Brahman.] An entire Upanishad called Vajra-shuchiko-panishad, belonging to the Sam Veda tradition is devoted to the subject. The eclectic virtues of Brahmins have been expounded in Brihad Aranyaka Upanishad, Canto 3, Brahman 5 as well as in Canto 3, Brahman 8, verse no. 10

These four classes of the human race were created from the single father, the Viraat or Brahma. Their origins are indicative of the different jobs that they were assigned so as to enable the creator perform the task of governance just like a king assigns separate jobs to his different ministers. But it must be clearly understood here that each class of the human race was like a part of the body of the Supreme Being, and even as a man feels disfigured and handicapped as well as feels the pain equally if his leg is cut off from the rest of his body as he feels when his arm or head is severed, the Lord feels betrayed and hurt when even one of his sons is subjected to humiliation and pain. The four classes had specific jobs cut for them so that the society could function smoothly.

The Brahmins have their origin from the mouth of Brahma the creator. Since the mouth is used to give advice and teach others, the primary job of the Brahmins was to act as moral guide to their brethren. The four Vedas, which are repository of all knowledge that exist, were also created from the mouth of Brahma; hence these Brahmins were considered most wise and learned. The arms are metaphors for strength and powers; they are used to protect and help others. Hence, the Kshatriyas, who were created from the arms of Brahma, were those sons of his who would give the needed protection and security to their other brethren. In order to feed his creation, Brahma had to toil and labour to provide for the maintenance and financial and material well being of the society for merely teaching and protecting would not suffice without some one to take care of the other necessities of life. So he created the Vaishyas from his thighs, symbolising labour, to pick up the mantle of mundane affairs of life. But there must be someone who would do the daily chores, such as tilling the fields, doing the harvesting, washing and cleaning, and all other such odd jobs. This was assigned to the Shudras created from Brahma's feet symbolising service.

Paingalo-panishad of Shukla Yajur Veda tradition, in its Canto 1, verse no. 7 and Canto 2, verse nos. 3 describe how the three basic Gunas of Sata, Raja and Tama were used by the supreme Brahm to create different types of creatures in this creation.

None of these classes were meant to be inferior or superior to one another; they were all parts of the body of the same Brahma. In fact, the leg bears the burden of the body; just imagine what would have happened if Brahma had not created

anyone from his legs? How would the Brahmin walk, how would the Kshatriya fight, and how would the Vaishya do his commercial activities if he could not walk? Similar arguments can be applied to other classes. See also Brihad Aranyak Upanishad, 1/4/11-15 which describes their origin in graphic details, and also Aeitereyo-panishad, 1/1/4.

Reasons for classification—The Niralambo-panishad of Shukla Yajur Veda, in its verse no. 10 states the reason for the classification of the society in four classes.

The Subalo-panishad of Shukla Yajur Veda tradition, in its Canto 1, verse 6, and Canto 2, verse 1 describes the origin of these four classes in society.

³*Param Hans Parivrajak* = The phrase has three words, viz. 'Param' meaning supreme, the most exalted, the most acclaimed, the highly realised and one who has reached the highest echelons of achievement in his given field of interest; 'Hans' means a Swan, and its significance and symbolism is explained herein below; and 'Parivrajak' meaning a Sanyasi or a renunciate person who has developed total dispassion towards this material world and realised the futility of either pursuing it or enjoying it because it is illusionary, deluding, entrapping, and the cause of all his miseries and torments.

In other words, a Param Hans Parivrajak is a Sanyasi or a monk, a hermit, a friar, a mendicant or an ascetic who has completely disassociated himself from any involvement with this artificial world of materialism, and has instead focused his mind and intellect on the Truth which would provide him eternal peace and beatitude. He has reached the pinnacle of self-realisation which makes him aware of the truth of the supreme transcendental divinity known as Brahm, and he is called a 'Hans' because he has washed off all his worldly impurities and cleansed his inner-self just like a Swan that floats in the water of a lake without the impurities of the water affecting its cleanliness even slightly. Such a man lives in this world but is aloof from it; he lives amongst all the delusions but is not at all affected by them. Besides it, he has developed the wisdom and the erudition to discriminate between what is good and what is not, what is true and what is false, what is liberating and what is ensnaring just like the Swan which has the legendary ability to pick up pearls from an assortment of gems, and drink milk leaving behind water and other adulterants in it.

⁴*Swan* = The enlightened and realised person thinks of himself as a Swan and feels exhilarated that he is not an ordinary man bogged down by worldly fetters, but an exalted soul that is like a Swan.

The bird *Swan* or Hans is considered the most pure, clean, wise, erudite and clever among the birds. It is said to eat pearls, which means it picks up and accepts only the best amid the variety of things available to it in the form of an assortment of various gems and jewels representing the dazzling charms of this world. It is also reputed to drink milk leaving aside the water content in it symbolising its ability to imbibe the essence and the best, and leave the rest aside. It is also the vehicle of Goddess Saraswati, the patron Goddess of knowledge, wisdom, intelligence, speech and learning, indicating that it bears these glorious virtues. Hence, the reference to a swan while describing a creature conscious of the vital wind or Pran passing through him means the basic, inherent and intrinsic tendency of that wisened and intelligent creature is to be the best, most pure and divine, wise, awakened and enlightened, adroit, clever and sagacious like the swan, and pick all the goodness and forsake all that is bad in this world. Saraswati rides on a swan, symbolising the creature's inborn enlightenment and excellence of his mental caliber. Symbolically, Saraswati resides in his Pran because it rides on the swan, i.e. in his heart, throat and mind—that is, his heart has purity of emotions, he speaks well of all, and his wise words are sought after by all as priceless gems of wisdom, and his mind is intelligent, discerning and noble.

A wise man is expected to pick up the truth and leave aside the non-truths from the basket full of worldly charms of astounding proportions and myriad forms of temptations present in this creation.

Those wise men who have developed the level of wisdom, erudition and sagacity that they can discriminate between what is good and what is not, what is true and what is false, what is liberating and what is ensnaring for their soul are also honoured by the epithet of being a 'Hans' (Swan) because they are just like the Swan which has the legendary ability to pick up pearls from an assortment of gems, and drink milk leaving behind water and other adulterants in it. Even amongst such wise and enlightened men, those who have realised the 'truth' about their own self in the real sense, i.e. have become 'self-realised' and hence 'Brahm-realised' truthfully, and have consequentially attained the highest level of enlightenment and wisdom are called 'Param Hans'—literally meaning those who have accessed the 'supreme type of enlightenment'.

The alphabet 'Ha' of the word 'Hans' is sounded by the vibration of the exhaled wind passing through the vocal cords present in the throat or the wind pipe which connects to the nose, while the alphabet 'Sa' is sounded by the root of the tongue which opens into the mouth when the breath is inhaled. Both the nose and the mouth open in the same cavity called the throat. Hence, the inter relationship between 'Ha' and 'Sa' is evident. The main objective of this Upanishad is to make the Yogi (a person who follows its tenets of meditation) aware that he is like the divine swan, but he was unaware of his own divinity and sublimity, his exalted and noble stature, till that was pointed out to him. So he must become one like a 'swan', remind himself constantly that he is like a swan, and he must not do anything or act in anyway which is not befitting his exalted and superior status which is equivalent to a wise swan.

During the twenty-four hour period covering a single day and night, a person inhales and exhales, or breathes, roughly twenty-one thousand times, because each cycle of inhalation and exhalation is equivalent to saying one Mantra 'Hans' consisting of the two syllables 'Ha and Sa' (refer Dhyānbindu Upanishad, verse no. 63).

Hans, the divine Swan, is also one of the twenty-four incarnations of Lord Vishnu. Vishnu had once appeared as a divine Swan to preach the four celestial sages Sankaadi who were the mental sons of the creator Brahma.

It so happened that Sankaadi approached Brahma and wanted to know how can someone, who wished to have Moksha (final liberation and deliverance from this material world; freedom from attachment to the sense objects of this world; emancipation and salvation), effectively control his mind and sub-conscious and divert them away from the material charms of the world and its sense objects, and towards the inner self where the Atma, the pure consciousness, resides?

Brahma was confused and did not have the answer. So they meditated upon Lord Vishnu, the Supreme Being, from whom Brahma was born. Thus Vishnu appeared as a divine Swan. The sages could not recognise the Lord in that form and asked who he was. Then Vishnu, in his form as a Swan, preached the great tenets of metaphysics and Vedānta to Sankaadi. Thus, this revelation of Vishnu as a Swan was an embodiment of the greatest and the most refined form of spiritual knowledge, erudition, wisdom and enlightenment. Henceforth, Swan came to be known as a synonym for these eclectic and divine virtues. This story appears in Srimad Bhagwat, 11/13.

The Swan is depicted as a vehicle of Saraswati, the Goddess of knowledge and wisdom. In other words, those who worship Swan ride on the crest of knowledge, wisdom, erudition, sagacity and enlightenment.

The Yogchudamani Upanishad, verse no. 82-83 of Sam Veda tradition describes this Swan in the context of Yoga.

The Dhyān Bindu Upanishad, verse no. 24 and 61-65, of the Krishna Yajur Veda tradition which primarily deals with meditation and contemplation on Brahm in order to obtain emancipation and salvation of the soul of the creature says that the supreme transcendental Brahm, known also as Pranav, resides in the heart of all the living beings in the form of a Hansa. The main objective of this Upanishad is to make

the Yogi (a person who follows its tenets of meditation) aware that he is a personification of Brahm and is like the divine Swan, but he was unaware of his divinity and sublimity, his exalted stature, till that was pointed out to him in this verse. So he must become one like a 'swan', remind himself constantly that he is like a swan, and he must do not do anything or act in anyway which is not befitting his exalted and superior status which is equivalent to a wise swan. The highlight of its verse no. 63 is that it asserts that the Mantra 'Hans' is superior to the Gyatri Mantra.

The Yogshikha Upanishad describes in Canto 6, verse nos. 52-54 how the creature continues to do an involuntary Japa using the Mantra 'Hans' throughout his life while narrating how the creature continues to be buffeted and tossed around by the vital winds called Pran and Apaana.

The Brahm Vidya Upanishad of Krishna Yajur Veda has a number of verses dedicated to the concept of Hans and goes on to assert that it is the best Mantra with which a wise and enlightened ascetic should do Yoga (meditation) as well as Japa (repetition of Mantra). Such verses are nos. 16, 20-28, 34, 60-64 and 78-79.

The Hanso-panishad of Shukla Yajur Veda tradition is exclusively dedicated to explain the concept of the pure conscious Atma by way of using the metaphor of a Hans.

The Varaaha Upanishad of Krishna Yajur Veda, Canto 5, verse nos. 52, 54-55 describe the Hans Mantra besides asserting that the Atma, the pure conscious 'self' of the creature, is Hans (i.e. Brahm) personified.

References for the term 'Hans' or divine Swan—(a) Krishna Yajur Veda—Shwetashwatar Upanishad, Canto 2, verse no. 6; Canto 6, verse no. 15; Tejobindu Upanishad, Canto 1, verse no. 3-4; Dhyan Bindu Upanishad, verse nos. 24, 61-65; Brahm Vidya Upanishad, verse nos. 16, 20-28, 34, 60-64, 78-79; Yogshikha Upanishad, Canto 1, verse nos. 131-132, Canto 2, verse nos. 9-11, Canto 6, verse no. 20, 35-36, 53-54; Yogtattva Upanishad, verse no. 99. (b) Shukla Yajur Veda—Hanso-panishad is exclusively dedicated to explain the concept of the pure conscious Atma by way of using the metaphor of a Hans. (c) Sam Veda—Yogchudamani Upanishad, verse no. 31-35, 82-83, 93. (d) Atharva Veda—Naradparivrajak Upanishad, Canto 5, verse no. 4; Pashupata Brahm Upanishad, Canto 1, verse nos. 4, 12-22, 26-27; Canto 2, verse nos. 1-3; Mahavakya Upanishad, verse no. 6; Hayagriva Upanishad, verse no. 10.]

2. [Lord Adi Narayan preached—] 'A wise and erudite aspirant should first acquire knowledge under the guidance of a learned and self-realised Guru (moral preceptor and teacher) of high repute. This would enlighten him of the reality of this world and its material objects so much so that he understands and realises that all the comforts and pleasures of the world in which he lives as well as the world where he wishes to go after death (i.e. the heaven where he wishes to go after having lived a righteous life to enjoy its heavenly comforts and pleasures) are actually like a burden on his soul. [In other words, by studying the scriptures himself and being enlightened about their eclectic principles upon being taught by his learned teacher who explains their hidden meaning to him, he realises the falsehood of this material world and the truth of the Atma which is his own 'self' and pure consciousness, and hence the futility of pursuing the world and the comforts and pleasures of the senses either in this life or in the after-life become evident to him. Therefore, once he has attained this spiritual wisdom and knowledge of the Truth, he shakes off the deluding, artificial and entrapping world, and instead endeavours to attain eternity and true happiness that comes with distancing one's self from all delusions that are typical hallmarks of this material world, and diverting one's attention towards the grand spiritual truths of creation. Of course, such efforts would help one to become 'realised and enlightened', and with it would come bliss and happiness of an eternal and infinite kind, the bliss and happiness that is sustainable and true.]

This wisdom and enlightenment fills him with total detachment towards the three overpowering desires that a man has in this world—viz. desire for a son, desire for material prosperity and acquisition of wealth, and desire for fame, power, authority and majesty in this world.

He also develops total disinterest in the three types of Vasanas (worldly passions and lust) and abandons them. These three Vasanas are the following—Lok Vasana, Deha Vasana and Shastra Vasana¹.

He treats all sorts of attachments, attractions and infatuations ('Mamatva') as well as ego, pride and haughtiness ('Ahankar') as being equivalent to vomit, and therefore most reprehensible, disgusting, and worthy of being discarded.

With this wisdom firmly ingrained in his sub-conscious, he completes his education under the able guidance of a learned Guru while strictly observing the eclectic principles of Brahmacharya. [This is called 'Brahmacharya Ashram' and is the first phase in the life of a man. 'Brahmacharya' is a life of strict self-control, abstinence and continence, not only in sexual terms but taken in a very holistic manner involving strict control over all the organs of the body and total abstinence from numerous indulgences. A student is expected to observe strict discipline in order to concentrate his energy on studies without distraction, as well as to inculcate the virtue of self control that would come in good stead to him later on in his life.]

Having graduated with these grand and magnificent spiritual values firmly established in his psyche, he enters the second stage of life as a householder, called 'Grihastha Ashram'.

On completion of the second phase as a Grihastha he should step into the third phase of life called 'Vaanprastha'—literally meaning 'heading for the forest'. [This is simply a metaphor for having turned his back to the humdrum world and spending the rest of the life in search of peace and serenity which are symbolized by the term 'forest'.]

Finally, at the culmination of this third phase he should become a 'Sanyasi' or a 'Parivrajak'. [That is, now he should be completely unattached with anything, even to the extent that he keeps no company and avoids pilgrim sites. For him, the search for the Atma is the ultimate pilgrimage and the body itself is the holy site where the Atma lives.]

This is the general rule, but in exceptional cases a man can enter the phase of Parivrajak (i.e. he can become a renunciate Sanyasi, or a monk, hermit, mendicant or friar) directly from the Brahmacharya or Grihastha Ashrams without having had to go through the traditional path or the well-established routine procedure, or the various phases or the stages that one has to pass through to become a full-fledged Sanyasi.

Hence, whether or not a person has observed religious sacraments and vows, whether he has studied the scriptures or is illiterate in such matters (i.e. is un-lettered, uninitiated, uneducated, does not follow the tenets of religion, has not observed any sacraments, is unaware of scriptural concepts such as the Atma and Brahm etc.), whether he has done the fire sacrifice or not (i.e. whether or not he worships the Lord by offering him oblations through the sacred fire as ordained by the Vedas; whether or not he has purified himself as symbolized by his worshipping the fire)—whenever sincere and true sense of renunciation, detachment, disinterest and dispassion sprouts in his heart, he can become a Parivrajak (a Sanyasi).

According to established tradition, when a man who belongs to either of the three phases of life called a Brahmacharya, Grihastha or Vaanprastha develops true and complete detachment from this world and is desirous of taking the vows of a Parivrajak, he should first take formal permission from his parents, wife, son(s), kith

and kin, friends and companions, as well as his followers or disciples or those who are dependent upon him in any way. Then he must do the 'Prajapatya Ishti Yagya'. [This sacrifice is a special fire sacrifice done at the time of breaking off all connections with this world and stepping on the path of Sanyas. It is meant to offer oblations to Prajapati Brahma, the creator, and requesting the Lord to take care of those the aspirant leaves behind as well as of himself.]

But this principle does not apply on a man who wishes to take the vows of a Parivrajak way of life directly (i.e. even before or during the above three phases) without bothering to undergo the formal process. [This is because he is so eager to renounce this world, he is so eager to search the Truth and discard the falsehood, he is so eager to find liberation and deliverance that he does not wish to waste time in formalities and seeking permission from anyone. He need not wait for someone's consent or approval to become a Sanyasi; what if his parents or wife or son do not agree and create a hurdle in his spiritual path? Besides this, he has come to realise that all relations are limited to the gross body as the Atma has no relations whatsoever, for it is an eternally free and independent entity. The wise and enlightened aspirant has already understood the truth of the statement that the body is not his true identity, and neither is it that of the person from whom permission is sought. So, who should seek permission from whom, and who is empowered to refuse? So, why should he waste time and energy on pretensions and falsehood; why should he appear to be courteous and nice by asking permission from anyone, or appearing to be apologetic for his leaving his kith and kin alone? The very fact that true enlightenment has arisen in his bosom that has motivated and inspired him to throw away the falsehoods and artificial relations of the world, and instead move towards the great relationship that his Atma has with the supreme Atma known as Brahm would automatically make him free from all obligations of having to seek permissions or observing formalities in order to renounce the world and its shackles. He feels absolutely independent and unbound by any fetters to this world. Since self-realisation that attends achievement of true spiritual wisdom and enlightenment has taught him that his 'true self' is the Atma and not the gross body, and that all relationships are limited to the gross body and the Atma has no kind of relations, he feels not at all obliged to seek anyone permission to break free from all bondages pertaining to the body, and 'relationships of the world' are like these bondages. The Atma is as free and unshackled as the air element. So when the Atma flies free, it need not have any regrets or feel apologetic.]

Therefore, instead of doing the Prajapatya Ishti Yagya he must do the fire sacrifice called the 'Aagneya Ishti Yagya'. [This is the oblations paid to the Fire God or the Fire Element which is now requested to take up residence in the inner-self of the aspirant. This is a symbolic sacrifice to signify that the aspirant has burnt all connections with the external world, has burned all his spiritual impurities, has empowered himself with the power, potentials and authority of the Fire which is enshrined in his bosom, and now onwards he would worship the Atma as an embodiment of the holy Fire. Now onwards, he does not have to worship the sacred fire externally, but he offers his oblations and worship to it inside his own body. For such worship, whatever he eats or drinks is like an offering and oblation. Similarly, each of his breath is also like an offering. Indeed, this form of internal fire sacrifice and symbolic worship is regarded as the being of the best kind and the wisest way of worshipping the Supreme Being. This concept is further elaborate in the following paragraph.]

The Fire is the 'Pran' or life (both of the entire creation at the macro level of existence, as well as of the individual man at the micro level of creation, because

without the warmth, energy and light provided by the fire no life is feasible). It is on the strength of the fire that the Pran Vayu (the vital wind) carries out its various life-infusing and life-sustaining functions, and it is on the strength of the fire that the air shows movement. [The vital winds in the body are the ones responsible for all the small and big functions carried out by the different organs of the man's body. The 'fire element' plays a very important role in the body as is evident from the fact that if the fire element decides to calm down, or the body becomes cold, all its activities would automatically come to a standstill, and the man would die. A warm body is equivalent to a living body, while a cool body is a corpse. On the more physical plane we observe that when a fire burns, a breeze begins to blow, indicating 'movement' in the otherwise static air element. The fire heats the air and creates convection currents which make the otherwise static air move. This is most evident in hot summer afternoons when hot winds pick up speed and develop into a storm as the temperature rises during the afternoon hours on the plains and deserts. The 'fire element' is a metaphor for dynamism, vigour, vitality, energy, strength and life.]

An aspirant should offer three types of symbolic oblations to this fire sacrifice. These three symbolic offerings are the three Gunas such as the Sata Guna, the Raja Guna and the Tama Guna that are inherent to all living beings in this world. [In other words, he must burn all the three distinguishing qualities that are inherently present in all living beings, and which decide their behaviour, thought process, personality, character traits etc. A Sanyasi should develop complete equanimity and total neutrality in all matters. He must show no good, bad or mediocre behaviour that is determined by any of these Gunas; he must have no emotions determined by the dominance of one or the other of these Gunas; he should not harbour any specific qualities that can be used to ascribe him with some particular distinctive characteristic. He must live a life of anonymity, equanimity and total neutrality. Thus, offering of the three Gunas to the fire is a metaphoric way of saying that a true Sanyasi dissolves his individuality and personal identity to become universal like the Atma which he has now recognized to be his 'true self and identity'.]

Then he must smell the fire while saying the following hymn—'Oh Fire God! The Pran (i.e. the life or 'consciousness' as well as the vital winds or airs present inside my body) is the cause of your origin. [That is, it is because my body has 'consciousness' in it that it is said to be alive, and a living body is the abode of the fire element, for as soon as the life or consciousness leaves the body it becomes dead, and the fire element immediately leaves it too. The word 'Pran' also means the vital winds or airs that keep the body alive and active. The vital winds control and regulate the body by controlling and regulating the functioning of all the individual organs of the body. Since it is an established fact of science that air is needed to start the fire and keep it burning, and that no fire can survive without air, this stanza also means that it is the presence of the vital winds, collectively called the 'Pran', which helps the 'fire of life' burning inside the body. This physical fact and relationship between the air element and the fire element is depicted metaphorically by saying that the 'Pran is the father of the fire element'. Just like a father who not only provides the spark that produces the child but does his best to ensure that his off spring does not die a premature death, the air element present inside the body also ensures that the fire of life burning inside the body of the Sanyasi is not blown out. In other words, the Pran ensures that life is not snuffed out of the Sanyasi before its time for his Atma to emerge from the prison of the gross body to merge with the cosmic Atma known as the Parmatma, a development that provides the Sanyasi with his final Mukti or

Moksha, i.e. when he finds his final spiritual liberation, deliverance, emancipation and salvation.]

Being aware of this fact, please enter it and subtly establish yourself in the Pran. [That is, the fire element is invited to establish its self in the body of the aspirant in a symbolic manner so that his vital winds are kept energized and strengthened, and he is given sufficient vigour and stamina to bear with the harsh realities of a Sanyas way of life during which all the physical comforts of the world are lacking.]

Since you (the Fire God) have come into being from the Pran (consciousness and vital airs that give life as explained above), and since you are requested to take up your abode in it, you are also requested to impart your glorious illumination and dynamism to it. [In other words, you must provide my consciousness represented by my Atma with divine illumination in the form of truthful knowledge, intellect, wisdom, erudition, sagacity, and the mental ability to discriminate between the truth and the false. At the same time as this, you must also ensure that my vital winds or airs that sustain my physical body are not deprived of the necessary dynamism, strength, vigour, vitality and energy.] Bless me so that I can obtain better results in my spiritual pursuits and attain greater heights of spiritual success. Let me be blessed with enhanced energy, strength, courage, stamina, vigour and drive to be able to move steadily ahead in my endeavours and reach the pinnacle of success in it. [When the Pran or life-consciousness present in the body is fully strengthened, the aspirant would be empowered to pursue meditation and contemplation without any hindrance, such as lack of sufficient energy and strength needed to cope with the strenuous demands of Yoga. Re-vitalized Pran would ensure re-vitalized body, and with the body in a proper condition the rigours of life as a Sanyasi would be easy to cope with.]

Oh Fire God! You are earnestly requested to establish your esteemed self in the Pran which is regarded as your origin. [The word used in the text is 'Yoni', meaning a womb. The embryo is conceived and nourished in the mother's womb, and the latter is therefore regarded as the place from where the former originated. In the case of the fire element, this symbolic womb is the Pran or life-consciousness because if there is no consciousness in this creation there would be no life, and hence there would be no need or use of the fire. 'Pran' also means the vital airs or winds, and these airs or winds keep the fire element alive and active inside the gross body. As has been explained above, both the factors of 'consciousness' and the 'vital airs' are used as synonyms for 'Pran' in this verse. Therefore, both are regarded as the affable and doting 'father' of the fire element in a symbolic way. In the present context, the aspirant requests the fire element to subtly establish its self in his body so that he can easily cope with the rigours of the Sanyas way of life. He would not get proper nourishment because he would have to depend upon begged food, he would not have proper clothes to keep himself warm, or warm bedding to sleep upon, he would not have the comforts of a home and hearth, and therefore would be left on the mercy of the elements. Weakness of the body would also make his vital winds weak, and hence it is very important to invoke the blessings of the Fire God so as to overcome these and other such grave hurdles of the Sanyas way of life. If the internal fire is burning robustly, it would be so much the easier for him to overcome all the problems that he might have to face during the rough and tough life of Sanyas. Again, a well-kindled fire would speed up his progress in Yoga and help him achieve success in such practices as activation of the Kundalini and raising of the vital winds from the lower parts of the body to the head where he expects to experience the bliss of realisation of consciousness.]

So, please go there (in the Pran) and take up your honourable residence in it. [The word used in the text is 'Gachha' which means 'to go'.]

With this prayer, the aspiring Parivrajak should say 'Swaha²' to finish his invocation and offerings. [The word 'Swaha' is said while making offering to the sacred fire as it represents the mouth of the Fire God. When the worshipper has sufficiently pleased the Fire God, the latter opens his mouth to accept the offerings made by the worshipper.]

For the purpose of performing the above worship fire is needed, and it should be obtained from the household of a Srotriya person (i.e. someone who performs daily fire sacrifice according the principles laid down in the Vedas, and uses the latter's hymns for this purpose). After obtaining it, the aspirant should smell it (as described above in this paragraph). [The 'smelling' is done as a mark of showing affection and reverence. It is like the modern practice of kissing some dear one on the cheek in western culture, and on the head in Indian culture where the father or anyone elder than the person touches the latter's head and smells it as a formal gesture of blessing, love and affection.]

In case formal fire is not available due to any reason, or when it is not practically feasible to perform the fire sacrifice in its physical form, and the aspirant is very eager to become a Parivrajak without delay then he should complete the ritual by simply using water (in the place of the fire).

He should think that the water element known as 'Apaha' personified as the Water God is the primary origin of all the other Gods, including the Fire God. Hence, he should worship the Water God as follows—'Oh Water God! You are a personified form of all the Gods taken together. Therefore, I am offering my oblations to you (and it would be equivalent to offering it to each of the Gods at once).' Then he should say 'Swaha' and make the offering.

Once the offerings to the Gods is complete, he should pick up the remaining material used for such offerings, including Ghee (clarified butter) used for the purpose, and accept them (eat them) himself. [This is to signify that all the Gods reside in his own bosom. It indicates that they have accepted his gesture by imbibing the food offered to them. At the same time it also signifies that the spiritual aspirant is aware of the fact that the supreme God resides in his own self as the Atma to whom he is finally making his offerings by the symbolic gesture of eating all the remaining things himself. It has been said in the Upanishads that the body is a microcosm of the entire creation, and that all the Gods, who incidentally represent the forces of Nature in a personified form, took up their residences in this body at the micro level of creation just like they lived in the heaven at the macro level of creation—refer Rig Veda's Aiteriyo-panishad. Therefore it is not inappropriate to say that the offerings are made in a symbolic manner to all the Gods living inside the body of the Sanyasi.]

This process is used by those who follow the path prescribed for warriors, or those who wish to abandon the physical gross body by fasting, or those who wish to leave the mortal world by entering water and submerging (drowning) in it, or those who wish to cremate their gross body themselves by entering a fire that is voluntarily lit by themselves.

It is ordained that if one is really interested and sincere then he should not wait for formalities to be completed, and instead accept the vows of Sanyas mentally, or even by saying so and making a declaration to this effect (2).

[Note—¹The *three Vasanas*—(a) *Lok Vasana*—this is the desire and greed for wealth, fame, sense objects of the material world, territorial gains, authority and powers, majesty, pomp and pelf etc. The Vasanas relating to the world are the various

attractions and allurements that his apparently enchanting and captivating world presents to a person. It also refers to the various and endless responsibilities and obligations, real and imaginary, that a person has, or imagines he has towards this world.

Sometimes the Lok Vasanas overlaps the Deha Vasana as often they are interconnected. For example, one's 'Vasanas' pertaining to one's son, property, material wealth and other assets which a person has acquired by the efforts made by his body and which help him to get established in this world and enjoy enhanced comforts and pleasures as well as respect and honour that such acquisitions entitle him to in this physical world also come under this category of Vasanas. All such relationships that exist in this world, such as his relatives, his contacts, his friends, his peers and compatriots, along with his obligations, his contracts and his responsibilities related to them are called Lok Vasanas. It would also include all things done by him in this world to appease those who are related to him with this body.

(b) *Shastra Vasana*—this is the desire and yearnings related to scriptures and ancient literature, such as a desire to become an expert in them and be recognised as such, the desire to study them more and more, acquiring scholarship and literal expertise in them with its accompanying fame, renown, glory, honour, respect and financial prosperity, become much sought after and acquire a wide follower-ship based on these qualities and honours bestowed upon them by the world by the virtue of their unique abilities and expertise of the scriptures etc. But usually such knowledge is superficial, and the so-called expert of scriptures relies more on their letter rather than on their spirit, engrossing himself in endless discussions and debates leading to confusions and contradictions instead of solving them. The scriptures are vast and like a fathomless sea. Trying to realise the Supreme Truth by delving into the depths of the scriptures is like an attempt at extracting a single piece of pearl by churning the whole ocean. Though it is theoretically possible in thousand of years of continuous effort, but practically it is impossible and incredulous to even think of such a success; it is a too far-fetched notion. It is rare to find a truly wise and enlightened soul amongst worldly scholars and orators, for the latter's erudition is limited to gaining fame and name and nothing more.

(c) *Deha Vasana*—this is the insatiable desire and passion related to the gratification of the sense organs, such as becoming licentious, engrossing oneself in enjoyment of worldly sensual objects, and all other types of indulgences and gratifications. The 'Vasanas' pertaining to the body also relate to the attachments that one has with one's son, property and wealth which a person has acquired and enjoyed with his body, and the world around him—his relatives, his fame, his contacts, his friends, his obligation, contracts and responsibilities. It also means gratification of the sense organs of the body as well as to appease those who are related to him with this body so that they continue to serve and help him and give comfort and pleasure to his body.

Now, when we talk of the Atma as pure consciousness or an embodiment of light, the question arises 'how can we obtain the clearest perception of that reality?' The greatest exponent of Vedanta philosophy, sage Adi Sankaracharya prescribes the following four paths—(i) discrimination between the eternal and truthful, and the non-eternal and non-truthful, (ii) renunciation of desires for sensual gratification and enjoyment of pleasures from this materialistic world, (iii) development of six divine eclectic wealth—self control, surrender, faith, forbearance, peace/tranquility and poise of the mind, and (iv) sincere desire for liberation and deliverance, because it is only then that the creature will try to find ways to achieve it.

(ii) Another classification is based on the proportion of *bad* or *good* qualities inherent in and integral to the nature of a man. Therefore, there are broadly classified into Good Vasanas, and Bad Vasanas depending upon the proportion of good quality and the bad quality that is inherent in the man and forms his innate character. These

qualities are called the Gunas, and they are three in number—viz. Sata Guna, Raja Guna and Tama Guna. Hence, we have *Satvic Vasana*, *Rajic Vasana* and *Tamsic Vasana*.

The *Satvic Vasanas* are those desires that are determined by the predominance of the best quality called Sata in a man. Such a man is inclined to do auspicious deeds and take noble actions. He is naturally inclined to and attracted towards those things in this world which help him to cultivate higher values in life, such as the desire of serving others selflessly, being compassionate, relinquishing one's right for the general welfare of others, spending time in finding ways to achieve knowledge of the 'self', study of the scriptures and generally spending life in noble thoughts and deeds, etc.

The *Rajic Vasana* is the middle path which creates desires for name, fame and power and their accompanying laurels and majesty. Such tendencies need commensurate actions so that they can be effectuated. Hence such a man would be engrossed in the world and its activities; he would serve others but would have a certain degree of self-interest in whatever he does; he would judge everything but with himself as the overriding factor. He would study the scriptures but not for his spiritual well being but to gain money and fame and a large follower-ship.

Finally, the lowest of them is the *Tamsic Vasana* which makes a man pervert, sinful, selfish, indulgent and indolent to the extreme. He would snatch other's right in order to fulfill his own desires; he would study the scriptures only to find fault with them and ridicule them. He would not have any qualms in making others suffer by his actions and derive immense satisfaction and pleasure in it. He would have no scruples and a sense of probity and propriety in what he does in order to satisfy his desires, wants, yearnings, aspirations and expectations.

It ought to be noted that there are no water-tight compartments in these three types of Vasanas; they are diffused and more often than not difficult to differentiate one from the other. Their intensity may change with the change in the person's attitude and the level at which his thought processes as well as his mind and intellect operate as he develops wisdom and knowledge.

Vasanas arise due to one's desire to gratify the natural instincts of the sense organs. Such as for example, the eye has a natural urge to see beautiful objects. So if a man falls prey to this urge, his mind and intellect would come into play and the man would then try everything in his means and power to acquire that object which pleases the eye, thereby dragging other organs in this quagmire. Each organ would then make its own demand, and the demands never cease but go on multiplying in a compound manner. Actions prompted by the element of ego and egocentric desires such as the attitude of 'I, Me and Mine' leave in their wake a chain of desires and wants which keep us prodding, propelling and compelling to satisfy them, and the chain of Vasanas is set in motion.

So the easy way to stem the surge of Vasanas and finally obliterate them is to first analyse one's natural inclinations and tendencies, and then slowly divert them from lower level to a higher level by conscious effort and diligence. One of the methods to do this is to do deeds but without expecting any rewards from them—which is at the core of Karma Yoga. With this attitude, the accumulation of Vasanas is gradually exhausted. Another way is to acquire truthful knowledge by studying the scriptures directly or getting to know about their great tenets and teachings from others. This helps to remove 'Agyan' or ignorance of the reality and truth which is at the very root of the creation of Vasanas in the first place. If one becomes wise and gets acquainted with great metaphysical truths about the 'self' and the Atma along with the nature of existence and its essential form as well as the real goal of human life in spiritual terms, it would be natural and logical that he would be more inclined to overcome all sorts of Vasanas, including the Satvic ones. In fact, he would have no Vasanas at all.

The Vasanas have been described in detail in the *Varaaha Upanishad* of Krishna Yajur Veda tradition, in its Canto 2, verse no. 70, and Canto 4, verse nos. 16, 20, 23.

In Mukthiko-panishad, canto 2 of the Shukla Yajur Veda tradition, Lord Ram explains to his most ardent devotee, the wise and enlightened Hanuman the concept of Vasanas and how to purge and control them in order to attain emancipation and salvation.

The Yog Kundalini Upanishad of the Krishna Yajur Veda tradition, Canto 3, verse nos. 18-19 describes what is known as the 'good Vasana'.

How to overcome the Vasanas—Generally speaking, the drag of Vasanas (i.e. inherent tendencies, notions, innate habits, desires, yearnings etc.) of a creature, which create a hindrance in its contact with the pure self, can be overcome by the following four methods—(i) Method of persuasion—the creature tries to convince itself through reasoning, discrimination, self analysis and gentle prodding that its true identity is not the body but the soul or Atma which is the real and truthful self. (ii) Method of purification—the creature loves itself so much that its mind is blocked from all other love. This can be purged by thinking of the wider world as the beautiful extension of the self. Thus, selfishness is gradually reduced and it is replaced by love, compassion and graciousness. (iii) Method of eradication of desires—this can be done by selfless action and removal of ego. (iv) Method of forceful confrontation—the seeker should confront its mind about its wayward behaviour and force it to overcome past habits and tendencies. Efforts should be made to control the mind's restlessness—diligently, courteously and persistently.

²*Swaha*— The word *Swaha* is used to offer any offering to the ritualistic fire during the fire sacrifice. It represents the mouth of the Fire God. When the worshipper has sufficiently pleased the Fire God, the latter opens his mouth to accept the offerings made by the worshipper. The offering is in the form of clarified butter, cereals, sweets and fruits etc. With each offering, the word is pronounced to symbolize acceptance of it by the Fire God.

The word means 'hail, hail to you; may a blessing rest upon you!' *Swaha* in mythology is a personification of the oblation offered to the fire sacrifice. *Swaha* is also depicted as the daughter of Daksha Prajapati and wife of Agni, the Fire-God; she is said to preside over burnt offerings. Her body consists of the four Vedas and her limbs are the branches of the Vedas, called Angas. In some texts, *Swaha* is also depicted as the wife of Rudra Pashupati.

It must be noted that the word *Swaha* is usually pronounced while making offerings to the fire pit of the fire sacrifice, but more broadly it means submission, humility and offering the best that one has to the chosen deity. In the case where this word is said while offering prayers to the chosen deity by using Mantras, it means to offer one's own self with the greatest of reverence, humility and submission before the Lord being worshipped.]

3. After having taken the vows of Sanyas in a systematic manner by offering oblations to the Atma (i.e. worshipping the pure 'self' and being firmly convinced that this Atma is the supreme Brahman personified), purging it of all worldly impurities (symbolizing various Vasanas and Vrittis or worldly desires, habits and obligations pertaining to this world that all human beings have to a greater or lesser degree), and doing the 'Virja Hom' (the fire sacrifice done at the time of taking the vows of Sanyas, and offering oblations to the sacred fire) whereby the sacred fire element is established in his own Atma (as narrated in detail in verse no. 2 above), the aspiring Parivrajak (Sanyasi) should break off all connections with the world by passing on his responsibilities and obligations to his son. [It is like a ceremony of 'passing the baton'. It is a part of the cycle of creation whereby the old gives way smoothly to the new, and continuity is maintained without a hitch.]

In case a son is not available, then the same procedure should be followed for one's disciple or follower. If any disciple or follower is not available then the same

procedure should followed and the inheritance should be passed on to one's own Atma. [The Atma is a universal entity as it is pure consciousness that is uniform and universal in nature. The implication here is that in case no specific person is available to accept the inheritance or the legacy being left behind by the Sanyasi, he should leave it to the society as a whole. It is such a grand vision of inheritance envisioned and expounded by Upanishadic thinkers that has the essential idea which says that nothing belongs to a man, he should never think that he has exclusive right to anything because everything is to be left behind when one makes his final exit from this world. Since the Atma is a universal entity and all human beings have equal right over what the Lord has provided in this world, therefore whosoever enjoys the things left behind by the Sanyasi is deemed to be enjoyed by the Atma which is a personified form of the Lord himself. Unless the Sanyasi has developed this holistic, all-inclusive and equanimous view of creation, he has no right to be truly called a Parivrajak!]

He should pronounce the words 'Brahm Twam Yagyastwam' ('Brahm you are personified in the form of the sacred fire of the sacrifice') and remember Brahm with full devotion and submission. Then he should enter 'Savitri'¹. [That is, he should offer his oblations to fire, water and earth because they represent the Savitri as described in the note below. Or in case he wishes to leave his mortal body and obtain permanent Moksha (salvation and emancipation) as mentioned in the concluding stanzas of verse no. 2 above, he can enter the fire for self-cremation, the water for self-drowning, and the earth for burying himself in a dug-out or enter a cave never to come out again.]

{The following narrative outlines the reverse process of creation, or its regression in metaphysical terms²—} The aspiring Parivrajak should first think that the Mother of the Vedas and the one who has supported and sustained the Brahmins since the beginning of creation (i.e. the Gayatri Mantra and the Gayatri Chanda in which the Vedas were originally composed) has reverted back to its original, its principal primary and elementary form as the three Vyahritis. [These three 'Vyahritis' are the first words uttered by the creator, and they are 'Bhu', 'Bhuvaha' and 'Swaha'. It is from them that the rest of the world came into being; it is from them that all the alphabets of the language and the three steps of the Gayatri Chanda came into existence. The Gayatri Chanda is a special type of verse in which the first verses of the Vedas were composed. Hence it is called the 'Mother of the Vedas'. Since the Brahmin class used to exclusively study the Vedas and depended upon this study for their knowledge, sustenance and livelihood, it is said that the Gayatri supported them.]

Then the three Vyahritis should be merged with their primary forms as the three letters of the ethereal word OM (i.e. the letters A, U and M respectively). [That is, since Bhu is imagined as having its origin in the first letter 'A' of the word OM, it reverts back to it. Similarly, since Bhuvaha is imagined as having its origin in the second letter 'U' of the word OM, it reverts back to it. And finally, since Swaha is imagined as having its origin in the third letter 'M' of the word OM, it reverts back to it. Not only this, all these three letters A, U and M have no separate existence but in a composite form known as OM which is regarded as a 'monosyllable' implying that its sound is just like a single alphabet. In other words, the entire world is deemed to have had its origin in one point source known as the 'Bindu' or Brahm, and had expanded from it in its present form. So when regression takes place, it collapses back into this single point source known as Brahm.]

After that, the aspirant should carefully sip some water.

Then, while saying the Pranav Mantra 'OM', he should clip-off the tuft of hair (called the 'Shikha') from his head, tear the sacred thread (called the 'Yagyavit') that

is worn by him across his chest, and remove his clothes and lay them on the ground or throw them in the water of a river etc.

Having discarded all his possessions, he should say the Mantras ‘OM Bhu Swaha’, ‘OM Bhuvaha Swaha’, and ‘OM Swah Swaha’, and meditate upon his form that is like a new-born child. [That is, he should transform himself into a new-born child that has no hair on its head, wears no clothes, has no sacred thread yet, and is naked. This child is absolutely innocent and untainted by the corruptions of the world. Its heart is pure and pristine, and it remembers nothing of the past life nor bothers of the future. It is unconcerned by what is happening around it. It is fearless and careless. It is cheerful, happy and easy to please. The implication is that the Sanyasi should transform himself into an innocent and pure being that resembles a new-born infant or a very young child. The word ‘new-born’ aptly applies to him because he has just stepped in to the divine world of spiritualism after having discarded his past life.]

Then he should say ‘I have taken Sanyas’ three times, first mentally, then in a mutter, and then loudly. This is done to express his firm resolve to become a Parivrajak, to mentally prepare him for the new way of life, to express his intentions and then finally declare it loudly with certainty in his voice.

Then he should henceforth use the OM Mantra and always remember (i.e. keep his mind focused on) Pranav or the supreme transcendental Brahm. He should raise his arms and declare that he is granting fearlessness to all the creatures. No living being need fear him any longer. [This serves a dual purpose—it removes any trace of ill-will or animosity that anyone harbours against him, and it endears him to one and all around him. After all, when he has renounced the world, there is no reason why anyone should have any fear from him. Even if he was a king before taking to the Sanyas way of life, by making this declaration he expects that he is treated like an ordinary man by others. This is necessary in order to instill humility in him along with removal of any trace of ego and pride from his psyche.]

Then he should make the following declarations which encapsulate the great sayings, called the Maha Vakyas, of the Vedas—viz. ‘Aham Brahmasmi’ (I am Brahm), ‘Tattwamasi’ (You are that essence known as Brahm) etc. He should constantly meditate and contemplate upon these Maha Vakyas and research the Truth about himself. [That is, he must ponder deeply into the hidden meaning of the great tenets of the scriptures and strive to personally witness and experience the application of the truth of the Maha Vakyas. This can be achieved by concentrating upon his inner-self to realise the Atma or the pure consciousness that resides in his bosom.]

While so lost in his thoughts and full of contentedness and bliss, he should head in the north direction³ and spend his time wandering there. [That is, after taking Sanyas, he must go to the lofty Himalayan Mountains in search for spiritual solitude and peace, for an environment that is conducive to meditation and contemplation, and for being close to Mother Nature where he can feel the divinity close to him without any sort of disturbance from this world. The phrase ‘head north’ has a metaphoric meaning also which implies moving up in the direction of spiritual elevation, moving ahead to find liberation and deliverance by breaking free from the shackles of the gross world and entering the subtle world of the Atma, and to move away from the world of material entrapments and delusions into the world of spiritual freedom and bliss.] (3).

[Note—¹*Savitri*—The word ‘Savitri’ has a female connotation and is regarded in metaphysics as a personified form of the dynamism and energy of Brahm, the supreme transcendental Being who is the Grand Lord of creation. Its male counterpart

is known as 'Savita'. Upanishads assign various interpretations to the word Savitri because the dynamism of Brahm has shown its self in myriad of forms.

In the chronology of genesis of creation it is said that from Brahm came into being the air or wind element, from the wind came into being the ethereal word OM, from the word OM came into being the Savitri (fire), from the Savitri came into being the Gayatri (Mantra of three steps), and from the Gayatri came into being the world (refer Atharva Shir Upanishad of the Atharva Veda, verse no. 6).

The Savitri Upanishad of the Sam Veda tradition says that if the Sun is the Savita, then its rays is Savitri (i.e. if the Sun represents the supreme Brahm, then the dynamism of Brahm is personified as its rays called Savitri—refer verse no. 6); if the Fire is Savita (Brahm), then the Prithivi or Earth is the Savitri (its dynamic ability to foster and sustain life on display—refer verse no. 1); if the Water God known as Varun is Savita (Brahm), then Apaha (the water element in a liquid form) is its Savitri (dynamic form—refer verse no. 2).

In Puranic lore, Savitri is the divine consort of the Sun God. It represents the dynamism and energy of the Sun on vivid display. It is the Fire God personified in the form of a Goddess because the Shakti, or the dynamism of the Supreme Being with which he created, sustains and would bring this creation to an end is represented in a female form of a Goddess known as Shakti. Brahm, the Supreme Being, uses his Shakti to achieve anything in this creation.

Similarly, the Water God who personifies the water element is also known as Savitri as water is regarded as a personified form of all the Gods at once. This is obviously because water is a pre-requisite for life and no life is ever imaginable without the presence of water in some form. It is the great elixir of life. This fact is endorsed by Param Hans Upanishad of Atharva Veda tradition, verse no. 2 wherein it is stated that when an aspirant is taking the vows of Sanyas and fire is not available due to some reason then he can offer his oblations to the water which is deemed to be the element from which all other Gods have come into being.

The Earth is also known as Savitri as it the base that supports and gives abode to both the fire as well as the water elements. It is in the bowls of the earth that the fire and water live eternally.

If fact it is the Savitri that is regarded as the cosmic Mother from whom all the Gods were born. Refer *Savitri Upanishad*, verse no. 14.

An entire Upanishad is dedicated to the theme of 'Savitri' and it is named after this entity as Savitri Upanishad; it belongs to the Sam Veda tradition. Its verse nos. 1-9 are dedicated to defining what is Savitri and what is Savita, and verse nos. 10-13 asserts that the three steps of the famous Gayatri Mantra are actually metaphoric representations of the great Shakti (dynamism, strength, powers, potentials and energy) of the Savitri.

Savitri symbolizes the Shakti of the Supreme Being with special relation to this gross world where the creature lives, i.e. the earth. Hence, when we talk of the fire element and water element as manifestations of Savitri we refer to their forms as they exist on earth—as the subterranean water or fire inherent to earth. No life is sustainable without either of the fire, the water or the earth being present simultaneously.

In the Upanishads dealing with the concept of Sanyas it is prescribed that after the aspirant has duly worshipped the consecrated fire, either actually or in a symbolic manner, he should establish the divine Goddess Savitri in the Vyahritis. Refer *Naradparivrajak Upanishad*, Canto 4, verse no. 37.

²The *retrogression/conclusion of creation, or the various stages in the dooms-day* have been described in the Vishnu Puran, Chapter 6, Cantos 3-4. In the Upanishads, it has been outlined in the following Upanishads—(i) Shukla Yajur Veda = Paingal Upanishad, Canto 3, verse no. 6. (ii) Atharva Veda = Tripadvibhut Maha Narayan Upanishad, Canto 3, paragraphs 7-16 while describing the life spans of Brahma, Vishnu, Viraat and Adi-Narayan.

³The concept of going to the *north direction* to seek spiritual elevation and find Mukti (liberation and deliverance) has been explained in other Upanishads also—viz. Atharva Veda's Narad Parivrajak Upanishad, Canto 4, verse no. 37, and Tripadvibhut Maha Narayan Upanishad, Canto 5, paragraph no. 15.

In the context of the Indian sub-continent where the Upanishads were first conceived and composed, going in the 'northern' direction refers to heading for the lofty heights of the Himalayan mountain range. It is here that great ascetics, sages, seers, hermits and mendicants used to live in early times. It has a dense population of enlightened and self-realised souls. This factor injected an aura of divinity and positivity to the northern direction. Further, the northern direction where the mountains and verdant pristine forests were located had the quality of being tranquil, lonely, serene, calm and peaceful that was very helpful for spiritual pursuits, such as doing Tapa (austerity and penance), Dhyana (contemplation) and Yoga (meditation). This is the reason why the green, cool and pleasant surroundings of the mountains and their forests were chosen by ancient sages and ascetics as their preferred habitat. This place was far away from the hustle and bustle and the restlessness of ordinary mundane life of the world, and was untouched by corruptions and worldly taints. It gave these holy people absolute peace and quietude that is so necessary for spiritual pursuit, mental peace and emotional solace.

The term 'northern' therefore symbolically represented the upward mobility of the soul when it sought to rise above the humdrum of worldly life, break free from all worldly shackles and entanglements, and seek its liberation and deliverance from the gross body as well as the gross world. It represented the quest for higher spiritual way of existence, a life of higher consciousness, awakening, realisation, wisdom, enlightenment etc. It represented a state of existence free from all moral and spiritual encumbrances represented by numerous taints, faults, corruptions and blemishes that are associated with life in this world. It would be a utopian and pristine pure form of enlightened existence much like the crystal clean and pristine environment of the mountains and its forests themselves.

The dimension, the intensity and the density of positive energy emanating from the pure consciousness is more in the northern direction as compared to other directions because of a greater population of self-realised and enlightened sages who lived in this particular region of the earth. The lofty peaks of the mountains are metaphors of high peaks of pure consciousness, or high intensity waves of consciousness that have peaked, and its accompanying high level of spiritual energy and positivity, while the valleys, depressions and gorges present elsewhere on earth symbolise just the opposite—low level of consciousness and its accompanying low level of spiritual energy.

The world below the northern direction, i.e. everywhere else other than the northern direction, is literally like a slum-ghetto in spiritual metaphor—it is riddled with all sorts of factors that tie down the creature to this deluding world and its entanglements; it keeps the soul trapped in shackles; it impedes growth and development; it breeds moral and spiritual corruption and degeneration. Indeed, it is so gross that it needs quite an effort on the part of the aspirant to break free from its fetters and rise above to his final freedom.

We can look at these two directions from another angle. As compared to the northern direction where the high mountains are located, the opposite direction of the south is where the 'ocean' (the great Indian Ocean) is present. Whereas the mountain represents 'high' ground to which a man rushes for his life out of fear of being drowned during floods and deluges, the ocean is the one that does the opposite—it submerges and drowns everything; everything sinks in its fathomless waters. This is a metaphoric way of saying that the northern direction provides the high moral ground for the creature, and moving towards this direction means spiritual progress whereby the soul is lifted from the bowls of low forms of gross life, and endeavours to reach for the higher form of existence symbolized by the lofty peaks of the mountains. On

the other hand, the southern direction is a metaphor for a lowly and gross form of existence that virtually drowns the creature in the quagmire of worldly delusions and its attendant problems just like the ocean sinks everything put in it.

The southern direction is a metaphor for spiritual downfall, degradation, degeneration and depletion of spiritual energy. The low-bound soul gets stuck in this marsh, gets dirty and corrupted, and thereby loses the pristine cleanliness and shine that it inherently possesses. The southern direction representing the gross and deluding world is entrapping for the soul, it's an impediment for the soul's liberation and deliverance, while the northern direction where high land and mountains are present represent the state of existence when the soul lives in a high moral ground, free from all taints and blemishes, and is equivalent to the soul's progress towards its ultimate aim of finding liberation and emancipation.

This being so, those enlightened souls who lived in the northern direction were deemed to be like 'radiant Gods' because of the high level of energy of the consciousness emanating from them and forming a bright halo around them. As compared to these enlightened souls, those who lived down in the pit of ignorance and delusions that was characteristic of this material world lacked this glow of divine energy, and hence were regarded as 'dark-complexioned'.

The other two directions, such as the east and the west, are dominated by plains and comparatively flat land in nature as compared to the mountains in the north and the ocean in the south. So they were represented by those who were ordinary humans, neither as brilliant as the ones who lived in the northern direction, nor as dark as the ones who lived in the southern direction.]

4. If one is not eligible or unable to take the vows of Sanyas in the format described above (in verse no. 3), then there is an alternative arrangement for him. It is being narrated now.

He should grant fearlessness to all the creatures by declaring—'OM salutations! Oh friends! Give me your protection; lend me your strength. You are like the weapon called Vajra that belongs to Indra, the king of Gods who had killed the demon Vrittasur with it. Grant me peace and serenity. Free me from sins.'

After having made the above request prefixed with the word OM*, he should pick up the external signs of a Sanyasi, such as a monk's stick made up of bamboo that is clean and not damaged in anyway (such as being eaten by insects), the waist-thread, the loin-cloth, the water-pot, and one piece of ochre cloth to wrap around the body. [*The intention of prefixing OM to the address made to friends implies that the aspiring Parivrajak is addressing them as visible manifestations of the supreme Brahm. This word 'OM' is prefixed to all prayers offered to all the Gods as a matter of routine but the intention is that these Gods are being honoured as Brahm in their form, or that the main supreme deity to whom a particular prayer is offered is Brahm and not the junior God who is mentioned by name in the prayer. The same principle applies here as well. After all, it is the same Atma or pure consciousness that resides in the bosom of all the friends of the Sanyasi to whom he addresses this prayer, and this Atma is none but Brahm personified. Hence, he is actually praying to Brahm through the medium of his friends and compatriots.]

Wearing them, he should approach a learned Guru (moral preceptor and teacher) to be formally initiated. He should bow before him in reverence and accept the Maha-Vakya (i.e. the great saying of the Vedas) 'Tattwamasi' ('that art thou'; i.e. the Brahm you are seeking is none but you; the essence of creation is you) as a Mantra from the Guru. [At the time of initiation into a religious fold, the Guru gives a certain Mantra to the disciple as a key to his success. Since the candidate in this case

is about to take the vows of Sanyas, the best Mantra is Tattwamasi because it enlightens him about the truth of his own self.]

Once again, this Mantra is prefixed with the divine word OM (to indicate that the teacher is addressing the supreme Brahm when he makes this declaration, and to establish its trustworthiness).

Then the aspiring Sanyasi should observe the following codes of conduct—he should wear only thin ochre clothes or a deer-skin, should avoid getting into water (such as river or a stream) or climbing heights (such as rocks or high mountains), should not take food even by begging from one house more than once (or should accept a little food from a few houses), take a bath three times a day (at dawn, at noon and at dusk), should spend time in studying and understanding the philosophy of the Vedas (i.e. should study the Upanishads in-depth), and constantly repeat the Mantra for Pranav (Brahm), which is OM.

Enlightening himself by acquiring comprehensive spiritual knowledge (got by diligent study of the Upanishads) and treading wisely on the path of Brahm-realisation, he should turn inwards and hide his emotions and feelings within. He should strive to become free from all attachments and affections of all sorts, and instead focus his attention on the Atma, the pure consciousness, by becoming spiritually oriented.

He should abandon the following negative traits—Kaam (worldly passions and lust), Krodh (anger, wrathfulness), Lobh (greed, rapacity), Moha (affections, infatuations, attachments and attractions), Mada (arrogance, hypocrisy, haughtiness), Matsarya (jealously and envy that lead to anger and wrath), Dambha (deceit and conceit, falsehood and lies), Darpa and Ahankar (pride, arrogance, conceit, rashness, boastfulness, false sense of grandiose), Asuya (malice, envy, jealousy, detraction), Garva (same as Ahankar and Darpa), Ichha (aspirations, desires and wants), Dwesh (having animosity, ill-will, jealousy, hatred and malice), Harsha (having joys, feeling happy and exhilarated as from some good news), Amarsh (intolerance and its attendant anger, wrathfulness and jealousy), Mamatwa (to have affections and endearment for anything or anyone; to be emotionally attached with something or someone), and other such worldly traits that are ensnaring by their inherent nature.

Instead of the above negative traits he should inculcate the following positive ones—He should arm himself with the eclectic virtues of Gyan (truthful knowledge, wisdom and enlightenment) and Vairagya (renunciation, detachment and dispassion), should turn his back to material wealth and lust for sensual pleasures, should study all the Upanishads comprehensively with an open and receptive mind, should strictly follow the tenets of Brahmacharya (sexual abstinence as well as exemplary self-control over the sense organs to inculcate discipline), Aparigraha (giving away of assets or possessions; non-accumulation; renunciation of the highest degree), Ahinsa (non-violence, both physical as well as mental), Satya (truthfulness in a holistic way), and Jitendriya (one who has conquered the wayward tendency, the restlessness and rashness of the sense organs of the body; one who exercises exemplary self control over the gross organs of the body).

He should be free from any kind of 'Raag' (having any sort of infatuation, attraction, attachment, affection and favour) for anything or anybody or any situation, both internally (i.e. mentally and sub-consciously) as well as externally (i.e. natural tendency of the sense organs to seek self-gratification).

Being thus neutral and non-attached, he should beg for food in order to sustain his gross body by accepting food from any household belonging to any of the four classes of society without distinguishing between them just like an animal (such as

cow or other cattle) that accepts food from anyone who offers it something to eat, subject to the condition that this household does not belong to someone who has fallen from his lawful way of life, is sinful and is tainted in any manner. [This is because such food too becomes tainted as it is ill-gotten, and would be like poison for the eater.]

A wise person who follows this principle develops a sense of equanimity and treats everyone as being equivalent to Brahm; he distinguishes between none, as all are Brahm personified in his view (4).

5. He should treat gains and loses with stoic equanimity in all the planes of time (i.e. in the present as well as in the future; with the past he has no concern).

He should accept food in his palms during begging (instead of in a pot).

He should remain thin and take care not to add flab to the body (as the latter would make him lazy and prone to diseases).

Firmly established in the thoughts of 'I am Brahm' as taught to him by his Guru at the time of getting initiated (refer paragraph no. 4 above), he should roam freely around for a period of eight months. [This period is necessary for his acclimatization to the life of a Sanyasi. It's a buffer zone between his previous life as a householder accustomed to the comforts of the world and the warmth of the household hearth, and the life as a wandering friar who has no such privileges.]

When he has become firmly established in the path of Sanyas and has fully acclimatized himself to its rigours, when he has inculcated wisdom and enlightenment, he should enter the next phases of Sanyas and progressively move ahead by becoming a Kutichak, a Bhaudak, a Hans or a Param Hans in that order¹.

Having attained the exalted stature of a 'Param Hans Sanyasi' (the theme to which this present Upanishad is dedicated), he should discard the waist-thread (or waist-band), the loin-cloth, the staff and the water-pot by offering them to a water body nearby. While doing this he should offer oblations and say Mantras relevant to the occasion.

Having discarded all his external appendages that characterizes him as being a Sanyasi, he should roam freely everywhere like a naked child. [The word 'naked' is a metaphor for having nothing to hide, having no secrets and no remaining unbothered about having to observe the niceties of the formal world. A child is innocent, cheerful, carefree, pure-hearted, bears no ill-will against anyone, is easy to please, and is regarded as an image of God². Hence, when a Sanyasi or Parivrajak becomes one like a child he is deemed to be an image of God.]

During this period of his wanderings, he should stay in a village for only one night, at a pilgrim site for three nights, in a town for five nights, and in any one given area for not more than seven nights.

He should not have any permanent home of his own.

He should be of a steady and firm mind and intellect, not swayed by any emotion or circumstance.

He should not enjoy proximity with fire (even during the winters—to ensure his safety from being burnt unawares as well as to inculcate the habit of observing strict austerity and doing rigorous penance).

He should stay 'Nirvikaar'—i.e. he should not allow any taints and faults or shortcomings to affect or influence him in the least.

He should free himself from the burden of adhering to certain formalities and rules of life by not bothering to worry about them.

He should regard loss and gain equally, and remain emotionless, unaffected, stoic and neutral in both the cases.

He should beg for food like a cow just in order to maintain his Pran in his body. [To eat like a cow means that he calmly accepts whatever is offered to him, and that too directly in his mouth without storing it for further use. He should chew the food properly before allowing it to enter the stomach like the cow chews its cud.]

He should treat all water bodies as the water-pot.

He should stay alone in a serene, secluded and calm place.

He should never pay attention to any kind of benefit or gain as well as harm or loss.

He should sleep on the ground.

He should not shave.

He should free himself from the obligation of having to observe the various religious sacraments such as 'Chaturmaas'—i.e. the requirement that ordains a monk to stay at a given place for a period of four months during one year, usually during the rainy season. [This requirement has been envisaged by the scriptures as a means to give the body of the wandering monk some rest and to prevent him from being exposed to the vagaries of Nature—such as facing the risk of being bitten by insects which proliferate during the rainy season as well as from reptiles such as snakes which come to the surface when their holes are flooded with rain-water, being infected by germs during the dampness of the rainy season, being soaked by rain with the accompanying chance of falling mortally ill with nothing for protection, or even facing the harsh conditions of winter. But a Param Hans Sanyasi is given the freedom to act as he deems fit.]

He should only pay attention to things that are 'Shukla' or bright and illuminated by nature—i.e. things or subjects that are auspicious, righteous and spiritually uplifting.

He should have nothing to do with women, worldly wealth and material things, as well as a city or village.

In spite of being highly wise, self-realised and enlightened, having inculcated exemplary self control, he should nevertheless behave erratically and unpredictably like an ignorant man, like a vagrant, like a lunatic, or like a wayward man who has lost his bearings. He should not divulge his spiritual stature, either in the form of external signs or in the form of special and exclusive behaviour that is holy, pious and divine. [This is to ensure that he is left alone, and no one either bothers or dares to come near him to disturb his meditative and contemplative mood. Should he show off his elevated spiritual stature and mystical powers, people would swamp him in uncontrollable hordes to seek his blessings for their mundane worldly problems, leaving him no time for his spiritual pursuits and disturbing his peace of mind and demeanours.]

Treating day and night alike, he should always remain in a perpetual state of half-sleep and half-awake. [This refers to his mental state of remaining unconcerned with his surroundings and the world at large. 'Half-asleep' refers to his indifference to anything pertaining to the gross world, and 'half-awake' refers to his constant involvement and remaining engrossed in meditation and contemplation. This state is equivalent to the Turiya state of spiritual existence which also corresponds to the state of consciousness known as Samadhi. This is a state when one is half awake and half asleep in the sense that though he goes about the routine affairs of this world in apparently a normal way, internally he remains aloof and disinterested in anything. This is the higher level of existence when one has realised the super consciousness

that makes him immune to and disinterested in anything inferior and sub-standard. This is also called the ‘Unmani’ or indifferent state of the mind and the sub-conscious.]

Verily, he who remains absorbed in researching the truth about himself as well as about Pranav (Brahm)—that is, an enlightened Sanyasi who remains engrossed in contemplating upon the Atma which is pure consciousness and his ‘true self’, along with meditating and contemplating upon Brahm which is the cosmic super Consciousness and the universal Absolute Truth of creation—when such an enlightened and self-realised man follows the path of Sanyas, and finally leaves his gross body as a true and realised Sanyasi (or as a true Parivrajak), then he is indeed known and honoured as a ‘Param Hans Parivrajak’ (5).

[Note—¹These four types of Sanyasis are described in Sanyas Upanishad of the Sam Veda tradition, Canto 2, verse nos. 23-27; and Shatayani Upanishad of Shukla Yajur Veda, verse no. 11.

²The fact that a *child* is an image of God is endorsed by the **Holy Bible** as follows—

“1: At the same time came the disciples unto Jesus, saying, Who is the greatest in the kingdom of heaven? 2: And Jesus called a little child unto him, and set him in the midst of them, 3: And said, Verily I say unto you, Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven. 4: Whosoever therefore shall humble himself as this little child, the same is greatest in the kingdom of heaven. 5: And whoso shall receive one such little child in my name receiveth me. 6: But whoso shall offend one of these little ones which believe in me, it were better for him that a millstone were hanged about his neck, and that he were drowned in the depth of the sea. [The Holy Bible, New Testament, Gospel of St. Matthews, 18/1-6.]”

“36: And he took a child and set him in the midst of them; and when he (Jesus) had taken him (child) in his arms, he said unto them (the twelve Apostles), 37: Whosoever shall receive one such children in my name, receiveth me; and whosoever shall receive me, receiveth not me, but him (the Lord God) who sent me. [The Holy Bible, New Testament, Gospel of St. Mark, 9/36-37.]”

6. [Brahma (the creator) asked once again—] ‘Oh Lord, what is form of ‘Pranav Brahm’ (the cosmic Consciousness)?’

[Lord Adi-Narayan replied—] ‘Pranav Brahm has sixteen Matras or aspects. [These ‘Matras’ of Brahm are also known as ‘Kalaas’ of Brahm.]

There are four states of existence of consciousness, and each of them has four aspects, bringing the total to sixteen.

There are said to be four primary states of existence of consciousness—viz. Jagrat or waking state, Swapna or dreaming state, Sushupta or deep sleep state, and Turiya or post Sushupta state of existence of consciousness¹. Each of these primary states is further divided into four more subtle sub-classes of existence bearing the same names as the four primary states.

Hence, the first primary state of existence known as ‘Jagrat’ or waking state of consciousness has four subtle secondary states as sub-divisions or sub-classes known as Jagrat, Swapna, Sushupta and Turiya.

Similarly, the second primary state of existence known as ‘Swapna’ or dreaming state of consciousness has four subtle secondary states as sub-divisions or sub-classes known as Jagrat, Swapna, Sushupta and Turiya.

Likewise, the third primary state of existence known as ‘Sushupta’ or deep sleep state of consciousness has four subtle secondary states as sub-divisions or sub-classes known as Jagrat, Swapna, Sushupta and Turiya.

And finally, the fourth primary state of existence known as ‘Turiya’ or trans-Sushupta state of consciousness has four subtle secondary states as sub-divisions or sub-classes known as Jagrat, Swapna, Sushupta and Turiya.

Thus, the first primary state of consciousness known as ‘Jagrat’, when considered on a macro plane or level of existence, produces the vast external ‘Vishwa’ or the gross world of material sense objects. This state in which the consciousness becomes aware of the external world includes four sub-levels, and each exists as a world in its own right. Hence, during the ‘Jagrat’ state we have the following four classes of Vishwa (external visible, gross world) known as ‘Vishwa-Vishwa’, ‘Vishwa-Taijas’, ‘Vishwa-Pragya’, and ‘Vishwa-Turiya’.²

The same principle is applied to the other three states.

Therefore, the second primary state of consciousness known as ‘Swapna’, when considered on a macro plane or level of existence, produces the subtle world known as ‘Taijas’ (literally meaning an entity that is glorious, effulgent, radiant and splendid; here referring to the world of dreams which is more splendid, charming, magnificent and fascinating than the real gross world of physical gross existence). This state in which the consciousness becomes aware of the subtle world that is imaginary but appears to be true as it is created by the glorious creative abilities of the mind and the sub-conscious includes four sub-levels, and each exists in its own right. Hence, during the ‘Swapna’ state we have the following four classes of existence of Taijas world—‘Taijas-Vishwa’, ‘Taijas-Taijas’, ‘Taijas-Pragya’, and ‘Taijas-Turiya’.

Similarly, the third primary state of consciousness known as ‘Sushupta’, when considered on a macro plane or level of existence, produces the subtler world known as ‘Pragya’ (literally meaning an entity that is inherently wise, all-knowing, omniscient, enlightened and erudite). In this state the consciousness is free to see its own self because it is freed from the distractions caused to it by constant inputs from the gross organs of the body in relation to the external world and from the mind and its sub-conscious engaged in imagining a fascinating world of dreams. Hence, the consciousness is able to turn peacefully inwards and see the world of its own, and it is therefore called ‘Pragya’ as it is the world of enlightenment, wisdom, knowledge and erudition as opposed to the gross world known as Vishwa of the Jagrat state, and the subtle world known as Taijas of the Swapna state. Now, as in the previous cases, this Pragya also has four categories as follows—‘Pragya-Vishwa’, ‘Pragya-Taijas’, ‘Pragya-Pragya’, and ‘Pragya-Turiya’.

Finally, the fourth primary state of consciousness known as ‘Turiya’, when considered on a macro plane or level of existence, produces the subtlest form in which the consciousness exists, the world known as the transcendental world or Turiya world. It is so-called because it crosses the outer limit of Sushupta in the sense that having reached this state, the consciousness does not have to revert back to the earlier three states of Sushupta, Swapna and Jagrat. It’s virtually a permanent state of bliss and ecstasy when no awareness of any thing in its gross form exists, and the bliss and ecstasy are irreversible. Like the earlier three cases, this state is also sub-divided into four categories as follows—‘Turiya-Vishwa’, ‘Turiya-Taijas’, ‘Turiya-Pragya’, and ‘Turiya-Turiya’.

Since consciousness and all forms of existence are nothing but Brahm, the super-consciousness, in all these forms, it follows that Brahm has sixteen Matras (or forms or aspects).

[Now, this concept of sixteen Matras of existence of consciousness of an ordinary Jiva or living being in this creation is applied to the grand metaphysical concepts of OM as well as the various states in which consciousness exists when an aspirant is engaged in meditation and contemplation. This helps to draw a parallel between them and establish a sense of seamless uniformity in creation. It also establishes the principle of non-duality by proving that it is the same Brahm that exists in all planes of existence, whether gross or subtle, where micro or macro level of creation is taken into consideration.]

The first letter 'A' of the divine word OM³ standing for Pranav is equivalent to the 'Jagrat-Vishwa' form of Brahm which is the latter's first aspect. [This refers to the first step of the Jagrat or waking state of existence of consciousness.]

The second letter 'U' of the divine word OM standing for Pranav is equivalent to the 'Jagrat-Taijas' form of Brahm which is the latter's second aspect. [This refers to the second step of the Jagrat or waking state of existence of consciousness.]

The third letter 'M' of the divine word OM standing for Pranav is equivalent to the 'Jagrat-Pragya' form of Brahm which is the latter's third aspect. [This refers to the third step of the Jagrat or waking state of existence of consciousness.]

The 'Ardha Matra'⁴ (half-syllable) of the divine word OM standing for Pranav is equivalent to the 'Jagrat-Turiya' form of Brahm which is the latter's fourth aspect. [This refers to the fourth and final step of the Jagrat or waking state of existence of consciousness, and precedes the Swapna state.]

The 'Bindu'⁵ (the dot; the point-source of creation) of the divine word OM standing for Pranav is equivalent to the 'Swapna-Vishwa' form of Brahm which is the latter's fifth aspect. [This refers to the first step of the Swapna or dreaming state of existence of consciousness.]

The 'Naad'⁶ (the cosmic sound of creation; the dish-like sign placed below the dot on the top of a letter to represent the crucible of creation) of the divine word OM standing for Pranav is equivalent to the 'Swapna-Taijas' form of Brahm which is the latter's sixth aspect. [This refers to the second step of the Swapna or dreaming state of existence of consciousness.]

The 'Kalaa' (the various forms or aspects of the gross creation when considered in a holistic and comprehensive manner) is equivalent to the 'Swapna-Pragya' form of Brahm which is the latter's seventh aspect. [This refers to the third step of the Swapna or dreaming state of existence of consciousness.]

The 'Kalaa-teet' (the various forms or aspects of creation that transcends the known world and pertains to the subtle world) is equivalent to the 'Swapna-Turiya' form of Brahm which is the latter's eighth aspect. [This refers to the fourth and final step of the Swapna or dreaming state of existence of consciousness just prior to the Sushupta state.]

The 'Shanti' (the peace, calmness, serenity and tranquility that is obtained when the consciousness reaches the Sushupta state) is equivalent to the 'Sushupta-Vishwa' form of Brahm which is the latter's ninth aspect. [This refers to the first step of the Sushupta state of existence of consciousness.]

The 'Shanti-Ateet' (the peace, calmness, serenity and tranquility that is obtained when the consciousness reaches the higher state of Sushupta) is equivalent to

the ‘Sushupta-Taijas’ form of Brahm which is the latter’s tenth aspect. [This refers to the second step of the Sushupta state of existence of consciousness.]

The ‘Unmani’ (the state of existence in which the mind has lost all interests in the gross world and the gross body; it is usually employed in the context of Yoga—refer Shandilya Upanishad, Canto 1, section 7, verse nos. 17) is equivalent to the ‘Sushupta-Pragya’ form of Brahm which is the latter’s eleventh aspect. [This refers to the third step of the Sushupta state of existence of consciousness.]

The ‘Mano-mani’ (the higher state of existence in which the mind has lost all interests in the gross world and the gross body; it is usually employed in the context of Yoga—refer Shandilya Upanishad, Canto 1, section 7, verse nos. 10) is equivalent to the ‘Sushupta-Turiya’ form of Brahm which is the latter’s twelfth aspect. [This refers to the fourth and the last step of the Sushupta state of existence of consciousness.]

The ‘Turyaa’ (the first stage of Turiya state of existence that transcends the Sushupta state; the transcendental state of the mind and the sub-conscious; the so-called Vaikhari state in which a self-realised ascetic or hermit exists) is equivalent to the ‘Turiya-Vishwa’ form of Brahm which is the latter’s thirteenth aspect. [This refers to the first step of the transcendental state of existence of consciousness known as Turiya.]

The ‘Madhyamaa’ (the second stage of Turiya state of existence) is equivalent to the ‘Turiya-Taijas’ form of Brahm which is the latter’s fourteenth aspect. [This refers to the second step of the transcendental state of existence of consciousness known as Turiya.]

The ‘Pashyanti’ (the third stage of Turiya state of existence) is equivalent to the ‘Turiya-Pragya’ form of Brahm which is the latter’s fifteenth aspect. [This refers to the third step of the transcendental state of existence of consciousness known as Turiya.]

The ‘Paraa’ (the fourth and the final stage of Turiya state of existence that is the ‘supreme and most exalted’ state; the word ‘paraa’ means one that is supreme, most exalted and transcendental) is equivalent to the ‘Turiya-Turiya’ form of Brahm which is the latter’s sixteenth and final aspect. [This refers to the fourth and the ultimate step of the transcendental state of existence of consciousness known as Turiya.]

[Now, this concept is being explained in the context of OM. If it is deemed that the entire creation is incorporated in the ethereal word OM that is synonymous with Pranav and Brahm, then these sixteen Matras of Brahm vis-à-vis the four states of consciousness as narrated above can be applied to the different aspects of OM as follows—]

The four Matras or aspects in which the Jagrat state exists represents the four fractions of the first letter ‘A’ of the word OM. [These four Matras are ‘Jagrat-Vishwa’, ‘Jagrat-Taijas’, ‘Jagrat-Pragya’ and ‘Jagrat-Turiya’. Hence, the first aspect or Matra of OM represented by its first letter ‘A’ symbolizes these four sub-divisions of the Jagrat or the waking state of consciousness in this creation.]

The four Matras or aspects in which the Swapna state exists represents the four fractions of the second letter ‘U’ of the word OM. [These four Matras are ‘Swapna-Vishwa’, ‘Swapna-Taijas’, ‘Swapna-Pragya’ and ‘Swapna-Turiya’. Hence, the second aspect or Matra of OM represented by its second letter ‘U’ symbolizes these four sub-divisions of the Swapna or the dreaming state of consciousness in this creation.]

The four Matras or aspects in which the Sushupta state exists represents the four fractions of the third letter 'M' of the word OM. [These four Matras are 'Sushupta-Vishwa', 'Sushupta-Taijas', 'Sushupta-Pragya' and 'Sushupta-Turiya'. Hence, the third aspect or Matra of OM represented by its third letter 'M' symbolizes these four sub-divisions of the Sushupta or the deep sleep state of consciousness in this creation.]

And finally, the four Matras or aspects in which the Turiya state exists represents the four fractions of the Ardha Matra of the word OM. [These four Matras are 'Turiya-Vishwa', 'Turiya-Taijas', 'Turiya-Pragya' and 'Turiya-Turiya'. Hence, the fourth and final aspect or Matra of OM represented by its Ardha Matra symbolizes these four sub-divisions of the Turiya or the transcendental state of consciousness in this creation.]

The 'Brahm' that has been described above is known as 'Pranav' or cosmic Consciousness that is all-pervading, all-encompassing, all-knowing and the supreme transcendental Authority and the absolute Truth in creation.

It is this supreme transcendental Brahm that is worthy of being worshipped and sought by Param Hans Avadhuts (higher categories of Sanyasis or Parivrajaks) who have reached the transcendental stage of existence.

This transcendental knowledge is able to reveal the secrets and mysteries of Brahm; it virtually 'illuminates' Brahm and makes it known or accessible by way of realisation and enlightenment.

It is the way that leads to 'Videha Mukti'—or the form of spiritual liberation that transcends the level of gross existence and is not limited to just discarding the gross body upon death but actually being separate from the body even while living in it. Of course, the word 'Videha' means 'without the body'—but here it means to live in such a way that the spiritual aspirant is completely unaware of the existence or non-existence of the body. Since he has become exemplarily self-realised and enlightened, he has understood that his 'true self' is not the gross body but the Atma which is pure consciousness personified. This Atma, he realises, is different, distinct and independent from the body. [He thus feels no physical pain or discomfort; he feels no thirst or hunger; he has no attractions for the sense objects of the world simply because these are the functions of the body; he has no friends or enemies for they are also limited to the body.] (6).

[Note—¹The *four states of existence of consciousness*: They have been described in the following Upanishads amongst others—(a) Shukla Yajur Veda—Brihad Aranyak Upanishad 2/1/16-20, 4/3/9-38; Subalo-panishad, Canto 4 full as well as Canto 9, verse no. 1-7; Paingalo-panishad, 2/11-16; Mandal Brahmin Upanishad, 2/4-2/5; Turiyateet Upanishad. (b) Krishna Yajur Veda tradition—Varaaha Upanishad, Canto 2, verse no. 59-64, 72; Canto 4, verse no. 11-20; Brahmo-panishad, verse no. 1, 20-21; Kaivalya Upanishad, verse no. 12-14; Dhyan Bindu Upanishad, verse no. 93/12-93/15; Sarwasaar Upanishad, verse no. 4; Shaarirak Upanishad, verse no. 14; Brahm/Amrit Bindu Upanishad, verse no. 11. (c) Atharva Veda tradition—Mandukya Upanishad, verse nos. 3-7; Atharvashikha Upanishad; Nrisingh Purvatapini Upanishad, Canto 4, verse no. 4-7; Naradparivrajak Upanishad, Canto 5, verse nos. 1, 24-26; Canto 6, verse no. 4, Canto 8, verse nos. 9-16, 19-20; Ram Uttar Tapini Upanishad, Canto 3, verse nos. 5-8.

The Atma or the soul which is pure consciousness and true self of the creature has many states of existence according to metaphysics—e.g. the 1st state called the waking state or 'Jagrat', the 2nd state called the dreaming or 'Swapna', and the 3rd called the deep sleep state of consciousness or 'Sushupta'. There is a 4th state also, and it is called 'Turiya', which is obtained as a result of going beyond the 3rd stage of

deep sleep, and it is a permanent state of bliss and felicity in which the conscious Atma usually lives in ordinary people who are said to be self-realised. Beyond this 4th state is the Turiyateet, literally the state which is beyond the Turiya state and in which the Atma (pure consciousness) is free from all the encumbrances and characters displayed by it during the other four states. Therefore, Turiyateet would be the 5th state of existence of the Atma, and the higher transcendental state when the spiritual aspirant experiences oneness with Brahm. Whereas the Turiya state is the hallmark of those who are self-realised, the Turiyateet state is the benchmark for those who are Brahm-realised.

To start with the understanding of these different states of existences of the consciousness, we have to begin with the fundamental two states in which the creature lives in this world. These two are the following—(1) the *waking* and (2) the *sleeping* states. For the purposes of analyzing the behaviour and existential states of the creature during these two fundamental stages, they have been classified into three distinct states as follows—the waking state called ‘Jagrat’, the dream state called ‘Swapna’, and the deep sleep state called ‘Sushupta. Beyond these three, there are two transcendental states called Turiya and Turiyateet states of existence of the consciousness in which self-realisation and Brahm-realisation are possible, or which mark the state in which those who are self-realised and Brahm-realised exist. We will now endeavour to analyse all these five states of existence of the conscious Atma in simple terms in brief.

According to the Varaaha Upanishad of Krishna Yajur Veda, Canto 1, verse no. 11, there are three types of world that the Jiva lives in. They pertain to the three states of consciousness in this world. They are Vishwa (the world as the individual creature perceives it in its waking state of consciousness), Taijas (the world as the individual creature perceives it in its dreaming state of consciousness), and Pragya (the world as the individual creature perceives it in its deep sleep state of consciousness).

(a) The 1st stage is called waking or *Jagrat*. During this state, a creature’s sense organs that constitute its gross body are active and they receive inputs from the physical material world outside which they in turn transfer to the mind which forms the creature’s subtle body. This mind then filters through the clutter of information, then either orders the organs of action to respond accordingly, or it consults its supervisor, the intellect, for advice. Meanwhile, the mind stores all the information in its data bank for future reference much like the record room of an office. The true self of the creature, the pure conscious Atma, is like the King in whose secretariat the mind and intellect work, and therefore the Atma is the final Authority which takes the final decision and is responsible for all the things done by each of these individual entities. Even as the King cannot absolve himself for the sins committed by his subjects during his rule or plead ignorance of whatever is happening in his kingdom though he is not directly involved in them or in the day to day routine work of the kingdom as he stays in his palace and cannot be practically expected to control each movement in his kingdom, but he is morally responsible for them and cannot deny this responsibility. Similarly, the Atma of the creature is responsible for each and every thing that the creature does though the Atma is limited to its palace-like residence in the heart of the creature. So, the otherwise immaculate Atma is accused of things that body or mind of the creature does because the Atma is at the helm of affairs.

During this Jagrat state, the Atma interacts with the outside world through the medium of the sense organs of the gross body (i.e. the physical body). The sense organs of perception of the body collect information from the external world and pass them over to the mind, which in turn processes them and passes necessary instructions to the organs of action on the one hand, and files data for future reference in its memory bank on the other hand. The mind would also refer to the intellect those things which are not routine in nature. It is the transcendental state of supreme enlightenment and self-realisation.

The Jagrat state is when the consciousness is aware of the external world of material objects, and this is made possible through the medium of the sense organs of perceptions such as the eye, ear, nose, tongue and skin which enables the creature to respectively see, hear, smell, taste and feel this world. The creature's responses are carried out with the help of the organs of action such as the hands which receive, the legs that take him to the desired place, the mouth that helps him to speak and eat, the excretory organs that helps it to eliminate waste from the body, and the genitals which helps him to recreate and enjoy the sensual pleasures of the world. These organs are located in the gross body, and since the world is experienced through them, the latter is also deemed to be gross. The coordination of all the perceptions and actions is done by the mind-intellect which is the subtle part of the body.

The first stage of Jagrat or waking state of consciousness has been beautifully described in Brihad Aranyaka Upanishad of Shukla Yajur Veda, Canto 2, Brahman 1, verse no. 20; Canto 4, Brahman 3, verse nos. 16-19, 31, 34-35.

The Jagrat state of consciousness has also been described in the Ram Uttar Tapini Upanishad of the Atharva Veda tradition, Canto 3, verse no 5.

(b) *Swapna* or dreaming state is the 2nd state of consciousness when the latter has withdrawn its self from being actively involved in the outside world through the medium of the sense organs of perception and action. But the mind does not sleep and remains active as before, though this activity is at the subtle level of the sub-conscious. Here, the consciousness remains active through the medium of the vital winds, called the various Prans present inside the body, and moves in the different Naadis (tubular ducts in the body, such as the nerves and veins etc.) which keep the mind working. Refer Shukla Yajur Veda's Paingalo-panishad, Canto 2, verse no. 12, and Brihad Aranyaka Upanishad, Canto 2, Brahman 1, verse no. 18; Canto 4, Brahman 3, verse no. 20; Krishna Yajur Veda's Dhyan Bindu Upanishad, verse nos. 58-60; Rig Veda's Kaushitaki Brahmin Upanishad of Rig Veda, Canto 4, verse no. 19.

This Pran is deemed to be synonymous with the life factors and consciousness in the body as well as with the latent fire element present inside the body which gives the energy, strength and vitality to the body to live and remain active. If it were not for the fire element (Tej) and the wind element (Pran), the consciousness (Atma, the 'self') would have found it difficult to live in the body. In fact, the Prashna Upanishad of Atharva Veda, Canto 4, verse no. 3 clearly states that the Pran in its manifestation as Agni or fire.

Since no external stimuli is being received from the outside world, the mind begins to replay what is stored in its memory bank and uses its stupendous abilities to imagine and recreate situations and circumstances in an imaginary world of dreams. Since the Atma living in the causal body depends upon the mind living in the subtle body to feel or sense anything pertaining to this world, for all practical purposes therefore the Atma begins to live in this new world of dreams conjured up by the mind and gets as involved in it as it was during the waking state. Since the mind is active here, the man remembers some of his dreams even when he wakes up. So as far as the Atma is concerned, the two states of waking and dreaming means the same—the world exists for it in both these two states.

During the sleeping stage, the Atma sees dreams. This is called *Swapna* state of existence of the consciousness. In metaphysical terms it is called *Supta*. This is the sleeping state of consciousness. Here, the creature is alive because it's Pran or the vital winds move around and remain active in its different Naadis (tubular ducts in the body such as the nerves which number seventy thousand).

The Prashna Upanishad of Atharva Veda, Canto 4, verse no. 2 very precisely describes what sleep is.

The Pran oscillates between the Jagrat and Supta states of existences (i.e. between the waking state of consciousness and the sleeping state of consciousness) as

described in Brihad Aranyaka Upanishad of Shukla Yajur Veda, Canto 4, Brahman 3, verse no. 16-18, 34-35.

According to Paingalo-panishad of Shukla Yajur Veda, Canto 2, verse no. 12, when the creature is in dreaming state of existence, his Prans (vital life-consciousness represented by the vital winds) moves along the various Naadis (tubular ducts in the body).

The Varaaha Upanishad of Krishna Yajur Veda tradition, in Canto 2, verse no. 61, describes how 'dreams' are seen.

(c) Beyond the second state of existence of consciousness is the third eclectic state called the *Sushupta* or deep sleep state. This has been elaborately dealt with in the Brihad Aranyaka Upanishad of Shukla Yajur Veda, Canto 2, Brahman 1, verse no. 19; Canto 4, Brahman 3, verse nos. 14-15, 19, 21-30. During this stage the creature does not dream.

The *Sushupta* or the deep sleep state of consciousness is the 3rd state in which the mind has also become defunct, and the Atma has withdrawn itself into the exclusive domain of the causal body and lives in seclusion, disconnected with the external world because of the non-involvement of either the gross body or the subtle body. Here it is surrounded by the space of the subtle sky around the heart, called the *Hridya Akash*. During this state of existence, the vital winds, called the *Pran* or 'life' of the creature, keep on moving in the different Naadis (various ducts such as nerves and veins etc.) as during the dreaming state so as to keep the body alive as is evident from the fact that all the subtle and imperceptible functions of the inner organs of the body such as the liver, kidneys, heart, pancreas, digestive organs, lungs etc. continue uninterrupted as before, because if they cease to function the body would die. It is the mind now that has gone in a defunct state. But this phase is temporary and shows the true nature and fundamental characteristic of the Atma, which is blissful and peaceful, contented and fulfilled, not feeling restless and perplexed in any manner whatsoever because it is now not being disturbed by the mind's constant nagging. That is why a sound asleep man does not want anything, he does not feel anything, he is not worried about anything, he is not concerned about anything, and he does not remember anything. That is also why one feels very relaxed and refreshed after even a short deep sleep when the mind and the body both find their rest.

The *Prashna* Upanishad of Atharva Veda tradition, in its Canto 4, verse no. 6 describes in clear terms why a creature stops dreaming.

(d) Then comes the 4th state of existence of the Atma, and it is known as *Turiya* state. This state is reached when the third state becomes a perpetual phenomenon instead of being only a temporary phase. Once this state of *Turiya* is reached, then even though the man might wake up from sleep and appears to be going about his normal duties in a routine manner in this world, his pure consciousness remains aloof and distanced from the sense organs of perception and actions as well as from the mind. This is the 'transcendental state' of existence of consciousness, and it goes beyond the third state of *Sushupta* or deep sleep state of consciousness. Here the spiritual aspirant lives in a state of perpetual *Samadhi*. That is, he remains in a constant state of blissfulness and meditation though he lives in this physical world and goes about his normal affairs like an ordinary man.

During this 4th state called '*Turiya*', the Atma acquires all the characters of the earlier three stages, viz. the waking, the dreaming and the deep sleeping states in their individual form as well as in a combined and composite way. In this state of spiritual existence, the consciousness exhibits all the traits of the earlier three states at the same time along with the unique traits which would obviously be a net result of the combined affect of all the individual traits that are so unique to each of the three earlier states of existence consciousness—viz. the waking state, the dreaming state, and the deep sleep state.

The 4th state of existence of the consciousness or Atma is also called the '*Turiya Chaitanya* state'. In this state, the creature exists in its purest form as the pure

consciousness which is undiluted, uninterrupted and unpolluted by any impulses or inputs from the external world. This results in its pristine and immaculate form as 'consciousness' to shine through (much like the flame of the candle which shines with all its brightness and splendour once the tainted glass covering around it is removed). This consciousness is the true 'self' of the creature and its real identity.

Thus, it is the Atma or the pure consciousness as the true 'self' of the creature that is the witness of the existence of the other three states in which the creature lives. This 'self' or Atma is imperishable and without a birth or beginning. This is because the other three states continue to appear and disappear in a rhythmic cycle as the creature wakes up to face the world after his phase of sleep is over, only to go back to sleep again when it is exhausted, and wake up again refreshed and rejuvenated from sleep. But the fourth state is like the Sun in the sky which is steady and shines constantly upon the world and lights it up. This Sun is unaffected by anything happening in this world and to this world, and remains completely dispassionate and detached from anything mundane and terrestrial. Nights and days appear and disappear in a cyclic manner, but the Sun remains the same. During the night it is erroneously assumed that the Sun is no more, but as science has proved the Sun is there in the sky though it might not be visible to the creature during that period of time called the 'night' as it is shining on the outer side of the globe. The day is comparable to the waking state of consciousness, the moon-light night to the dreaming state of consciousness when a man is able to see this world but with a different light, while the dark night when nothing is visible is comparable to the deep sleep state of consciousness when nothing of the external world is visible.

The Varaaha Upanishad of Krishna Yajur Veda, in its Canto 2, verse no. 64, describes what the practical implication of this Turiya state of consciousness is.

The Subalo-upanishad of Shukla Yajur Veda tradition, in its Canto 9, verses 1-7 elaborately describes the fourth state of existence of the consciousness called the Turiya state. It says that the bliss and happiness, collectively called 'Anand', which is found in the 4th state of existence of the consciousness called 'Turiya' when one experiences and witnesses the divine supreme transcendental Being (Brahm), also ends with Turiya. It is the 'final frontier', the ultimate goal that the soul strives to reach. So, when the fount of bliss (Anand) is reached in the Turiya state, nothing more is left to be achieved or acquired. As soon as a man abandons this supreme state of existence and wakes up into this mundane existential material world, he immediately loses that bliss which he was enjoying in the Turiya state. The word Turiya means 'fourth quarter', and once this segment is reached after crossing the first three quarters, there is nothing beyond it and the complete cycle is achieved. There is accomplishment of all that has to be accomplished; there is the 'final coming home, full cycle' for the soul. Everything comes to a full stop.

Being thus enlightened about the truth, the man moves ahead to the next phase called 'Turiya' state of existence. In this state, there is no fear of death, no sorrows, no torments, no sufferings and no perplexities pertaining to this world. It is marked by eternal bliss, peace, tranquility and happiness. In this state the man realises his truthful form, and thus all the causes for his taking birth are rendered null and void. That is, the seed in the form of his unfilled desires and hopes as well as the consequences of his past deeds is made sterile. The 'seed' does not find compatible ground to survive and sprout into new shoots. Therefore, the 'tree' in the form of this world and representing the endless cycle of 'tree-seed-tree' symbolizing birth and death is uprooted from its roots for ever.

This final quarter or state of existence called Turiya is marked by glorious virtues, such as of being equivalent to Amrit (the ambrosia of eternity and bliss), of being fearless, of being without any sufferings, pains, sorrows, torments, anguish, grief and distress of any kind, of being eternal, infinite and without an end and limitations, and of being in a state that has no 'seed' or cause from which a person would have to take any birth again. Such a person is called 'Turiya', i.e. one who has

crossed the barrier, one who has traveled full circle and has attained final liberation and deliverance. Hence, he attains the supreme transcendental Brahm. [In other words, as has been said above, he comes home after having traveled full circle, and therefore has no need to go over it once again in order to find his home where he would ultimately retire and take his final rest!]

²This concept can be understood by a simple illustration. Suppose there are four types of bottles marked A, B, C and D. Each type has four bottles, hence we have four bottles of type A, four of B, four of C, and four of D, bringing the total number of bottles to sixteen. Now we are provided with four coloured liquids marked L1, L2, L3 and L4, and are asked to fill the four bottles of each category with each of these four liquids. When the filling is completed and the bottles are lined up and labeled, we will have a total of sixteen filled bottles, grouped in four categories of four bottles in each category as follows—

The 1st bottle of type 'A' having liquid 'L1', the 2nd bottle of type 'A' having liquid 'L2', the 3rd bottle of type 'A' having liquid 'L3', and the 4th bottle of type 'A' having liquid 'L4'.

Similarly, we fill the other group of bottles as follows—the 1st bottle of type 'B' having liquid 'L1', the 2nd bottle of type 'B' having liquid 'L2', the 3rd bottle of type 'B' having liquid 'L3', and the 4th bottle of type 'B' having liquid 'L4'.

Next, the bottles of group C are considered. The 1st bottle of type 'C' having liquid 'L1', the 2nd bottle of type 'C' having liquid 'L2', the 3rd bottle of type 'C' having liquid 'L3', and the 4th bottle of type 'C' having liquid 'L4'.

Finally we have the 1st bottle of type 'D' having liquid 'L1', the 2nd bottle of type 'D' having liquid 'L2', the 3rd bottle of type 'D' having liquid 'L3', and the 4th bottle of type 'D' having liquid 'L4'.

Thus, we have a total of 16 bottles filled with these liquids.

In this example, suppose the four types of bottles stand for the four states of existence of consciousness—viz. bottle of type 'A' represents Jagrat, bottle of type 'B' represents Swapna, bottle of type 'C' represents Sushupta, and bottle of type 'D' represents Turiya.

Similarly, suppose the four coloured liquids stand for the name assigned to this consciousness in each of these states—viz. liquid of type L1 represents Vishwa, liquid of type L2 represents Taijas, liquid of type L3 represents Pragyā, and liquid of type L4 represents Turiya.

Therefore, we will have the following sequence—(i) Category A = 'Jagrat-Vishwa'; 'Jagrat-Tijas'; 'Jagrat-Pragyā'; 'Jagrat-Turiya'; (ii) Category B = 'Swapna-Vishwa'; 'Swapna-Tijas'; 'Swapna-Pragyā'; 'Swapna-Turiya'; (iii) Category C = 'Sushupta-Vishwa'; 'Sushupta-Tijas'; 'Sushupta-Pragyā'; 'Sushupta-Turiya'; and finally (iv) Category D = 'Turiya-Vishwa'; 'Turiya-Tijas'; 'Turiya-Pragyā'; 'Turiya-Turiya' = 16 states or aspects of the same consciousness.

An important point to note is that the existence of four sub-divisions in any one state of existence is a system adopted of grading the same consciousness into different subtle levels within the same state. It is like the system of grading students in school or college—those within the general grade 'A' are sub-divided into two or more categories such as A++, A+, A and A—.

³The concept of *OM* and *Naad* : Briefly, the monosyllabic word OM actually consists of three letters when analysed—viz. A, U and M. The letter 'A' stands for the origin of creation, the letter 'U' signifies the development and expansion of this creation, while the letter 'M' stands for conclusion. Other metaphysical connotations of these three letters have been elaborately described in Yogchudamani Upanishad, verse no. 74-79 and Jabal Darshan Upanishad, Canto 6, verse nos. 3-10 of Sam Veda.

⁴The *Ardha Matras*/Maatraas—The *Ardha Matras* are the half-syllables used in Sanskrit language and placed above, below, before and after an alphabet to give it a proper sound. It gives the concerned alphabet a proper form besides giving a meaning to the word of which the alphabet with its *Ardha Matras* is a constituent part. According to the *Ram Uttar-Tapini Upanishad*, Canto 5, verse no. 4/40, Lord Ram has been viewed as a personification of this ‘*Ardha Matras*’. It symbolises the fact that without him the creation loses its meaning, glory and existence even as a word loses its meaning and impact without the alphabets having proper *Ardha Matras*.

In the context of OM, the *Ardha Matra* refers to a half-syllable placed at the end of the third letter ‘M’ of OM in the form of a ‘Halant’ or a mark of an oblique line placed below M. In the symbol of OM, it is represented by a horizontal ‘S’ sign placed to the right groove of the symbol which represents the long vowel sound of ‘Ooo’ in Sanskrit (like in *boot*). Normally, the letter ‘M’ of the word OM is to be hummed in a prolonged sound stretching into infinity. But since it is not done and the worshipper becomes silent, it is called ‘half Matra’ or half syllable. It is tantamount to conclusion of the word OM, and since OM is envisioned as representing the whole gamut of creation, this *Ardha Matra* is symbolic of conclusion of creation. That is why it is accompanied by the universal fire of destruction called the *Samvartak Agni*.

The *Atharva-shikha Upanishad* of the *Atharva Veda* tradition, in its *Kandika 1* says that the *Ardha Matra* of OM represents the Moon God, the Mantras of the *Atharva Veda*, the Maruts (the Wind God), the *Viraat Chanda* and the *Samvartak Agni*. It is the fourth leg or *Paad* of *Brahm* and follows the third letter ‘M’ of OM.

The *Tripadvibhuta Maha-Narayan Upanishad* of the *Atharva Veda*, Canto 7, paragraph no. 68 says that Lord Vishnu represents the *Ardha Matra*.

⁵⁻⁶The *Bindu* and *Naad*—The word ‘*Bindu*’ ordinarily refers to a ‘dot’ placed on the top of a Sanskrit alphabet to produce the nasal sound of a resonating ‘N’ or of ‘M’—as in *ring* or *rim*. It is equivalent to the reverberations of primordial sound created at the beginning of creation, and from which the rest of the subtle forms of sound were generated. It is called *Naad* in this context of creation.

The *Naad* and *Bindu* are collectively called the ‘*Chandra Bindu*’. It is a sign resembling a concave crucible or shallow plate over which is placed a dot at its focal point. It is a ‘moon-like spot’ and hence called the ‘*Chandra*’ (moon) ‘*Bindu*’ (a dot). It is a nasal sound equivalent to the letter ‘N’ as in the words *can’t*, *mount*, *taint* or *taunt*. The Moon is regarded as the heavenly pitcher of *Amrit*, the elixir of life and the ambrosial fluid of eternity and bliss. The *Bindu* is a drop of this *Amrit*. Hence, in metaphysics the term *Chandra Bindu* is used to refer to the supreme transcendental *Brahm* and the spiritual state of realisation of pure conscious ‘self’ when the aspirant enjoys bliss and experiences a surge of ecstasy. This is a metaphoric way of saying that he tastes *Amrit* dripping from the Moon.

The concept of *Bindu* (a ‘dot’ or a ‘drop’) and *Naad* (the cosmic ‘sound’) have a close association with the concept of OM (the ethereal word representing the supreme transcendental *Brahm*) and its iconographic depiction as a symbol in the form of the sixth alphabet of the Sanskrit language, i.e. the long vowel sound ‘Ooo’ as in ‘*boot* or *root*’. Amongst the various *Upanishads* that describe this concept are *Naad Bindu*, *Dhyan Bindu*, *Tejo Bindu* and *Yogshikha* (Canto 3, verse nos. 2-11).

This OM is a representative of the supreme transcendental divine entity known as *Brahm* which predates this existence and lasts even after this world is concluded. In fact, this creation would fall back to merge into this *Brahm* and re-emerge from it at the time of a new beginning much like waves in an ocean rising and falling into the water again and again. This *Brahm* is in a neutral, a-dynamic and attributeless state in the period before the process of creation began. Then when the time came for the creation to come forth, energy and necessary strength and relevant power were needed. This is called ‘*Shakti*’ aspect of *Brahm* which was inherent to *Brahm* but in a latent form. The ‘point’ whereby this *Brahm* revealed his *Shakti* is called a ‘*Bindu*’. It

is also like a 'drop' of the cosmic sperm emerging from the cosmic Purush, the invisible Father of creation, which contain all the necessary energy, strength, vigour and vitality needed to initiate the process of creation. Hence, Bindu is Brahm's 'Shakti' aspect; it represents the 'dynamic principle of Brahm'. In Tantra literature, Brahm is treated as Shiva, and his energy is called a Shakti represented by the Bindu. Since OM is a symbol for Brahm, this Shakti was put on top of this symbol in iconography to depict this fact in visual term.

Now came the revelation of this Shakti—and that was done in the form of Naad, the 'cosmic sound'. Since only the invisible ether was present in the beginning, this Shakti caused a ripple in it which spread in the form of waves. Waves have kinetic energy and this set in 'motion' the process of creation. Modern science has shown that the origin of this universe was in a Big Bang, and this means that there was a 'single point' where this 'explosive bang' occurred—a clear reference to the concept of a 'Bindu' (point) and its accompanying 'Naad' (sound). It was from this Bindu that the cosmic debris spread out by the force of this explosion to distant corners of the available space to act as nuclei for the umpteen numbers of planets and star systems that would eventually evolve to form the universe as we know of it today.

Since Bindu was the energy of Brahm that was not visible, it is therefore the un-manifest dynamic force of Brahm and very closely associated with the latter; it is a part of Brahm. The Naad is a revealed form of this Shakti as it is the cosmic sound which can be actually heard. Since Naad had its origin in Brahm and is a manifested form of the stupendous energy contained in an un-manifested form in the Bindu, it is constantly associated with them much like the electromagnetic waves (Naad) of a radio broadcasting station, the speaker (Brahm, the consciousness) who broadcasts the news and the transmitter tower (the Bindu) are inseparable from one another.

The concept of 'Bindu' and 'Naad' can be understood in another plane also. The cosmic process of creation needed the injection of a cosmic sperm to initiate the process of the creation of the cosmic embryo. This sperm would come from the cosmic Father, i.e. Brahm. Brahm in the context of metaphysical interpretation of creation would be the 'causal body of the cosmos' because it is the 'cause' of it all. The 'drop' of sperm ejaculated by this Father (Brahm) had the stupendous creative power and energy that provided the necessary spark. The word 'Naad', in addition to its conventional meaning of 'sound', also means a big open concave 'bowl or dish or crucible' for storing liquid, which in the context of creation meant the cosmic womb of Nature. So, when the cosmic Father (Brahm) dropped one 'drop' of his sperm (Bindu) into the crucible (Naad), the cosmic conception was affected and the process was initiated. From this conception there emerged the Hiranyagarbha, the yellow egg of the cosmos, which in terms of Vedanta would be the macrocosmic 'subtle body' of creation. When this cosmic egg matured, the macrocosmic gross body emerged in the form of the Viraat Purush.

The stupendous and astounding powers that Brahm inherently possesses are highlighted in the context of the most fascinating, majestic and magnificently wondrous world it has created using its own energy called Shakti. Had this creation not been in existence, the powers of Brahm would not have come to the fore. In other words, the active principle of Brahm is revealed in the form of the Shakti.

Since the Bindu is regarded as the Shakti principle of Brahm in Tantra literature because it is this principal point from where the primary form of active and dynamic Brahm started to reveal its self in the form of Naad, it is likened to the 'fire element'. The Naad itself is sound and the latter needs the medium of ether to travel as waves and spread in all the directions. Therefore, Naad is likened to the 'wind element'.

For the purpose of Yoga practice, the Bindu is depicted as the dot present on the top of the symbol of Naad, i.e. the sixth Sanskrit alphabet 'Ooo', symbolising the focal point in the cosmic bowl from where this sound is generated and where the mind is supposed to be focused during meditation so that Naad can be heard. The

location of this Bindu in the body is the center of the two eyebrows where a practitioner of Yoga is supposed to focus his attention during meditation.

The Naad is the cosmic sound heard by an ascetic when he is in deep meditation mode. As any sound originates from a source and then radiates out in the form of waves much like ripples created on the surface of a calm lake when a stone is thrown in it, the Naad has its cosmic origin in the one-point source of sound energy called Bindu that has Brahm as its principal base.

From the perspective of the meaning of Naad as 'sound' we can have the following interpretation—all sounds have a 'point' of origin, the Bindu of origin. From this point source the sound waves spread out in waves in the ether present in space at the macro level of creation, and in the air in the immediate surrounding space at the micro level of creation. It can be compared to ripples arising on the surface of a calm lake when a stone is thrown on it. 'Energy' waves are created from the 'point' of impact and spread out in concentric layers just like the waves of sound travel in ether. This example would prove why and how the origin of Naad was envisioned in the Bindu (dot) by the ancient sage who had first visualised it.

The Bindu means a 'point source', and Naad refers to the 'un-manifest energy in the form of sound' that radiated out in the cosmic ether from this point source. Therefore, the Bindu would refer to the passive Brahm and the Naad would mean in this context the dynamic and active energy of this Brahm radiating out from this point source to all the directions of creation.

This Bindu or dot is the focal point from which the cosmic Naad or sound originated when the process of creation first started in what the modern science recognizes as the 'Big Bang'. This sound spread to all corners of the cosmos. The human skull is also slightly concave from the inner side, and the brain is located just below it. The implication is very obvious—this Bindu or 'dot' generated the cosmic Naad which is heard by the ascetic when he focuses his entire concentration in the head by diverting all his senses away from the external world and fixing their attention on one point in the head, called the Agya Chakra or still higher up in the Brahm Randhra Chakra.

It is just like fine tuning the antenna of the modern satellite discs used in television reception. The reverberation and vibrations caused by this cosmic Naad is very overwhelming for the ascetic and he literally drowns in its sound. The vibrations massage his nerves and relaxes them; he feels a sense of extreme ecstasy and bliss due to this, and that is comparable to the one obtained at the time of ejaculation of sperm during intercourse—hence the reference to the male phallus and the semen dripping from it. There is no vulgarity in this explanation. This citation is used to give a physical and verifiable idea of the extent of bliss and ecstasy obtained when the ascetic reaches the climax of Yoga so that he can hear the Naad.

This is also why this condition is compared to the 'cosmic union' of Shiva representing Brahm and his own energy personified as Shakti which produced this sound energy called Naad in the ethereal space of the cosmos. It was Brahm's ecstasy and bliss of self-realisation that produced a cosmic vibration which in turn set in motion the process of creation. According to Vedanta, Shiva is known as Brahm, while this Shakti is known as Maya. According to the Sankhya philosophy, this Shakti is called Prakriti in the context of Brahm who is called Purush here.

In Tantra worship, Bindu is regarded as Shakti, the dynamic aspect of Shiva, and the Peeth is the seat of this Shakti. There is another way at looking at these two words—Bindu represents the cosmic sperm which represents the dynamic energy, potentials and powers of Shiva, and the Peeth would then be the seat of this Shiva energy, i.e. the base of the Shakti.

Naad is a form of cosmic sound, and this sound is a form of energy created by vibrations in ether. In other words, during the process of Yoga, when the vital winds, especially the Apan wind is made to activate the Mooladhar Chakra by literally vibrating or shaking it into action, the latent energy trapped inside it is activated to

produce the sound much like striking of the tuning fork produces sound in a school physics laboratory.

This is another interesting analogy. The seed is round and small—almost like a Bindu or dot—when compared to the huge tree that it would produce. The sprout is like a Lingam or phallus coming out of it. [Refer Yogshikha Upanishad, Canto 3, verse no. 3.]

The Naad or cosmic sound that is physically heard during Yoga is a manifestation of the dynamic forces or Shakti of Brahm, the energy present in this Naad is that dynamic force or Shakti itself. Taking a parallel from the physical world, the Naad is like the eye of the body but the eye function only because it has the energy to do so and has been empowered by the faculty of sight to see. In other words, the ascetic sees this living world characterised by the presence of sound as a revelation of Brahm who is universally and uniformly present throughout it in an imperceptible and subtle form. The fact that ‘sound characterizes this world as living as opposite to being dead’ is proved by the fact that there is utter silence in a morgue or grave yard whereas there is hustle and bustle of life in a busy city. For all practical purposes of Yoga as described in the Yogshiksha Upanishad, this Naad and its subtle energy called Pashyanti is located in the Mooladhar Chakra. [Refer Yogshikha Upanishad, Canto 1, verse no. 178, Canto 3, verse nos. 2-3.]

The concept of Naad and Bindu has been explained at length in Yogshikha Upanishad of Krishna Yajur Veda tradition, Canto 1, verse nos. 105, 167, 178; Canto 2, verse no. 6; Canto 3, verse nos. 2-3, 11; Canto 4, verse no. 47; Canto 5, verse no. 28; and Canto 6, verse nos. 48-49, 71-73.

The relationship between Naad and Bindu has been elucidated in great detail in Yogshikha Upanishad of Krishna Yajur Veda tradition, Canto 1, verse no. 178, Canto 3, verse nos. 3, 11, and Canto 4, verse no. 47.

The relationship between the Bindu, Naad and the Mana has been described in Yogshikha Upanishad of Krishna Yajur Veda, Canto 1, verse no. 178, Canto 6, verse nos. 71-73.

Naad Shakti or the majestic, dynamic and profound mystical and spiritual energy, powers and potentials of Naad have been expounded in Yogshikha Upanishad of Krishna Yajur Veda tradition, Canto 1, verse nos. 105, 178, Canto 6, verse nos. 21, 48, 72.

The *Bindu Shakti* or the majestic mystical energy and spiritual potentials of the point-source from where the cosmic Naad is envisioned to have had its origin has been described in Yogshikha Upanishad, Canto 6, verse nos. 49, 71, 73.]

7. Brahma asked once again—‘Oh Lord! How can one be called a ‘Brahmin’ if he follows the edicts of Sanyas and discards the sacred thread, cuts off the tuft of hair on the head, and abandons doing any of the religious deeds such as a fire sacrifice and observing other sacraments as required by the scriptures to be done by a Brahmin?’

Lord Vishnu (Adi-Narayan) replied—‘A true Brahmin is a wise and enlightened person who treats the Atma, the pure consciousness, as the non-dual Principal of creation (i.e. who regards the Atma as a personification of the supreme Brahm that is non-dual or Advaitya and the only supreme Authority of creation), and for whom being steady in his meditation and contemplation as well as spiritual pursuit is the symbolic tuft of hair—such a person is deemed to be cleansed and made holy by whatever he does. This is because all his deeds are deemed to be auspicious and holy. [That is, he need not do special deeds such as fire sacrifices or observing of sacraments in order to wash off his sins or any kind of spiritual taints that might be adhering to him.]

He is deemed to have completed doing all religious and auspicious deeds required to be done by a man.

It must be understood that such an enlightened man is indeed a Brahmin for he is dedicated and devoted to Brahm (the Supreme Being), he is no less than a God, he is indeed a 'Rishi' (or a great sage), he is a 'Tapasvi' (or someone who is well endowed with the glorious virtues of Tapa, i.e. austerity and penance, and is steadfast in observing its tenets), he is the best follower of the tenets of the scriptures and an excellent spiritual aspirant, he is therefore the Guru (guide, teacher and preceptor) for the whole world.

A truly wise, enlightened and self-realised aspirant who understands the implications and import of what has been said above realises the truth of the statement that the pure conscious Atma standing for Brahm is the true identity of his. And therefore such an enlightened man declares 'It (Brahm; Atma; Truth; Consciousness) is me'.

True Param Hans Parivrajaks are a rarity in this world. If there is one then surely he is a personification of the Vedas—i.e. he is eternally as holy, pure, auspicious and divine as the Vedas.

I (i.e. Lord Adi-Narayan; Lord Vishnu; the Supreme Being) reside in the inner-self of a great and spiritually enlightened man whose mind and sub-conscious is perpetually focused on me.

[That is, those who remain submerged in the thoughts of the Lord, who constantly meditate upon the Lord, who remain engrossed in contemplation upon the Lord, who think of no one else except the Lord, and whose entire life and its purpose is dedicated to the Lord, the Lord lives in their hearts as his own abode. In other words, the heaven that is imagined to be the divine abode of the Supreme Being is no where else except in the heart of the sincere devotees of the Lord. Such people become a living personification of the divine heaven or a pilgrim site because the Lord resides in their inner-self.]

Such a self-realised man in whose heart the Lord resides and who possesses the eclectic virtues mentioned herein above is indeed eternally contented.

He becomes immune to and is freed from being moved or influenced by heat or cold, praises or insults, happiness and joys or pains and sorrows. [This is because he has inculcated the grand qualities of equanimity, fortitude, forbearance, tolerance, dispassion, neutrality and indifference.]

He easily bears with criticism, slander, reproach and censure, as well as with all provocations, instigations and temptations to become angry and wrathful, seeking revenge or retribution. [That is, he is exemplarily forgiving and tolerant; he harbours no ill-will or animosity against anyone.]

He is free from the tainting effects of the six Urmis¹.

Similarly, he is free from the six Vikaars² that taint a man's thoughts.

He sees and treats everyone alike, without distinguishing between any two creatures. [That is, he has developed the holistic view that all the creatures are Brahm personified, that the same divine Atma or pure consciousness lives in all of them, and therefore one should treat all living beings equally with great respect and equanimity. One must not be partisan and biased in anyway; one should not show favour or dis-favour towards anyone; one should regard rich and the poor, the lowly and humble as well as the high and the mighty in equal terms.]³

He sees nothing else except the Atma (the universal Consciousness) everywhere.

The directions are his clothes. [That is, he prefers to remain physically naked because he wears the sky as his over-garment.]

He does not believe in formalities and external forms of worship, hence he does not follow the four ritualistic steps of doing a sacrifice—viz. ‘Namaskar’ or bowing before the sacred fire to pay respects, ‘Swaha’ to indicate that he does not offer any oblations to the physical form of fire because this word is uttered when one is offering an oblation to the sacred fire, ‘Swadha’ to indicate that he does believe in offering libations to the spirit of dead ancestors, and ‘Visarjan’ to indicate that he need not undertake the rituals for formally ending the sacrifice. [This is because he has established the sacred fire in his own inner-self at the time of taking the sacred vows of Sanyas—refer paragraph no. 2 of this Upanishad. He need not worship the spirit of dead ancestors because he has no relations in this world except the Atma, and the Atma does not die so there is no question of offering anything to a ‘dead’ entity. Besides this, he worships no one else except the supreme Brahm and his Atma.]³

He is beyond the purview of reproach, criticism and insult, and is immune to them.

He does not employ any Mantra (spiritual formulas) or Tantra (occult forms of worship) for attainment of his spiritual objectives.

He does not think of or worships any other God or deity.

He is so enigmatic and mystical in his ways that nothing can be known of him in certain and visible terms, nor is anything of him is hidden as his life is absolutely transparent. [Since his ways are mystical and mysterious, nothing can be certainly ascertained about him. And since he remains ‘naked’, there is nothing of him that is hidden, concealed or secret. The term ‘naked’ is a metaphor for openness and transparency. Hence, a Parivrajak presents a paradox.]

He remains above all and indifferent to all.

He is steadfast in his conviction that ‘I am Brahm’, and remains submerged in this eclectic thought.

He is eternally blissful as he remains engrossed and lost in the thoughts of the divine entity (Brahm and Atma) that is hallmarked by the virtues of being truly and eternally blissful (‘Sachidanand’), of being non-dual and unique (‘Advaitya’), and being a treasury of enlightened consciousness (‘Chidghan’).

A person who feels fulfilled and absolutely contented by realizing the supreme Brahm, known also as Pranav (and represented by the ethereal word OM), is indeed called a ‘Param Hans Parivrajak’.

Verily, this is what this Upanishad elucidates and declares; this is its proclamation and affirmation. Amen! (7).

[Note—¹⁻²The *six Urmis* and *six Vikaars* have been described in the *Varaaha Upanishad*, Canto 1, verse nos. 8-9 of the *Krishna Yajur Veda* tradition. These are the six faults associated with all those entities that take a birth and have a gross body.

These faults are the following—(i) That there is an ‘Asti’—i.e. to be in existence. [This is a major fault because whatever that exists in this world is an illusion created by the mind just like the existence of water seen in a desert mirage, ghost in the dark, a serpent in the rope, change in the moon’s surface during the lunar cycle, two or more suns when seen as an image in more than one mirror, the sun or moon being devoured by some imaginary demon during eclipses, the rising or setting of the moon or the sun, etc. There is another interpretation of the term ‘existence’—it is the existence of ‘duality’, the conception that there are two independent entities such as the Jiva or the living creature and the Parmatma or the Supreme Being, or the conception of ‘you’ and ‘me’, or ‘this’ and ‘that’. This is against the fundamental tenet of Vedanta which lays stress on ‘non-duality’ of everything which briefly states that whatever that exists is but one single non-dual Brahm revealed in that form. Therefore, the concept of ‘Asti’ has an erroneous, a fallacious and ill-conceived

foundation. Anything founded on errors of perception or misjudgment is bound to be faulty, distorted, and away from the reality and truth.

(ii) That there is a 'Jaati'—i.e. birth. This relates to the conception that there is a birth and that things are freshly born or reborn again. [This is a fault also because of two reasons. One, if anything does not exist as asserted by the first clause, then the question of its being born or dying does not arise. And two, even if we were to treat everything as Brahm personified—because it would be difficult to deny things physically seen and witnessed—then it is forgotten that Brahm does not take a birth, for it is eternal, infinite, imperishable and the 'one without a birth'. Therefore this very conception of having a birth has no sound footing; it is faulty. It is an upshot of faulty perception of the reality of Brahm and Truth.]

(iii) That there is a 'Vardhan'—i.e. there is increase, enhancement, expansion, growth. This relates to the conception that an entity increases, enhances, grows or develops. [This is a fault because for one, 'truth' never grows and develops, it is always constant, universal, uniform and never changing; and two, 'Brahm' also does not grow or enhance or develop or in any way change because it is the ultimate Truth in creation, and 'Truth' does not change.]

(iv) That there is a 'Parinaam'—i.e. result or consequence or effect or sequel. This relates to the conception that there is a sequel, a consequence, an affect, an upshot, an outcome, a result, a follow up or a fruit of certain deed that was done in the past. [This arises out of the fundamental error that one is the doer of anything, that therefore there is a consequence, a result or sequel of that deed—either good or bad—which cannot be avoided and must be either enjoyed or suffered. This is a fundamental error of conception because one is not a doer of anything because all deeds are done by the physical body which is not the 'self' of the person, for this 'self' is the pure consciousness called the Atma that lives as a distinct entity inside the body as its resident. Further, since there is no truth in what is seen in this world, the question of there being a birth, development and an end does not arise, and consequentially the question of anything being a Parinaam of any deed done in the past life also does not arise.]

(v) That there is a 'Kshaya/Kchaya'—i.e. decay and decline. This relates to the conception that there is a stage called the last stage when there is decay and decline. [This is an error arising out of the pervious errors because anything that is eternal, infinite, imperishable and truthful, for instance Brahm, never decays or declines, nor does anything that really does not exist, like this illusory world, can ever decay or decline. It is all imaginary, delusory and false.]

(vi) That there is a 'Naash'—i.e. destruction and ruin. This relates to the conception that there is finally destruction or termination. [This fault is a derivative of the earlier faults.]

“verse no. 9 = The six Urmis or faults of the body are the following—(i) 'Ashana' or hunger, the need to eat, and therefore the need for food (along with all the accompanying problems such as worrying about its production, safety, storage, procurement, cooking, proper digestion etc.); (ii) Pipaasa or thirst, and the desire to drink and therefore the need for liquids to quench the thirst (which create the same sort of problems that are associated with the need for food; (iii) Shoka or grief, distress and dismay (which have a profound negative impact on the overall mental, psychological and general metabolic health of the body); (iv) Moha or to have strong attractions or longing for anything or anyone, to be emotionally attached with anything, to be deluded, to be held under magical spell of anything or to be under its charm, to hallucinate as a result of these emotional faults (all of which makes a man a virtual serf of his emotions and tied down to the object of his adoration, thereby robbing him of his independence and peace, and more often than not becoming the cause of his interminable sufferings); (v) Jara or old age and its attendant decline of the body leading to its decrepit and weakened physical state when the body loses its strength, vigour and stamina, thereby becoming a burden on the person; and finally

(vi) Mritu or death of the body. All these factors create an immense amount of discomfort and horrors to the person (i.e. to the Atma that is the true identity of the person) to whom this body belongs.”

There also *other six faults* that are considered as *enemies* of a man—Kaam (worldly passions, lust, desires and yearning), Krodh (anger, indignation and wrathfulness leading to spite and ill temper), Lobh (greed and rapacity), Moha (ignorance based delusions, worldly infatuations, attractions and attachments), Mada (egoism, arrogance, haughtiness and hypocrisy) and Matsarya (envy, jealousy, malice, anger and wrath)—refer Mudgal Upanishad, Canto 4, verse no. 4 of Rig Veda tradition; and Varaaha Upanishad, Canto 1, verse no. 10 of the Krishna Yajur Veda tradition.

According to Mudgal Upanishad, 4/7 of the Rig Veda tradition, the six delusions, called ‘Urmi’, that create fear, sorrows, agonies, sufferings and pains to a creature are the following:--(1) hunger, (2) thirst, (3) grief, (4) Moha (worldly attachments, illusions, entrapments), (5) horrors of old age, and (6) death.

The Naradparivrajak Upanishad of the Atharva Veda tradition, in its Canto 7, verse no. 1 describes that a Sanyasi (a renunciate monk or mendicant or hermit or friar) must overcome the six Vikaars of his mind and should not allow them to create any consternation for him.

³There are a number of Upanishads that advocate internal forms of worship instead of all external forms of rituals and worships—viz. the *Naradparivrajak Upanishad* of the Atharva Veda which deals with the eclectic philosophy of Sanyas expressly prohibits all external forms of worship in its Canto 5, verse no. 20.

Some of the other Upanishads are the following—(i) Sam Veda tradition—Maitreyu-panishad, Canto 2, verse no. 21, 26; Jabal Darshan Upanishad, Canto 4, verse nos. 50-59; and Sanyaso-panishad, Canto 2, verse no. 74-75, 97.

(ii) Atharva Veda tradition—Devi Upanishad, verse nos. 29-30; Narad-Parivrajak Upanishad, Canto 3, verse no. 75, Canto 5, verse no. 20, Canto 6, verse nos. 7, 37-38, 42, and Canto 7, verse no. 1; Atharvashir Upanishad, Kandika (Canto) 4; Tripadvibhut Maha Narayan Upanishad, Canto 5, paragraph no. 15 (stanza nos. 1-3); Param Hans Parivrajak Upanishad, verse no. 7.

(iii) Krishna Yajur Veda’s following Upanishads—Pran Agnihotra Upanishad; Varaaha Upanishad, Canto 2, verse no. 69, 74; Canto 3, verse no. 26, 29-30; Tejobindu Upanishad, Canto 6, verse nos. 21-24.

(iv) Shukla Yajur Veda tradition—Advai Tarak Upanishad, verse nos. 5, 10, 13.]

Chapter 16

Annapurna Upanishad/Annapurno-panishad

The ‘Annapurna Upanishad’ is a fairly long one with five Cantos having a total of three hundred thirty-seven verses. It is a dialogue between sage Nidagh, the ascetic disciple who wished to know how to obtain spiritual liberation and deliverance, and sage Ribhu, the enlightened one and the most exalted amongst those sages who were Brahm-realised.

This Upanishad is a brilliant exposition on the philosophy of Advaitya Vedanta, the eclectic philosophy of non-duality, and it focuses on the Atma, the pure conscious ‘self’, the realisation of which is true and real Mukti (spiritual liberation and deliverance of the creature) from all the fetters having their origin in delusions and ignorance. Since this Atma is no other entity but the supreme Consciousness of creation known as Brahm, the Upanishad emphasizes that to be truly enlightened, wise and learned one must be self-realised and Brahm-realised simultaneously. In fact there is no difference between these two divine states of existences. The Upanishad describes how a fully self-realised and enlightened person feels, how he experiences a profound sense of blessedness when he has truly understood the Atma (the pure consciousness) and other spiritual Truths.

The Upanishad derives its name ‘Annapurna’ from the fact that it opens with the praises of Goddess Annapurna, the divine Shakti or the majestic power of the Supreme Being which provides nourishment to all, in the form of an invocation or introductory. The Mantra dedicated to Annapurna was divulged to sage Ribhu by his father, and it has twenty-seven letters. Ribhu had worshipped Goddess Annapurna persistently day after day using this Mantra, and she finally appeared before him to bless him and grant him the boon of ‘self knowledge’, or the divine and eclectic knowledge pertaining to the Atma, the pure consciousness. This made sage Ribhu ‘self’ and ‘Brahm’ realised, most fulfilled and attained soul.

Goddess Annapurna is none other than Goddess Laxmi, the divine consort of Lord Vishnu, the sustainer, nourisher and protector of this creation. It is Laxmi who fulfills all the desires of the creature and provides him with nourishment and welfare in this world. Hence she is honoured as ‘Annapurna’—literally one who fills the granary and provides food to this world. She represents the dynamic powers of the Supreme Being by which he takes care of this creation.

This Upanishad is an elaborate discourse on the philosophy of Advaitya Vedanta—or the principles of non-duality, and how a wise and enlightened aspirant gains true knowledge and attains the state of true liberation and deliverance from all the spiritual fetters that tie down an ordinary creature to this gross world and an equally gross body. During its long rambling discourse, the text describes and explains many relevant spiritual and metaphysical topics, such as for instance the concept of various states of existences (such as Jagrat, Swapna, Sushupta, Turiya and Turiya-teet), the concept of ‘Bhrama’ (delusion and misconception about any given thing or situation; spiritual delusions), of what constitutes the various ‘Sankalps’, ‘Vasanas’ and ‘Vrittis’ (worldly volitions, passions and inherent mental tendencies brought to this life from the previous life) that a creature harbours in his inner self, and how to overcome them, the concept of ‘Mano-naash’ (conquering the mind and the sub-conscious and their stabilization as well as dissolution through diligent practice), of ‘Sanyas’ (the life of renunciation and detachment), of ‘Jivan Mukta’ (to

be spiritually liberated even while alive and having a gross body), of ‘Videha Mukti’ (to be spiritually liberated without the interference of the physical gross body), of how to overcome the various faults and temptations of this world, of what is really meant by the various names that are assigned to the basically indivisible and uniform ‘sky element’ known as the ‘Akash’ (such as the subtle forms of the sky known as Ghatakash or the sky present inside an empty pot, Mathakash or the space within the walls of a monastery etc), and many other such important topics that any student of metaphysics must be well conversant with.

----Shanti Paath----

Please see appendix no. 1 for the English of this Shanti Paath.

Canto 1

1. OM Salutations! The sage named Nidagh, who was an acclaimed Yogi (an ascetic well-versed in the principle and practice of Yoga or meditation), approached another sage named Ribhu¹, an attained soul who had become ‘self-realised’ and ‘Brahm-realised’, and was considered as the most exalted sage of his time, and reverentially prostrated in front of him to pay his respects.

Having shown his respects to Ribhu, Nidagh got up and stood in front of him once again (1).

[Note—Sage *Ribhu* and his disciple *Nidagh*—These two sages were known as Paramhans as they were highly wise, erudite, enlightened, self-realised and Brahm-realised. This fact has been asserted in the Brihajjabal Upanishad, Brahman 7, verse no. 3. This particular Upanishad is Chapter 6 of our current volume.

Sage Ribhu is said to be one of the several mind-born sons of the creator Brahma. With this gene running in his blood, he was by nature wise, enlightened and self-realised, but in order to conform to established traditions he took initiation from his elder brother Sanatkumar who was himself one of the mind-born sons of Brahma. Ribhu was renunciation personified, was unpretentious and free from all shortcomings and blemishes that tainted others in Brahma’s creation. His only attire was his own skin, and he lived in a thatched hut.

It is believed that his first disciple was sage Nidagh who was the son of the great sage Pulastya. It so happened that once Ribhu, during his wanderings, came to the hermitage of Nidagh and saw that he was studying and chanting the hymns of the Vedas. Ribhu felt very pitiful for him and advised him that if one did not know or understand the essence of what the Vedas preach, if he did not come to know the Absolute and the Truth and become self-realised, then all this study is an exercise in futility. Thereafter Nidagh accepted his discipleship and learnt from sage Ribhu the intricacies of the esoteric knowledge of the Atma and Brahm.

Under the instructions of his Guru Ribhu, Nidagh accepted the life of a householder, married and established his hermitage on the banks of river Devika. After a long time, Ribhu remembered his disciple and wished to see him, and thus came to his hermitage. Nidagh could not recognize him, though he welcomed the guest with the greatest of respect and fed him. After meals, Nidagh asked Ribhu whether he was satisfied with the meal, who he was, where did he come from, and where he was going.

Then Ribhu preached him—‘Oh son! I am not the body or the Pran (life forces living inside the body) that gets fed or feels quenched of hunger or thirst. The ‘self’ or

the Atma is as eternal, infinite, all-pervading and omnipresent as the sky, so there is no question of it coming from anywhere and going anywhere. All these mundane aspects of creation—to be satisfied or not, to come and go—are related to the ever-changing ‘untruth’, so do not repost any trust and faith on such things that are transient, unsteady and fickle. Don’t be wasting your precious life and time in delusions, hallucinating and swinging between this and that. Instead, become uniform and steady on the Truth which is itself uniform, steady, unchallengeable, unequivocal and irrefutable. Concentrate upon your Atma, the pure ‘conscious self’.

Nidagh recognized his Guru, was overwhelmed with gratitude, and fell down on his august feet in surrender. This same idea was elucidated by sage Durvasa to the Gopis (milkmaids who accompanied Lord Krishna in his childhood days at Vrindavan) that forms the text of the Gopal Uttar Tapini Upnaishad of the Atharva Veda tradition.

After another long spell of time, the Guru once again decided to visit his disciple. When Ribhu reached the hermitage he found there was a great procession passing on the road and Nidagh was waiting patiently to let the procession pass so that he can cross the road. On enquiry he told Ribhu—who he could not recognize again—that the king of Virpur was passing through. Ribhu wished to rekindle the fire of enlightenment in his disciple, so he asked Nidagh—‘Say, who is that king in this melee?’ Ribhu replied that he was sitting on the biggest elephant. Ribhu asked him to point out some characteristic feature so that he can distinguish between the king and the elephant from a distance. At this seemingly stupid and impertinent question, Nidagh pushed Ribhu down and mounted on his back, saying—‘Now, I am the king and you are that elephant’. The wise teacher was unperturbed, and asked to point out the difference between them—i.e. how has he (Nidagh) become a king, and how come the man he is riding upon has become an elephant. Shocked beyond belief, Nidagh suddenly realised that the man was no one else but his revered Guru Ribhu. He fell at the enlightened teacher’s feet and asked for forgiveness. Ever so merciful and kind as Ribhu was, he not only pardoned his disciple but preached him the fact that the external body is not the true identity of the creature, and that to recognize someone based on this physical gross feature is the most ignorant and stupid thing to do, something not expected from a so-called learned man of the Vedas. So, finally Nidagh realised the futility of studying the Vedas without understanding the principle enshrined in their tenets. Thereafter, Nidagh finally found his spiritual liberation and deliverance, and though he lived in this world like another man, but henceforth he lived as a ‘Jivan Mukta’—i.e. a person who is freed from the fetters of the world and the body inspite of living in this gross material world and having a physical body that is equally gross. Such a self-realised man is totally detached and unconcerned about both of them—i.e. the body as well as the world. When the proper time comes, such persons find ‘Videha Mukti’—i.e. they shed their mortal body even without being aware of it being shed, and merge their ‘self’ with the supreme Self, the cosmic Consciousness known as Brahm, never to take birth again. This is because at the instant enlightenment dawns upon them, they stop being associated with any of the deeds done by the body, and remain absolutely neutral. Therefore no consequences of deeds done and actions taken by them by their physical gross body accumulate as far as their true self is concerned, and they do not have to take a re-birth to go through the process of either enjoying or suffering from these consequences.

Coming back to the story of Ribhu, when this news reached Sanatkumar, the Guru of Ribhu, he was extremely pleased and impressed, and to commemorate this occasion and to immortalize this unique virtue of forgiveness, he added the first letter ‘Ksha’ (pronounced as a combined utterance of the letter ‘Ka’ and ‘Cha’) of the word ‘Kshamaa’, meaning ‘forgiveness’ in the Sanskrit language, to Ribhu’s name. Thus, henceforth Ribhu came to be known as ‘Ribhuksha’ (Ribhu + Ksha). Since Ribhuksha was ever in a blissful mood, the word of bliss and ecstasy, viz. ‘Anand’ was appended to his name, and it finally became ‘Ribhukshaanand’ (Ribhu + Ksha + Anand).

The great metaphysical preaching of sage Ribhu for the benefit of Nidagh also appear in Tejobindu Upanishad, Cantos 5-6 as well as in Varaaha Upanishad, Cantos 4-5 of the Krishna Yajur Veda tradition, and in Maho-panishad, Canto 5 of the Sam Veda tradition.]

2. Sage Nidagh most respectfully asked sage Ribhu questions pertaining to 'Atma-Tattva', i.e. regarding the fundamental truth and essence, the 'Tattva', about the esoteric and enigmatic entity known as the 'Atma', the consciousness that is the pure 'self' of the living being¹.

Thus, Nidagh asked sage Ribhu, 'Oh Lord! Please enlighten me about the knowledge of the 'Atma-tattva', and preach me about it in detail. By worshipping whom did you acquire this knowledge of Brahm? [That is, how did you become self-realised and Brahm-realised? It ought to be noted here that there is no difference between the knowledge of the Atma and that of Brahm because both the divine entities are 'consciousness' personified, the former at the microcosmic level and the latter at the macrocosmic level of creation.] (2).

[Note—¹The word 'Atma' means 'soul'. This word 'soul' itself implies the essence and fundamental basis of anything. It refers to the 'actual and absolute truth' that is hidden behind the external façade of falsehood, or even the 'apparent truth' that is only illusionary and misconceived. In the context of metaphysics, this 'truth' is the Atma, the soul of the creature, because sans this soul the creature has no meaning. There would be no life on this planet earth if there was no living soul here; dead bodies do not have any meaning and relevance in the context of life and creation. Hence, if there is any truth in 'life' it is the pure conscious entity known as the Atma, and not the gross body or the equally gross world which is pith-less and lifeless. Sage Ribhu was well-versed in this knowledge of the Atma as he was preached on it by none other but Brahma, the creator of the Vedas which are epitomes of pristine pure philosophy pertaining to the Absolute Truth of creation known as Brahm, and which in turn is pure Consciousness personified in the form of the Atma.]

3. Please be graceful enough to give this divine and eclectic knowledge to me, the grand knowledge that is at once spiritually liberating and enlightening, that is capable of providing emancipation, salvation and deliverance to the one who has acquired it, and which blesses the person who possesses it with an exalted stature, auspiciousness, majesty, glorious virtues and mystical powers.

[This knowledge is empowering and enabling for the creature as it not only entitles him for obtaining the exalted stature of one who is wise and enlightened but also provides him with the fruits of self-realisation that leads to his spiritual liberation, deliverance, emancipation and salvation. It makes the creature acquainted with the ultimate and absolute Truth of creation, and this knowledge itself would make him stand out from the crowd, thereby bestowing unmatched honour and respect upon him.]

Sage Ribhu was overwhelmed and felt obliged to preach. He blessed Nidagh and said, 'Oh Nidagh, be blessed! Listen this eternal knowledge from me with due attention (3).

4-5. You would be liberated and delivered by having this knowledge (i.e. by understanding it and implementing it).

[Now, Goddess Laxmi, the goddess of wealth and prosperity who is also known as Annapurna as she provides all the necessities of life, is being invoked in the following verses. Sage Ribhu had acquired the grand and eclectic spiritual knowledge

of the Atma by worshipping Goddess Annapurna, and so he prays to her first before proceeding ahead with his discourse for the benefit of sage Nidagh. This is also the reason why this Upanishad is named after this Goddess—it is to honour her and to emphasize the point that the knowledge contained in it was revealed by Goddess Annapurna as her blessing for sage Ribhu as made clear in verse nos. 8-12 of this Canto 1.]

She is the adornment of the Naad¹, the Bindu² and the Kalaa³. In other words, she is the center of authority and power that gives these entities their importance and value. These three entities acquire their importance because they personify or embody certain glorious virtues of Goddess Annapurna [4.]

She is an image of eternal blissfulness and cheerfulness.

She has no support, and neither needs any.

[In other words, she is self-sustaining and self-supporting. She does not need any other prop to help her be established and gain majesty, magnificence, power and authority. In fact, she gives support to the rest of the world. From the practical point of view this means that Goddess Laxmi provides the world with all the requisites necessary for a happy and prosperous life; she takes care for the world's need for material wealth and prosperity so that the creature is well fed, nourished and looked after. Hence, she is called 'Annapurna'—the one who replenishes food stock and other essential necessities of life.]

She has a pleasant and charming countenance, and equally pleasant and charming demeanours. She is famous with beautiful plaits or locks of hairs on her head. She looks exceptionally graceful, majestic and beautiful in this image.

She is known as 'Maha-Laxmi', the great Goddess of wealth, prosperity, well-being and all-round welfare.

[It ought to be noted here that Laxmi serves the creation by providing it with all its necessities of life, to make it comfortable and livable. But this applies to the material level of existence. The real and truthful welfare and well-being of the creature lies elsewhere—it lies in his spiritual well-being and welfare, it lies in his internal peace and tranquility, it lies in his ability to find true bliss and real happiness, in finding freedom from the miseries and torments associated with the gross body and remaining yoked to the continuous cycle of birth and death. Similarly, the real and truthful asset of the creature lies in the realisation of the Atma and the 'self' because this is a permanent and stable asset which is eternal and imperishable by its inherent nature, and therefore its accompanying bliss, ecstasy and contentedness is equally stable, eternal and imperishable as opposed to that obtained from the material things of the world as they are perishable, transient, ever-changing and illusionary like the world itself. Therefore, the same Goddess would provide the creature with worldly objects of his choice and majesty if he so wishes, and with spiritual majesty and glory if this is his wish. This is why the enlightened sage Ribhu worshipped Goddess Maha-Laxmi—he wished a special boon of spiritual wisdom and enlightenment as he understood the stupendous importance of this eclectic divine knowledge as he was the son of Brahma, the creator, and had the latter's genes running in him. Since Laxmi is the goddess in charge of the Lord's treasury, whether of material goods or of spiritual assets, it was appropriate for Ribhu to approach her because she had the 'key', she knew the right path and means to achieve what Ribhu wanted. Goddess Maha Laxmi could unlock the treasury of priceless wisdom, knowledge and enlightenment that Ribhu sought. Thus, we must see 'Laxmi' in this latter form in the context of this Upanishad.]

She enhances or stokes or ignites the internal passions and desires for more in the creature.

[Again, this stanza should be interpreted in the proper and correct context of what has been said in the preceding note. Goddess Laxmi stands for material wealth and prosperity, and their accompanying comforts, pleasures and joys as well as power, fame, pelf and authority. These things have no end, and the more a man has them the more he wants. It is rare and virtually impossible to be satisfied with them. This is what is implied here. The prefix ‘Maha’ meaning ‘great or grand’ serves to heighten the gravity of this situation—i.e. it indicates that the numerous passions, desires and yearnings that a man has for the world and its material sense objects are formidable forces to reckon with, and if one wishes spiritual enlightenment and has liberation and deliverance as the goal of his life then he would first have to conquer this fort.]

She is an image of kindness, graciousness, courteousness, politeness and sobriety.

[Although the Goddess presides over a formidable treasury of material wealth and prosperity, and similarly though she holds the key to spiritual wealth, knowledge and enlightenment, she is still not haughty, arrogant, wild, egoist and proud, but is the most benevolent and extremely gracious Goddess who looks after all the needs of this world, and therefore has countless creatures begging for her grace, kindness, benevolence, largesse and mercy. In spite of her powers, authority, majesty and grandeur, she is still humble, polite and graceful. She has no sense of ego and pride in her cosmic overriding powers, authority, majesty and grandeur.] [5.] (4-5).

[Note—¹⁻²Naad and Bindu—The word *Bindu* ordinarily refers to a ‘dot’ placed on the top of a Sanskrit alphabet to produce the nasal sound of a resonating ‘N’ or of ‘M’—as in *ring* or *rim*. It is equivalent to the reverberations of primordial sound created at the beginning of creation, and from which the rest of the subtle forms of sound were generated. It is called *Naad* in this context of creation. Therefore, the Naad is the cosmic sound of creation. It is represented by the dish-like sign placed below the dot on the top of a letter to represent the crucible of creation.

The Naad and Bindu are collectively called the ‘Chandra Bindu’. It is a sign resembling a concave crucible or shallow plate over which is placed a dot at its focal point. It is a ‘moon-like spot’ and hence called the ‘Chandra’ (moon) ‘Bindu’ (a dot). It is a nasal sound equivalent to the letter ‘N’ as in the words *can’t*, *mount*, *taint* or *taunt*. The Moon is regarded as the heavenly pitcher of Amrit, the elixir of life and the ambrosial fluid of eternity and bliss. The Bindu is a drop of this Amrit. Hence, in metaphysics the term Chandra Bindu is used to refer to the supreme transcendental Brahm and the spiritual state of realisation of pure conscious ‘self’ when the aspirant enjoys bliss and experiences a surge of ecstasy. This is a metaphoric way of saying that he tastes Amrit dripping from the Moon.

The concept of *Bindu* (a ‘dot’ or a ‘drop’) and *Naad* (the cosmic ‘sound’) have a close association with the concept of OM (the ethereal word representing the supreme transcendental Brahm) and its iconographic depiction as a symbol in the form of the sixth alphabet of the Sanskrit language, i.e. the long vowel sound ‘Ooo’ as in ‘boot or root’. Amongst the various Upanishads that describe this concept are Naad Bindu, Dhyana Bindu, Tejo Bindu and Yogshikha (Canto 3, verse nos. 2-11).

This monosyllabic word OM actually consists of three letters when analysed—viz. A, U and M. The letter ‘A’ stands for the origin of creation, the letter ‘U’ signifies the development and expansion of this creation, while the letter ‘M’ stands for conclusion. Other metaphysical connotations of these three letters have been elaborately described in Yogchudamani Upanishad, verse no. 74-79 and Jabal Darshan Upanishad, Canto 6, verse nos. 3-10 of Sam Veda.

This OM is a representative of the supreme transcendental divine entity known as Brahm which predates this existence and lasts even after this world is concluded. In fact, this creation would fall back to merge into this Brahm and re-emerge from it at the time of a new beginning much like waves in an ocean rising and falling into the water again and again. This Brahm is in a neutral, a-dynamic and attribute-less state in the period before the process of creation began. Then when the time came for the creation to come forth, energy and necessary strength and relevant power were needed. This is called 'Shakti' aspect of Brahm which was inherent to Brahm but in a latent form. The 'point' whereby this Brahm revealed his Shakti is called a 'Bindu'. It is also like a 'drop' of the cosmic sperm emerging from the cosmic Purush, the invisible Father of creation, which contain all the necessary energy, strength, vigour and vitality needed to initiate the process of creation. Hence, Bindu is Brahm's 'Shakti' aspect; it represents the 'dynamic principle of Brahm'. In Tantra literature, Brahm is treated as Shiva, and his energy is called a Shakti represented by the Bindu. Since OM is a symbol for Brahm, this Shakti was put on top of this symbol in iconography to depict this fact in visual term.

Now came the revelation of this Shakti—and that was done in the form of Naad, the 'cosmic sound'. Since only the invisible ether was present in the beginning, this Shakti caused a ripple in it which spread in the form of waves. Waves have kinetic energy and this set in 'motion' the process of creation. Modern science has shown that the origin of this universe was in a Big Bang, and this means that there was a 'single point' where this 'explosive bang' occurred—a clear reference to the concept of a 'Bindu' (point) and its accompanying 'Naad' (sound). It was from this Bindu that the cosmic debris spread out by the force of this explosion to distant corners of the available space to act as nuclei for the umpteen numbers of planets and star systems that would eventually evolve to form the universe as we know of it today.

Since Bindu was the energy of Brahm that was not visible, it is therefore the un-manifest dynamic force of Brahm and very closely associated with the latter; it is a part of Brahm. The Naad is a revealed form of this Shakti as it is the cosmic sound which can be actually heard. Since Naad had its origin in Brahm and is a manifested form of the stupendous energy contained in an un-manifested form in the Bindu, it is constantly associated with them much like the electromagnetic waves (Naad) of a radio broadcasting station, the speaker (Brahm, the consciousness) who broadcasts the news and the transmitter tower (the Bindu) are inseparable from one another.

The concept of 'Bindu' and 'Naad' can be understood in another plane also. The cosmic process of creation needed the injection of a cosmic sperm to initiate the process of the creation of the cosmic embryo. This sperm would come from the cosmic Father, i.e. Brahm. Brahm in the context of metaphysical interpretation of creation would be the 'causal body of the cosmos' because it is the 'cause' of it all. The 'drop' of sperm ejaculated by this Father (Brahm) had the stupendous creative power and energy that provided the necessary spark. The word 'Naad', in addition to its conventional meaning of 'sound', also means a big open concave 'bowl or dish or crucible' for storing liquid, which in the context of creation meant the cosmic womb of Nature. So, when the cosmic Father (Brahm) dropped one 'drop' of his sperm (Bindu) into the crucible (Naad), the cosmic conception was affected and the process was initiated. From this conception there emerged the Hiranyagarbha, the yellow egg of the cosmos, which in terms of Vedanta would be the macrocosmic 'subtle body' of creation. When this cosmic egg matured, the macrocosmic gross body emerged in the form of the Viraat Purush.

The stupendous and astounding powers that Brahm inherently possesses are highlighted in the context of the most fascinating, majestic and magnificently wondrous world it has created using its own energy called Shakti. Had this creation not been in existence, the powers of Brahm would not have come to the fore. In other words, the active principle of Brahm is revealed in the form of the Shakti.

Since the Bindu is regarded as the Shakti principle of Brahm in Tantra literature because it is this principal point from where the primary form of active and dynamic Brahm started to reveal its self in the form of Naad, it is likened to the 'fire element'. The Naad itself is sound and the latter needs the medium of ether to travel as waves and spread in all the directions. Therefore, Naad is likened to the 'wind element'.

For the purpose of Yoga practice, the Bindu is depicted as the dot present on the top of the symbol of Naad, i.e. the sixth Sanskrit alphabet 'Ooo', symbolising the focal point in the cosmic bowl from where this sound is generated and where the mind is supposed to be focused during meditation so that Naad can be heard. The location of this Bindu in the body is the center of the two eyebrows where a practitioner of Yoga is supposed to focus his attention during meditation.

The Naad is the cosmic sound heard by an ascetic when he is in deep meditation mode. As any sound originates from a source and then radiates out in the form of waves much like ripples created on the surface of a calm lake when a stone is thrown in it, the Naad has its cosmic origin in the one-point source of sound energy called Bindu that has Brahm as its principal base.

From the perspective of the meaning of Naad as 'sound' we can have the following interpretation—all sounds have a 'point' of origin, the Bindu of origin. From this point source the sound waves spread out in waves in the ether present in space at the macro level of creation, and in the air in the immediate surrounding space at the micro level of creation. It can be compared to ripples arising on the surface of a calm lake when a stone is thrown on it. 'Energy' waves are created from the 'point' of impact and spread out in concentric layers just like the waves of sound travel in ether. This example would prove why and how the origin of Naad was envisioned in the Bindu (dot) by the ancient sage who had first visualized it.

The Bindu means a 'point source', and Naad refers to the 'un-manifest energy in the form of sound' that radiated out in the cosmic ether from this point source. Therefore, the Bindu would refer to the passive Brahm and the Naad would mean in this context the dynamic and active energy of this Brahm radiating out from this point source to all the directions of creation.

This Bindu or dot is the focal point from which the cosmic Naad or sound originated when the process of creation first started in what the modern science recognizes as the 'Big Bang'. This sound spread to all corners of the cosmos. The human skull is also slightly concave from the inner side, and the brain is located just below it. The implication is very obvious—this Bindu or 'dot' generated the cosmic Naad which is heard by the ascetic when he focuses his entire concentration in the head by diverting all his senses away from the external world and fixing their attention on one point in the head, called the Agya Chakra or still higher up in the Brahm Randhra Chakra.

It is just like fine tuning the antenna of the modern satellite discs used in television reception. The reverberation and vibrations caused by this cosmic Naad is very overwhelming for the ascetic and he literally drowns in its sound. The vibrations massage his nerves and relaxes them; he feels a sense of extreme ecstasy and bliss due to this, and that is comparable to the one obtained at the time of ejaculation of sperm during intercourse—hence the reference to the male phallus and the semen dripping from it. There is no vulgarity in this explanation. This citation is used to give a physical and verifiable idea of the extent of bliss and ecstasy obtained when the ascetic reaches the climax of Yoga so that he can hear the Naad.

This is also why this condition is compared to the 'cosmic union' of Shiva representing Brahm and his own energy personified as Shakti which produced this sound energy called Naad in the ethereal space of the cosmos. It was Brahm's ecstasy and bliss of self-realisation that produced a cosmic vibration which in turn set in motion the process of creation. According to Vedanta, Shiva is known as Brahm, while this Shakti is known as Maya. According to the Sankhya philosophy, this Shakti is called Prakriti in the context of Brahm who is called Purush here.

In Tantra worship, Bindu is regarded as Shakti, the dynamic aspect of Shiva, and the Peeth is the seat of this Shakti. There is another way at looking at these two words—Bindu represents the cosmic sperm which represents the dynamic energy, potentials and powers of Shiva, and the Peeth would then be the seat of this Shiva energy, i.e. the base of the Shakti.

Naad is a form of cosmic sound, and this sound is a form of energy created by vibrations in ether. In other words, during the process of Yoga, when the vital winds, especially the Apaana wind is made to activate the Mooladhar Chakra by literally vibrating or shaking it into action, the latent energy trapped inside it is activated to produce the sound much like striking of the tuning fork produces sound in a school physics laboratory.

This is another interesting analogy. The seed is round and small—almost like a Bindu or dot—when compared to the huge tree that it would produce. The sprout is like a Lingam or phallus coming out of it. [Refer Yogshikha Upanishad, Canto 3, verse no. 3.]

The Naad or cosmic sound that is physically heard during Yoga is a manifestation of the dynamic forces or Shakti of Brahm, the energy present in this Naad is that dynamic force or Shakti itself. Taking a parallel from the physical world, the Naad is like the eye of the body but the eye function only because it has the energy to do so and has been empowered by the faculty of sight to see. In other words, the ascetic sees this living world characterized by the presence of sound as a revelation of Brahm who is universally and uniformly present throughout it in an imperceptible and subtle form. The fact that ‘sound characterizes this world as living as opposite to being dead’ is proved by the fact that there is utter silence in a morgue or grave yard whereas there is hustle and bustle of life in a busy city. For all practical purposes of Yoga as described in the Yogshiksha Upanishad, this Naad and its subtle energy called Pashyanti is located in the Mooladhar Chakra. [Refer Yogshikha Upanishad, Canto 1, verse no. 178, Canto 3, verse nos. 2-3.]

The Param Hans Upanishad of the Atharva Veda, in its paragraph no. 6 describes that the Bindu represents the fifth Matra or aspect of Brahm having a total of sixteen Matras. The ‘Bindu’ is equivalent to the ‘Swapna-Vishwa’ form of Brahm that exists in the first of the four subtle or secondary states in which the consciousness exists during its ‘Swapna’ or dreaming state of existence in this world.

The same Param Hans Upanishad goes on to say in the same paragraph no. 6 that the Naad represents the sixth Matra or aspect of Brahm having a total of sixteen Matras. The ‘Naad’ is equivalent to the ‘Swapna-Taijas’ form of Brahm that exists in the second of the four subtle states in which the consciousness exists during its ‘Swapna’ or dreaming state of existence in this world.

The concept of *Naad and Bindu* has been explained at length in Yogshikha Upanishad of Krishna Yajur Veda tradition, Canto 1, verse nos. 105, 167, 178; Canto 2, verse no. 6; Canto 3, verse nos. 2-3, 11; Canto 4, verse no. 47; Canto 5, verse no. 28; and Canto 6, verse nos. 48-49, 71-73.

The *relationship between Naad and Bindu* has been elucidated in great detail in Yogshikha Upanishad of Krishna Yajur Veda tradition, Canto 1, verse no. 178, Canto 3, verse nos. 3, 11, and Canto 4, verse no. 47.

The *relationship between the Bindu, Naad and the Mana* has been described in *Yogshikha Upanishad* of Krishna Yajur Veda, Canto 1, verse no. 178, Canto 6, verse nos. 71-73.

Naad Shakti or the majestic, dynamic and profound mystical and spiritual energy, powers and potentials of Naad have been expounded in *Yogshikha Upanishad* of Krishna Yajur Veda tradition, Canto 1, verse nos. 105, 178, Canto 6, verse nos. 21, 48, 72.

The *Bindu Shakti* or the majestic mystical energy and spiritual potentials of the point-source from where the cosmic Naad is envisioned to have had its origin has been described in *Yogshikha Upanishad*, Canto 6, verse nos. 49, 71, 73.

³The word *Kalaa* has a wide application and briefly it refers to a particular aspect or position or condition or situation of any entity. It is indicative of this entity's deeds which has led it into the present position or situation. It also refers to the special qualities, attributes, virtues, strengths, powers and potentials possessed by it. Other connotations include—(a) shape, form, contours of a thing; (b) special qualities, art, craft, skills, expertise, attributes etc. that one possesses; the shades or aspects of one's overall personality; (c) a division, portion, fraction, phase or degree; (d) brilliance, magnificence and grandeur; (e) maverick and supernatural powers possessed by an entity.

The 16 *Kalaas* or *aspects* or *facets* of creation have been expressly listed in the Prashna Upanishad of the Atharva Veda tradition, in its Canto 6, verse no. 4. These sixteen *Kalaas* are also called the *sixteen Aakarshini Shaktis* of creation that makes the possessor of these virtues much sought after in society. The word 'Aakarshini' means one that attracts others, and the word 'Shakti' of course means power. These 16 *Kalaas* are the following—(i) Pran (life; life consciousness; the very essence of creation; the vibrations of life manifested in the form of the vital winds; the rhythm and essential functions pertaining to life), (ii) Shraddha (the eclectic virtues of faith, believe, conviction, reverence, respect, devotion), (iii) Akash (the all-pervading, all-encompassing sky or space element), (iv) Vayu (wind, air element), (v) Tej (energy, splendour, radiance, glory, might, majesty and fire element), (vi) Apaha (अपः—water element which is the all-important ingredient for life), (vii) 'Prithivi' (earth element which is the base or foundation for all mortal creation), (viii) Indriya (the organs of the body, both the organs of perception as well as of action), (ix) Mana (the mind and heart complex and their stupendous potentials), (x) Anna (food, the element without which life is simply not imaginable because it provides it with the basic nourishment and energy), (xi) Virya (semen, sperms, standing for courage, valour, potency, vitality and prowess), (xii) Tapa (austerity and penance, tolerance of hardship as a means of penitence, forbearance as well as carrying out strict religious vows in order to purify one's self; the sufferance for some auspicious and noble cause) (xiii) Mantra (the key or formula to achieve success in any enterprise; it also refers to the ability to give good advise; the power to contemplate and think, concentrate and focus, and then logically arrive at a conclusion; the different mystical formulas consisting of letters or words or phrases which encapsulated various dynamic forces of Nature which could be invoked and harnessed by the creature and help him to utilise the latent cosmic energy, strength and other magnificent powers incorporated in these Mantras for the benefit of creation at large), (xiv) Karma (the ability to do deeds and take action; the strength, energy and stamina to perform even difficult tasks), (xv) Loka (the various worlds, such as the mortal world where the creature lived on the earth, the lower heaven called the Antariksha where the junior Gods and the Spirits of dead creatures would live, and the upper heaven or Brahm Loka where the Supreme Being lives; the different worlds as experienced during the waking state, the dreaming state and the deep sleep states of existence of the consciousness), and (xvi) Naam (the name assigned to each independent creature; the good name, fame, reputation, honour and glory that a creature has in this world).

There are said to be sixteen *Tattvas* or essential units or elements in creation. They are the following—the five organs of perception (ear, eye, nose, tongue and skin) + the five organs of action (hand, leg, mouth, anus and genital) + the five Prans (the five subtle forms of the vital winds present inside the body—such as Pran, Apaana, Samaana, Vyana and Udana) + one Mana (mind) = 16.

The fact that there are sixteen *Tattvas* is mentioned in Tripadvibhuta Mahanarayana Upanishad of Atharva Veda, Canto 5, paragraph no. 15.

These sixteen elements or units created by the Supreme Being are the sixteen *Kalaas* or *aspects* or *fractions* of creation. In other words, this visible creation is made up of these sixteen units in different ratios just like a colourful picture in mosaic is prepared by an expert artisan from bits and pieces of glass or stone which are

independent units in their own right but when incorporated in the mosaic that forms the colourful picture they become an inseparable and an integral part of the latter. Even if one piece is removed, the picture is disturbed.

In simple terms it means that a person's total composite personality, his characteristic attributes and individuality, his vitality and stamina, his prowess, powers and strength, his drive and vigour et al can be divided into sixteen parts.

The Kalisantarana Upanishad of Krishna Yajur Veda, in its verse no. 2 says that these sixteen Kalaas are like sheaths or veils covering the Atma or 'self' of the man, and he can realise this glorious divinity residing in his bosom only when these Kalaas which are like impediments or hurdles in self and Brahm realisation are removed. When this Upanishad describes them as 'hurdles or impediments' in realising the glory of the 'self' it implies that although all these sixteen qualities are related to achieving glory and majesty in the world, they have nothing to do with 'self-realisation' and 'Brahm-realisation' which is possible only by abandoning everything related to this world as well as the body both in its gross part and its subtle part.

The Prashna Upanishad of Atharva Veda, Canto 6, verse no. 2 says that the divine entity that exhibits sixteen divine attributes lives in the body itself.

The 15 Kalaas—The Mundak Upanishad of Atharva Veda, in its Canto 3, section 2, verse no. 7 mentions of the fifteen Kalaas of a wise man merging into one main Kalaa, but it has not mentioned which these fifteen Kalaas are. However, the Prashna Upanishad of Atharva Veda tradition, in its Canto 6, verse no. 4 has cited sixteen units of creation that have emerged from Brahm. If the primary Pran or life consciousness that was formed in the very beginning of creation is removed from the list, we come to the remaining fifteen units which are like Kalaa as they represent the fifteen aspects of creation. Hence, these fifteen Kalaas would be the following—Shraddha (the virtues of devotion, faith and belief), Akash (the sky or space element), Vayu (the wind or air element), Jyoti (the light and radiance personified in the form of the fire element), Aapha (the water element), Prithivi (the earth element), Indris (the different sense organs of the body), Mana (the thinking mind and the emotional heart), and Anna (the food that would sustain the other elements of creation which had combined to give shape to the creature).

From the Anna were created the following other units or elements of creation—the Virya (the sperm which is the carrier of life and the metaphor for valour, strength, stamina, vitality, vigour, energy, potentials etc., Tapa (austerity, penance and sufferance for some noble and auspicious cause), Mantras (the different mystical formulas consisting of letters or words or phrases which encapsulated various dynamic forces of Nature which could be invoked and harnessed by the creature and help him to utilize the latent cosmic energy, strength and other magnificent powers incorporated in these Mantras for the benefit of creation at large), Karma (the ability to do deeds and take action; the strength, energy and stamina to perform even difficult tasks), Loka (the various worlds, such as the mortal world where the creature lived on the earth, the lower heaven called the Antariksha where the junior Gods and the Spirits of dead creatures would live, and the upper heaven or Brahm Loka where the Supreme Being lives; the different worlds as experienced during the waking state, the dreaming state and the deep sleep states of existence of the consciousness), and Naam (the name assigned to each independent creature).

The 8 Kalaas of the Gods—The eight Kalaas of the Gods and their incarnations or manifestations—Since there are said to be a total of sixteen Kalaas and the ordinary man can possess the maximum of these five Kalaas with those who are especially gifted having an additional three as narrated above (bringing the total Kalaas possessed by human beings to $5 + 3 = 8$), the remaining eight ($16 - 8$) belong to the Gods or their incarnations or manifestations. These are the following—(i) Prabhuvi—this is that magical and divine power possessed by the entity that enables it to make possible things that are impossible. For example we have the manifestation

of Lord Narsingh (half man and half lion incarnation of Lord Vishnu from a stone pillar to protect his devotee Prahalad from being killed by his own demon father). (ii) Kunthini—this enables the entity to neutralise the any of the effects of the five elements of creation, including their bad effects. For example we have Lord Shiva who drunk the horrible poison called Halalal that emerged as a result of the churning of the ocean without letting that corroding and very potent poison from harming him. (iii) Vikaasani Kalaa—the ability to develop, grow, expand or increase to any size, in any form and in any way one wishes. For example we have Lord Vamaan, the dwarf mendicant, who had measured the entire world in his three steps. (iv) Maryadini—this is the character, attribute or quality which forces the God-head to observe and exhibit exemplary virtues of righteousness, probity and propriety inspite of his ability of doing anything it wants. It virtually ties him down or restricts him to following a strict and exemplary code of conduct that he successfully implements; these codes are difficult even for the Gods to implement. For example we have Lord Ram who led an exemplary life of righteousness, auspiciousness, probity and propriety as well as observe all the character traits and attributes that are so common with all the human beings inspite of the fact that he was an incarnation of Lord Vishnu, the almighty, omniscient, omnipotent, omnipresent and all-incorporating Viraat Purush who is a manifestation of the Supreme Being. (v) Sanghlaadini Kalaa—this enables the God-head to supersede or overrule the laws of Nature and perform miracles that even defy its laws. For example, Lord Krishna had created flowers and fruits even without season. (vi) Ahalaadini Kalaa—this enables one to physically remain away but spiritually be constantly near one's object of devotion or contemplation and serve him or her. This is the way Radha was able to enchant Lord Krishna inspite of not remaining with him at all times. (vii) Paripurna—this word itself implies something that is wholesome and complete in all respects. It can therefore exhibit all the sixteen qualities or Kalaas in one go, or is the entity that embodies all these qualities in its self. Amongst the incarnations of Lord Vishnu, Ram and Krishna are said to be Paripurna. The supreme Brahm is 'Paripurna' because nothing is missing from him; it is wholesome and complete. And finally, (viii) Swarupaa-wasthiti—this means the ability to withdraw or collect all the Kalaas exhibited by an entity and revert to its original and primary form when it is so wished by it. For example, at the end of the Dwapar Yuga, Lord Krishna had withdrawn all his Kalaas into himself before bringing to close his sojourn on this earth.

The 16 Kalaas of the Moon—This refers to each of the sixteenth part of the moon's diameter/disc, or one of the various phases of the moon. The moon waxes and wanes in a fourteen day phase—each day it is different from the other. Thus we have fourteen Kalaas of the moon. Added to this is the full moon and the dark moon—i.e. two more Kalaas. Therefore the total Kalaas of the moon are $14 + 2 = 16$. These fourteen Kalaas have the following names—Amrita, Maanadaa, Pushaa, Tushti, Pushti, Rati, Dhriti, Shashini, Chandrika, Kanti, Jyotsnaa, Sri, Pritirangaa, Purnaa and Swarajaa.

The 12 Kalaas of the Sun—This refers to each of the twelfth part in which the sun's diameter/disc has been divided. They are called 'Dwaadash Aditya', meaning the twelve forms in which the Sun God is known. They are the following—Tapini, Taapini, Dhumraa, Jwaalini, Ruchi, Shushumna, Bhogadaa, Vishwaa, Bodhini, Dhaarini and Kshamaa.

Other forms of Kalaas—Other connotations of the word are the following:-- (i) the division of time equivalent to about eight seconds; (ii) one degree out of the three hundred and sixty degrees. So when this term 'Kalaa' is applied to that supreme Truth, also known as the supreme Brahm which is complete and wholesome, it implies that what is being referred to is but only one or more fraction of the whole, and therefore this one or more fraction cannot be a complete definition of the whole. At the best, it can give a rough idea of the principal, but not the exact idea of what constitute *Brahm*. This Brahm is an entity so wholesome and grand, so majestic, so

magnificent, so stupendous and astounding that it transcends the definitions or parameters set by this particular word. That Truth or Brahm is beyond their reach and dimension; these various connotations of the word cannot either be applied to that Truth or Brahm nor can they define it in its entirety in any way.

The *64 Kalaas of Brahm*—It is said that the complete Brahm has sixty four Kalaas. If these are divided into four quarters or quadrants or aspects or symbolic legs of Brahm, three-fourths is in the realm of the unknown (heaven) and only one-fourth is in the form of the visible creation (world). Therefore, if Brahm is a complete cycle of sixty four Kalaas, then the known physical world has $64/4 = 16$ Kalaas. It is a quadrant of Brahm. (Rig Veda, 10/90/4).

It is said that Brahm has four 'Paads' or legs which symbolise the four corners of creation. That is, Brahm surrounds this entire creation from all sides. Out of these four legs, the visible world represents one. The rest of the creation stands for the remaining three legs. According to another theory, Brahm is said to have sixty four Kalaas or aspects or levels. Out of these, the known world is represents Brahm's sixteen Kalaas, i.e. this world is only one fourth aspect of the entire Brahm—a fact metaphorically depicted by saying that Brahm can measure this world in one step. The rest is the invisible macrocosmic aspect of Brahm which is beyond imagination and comprehension. This is obvious because if one fourth is so difficult to understand, one can easily understand the astounding nature and stupendity of the remaining three fourths.

The *Kalaa in the context of OM*—In the geometrical symbol of Brahm which is pronounced as 'OM', these three Naad, Bindu and Kalaa appear as a crescent moon or a shallow bowl with a dot at the center placed on the top of the symbol for OM. This Naad is like a big trough and represents the cosmic bowl or crucible in which the primary cosmic gel was placed to initiate the process of creation. The Bindu appears to indicate the pin-point source of heat, radiation or any other activating source placed just above this crucible to inject sufficient energy in to the primary fluid and activate it. It acts like a source of energy directed at the crucible (Naad) set off the chain reaction that would ultimately culminate in the creation. The Kalaa which refers to the various phases of the moon would indicate the different stages through which the entire process passed from the initial stages of creation to its complete closure. But even as the parents of a child do not undergo any apparent change while the embryo develops in the mother's womb, the Supreme Being remained the same all the while the creation developed and unfolded in the cosmic womb represented by Mother Nature. Another example to explain is the moon's disc which appears to change every single day but all know that it remains the same, and the apparent change in its shape is only due to the angle with which its lighted or dark surface is viewed from the earth.

The Dhyani Bindu Upanishad of Krishna Yajur Veda tradition, in its verse no. 13 proclaims that OM has eight Kalaas or facets or parts. They are the letters A, U, M, Naad, Bindu, Kalaa, Kalaa-teet and Param.

In brief, the idea is that Goddess Laxmi or Annapurna possesses all the majestic and magnificent glories and virtues listed above or implied in what has been said.

Kalaa in the context of the Jiva or the living being—The Brahm Vidya Upanishad of Krishna Yajur Veda, verse nos. 33, 37-40 describe the concept of 'Kalaa' vis-à-vis the living creature. It says that the 'consciousness' that is present in the gross body of the creature called the Jiva-atma should be regarded as the one that has different Kalaas, i.e. as the one which shows various attributes and characteristic qualities and features typical or specific to that body. On the other hand, the same 'consciousness' when it is freed from the limitations and tainting effects of the gross body becomes free from these limiting factors and thus becomes one without any Kalaas, i.e. it has no attributes or special characteristic features that are specific to it, that can limit its virtues and qualities to a particular set of attributes and

characteristics. Therefore the Jiva-Atma or the living being has numerous characteristics, while the Parmatma, the Supreme Being, has no such limitations.]

6. 'Oh Goddess Annapurna! Fulfill my wishes. Give me food (i.e. nourish me and protect my life). Swaha.' With the utterance of the word Swaha, the worshipper should offer oblations to the divine Goddess after having said the Mantra (hymn) in her honour. [The Mantra is given in the following verses. The word 'Swaha' is uttered at the end of the Mantra to mark its end when offerings are made to the deity worshipped.] (6).

7. The Goddess resides in this Mantra as its Atma or essence symbolized by each of its twenty-seven letters.

[The Mantra of the Goddess consists of twenty-seven letters, and each of these letters has equal importance and significance. Even if one letter is removed the Mantra would collapse. That is why all these Mantras collectively and individually are likened to the Atma or soul of the Mantra because any living being cannot survive without the presence of the Atma in his body.]

She is served and honoured by her female attendants called 'Yoginis' (female ascetics) (7).

8. 'Aim Hrim/Hrin(g) Saum Srim/Srin(g) Klim/Klin(g) OM Namō Bhagavatya-annapurne Mamaabhilashitam Annam Dehi Swaha'—this is the Mantra having twenty-seven letters with which the Goddess Annapurna is worshipped. [The brief meaning of this Mantra is—'OM Salutations to Goddess Annapurna who is honoured by the Beej Mantras 'Aim' standing for Vaak Shakti or the power of speech, 'Hrim/Hrin(g)' standing for Maya Shakti or the power to create delusions, 'Saum' standing for politeness and suave demeanours, 'Srim/Srin(g)' standing for Goddess Laxmi or the power of wealth and prosperity, and 'Klim/Klin(g)' standing for Kaam Shakti or the power of desires that drives all actions and deeds. I reverentially bow before you. Be kind to fulfill my wishes and provide me with sufficient food and nourishment. I am offering this oblation to you by saying Swaha.']

I (Ribhu) had received this Mantra from my father (Brahma the creator). I follow this instruction and worship the Goddess. I worship her with this Mantra daily with devotion, and I have been doing it for a long time. I also ensure to diligently observe all the sanctioned rules of conduct for an auspicious and righteous way of life while doing so (8).

9. When I had been worshipping Goddess Annapurna over a long period of time, she was pleased with me and finally appeared before me in her most charming and magnificent form. She had large eyes, was smiling pleasantly, and her face was like a lotus flower (9).

10. When I saw the Goddess I stood up and then paid my respects to her by prostrating before her. After that I stood before her with the palms of my folded hands touching each other as a mark of submission and respect.

The Goddess asked me for a boon, saying, 'Oh son! You are blessed. Ask for any boon (or reward or gift) that you wish to have, without hesitation and delay.' (10).

11. In this way the Goddess with large eyes asked me to request her for a boon to be granted.

Oh exalted sage (Nidagh)! I then asked ‘Oh Goddess Parvati! Let the knowledge of Atma-Tattva sprout (and take firm root) in my mind.’

[‘Parvati’ is the divine consort of Lord Shiva and is considered as the Mother Goddess from whom all other Goddesses manifested. ‘Atma-Tattva’ is the essential knowledge of the Atma, the essence of creation and the true self of the creature. Hence, Ribhu basically requested the Goddess to provide him with enlightenment and self-realisation. This would lead to Brahm-realisation and his ultimate Mukti or liberation and deliverance. It is to be carefully observed here that the enlightened sage has addressed the Goddess as ‘Parvati’ instead of as Annapurna. It is to show that he knows that there is no difference between these two forms of the cosmic Shakti, which is the dynamic power, the cosmic energy and the supreme authority of Brahm revealed in different forms and known by different names, as well as the fact that he is well acquainted with the philosophy of Advaitya which stresses that there is no duality in creation because the ‘Truth’ will always remain the same no matter in which form it exists.

Further, sage Ribhu was an ascetic of the highest order. For ascetics, the chief deity is Lord Shiva, and the latter’s divine consort is Goddess Parvati. Hence, it was to give due respect to Goddess Parvati that Ribhu addressed Goddess Annapurna with this name. He also wished to give the message that whenever he worships Goddess Annapurna he is actually worshipping Goddess ‘Parvati’ because he knows that there is no difference between them.] (11).

12. When I had made this request, the divine Goddess graciously granted it to me, saying ‘So be it’. Then she vanished from sight.

Immediately I became enlightened and saw the mysteries of the world unravel before me (i.e. I got a divine sight which enabled me to literally look behind the curtain and see the esoteric secrets and truth of existence that lay behind it). I could see the various aspects of the world without any effort (i.e. I could easily distinguish the truth from the falsehood; I could easily distinguish the subtle and the sublime from the gross and mortal because I had acquired the eye of wisdom and enlightenment which gave me deep penetrating powers of insight and discrimination) (12).

13. Now, I shall narrate the five types of ‘Bhrams’—literally meaning delusions, illusions, deceptions and misconceptions that exist in this world, especially those related to the metaphysical field and spiritualism. These Bhrams create a lot of confusion and doubts caused by ignorance of the actual truth, which lead to perplexities and vexations.

The first Bhram is that the Jiva (the living being) and Ishwar (the Supreme Being) are two different and separate entities (13).

14. The second Bhram is that the Atma, the pure consciousness and the ‘self’ of the creature, regards its self as the doer of deeds (‘Karta’).

The third Bhram is that the Jiva has three divisions of the body and all belong to it. [The three divisions of the body are the gross body consisting of the external sense organs, the subtle body consisting of the mind and intellect, and the causal body harbouring the ‘cause’ of existence as well as the other two aspects of the body in the form of the consciousness known as the Atma that lives in it.] (14).

15. The fourth Bhram is to believe that the entity which is responsible for the creation of this corrupt and fault-ridden world is itself tainted and has various faults inherent in

the world. [This is based on the assumption that since it is said that the world is an exact image of this supreme entity, so if the image in the form of this material world is tainted then the principal of which it is an image must also be tainted.]

And the fifth and final Bhram is to believe that the 'cause' of this world (i.e. the entity that has brought about the world's existence) is different and separate from the 'result' or 'effect' of its endeavours which manifested in the form of this world.

When these five Bhrams are done away with, it is only then that true wisdom and enlightenment begin to shine in the inner-self of the creature. [These Bhrams act like dark veils that surround the sub-conscious and the inner-self of the creature, making the mind and intellect so biased and pre-programmed that it is unable to analyse any given situation dispassionately and arrive at the 'truth'. Once the veil of ignorance and delusions are removed, wisdom and enlightenment shine through like the bright sunlight emerging from behind the dark clouds in the sky.] (15).

16. When one becomes wise, erudite and enlightened he is able to see the truth behind the phenomenon of image formation and understand that the image that is seen in the mirror or any other reflecting surface is a reflection of some principal entity, and therefore it is both identical to this principal entity as well as completely different, distinct and separate from it.

[Suppose we see the image of a tree in a mirror. The image is exactly like the actual tree, but while the tree has a physical and tangible existence, its image is not, as the latter is merely a reflection of the former and therefore non-existent in the real sense.]

Similarly, pure crystal appears to be red when it is in contact with something that is red coloured. But actually the crystal has no colour of its own but merely reflects the colour of its surroundings or the things with which it is associated.

The sky element is essentially one, uniform and indivisible whole by nature, but it is nevertheless classified into various categories for the purpose of understanding—such as we have 'Ghatakash' or the sky present inside the hollow of an empty mud-pot, or 'Mathakash' or the space within the walls of a monastery. So these names create an illusion that these skies are different from one another, but the fact is that they aren't.

[For instance, if the mud-pot is broken there remains no segregation between the space that was present inside its wall and the vast space present outside its wall. There is no need to mix them; there is no effort involved in their becoming one and the same. It is a natural and automatic process. Rather, the wall of the pot had artificially created a separation in the otherwise uniform sky. Similarly, the creature's pure conscious Atma residing in his gross body is the same as the cosmic Consciousness called Brahm that is all-pervading in this creation. The gross body of the creature is the one which separates this consciousness into two, and this creates an illusion that the creature's Atma and Brahm are two different and separate entities. When the gross body is shed it is obvious that they merge with one another without any effort, and without leaving behind any trace of separation just like the space inside the pot merges with the space outside in a seamless manner when the pot is broken.]

Just like one is misled to believe that a given length of harmless rope is a fearful snake when seen from a distance, and this misconception is removed when the rope is examined from close quarters, the misconceptions about the world (that it is true and real) too vanish when one examines it from close quarters and comes to

realise the truth about it (that it is illusionary, deluding, artificial, entrapping and misleading).

Likewise, the pure metal known as gold appears to be different from the ornaments made out of it in the first instance, but on close analysis and understanding this misconception is removed because the gold is inherent to all the golden ornaments, and the latter owe their very existence to the former. It is the gold that has been converted into the ornament, and when the latter is melted it would revert back to gold. Without 'gold' there cannot ever be the existence of an ornament called 'golden'.

[When this principle is applied to this world having myriads of colourful forms and exceptional varieties of characters and features, we deduce that all these are simply multifarious manifestations of one single principal entity known as Brahm, the cosmic super Consciousness. When this world would finally come to an end, it would revert back to its principal source of origin, and it is the formless and shapeless Brahm. Just like the element 'gold' has no specific primary shape or form of its own but assumes the shape of the ornament, Brahm itself is formless and featureless but assumes the form of this world. Just as it is impossible to catch hold of the single atom of the metal gold in its primary and basic form of an 'atom of gold', it is similarly impossible to grasp 'Brahm' or 'consciousness' in its primary and basic form. But once again, as the same gold in its physical and gross form can be easily grasped and moulded, the Brahm in its grosser form can be easily understood and seen. But this visible world is not the true identity of Brahm just like the external and visible form of the ornament is not the true identity of the atom of the metal known as 'gold'. Further, even as impurities are inherent in any ornament of gold and it would be foolhardy and stupid to accuse the pure atom of gold of having the same impurities as those possessed by the golden ornament, it is also most foolish and the height of ignorance to accuse Brahm of possessing the taints and faults that are inherent to this gross physical world. Refer Canto 2, verse nos. 17-18 which explicitly endorses this view.]

In this way when a man becomes wise, erudite and enlightened, or when these virtues arise in his inner-self and the mind gets illuminated, all Bhrams (delusions, misconceptions, falsehoods) about the world are dispelled.

So, it is from then (i.e. when I was blessed by the Goddess and became enlightened) that all my Bhrams have been removed and I have become Brahm-realised.

Oh Nidagh, follow my example and attain the eclectic knowledge that is true and spiritually elevating, that would remove all your confusions and consternations, and would illuminate your inner-self so that you become self-enlightened and Brahm-realised.' (16).

17. Sage Nidagh bowed before sage Ribhu and requested him, 'Please preach me Brahm-Vidya¹, i.e. enlighten me about the secrets of the enigmatic Brahm. Nothing is superior to this knowledge and better than it.' (17).

[Note—¹Brahm Vidya, or the knowledge of the supreme transcendental cosmic Consciousness known as Brahm, and Atma Vidya, or the knowledge of the Atma which is the same 'consciousness' that resides in the body of the individual creature, are intricately and inseparably linked with each other so much so that acquisition of the knowledge of any one automatically means the acquisition of the knowledge of the other, the only difference between them being the plane of existence at which these two terms refer, for while the term 'Brahm' refers to the cosmic and all-encompassing macrocosmic level of creation, the term 'Atma' refers to the same

divine entity that pertains to an individual creature at the microcosmic level. But then since this individual creature is an image of the entire cosmos, it follows that knowing the Atma, the truthful 'self' of one's existence one is able to know the spiritual truths of the entire creation.

Brahm Vidya is essentially an exposition of the knowledge of the Atma Tattwa, and vice versa. This is the primary reason why sage Ribhu explains the Atma Vidya in the following verses of this Canto, and then goes on to elaborately explain how to realise this Atma and gain spiritual benefits from this knowledge when sage Nidagh has actually asked him about the 'Brahm Vidya' and nothing else.

The concept of Brahm Vidya has been the chief subject of discussion of a number of Upanishads, especially the following:--(a) Krishna Yajur Veda's Kaivalya Upanishad, Brahm Upanishad, Panch Brahm Upanishad, Akchyu Upanishad, Tejobindu Upanishad, Varaaha Upanishad, Canto 1-5, and Brahm Vidya Upanishad. (b) Atharva Veda's Mundak Upanishad, Mundak (Canto) 1, section 1; Mundak (Canto) 2, section 1; Mundak (Canto) 3, section 1-2; Shandilya Upanishad, Cantos 2-3; Atma Upanishad; Tripadvibhut Maha Narayan Upanishad, Canto 1, paragraph no. 4; Canto 4, paragraph no. 1; Annapurna Upanishad, Canto 1. (c) Sam Veda's Chandogya Upanishad, Canto 7-8; Keno-panishad; Avyakta Upanishad. (d) Shukla Yajur Veda's Brihad Aranyak Upanishad; Isha Vasya Upanishad, Adhyatma Upanishad. (e) Rig Veda's Mudgal Upanishad; Atma Prabodh Upanishad.]

18. Ribhu was pleased and began his discourse—"I am pleased with you and shall oblige you.

Oh Anagh (the sinless and pure-hearted sage Nidagh)! Become so wise, realised, erudite and enlightened that while externally you become a great doer of auspicious deeds and enjoy their grand rewards, internally you must remain totally detached from them, having nothing to do with either the deed or its result by renouncing all your involvements with the world, by becoming highly dispassionate and neutral.

[That is, on the one hand you should become so successful in your endeavours that you become highly respected in this world for your achievements, and therefore obtain all the glories, majesty, magnificence, honour and mystical powers that one can ever hope to acquire by being successful in life and doing auspicious deeds, you can even enjoy the rewards of your deeds and efforts, but do this only externally. Internally, you must not be affected by either the deed or its result by becoming highly dispassionate and by renouncing all your involvements with this world. You must be completely detached and disassociated from this world. Hence, while you might be enjoying this world and living a normal life like me, internally you must be submerged in meditation and contemplation, you must be constantly thinking of the Atma and Brahm, and nothing else.]

Research your true 'self', or research about the truth of your 'self'. [Find out who you truly are, and what your true identity is. Refer verse no. 40 in this context.] Having known it or becoming enlightened about it, you would become eternally happy and cheerful. [That is, if you sincerely wish to obtain real spiritual peace and happiness, distance yourself from this gross and deluding world that is full of miseries as well as is mortal and transient, and instead concentrate on your Atma which is your 'true self' as well as the pure consciousness.] (18).

19. Realise and become enlightened about the truth of the statement 'I am that Brahm who is eternally awakened and always shining, who is pure, untainted, immaculate and pristine, who is most ancient and primordial, and who is eternal and imperishable. There is nothing except this. [That is, there is no truth other than this.]'

With this eclectic thought and firm conviction, become faultless and free from having any kind of taints. This would pave the way for your emancipation and deliverance. This would give you eternal bliss, happiness, peace, tranquility, beatitude and felicity (19).

20. Whatever that is seen here has no reality in it; it has no substance, pith and truthful existence. Have firm faith and conviction in this view.

Just like the city of Gandharvas (who are semi-gods of lower category in the hierarchy of Gods, and engage in performing tricks) which has no real existence, and like the sight of water in the mirage seen on the sand in hot desert being simply an optical illusion, whatever is seen in this world is also illusionary and deceptive, and therefore has no real existence (20).

21. Whatever is seen to exist in this world appears to be there just because it is imagined to be there (by the imaginative powers of the mind); actually it isn't.

Oh sage! Have faith in the divine and eclectic entity that is beyond the six organs of the body, and gain knowledge of it. In other words, become enlightened about the Atma or pure consciousness that is your true self; become 'self-realised'.

[The six organs are (i) the mind, which is the subtle component of the body, and (ii) the five sense organs of perception of the gross body such as ear, eye, nose, tongue and skin = total 6. The entity being referred to here is the Atma or pure consciousness. Sage Ribhu exhorts Nidagh to become self-realised by experiencing the presence of the Atma in his inner-self. This Atma is different from either the gross body or the subtle body as mentioned here.] (21).

22. This entity (i.e. the pure conscious Atma that is implied in verse no. 21) is imperishable, eternal and infinite like the sky, it is in the form of the Atma or the soul (essence; fundamental basis) of all living beings, it is immutable, indivisible and one single whole, it has no 'holes' in it (i.e. it has no drawbacks, shortcomings, taints or faults), and it is self-sustaining as well as able to sustain everything else in this world much like the planet earth (which is self-sustaining and complete in its own right, which needs no external replenishments to refill its bowl which is being constantly exploited and drained of its reserves, and which harbours all forms of diverse life along with sustaining and nourishing them without ever complaining of the way it is being abused by all and sundry).

Be convinced and have the eclectic thought that 'I am this divine entity (Atma)' (22).

23. If the mind and the sub-conscious develop some sort of dejection or depression and the creature begins to think that he is not an exalted entity and suffers from wants, or he feels that he is not complete or fulfilled (i.e. when, under the influence of ignorance and delusions, the creature begins to feel that he is suffering from this or that problem, that he is not happy, that he would die, and so on and so forth)—in such a situation he must tell himself that it is wrong to think this way, and that he is absolutely normal and fine.

In other words, the mind and the sub-conscious must be trained to remain calm and steady, and not be moved by imaginary problems and things that have no existence. The creature (i.e. the Jiva, the living being) must learn to inculcate positive and constructive thinking and virtues, and discard negativity and destructiveness (23).

24. When the mind and the sub-conscious begin to think that the 'self' (of the individual creature) is not different from the supreme 'Self' known as the 'Param Tattwa' (literally the supreme essence; the absolute Truth; the supreme Atma or the all-pervading super Consciousness), it is then that all distinctions between the two planes of existences in which the same essential Truth (the Tattwa, the Atma, the pure consciousness) exists is removed. In other words, when the wise spiritual aspirant trains his mind to think that his 'true self' is the pure consciousness residing inside his bosom, that this body is merely a carrier of this consciousness, that consciousness is a universal and indivisible entity that cannot be mutated or fractioned, that the consciousness residing in his body is the same that prevails everywhere else and resides inside each and every living being in this creation—it is only then that he truly understands the meaning of the term non-duality or Advaitya, and consequentially is entitled to be truly called wise, enlightened and self-realised.

[We deduce from this observation that it is the 'Chitta', or the mind and its sub-conscious aspect which are responsible for either the creation of the notion of duality, or of non-duality. The difference between an ignorant and deluded man and a self-realised, wise and enlightened man is that while the mind of the former believes that the Jiva and the Ishwar are two separate entities, the mind of the latter is convinced that they are one, indistinguishable and inseparable. This delusion of there being 'duality' between the Jiva and the Ishwar is of course referred to as the 'first Bhram' as mentioned above in verse no. 13.] (24).

25. When one develops this eclectic and holistic vision of life and creation (or existence), he is able to access Mukti (liberation and deliverance) while he is alive and still has a gross body. That is, though he has a body, but for all practical purposes he is deemed to be liberated from its shackling affects; he is deemed to be free from the limitations imposed on him by the grossness of the body. Here the term 'he' would mean his 'truthful self, the Atma which is pure consciousness'.

[Such a wise man realises that his 'true self' is the pure conscious Atma that is a sublime and subtle entity which is quite different from the gross body, as the latter is merely a habitat of the former. This self-realised and enlightened man can be doing all the deeds required of him in this world, but still remain free from all bondages and encumbrances because he has developed the wisdom to understand that the deeds are being done by the body and not his 'true self' which is the Atma, the pure consciousness, and hence 'he' remains a mere spectator of what the physical gross body does. Besides this, he has also realised that the world is an imaginary thing of the mind, that it is entrapping and deluding by its inherent nature, and so anyone who is wise would have nothing to do with anything that is untrue, selfish, cunning, crap, demeaning, demoting, denigrating and entrapping for the soul.

Therefore he understands that it is well to avoid this trap. He has no expectations of any rewards or punishments from the deeds, he has no target or aim or objective for doing the deeds—for he simply does them because it is his duty and assigned to him by the Supreme Being who is the Lord of all creatures and the world in which they all live. With this eclectic and highly evolved spiritual way of thinking, he does not get involved in the deeds or in any of the demands for gratifications of the body and its sense organs. Thus no consequences accrue to him for doing deeds. For him, the body simply does not exist, and therefore the world also does not exist because the latter is directly related to the former.

This sublime thought process is a de-facto 'Mukti' for the aspirant as he has freed himself from the bondages of the body and the demands of its sense organs, as well as the world of sense objects and its attendant delusions and entangling web.]

This state of the mind and the sub-conscious is called 'Turiyateet Mukti' or the transcendental state of existence.

[This is because in the Turiyateet state of existence of the consciousness, which can be said to be the state of 'super-consciousness', the mind thinks of nothing; it is in a neutral state. In its wake, the 'self' too becomes neutral and established in the Turiyateet state because it was the mind that had been nagging the 'self' or the Atma of the creature with so many inputs and demands that the 'self' just could not find time to rest and find its peace. With the mind out of the scene, the 'self' or the Atma reverts to its primary state of existence which is inherently calm and neutral. The 'self' or the Atma therefore lives in the Turiyateet state when the mind enters this state of existence.] (25).

26. Oh Anagh (i.e. sage Nidagh who is the sinless and faultless)! Such a highly self-realised man is deemed to be in a perpetual state of Samadhi—i.e. in spite of his apparently going about his normal duties in this world expected of him, he still remains lost in his own thoughts internally, and therefore he is deemed to live in a perpetual state of trance called 'Samadhi'. [He is unconcerned with and unaware of anything around him, including even his body. His body does some or the other deed in a mechanical fashion, but his 'true self' is absolutely oblivious of what the body does or does not do. Therefore, because of this un-involvement and dispassionate attitude of the inner-self, the person in a state of Samadhi is not at all affected by any of the deeds or actions undertaken by the external gross body.]

Therefore, both types of aspirants, those who are in the Turiyateet state as well as those who are in the Samadhi state, are deemed to be Mukta; they have attained Mukti (spiritual liberation and deliverance, emancipation and salvation). In fact, for all practical purposes, both these states are synonymous with each other as both are transcendental states of existence of consciousness which is untainted and unaffected by any of the taints or drawbacks or shortcomings or faults of this deluding material world.

This sort of Mukti is not limited to only those who have studied the scriptures or are well versed and learned in them, and likewise it is not beyond the reach of those who do not have this privilege. In fact, Mukti is available to anyone who has become truly enlightened, wise and self-realised. This is made possible by training the intellect and the mind to think in the terms of the philosophy espoused in this Upanishad.

[That is, anyone who is diligent, determined and sincere can access this Mukti by becoming self-realised and having firm faith in the essence of Advaitya Vedanta that speaks of the non-duality, immutability, universality and uniformity of the Truth known as Consciousness. He must be convinced that his 'true self' is the Atma which is eternal, subtle, sublime and pure consciousness, and not the body which is perishable, gross and inane.]

A person who lives in this state of mind and thoughts for a long time becomes absolutely neutral and dispassionate so much so that the ecstasy and bliss that he experiences in the higher states of spiritual realisation and enlightenment do not show in his demeanours and countenance. Externally it appears that he is in a stupor and indifferent to all emotions and feelings; but internally he is full of bliss and joys unlimited. He has reached the stage of higher consciousness when he appears neither

happy nor sorrowful; he is neither cheerful nor remorseful. [This is described as the Unmani and the Manonmani* states obtained in higher states of Yoga when the mind and its sub-conscious thoughts are neutralized—refer Shandilya Upanishad of the Atharva Veda tradition, Canto 1, section 7, verse no. 17 and verse no. 10 respectively. Refer also to Canto 3, verse no. 4 of our present Upanishad.] (26).

[Note—There are a number of Upanishads that describe how the Mana can be controlled. References: (i) Shukla Yajur Veda's Paingal Upanishad, Canto 4, verse no. 4. (ii) Krishna Yajur Veda's Kathrudra Upanishad, verse nos. 39-40; Yogshika Upanishad, Canto 1, verse nos. 62-65, 69-71. (iii) Atharva Veda's Shandilya Upanishad, Canto 1, section 7, verse no. 23-25.

The Paingalo-panishad, canto 4, verse no. 5 of the Shukla Yajur Veda tradition states that the immaculate Atma, when it erroneously associates itself with the body, i.e. the sense organs which constitute the body, and the mind, it begins to think that it is a doer of deeds and also has to suffer from their consequences. In order to free itself from this clutch of delusion, the Atma needs to exercise control over the mind and the sense organs of the body.

The mind and the sense organs of a man are inherently very restless. Their control is called 'Nigraha'. The word 'control' implies that both of them are reined in and prevented from recklessly following their usual sense objects of the material world, seeking comfort and pleasure from them. To do this we have to set a goal, and then focus them on these goals, for then, their energy and agility would be diverted towards that goal. For this purpose the goal would be spiritual and that would mean self knowledge and self realisation. Once this spiritual goal is set, the Ahankar or a false and inflated sense of self-esteem, pride and ego along with their attendant arrogance and haughtiness that are inherent in a man will take care of the rest—for now he would do his best not to fail in his endeavour which he has set for himself by himself. A focused mind and sense would help the man to control them, for now they would find no time and energy to go berserk and have to live up to their expectations.

Another method is to focus the mind on one thing at a time—and this time it is self knowledge. Once the mind is focused on this target, it would try to find out how to achieve it, and then actually implement that method.

These methods are positive and are more helpful as compared to methods used to suppress the mind and sense organs, because then they would feel like being trapped under duress and would try to break free at the first opportunity, creating greater distress to the seeker.

The mind is always restless and it keeps the body restless. This is proved when a tired man sleeps. At that time, his weary body lies like a dead log of wood, not wanting to stir at all, but the mind is so restless that the same man 'dreams' the wildest of dreams, imagining nightmarish things so profound that when he wakes up from a long sleep he is as tired as he was at the time of going to sleep, though his body had been taking complete rest all this while. So in effect, the restless mind had not allowed the man to take 'effective rest'. This is what is meant here when the verse says that the body gets peace when the man realises the true nature of his self, because then his mind ceases to be in a state of constant flux due to the man concentrating it even forcefully upon the Atma, whereby the mind has no time to think of any thing else that is nonsense. This results in a situation when the man is able to harness the energy of the mind and concentrate it upon what lies beyond the restless picture projected by the mind; he is able to channelise the mind's vital strength from the falsehoods to the truth-hood. This in its wake gives peace to the body because with the elimination of the constant nudging by the mind, the organs of the body get a chance to find rest and peace.

When the mind is restless, it directs the body's sense organs towards their respective objects of perception and action. The mind does not allow the body to take rest. For example, a waking man's eyes are constantly jumping from one sight to

another, his ears hear one sound after another, and even his skin starts to itch if he has no other thing to do! Let a man sit alone for any length of time and he would become fidgety and change his position frequently lest the parts become numb. It is here that meditation helps—it trains the body and the mind to remain steady and calm like obedient pupils under the tutelage of a strict teacher. With this outlook, the man is able to rein the mind as well as the body.

The mind decides how we perceive and experience the world—the same circumstance, the same input of stimuli might seem pleasant at one given time but most irritating at another because the mind perceives them differently. Therefore, by exercising control over the mind by diverting it to the inner-self, one is able to give peace to the body.

Again we must note that the mind and therefore the body exist because of the following *four things*—(a) ‘Guna’ or attributes or qualities that are inherent in the character of a man, (b) ‘Kriya’ or activity that are so characteristic of them both, (c) ‘Vishesha’ or the unique features that the mind and body possess, and (d) ‘Sambandh’ or the relationships that they establish with each other and the rest of the world. The physical body depends upon the mind as would be clear when we consider the fact that all the perceptions and the actions have their seat in the respective faculties of the mind (brain). For example, if the mind is somewhere else, then no matter we might be staring at an object for hours, but we would not register it in our memory, and we would not recognize it when shown again, though we had been staring it for so long. This applies to all other parts of the body. This relationship known as ‘Sambandh’ is elaborately described in Canto 2 of this Upanishad.

The creature has three types of bodies—viz. the gross body consisting of the sense organs, the subtle body consisting of the mind-intellect complex, and the causal body which harbours the pure conscious Atma. When the first two are eliminated, or when the enlightened creature is able to divert his attention from the body making it non-relevant and non-existent thereby preventing even the mind from receiving any new inputs from the gross world and becoming irrelevant and non-existent, naturally what is left is the third body. This causal body has the Atma surrounded in the bliss sheath; it was its interaction with the external world through the medium of the mind and the body that it got agitated. Again this was because the Atma was ignorant of its holy and sublime nature; it was surrounded by the veil of ‘Avidya’. When this veil of ignorance is removed from the Atma by acquisition of truthful knowledge and self-realisation based on contemplation and meditation, either as advised by one’s wise and realised teacher or by the deep studying of the scriptures, the pure and original shine and glittering illumination of the Atma comes to the fore. This leads to the realisation of its blissful nature, because when all agitations are removed, the seeker finds perpetual peace and tranquility.

The mind is the cause of all bondages for the creature. Bondage is when the mind longs for something, grieves about something, rejects something and accepts another, is please about something or displeased about another.

‘It is good to tame the mind which is difficult to tame, and is naturally inclined to be flirty and flighty, rushing wherever it wishes. A tamed mind brings happiness.’ [Dhammapada, 37.]

*The *Unmani* state is a higher and exalted state of existence of the consciousness when it rises above the mundane and the gross, and lives in a sublime state. The word itself has two connotations—one is to rise and lift up, and other is to become indifferent to things that are gross and unattractive. The ascetic who practices the form of Yoga outlined in this Upanishad is able to ‘lift’ his ‘self’ from the gross level of existence, ‘rise up’ and reach an exalted state of existence when he is able to ‘see’ the sublime Tattwa, or experience the presence in his own inner self the eclectic entity that is the essence of existence and which in common parlance of Vedanta and metaphysics is known as the ‘conscious self’ or the pure conscious Atma. This Atma is the essence or the Tattwa that is self-illuminated and that is witnessed in the higher

stages of Yoga as described in this verse. It is the realisation of this Atma that is the aim of all spiritual pursuits, and it is this realisation of the Atma that is the cosmic Truth known as Brahm which gives the feeling of unmatched exhilaration and ecstasy to the ascetic. That is why he is stunned and his eyebrows are raised in a crooked stance. He had never ever experienced this scintillating source of light earlier in his life, and when he actually 'sees' it, he is taken by surprise and utterly stunned and dazzled by its mere presence. The word also means total renunciation.

The *Manomani* state is very similarly to the Unmani state. The word 'Manomani' has 'Mana' as its first part, and the word 'Mana' means the thinking mind and the emotional heart. Hence, the Manomani state is that in which the mind loses its restlessness and is put under control just like one is able to control the vital winds during the process of Pranayam done in Yoga (meditation).

This state has been described in the Shandilya Upanishad of the Atharva Veda tradition, Canto 1, section 7, verse no. 10.]

27. By diligently practicing control of the mind for a long time by doing various Aasans (sitting postures) and other meditative techniques of Yoga (such as Pranayam or breath control, Bandhas or closing all exposure of the mind to the turmoil of the external world, etc.), one is able to become aware of the 'truth' of the presence of the pure consciousness inside one's own self as well as is able to get rid of the various Bhrams (delusions, misconceptions, deceptions, illusions etc. and their causes as described in verse nos. 13-16 above) that are associated with this life.

In other words, one is able to ascertain the 'truth' and do away with the falsehood. In fact, when the sun of 'truth' dawns on one's mental horizon, its brilliant light automatically dispels the darkness of falsehood. He is then able to attain the auspicious state of Mukti as well as of Turiya and Samadhi (as narrated in the foregoing verses) (27).

[Note—The concept of *Mukti* has been elaborately described in this Upanishad in Cantos 3-6.]

28. A person whose mind is convinced that the Atma or pure consciousness is free from being tainted or affected by any of the qualities characteristic of this world is the one who has truthfully understood what the Atma is, and is therefore truly 'self-realised'. Such a wise man is internally calmed, serene and peaceful, as well as in a state of bliss and contentedness.

When this state is achieved, it is called the state of Samadhi (28).

29. A person who can remain calm and steady by controlling his Vasanas¹ (i.e. the inherent passions, yearnings, desires and wishes that are so characteristic of all living beings; worldly attachments and attractions; desires for gratifications) is the one who can keep his mind and heart steady and focused on his spiritual goal. Such a man is said to be steady and unwavering in his spiritual pursuit.

When an aspirant reaches this exalted state of existence when he is not disturbed by the constant interference of the various Vasanas, he can experience the bliss and peace that are only available when this state is reached. He is deemed to be in the state of Samadhi or a trance-like state marked with indifference to the gross existence consisting of the material world and the gross body, a state of complete peace and tranquility that bestows rest and bliss to the aspirant. Since true peace and bliss is available only when one gets rid of the Vasanas and obtains the state of Samadhi, it also called the 'Kaivalya state of existence'² (because the word 'Kaivalya' literally means 'one of its only kind'; unique, unparallel and matchless).

[This is very obvious—when a man is being subjected to constant nagging demands of the sense organs of the body as well as the heart and the mind, he can never ever hope to find peace. He would be constantly striving to fulfill their never-ending demands, requests, hopes and expectations. It is only when he shuns them or shuts off the door to them that he can ‘sleep or rest in peace’. This phrase ‘sleep and rest in peace’ is a metaphor for his state of Turiya and Samadhi because he is unaware of anything pertaining to the external physical world made aware of by the medium of the sense organs of the gross body, as well as the subtle world of the sub-conscious mind that exists in his dreams. When this overwhelming calmness prevails, when there is nothing to disturb the Atma, the latter finds true rest and peace. Since true rest and peace and their accompanying sense of bliss and happiness is available only when this eclectic state is reached, it is defined as the ‘Kaivalya’ state—or the state that is unique and unmatched. This existential state bestows him with extreme bliss and peace; he feels full of beatitude and felicity; he is steady, unruffled and unmoving; he is unaffected by anything in this world; he is totally indifferent and neutral to everything, being merely a witness to all. He exists in his truthful state of enlightened ‘self’, and it is tantamount to his being in the Turiya or Samadhi state of enlightened existence.] (29).

[Note—¹The concept of *Vasanas*— *Vasanas/Vasnas* are the numerous attractions, desires, yearnings, infatuations and other natural inclinations of the creature that tie him to this world. *Vasanas* arise because a man thinks that one thing is better than the other and that he must get hold of the better choice. The *Vasanas* are deep-rooted impressions that define the texture of a man’s mind and intellect. On the other hand, intentions are conscious thoughts that determine his actions. *Vasanas* are innate inclinations and tendencies which form the propelling force behind a man’s desires, thoughts and actions.

Classification of *Vasanas*:--There are many ways to classify the *Vasanas*. Let us examine them one by one as follows.

(i) The *Vasanas* are of three types—viz. Lok *Vasana*, Deha *Vasana*, and Shastra *Vasana*—refer Atharva Veda’s *Param Hans Parivrajak Upanishad*, paragraph no. 2. Now let us examine them in detail.

(a) *Lok Vasana*—this is the desire and greed for wealth, fame, sense objects of the material world, territorial gains, authority and powers, majesty, pomp and pelf etc. The *Vasanas* relating to the world are the various attractions and allurements that his apparently enchanting and captivating world presents to a person. It also refers to the various and endless responsibilities and obligations, real and imaginary, that a person has, or imagines he has towards this world.

Sometimes the Lok *Vasanas* overlaps the Deha *Vasana* as often they are interconnected. For example, one’s ‘*Vasanas*’ pertaining to one’s son, property, material wealth and other assets which a person has acquired by the efforts made by his body and which help him to get established in this world and enjoy enhanced comforts and pleasures as well as respect and honour that such acquisitions entitle him to in this physical world also come under this category of *Vasanas*. All such relationships that exist in this world, such as his relatives, his contacts, his friends, his peers and compatriots, along with his obligations, his contracts and his responsibilities related to them are called Lok *Vasanas*. It would also include all things done by him in this world to appease those who are related to him with this body.

(b) *Shastra Vasana*—this is the desire and yearnings related to scriptures and ancient literature, such as a desire to become an expert in them and be recognised as such, the desire to study them more and more, acquiring scholarship and literal expertise in them with its accompanying fame, renown, glory, honour, respect and financial prosperity, become much sought after and acquire a wide follower-ship

based on these qualities and honours bestowed upon them by the world by the virtue of their unique abilities and expertise of the scriptures etc. But usually such knowledge is superficial, and the so-called expert of scriptures relies more on their letter rather than on their spirit, engrossing himself in endless discussions and debates leading to confusions and contradictions instead of solving them. The scriptures are vast and like a fathomless sea. Trying to realise the Supreme Truth by delving into the depths of the scriptures is like an attempt at extracting a single piece of pearl by churning the whole ocean. Though it is theoretically possible in thousand of years of continuous effort, but practically it is impossible and incredulous to even think of such a success; it is a too far-fetched notion. It is rare to find a truly wise and enlightened soul amongst worldly scholars and orators, for the latter's erudition is limited to gaining fame and name and nothing more.

(c) *Deha Vasana* –this is the insatiable desire and passion related to the gratification of the sense organs, such as becoming licentious, engrossing oneself in enjoyment of worldly sensual objects, and all other types of indulgences and gratifications. The 'Vasanas' pertaining to the body also relate to the attachments that one has with one's son, property and wealth which a person has acquired and enjoyed with his body, and the world around him—his relatives, his fame, his contacts, his friends, his obligation, contracts and responsibilities. It also means gratification of the sense organs of the body as well as to appease those who are related to him with this body so that they continue to serve and help him and give comfort and pleasure to his body.

Now, when we talk of the Atma as pure consciousness or an embodiment of light, the question arises 'how can we obtain the clearest perception of that reality?' The greatest exponent of Vedanta philosophy, sage Adi Sankaracharya prescribes the following four paths—(i) discrimination between the eternal and truthful, and the non-eternal and non-truthful, (ii) renunciation of desires for sensual gratification and enjoyment of pleasures from this materialistic world, (iii) development of six divine eclectic wealth—self control, surrender, faith, forbearance, peace/tranquility and poise of the mind, and (iv) sincere desire for liberation and deliverance, because it is only then that the creature will try to find ways to achieve it.

(ii) Another classification is based on the proportion of *bad* or *good* qualities inherent in and integral to the nature of a man. Therefore, there are broadly classified into Good Vasanas, and Bad Vasanas depending upon the proportion of good quality and the bad quality that is inherent in the man and forms his innate character. These qualities are called the Gunas, and they are three in number—viz. Sata Guna, Raja Guna and Tama Guna. Hence, we have *Satvic Vasana*, *Rajic Vasana* and *Tamsic Vasana*.

The *Satvic Vasanas* are those desires that are determined by the predominance of the best quality called Sata in a man. Such a man is inclined to do auspicious deeds and take noble actions. He is naturally inclined to and attracted towards those things in this world which help him to cultivate higher values in life, such as the desire of serving others selflessly, being compassionate, relinquishing one's right for the general welfare of others, spending time in finding ways to achieve knowledge of the 'self', study of the scriptures and generally spending life in noble thoughts and deeds, etc.

The *Rajic Vasana* is the middle path which creates desires for name, fame and power and their accompanying laurels and majesty. Such tendencies need commensurate actions so that they can be effectuated. Hence such a man would be engrossed in the world and its activities; he would serve others but would have a certain degree of self-interest in whatever he does; he would judge everything but with himself as the overriding factor. He would study the scriptures but not for his spiritual well being but to gain money and fame and a large follower-ship.

Finally, the lowest of them is the *Tamsic Vasana* which makes a man pervert, sinful, selfish, indulgent and indolent to the extreme. He would snatch other's right in

order to fulfill his own desires; he would study the scriptures only to find fault with them and ridicule them. He would not have any qualms in making others suffer by his actions and derive immense satisfaction and pleasure in it. He would have no scruples and a sense of probity and propriety in what he does in order to satisfy his desires, wants, yearnings, aspirations and expectations.

It ought to be noted that there are no water-tight compartments in these three types of Vasanas; they are diffused and more often than not difficult to differentiate one from the other. Their intensity may change with the change in the person's attitude and the level at which his thought processes as well as his mind and intellect operate as he develops wisdom and knowledge.

Vasanas arise due to one's desire to gratify the natural instincts of the sense organs. Such as for example, the eye has a natural urge to see beautiful objects. So if a man falls prey to this urge, his mind and intellect would come into play and the man would then try everything in his means and power to acquire that object which pleases the eye, thereby dragging other organs in this quagmire. Each organ would then make its own demand, and the demands never cease but go on multiplying in a compound manner. Actions prompted by the element of ego and egocentric desires such as the attitude of 'I, Me and Mine' leave in their wake a chain of desires and wants which keep us prodding, propelling and compelling to satisfy them, and the chain of Vasanas is set in motion.

So the easy way to stem the surge of Vasanas and finally obliterate them is to first analyse one's natural inclinations and tendencies, and then slowly divert them from lower level to a higher level by conscious effort and diligence. One of the methods to do this is to do deeds but without expecting any rewards from them—which is at the core of Karma Yoga. With this attitude, the accumulation of Vasanas is gradually exhausted. Another way is to acquire truthful knowledge by studying the scriptures directly or getting to know about their great tenets and teachings from others. This helps to remove 'Agyan' or ignorance of the reality and truth which is at the very root of the creation of Vasanas in the first place. If one becomes wise and gets acquainted with great metaphysical truths about the 'self' and the Atma along with the nature of existence and its essential form as well as the real goal of human life in spiritual terms, it would be natural and logical that he would be more inclined to overcome all sorts of Vasanas, including the Satvic ones. In fact, he would have no Vasanas at all.

Now let us examine these *three Gunas* in brief. (a) 'Sat Guna' is the 1st eclectic quality that refer to all the positive, noble, virtuous, auspicious and good qualities present in a creature, (b) 'Raj Guna' is the 2nd type of quality which pertains to worldly passions, desires and ambition etc., while (c) 'Tam Guna' is the 3rd type of quality which is regarded as the lowest and meanest of the three qualities leading to various vices, evils, sins, perversions etc. The various permutations and combinations of these three qualities create a particular nature of an individual giving him his individuality and his special characters which are unique to him; they determine his temperament, behaviour, thought process et al. Two individuals having the same external form of the gross body—e.g. two men—might look very much alike but they vary immensely in their nature, habit, behaviour, thinking, outlook, action and deeds, wisdom and way of living. This is what is meant when it said that a creature has to roam in 84 Lakh wombs or forms of life; it is only a metaphor—it does not mean an actual, countable specific number that there are actually and physically 84 Lakh types of bodies of living beings; it only symbolically refers to the huge possibilities that are possible with these three 'Gunas' and their different combinations that can imaginably produce a myriad variety of creation that can be created with these three basic qualities and their various sub classes of qualities.

Satvic tendencies are the best tendencies amongst the three. They are positive qualities of service, benevolence, mercy, devotion, wisdom, holiness, piety etc. Rajsic tendencies are the second best quality which produces worldly desires, passions,

selfishness, obsession, expansion etc. The Tamsic tendencies are the worst types leading to vices, perversion, delusions, deception, gloom, anger, ignorance et. al.

The proportion of the three Gunas decides the nature, natural temperament, tendencies, habits and inclinations of the creature. For example, a person with a greater proportion of 'Satvic' (noble) characteristic will be considered nobler than a man with a greater proportion of 'Rajasic' or 'Tamsic' qualities. So we can say that sages, seers, prophets, scholars and generally enlightened persons have a high degree of 'Satvic' qualities in them; kings and householders who live a noble life are example of those with higher amount of 'Rajasic' quality in them; while sinners, killers, drunks, rowdy elements, cheats etc. are those people with higher 'Tamsic' quality in them. These Gunas have direct bearing on the personality of a man.

The Vasanas have been described in detail in the *Varaaha Upanishad* of Krishna Yajur Veda tradition, in its Canto 2, verse no. 70, and Canto 4, verse nos. 16, 20, 23.

²*Kaivalya*— The word *Kaivalya* means the 'only one' or the non-dual state. It is the supreme stature of existence which is the one of its kind and the most exalted state of existence when nothing but the non-dual consciousness is discernible everywhere in the world by the enlightened creature. There is non-duality and uniformity everywhere. It is a state of existence which is similar to the state of Samadhi in which the man goes about his daily life doing his chores in a routine way without getting emotionally involved in them and even remaining totally oblivious of what he is doing. He remains totally submerged in his inner self and thoughts. He appears in a virtual trance-like state of existence usually observed in realised ascetics and great philosophers. People regard such men as absent minded, but they are so much absorbed in themselves that they are not concerned with what others think of them. For them, the external world ceases to exist though they physically live in it and interact with it.

This Kaivalya form of existence is tantamount to being liberated from the fetters that tie the creature to this body and the world because though he lives in the world he is totally indifferent to it; he is free from all worries, sufferings and sorrows as well as all forms of attachments, entanglements and involvements with the artificial and deluding world that are the usual features of an ordinary worldly man submerged in the world's entrapping charms. This state is comparable to the actual and physical liberation of the soul upon death when it is physically liberated from the bondages of the limitations imposed by the gross body; the only difference being that in the former case the man is alive and enjoys the privilege of having a body that allows the ethereal Atma to enjoy this physical world in a totally dispassionate and detached manner as if it is a neutral observer, while in the latter case he sheds the burden of the body altogether.

The Kaivalya state is considered superior because such a man lives a life of happiness and contentedness; he never suffers from any worldly miseries and worries; he treats the world around him as of no consequence, and remains indifferent to its deluding effects and their entanglements. On the other hand, the ordinary man might find emancipation upon death, but his life is a burden while he is still alive in it. Such a man has not truly understood the teachings of the scriptures; he has not understood the 'spirit' of spiritualism and metaphysics as enumerated by the Upanishads because their main aim is to give peace and tranquility to the tormented soul and help in its liberation from the deluding effects of the body and the world. This concept has been elaborately described in *Muktiko-panishad* of the Shukla Yajur Veda tradition.

The Kaivalya form of Mukti envisions the merger of the 'self' with the supreme 'Self' so that there is no chance of the 'self' or the pure conscious Atma to take birth again (refer *Yogtattva Upanishad*, verse nos. 108-109 of Krishna Yajur Veda). For all practical purposes as far as the ascetic is concerned, this would be equivalent to merging his soul with Brahm because the supreme Brahm resides in his own 'self' as his Atma or consciousness as well as his Pran or spark of life. Besides this, the very fact that he has reached this state of Samadhi itself indicates that he has crossed the

earlier stages where any of the worldly corruptions can demote him and pull him away from his spiritually exalted stature. He would have realised that the body is not his 'true self' but it is the Atma, and that this Atma is the supreme transcendental Consciousness personified. How can anyone with such an enlightened view of the 'self' can ever be expected to be weighed on the same scale as his other brethren who treat their bodies as their 'self' and remain engrossed in this material world of sense objects. So, though he retains the body and appears to be of a lower category than the ascetic who has discarded his body to merge his 'self' with the supreme Brahm, basically there is no difference between the two. The former type of ascetic who retains the body is called 'Jivan Mukta', or the one who has obtained liberation and deliverance from the fetters of the world while still living in it because he has certain obligations to fulfill, and the latter is called 'Videha Mukta', or the one who has obtained the same liberation and deliverance by abandoning the body. The body in both the cases causes no hindrance for him, because even while he has retained the body as a Jivan Mukta if he prefers the option to do so, he already has acquired so much divine mystical and magical powers called the various Siddhis that he can perform super human and super natural deeds that anyone with a body cannot ever expect or hope to do. These have been enumerated in verse nos. 73-74, 87, 91, 94, 97 and 102 of the Yogtattva Upanishad.

But there is subtle catch here which must be closely observed. Verse nos. 21-22 and 76-79 of the Yogtattva Upanishad clearly state that the use of various Mantras and obtaining Siddhis are impediments in obtaining the true fruit of Yoga; those who wish to acquire them and remain satisfied with them are of a very low type of Yogi.

Further, verse nos. 14-18 of this Yogtattva Upanishad describe what constitutes 'true Gyan' or true knowledge and wisdom, and it is to obtain the only state of existence that can give eternity to the Atma, and it is called 'Kaivalya', and this is the merger of the self with the supreme Self. This is obtainable when the Atma discards the body and finds final liberation and deliverance, or ultimate emancipation and salvation. This is 'unconditional Mukti', while the one obtained while retaining the body would then naturally be a 'conditional Mukti' because while the body is still there, Mukti cannot be absolute; it is conditional and subject to certain parameters and conditions that naturally come when someone has an obligation to fulfill. The obligation in this case is towards the body because the Atma is obliged to remain inside it and it must pay its due respect and the dwelling 'rent' to it! Therefore, the Atma is under 'conditioned freedom' if the ascetic chooses to retain the body and remain inside it instead of discarding it and becoming 'absolutely free', in which case the Atma becomes 'unconditionally free'. The later state is called 'Kaivalya' Mukti. The body has to be discarded ultimately, sooner or later; the soul is therefore not 'absolutely' free if the ascetic retains the body as compared to the case where he decides to permanently abandon it once the window of golden opportunity arrives during Samadhi.

Therefore, the ascetic has two options open to him as already pointed out in verse nos. 105-107 of the Yogtattva Upanishad—i.e. either to obtain Kaivalya Mukti which is like the Videha Mukti, or to obtain Jivan Mukti. There is only a subtle hair-fine difference between the two.]

30. Therefore, I pray and hope that you are blessed with the state of the mind when it is free from any kind of Vasanas—either those that are related to the gross body (such as the desire for the gratification of its sense organs) or those that are related to the external world and its material sense objects (such as the desire to obtain them, hoard them, enjoy them and be attached to them). Let your mind become neutral and non-involved in any of the Vasanas and their attendant ills; let your mind think that it does not do anything, that it is a non-doer of deeds that are done in the wake of instigation made by the Vasanas (30).

31. The Vasanas inherent in the creature are like a dark cloud that envelops the Chitta (mind, the intellect, the sub-conscious) from all sides. They are the cause of all the problems and miseries of the creature; they give the creature all sorts of torments and troubles. Hence, a wise man should endeavour to decimate or at least weaken the Vasanas gradually with the final aim of eliminating them (31).

32. A wise man should intelligently and diligently abandon the notion of existence of anything worthwhile in this material mundane world from the radar of his mind and sub-conscious. He must train it to assume the virtues of the sky. Just like the sky has no boundaries and limitations, his mind too has no fetters or limitations. A person who remains engrossed in contemplating upon his inner-self lives like the sky. He too attains such glorious virtues as those possessed by the sky.

[All living beings have a natural tendency of seeking happiness and peace. Since he is immediately in contact with the world as soon as he is born, he has the world as his constant companion since birth, and finds solace and comfort in its company. This world is visible and tangible, and at least it fulfills his immediate needs for all material things that provide comfort, happiness and enjoyments. The creature is so overwhelmed with this pampering that he forgets about his long-term spiritual welfare just like a spoilt child goes after sweets unconcerned about what this indulgence would do to his long-term health. How would the child know that it is wrong to eat too many sweets, that they would damage his teeth, cause such chronic diseases as diabetes, and ruin his liver and other internal organs, if someone does not tell him?

The same thing applies to the creature. He has seen and experienced the charms of this world since his birth, and no one had told him that it is illusionary and transient, that it would trap him in its web like a spider catches an insect and then never lets it free till it has sucked the life out of its prey. The creature is not aware of the fact that pursuing this world would lead him to nowhere just like running behind the mirage would not lead to water in a hot desert. In this scenario, neither the creature nor his mind is at fault because no one had enlightened them about the reality. This responsibility falls upon the scriptures and the wise teacher (the Guru) who make the spiritual aspirant aware of the reality of the situation, and then it is the responsibility of the individual to make an intelligent and well thought out decision for his own sake. This is exactly what is meant by saying that the creature should train his mind. The mind is simply an instrument to carry out the instructions of the 'Master', who in this particular case is the Atma because it is the 'true self and identity' of the individual creature. Thus, when the wizened, self-realised and enlightened creature becomes aware of the falsehood of the world and its temporary nature, when he logically deduces that anything that is false and temporary cannot give happiness and peace that is of a permanent nature, he instructs the mind to turn away from the world and search for it elsewhere. It is then that the mind is said to be turned away from the various 'Vasanas' related to the body and the world. The mind is an intelligent entity; it is like the super-computer that works out an answer instantly once the instructions are fed into it. So the mind immediately changes track and concentrates upon the inner-self and begins to dwell in the 'subtle world of the consciousness'. It is here that it finds the source of eternity and peace, it is here that it finds true happiness and bliss which are unaffected by the turmoil of the external world which is transient and deluding. Once someone has tasted the real nectar he would obviously not want to have anything to do with fakes. Thus, once the aspirant

tastes the nectar of peace, happiness, bliss and contentedness that comes by overcoming the various Vasanas related to this world and the body, he would naturally shun them without any further prodding, counseling or cajoling.

A wise person must teach his mind not to register anything in this material world by intelligently convincing it of its futility and falsehood. When the mind is politely educated of the reality and truth, it would abandon the material world out of its own free will because it would not find any substance in it. The mind would realise that it would gain nothing by pursuing this world, and hence it is a waste of time and energy for it to do so. The mind is not a foolish entity, rather it is the only entity in the otherwise inane body that can think, research, analyse, discriminate, deduce and decide. So when it is intelligently convinced, it would see the 'truth' without much cajoling or use of coercion. Once the mind is convinced, the rest becomes easy because it is the mind that is the power-house and the driving force in the body that actually holds the strings of what a creature does and what he does not do.

When the mind becomes neutral, then it would be like the 'sky' because the sky harbours so many things that are lodged in its bowls—such as for instance the numerous pollutants, the dust particles, the gases, the uncountable heavenly bodies as stars, planets, comets, cosmic debris, asteroids, galaxies etc.—but it still remains unaffected and inherently untainted and clean. What is seen as the pollution of the sky is only of a physical dimension with a limited extent, for the element that is called the sky is very subtle, vast and all-pervading by nature so much so that the pollution that is seen in its very limited and miniscule area is not even like a small pebble or a minute speck on its vast and infinite shore. A neutral mind becomes as quiet and calm as the deep recesses of the sky. It accepts everything without getting attached to any of them, and the world keeps on rising and ebbing in its front but it remains indifferent to and undeterred by it. Nothing can affect the creature if the mind is under control. A freed mind has boundless potentials and powers; it can achieve stupendous results not otherwise possible for the creature. Since the mind is the driving force that governs all thoughts, behaviours, actions and deeds of all living beings, a person with a tamed and trained mind can achieve great mystical powers and tremendous spiritual achievements, and indeed become super-natural by rising above the mundane and acquiring grand virtues and eclectic qualities of an infinite dimension. His majesty and powers, his good name and fame spread far and wide; he acquires such spiritual powers and authority that he virtually becomes as vast and infinite as the sky. He develops a holistic view of this creation and the world around him; he no longer remains selfish but becomes one who has a broad and all-inclusive approach to this life. No amount of worldly temptations and coercion of the sense organs of the body would ever deflect him from his chosen path or disturb his poise and state of neutrality. No corruptions of the surrounding world would ever affect him and taint his inner self just like the lotus flower whose petals are never moistened by the dirty water of the pond in which it grows. Hence, a controlled and trained mind is compared to the vast, fathomless and incorruptible sky.

A person who has experienced the pure consciousness attains such glories, such magnificence, such majesty, such mystical powers, such incorruptibility, and such eclectic spiritual virtues that they are compared to the sky in their vastness, their depth, their insight, their reach and their all-inclusive nature as well as their incorruptibility and immaculacy.] (32).

33. Just like a shrewd trader having no special affinity or attraction or preference for any particular place or spot where he would like to stay as his primary focus is on his

business and its profits, and he would not think twice before abandoning the first place and moving to some other place should the latter give him better chances of doing enhanced business and earn more returns, a wise and enlightened spiritual aspirant also has no special preferences for either a forest or a village. For him, both are alike as long as they serve his purpose of achieving his spiritual goals. He has no preference or abhorrence for anything (because, for one, he has inculcated the noble virtues of having neutrality, indifference, equanimity and fortitude, and second, his chief aim is obtaining liberation and deliverance for his soul, and therefore any situation that helps him achieve it is dear to him, and any situation that does not is shunned by him).

[A businessman is focused on his business rather than on the comforts or pleasures that a particular place provides. He leaves the comfort of his home and the known environs of his town to which he is used to since birth to venture out into unknown countries and live in hostile circumstances if that helps him to make a profit. No matter how charming a place is, if it does not allow him easy business and profit opportunity, he would chuck it without the least regret or compunction, and instead opt for a place that is favourable and conducive for his business interests.

Similarly, if a wise man finds that the forest is too uncomfortable for him in doing meditation and contemplation, if he finds that he is unable to cope with the harsh conditions of the forest no matter how much they are extolled by the scriptures for their utility in one's spiritual life, the wise man would not hesitate to discard the idea of living in a forest. He can even live outside a village (or for that matter any inhabited area) in an abandoned or lonely place (such as a mountain or hill side, a cave, the banks of a river, a remote shrine outside a small hamlet, etc.) wherever he finds peace and an environment that is conducive to his spiritual pursuit.

This verse assumes tremendous practical importance. It shows that ancient sages and seers were not dogmatic, rigid, bigots or fanatical in their views. The stress is on internal peace and control of the mind in order to attain one's spiritual objectives; the thrust is on flexibility of approach, on self awakening and accessing the truth. What is the use of going to the forest if the body is so uncomfortable and restless that in spite of the best of efforts of the man his mind cannot find its much sought-after peace for which the man had gone to the forest in the first place, and how can an agitated, restless and distracted mind that remains in a state of flux can ever be conducive to one's obtaining his cherished goal in life? He would rather be better off in the vicinity of a village or even in his home if that gives him mental assurance of stability and peace. Refer verse no. 34 below which is very explicit in this view.

In practice, this is the reason why Sanyasis, or renunciate friars, monks and mendicants, are expected to beg for food on a daily basis from households for their sustenance. Obviously they would need to live near inhabited areas where they can go begging for food from households—no household is found in a forest! If finding food was the only criterion, they could ask some rich man such as a king to make all arrangements for them in the forest itself without the need for going to the 'household' for food. This stark truth stares in one's face if he is wise enough to read the scriptures with an open mind in order to understand their intentions and purpose rather than becoming too literal and bookish in his approach in studying them.] (33).

34. A self-realised man, being focused on his inner-self and lost in the thoughts of the pure conscious Atma, treats everything and all situations in life equally, with great equanimity, and without distinguishing between them.

He may be sleeping, awake, walking or reading, but he always remains focused on the Atma; he remains steady in contemplating and meditating upon the Atma irrespective of the physical plane in which his gross body lives.

Such an enlightened and spiritually attained man may live in a forest or a village or a big town—all are equal for him.

[This verse compliments the observations made in verse no. 33 above. The idea is that when the mind is focused on the inner-self and is turned away from the outer world—i.e. when the mind is controlled as envisaged in verse nos. 20-22 above—the aspirant is not at all influenced by his surroundings. This is because it is the mind that actually makes the Atma aware of the various conditions prevailing in the outer world, thereby being the cause of all restlessness that the Atma is subjected to. Once the mind and the sub-conscious are controlled and properly trained, the Atma—i.e. the ‘aspirant himself’ in the truthful sense—is rest assured of peace and tranquility, as well as their attendant bliss and happiness.] (34).

35. A person who is peaceful, tranquil, serene and calm in his inner-self would treat the outside world in a similar manner.

[This is like looking at the world through a glass window. The sights seen would assume the colour of the glass. If the glass is red tinted for instance, the world outside would also be red-hued. This fact has been beautifully brought out in Dhyana Bindu Upanishad, Krishna Yajur Veda, verse no. 93/1-93/15, and in Naradparivrajak Upanishad of Atharva Veda, Canto 6, verse no. 3.

Now therefore, if the inner-self is pure and untainted, if it is calm and peaceful, the Atma—which incidentally is the ‘observer’ living inside the dwelling known as the body of the creature—would see or observe the outside world as being calm and peaceful. On the contrary, if the inner-self is restless and agitated, the outer world too appears to be restless and agitated in equal proportion for the creature. In other words, a man sees the world like he himself is. Hence the importance is on attaining inner peace and quietude instead of seeking it outside because the ‘outside’ is a world that is constantly on the boil and ever simmering like the surface of the hot sand in a desert when mirage makes its appearance.]

Similarly, a man whose inner-self is burning with ‘Trishna’ (greed, rapacity, yearnings and wants) would find the world too tormenting and agitating for his soul. He would find only miseries and sorrows in the world (because his greed and yearning never ends, the more he gets the more he wants, and like a man running behind the illusive water seen in a mirage in the hot desert such a man too does not find peace anywhere in the world, but is rather scorched by the various sorrows and miseries that accompany shortages, unfulfilled desires, lack of opportunities and so many other things or situations that lead to dismay and frustration that seem to engulf him from all sides, drowning him and suffocating him in their wake).

[An internally contented man would be happy with whatever he has in this world and would thank the Lord for it, and an internally unsatisfied man may become the Emperor of the whole earth but would still want more of it, and remain dissatisfied and greedy throughout his life. Internally he is being ‘burnt’ by numerous aspirations, yearnings, desires and wants, and externally this world ‘burns’ him in failed ambitions leading to a chain of frustrations, dismay, distrust, strife, jealousy, ill-will, enmity, animosity and their accompanying sorrows, miseries and pains.] (35).

36. For a self-realised and enlightened man, the subtle and sublime entity that lives in his inner-self is also the one that lives uniformly everywhere else in this creation. This eclectic entity is the 'Atma' or the pure consciousness.

[In other words, an enlightened man sees the Atma, the pure consciousness, as the only entity that matters in this creation; he sees this Atma not only as his own 'self' but also as the reality in the rest of the creation. When he sees other creatures, he sees not their gross bodies but the Atma in that form; hence he would treat all the creatures equally because the Atma is a uniform and universal entity, being the all-pervading consciousness. This observation is the essence of the philosophy of Advaitya Vedanta.] (36).

37. A man who is wise, self-realised and enlightened, a man who has experienced the 'truth', i.e. who has understood that the body is not his 'true self' but it is merely the habitat of the Atma which is his 'true self', and that all the deeds are done by the external gross organs of the equally gross body and not by the Atma—well, such a man is full of equanimity and dispassion, he is not bothered about the deeds or their consequences.

Such a man uses all the organs of the body to do all the deeds required to be done by him in this world according to destiny or the will of the Lord, but still remains totally detached and disassociated from them. This is because he knows that 'he' (i.e. his true 'self' known as the Atma) is not doing something, but it is the body that is doing anything. He therefore neither feels happy or exhilarated at being successful in doing the deeds or being rewarded for them, nor does he feel dejected or depressed or sorrowful or dismayed at not being able to do them as expected or even failure to do them at all if the circumstances do not permit. [Since he is of the view that 'he' is not doing anything, it is natural that he is not entitled to the rewards or punishments for the deeds done.]

In this way he is able to access exemplary peace and stability of mind and sub-conscious. He is said to be a person having a 'Samaahit Chitta'—i.e. the mind, intellect and the sub-conscious that accepts all without any distinction. That is, he accepts sorrows and joys with equal pleasure; he treats successes and failures with equal detachment. Nothing ruffles him; nothing disturbs his tranquility and stability. He has thus attained an exemplarily equanimous state of being (37).

38. Such a wise and self-realised man who is enlightened about the Atma, the pure conscious 'self', treats or sees everything, everyone and every situation with exemplary equanimity and uniformity of mind. He sees no distinction between any two given entities, and sees them all in his own likeness.

[This is because he does not see the external features of the gross body, but rather sees the Atma residing inside it. This Atma is a universal entity and the all-pervading consciousness; the Atma is immutable, unchanging and indivisible. Hence, the Atma that resides in his own bosom as his soul or true self is the same as the one that resides in the creature standing in his front. Therefore, though for practical reasons and exigencies of this life he may be required to maintain decorum, observe social norms and conform to formal hierarchy of society, internally he would have the same love and respect for the other person as he would have for himself. This is the secret behind the second of the ten commandments of Jesus Christ—'Love thy neighbour as you would love yourself'—the Holy Bible, Gospel of St. Mark, 12/31.

As for treating all situations alike, it has already been said in verse no. 37 that a wise and enlightened man remains unattached to his deeds, and therefore unaffected

with their results, good or bad. This helps him in being steady and unmoved under all circumstances.

And as far as material things are concerned, he has already understood that whatever is seen in this world is transient and illusionary because the world in which they exist is itself transient and illusionary. It is because the world is a creation of the mind; it is like the dream seen when the man sleeps, the only difference being that while his gross organs are inactive in the dream they are active while he is awake. But in both the cases the world is the creation of the mind—albeit one world exists at the gross physical level that is visible, and the other exists at the subtle level that is not visible, but this does not alter the fact that it is a product of the creative ability of the imaginative mind. Anything that is ‘imagined’ can not be true, real, stable and sustainable.]

Hence, he sees wealth belonging to others as being useless clods of clay or pieces of useless earth. This view is natural to him; it is not due to some fear or compulsions.

[That is, when a wise and enlightened man says that wealth belonging to others are as worthless for him as a ball of clay, he is not saying it because he cannot get hold of this wealth as he is not powerful enough to snatch it from the other person if given a chance, but because he actually means it sincerely. Deceit and conceit are not the playground for the Atma.] (38).

39. For a wise, enlightened and self-realised man, it does not matter whether death comes now or after a long time. Such a man is never tainted or influenced by any of the faults and shortcomings pertaining to this world; he remains as pure, untainted and un-corrupted as a piece of pure gold that might have fallen in a patch of muck and slush on the earth, or may be smeared with slime.

[It is very important to understand this verse in the context of what has been said immediately before in the previous verses. The piece of gold is not at all affected by anything in which it falls or is covered with—for it can be easily cleaned by washing off the impurity with clean water and scrubbing. The slush or the slime can never ever affect the inherent internal purity of gold. Similarly, a man who is wise, self-realised and enlightened lives in the corrupt surroundings of this world, he even does deeds in this world, but internally he is pristine pure, holy, and unaffected by anything. He is like the piece of gold cited in this verse. The ‘gold’ is a metaphor used for a priceless entity with immaculate purity and tremendous intrinsic value that never fades or erodes.

Now, let us examine how this applies to the man who treats the wealth of others as mud. If a man knows for certain that he would die the next day, then it is natural that he develops total dispassion for anything of this world—he would not want wealth and pleasures; he would not like to do anything at all, what to say of his hoping for acquiring material wealth and expecting long-term financial rewards for all his efforts. But suppose a man is young and healthy, belongs to a rich family, has an excellent job, and is well educated—will he think in the same vein? The answer is ‘very rarely, if at all remotely yes’. The latter type of man never imagines even in his wild dreams that all his wealth would vanish the next day when he dies, or that this wealth would not help him conquer death.

So, the man who is being cited here in this verse is not the one who has developed total renunciation and dispassion out of certain existential compulsions, or due to circumstances forcing him to pretend as being dispassionate and detached in order to overcome his shame or frustration because success eludes him, or because he

has not been able to taste the fruit of his labour, and therefore he hides behind pretensions of being a wise man who does not want wealth as he had developed renunciation. Instead, the man who is being referred to here is one who develops this eclectic and spiritually liberating view sincerely and honestly after careful examination and analyses of all available data to arrive at the 'truth' of existence, the 'truth' of the world and his own 'self' which the Upanishad prefers to call the 'Tattwa'. And this 'Tattwa' is that the real thing that matters for the man is the pure consciousness called the Atma which is eternal and blissful, that this world is deluding, illusive, artificial and entrapping like the mirage seen in the desert, that it is transient and illusionary, that to pursue it is like following the setting sun in the western horizon in order to reach it before it sets because the more a man moves in that direction the more the horizon as well as the sun move away or recede from him, and that to be freed from this quagmire of fruitless running around in pursuit of some illusive objective one needs to free one's self from the entire spectrum of delusions pertaining to the world vis-à-vis his own 'self' in a comprehensive manner.] (39).

40. Contemplate and ponder deeply on the questions 'who am I', 'how or what is all this (that I see around me)', and 'how is birth and death caused'.

When you (i.e. Nidagh) begin to ask these questions, it is then that you would be inspired to search out and find the answer. Then you will be able to find the great spiritual fruit in the form of the universal Truth.

[That is, when you find the answer to these questions by searching for them yourself, you would be more convinced by what you discover as opposed to the truth being told to you by someone else. This is because in the latter case you may doubt its authenticity and may feel that it is being imposed upon you or advised to you by some vested interests. But when you search it out yourself you would be going through layers after layers of facts and half-truths, you would be able to see how things have come into being, and you will be having first-hand knowledge of so many other things on the way to the Truth. It would be an eye-opening journey of spiritual discovery for you, and the knowledge that you gather en-route to the ultimate Truth would be like an additional bonus for you, enlightening you about so many practical things that you may not know if you do not make the right effort of undertaking the research yourself. A hungry man who is hungrily searching for food relishes it more than a man who is served ready-made food on the dining table.

So do it yourself instead of being spoon-fed! A teacher can show you the correct path, he can teach you how to reach your destination, but the walking has to be done by you. Refer verse no. 18 in this context.] (40).

41. When the mind is trained to have this eclectic wisdom and enlightened thoughts (as narrated in the foregoing verses), it abandons its present habits and natural tendencies, and instead evolves into a higher state of existence which is naturally sublime and blissful, which would naturally help you to realise your true self and true spiritual potentials (41).

42. When you have sufficiently trained your mind, it would not get mired in any sort of worldly Vrittis (natural tendencies of the mind that impel it towards the material world of sense objects) and its attendant problems. Such a mind and sub-conscious are freed from being tormented by any kind of sorrows, miseries, pains and other problems related to this world.

Just like a man cannot be drowned in the water collected in the shallow depression made on the ground by the hoof of a cow, a wise and enlightened man whose mind is free from Vrittis would not at all be affected by the world and its natural miseries, sorrows and torments. He never gets excited or unnerved by his circumstances; he maintains his cool under all conditions; no adversity is strong enough to disturb his calmness of mind and demeanours (42).

43. Even a Brahmin (i.e. a wise and learned man) who is narrow-minded and short-sighted, who is miserly in his views and thoughts in relation to this world, can get trapped in it and tainted by its faults just like a short-sighted man putting his legs in the dirty water that has collected in the shallow depression made on the ground by the hoof of the cow and getting smeared by the slush in the process.

Just like a mosquito remains trapped and rolling in the filthy water collected in the hollow made on the ground by a cow's hoof, an ignorant man too remains trapped in the world with its miseries and sorrows.

[A Brahmin is usually regarded as a wise and learned person who has studied the scriptures and knows their meaning. But if unfortunately his knowledge is limited to the literal learning of the verses of the scriptures by heart as a means of livelihood without understanding the philosophy behind the teaching of the scriptures, without implementing them in his own life but teaching them to others just to get honour and wealth—then such a Brahmin would fall in the same trap in which an ignorant man falls. A Brahmin who, inspite of having had the privilege of studying the scriptures and being taught of the secrets by expert and experienced teachers, still remains engrossed in the world and attached to its material sense objects inspite of learning that they are inherently entangling and the cause of all miseries and sorrows for the creature, who prefers transient enjoyments and pleasures of the world by sacrificing his long-term spiritual welfare, who forgets that the cause of remaining trapped in the continuous cycle of birth and death is getting involved in this entrapping world, who is tempted by the charms of the world inspite of having the knowledge that this world is deluding and illusionary like the mirage seen in the desert, who does not understand the real meaning of the terms 'non-duality' and 'truth' vis-à-vis the Atma and creation as envisaged by the scriptures, and teaches or preaches others about Dharma and Mukti but never attempts to follow their principles himself—then indeed such a Brahmin would drown in the vast ocean-like world just like a short-sighted man is unable to see the dirty puddle in front of him while walking, and steps right into it, splashing filth all around and dirtying his clothes and body. Here, the term 'filth and dirt' are metaphors for the numerous spiritual faults and corruptions that impregnate the world and are part of it, and the 'dirty water collected in the shallow hollow made on the ground by the cow's hoof' refers to the world of material sense objects. The analogy with the hollow made by a cow's hoof is employed to stress the point that to overcome the world and its temptations is not at all an insurmountable task if only a man has determination and will to do so; there are easily crossable if one is just cautious enough to step aside or just step across it—i.e. cautious and wise enough to avoid it and shun it. This can be achieved by simply controlling the mind, the intellect and the sub-conscious.

Hence, a Brahmin or any other man is considered short-sighted and narrow-minded in the context of this verse if he allows himself to stoop low and his mind to remain hooked to even the most inconsequential of things in this world without bothering for the long-term negative effect it is going to have on his all-round spiritual good. Once he allows himself to be involved with anything related to the world, it is

impossible to remain clean just like it is impossible to remain clean if one steps in the puddle of dirty water.

Such a man would remain perpetually shackled to this world, birth after birth, with no liberation and deliverance in sight. He indeed is 'short-sighted'; he indeed is ill-witted; he indeed is an ignorant fool.] (43).

44. Oh exalted sage (Nidagh)! When one voluntarily, cheerfully and out of his own free will leaves a thing, he would not be attracted to it again or harbour any surreptitious desires for it. It is only then that he can think or look beyond his erstwhile possession.

In other words, when one voluntarily and happily leaves this world and snaps his association with it, then he would not be tempted by the world any longer.

[This is opposed to forcefully having to disown the world and its charms, for then the inner-self would be constantly longing for the world, the sub-conscious would be permanently hooked to the world, and instead of getting peace, the result would be constant mental agony and restlessness caused by endless desires and wishes, by endless passions and lust, by endless greeds and yearnings. It would kill the very purpose of leaving the world in the first place. In other words, renunciation, dispassion and detachment should be natural and borne out of knowledge of the 'truth' based on wisdom, erudition, analytical thinking accompanied by proper and judicious decision making-process. It should not be done just because the scriptures say so, or some teacher has said so—for then the aspirant is bound to fail in his attempts to find real peace and freedom from the worldly miseries and shackles. On the contrary, they would lead to stronger shackles and greater miseries because of suppressed desires and unfulfilled longings.

It is when the mind is fully educated about the given subject or the circumstance it has to deal with, when it is given freedom to think, research, analyse and deduce, and when it becomes dispassionate and non-involved in the result of the decision that it is about to make that it can think rationally and in an un-biased way. So, when the mind is told about the truth of this world and the causes of all the miseries that the creature faces, when it is properly educated and trained to make judicious decisions, when it remains detached from the world, when it recognizes its importance and responsibilities vis-à-vis the future of the creature—it is only then would a man sincerely and honestly renounce the world and free himself of all its associated problems.

When this comes to happen, when a man loses his short-sightedness and miserly views, when his mind stops being selfish in the sense that it stops gravitating towards the material pleasures and comforts of the world, which however are transient and impermanent, in order to satisfy its natural urges, tendencies and passions, and instead prefers to think of the long term welfare of the creature, it is only then that the creature can get rid of the material world that is deluding in the first place, it is only then that he can see the world that transcends this gross material world, and it is only then that he moves in a spiritually uplifting direction and finds the spiritual world where there is no misery and torment, where there is bliss and happiness of the eternal kind.

Therefore, it is only when one leaves the gross world that he can see the subtle and the sublime world that lies beyond it.] (44).

45. Until the time everything gross and inconsequential are not discarded, it is not possible to have the knowledge or acquaintance of the Atma, the pure sublime Consciousness and the Absolute Truth of existence.

When all things gross and inconsequential are eliminated, the only sublime and quintessential entity that is left behind is the Atma (because it is the only ubiquitous and quintessential 'truth' that remains after sieving of the falsehood).

[It is like the process of elimination to arrive at the truth. For instance, when one has to find the reality in a given situation, he would sieve through all available information and discard what is non-relevant and obviously not the reality. It is only then that he would finally be left with the information that actually relates to the reality and which is of any value for him. Similarly, when a wise man sieves through all available data collected by his sub-conscious mind and intelligently analyses them he would be able to discard the falsehood and pick up the truth. He discovers to his amazement that the gross world is not the 'truth' he is seeking, but it lies somewhere else. This is the subtle world of the consciousness, and it is called the Atma. It is the 'truth' that he was seeking. When all falsehoods are eliminated, what remains is obviously the 'truth'; when all grossness are removed, what remains is the subtlety that is devoid of all grossness.] (45).

46. In order to have a divine vision of the Atma (the pure consciousness and the true 'self') it is imperative that the aspirant abandons everything else.

[In other words, one has to be focused on his spiritual goal in life in order to actually attain it. If one wishes to realise the truth of the Atma, he has to discard all non-truths.]

Hence, leave everything from a distance (i.e. do not even think of things that would act as impediments in your spiritual pursuit) because then only the truth known as the Atma would be left.

[When a spiritual aspirant distances himself from everything gross and non-truth, the only thing that survives is the subtle truth, and it is the pure consciousness known as the Atma. Refer verse no. 44-45 above.] (46).

47. Whatever that is seen in this gross world is nothing but an imagination of the mind and its sub-conscious. In fact, there is no pith and substance in it, there is no truth in it. It is merely a vibration of the imaginative mind which oscillates between this and that.

[In other words, this world is just like the world of dreams which is a creation of the sub-conscious but has no real existence. The only difference between this visible world and the one that is seen in one's dreams is that while the former is perceived when the gross organs of perception in the body are activated by means of vibrations sent by the active mind, the latter is created when the role of the active mind is taken over by the sub-conscious when it generates vibrations to create an imaginary world of dreams. In the dreams, the sense organs of the gross body have no role to play. The dreams are basically the creations of the imaginative mind which has the stupendous and amazing ability to 'create' things that have no real existence, and this is why it is called the 'creative mind'. Should the mind decide to take rest, the 'creation' would automatically come to a naught.

The oscillation of the mind refers to the fact that while one world exists when the mind is active, the other world exists when the sub-conscious is active. While the former is called the world during the waking state of consciousness or the Jagrat world, the latter is called the world of dreams or the Swapna world. The creature

oscillates between these two worlds—it either remains awake or asleep. If he is awake, he would go to sleep after some time, and if he sleeps he would wake up again after some time. The living being spends his entire life swinging like a pendulum.

The Upanishad however exhorts him to move beyond and give rest to his mind so that he can see the world that is real and not an artificial creation of the mind, and this world is the world of the transcendental Consciousness, called the world of the truthful Atma. This world is not oscillating between any two states; it is stable and permanent, hence the ‘truth’, because ‘truth’ is always stable and permanent as opposed to falsehood that continues to change every other moment like the simmering mirage of the desert.] (47).

48. Oh Brahmin (i.e. the learned sage Nidagh)! Those who have a well-controlled and trained mind, those whose mind has stopped vacillating and remaining in a state of constant flux, those who have inculcated the noble virtues of equanimity and dispassion—such people are eternally contented and at peace with themselves. They are able to analyse things properly and make judicious decisions dispassionately because their mind is free from any kind of bias and prejudice.

This state of existence of the mind has been defined by wise men as ‘Samadhi’ that is also known as ‘Para Pragma’—the supreme and transcendental state of existence when the mind is not affected by anything of the world, when the aspirant remains completely unmoved by his surroundings, when he is absolutely lost in the subtle and sublime world of the Atma which is pure consciousness and the spiritual ‘truth’ of creation as opposed to the gross world of the sense organs or the one created by the mind, and when he has attained the supreme knowledge of the Atma that is not only ‘truthful’ but also beyond the grossness of the world created by the mind.

It is the state of ‘Samadhi’ or trance-like existence when the mind is completely obliterated and only consciousness exists in its pristine pure state; it is the supreme transcendental state of existence and awareness that is known as ‘Para Pragma’ (48).

49. In this state of ‘Samadhi’ that a seeker has reached on obtaining ‘Para Pragma’ (i.e. when one has become totally indifferent to the artificial world by becoming self-realised and experiencing the presence of the pure consciousness in his own inner-self), there is no trace of any kind of negativity—such as for instance, there are no wants, there are no confusions and doubts and their attendant perplexities and consternations, there is no trace of pride, ego and arrogance. [Rather, it is the state of utmost contentedness, fulfillment and ecstasy; it is a state of high degree of equanimity and broad vision.]

In fact, this type of Samadhi (i.e. the Samadhi marked by ‘Para Pragma’) is more stable than even the mountain known as Mt. Meru¹.

[In other words, the transcendental state of existence called Samadhi that is obtained after one has attained knowledge of the ‘truth’ of the Atma that comes with self-realisation, and which automatically excludes his involvement with the gross world, is a very stable state of existence so much so that no temptations of the world are strong enough to disturb this state and its attendant peace and tranquility, its accompanying bliss and ecstasy.] (49).

[Note—¹Mt. Meru—The Meru mountain is also called ‘Sumeru’—the ‘golden one’. The word ‘Meru’ literally means one that reflects light like a mirror or crystal. It is described in the Purans as the fabulous mythological mountain that forms the axis of the whole world. It is much like mount Olympus of Hindu mythology. All the planets

revolve around it. It is compared to the cup or the seed-vessel of the lotus, the leaves of which symbolize the different Dvipas or continents and islands. The holy river Ganges from the heaven on its summit, and from there it divides into four streams and flows down to the rest of the world. The four Lokpals or the custodians of the four directions of the celestial compass occupy the corresponding face of this mountain which is said to be made of gold and glittering gems.

Its height is said to be one lakh Yojans which is equivalent to roughly 8 lakh miles. [1 lakh = 1,00,000 units; 1 Yojan = approx. 8 miles.]

Out of this huge size, 16,000 Yojans (8 x 16,000 miles) is under the ground, and 84,000 Yojans (8 x 84,000 miles) above the ground. On its top there is a flat plateau of approx. 32,000 Yojans (8 x 32,000 miles). It is here that Brahma the creator and his mind-born sons such as Daksha and the Saptarishis live. [refer Mahabharat, Vanaparva, 162; Bhagvata, 5/16.]

It is situated in the mystical Jambudvipa (the huge island by the name of 'Jambu'), and Bharatvarsha (India) is said to be to its south. The abode of Lord Shiva known as Mt. Kailash, which is presently located in the northern reaches of the Himalayan mountain range, is said to be the same Mt. Meru.

The creator Brahma resides on its summit, and it is the meeting place of Gods, semi-Gods such as Gandharvas, and exalted sages and seers who have attained Brahm-hood.]

50. Oh Brahmin (i.e. Nidagh)! The state of the mind and the sub-conscious when they are fulfilled and contented in every respect is called 'Samadhi'. [Because in this exalted state, the man would want and seek nothing; he gets such tremendous amount of bliss and peacefulness that he would not bother to seek a lesser amount of these grand virtues by turning towards the world and its material sense objects seeking bliss and happiness.]

This unparallel Samadhi is devoid of all things that need to be discarded, or about which one may have to think twice as to their utility, need and importance as far as the long term spiritual welfare of the aspirant is concerned. It is a stable state of the mind and sub-conscious when all his desires to obtain this and that have been overcome and eliminated for good (50).

51. This highest form of Samadhi is said to have its only origin in the enlightenment and true wisdom that the Chitta (the sub-conscious mind) has obtained. In other words, the true form of Samadhi is obtained when the mind is illuminated (taught; made aware of; wizened) about the 'truth', and thereby becomes highly enlightened.

Those who are well-versed in the eclectic philosophy of the Vedas regard this as the Turiya state of existence (which is the transcendental state). [Hence, Samadhi and Turiya are equivalent to each other.] (51).

52. The Sushupta state (or the 'deep sleep state) of consciousness is on the threshold of the Turiya state; it precedes the Turiya state and is very close to it.

When the Mana (mind) and Ahankar (ego, pride) dissolve (i.e. when both the mind that harbours ego, and the ego that influences the working of the mind, are made ineffective, are neutralized) it is then that the aspirant is said to have reached the Sushupta state.

[The Sushupta state of existence is the deep sleep state that comes after the Swapna or the dreaming state of consciousness. It is the third state of existence of consciousness. In this state the mind and the sub-conscious are both defunct. The difference between the Sushupta and Turiya states is that the creature reverts to the Swapna state from the Sushupta state, but when he reaches the Turiya state this

reversal does not happen. That is why the Turiya state is likened to Samadhi while the Sushupta state isn't.] (52).

53. In the higher states of realisation when the mind is able to control its self voluntarily (i.e. when all its Vasanas and Vrittis are done away with automatically and without the least effort), it is then that the divine and sublime form of the supreme Consciousness, called the 'Parmatma' or 'Parmaeshwar', makes itself evident to the spiritual aspirant. This vision bestows supreme bliss and beatitude upon him. [That is, the aspirant becomes Brahm-realised when he reaches the higher echelons of self-realisation.]

It is only when the Mana (mind) is fully controlled and diverted towards realizing one's goals in life (which in the present case is his quest for the spiritual 'Truth' and attainment of 'Mukti' or liberation and deliverance for his soul) that one can hope to achieve success in reaching it.

[In other words, since the mind is the only tool available to a man to achieve success in any of his endeavours, so when the mind is under his control and when it sees the futility of pursuing this world would it voluntarily help the man to obtain success in his spiritual pursuits and realise the truth of the Atma, the pure consciousness. A distracted mind would only create obstacles instead of helping the aspirant in any way.] (53).

54. When the mind is controlled and the aspirant has tasted the divine nectar of supreme bliss obtained upon his having the vision of the 'Parameshwar' (i.e. upon obtaining Brahm-realisation), all his Vasanas related to the world and its material sense objects (i.e. all sorts of worldly passions, lust and yearnings for seeking bliss and happiness in the gross material things of the world) are naturally and automatically done away with.

When this happens, the sub-conscious becomes absolutely clean like pure crystal.

[Whatever sensory perceptions the mind receives from the external world are stored in the sub-conscious which acts as a storage and retrieval system for the mind and the intellect. When the mind and the intellect have to make some analysis and arrive at a decision, they draw upon the information stored in the sub-conscious part of the mind which therefore directly affects the conclusion and the decision taken by the creature. Hence, when the mind loses interest in the material world or is turned away from it, the 'Chitta' (sub-conscious and memory) of the creature would be like a clean slate.]

It is in this eclectic state of existence that the 'self', i.e. the pure consciousness that is self-illuminated, begins to reflect in the Chitta. In other words, the mind and the sub-conscious begin to experience the presence of the pure consciousness inside the inner-self of the aspirant once all interference from the Vasanas originating in the outside world are removed. The mind and the sub-conscious begin to shine with the light emanating from the Consciousness that is beyond description. [As long as the mind and its various components are turned towards the world, being driven by the creature's natural Vasanas and Vrittis, all the taints and negativities so characteristic of this material world are reflected in the mind just like a mirror that reflects the object towards which it is turned. Now, if the same mirror is turned towards a lighted candle or a torch it obviously would reflect their light. Similarly, when the mind is turned away from the darkness of the deluding world and turned towards the light emanating from the pure consciousness residing inside the inner self of the spiritual

aspirant in the form of his 'Atma', it is obvious that the mind would reflect the Atma's divinity, its glory and its eclectic qualities.] (54).

55. Everything of any true spiritual worth in this creation is nothing but the Atma, the pure cosmic Consciousness. The latter is endless and eternal; it is steady, immutable, and constant; it has no taints or faults whatsoever. This Atma resides in the inner-self of the aspirant as his 'true self', and externally it is in the all-pervading form that is universal and uniform in this creation.

[The Atma is a sublime and subtle entity that has no grossness and physical form. Hence, it is not visible just like the atom of any given element is not physically visible. But the fact is that the element, such as for instance gold or iron, exist in their physical gross form that is both visible and can also be touched and felt only because of the atom—because it is the atom that has made the physical existence of the element, which in the present example are gold and iron, possible. The atom is the basis of existence of these elements; it is the 'atom' which gives these two elements their unique characteristics and place in the Periodic Table. Both gold and iron are visible, though their atoms themselves are not visible. Likewise, though the Atma is not visible in physical terms like the atom, the existence of the visible world and the life present in it is an ample and incontrovertible proof of the existence of the Atma just like the presence of gold and iron are proofs for the existence of their respective atoms. All things made of gold or iron would have the corresponding atoms pervading throughout the physical structure of all such things. Similarly, all living beings and the existence itself are uniformly pervaded by the Atma; the Atma permeates throughout them.]

The Atma is such a universal entity that besides being the 'self' of the individual creatures it is also the 'self' and the true identity of the Gods. Since it is the almighty entity that rules all living creatures as well as the exalted Gods, it is Brahm, the Supreme Being, himself. It is the 'God of all Gods'!

[The same consciousness is present in the inner-self of any given living being as well as in the form of any given God. Hence it follows that when the aspirant is able to realise that his 'true self' is the Atma and not the gross body, there would be no difference between him and any God. This is the fundamental reason why 'self-realised' ascetics are called 'Brahm-realised', are worshipped, adored and honoured just like one does for Gods, and are given the same honour and respect that one gives to the almighty God, the Supreme Being. The Atma is Consciousness, and Consciousness is known as Brahm. Hence, there is no difference between the Atma and Brahm.] (55).

56. The Chitta (mind and sub-conscious) that is not attached to anything or that does not long for anything is said to be pure, unbiased, detached and dispassionate. Hence, a Jiva (living being, a creature) who has developed such an eclectic state of his Chitta is said to be free from all the fetters that shackle others to this world inspite of his living in the same world in an ordinary way. [Refer Canto 2, verse no. 12.]

[This is obviously called 'Jivan Mukti'—literally meaning to be free from all bondages pertaining to this world while one is still alive and living a normal life in this world. Such a man does all things required of him, but never gets emotionally and mentally attached to either the deeds or their results. No temptations of the world are strong enough to break his resolve and to affect his dispassionate state of mind.]

On the other hand, if a man is internally hooked to the world and its material sense objects, if his Chitta is not free from its Vasanas and Vrittis (natural attractions

for the world and its charms, comforts and pleasures) then no matter how much effort he spends in doing Tapa (austerity and penance) for a long period of time to seek Mukti (liberation and deliverance), he would never find it; Mukti would always elude him (56).

57. A Jiva (a living being) whose inner-self is free from all attachments or entanglements with anything in this world, or who has no relations with anyone whosoever, is deemed to be a Jiva freed from all fetters and encumbrances. Such a Jiva has a cheerful disposition and pleasant manners.

[This is because he treats everyone and everything alike without having any bias for and against any of them; he does not favour anything or anyone, nor is he prejudiced against them. The result is that he has no enemy or friend, he has no fear from any quarters, and he treats every circumstance with stoic equality, remaining unruffled and poised under all situations. With exemplary calmness and poise comes an equally high measure of internal peace and tranquility that shows in his thoughts, behaviour and temperament. He would treat everyone with equal compassion and kindness, thereby endearing all around him. He would readily share his possession with others and would even give others something they need without having a second thought, thereby contributing to a positive and friendly environment of brotherhood and love around him where gracefulness, compassion, caring and sharing are the dominant norms. Obviously there would be no jealousy and ill-will that are generated when one is narrow-minded, selfish and greedy.]

He might be doing deeds as demanded by his destiny or circumstances, but internally he is so detached from them and their results that he does not think himself to be either the doer of deeds or the one who would be entitled to the fruits of the deeds done.

[Basically this means that he has realised that his ‘true self’ known as the Atma is not the one that is doing anything at all, rather it is the gross body which is merely a habitat of the Atma and not the person’s truthful identity. Since all the deeds are done by the body which is not the ‘self’, the question of the ‘self’ as being either the doer of deeds or the enjoyer or sufferer from the result of the deeds done does not arise. Since he has become dispassionate and detached from the ‘inside’, i.e. his inner-self and the sub-conscious mind is not involved in anything, it does not matter whether or not he does any deed ‘externally’ with his gross body. This is true Mukti—because if the inner-self and the sub-conscious are attached to the world then even if a creature does not do anything he still is deemed to be bonded to this world.] (57).

-----*****-----

Canto 2

1. Nidagh said, ‘What is called ‘Sanga’ (company; relationship; attachment; bond), and what is its form? What is described as bondage for those who have a gross body? What is said about their freedom and deliverance from this bondage? By what means those creatures who have a gross body can find liberation and deliverance from their bondages? What is the remedy for the various miseries and the countless torments which a Jiva, the living being, suffers from? Please explain these to me.’ (1).

2. The ‘Jiva¹’, the living entity that bears the gross body and lives in it, is distinct from the gross body in which it lives. But unfortunately a creature, the living

being, might, under the influence of delusions and ignorance, think them to be one and the same—i.e. he might erroneously believe that the gross body and the living entity that resides in it are the same.

This situation when the creature believes that the gross body is his ‘self’ is called ‘Sanga’—because the creature (the *Jiva*; the living being) has attached himself to the body, making it his identity and an inseparable part, because with this identification they are deemed to be one, and because the result is that the creature loses his independence in the form of the pure conscious Atma that is separate and distinct from the gross body. Instead, he allows himself to be an inseparable and integral part of the gross body. In short, the creature keeps constant company (‘Sanga’) of the gross body.

Since all relations and contacts with this world are limited to the gross physical body and are created by the body, since it is the body that lives in the world and keeps constant contact with it, such a creature (who thinks that his body is his ‘self’) is said to be in the company of the gross world; he is said to have a ‘Sanga’ (company; association) with the world² (2).

[Note—¹Here, the term ‘living entity’, or the *Jiva*, refers to the pure consciousness known as the Atma that lives inside the gross body of the creature. This Atma is the true ‘self’ of the concerned creature. The creature, on the other hand, is a composite of the Atma and the gross body in which this Atma lives. The term ‘Jiva’ literally means ‘a living being, an entity that has life’. The gross body, if taken independently, does not have any independent life of its own but it depends upon the conscious soul living inside it to give it its life. Similarly, the Atma needs a gross body to live in this gross world because for the simple reason that it (the Atma) is an ethereal entity that would not be able to live and do anything in this world on its own accord without the help and the medium of the body.

Hence, it is obvious that the term ‘Jiva’ actually refers to the pure consciousness that lives in the gross body of the creature. But in practice in this physical world we use the term ‘Jiva’ to mean a living body—i.e. we recognize as Jiva as an entity that has a body that is alive and active. But to make this gross body alive and active there is the absolute necessity for the presence of the sublime and subtle entity known as the Atma, the soul, the pure consciousness.

Therefore, the ‘Jiva’ has two connotations—(i) the ordinary Jiva is he who lives in the gross world and is an entity that is a composite or the sum total of both the gross and inane body as well as the pure consciousness known as the Atma. Each unit or component of this Jiva is as important as the other—the Atma would need a dwelling to live in this world, to acquire its own identity and make efforts to fulfill its desires, and the body would need some entity, some powerful driving force, to make it alive and do what it wants to do. Such a Jiva is said to be one who keeps a ‘Sanga’ or the one who has company of the body, or the one whose ‘true self’ known as the Atma keeps company or association with the body and the world. (ii) The other Jiva is the one who is highly enlightened and self-realised. He understands that his ‘self’ is distinct from the body, and that even if the body is discarded his Atma would continue to live in an ethereal form which, however, is the Atma true and natural form. Therefore, this Jiva is said to be without any company—i.e. he is ‘A-Sanga’, one who has no company or association.

²This is the sign that the Atma is bound to the body and the world—it is the Atma that is not free. In other words, if any entity keeps company with another entity, no matter how exalted or divine the first entity might be, it is bound to be affected by its company. To illustrate this phenomenon we can take the instance of the moon and the earth. The moon exerts its magnetic and gravitational pull on the earth though the earth is so much larger and full of vibrant life as compared to the barren moon. This influence of the moon results in high tides in the ocean, and, according to astrology,

even on the fate of the human being. If such lifeless bodies as the moon which is so far from the surface of the earth is said to have its influence on the man's behaviour and even on the water of the ocean, one can easily imagine the influence that the immediate world would have on the Atma—and that means the living being himself—because both are very close to each other and have a direct interaction.]

3. [Now, in this verse the Atma that is free is being discussed.]

A Jiva (the creature; the living being) who has developed the holistic view that whatever exists is nothing but the Atma in that form (i.e. the same pure consciousness is revealed in so many forms) would see no difference between what to accept and what to discard. Such a Jiva is indeed 'A-Sakta' or without company, without attachments, without bondages, without shackles and fetters, without any passions and yearnings, and without any dependence on anything. An exalted Jiva who has developed this eclectic state of mind which helps him to separate his 'self' from everything else related to the body is said to be 'A-Sakta'.

[That is, a sense of complete equanimity, evenness and neutrality dominates the thought process of a realised and wise man. Such a realised man would be dispassionate towards and unattached to anything in this world, for he would be treating everything in the same manner. For him a hut is as good as a mansion, dry bread would be as tasty as buttered one. He would not depend on any given set of circumstances to find peace and happiness; rather he would be eternally contented in whatever he gets or whatever situation he finds himself in. All this happens because it is the body that comes in direct contact with the world and its material sense objects that are the subject matter of corresponding sense organs of the body. For instance, sights of the world are the subject matter for the eye, and the latter derives pleasure at seeing pleasant sights and abhors unpleasant sights. The tongue likes delicious things to taste and shies away from bitter things. A man who thinks that his body is his 'self' would follow the directions where sense organs take him—for instance he would have an innate desire to taste delicious food, see beautiful sights, touch sensual things, hear pleasant sound, smell sweet aroma, etc. This means that such a man would be dependent upon the likes and dislikes of the body, linked to the world through this body and its attractions and aversions, and subsequently hooked to the world at the whims of the body.

On the other hand, a man who has distanced himself from the body would be independent of all its temptations, its prodding, its constant nagging and its provocations. He would be freed from or disinterested in whatever the body does or is inclined to do. He would not be linked to this world through the body, and hence would be independent from any dependence upon both of them—i.e. he would not depend upon either the body or the world for his quest for peace and bliss, happiness and joys, comfort and pleasure, fulfillment and contentedness. [That is, he would not think that being able to gratify the urges of the body, or providing comfort to the gross organs of the body, or acquisition of material objects of choice in the world and acquiring majesty and grandeur are marks of success or fulfillment in life. Instead, he would seek fulfillment and happiness elsewhere in his own 'self' by meditating and contemplating upon the Atma which is the 'truth' and the 'reality' of creation, as this Atma is the pure consciousness that is the only spiritual truth of life.]

Since he sees uniformity in this creation, since he does not see the external form of the body but the subtle Atma that resides inside it as the truthful identity not only of his own self but of all other living beings in this creation, he would cease to

see distinctions between this and that. That is, the notion of duality vanishes from his mental radar.

Thus, his mind would become steady and rested as all its restlessness would be done away with. This type of man is called 'Jivan Mukta'—one who is spiritually free in spite of having a gross body, and living with it in this mundane, mortal and gross world. A truly 'A-Sakta' man is therefore he who has developed exemplary and stellar levels of renunciation, equanimity, non-involvement, dispassion and detachment from both the body as well as the world. He is concerned about the Atma and nothing else. He lives a life like a lotus flower whose petal remains clean and un-moistened in spite of it living in a dirty pond and is always surrounded by water.] (3).

4. A person is called 'A-Sanga' or 'A-Sansakta' (i.e. one who has no attachments with anything or anyone, and one who keeps no company) when he has no sense of duality and distinction between himself and the other person (i.e. any living being), when he does not have the notion of 'this thing' and 'that thing'.

[This exemplary level of uniformity and universality of view when he sees no difference between any two entities in creation is possible only when he sees the same Atma or pure consciousness everywhere, and realises that what actually matters is not the gross things but this subtle and sublime Atma.]

Only such a person who has this uniformity of views and a steady mind is rightly called 'Brahm-realised', and only he is eligible to declare 'I am Brahm'. Such a person is indeed 'A-Sansakta'—one who is not attached to any particular entity.

[Brahm here refers to the pure consciousness that resides in the inner-self as the Atma of the individual, as well as the Atma of all living beings in this creation. Not only limited to the living being, this term 'Brahm' also implies the dynamic forces and energy of creation that subtly live inside the atom of all elements, and thereby of all things that exist in this creation because the atom is the basic unit of creation and all elements are basically made of atoms. In the field of metaphysics, the basic elements are earth, water, fire, air and sky, and the dynamic force that are inherent in all of them which enables them to harbour and sustain life is known as the 'Brahm' factor—for otherwise they would have not been able to harbour and sustain 'life'.

Therefore we see that whereas the term Brahm refers to the 'consciousness' that is present in all 'living beings' such as plants and animals, it also applies to the apparently 'non living' aspect of creation because all things that exist are made of the basic elements, and all elements have 'atom' as their basic unit. The atom has dynamism and stupendous cosmic energy trapped in its core—as is evident in modern times when we are all well acquainted with the phenomenon of 'atomic energy'.

In this context it must be noted that an atom is externally neutral, but harbours dynamic energy inside. Outwardly it shows no signs of movement but internally it constitutes of electrons that continuously revolve around the nucleus. So, there is internal 'movement, life, dynamism and activity'. It is this 'electron' that provides the otherwise neutral atom its magnificent powers known as the 'atomic power'. This analogy of the atom would clearly help one to understand the concept of Brahm and its dynamism in the form of Shakti. Like the atom, Brahm is externally neutral and invisible. The Shakti of Brahm is like the dynamism of the atom personified in the electrons which are an integral part of the atom but need to be activated to be of any use. Just like each and every element of this world is made of atom which is universally present everywhere, Brahm too makes up this world as its integral and inseparable part.

Just like nothing can exist without the atom though the atom is not visible, nothing can exist sans Brahm though the latter is not visible. Since all the elements also have a physical form that are visible, each form having its own characteristic features and qualities which are unique to it and different from its immediate neighbour, all physical forms that the same Atma takes would also have their uniqueness and individuality as well as their independent existence which is distinct from the other.

Therefore, the term 'Brahm' is a broad one, incorporating all that exists in this creation—whether it is considered at the micro level of creation, or at the macro level of creation. Refer Canto 2, verse nos. 17-18 which is very explicit in this endorsement.]

Thus, a wise man who has developed this holistic view of Brahm realises that his 'true self' is the Atma (the 'atom' in the above illustration) which is Brahm or consciousness personified (in a microcosmic level of existence), and that this same Brahm is the one who lives in each unit (atom) of creation (at the macrocosmic level of existence).

Such a man is called 'A-Sakta' because he is self-reliant and does not depend upon anything or anybody in this world for his existence or sustenance just like the case of the atom which is self-sustaining and an independent unit in its own right.] (4).

[Note—In the instance of the atom of any given element being independent and self-sustaining in its own right it ought to be noted that when the same atom gets associated with other atoms, molecules are formed. These result in the formation of the structure of the element in its physical form. Sometimes it also happens that a complete new thing is formed by such association or unions—for example we have water. Water consists of two atoms of Hydrogen and one atom of Oxygen, both of which are elementary elements and gases, but water is not gas. This instance would show that after some point, worldly contact and interaction has such a profound effect on the Atma that it loses its original truthful nature and virtuous form, and instead undergoes such a transformation that the new form of the Atma makes it appear to be a part of the world characterized by countless faults, taints and shortcomings. This new identity of the Atma is its deluded form, and not its truthful form. Therefore, when the Atma is attached with the grossness of the body as well as the world, it is bound to become gross to a greater or lesser degree.]

5. 'A-Sansakta' person is one who does deeds selflessly without any kind of emotional and mental involvement in either doing them or in their results. He does not feel glad that he has done some noble work selflessly; he does not develop any sense of pride in such deeds. He also does not feel obliged to do anything, and neither feels grateful or satisfied at having done it. Such a person is said to be a true renunciate and truly dispassionate towards deeds (5).

6. A person becomes aware of all deeds and their fruits or results only through the medium of the mind and the intellect. Hence, a man who can disassociate his mind from involvement with deeds is said to be 'A-Sansakta'—one who is not involved in doing deeds and not attached to or affected by its results.

[It is the mind that tells a man that he is doing certain thing, and it is the intellect that helps him to predict its results. For instance, when a man picks up something not belonging to him, it is his mind that tells him that the deed that he is doing is tantamount to stealing, and it is a sinful act. But suppose the mind is programmed to think that all things belong to the society as a whole and a man has the

right to pick up what is needed by him then the same deed of picking up the thing needed would cease to be a sinful act. In another instance, suppose the mind is engaged in some thoughts and the man picks up something, we say that he has done so 'absent-mindedly', or without the involvement of the mind. In this case, the element of the deed being sinful or not does not arise because the man is just not aware of the significance of what he is doing. He is doing it mechanically as if by habit.] (6).

7. A person who does deeds without being overly worried about their results is said to be unattached to the deeds. Such a person can do the deed well (because he would be able to concentrate his efforts on the task at hand rather than getting nervous and restless about the unseen future) (7).

8. Such a person (i.e. a person who is described as being 'A-Sakta', i.e. one who is unattached) is not infatuated with anything, has no worry of any kind (does not think about anything, hence remains free from all sorts of worries), has no special desire or worries about doing or not doing anything (and does deeds as and when they present themselves to him for being done), and is not bothered or worried about either the need for going anywhere or the consequences of not going. Such a man is exemplarily neutral and indifferent to all circumstances and situations that prevail around him; none of them ever ruffle him and disturb his mind (8).

9. Such a person (i.e. a person who is described as being 'A-Sakta', i.e. one who is unattached) turns inwards (as opposed to being extrovert) and remains submerged in the thoughts of his inner-self. He remains lost in contemplation; he remains totally indifferent and neutral in all places and under all circumstances. That is, he does not allow himself to be involved in anything anywhere.

Such a man remains engrossed in enjoying the nectar of the Atma—i.e. he is submerged and engrossed in enjoying the bliss and happiness that comes with experiencing the presence of pure consciousness that comes with perpetual contemplation and meditation when the man has lost awareness of all things that are extraneous to the Atma (9).

10. Such a Jiva (i.e. a living being who is described as being 'A-Sakta', i.e. one who is unattached) is unconcerned with meeting obligations or conforming to conventions and traditions that govern a creature's relationship with others as well as with the world in which he lives.

Even when he is meeting obligations or conforming to traditions and living up to his expectations in this world (such as by doing various things, fulfilling his obligations, or by behaving in the way expected of him) he still remains non-committal and neutral internally. He remains focused on his Atma which is his 'true self' and 'pure consciousness'. [Such a person is said to be firmly established in the Atma; he is devoted and faithful to the Atma. Just like a loyal and faithful wife interacts with so many men during the course of her working life in the office or the market place, but has nothing to do with them at the personal and emotional level because the only 'man' in her life is her husband, a self-realised, wise and enlightened man remains focused on the Atma in spite of having to live a normal life in this world and interacting with it like other men who may not be as spiritually enlightened and exalted as him.] (10).

11. Or it can be said that such a person who abandons all involvement in all deeds and actions related to the body and the world finds true peace and tranquility; he becomes calm and poised. This eclectic virtue is his asset; it characterizes him.

Such a realised person remains established in the Atma which is like a glittering gem, and he shines in its illumination; he exults in its divine charms and virtues.

[That is, a self-realised man who has experienced the glory of the pure consciousness residing in his inner-self develops a natural glow of divinity around him like the halo seen around the lighted flame of a lamp. This flame would give the best light if it is not disturbed by breeze, even the gentlest of waft of air. Similarly, a man who is not disturbed in any way whatsoever would be able to remain fully concentrated on the Atma and draw on its nectar of bliss and ecstasy like the bee drinking nectar from the flower of its choice remaining oblivious of its surroundings. This would show in his cheerful countenance and the glowing halo of spirituality, holiness and divinity that effuses from his enlightened inner-self and surrounds him from all sides.] (11).

12. The state of the Chitta (sub-conscious mind; the ability of the mind to pay attention and remember events) when it is neutral, non-active or dormant so much so that it does not register any of the constant inputs received by the mind from the external world through the medium of the sense organs of perception of the body, is said to be equivalent to being in the deep sleep state of existence, called the Sushupta state, inspite of the creature remaining awake and active in this world, the state known as Jagrat state.

In other words, when the mind and the sub-conscious become un-interested in being involved with the body and the world at large, the creature finds the same peace and rest that he would find when he is sleeping peacefully without a worry in the world. [Refer Canto 1, verse no. 56.]

[The deep sleep state is when the mind is defunct and it ceases to function. The waking state is when the mind is fully active and the creature is actively involved in the world. So, in the situation when the mind fails to register what is happening around it, when it becomes uninterested in what the body does, it would be equivalent to the mind being in a virtual deep sleep state. It is said that the creature finds true rest and peace in the deep sleep state or the Sushupta state because both the physical body as well as the mind are resting. In the present context, the creature finds rest because the mind has stopped nagging him, and he can peacefully enjoy the nectar of bliss that drips from the realisation of the consciousness residing in his inner-self, in his bosom.] (12).

13. Oh Nidagh! The subtle Sushupta state of the mind and sub-conscious (when they are inactive and defunct for all practical purposes even though the creature might be physically awake as described in verse no. 12 above) is achieved and made steady by constant practice.

When the Sushupta state is ripe and perpetual, it is known as the 'Turiya' state. This is what those who are experts in the essence of metaphysics assert (13).

14. All the worldly problems of the spiritual aspirant are eliminated in the Turiya state, and he obtains a perpetual state of extreme Anand (blissfulness, happiness, beatitude and felicity marked by ecstasy, fulfillment and contentedness) in this state (14).

15. This extreme sense of Anand that is experienced in the Turiya state is also called 'A-Anand'—the state of existence when the feeling of Anand is so permanent, all-pervading and overwhelming that the spiritual aspirant is not even aware of its presence; he is so habituated to it that he does not find anything special about it. Hence, he becomes neutral to the enjoyment of Anand as well.

[It is like the case of a man who is habituated to the worldly comforts of a wealthy life. A man who is poor would greedily yearn for such a life, and if he is fortunate enough to access it he would wallow in it for some time till he becomes bored with it. The rich man is habituated with a pampered life of material comfort so much so that he pays no attention to it for it is taken for granted by him. Similarly, a spiritual aspirant who has reached the Turiya state of existence becomes so steady in it that the fact that he is in blissful and contented state has no special significance for him; it is a routine thing henceforth for him.]

This sort of extreme Anand, i.e. the so-called 'A-Anand', is eternal and immense in its stretch and dimension. It is also called 'Maha-Anand' or 'the great bliss, the great happiness, the great joy, the great beatitude and the great felicity' that is reached when one reaches the higher states of realisation of the super Consciousness. It is equivalent to the transcendental state that crosses what is the routine and the humdrum state of existence of the Atma in this world.

The state of 'Maha-Anand' is so steady, so robust, so permanent and so perpetual that not even 'Kaal' (all dimensions of time and circumstance) can disturb it; it is beyond the reach and purview of Kaal.

[That is, not even the greatest of adversities can disturb the level of bliss, happiness and contentedness that a man who has reached the higher level of Turiya state enjoys. No temptations of the world are strong enough or charming enough to allure him away from the state of blissfulness and contentedness in which he lives during the Turiya state of consciousness.]

Such an ascetic or Yogi who has obtained the Turiya state of consciousness is deemed to have attained Mukti (i.e. he has attained liberation and deliverance) (15).

16. All the fetters and bondages that are an integral part of the creature's life in this world, and which have shackled him to the world not only in this present life but even had done so in his past lives, are broken and done away with when he has reached the Turiya state.

All his negative traits such as having 'Abhimaan' (i.e. having a sense of ego and false pride with their accompanying arrogance and haughtiness) are dispelled.

[A man feels proud on having successfully done anything only when he thinks that he is the one who has done something, when he feels that he had skillfully handled the situation leading to achievement of success. But when he has developed the eclectic view of not getting involved in the deeds done by the body, when he maintains stoic neutrality and detachment towards the deeds, then he cannot claim any honours for success. Hence, there would be no reason for his developing any sort of 'Abhimaan' in whatever success that has been achieved by his body in this life. He would be doing deeds but remain totally immune to any sense of pride and ego related to them. This is exactly what is expected of an enlightened man who has reached the Turiya state of existence.]

Just like a piece of salt put in water dissolves in it without leaving a trace, becoming one with the water itself, a spiritual aspirant who has obtained the highest state of realisation and enlightenment dissolves his 'self' and merges it with the

supreme 'Self' to become one with it and indistinguishable from it. Such an aspirant is honoured as being a 'Mahatma'—a great Atma, a great soul (16).

17. Whatever is visible in this world consisting of two facets—one that is animate and the other that is inanimate. Taken in its entirety, the world must have something at its core without which it would just not exist.

The transcendental vision which enables a man to see this hidden entity without which nothing would exist, the entity that is not visible and apparent in its external form but nevertheless constitutes the very core and the very basis of creation, helps him to realise the universal presence of the invisible Brahm that forms the core, known as the 'Atma' or the 'soul' or the essence, of the entire creation.

This eclectic vision of creation enables the wise and enlightened aspirant to see Brahm everywhere in creation, to realise that Brahm is the essence of existence, and that it is the truth that is universal, uniform, all-inclusive and all-pervading (17).

18. A person who has any kind of attraction for or attachment with any of the things that are visible in this world is said to be the one who is bonded to this world, who is fettered and bound in shackles. [This is because all things that are visible in this mortal world are gross in nature, are perishable and transient by nature. This man is the one who maintains a 'Sanga' as outlined in Canto 2, verse nos. 1-11.]

To be freed from such attractions or attachments is deemed to be Mukti or freedom.

It is impossible to describe one's feelings in tangible and comprehensive form about what one has 'seen' behind the external façade of the visible world.

[The reference here is to the quintessential 'Truth' recognized as 'Brahm' that forms the subtle and hidden core of creation, and not to the physical gross aspects of the world. In other words, the 'Brahm' that the wise, enlightened and Brahm-realised man 'sees', or of whom he has a divine vision, or whom he perceives as the basis and fundamental essence of creation, cannot be described in words. This is because words have their own limitations, and Brahm is such a divine, esoteric, enigmatic and mysterious entity that it can only be experienced and never defined in words. Brahm is not something gross that can be 'seen' with the gross organ of sight (eye) and therefore it cannot be described, because a man can only correctly describe things that he has 'actually seen with his eyes'. The Brahm that he 'sees' is seen with the divine 'eyes of self-realisation, erudition, wisdom and enlightenment'; this Brahm exists in the subtle plane of existence and not in the physical plane like other sense objects. Just like the physical eyes cannot see the 'air' or the 'atom' to be able to define or describe them, it is also not able to do so with Brahm.

Even in the physical world when one sees any object, he would not be able to completely describe it in its entirety because of the fact that words have their limited use, but supposing he is able to narrate any thing seen in physical form completely, the narration might not hold good or be a truthful depiction of that thing after some time, because the thing would have undergone a change, howsoever miniscule, by the time this narration is actually done.]

In fact, this sight or vision (of Brahm) can only be witnessed and experienced and endorsed personally, but can never defined or described in words or gestures or images or metaphors of any kind by anyone (18).

19. Treating what has been taught to you (Nidagh) as being the irrefutable truth and the actual reality, become stable and steady (in your mind). This would help you to attain the state of Sushupta (as described in the foregoing verses).

This would help you to easily attain transcendental state of Turiya (as described in verse nos. 14-15 above). Obviously, it would give you immense peace and bliss. Hence, focus your mind and vision on attaining this target.

[That is, sage Nidagh is exhorted by his enlightened teacher Ribhu to cast aside any doubts and confusions that he might be having about Brahm and the Atma in view of what has been narrated in this Upanishad, and become stable in his spiritual pursuit. He must conquer his mind and make it stable so that it is not allowed to be tossed and turned and therefore remain in a perpetual state of agitation and confusion caused by the innumerable deluding inputs from the gross world as well as by the equally confusing doctrines espoused by various schools of thoughts and philosophies, but rather become steady and rested. The benefit of the calmed-down mind that has been fully trained to remain stable and be wise enough to analyse things and develop a deep insight to see the 'hidden' truth by being able to peep behind the external layers of apparent truths that are not the actual thing have been outlined earlier in Canto 1 of this Upanishad in detail.

Being thus enlightened about Brahm and his Atma, Nidagh would ultimately find eternal peace, happiness, rest, bliss, beatitude and felicity which are the focus of all spiritual aspirants who are wise and erudite.] (19).

20. The Atma (pure consciousness) is such an esoteric, enigmatic and mysterious divine entity that is neither gross nor subtle, that is neither visible and apparent nor invisible and implied, that is neither animate nor inanimate, and is neither false nor true!

[That is, the Atma cannot be fixed by any criterions; it cannot be butted and bounded by some parameters that would define it. It presents a paradox of sorts where both the extremes of any given set of circumstances would equally apply to it.]

For instance, the Atma, though being invisible itself, is the basis of this world which is visible, and therefore the Atma is the invisible aspect of the visible world. At the same time, it is the Atma that has assumed all the forms that the world takes, and sans the Atma there is no truth in it. Therefore, the physical world is a visible manifestation of the Atma, thereby indirectly proving that the Atma is visible.

Since the gross world has any existence because of the Atma and is a manifestation of the Atma, we deduce that the Atma exists in a gross form of this world. But primarily the Atma is a subtle entity (and not anything that is gross in the least), and it pervades throughout this world like the atom pervades in any given element. Neither the atom nor the Atma are visible to a causal observer, but their existence just cannot be denied if one is wise enough to understand the fact that any given element has the atom as its basis as much as the world which has the Atma as its basis. Hence, the Atma is subtle, atomic and invisible in its basic form besides being all-encompassing, all-pervading, all-permeating and omnipresent in this creation. Nothing exists sans the Atma.

Since the Atma forms the basis of 'everything' in this world, both in its animate as well as in its inanimate forms, it follows that the Atma has two aspects as well—one that is animate and the other that is inanimate.

If one were to judge the Atma in physical terms it would appear to be 'false' because it cannot be proved by laboratory experiments as required by modern science to establish the truthful existence of any given entity, but it would be foolish

to ignore its existence because things that are subtle and sublime are beyond the scope of laboratory equipments. The existence and presence of the Atma has been unequivocally endorsed by realised and enlightened persons who have experienced and witnessed it while meditating and contemplating—something that goes far ahead and beyond the physical proving in a science laboratory.

In other words, the Atma is such an enigmatic, esoteric and mysterious entity that it is not at all possible to define it or describe it or fix its characteristics and attributes. For instance, no one can define with certainty the taste of such an ordinary thing as ‘plain drinking water’. Each man would describe it differently; each man would see different virtues of water. This plain water can dissolve a large number of things as it is the universal solvent, and also can assume a large number of forms such as vapour, ice, rain, mist etc. But does this mean that the basic nature of the atoms of Hydrogen and Oxygen that combine together to form the element known as ‘water’ would change? Does it also mean that since one is not able to see these atoms of Hydrogen and Oxygen one were to assume that water has some other basic structure or an independent ‘atom of water’ like the primary elements such as Hydrogen, Oxygen, Iron, Aluminum, Gold, Silver etc.?

A similar idea that the basic nature of the water would always remain the same irrespective of its external appearances is endorsed in verse no. 44 below in this Canto no. 2.

Likewise, even though the Atma is very subtle and hidden in this creation, it is nevertheless its only and ultimate ‘truth’. The Atma is the ‘soul’ of creation; it is the ‘essence’ of creation just like the atom is the fundamental basis for the existence of all elements in creation.] (20).

21. A self-realised man (i.e. one who has understood the real meaning and import of the word ‘Atma’, and has personally experienced the presence of the pure consciousness in his inner-self) develops a holistic, all-inclusive and non-dual approach to life and the world around him. He thinks and firmly believes as follows—

‘Neither do I have an existence that is separate from the Atma (pure consciousness), nor does anyone else in this existence.

Neither am I lonely, nor in numerous forms. My essential form (as the pure consciousness) is non-dual and imperishable. [This is because the Atma or pure consciousness is a universal entity that is uniformly present in all the creatures in this world—so I am not alone. Further, since the Atma is one and non-dual, it exists in one basic form inspite of having uncountable number of external forms.]

I (as the pure consciousness known as the Atma) am not that which is visible in this creation or that is perceived by the sense organs of perception. [This is because the sense organs are gross in nature, being part of the gross body. Anything gross cannot perceive an entity that is the most subtle and sublime. What these sense organs perceive is the gross physical aspect of the world, but they do not have the ability or the caliber to perceive anything that is as subtle and sublime as the pure consciousness.]’ (21).

22. A person gets immense pleasure when coordination is established between the object to be seen or perceived and the organ responsible for seeing or perceiving it.

[If a man learns that a particular thing is very beautiful to look at and he is able to see it to his eye’s content, he feels extremely happy and contented. On the other hand, if he is not able to see it because his eyesight is bad, or because his eyes cannot see it for some reason or the other, he feels dismayed, distraught and

discontented, and therefore agitated. This would apply to all the other organs of perception such as the ears which hear, tongue which tastes, skin which feels, and nose which smells. Hence, when a proper coordination is established between things to be perceived and the relevant organs of perception, a man gets immense satisfaction and pleasure.]

The degree of contentedness, pleasure, bliss and happiness that is got when one is able to see or perceive something that is far more enduring than the physical perceptions of the world, something which is so sublime that it is beyond the reach of the ordinary gross organs of perception, or something that has an eternal and infinite value, is of a greater dimension and intensity than what one gets by perceiving things that are easily seen or perceived in this world by the organs of perception of the body, things that have a lower value, things that are mortal and finite like the world to which they relate, and therefore spiritually inconsequential.

[The higher level of contentedness, pleasure, bliss and happiness refers to the state of self-realisation when the aspirant is able to have a sublime experience of the pure consciousness that is an extremely exhilarating experience as compared to the pleasure and happiness that is got by perceiving and enjoying things of the gross world. This is because the experience of the eternal consciousness leads to perpetual contentedness, bliss and happiness, while that which is obtained by the perception of the objects of the material world has a limited span of life. This is because the world itself is transient, finite and perishable, while the pure consciousness is eternal, infinite and imperishable.]

Hence, the bliss and happiness that is got in the transcendental state of existence is much superior to and far more eclectic and divine than what one gets during one's perception of the gross world and its equally gross material sense objects (22).

23. Moksha (spiritual emancipation and salvation) is not present or available in the sky above, or anywhere behind it or underneath it in the nether world, or even on the earth.

True Moksha is available when all hopes and expectations, all desires and yearnings are eliminated; it is available when one does not remain aware of his surrounding world (of material sense objects along with their accompanying temptations). [In other words, Moksha entails breaking free from the shackles of the world; it involves freedom from all attachments, attractions, allurements and temptations of the world. Not to be tempted by the world ensures that the man is free and not under any sort of obligations to obey it dictates in order to meet the demands of his mind and sense organs seeking gratification, pleasure and comfort from this world of material objects and magnificent charms (23).

24. 'Let me have Moksha'—even this thought is a sort of desire, and when it arises in the inner-self of the creature it has a shackling effect for the latter. It acts as a hurdle in the creature's true Moksha. This is because whenever any kind of desire and expectation sprout in the mind and heart of the creature, they act as fetters that prevent his spiritual freedom and deliverance (24).

25. When one has developed the eclectic and holistic view about the Atma (pure consciousness) as being a universal and all-pervading divine entity that is so unique that inspite of the fact that it is uniformly present everywhere in this creation it still remains free and separate from what is seen in this world—it is only then that the

creature is said to have obtained the level of erudition and wisdom that enlightens him on what Moksha truly is.

[The Atma is an ethereal entity that cannot be limited to any given frame defined by the world of visible objects. Since everything in this creation is a manifestation of the Atma it means that all visible as well as invisible entities are one or the other form of the Atma. On the other hand, Atma is a sublime and subtle entity which is not gross like the things of the physical world, hence it is separate from what the world is usually understood to mean. A wise and self-realised man understands that his 'true identity' is not the gross body but his pure conscious Atma. Hence, inspite of his physical presence in the world and bearing a gross body with which he interacts with the world, the body which gives him his individuality in this world and by which the world recognizes him as an individual man, he knows that it is not the truth. Since it is the physical gross body that can be tied and not the ethereal entity known as the Atma, this wise, enlightened and self-realised man is deemed to be eternally and truthfully free and unbound. He is free from all fetters that shackle an unwise and un-realised man to this world as well as the body. In other words, the tentacles of delusions and ignorance do not clasp him in a vice-like grip the way other ordinary creatures are. This is 'Mukti'—freedom from being a serf to delusions and ignorance; freedom from being shackled to the gross body and the equally gross world.]

For such a wise, realised and enlightened man there is no such thing as being in some kind of bondage or shackle (known as 'Bandh'), and therefore there is no need for obtaining liberation and deliverance (known as 'Moksha') from it.

[This is because he has realised that the Atma, the pure consciousness, is his 'true self' and 'true identity'. This Atma is ethereal, subtle and sublime as compared to the gross world in which it lives. The gross body of the individual has so many limitations, but the Atma has no such fetters. With this realisation, the wise man understands that he is not tied down by any strings, and not bound to any thing in the real sense.

The reason for his seeking 'Moksha', or freedom from shackles, arises because he had erroneously thought that the gross body was his 'self', but when this false identification is removed and the truth prevails that the Atma is the 'self', the question of seeking Moksha does not arise at all, for the Atma is eternally free and has no bondages of any kind. It is like the air or the sky that is eternally free and without any limitations imposed on it. Even when the air or the sky seem to be enclosed by a wall (such as a pitcher or building), this limitation is artificial and man-made, for as soon as the wall is removed the air or the sky that is present inside the wall becomes one with the corresponding element outside.]

Therefore, you (Nidagh) must develop or cultivate this eclectic view about yourself and remove all doubts about what Moksha is. Get rid of the idea that there exists some kind of 'Bandh' (bondage, shackle or fetter) from which you need 'Moksha' (freedom and deliverance).

[In other words, you are eternally liberated, and the only reason why you think that you need Moksha is because you are ignorant and deluded about your 'true self'. Once you become enlightened that you are not the gross body, or that this world is merely a temporary habitat for you, and that your 'true self' is the pure consciousness that is eternally free and sublime, you would not need any separate Moksha for yourself. When you develop this eclectic view about yourself and understand what Moksha really is, you would have no 'Bandhs', or the need of getting 'Moksha' from them.] (25).

26. A man who seeks spiritualism, or one who wishes to realise the Atma (the pure consciousness), does not find peace or rest till his mind becomes fully purified and cleansed of all the taints (that are generally associated with those who seek the world and attempt to find peace in it).

[This is because the mind needs to be fine-tuned and controlled properly first before anything can be done by a man as the mind is the only instrument that can think, analyse, choose the correct option, and direct the man towards his chosen destination. In the field of spiritualism it is of utmost importance to control the mind by purifying it completely, because the path of the 'spirit' is holy and ethereal, and therefore it needs equally cleaned and sanctified instrument to reach the goal. The importance of cleaning the mind and taming the various Vasanas and Vrittis has been dealt with in substantial detail in Canto 1 and Canto 4 of this Upanishad.]

Such a man (who relentlessly pursues his spiritual path with a clean and controlled mind) is surely able to find peace and tranquility of the highest order, the kind of which is not available anywhere else in this world, when he ultimately realises the Atma or the pure consciousness. He does not want anything else in this world except this goal (of self-realisation and its attendant peace and bliss of the highest order) (26).

27. A wise and self-realised spiritual aspirant who remains established in the Atma which is pure consciousness, which is the basis of the entire living world, and which is one of its only kind, having no parallel—such a man is said to be 'Jivan Mukta'.

He has no affections, attachments or attractions for anything or anybody in this world; he is not infatuated with them nor does he yearn for them. He remains totally disinterested and neutral to the world and everything pertaining to it. Such a man is said to be 'Jivan Mukta'.

[The phrase 'Jivan Mukta' means one who is freed from all fetters or bonds in his life. When an aspirant realises that his true 'self' is the Atma and not the body, he becomes free from this first and foremost hurdle in his spiritual freedom. When this obstacle is removed, the shackles of the world are secondary and can be easily overcome. This is because the material world of sense objects is directly related to the body; it is the body that interacts with the world. When the enlightened man disassociates himself from the body, when he does not think that what his body does is being done by him, all his relations with the world are snapped instantly. The Atma is like a bird that is habituated to flying freely in the sky, but unfortunately it was trapped in the body and became dependent upon the world for its sustenance because it allowed itself to be tempted by its illusionary attractions and charms just like the unfortunate bird that gets caught in the bird catcher's net because of its greed for the grain or the worm that he puts as bait to attract the bird. Once this barrier of greed is done away with, the bird can remain flying in the sky without any fear of being caught. Even when it is caught, it should attempt to break free from the trap and use the first chance available to fly off into the sky which is its natural habitat. Similarly, once the wise man realises that the world and the body are different from the Atma, once he snaps all attachments with the world and its material sense objects, he becomes like the freed bird. He would live in this world, but at the mental plane he is unbound to it; he is unshackled; he is unfettered.] (27).

28. [Verse nos. 28-31 should be read together.]

A person who does not worry about the future or has any expectations from it, who does not remain concerned about the present and tackles things as and when they present themselves to him, who does not wish to have any knowledge of the past (because things gone by are history and they do not matter to him now or even in the future)—(28).

29. A person who has no affections for or attachments with anybody with whom he is associated in life, who treats all his friends with equal friendliness, and extends the same attitude to even those who are wicked, deceitful, dishonest and crafty, or are hostile to him—(29).

30. A person who behaves like a child among children, who acts like an old man when dealing with those who are aged, who shows patience, courage and fortitude with those who have these grand virtues, who becomes a youth when in the company of other youths, and becomes sorrowful and aggrieved when he sees others in this condition—(30).

31. A person whose mind and intellect are steady and calm, who is extremely cheerful and blissful, and whose thoughts are robust and firm—the fame of such a person (as outlined in verse nos. 28-31) spreads everywhere.

Such a wise man (who exhibits the above characteristics) always remains happy, is of a cheerful, pleasant and sweet disposition, and is free from the negative and depressing thoughts of being lowly and deprived of anything.

Indeed such a man is deemed to have achieved Mukti, or liberation and deliverance from all sorts of fetters and bondages.

[It would be evident while reading verse nos. 28-31 that the person to whom they refer is no ordinary man but someone who has inculcated the noble virtues of equanimity, empathy, sympathy, tolerance, endurance and humility, who treats every situation with stoic indifference and equality, who remains internally detached from all worldly relations and activities while doing deeds as required of him according to the demands of the circumstance, who maintains his equanimous state of mind during miseries as well as joys, and who maintains his calm and poise inspite of being surrounded by constant turmoil and transience that are hallmarks of the world around him. This is only possible for a man who has distanced his inner-self from being associated with the external gross world on the one hand, and sees uniformity in it on the other hand. The first thought is achieved because he knows that the world is simply a creation of the mind and hence illusory, that the true thing is the 'consciousness' that is not at all affected by the turmoil that characterizes the world, and that real peace is possible only when one maintains total neutrality amidst this upheaval. The second thought is possible when he sees the same 'consciousness' as a revelation of the supreme Brahman, the Supreme Being, in all aspects of creation, and therefore just marvels at the maverick play of the Supreme Being that unfolds before his eyes.

Being not grounded by any given situation, by not being bound to any set conditions, by remaining free from any obligations and expectations, and by maintaining his mental poise and equilibrium under all circumstances, a man is able to obtain freedom from all existential worries and mental disorders vis-à-vis this world in which he has to live. He maintains his quiet and serenity, his neutrality and detachment, under all circumstances—refer verse no. 28.

The fact that the man of whom we are talking about is wise and erudite is evident from the fact that he acts with utmost prudence and intelligence, being friendly with those who are friendly towards him, and skillfully witty with those who act smart with him (verse no. 29), who mixes well with his surroundings by becoming one with it (as narrated in verse no. 30), and who is never ruffled but maintains his mental stability and calmness (as outlined in verse no. 31).

Such a man is indeed eligible to attain fame and honour as a man who is internally free from all worldly shackles.] (31).

32. When one makes diligent effort and practices the above principles throughout his life, their implementation become natural to him, they become a part of habit and normal behaviour. His body naturally becomes responsive and adapted to his way of thinking.

[Since it is the gross body that comes in direct contact with the external world, developing relations with others, whether friendly or otherwise, and interacting with them, so when the mind develops steady neutrality by constant practice the body would too develop neutrality over time. As a result, a man would treat his friend and those who are opposed to him equally; he will treat those things that are charming and pleasant with the same indifference that he shows towards things that are otherwise. The sense organs of the gross body would not be any longer attracted by their respective sense objects in the world but maintains exemplary neutrality and calm—the eye would not be interested in looking at beautiful sights, the tongue would not hanker for tasty food, the ear would not like to hear only praises and pleasant things, the skin would no longer long for sensual touches, and the nose would no longer yearn for sweet scents. Similarly, the hands would no longer stretch out to grab things that are not worthy, the legs would no longer take the man to where self gratification is available, the mouth would not speak unnecessarily or eat just for pleasure, and genitals would not seek their own quota of pleasure. Such a regulated and reined-in body would be in consonant with the state of the spiritual aspirant's mind and subconscious. The state of equanimity and evenness acquires a wholesome nature; it encompasses every fraction of the spiritual aspirant's life and his dealings with the world.

Obviously, when the mind and the body work in tandem, the spiritual journey becomes easy and comfortable for the aspirant. He is easily able to obtain freedom from this world.]

Finally, when the time comes for the Pran (life-forces) to leave this body, it does so easily and without any regrets. The mind is fully calm and rested at that time. Nothing remains for it to achieve except Nirvana—or final liberation and deliverance, final emancipation and salvation.

[When the body and the mind are both tamed, the man has no desires or expectations left in this world. He has no unfulfilled wishes, or goals that remain elusive. He has no attachments with or affections for anything or anybody in this world. So when the time comes for his final departure from it, i.e. when he is about to die and leave the body and the world, he has no regrets or worry as to what would happen to his near and dear ones after him, or what would happen to the huge assets he had so laboriously created and assiduously collected around him, or what would be the fate of the world and the various relationships that he had so meticulously cultivated and nurtured in his life. He is so dispassionate and detached from this world as well as the body that he does not give a second glance to them at the time of his death.

His only thoughts are on his final liberation and deliverance. He rather feels glad that finally the chance has come for his salvation and emancipation. He is happy that finally the opportunity has arrived for his final liberation and deliverance from the fetters of the body and the entangling effects of the world when the barrier of the body is removed with its physical death. This frees the Atma from the compulsion of having to live in this world trapped inside a gross body and conform to so many traditions and conventions which act like so many burdens for it. Until the time of death, the Atma was forced to live in the body and interact with the world because it is impossible to live in the world and not interact with it. Of course, a wise and enlightened man remains aloof from the world and the body in spite of his living in this world and interacting with it, but this creates a lot of practical problems for him. But when death arrives, the necessity to have a body is removed, because the body collapses on its own, so there is not even the regret at having to discard the body which had given the Atma shelter for such a long time. Hence, a wise, self-realised and enlightened man does not treat 'death' with fear and disdain, but he welcomes it willingly and cheerfully. He regards the death of the physical body as a god-sent gift to get rid of the fetters that had been shackling his Atma, which incidentally is his 'true self', to the gross world full of miseries and pains. Say, who would like to live in bondages and behave like a serf or slave if he is given an opportunity to get his final freedom that is eternal?] (32).

33. Doubts and confusions (about what is the 'spiritual' truth and what is not, what is the truthful path and what is the misleading path) are the breeding grounds for mental and emotional restlessness, perplexities, bewilderments and consternations.

When one is wise, enlightened and realised, he is certain of the 'truth' as well as of the 'falsehood', and it is then that he finds peace and rest because he would no longer be deluded and subjected to confusions. So, when the mind itself goes out and searches for the truth and successfully finds it, it returns with a firm conviction about it. It is then that the mind becomes very steady and firm in its beliefs and convictions, and no amount of worldly corruptions and negativity would henceforth manage to delude the mind or sway it from its well-considered chosen path.

[The mind is an intelligent aid for the aspirant. He uses this instrument in anything that he does in this world. In fact, each single deed and action that any of the organs of the living organism does or undertakes is directly or indirectly controlled by the mind, the intellect and the sub-conscious. So, first the mind is in doubt whether the world is true or false. It is restless and agitated. It begins its research and finally realises that the world is its own imaginative creation, and that, in essence therefore, it is falsehood. The mind is aided in this search by the study of the scriptures as well as by a close examination of the world and an analysis of experience of others. When it finds that the 'truth' is somewhere else, and that this 'truth' is the pure consciousness hidden inside the bosom of the aspirant himself, it becomes focused on the truthful Atma, because the latter is the 'consciousness' that is the 'truth' of existence. And a focused mind is rested and calm; it can think coherently, cogently, properly and with due diligence.]

Hence, a Jiva (living being) who is free from doubts and confusions is indeed said to be Mukta—free and unshackled (because his mind would be easily able to separate the truth from the falsehood, thereby freeing him from the bondage of delusion and ignorance) (33).

34. The eclectic knowledge that a spiritual aspirant has about the enigmatic Atma, the pure consciousness, that it is a divine entity which has neither a beginning nor an end (i.e. is eternal, infinite and imperishable) is equivalent to having knowledge of the 'Parmatma'—the supreme transcendental Atma which is synonymous with the Supreme Being.

Those who are wise, erudite and well-versed in the knowledge of the Atma assert that a firm knowledge about it that does not waver and diminish under any circumstance is equivalent to having knowledge about the Parmatma or the Supreme Being. At the same time, those who have this knowledge are deemed to be highly knowledgeable, wise, erudite, enlightened and learned (34).

35. Such a person who has acquired the supreme form of spiritual knowledge (as described in verse no. 34) is able to see the essence and the truth of everything in the three worlds of this creation¹. He realises that whatever of any worth and essence that exists in this creation is nothing but the same divine Atma (the pure consciousness) in all the forms.

With this firm conviction, he attains fulfillment. [He has no more doubts as to what is the truth and what is false in this world. With the acquisition of this divine knowledge, he is deemed to have become enlightened as well as self and Brahm realised. And for such a person, nothing more remains to be attained, realised, achieved, accessed, known or gained. Hence, this grand, eclectic and most divine knowledge fills the spiritual aspirant with complete contentedness, beatitude and felicity.] (35).

[Note—¹The three worlds referred to here have the following connotations—(i) the past, the present and the future; (ii) the heaven, the earth and the nether world; (iii) the world represented by the word 'Bhu' meaning the terrestrial world where ordinary mortals live, the world represented by the word 'Bhuvaha' meaning the lower heaven or sky where spirits and semi-Gods live, and 'Swaha' or the upper heaven where the Gods themselves live. In short, all forms of life anywhere in existence have any meaning only as long as there is the Atma in them.]

36. The holistic view of the Atma envisages that one sees this quintessential, divine, sublime, immanent, omnipresent and all-pervading universal entity (i.e. the Atma) everywhere in creation, in a uniform and indivisible manner.

Such a wise and realised man wanders—'where is that place where there is no Atma, and where is it specially located to the exclusion of the other place?'

He also wanders—'what is Moksha (liberation and deliverance; salvation and emancipation) and what is bondage? Everything is indeed Brahm'.

[That is, a man is truly wise, self-realised and spiritually enlightened when he has developed the non-dual view of this creation which envisages the presence of one universal Atma as being the only 'truth and reality' in creation, and the rest of the world with all its variations and multiplicities as simply being a manifestation of this single entity known as the Atma. Since the Atma is synonymous with Brahm, the only difference being that while the term 'Atma' applies to the cosmic Consciousness when it is understood in the context of micro level of creation, and as 'Brahm' when it is understood in its cosmic context at the macro level, it obviously follows that a wise and realised man would see the universal presence of Brahm everywhere.

Further, such a wise man does not regard himself as being bonded to anything, does not regard himself as being tied by any kind of fetters, or shackled by anything. This is because he has realised that his 'true self' is not the gross body but the pure consciousness that is known as the Atma which is an eternally free ethereal spirit that

cannot be butted and bounded, that cannot be put in shackles, that cannot be limited by anything that is gross, such as the body and the world. Just like the sky or the air which are inherently free and unbound, the ethereal Spirit, or the Atma, is also inherently free and unbound.

Having gained this insight, he is not misled by the external façade of the gross world, but is able to peer deep inside and behind it to have a vision of the actual reality that forms its basis. He sees the subtle and sublime form of the ‘pure conscious self’ known as the Atma being reflected everywhere in creation. Therefore, whatever is seen in this world is actually a reflection of his Atma in that form. In other words, he sees all the living beings in this creation as his own image. This also means that he has risen above the narrow-minded approach that an ignorant man has of this creation, and he has developed a holistic view of this creation whereby he sees nothing but one universal, immanent and immutable Brahm, the cosmic Consciousness and the ultimate Truth, uniformly everywhere. Refer verse nos. 23-33 of this Canto 2 in this context.] (36).

37. The sky is inherently indivisible and immutable, remaining constant and complete in all dimensions of time. It cannot be shackled to anything or by anything, and therefore there is no question of it being freed or delivered from any fetters or bandages. The sky is so vast, fathomless and infinite that there are no dimensions that can be assigned to it. There is nothing that exists beyond the sky.

The cosmic Brahm possesses these unique virtues as those possessed by the sky. The sky is used as a metaphor to describe the divine and magnificent glories and divine attributes of Brahm. Hence, Brahm is similarly eternally free and without the need of getting any liberation and deliverance from any sort of bondage just like the sky. Brahm is the vast, all-incorporating and all-encompassing cosmic entity like the sky beyond which nothing exists. It is larger than the largest, and greater than the greatest. It is measureless and fathomless; its dimensions are better understood by the words ‘eternal, infinite, without boundary, without a beginning and an end’. These virtues establish the greatness and universality of Brahm.

[In other words, Brahm is compared to the sky element and said to possess the grand virtues so characteristic of the latter. Of all the things in creation, the sky has the uniqueness of being the most subtle, infinite, formless, eternally free, all-pervading and all-encompassing universal element that just cannot be captured and put in shackles. The sky is not something gross and material as a piece of iron or gold that can be held and cut into small pieces. Similarly, Brahm is a cosmic divine and sublime entity that also has these eclectic virtues as the sky element, and therefore Brahm simply cannot be compartmentalized and divided into units that are separate from one another. Brahm cannot be limited to a specific area of creation, but it encloses the entire creation from all sides just like the sky that covers everything from all sides.

Like the sky element, Brahm too cannot be said to have two existences or a beginning and an end. That is why Brahm is said to be non-dual, immutable, indivisible, eternal and infinite.

Brahm is a divine and sublime cosmic entity that cannot be regarded as being under any bondage or fetter, and therefore it is eternally and inherently free and without any shackles of any kind whatsoever.

Everything in existence is present in the vast and fathomless bowls of the sky, and there is nothing that lies beyond it. Similarly, the entire creation is lodged in Brahm; nothing exists that is outside of Brahm. Brahm, as well as its analogue the

sky, encloses the entire creation from the outside like a moat around a fort. It envelops the creation from all sides. Anything that encircles another thing from the outside cannot be surmounted by the one which it surrounds. In other words, nothing in this creation can supersede Brahm just like nothing can cross the limits and boundaries of the sky.] (37).

[Note—Refer also to Canto 1, verse no. 16; Canto 4, verse no. 24; Canto 5, verse no. 77.]

38. Hence, you (Nidagh) should discard this notion of duality vis-à-vis the Atma from a distance (i.e. never allow yourself to ever think in these terms; never get close to this idea because it would only create doubts and confusions in your mind and lead to consternations and perplexities), and instead be blessed with an eclectic wisdom that would enlighten you about the non-dual nature of the Atma.

Become wise and self-realised; be enlightened about your ‘self’ as well as about the true nature of the Atma. Don’t get confused and deluded about this at all.

[That is, become firm and established in the non-dual nature of the pure consciousness. Don’t allow yourself to be bogged by delusions and many versions that are proffered about the ‘self’ and the world around you in which this ‘self’ of yours lives. Understand that this ‘self’ of yours is the sublime and ethereal consciousness called the Atma which is a universal entity also known as Brahm, that it is separate from the gross aspect of creation such as the body and the world of material sense objects, and that it is eternally liberated and therefore need no special freedom. The very fact that you think you need some kind of Moksha, or liberation and deliverance from some fetter or bondage, is out of delusion and ignorance about yourself. The truth is you are eternally liberated and under no bondage.

Think in this positive term if you indeed wish to be freed from your bondage, which is however imaginary and due to your own folly and ignorance of the truth.]

Become so dispassionate about and uninterested in the external world that you would treat wood and stone alike. Do not be attracted towards any of them, nor repelled from them. For all practical purposes, be absolutely neutral towards them. This would exemplify your achievement of ‘non-dual’ approach to the world.

[This stanza can also mean—‘Be so neutral and detached from this gross world that you see no difference between a piece of wood and stone. Both are equally worthless for you, or equally valued for you. Your mind should neither treat any of the two as being of a greater or lesser value than the other.’ This is just an example of the highest level of equanimity and detachment that one develops towards this material world when one becomes highly spiritually wise, realised and enlightened.] (38).

39. When there is no sense or notion of existence of any kind of difference between any two given things or situations, there would be no need to have any volitions, desires and aspirations for anything.

[It is only when a man thinks that what he has is inferior to some other thing that he strives to obtain the latter. He makes a determined bid to acquire it; he has aspirations to be better off and be happier than what he is at present. But when he has developed the sense of non-duality, when he sees no difference between what he has at present and what he would get by making fresh wishes (and then making efforts to acquire the object of his desire), he would not feel the need of striving for any thing new. This would give him his peace of mind and sense of contentment and fulfillment. In the present context of obtaining Moksha as had been discussed in the

preceding verses, when the wise and self-realised aspirant understands that he is already liberated and unbound, there would obviously be no motivation for obtaining Moksha when he has already got it. Likewise, he would have no desire for obtaining peace and happiness from anything in this world when these virtues are an integral part of his Atma, his 'self'. He would make no vows, would have no aspirations and volitions as he would see no difference between what is available and what can be made available by making such vows, or having any aspirations and desires.]

An aspirant who has developed this eclectic thought (i.e. who has truly understood the import of the term 'non-duality', uniformity and universality) is bestowed with eternal peace and tranquility that is infinite, imperishable, and without a beginning or an end.

[That is, when a man understands that the Atma is a uniform entity that remains constant in all dimensions of time, and that Brahm is no where except in the form of his own Atma, he no longer yearns for Mukti, or liberation and deliverance from this world, and to go to some imaginary heaven to find peace. He finds peace here in this world itself while living in it. For such an enlightened man, there are no separate things as a heaven and a world. He sees the Supreme Being right in his front in the form of the manifested world as well as inside his inner-self in the form of the Atma which he has already realised, for had it not been so it would be impossible for him to follow what these verses of this Upanishad say.] (39).

40. Always think that there is no thing of any worth in this world which does not have the Atma representing the pure consciousness in it.

[In other words, the only entity that should have any value for you is 'consciousness'. If anything in this world does not have 'consciousness' inherent in it then you should have nothing to do with it.]

Do not be confused and get perplexed by the two doctrines of 'Advaitya' (non-duality) and 'Dvaitya' (duality). Treat them equally.

[As the terms suggest, the doctrine of Advaitya says that there is only one uniform entity known as Consciousness uniformly pervading in this creation, that there is no difference between the supreme Brahm and the Jiva (the living being), and that all things in this creation are nothing but multifarious manifestations of this single Consciousness revealed in the form of Brahm. On the other hand, the doctrine of 'Dvaitya' says that the Brahm and Jiva are two entities; that Consciousness is distinct from the world. In other words, sage Nidagh is exhorted by his teacher, the learned sage Ribhu, to see only one uniform Consciousness as being all-pervading in this creation.]¹

Similarly, do not be afraid of old age and death. Do not fall prey to delusions, confusions and bewilderments; do not be baffled by contradictory doctrines in this world but stick to your firm conviction about the Atma as being the non-dual, eternal, imperishable, uniform and universally conscious entity.

[This is because old age and death affect the gross body and not the Atma which is constant, steady, unchanging, imperishable, eternal and infinite. The Atma neither gets old nor dies. So, sage Nidagh is asked not to be worried of old age or death because 'he' would neither become old nor die. The term 'he' applies to the pure conscious Atma or soul of Nidagh and not to his external gross body.] (40).

[Note—¹(a) Advaita Vedanta is a system of thought based on the Upanishads, its chief exponent being Adi Shankaracharya. It expounds the unity of the individual's soul, his 'self' or the pure consciousness known as the Atma, with the supreme

transcendental Brahm which is the universal cosmic 'Self' or the cosmic Consciousness which is also regarded as the Absolute, the Truth and the Reality.

References—(i) Krishna Yajur Veda's Akchu Upanishad, Canto 2, verse nos. 2-3, 29-31, 43; Tejobindu Upanishad, Canto 2 full. (ii) Atharva Veda's Tripadvibhuta Maha-Narayan Upanishad, Canto 1, paragraph nos. 4, 6; Canto 2, paragraph nos. 1-8, 11; Canto 8, paragraph nos. 1-7. (iii) Shukla Yajur Veda's Brihad Aranyaka Upanishad.

(b) Advaita-Dvaita Vedanta—This is a system espoused by saint Madhavacharya. It expounds that there is a duality or distinction or separation between the 'self' of the individual creature, the world, and Brahm.

(c) Vishitha Advaita Vedanta—This school of thought is called 'qualified monoism, and it visualizes the 'self' and the world as the body of the supreme Self which is the indwelling Principle known as the Atma. Its chief proponent was Ramanujaacharya.]

41. The Atma, which is eternally neutral, stable, unchanging and steady, is constantly subject to nagging and prodding by the restive mind; the Atma is incessantly being buffeted and tossed about by the mind which is inherently restless and always changing like the waves on the surface of the ocean. In other words, left to its own accord the Atma would remain peaceful, rested and calm, but it is the vibrations generated by the sub-conscious that keeps it constantly agitated and subjected to incessant turmoil just like the ocean whose fathomless bowl containing a vast reservoir of water appears to be very calm, unmoving and stable in its great depths, but ironically the same ocean appears to be tossing about violently from the outside with huge heaving waves that rise up on its surface in a constant cycle, then move rapidly ahead for some time, only to disappear at a distance. Had it not been for the waves, the ocean would appear to be calm and smooth, but these waves render it fearsome and make it appear to be constantly agitated and on the move.

[The internal stability and calmness of the ocean is not apparent on the surface which is constantly on the boil, heaving and subsiding in an endless cycle. But this agitation is limited only to the surface layer of water of the ocean, for if one were to dive deep into its bowl one would observe complete stillness and silence just like one finds in the depth of a dense forest or high up in the earth's atmosphere. Even the roar of the ocean is limited to its surface because deep in its bowls no such sound is heard.]

In other words, it is the consciousness or the Atma itself which is the cause of its own restlessness and spiritual problems. Should the Atma decide that it wants peace and calmness and overcome its troubles, it can easily achieve them.

[The mind works only till there is 'life' or 'consciousness' inside the body; no dead body thinks though the gross organ of the brain is still present inside the skull. Hence, it is the 'consciousness' that keeps the mind and the sub-conscious active and motivated; it is the 'consciousness' that decides whether or not the mind should remain active or not. Should the 'consciousness' decide that the mind ought to remain inactive and become irrelevant, the mind cannot overrule its instructions by becoming active and pertinent on its own accord. Therefore, it is the consciousness itself that is the cause of its own problems. That is to say, it is the creature himself who is responsible for all the delusions created by an untamed and uneducated mind, along with all the attendant problems; it is the creature himself who has allowed the mind to be engrossed in the material world and its sense objects, and thereby remain miserable, unfulfilled, agitated and in a constant state of flux. If the creature wants, he can end all his spiritual problems by just reining in the mind and calming it down. In

fact, major portions of Canto 1 of this Upanishad are dedicated to this theme of controlling of the Mana (mind and sub-conscious)—refer 1/20-27, 1/33-48, 1/56-57.]

The best and the most exalted state of spiritual liberation and deliverance is attainable only when all the extrovert tendencies of the mind are chopped away (i.e. controlled and eliminated for good so much so that they can never re-generate and create fresh nuisance for the spiritual aspirant) like the uprooting and felling of a tree with an axe. This is true and supreme state of exalted existence for the creature.

[A tree that has been cut from the root would not be able to grow again. Likewise, when the mind is permanently cut-off from the world and its material sense objects, it stops being deluded by them, it stops being disturbed by the countless inputs and temptations of the world, and hence it finds permanent peace. Such a mind is able to focus on the inner-self and gives everlasting peace to the creature. The significance of this verse lies in the fact that it stresses that the controlling of the mind is of paramount importance for the spiritual aspirant. If he is able to control the mind, he can attain the highest spiritual stature one can ever hope to reach.] (41).

42. A wise and self-realised man is one who accepts and embraces the eternally immaculate pure conscious Atma, the soul, as the ‘spiritual truth’ by being firmly convinced of its truthfulness, and its divine presence in his own inner-self. He is steadfast in his beliefs about the Atma. This bestows mental, emotional and spiritual stability in him.

He is never confused or doubtful as to where the Atma is or about its truthfulness—because he has realised its presence in his own inner-self. Therefore, the skeptic thought ‘where is the Atma?’ does not bother him, and hence such delusions as are created by being unaware of the truth of the pure consciousness do not act as shackles that would tie him down in fetters of ignorance and its attendant spiritual turmoil and torments (42).

43. The mind is like the axle of a wheel, while the world and the various desires pertaining to it are like the wheel itself.

[In other words, the world and the desire to enjoy it, the inherent natural inclination of the creature’s sense organs to swerve and move towards their respective sense objects in the mundane material world, depend upon the mind just like the wheel depends upon the central axle to revolve and take the vehicle ahead. If the axle or axis is broken or jammed, the wheel would stop rotating, and therefore moving ahead. Similarly, if the mind is controlled, the world along with all its temptations is easily controlled.]

Besides this, the world is never able to actually disturb the mind if the latter is robust and strong enough just like the case of the wheel which is not able to harm the axle no matter how fast it revolves or on what ground it moves as long as the axle is strong and robust enough to withstand the rough and tumble associated with the movement of the wheel, and is sufficiently calibrated to carry the weight of the wheel and bear the burden of the vehicle.

[But should the mind become weak, unstable, ever-changing, vicissitudinous and indecisive, the world is certain to break its resolve like a weak central axle which would not be able to sustain the movement of the wheel for any length of time and would eventually break. The result of a weak mind would be as disastrous for the creature as a weak axle would be for the wheel and the vehicle that it carries.]

A firm mind that is clear in its concepts and which harbours no doubts about anything is never disturbed or influenced by any of the things or circumstances of the

world just like the strongest of winds cannot have any effect on the mountain which remains totally immune to the tempest and maintains its neutrality and stability.

[That is, a man who has inculcated firm wisdom, erudition and self-realisation is never influenced by any of the worldly delusions, and he is never in doubt about the Atma, the spiritual Truth and the all-pervading Consciousness. In spite of witnessing so much paradox, irony and dichotomies in this world, he remains firm in his conviction about the Atma and Brahm. He has no confusions and doubts in his mind, as his mind is fully enlightened about the 'truth' so much so that it does not need any more convincing and proving. The mind is so firm in its conviction and beliefs that it can no longer be deluded by the strongest of temptations and allurements arising from the fascinating world of astounding charms and magnificence.] (43).

44. A man sees so many variations of the same thing and then believes that the latter has as many forms which appear to considerably differ from one another. The fact is quite different. All these sights give different ideas for the same thing; they are deluding and misleading about the true nature and the essence of the thing under consideration just like the water present in different ponds appear different in spite of the fact that 'water' in its primary form is the same element wherever it is present. [To illustrate the point, let us take the example of the potter moulding so many things from the same ingredient, the earth. He makes toys, pots and pans of varying designs, forms, shapes and sizes. Each is known by a different name and is distinct from the other. For example, he makes a toy elephant, a doll, a piggy-bank, a pitcher, a water-pot, a clay cup and saucer etc. All have different forms, but a wise man would know that their essential ingredient is 'clay' and nothing else. So in spite of them being called by different names and exhibiting different colours, sizes and shapes, they are all 'clay' or 'earth' and nothing else. Another instance is of water—the same 'water element' is known by so many names, e.g. liquid water, ice, snow, vapour, steam, moisture, river, ocean, stream, oasis, well, pond, lake etc. Do these names mean that the essential element known as water whose chemical formula is H_2O also has so many forms? Of course not; the 'molecule of water' remains the same in whatever form it exists. It's the exterior form and structure that changes according to existential requirements, but the basic ingredient of a water molecule always remains the same. Similarly, everything in this creation, if it is to have any truth in it, is invariably 'Brahm' in that form. It is the same Brahm or the cosmic Consciousness performing myriad functions as required by the necessities of creation and exigencies of circumstances. It is indeed the same Brahm performing different duties and carrying out different roles in this world. Since the 'Atma' is the 'soul' of creation in the sense that without the Atma this creation would be hollow from the inside and without any meaning and truth, it follows that Brahm and Atma are synonymous with each other.

Again, since 'life' and 'consciousness' are the two sides of the same coin, and without consciousness there would be no life, it follows that 'consciousness' is the soul of creation. In other words, the Atma is 'consciousness' that is the 'soul' and essence of creation. Since Brahm is the basic truth of creation, and since the Atma is also the basic truth of creation, it follows that Brahm and Atma are the same thing because 'truth' can be only one, and not more than one. Therefore, the Atma, known as the consciousness, is the 'Tattwa', or the essence and fundamental basis, of creation as much as Brahm, the cosmic super Consciousness that is also the Tattwa of creation.]

Similarly, a wise, enlightened and self-realised person is one who knows that the Atma is one, immutable and non-dual, and all its variations are simply adaptations

of this Atma to suit a particular situation or environment in this creation. Hence, all the varied forms in which the same Atma exists are basically illusionary in nature; they would mislead a man if he is not wise enough to understand that the fundamental essence behind all external appearances is the Atma and nothing else. If anything does not have ‘consciousness’ in it then it simply does not exist for any given length of time without disintegrating on its own. [For instance, the gross body of any creature begins to decay and disintegrate rapidly after the death because the Atma or the consciousness has abandoned it. But as long as the same body harbours the Atma, it looks healthy and charming, without showing the least sign of decay and collapse.]

A wise and enlightened person has intelligently examined all the aspects of creation and has come to the conclusion that the fundamental ‘truth’ about all things that exist in this creation is one, and not two. He has developed the depth of wisdom and the insight to see the subtle Atma hidden as the ‘truth’ everywhere.

Such a person is certainly ‘Mukta’—i.e. he has obtained freedom from all delusions and ignorance; he has found liberation and deliverance for his ‘self’ from all the worldly fetters that shackle other ordinary and un-realised creatures to this gross world as well as their own equally gross body.

[The wise aspirant has realised that his ‘self’ is the Atma which is eternally free and the most sublime entity; it is distinct from the gross body which an ignorant creature regards erroneously as his ‘self’. The fallacious notions that the body is the ‘self’ and the gross world with its material sense objects is ‘true’ are the cause of all fetters that shackle a creature to them. Once wisdom and true knowledge dawns upon the mental horizon of the aspirant that both these notions are false, and that the truth is elsewhere, he is deemed to have broken the shackle. He realises that the ‘truth’ and his ‘self’ are both the same, and it is known as the pure consciousness or the Atma. The word ‘Atma’ itself means the essence—the ‘soul’—of anything or any given situation. Since the ‘consciousness’ is the essence of life, it is therefore the ‘Atma’ or the cosmic Soul of this creation at the macro level of existence. The same Atma is the true ‘self’ of an individual creature at the micro level of existence in this creation.

Such a man who is enlightened about this ‘truth’ is indeed freed from all fetters of delusions and ignorance. He is the enlightened one who knows about the Atma as well as Brahm.] (44).

-----*****-----

Canto 3

[This Canto is an extension of the previous Canto and primarily deals with the control of the mind—how to do it, and what its benefits are. In the course of this discussion, the higher states of existence of consciousness, such as the Sushupta and Turiya, are also described, along with how to overcome the various Vasanas or passions, and Maya or delusions.]

1. Sage Nidagh enquired from the exalted sage Ribhu, ‘Oh Lord! What is Videha Mukti? Please elaborate upon it for me. Who is that great sage who had attained this sort of Mukti, and which Yoga (meditation and contemplation) did he do in order to attain it?’ (1).

2. [Ribhu replied—] ‘There is a great sage by the name of Pandavya who lives in his hermitage situated on Mt. Sumeru that is located on earth¹. He has obtained the

knowledge of the Tattva (essence; the fundamental knowledge of the Truth) from his learned Guru (moral preceptor) whose name is sage Kaundalya. With this divine knowledge, Pandavya was able to become 'Jivan Mukta'—i.e. he became spiritually liberated and delivered from all bondages even while living possessing a gross body and living with it in this gross world.

[That is, when he accessed true knowledge and became self-realised and enlightened, he did not find it necessary to die and leave this body or the world in order to find freedom from them. He continued to live in this world and bear the body, but still enjoyed all the rewards that come to a man who is actually free from all bondages and fetters. In other words, it is not necessary to physically leave the body to become free from its bondage and break its shackles, which the term 'Videha Mukti' literally means. 'Videha' means one without a body, and 'Mukti' means freedom and deliverance. So, once a man is able to detach himself from the body by realizing the fact that his 'self' is the pure conscious Atma and not the body, he is able to snap all relationships with the body. This is tantamount to his being 'Videha Mukta' while he still lives in this world and has a physical body. Obviously, this state of exalted existence is also known as 'Jivan Mukta', literally meaning 'to be spiritually free even while having a physical gross body with which a person lives a life normally in this material gross world'.

Therefore we conclude that there is no factual difference between being 'Jivan Mukta' and 'Videha Mukta'. They are synonymous with each other for a truly self-realised and enlightened man who has known the 'Truth'.] (2).

[Note—¹Mt. Sumeru has two connotations—one is the celestial mountain located in the heaven where Gods such as Brahma the creator etc. live, and the other is located on earth in the north of the Himalayan range in what is known as the present day Mt. Kailash. This is said to be the abode of Lord Shiva, and nearby it is the legendary lake of fresh water called 'Man Sarovar'. This mountain is an important pilgrim site for Hindus.]

3. This sage (i.e. Pandavya) is regarded as the best amongst those exalted sages who were well-versed in the knowledge pertaining to Brahm. Once he had determined for himself that he would attain this exalted state of Jivan Mukti, he practiced to exercise full control over his mind and sense organs (3).

4. He adopted the path of Yoga in order to achieve this. He practiced 'Baddha-Padmasan'¹ (a special type of sitting posture adopted while doing meditation; the so-called 'closed lotus posture'), had maintained half-open eyes² (indicative of his state of mind that is lost in contemplation and deep thoughts; the state when the man is not sleeping, yet not awake in the conventional term because his mind is not focused on the external world but lost in its own inner thoughts), and had become neutral and immune to all perceptions related to the external world as well as the body³ (i.e. his mind was so transfixed in his spiritual pursuit that it did not register any of the inputs of perception gathered by the external sense organs of the body, such as the eyes, the ears, the nose, the tongue and the skin, as well as was unaware of the various needs of the body that are normally felt unconsciously by all living beings, such as the feeling of hunger and thirst) (4).

[Note—¹*Baddha Padmasan* is described in Trishikhi Brahmin Upanishad of Shukla Yajur Veda tradition, in its Canto 2, verse no. 40, and in Yog Kundalini Upanishad of Krishna Yajur Veda, Canto 1, verse nos. 5, 22-23.

The 'Baddha Padmasan' is the lotus posture in which the two legs are closed in from the knee joints so that the soles of the foot rest one on the top of the other in

front of the groins, and the open palms of the hands are placed on the soles in such a way that they rest upon each other and point upwards. Thus, the palms would be roughly placed just in front of the navel. The body is held ram-rod straight, with the buttocks, the spine, the neck and the head in one straight line.

²The state of the mind when the eyes are half-open or half-closed has been described in Shandilya Upanishad of Atharva Veda tradition, Canto 1, section 7, verse no. 17.

³This state of the mind is called Unmani state as well as Manonmani state. Refer also to Canto 1, verse no. 26 of our present Upanishad.

These have been described in the same Shandilya Upanishad, Canto 1, section 7, verse nos. 17-18, and in verse no. 10 respectively. This Upanishad is Chapter 14 of this present volume of Upanishads belonging to the Atharva Veda.]

5. By diligently and persistently practicing these exercises of Yoga he was able to stabilize his mind. He was able to keep himself neutral and detached from the numerous thoughts that naturally arose in the mind as this is its normal characteristic habit and natural tendency.

[The mind cannot remain idle no matter how hard a man tries to keep it vacant of thoughts. The mind keeps on thinking one thing or the other. In the earlier stages of Yoga this normally happens, and the wise aspirant is advised to just let them come and go on their own much like the waves arising and subsiding on the surface of the ocean. The trick is not to pay attention to these thoughts. By and by they would calm down on their own when no one pays any attention to them. The intellect aspect of the mind has to be trained and fine-tuned to neglect these thoughts that arise in the sub-conscious. Gradually such neglect becomes a natural habit, and in due course of time the man is just not aware whether or not any thought exists at all.]

It is during such lonely states when one has withdrawn himself from the external world and has diverted his efforts to do meditation and contemplation that he becomes free from all external disturbances, and it is then that he realises how restless and fidgety the mind is.

[When a man is involved in the affairs of the world he is so busy with them that he has no time to see whether or not the mind is calm or restless as during active life the mind is never expected to be calm and rested. It is during periods of no external activity that one can judge the inherent and natural wont of the mind. It is then that he discovers that inspite of the absence of all external impulses and disturbances the mind is still as busy and restless as it was while being deeply involved in the activities of the world. This is because when the active mind rests, the sub-conscious takes over, and the result is equivalent to the mind remaining as active as before. When the gross organs of perceptions and actions were involved in the affairs of the world, the mind was engaged in receiving information from the outside world, analyzing them, and then instructing the body to act accordingly.

Since there are five organs of perception (ear, eye, nose, tongue and skin) and five organs of action (hand, leg, mouth, excretory and genital), the condition of the mind was like that of a charioteer trying to control a chariot with ten horses, each trying to pull the chariot the way it prefers. Obviously, to control the ten horses is a daunting task so much so that the charioteer has no time left to think of anything. But suppose he has trained his horses so well that once put on the road they keep on running steadily in a synchronized manner on the path ahead without breaking step, the life of the charioteer would be so much the easier and comfortable. The passenger too would have a pleasant ride. In this example, the charioteer is the mind while the chariot is the body, and the passenger is the Atma of the Jiva, the living being. This is

the situation during the movement of the chariot which can be compared to the Jagrat or the waking state of consciousness.

Now let us examine what happens during the Swapna or the dreaming state. During this state the body is inactive just like a standing chariot. But the charioteer would not find rest. He would go around the chariot and see if anything is wrong; he would pick up the dusting cloth and dust the chariot; he would pat his horses, rub his hands over their back, talk sweetly to them, and feed them. That is, he would do something or the other to keep himself busy for the time the chariot is standing, but he would not use this opportunity to rest. Similarly the mind does not rest when a man dreams; it is as active as it was when the man was fully awake in this world. The only difference these two situations is that while the mind was active at a gross level when the man was awake and interacted with the gross material world, it does so at the subtle level when the man dreams. This is because the world of dreams has its existence at the subtle level instead of at the gross level.]

Hence, no matter how hard a man tries to control the mind and prevent it from swerving towards the material sense objects of the world, the mind continues to defy him and constantly thinks of this world and its charms. This is the cause of the mind's restlessness, its volatility, its fickleness, its inconsistency, its vulnerability, and it being in a state of constant flux (5).

6. Now, examples are given to explain how the mind becomes fickle, freakish, restless and fidgety; how the mind is vulnerable to being influenced by the world and its material things.

At one instant the mind thinks of some cloth, then it jumps to another thing and begins to think of a pitcher, and in the third moment it would think of some cart or vehicle. In this unpredictable way the mind moves from one subject to another in a flickering moment.

Sometimes it begins to think of two things simultaneously. For instance, a monkey sitting on a tree thinks of jumping to another tree but remains undecided whether to continue sitting on the earlier tree or actually leaving it by jumping to another.

[This instance would show why the mind is restless. The monkey's indecision makes it fidgety and un-predictable. Likewise, the mind that is not decisive and steady is also restless and torn between various options. It begins to harbour a plethora of doubts that lead to bewilderments and confusions.] (6).

7. The body of the creature has five 'doors'. These five doors are actually the five sense organs of perception such as the eye etc. The mind ventures out into the world through these five doors. In other words, the mind perceives the external world through these five sense organs. You (Nidagh) must think in this term.

[Just like a man goes out of the house through the door to see the world outside, the mind wanders into the outside world and 'sees' it through the five organs of perception in the body. For instance, the mind 'sees' the sights of the world through the organ known as the eye, hears its noises and sounds through the organ known as the ear, smells its scents through the organ known as the nose, tastes through the organ known as the tongue, and feels the world through the organ known as the skin. These organs of perception of the body employ the medium of the mind to make the Atma aware of the existence of the majestic world with its numerous charms and fascinating forms.

It follows that if one closes these so-called doors, the mind would not be able to perceive anything of the external world because it would not be able to venture out into it. The world would cease to exist for the mind. Hence, if one is able to exercise control over the sense organs of perception of the body, one would easily prevent the mind from wandering out into the material world, getting enthused by its fascinating temptations, and then falling prey to its magnificent charms, however illusionary they are. Once trapped in the maze of delusions and falsehoods, the creature finds it exceedingly difficult to get out. The result of exercising control over the sense organs of the body is a restrained mind, a calmed and rested mind that would not be overwhelmed by the stupendously magnificent scene that unfolds before it as soon as it steps out into this colourful and flamboyant world which is like a stage-managed scene created by a magician. Such a mind would not be the cause of any restlessness and agitation for the aspirant.

Earlier in verse no. 6 the instance of the monkey is cited to explain how the mind and its sub-conscious remain unsatisfied and inconsistent. This would be clear now in the context of the working of the sense organs of perception. Suppose a man attends a party where sumptuous food is being served along with enchantingly melodious music, or some famous movie on show, or where some eminent personality is attending. His mind would be hyper-active and his sense organs would be extremely volatile and impatient—he would fill his plate with one food, but while he is not yet finished relishing its taste his tongue would be longing for some other dish; his eyes would be roving wildly for some other attractive dish somewhere else on the table, and simultaneously looking everywhere through the corner to see what is happening and who is attending the party; his nose would be attracted by some other enticing aroma emanating from some other dish in front of another guest; and while one of his ears would be focused on the music of the orchestra the other would be more interested in listening to the wild gossip flying around him. The cumulative result is that instead of feeling relaxed and rejuvenated at the end of the party, the man feels exhausted, tired and worn-out.] (7).

8. Therefore, you (Nidagh) must learn to exercise exemplary control and self-restraint over the natural tendency of your sense organs of perception to be restless, fidgety, volatile and unsteady; prevent them from being extrovert and hyper-active. Stop paying attention to the constant nagging by these sense organs; neglect them; ignore them.

Instead of this condition of being on the edge, think yourself as the pure conscious Atma that has none of these negative characteristics. Be convinced and firm in your conviction that your true 'self' is not the gross body, with its restless and fidgety sense organs as well as the mind, but the Atma which is pure consciousness and a sublime entity. This Atma is a manifestation of the supreme Lord known as 'Bhagwan'¹.

The Atma is merely a witness of all that is happening around it, and it is not an active participant in any of the events or is at all affected and tainted by them (8).

[Note—¹The Atma is called the *Bhagwan* because it is the ruling Authority in the body whom the sense organs serve. The Atma is the only 'living entity' in the body as it is pure consciousness, while the rest of the body, including the sense organs as well as the mind, is lifeless and inane. While the Atma is immortal, sublime and subtle, the body is mortal, worldly and gross. Just like all the organs of the state machinery serve the sovereign, the Atma is being served by all the sense organs as well as the mind of the body.

The term Bhagwan refers to someone who possesses eclectic qualities and divine virtues that others do not have. That is why Bhagwan is described as the 'Lord' of the world. In the present context, the Atma is 'Bhagwan' as it is the supreme Authority that resides in the body of the creature, and all the organs of the body along with the mind-intellect serve this Atma. Should the Atma leave the body, the latter would be of no worth, and would be dead. This is why the organs and the brain of a dead body do not function because their 'Lord', the Atma, has abandoned it.

The word Bhagwan refers to an enlightened being who possesses certain divine qualities not possessed by ordinary entities, virtues which are even difficult for the Gods to have. The word has two parts—'Bhag' and 'Wan'. The 2nd part 'wan' means 'one who possesses', while the 1st part 'Bhag' means 'one who is like the receptacle or womb' that harbours the following six qualities or virtues—(1) to have 'Aishwarya', which means to possess all the virtues that come under the category of having majesty, powers, wealth, fortune, opulence, flourish, supremacy, sway, dominance, glory, grandeur, omnipotence and other divine faculties in existence; (2) to have all Dharma, which means to possess all virtues that come under the ambit of righteousness, probity, propriety, virtuousness, and nobility of thought and conduct; (3) to possess all the glories and majesties that come under the definition of the word Yash, i.e. to have great fame, glory, majesty and renown; (4) to have Sree, i.e. to possess all wealth, prosperity, pomp and circumstance, to have prestige, dignity, respect, honour, splendour and glory, as well as all other factors associated with those qualities mentioned in serial no. 1-3 above; (5) to have complete and comprehensive Gyan, i.e. to have true, deep, incisive, complete and all-incorporating knowledge, erudition, wisdom, skills, expertise and enlightenment; and (6) at the same time to have immaculate and the highest degree of Vairagya, i.e. to have complete renunciation, detachment, indifference and dispassion towards everything in this world. Hence, any entity that is endowed with the above six divine, eclectic and exemplary qualities is called a Bhagwan.

Conventionally, the word is used as a synonym for the words 'Lord, God, Supreme Being', and is used for someone who is glorious, divine, holy, majestic, honoured and revered.]

9. The Atma (pure consciousness) is all-knowing and omniscient. Whatever is known about the world, e.g. whatever the eyes see in this world, is due to the Atma. In other words, without the Atma the creature would not know anything of the world because the organs of perception as well the mind and intellect would not be able to function, and also because the world itself would be devoid of all forms of life.

[It is because the Atma is the 'soul', the quintessential factor of life known as 'consciousness', and as such it forms the very basis of existence and life in this creation. If there is no Atma there would be a complete void, and nothing remains to be known from a void. Nothing exists in a void that is blank and sans any substance and meaning.]

So be happy and feel privileged that you have been enlightened about the Atma, that you have been acquainted with the Atma. With this knowledge, nothing more is left to be known. Be convinced that you have attained final spiritual liberation and deliverance when you have acquired the knowledge of the Atma. Be peaceful and rested. Be free from all worldly torments and sorrows because you are free from the fetters of the world (9).

10. By becoming self-realised you (Nidagh) would be firmly convinced about the truth of your Atma, the pure consciousness that forms your 'true self'. This perpetual state of enlightenment and transcendence is called Turiya, and you would find yourself living in this state day and night. [Refer Canto 1, verse no. 25 also.]

Endeavour to exercise control over your inner-self, and gradually you would be able to control all your Prans, the vital winds that are responsible for all the subtle as well as the gross activities of the body and its various organs¹. [Refer Canto 4, verse nos. 42, 85-87 also in this context.] (10).

[Note—¹Dictionary defines *Pran* as breath, inhaled and exhaled wind, the breath of life, life itself, one of the five chief vital winds or airs that sustain life, strength, valour, courage, energy, vitality, vigour. It is also synonymous with the fire element as well as with the supreme soul or Atma. It is the 'fire element' because both the fire as well as the Pran inject and infuse life into the otherwise lifeless and inane gross body of a creature, enabling it to get up and perform its functions and carry on with its activities. A dead body from which 'life' has exited becomes cold and lifeless, thereby indicating that the fire element that is inherently present in it has been extinguished—we then declare that the man is dead.

The various Prans and how they regulate the functioning of the various parts of the body, which is tantamount to making life flow inside the body through its network of Naadis which would be like the web of wires in an electronic apparatus through which electric impulses flow in order to keep the apparatus alive and activated, have been enumerated in a number of Upanishads—viz. the *Subalo-panishad*, Canto 9, verse no. 1-14 of the Shukla Yajur Veda tradition which says that there are fourteen vital winds called Prans present in the body. It lists their functions as follows—(1) Pran—this controls eyes and the faculty of sight (verse 1); (2) Apaana—this controls ears and the faculty of hearing (verse 2); (3) Vyan—this controls nose and the faculty of smell (verse 3); (4) Udaan—this controls the tongue and the faculty of taste (verse 4); (5) Samaana—this controls the skin and the faculty of touch (verse 5); (6) Vairambh—this controls speech (verse 6); (7) Mukhya—this controls the hands (verse 7); (8) Antarayam—this controls the legs (verse 8); (9) Prabhanjan—this controls the anus (verse 9); (10) Kurma—this controls the genitals (verse 10); (11) Shyen—this controls the Mana or the thoughts and emotions (verse 11); (12) Krishna—this controls the discrimination, intellect and wisdom (verse 12); (13) Shwet—this controls Ahankar or the notion of ego, pride, arrogance, vanity etc. (verse 13); (14) Naag—this controls the 'Chitta' or the faculty of concentration, memory, sub-conscious, reasoning (verse 14).

The *Shandilya Upanishad* of the Atharva Veda tradition, in its Canto 1, section 4, verse nos. 12-13 describes the *fourteen winds*, their *locations* and *functions*. This is Chapter no. 14 of this volume.

The word *Pran* literally means the life of all living beings, so called because the Pran injects life and consciousness in the otherwise lifeless body of the organism. It is represented by the vital winds and life impulses present in the body which keep the body alive, and distinguishes a living body from a dead one. The word 'Pran' is usually associated with the vital winds of the body as it is these winds that keep the body active and alive. The Pran is sometimes used synonymously with the Atma or soul of the creature because both are equally important for a creature's existence. Whereas Pran is a synonym of life and vitality, Atma stands for the consciousness present in the body. Hence both are like the two sides of the same coin called the living being.

Though technically Atma or soul is pure consciousness while Pran is a vital wind or air element, practically they are synonymous with each other. An illustration will clear this point. Suppose a man has lost senses in his limbs—they have been paralysed, or he is lying unconscious due to some serious disease. We regard such a man as alive and not as dead as long as he continues to breathe, and as long as he breathes, or as long as he is technically 'alive' his Atma is deemed to be inside his body, because the true identity or the true self of a man is not his physical body but his Atma. Therefore we do not regard the 'unconscious' body as dead. But when he actually dies, that is, when he stops to breathe, we say that 'his Pran' has left the

body, and that 'he' has died. Now, who has died? It is the person whose Pran has left the body; and the person is the 'self' or the Atma which has left the body when the Pran made its exit from it at the time of death. This is because Pran and Atma depend on each other so much so that as soon as the Pran leaves the body, the Atma also leaves the body and we say that the person is no more. Why do we say that the 'person is no more' when the body is actually lying in front of us? It is because the 'person' is the Atma and not the body, and this Atma has left the body with the Pran at the time of death. When the proper time comes, the Atma leaves the body astride the Pran, riding piggy back on it.

The five main vital winds are Pran, Apaana, Vyan, Udaan and Samaana. Amongst them, the Pran refers to the breath which injects the vital spark of life in a body to keep it alive and active, thereby providing it with the necessary impetus, the energy, vitality and strength to perform its designated functions and duties as a living entity. All the other vital winds are of any relevance and significance only as long as there is Pran in the body for the simple reason that if the body stops breathing it would die, and the dead body has neither the need for the other winds nor are they competent enough to keep it alive relying on their own strength. At the same time, all these vital winds are collectively called Pran because they work in tandem with each other to enable the main Pran, the breath, to actually carry out its function. These vital winds do not exist in separate so-called water tight compartments, as this is an incredulous proposition because air is an element that cannot be compartmentalized into separate entities having distinct existences, but they are named as separate winds just for the academic purpose of studying the way the vital wind or air functions differently in the body to enable it to carry on with its functions. So these other 'Prans' or vital winds besides the breath, both inhaled and exhaled, are the following—Apaana, Vyan, Udaan and Samaana.

So we see that the term 'Pran' is usually applied to breath because it is the vital wind force that injects and sustains life and vitality in a creature. It is synonymous with life, Atma and soul of a living creature. The presence of Pran determines whether a creature is dead or alive; it is a distinguishing factor between the animate and inanimate world. Pran is the essential vibrations of life; it is the rhythm of life; it is the essential characteristic that defines life.

The inherent tendency of the Pran, which is the vital wind residing in the upper part of the body between the heart-lungs and the nose, is to lift the creature to a higher state of noble, righteous, virtuous, auspicious and spiritual existence, to become wise and enlightened. On the contrary, the Apaana winds live in the intestine and pass down through the anus. It symbolizes the downward drag on the creature's spiritual upliftment, pulling it down towards the grosser aspects of creation and the materialistic world which is not only gross but also filthy and worthless like the excretory matters present in the intestine. It also symbolises passions, evils, vices, perversion and attachments to the worldly things at large, and their accompanying perplexities, bewilderments and hassles leading to restlessness and moral turpitude and degradation. This oscillation between the spiritual upliftment and moving upwards towards goodness, and spiritual degradation, moving downwards towards the gross world of sensual pleasures, leads a creature to a continuous cycle of birth and death—this oscillation is like the bouncing of a ball upwards and downwards from the surface of the earth. One must remember that a lot of symbolism, metaphors and allegories have been used in the Upanishad texts to explain things. One should be wise not to lose the spirit while getting bogged down by the literal meaning of the words; one should not lose the wood while searching for the tree. The 'Pran' wind here symbolizes the upward drift which the pure consciousness is inherently inclined to, while the 'Apaana' winds pull it down towards the attractions of the world. The creature remains trapped between the two forces.

This 'vital wind' called Pran is one of the five elements of creation, called the Panch Bhuts, the others being earth, water, fire and sky.

The Upanishads describing the various connotations and aspects of the Pran or the vital winds are, inter alia, the following:—

(i) Sam Veda—*Chandogya Upanishad* in its Canto 3, sections 13; Canto 5, section 1, verse nos. 1-15; Canto 5, sections 19-23 (describes how the five winds are satisfied; it also enumerates the Mantras pertaining to the five Prans); and Canto 7, section 15, verse no. 1; *Jabal Darshan panishad*, Canto 4, verse no.23-24; *Maitrayanu Upanishad*, Canto 2, verse no. 6-7 (which describes the functions of these winds).

(ii) Shukla Yajur Veda—*Subalo Upanishad*, Canto 9, verse no.1-14; *Paingalo-panishad*, canto 2, verse no.3; *Trishikhi Brahmin Upanishad*, Canto 1, verse no. 5, 8-9; Canto 2, verse nos. 54, 77-87; *Brihad Aranyaka Upanishad*, Canto 3, Brahman 9, verse no. 26; Canto 4, Brahman 2, verse no. 4; Canto 4, Brahman 1, verse no. 3; Canto 5, Brahman 13; Canto 6, Brahman 1.

(iii) Krishna Yajur Veda—*Dhyandindu Upanishad*, verse nos. 55^{1/2}-60, 95-100; *Varaaha Upanishad*, Canto 5, verse no. 28; *Yogshikha Upanishad*, Canto 1, verse no. 166; *Amritnado-panishad*, verse no. 33-38; *Brahm Vidya Upanishad*, verse no. 17-19; *Yogshikha Upanishad*, Canto 1, verse no. 165 and Canto 5, verse no. 2; *Taittiriya Upanishad*, Valli 3, Anuvak 3, 7; *Katho-panishad*, Canto 2, Valli 2, verse no. 10; *Yog Kundalini Upanishad*, Canto 1, verse no. 2 (especially describes the three methods to control the Prans); *Pran Agnihotra Upanishad*, verse nos. 11-12, 14-18 (which describe the fingers that are directly related to the five principal winds and the Mantras of these winds).

(iv) Atharva Veda—*Annapurna Upanishad*, Canto 3, verse no. 10 (that says that Pran controls all the activities of the body); Canto 4, verse nos. 42 (that says that the Chitta Vrittis inspire the Prans to become active), 85-89 (that say that control of Pran is equivalent to control of Vasanas, and briefly outline the methods by which Pran can be controlled); Canto 5, verse nos. 25-32, 50-53 (its verse nos. 52-53 aver that for a self-realised ascetic, the terms Pran and consciousness are the same); *Prashna Upanishad*, Canto 2-3; *Mundak Upanishad*, Canto 3, section 1, verse no. 4; *Shandilya Upanishad*, Canto 1, section 4, verse no. 12-13; *Annapurna Upanishad*,

(v) These vital winds have also been elucidated upon in sage Veda Vyas' *Adhyatma Ramayan*, Aranya Kand, Canto 4, verse no.38-39.]

11. When the fuel is exhausted, the fire would be automatically doused. There is a close link between the fire and the fuel.

[The fire depends upon the fuel to make its appearance and to remain lighted. But it burns the fuel and finally dies down. The fuel on the other hand burns itself out when put in the fire. In other words, ultimately neither the fire nor the fuel survives.

This analogy is used to explain how the activities of the body and the Pran are inter-related and inter-dependent. The body is the fire, and the Pran is the fuel. The Pran keeps the body active but in the process it gets worn out, exhausted and depleted in strength due to age and so many other factors associated with life, and the toll it takes on the body. Finally, both the body and the Pran would wither away and die; both become weak and exhausted, and a time comes that both stop their movement and activities. It is said that then the creature has died. But this statement does not depict the correct picture—because, for one, the creature's true identity is his Atma, the pure consciousness, and not the physical gross body that has died, and second, the body has become unconscious or lifeless because the Pran or the vital winds have become weak and unable to support the body. The 'Jiva' or the creature has not died because his Atma is an immortal and imperishable entity that is distinct and separate from the gross body that has been made weak by the weakness of the Pran. The Atma does not become weak even if the Pran becomes weak.]

Anything that has risen would set, and anything that has set would rise. This cycle would continue till the final rest and ultimate dissolution of creation.

[The sun is the best example of this doctrine. In the present context it refers to the fact that when the body dies, the Atma is for once liberated from its bondage, but soon it lands itself in another body to take a new birth. Since the Atma is the true identity of the aspirant, it is tantamount to the aspirant dying and taking birth again and again in a never-ending cycle.

In this scenario, the only way of ending this circle and breaking free from its shackle is to permanently de-link the Atma from the body and the world. This can happen only when the aspirant realises that except for the Atma the rest of the world, including the body, are non-truths and hollow. There is no use in longing for them or remaining involved in them. To achieve this end, he has to control his mind and the various Prans. When they are fully controlled and trained, the Atma would easily break free from the fetters that tie it to the body and the world. The mind would stop being enticed by the false charms of the material world, and it would in its turn direct the body to keep a safe distance from the world. The Prans need to be controlled because they are the instruments that directly play a role in the activities of the body. If the body is to be controlled, then both the mind as well as the Pran needs to be controlled.

Further, as long as the body is kept active by the Prans, the creature would never find rest as he would continue to interact with the external world and receive numerous inputs from it that would constantly keep the mind on its toes. This is because the sense organs of perception would be kept activated when the body is kept activated by the Prans. To break this circuit it is necessary to rein in the Prans. When the Prans subside, the world would also subside. Both would 'set' once and for all, thereby giving the spiritual aspirant his much sought-after Mukti—i.e. his liberation and deliverance from all fetters. Otherwise, the cycle of rising and setting would continue unabated.] (11).

12. A person who has cultivated exemplary degree of equanimity and neutrality, who has become highly dispassionate and detached from everything, accepts all perceptions with equal detachment and non-involvement. He treats the favourable as well as the unfavourable, the pleasant as well as the unpleasant, the good as well as the bad with equally stoic attitude and indifference. Therefore, he remains untainted and unaffected by any of the things or tidings of the world. None of them is able to influence him and disturb his spiritual calmness and poise.

In fact, even when he seems to be physically awake he is actually sleeping internally, because like a sleeping man he registers nothing about the events in the physical gross world around him.

Similarly, even when he appears to be physically sleeping he is actually wide awake as he is internally mediating and contemplating.

For a truly wise, enlightened and self-realised man both the situations are alike—whether or not he is awake, whether or not he is asleep, he maintains his mental equilibrium and calmness. He remains in a steady state of meditation and contemplation whether he is awake or asleep.

[Or in other words, unlike ordinary creatures whose mind-intellect is completely absorbed in the world during their waking state of consciousness, a wise, enlightened and self-realised man remains lost in his deep thoughts of the Atma, and is meditating and contemplating internally even though he is doing all his deeds in a normal way in this world externally. But inspite of his physical body doing any deed,

his mind-intellect apparatus is not involved in the deeds done by the body. The ignorant world and cynics would say that he is 'absent-minded' or suffering from some mental disease, but the fact is quite the contrary. This man is wise and enlightened; he is enjoying the bliss that comes with total detachment and non-involvement with the world, and the peace that this gives to the soul, the pure conscious 'self'. What is the use of pretending to be happy by enjoying the transient pleasures of the world when the long-term effect is misery and pain? What is the use of keeping a false or artificial smile on the lip to please the world when the heart is full of sorrows? Is it not wiser to be called dull-witted and stupid by the ignorant ones but reap the rich harvest of ever-lasting peace, tranquility and bliss that comes with total detachment and non-involvement?] (12).

13. Such a man remains neutral and detached towards all the objects of the senses, whether they pertain to the gross external world or the subtle internal world.

[The 'gross external world' is the world during the waking state of consciousness, called the Jagrat state. The 'subtle internal world' is the world of his dreams, called the Swapna state. In both the cases the sense organs have a natural tendency to run towards their respective objects in the corresponding world. When the man is awake, the physical body and its sense organs are active and they are directed by the mind, while in the dreaming state the same thing happens but at a subtle level when the sub-conscious takes over the role of the extrovert mind. During the waking state the physical body is active and the Prans help in its various efforts, while in the dreaming or sleeping state the Prans are active, but now at a subtle level by flowing through the various Naadis (nerves and veins) in the body and keeping the subtle world alive for the sub-conscious. For all practical purposes, the Atma does not find any kind of peace as long as it allows its self to remain involved in the world—whether that involvement is at a gross level as during the waking state of existence, or at the subtle level as during the dreaming state of existence.

In other words, a truly self-realised and enlightened man would have so trained his mind and sub-conscious that whether he is awake or sleeping, they remain neutral towards and detached from the world of the corresponding state. The effect is that the man is never disturbed, he is always peaceful and blissful, he can effectively practice meditation and contemplation in both the states. Extended further, it would mean that his Prans have been controlled both in the waking state as well as in the sleeping state.]

Such a man is said to have attained the state of Turiya, or transcendental state of existence of consciousness. He remains as unmoved and stoic as the pillar of a building. He bears the body till the time comes to abandon it just like a pillar that supports a building till the time comes for its demolition (13).

14. All the three worlds (the mortal world, the world of the spirits, and the heavens; the past, the present and the future) exist simply because the creature determines that they exist. Hence, it is very easy to discard them (by simply determining internally that the world does not exist).

[The entire world is a creation of the mind of the creature that is determined to create it with its stupendous and most excellent creative powers. It first imagines something and then believes that it is a fact. Hence, should a man determine that the world does not exist for him the latter would instantly become non-existent at the subtle level of the sub-conscious mind inspite of the world's gross physical presence.]

Such a man establishes a link between his individual 'self' and 'Pranav', the supreme Brahman or the cosmic 'Self', with the aid of the divine word 'OM' (by mentally repeating it constantly). This OM acts like a long and sturdy thread that links the individual 'self' with the cosmic 'Self'¹ (14).

[Note—¹In Yoga Upanishads it has been described how the ascetic does meditation by using OM as a Mantra for various Yogic exercises. This Mantra is used to focus the attention of the mind on the supreme transcendental Consciousness. The Mantra OM is repeated constantly, consistently and persistently. It is believed that the Pran of the individual creature leaves the body and attains oneness with the cosmic Pran by riding on this OM Mantra just like someone ascending to the top floor of a high-rise building with the aid of an elevator. Refer *Varaaha Upanishad*, Canto 4, verse nos. 1.11-2, and Canto 5, verse nos. 34, 69-72; *Dhyan Bindu Upanishad*, verse nos. 9-17; *Amrit Naad Upanishad*, verse no. 24, 31-32; *Kshuriko-panishad*, verse nos. 2-5; *Yog Tattva Upanishad*, verse no. 19, 21-22, 63, 136-139; *Shwetashwatar Upanishad*, Canto 1, verse no. 14; *Yogchudamani Upanishad*, verse nos. 71, 86, 101-104.

The movement of the Pran and the energy generated by such movement produces a resonance inside the body which translates into sound just like blowing air into the conch shell or a flute produces a loud sound. In the cosmic ether, sound is produced when waves generated in the ether collide with each other or rub against each other. The sound effect is enhanced manifold when these waves overlap each other because then the energy of the individual waves are augmented. The cause of this event happening in the cosmic ether is the 'cosmic consciousness'.

The humming of the Mantra OM produces a sound that replicates this cosmic sound inside the body of the man. The skull of a creature is like an inverted parabolic dome of the creation, and it is here that this sound is heard and produces a reverberation. The movement of the Pran adds energy to these sound waves. The result is an enhanced hearing of the cosmic sound. The waves of this sound produce an experience of extreme thrill because they massage the nerves of the brain. Since the Pran moves inside the various Naadis of the body, the energy thus generated is carried to all parts of the body through these Naadis which act like the electric wires in a house that carry electricity to all the points in the building.

The individual creature's body is a microcosm of the entire creation. When we chant OM, the vibrations created by it help to keep the Prans revitalized and energized by producing waves of sound that inspire movement in the vital winds present inside the body. In other words, OM helps to charge the dynamo of life by way of keeping the Prans energized—the energy that is produced by the reverberation of the sound of OM helps to prevent the Prans from getting weak and feeble. It is like keeping the fan turned on when one sleeps; the fan would keep the room airy and help in the circulation of air inside the otherwise closed confines of a room.

The vibrations generated by the sound of OM create waves in the vital winds present inside the body of the creature. Movement of these waves would produce energy that would keep the body not only active and alive but rejuvenated and energized too. Thus the cumulative affects of the chanting of the Mantra OM are manifold—but in the context of Pran it is to keep them active, moving and energized, and preventing them from becoming feeble and unable to support the body and its activities. Since the Atma has adopted this body as its habitat, OM also helps to give comfort to the Atma, which means to the individual Jiva because the Atma is his true 'self'.]

15. Even as a bird finds its liberation by willingly leaving the cage and flying into the sky with the help of the wind, the Atma too finds its liberation by voluntarily leaving the gross body and flying to its freedom with the aid of the Prans or the vital winds.

Since this sort of Mukti (liberation and deliverance) envisages abandoning the gross body with all its sense organs, compositely called the 'Deha', it is known as 'Videha Mukti'—i.e. the freedom that is obtained by leaving the gross body for good.

When this happens, the 'self' becomes absolutely pure and sublime because it is even physically free from being forced to have some kind of contact with the gross body, however superficial and perfunctory it may be, as was the case when the creature was alive and his 'self' (i.e. his Pran or vital life-forces) had to live inside the precincts of the gross body. No faults and negativity that are inherent to the body would any longer be relevant for the creature who has attained Videha Mukti (15).

[Note—With Videha Mukti as described here in this verse, the individual creature is able to actually leave the body and fully break his links with it. It is different with Jivan Mukti in the present context because in the latter case the Pran, or the vital life-forces and consciousness of the creature, still lives inside the gross body. So no matter how detached or disassociated the creature might train himself to be from the body, but by the virtue of the fact that he has to live inside it he is subject to constant harassment and nagging by the body and its sense organs. Even if he maintains complete neutrality it would still cost him great effort and constant vigilance to maintain his neutrality. And this would drain his energy and would interfere with his peace and restfulness.

On the other hand, when he leaves the body, the detachment and disassociation is complete and final. No taints and grossness of the body would have any kind of effect on the creature any longer. He would not be at the mercy of the body and the mind for maintaining his peace and bliss. The link would be so severely severed that no vestiges of earlier life are left behind. Even if the creature did harbour some remnants of negative traits so characteristic of the gross body and the world in which the creature lives, none would survive once the body is discarded.

The creature who has attained Videha Mukti attains the supreme stature of becoming one with the all-pervading, universal and cosmic Divinity known as Pranav or Brahm, the supreme transcendental 'Self' or the cosmic Consciousness. In other words, the individual 'self' merges with its primary source, the cosmic 'Self'.

In Upanishads dealing with Yoga, this process of the Pran actually leaving the body by means of various techniques of meditation have been described in considerable detail. Basically it entails first controlling the various Prans inside the body by practicing Pranayam and other Yoga exercises, and then diverting it up through the Kundalini, the coiled energy centre of the body at the lower end of the spine, so as to reach the forehead. Here the ascetic experiences extreme sense of bliss and ecstasy. The Pran rises further ahead and reaches the top of the head from where it escapes into the outer sky through the Brahm-Randhra, the hair-like slit present in the skull, to become one with and inseparable from the air element that is universally present everywhere in the vast bowls of the sky. Incidentally, the Pran and the air element are synonymous entities. While the 'air' left to its own accord is neutral and apparently without any evident signs of 'life', the subtle dynamism it contains is revealed in the form of 'Pran' that infuses 'life' in the otherwise lifeless and gross world.

This is a one-way escape of the Pran from the confines of the gross body into the air outside is tantamount to the creature's final liberation and deliverance.

In this context, the term 'Pran' and 'life' as well as 'consciousness' are taken to mean the same thing; they all refer to the actual 'conscious self', the 'living being' who finds his emancipation and salvation by this method of Yoga.]

16. Oh the excellent sage (Nidagh)! The state of the mind and the sub-conscious of a man who has attained self-realisation and has reached the transcendental state of consciousness known as Turiya is as innocent, pure and uncorrupt as that of a new-

born child. At the same time it is as calm and motionless (i.e. steady and poised; free from all agitations, restlessness, bewilderments, confusions, perplexities and doubts) as the wind which has no vibrations or movement in it, which is absolutely calm and static (16).

[Note—We can understand it with a simple example. The leaves of a banyan tree shake with the slightest hint of breeze, but when there is no movement in the leaves we conclude that there is surely no breeze. Similarly, when the mind is quietened the Pran is deemed to be quiet, and when the Pran is quietened the mind is also deemed to be quiet. In practical terms it means that when the creature has been successful in controlling the natural tendency of the mind to think of worldly things and harbouring desires for anything in this world, he is able to control the activities of his body because he would not allow any of the gross organs of perception and action in the body to have anything to do with the sense objects of the gross world. A regulated body is equivalent to regulated Prans because all the activities of the body are under the control and supervision of the various vital winds present inside it as outlined in note of verse no. 10 of this Canto.

The reverse is also true. If the body is not involved in enjoying the world and getting involved in its affairs, if the gross sense objects of the material world fail to tempt the body, it is natural that the mind would be in peace and at rest. It becomes restless because it is constantly being bombarded by countless inputs of the sensory perceptions originating in the external world.]

17. A self-realised and enlightened man lives with a calm, peaceful and steady mind and sub-conscious that is the natural state of consciousness during the Sushupta state. In this state, the only entity that exists is the consciousness with its grand sublime virtues and eclectic divine qualities, while the world, both the gross and the subtle, are made redundant. Thus, the man can live peacefully and blissfully, without any kind of restlessness and agitations, or any kind of bewilderments, confusions or doubts when he has reached the Sushupta state of existence.

[The Sushupta state is the third state of existence of consciousness when the mind as well as the sub-conscious has been rendered inactive, or they have shut down. This is a higher state of sleep and it comes beyond the second state of Swapna or dreams when the sub-conscious mind is active even though the active aspect of the mind is shut down. Since the mind is the only instrument that acts as a link between the pure consciousness and the external world, whether at the gross level or at the subtle level, so when the mind is kept aside, the consciousness is left alone, and it is then that the latter's natural and inborn characteristics and virtues come to the fore. The glories of the Atma make their presence felt during the Sushupta state of existence of consciousness because now there is no interference of any kind, either from the external world or from the internal world of the sub-conscious mind.]

This Sushupta state is the preparatory state for the higher state of Turiya. In other words, what is experienced during the Sushupta state is made permanent and robust in the Turiya state (refer verse no. 18 below). The Turiya state is compared to a large mountain which is absolutely unmoving and unchanging over time no matter what happens in the world around it.

[No seasons affect it; rain, sunshine and tempest are equal for it. It may be covered by snow and barren cliffs, or it might harbour a vibrant wildlife and a dense verdant forest, but none of them ever bothers the mountain. Similarly, nothing of the world ever affects the inner-self of a spiritually enlightened aspirant who has attained the Turiya state of existence. This state is marked by absolute calmness of

demeanours; it is an eclectic state of blissfulness and peace of a high order. This is the state of spiritual blessedness.] (17).

18. By first attaining the Sushupta state he progresses and graduates to the higher state of Turiya. Such an attained soul achieves an eclectic state of existence where everything is alike for it, where it does not distinguish between a situation that gives happiness and bliss, and another that does not. For an enlightened man, there is no such thing as something being 'true' and the other being 'un-true', for he has developed complete neutrality towards everything else except the Consciousness that he knows is an irrefutable and unequivocal Truth of existence. Once the 'Absolute Truth' is known, other 'non-absolute truths' do not bother him at all.

[In other words, he lives in that higher state of consciousness where mundane matters do not cast their dark shadow of unhappiness and misery. He is so high up in the hierarchy of existence that lowly things do not matter for him or bother him much like the sun that is unbothered by small patches of the earth that are covered by clouds or some deep cave where no sunshine ever reaches. The earth rotates on its axis as it goes around the sun so that every other moment a new fraction of the earth's surface would face the sun, but the sun is unconcerned.] (18).

19. In the higher state of spiritual realisation, the enlightened man attains an eclectic form that is invisible, divine, sublime and most subtle.

[This is because now he is not to be recognized by his gross body or the state of the mind. His true identity in the higher echelons of realisation is the Atma, the pure consciousness that is an ethereal entity that is not physically visible as it has no grossness like the body. The Atma has no such thing as a separate mind that needs to be taught and tamed, a mind that has to learn something—this is because the Atma is eternally and inherently all-knowing and omniscient; it does not need to be taught and made any more wiser than what it already is.]

This subtle and invisible form cannot be described or narrated by speech; it is beyond the reach of words and the faculty of speech. [Why is it so? Now, this question is being answered—] It is because his form is transformed (from being something gross like the body) into something that is ethereal and sublime, a form which is described as 'Shunya' (or a void, a non-being, the complete absence of grossness and awareness of the material world, the highest degree of neutrality and subtlety like the zero gravity in outer space where there is no weight in even the heaviest of things) by those who are votaries of this philosophy, and as 'Brahm' (or the most sublime, all-pervading and omnipresent cosmic Consciousness) by those who espouse the philosophy of Brahm.

[The form that is being referred to in this verse is that of the pure conscious Atma or the soul or the true 'self' of the aspirant, or for that matter of any living being. This 'Atma' is looked at from different angles and assigned different names under various schools of philosophies. Some are mentioned in the present verse and others are outlined in the following verses.

The Atma is known as 'Shunya' because it is absolutely dispassionate, unattached and neutral like the center of a bar magnet. The word 'Shunya' also implies the void of the sky which harbours everything in existence but itself remains unattached to and unaffected by any of them—a virtue that the Atma too possesses. Like the numerical 'zero' (Shunya) that itself is neutral but gives other numerals their enhanced value in terms of tens of hundreds and thousands, the Atma itself remains neutral and inactive but it is the only entity that is the cause of this creation and makes

the world go around. It is the Atma that lends dynamism and life to this otherwise lifeless and inane world. What worth is a world that is dead, because if the Atma—the ‘consciousness’—leaves it the world would be dead in an instant.

The same Atma exists in two planes of existences—one is at the microcosmic level of the individual creature in which case it is simply called the Jiva-Atma, and at the cosmic all-pervading and all-encompassing level in which it is called the Parmatma, the supreme Atma or the Supreme Being. This Supreme Being is none else but Brahm, or the cosmic super Consciousness, that forms the basis and is the soul of the entire creation.] (19).

20. Again, a self-illuminated and enlightened Atma (i.e. the ‘self’ of the spiritually attained man) has the form that is immaculate and pristine pure, a form that is absolutely untainted and free from all worldly corruptions. This form of the Atma is the one that is lauded and honoured by those who are called ‘Gyanis’—the wise and enlightened men who have in-depth knowledge and a high level of sagacity and erudition.

Similarly, the same Atma is known as the ‘Purush’ (the primordial Being who is the cause of creation) by the followers of Sankhya Shastra (which is a school of philosophy propounded by an ancient sage named Kapil).

Those who follow the philosophy of Yoga (meditation) call this Atma as the ‘Ishwar’ (literally the ‘Lord’ of all that exists, the Supreme Being himself personified). [The followers of Yoga strive to find Mukti or Moksha, i.e. liberation and deliverance, salvation and emancipation, by experiencing this Atma as the pure consciousness in the higher stages of meditation and contemplation. When this is achieved, they experience bliss and ecstasy of the highest kind. They regard this achievement as the realisation of the Supreme Being. For the Yogis, realisation of the individual consciousness known as the ‘Atma’ and establishing its oneness with the cosmic Consciousness known as ‘Ishwar’ is tantamount to having attained Mukti and Moksha. Since the Atma resides nowhere else but in the inner-self itself, the Yogi endeavours to realise his ‘true self’ to attain Mukti and Moksha. For this, he takes the recourse of many methods of Yoga outlined in the Upanishads dealing with the latter.] (20).

21. For Shaivas (the followers of Lord Shiva), the Atma is Shiva.

[‘Shaivas’ are the followers of Lord Shiva who treat him as the Supreme Being. Lord Shiva is the third of the Trinity Gods, and is the concluder of creation. Since he is the Supreme Being, he is also known as ‘Mahadev’—the Great Lord. The word ‘Shiva’ itself refers to an entity that is pure, truthful, blissful, uncorrupt and most enlightened. Since the Atma is inherently endowed with these virtues, it is most apt to call it ‘Shiva’.]

For those who regard the ‘Kaal’ as the supreme force, the powerful influence and the superseding Authority in creation that controls everything in existence, the Atma is none else but Kaal personified.

[The word ‘Kaal’ applies to such concepts as time and period, circumstance, situation, occasion, age, era, fate and destiny, and even to death. The God of death and destiny is known as Yam. Nothing can overcome the force of Kaal; it is the factor that determines what would happen when. Those who regard the term ‘Supreme Being’ to mean a supreme entity that has overriding power and authority in creation, they treat ‘Kaal’ as the Supreme Authority. Since the Atma is the supreme entity in creation, since all life would be obliterated if there was no ‘consciousness’ in the

gross body and the equally gross world, since it is the presence of this consciousness that decides as to how long a given entity can live and when it would die (because 'death' means that instant when the consciousness has physically abandoned the gross body of a creature), since the word 'Atma' itself means the 'soul' that is the basis of anything in existence, it follows that the Atma is none but a personified form of Kaal as defined herein above.]

The Atma is such a flexible, adaptable, all-encompassing, all-inclusive and all-pervading cosmic entity that nothing in this creation is excluded from its purview or reach. It transforms its self in any way or any form whatsoever one wishes it to perceive it in.

[To illustrate this phenomenon one can take the example of water present in so many varieties and forms—such as ice, snow, vapour, cloud, steam, liquid water, river, lake and etc. They are all 'water' in their basic form. Another illustration would be 'gold' which can be moulded into a variety of shapes and sizes to make ornaments of gold which in their external form would have no resemblance to the primary metal, but are 'gold' nonetheless.]

The Atma also appears as the subtle aspect of the heart for those who believe in the existence of the body.

[The 'heart' is the only organ in the body without which life would be snuffed out in an instant. A man can survive without any of one or more of his sense organs of perception or action—such as a deaf man, a dumb man, a blind man, a man who can't smell due to some serious infection of the nasal passage as it happens during cold and catarrhs, a lame man, an impotent man, etc. Similarly, a man who has no intelligence worth the name or whose mind is not working at all—such as a mad man, a block-headed ill-witted stupid etc.—too can survive. Again, in cases of emergencies, people are known to survive when one of their internal organs or a part of them are removed—such as the cases when one kidney is damaged and is removed by doctors, or when a part of the lung is removed due to cancer or malignancy. But say, can anyone live even for a fleeting moment if the heart stops beating, or if a part of it has malfunctioned? Can anyone survive the collapse of the heart? It is the heart that pumps blood, the 'river of life', through the countless veins and arteries meandering through the length and breadth of the body.

The breath and other vital winds in the body, called the Prans, would not be able to keep the body of the man alive if the heart does not do its duty, if the heart stops functioning. Similarly, the brain, which harbours the man's mind-intellect apparatus, would not be able to keep the body alive should the heart decide to call it quits. Mere good appetite and excellent digestion would not do any good to the body if the heart does not allow the blood to take the nutrients to all the distant parts of the body of the creature. In brief, there is nothing in the gross body that can keep the man alive if the heart does not cooperate. In other words, the heart is the 'core' of life in the body of a living being. Since we recognize that the essence and core of life is known as the Atma, it follows that the physical heart is the centre or the seat of the Atma that is the supreme Authority in the creature's body. Left to its own accord, as everyone knows, the heart is merely a mass of flesh and blood, but it is the 'consciousness' that is quietly and imperceptibly present in it that powers the dynamo of life in the form of the subtle currents of electric that activates the physical aspect of the heart and keeps it working. Since this 'consciousness' is the 'core of the heart', or we can say it is the single most important entity that gives the physical organ known as the heart its importance for the life of a living being, it is most appropriate to call it the 'Atma' or the 'soul' of the heart. It is the basis of the heart's importance and

significance vis-à-vis the life in the body of the creature. And since the heart itself is the core and basis of life in the otherwise lifeless gross body, it is also apt to call the heart as being equivalent to the Atma of the creature, for no one can survive without the heart. Therefore, in a metaphoric way and in the context of metaphysical importance and relevance of the heart vis-à-vis the Jiva, the living being, the heart is like the Atma for the Jiva.] (21).

22. The Atma lives as the essence and the ultimate truth of anything in existence; it is the 'soul' of existence; it is the factor without which nothing would exist.

For those who treat the Atma (or pure consciousness) as being a self-illuminated source of divine 'light', it is like the un-flickering flame of a lamp that is not disturbed by breeze.

[The light emanating from such a lamp is steady and its flame is erect. The Atma of a wise and enlightened man too is constant, steady, upright and straight; there is no crookedness or deceit in it; it does not deflect from its chosen path if left untouched by worldly delusions. Just like the un-flickering and steady light of the lamp illuminates its surroundings uniformly, the Atma too illuminates the inner-being of the spiritual aspirant uniformly. In other words, when one realises the Atma it is said that he has become 'self-realised' because he has gained the knowledge of the divine entity that is at the core of creation, that is the ultimate Truth of creation, that is a fount of eternal knowledge that leads one to his spiritual liberation and deliverance, the knowledge that is at once the most enlightening and spiritually empowering, the knowledge which provides the creature his salvation and emancipation.] (22).

23. The Atma is to be experienced and witnessed first hand by the spiritual aspirant—i.e. it cannot be taught or bought by someone, given to or taken from someone, nor can it be brought from somewhere or taken somewhere else. It has to be realised by the aspirant himself, and that too within his own inner-self and no where outside. This is the philosophy of those who espouse the importance and import of the eclectic doctrine of 'self-realisation'.

For the adherents of the philosophy of 'Dwaitya' (i.e. those who believe that the same Atma exists at two planes—one as the visible world and the other as the transcendental world, both being real in the plane they exist), the Atma assumes the corresponding dual form. That is, they regard the same essence known as the Atma as having a dual form—viz. it is 'Vyakta' or manifested, as well as 'Avyakta' or unmanifested; it is varied, diverse and multifarious on the one hand, and one, unchanging, uniform and immutable on the other hand. They would treat the physical gross world as true because it is the Atma in that form, and simultaneously regard the transcendental state that is subtle and sublime also as true as the Atma exists in this form too.

The Atma is such an exceptionally fascinating, esoteric, enigmatic, mystical and mysterious sublime and divine entity that inspite of the various and numerous ways it is perceived and understood to exist, it is all of them simultaneously and none of them exclusively; all its forms are true and no one form can claim to represent it exclusively to the exclusion of any of the other forms. The Atma incorporates all the myriad definitions that are assigned to it for the purpose of understanding its profundity and it stands true to each of these criterions, but it cannot be limited to any one of them exclusively. In other words, the Atma is an incomprehensible and an indefinable entity in creation (23).

24. The Atma (the pure cosmic Consciousness) is a sublime and divine entity that is most unique by nature. The Atma is an entity that is without a birth as it is eternal, that never dies as it is imperishable, that has no beginning as it is both eternal and infinite, and that is the beginning of everything in the sense that the rest of the creation has its origin in it. The Atma is regarded as the immaculate and most exalted entity by reaching or realizing which a seeker is said to have attained the supreme stature. It is an all-inclusive element in creation with nothing out of its purview and reach. It is absolutely neutral, dispassionate and detached as well as universal and uniform by its inherent nature.

A self-realised, wise and enlightened spiritual seeker who has realised this eclectic and divine Atma in its truthful form is said to have become as immaculate, holy, divine and pure as the Atma itself.

[This is because this seeker would have realised that his ‘true self’ is the pure consciousness known as the Atma which possesses the grand virtues enumerated above.]

He vision and thoughts expand and he becomes all-inclusive like the vast sky. Such a man is deemed to be as free and unbound as the sky that cannot be shackled by or bonded to anything.

[In other words, just like the sky harbours innumerable objects in its vast bowls but remains basically uninterested in them or unbound to them, the wise and enlightened man accepts all doctrines and philosophies with stoic neutrality, and instead remains focused on the spiritual path he has chosen for himself. He lives in this world, sustains a body, interacts with others by the medium of a gross body in this physical world—but internally he is completely detached and separated from all of them. This is because he knows the eclectic spiritual truth that what is meant by the term ‘he’ is a divine and sublime entity known as the Atma which is pure consciousness, and not the physical gross body which lives and interacts in an equally gross world. He also knows that this Atma is not only immortal and eternal but infinitely powerful and sublime as opposed to the body which is mortal, with a limited power and reach.] (24).

-----*****-----

Canto 4

[This Canto is a further elaboration of the concepts of Jivan Mukti and Videha Mukti that were initiated in Canto 3. During the ensuing discussion, the concept of Chitta (mind and sub-conscious) and Mana (mind and heart), and how to refine and control them are elaborately explained. Further incorporated in the discussion is the concept of Vasana and Vritti (the inherent passion, lust and desires that a creature has, as well his natural temperaments and inclinations respectively).

All these three components—viz. (i) Mukti, (ii) Chitta and Mana, and (iii) Vasana and Vritti—are intricately related to each other, and one must have a comprehensive understanding of them all if one wishes to obtain spiritual welfare.]

1. [Sage Nidagh asked the exalted sage Ribhu—] ‘Oh exalted sage! What are the signs of freedom that is known as Jivan Mukti (i.e. to be free from all spiritual bondages even when a man is alive in this world and lives a normal life), and how does it differ from the freedom that is obtained when flies off into the sky (i.e. the

Videha Mukti, the spiritual freedom found when one actually dies and leaves the physical body so that the spirit present inside it is freed from its fetters)?

If there is an actual state of existence when one can move freely in the sky without being subjected to any fetters (as is expected to happen going by the literal meaning of the term ‘Videha Mukta’), then why is that Jiva (the living being; the creature) not visible in the sky?’ (1).

2. [Sage Ribhu answered—] ‘As far as moving in the sky, or being able to fly freely and being physically visible is to be regarded as the criterion for a person who has attained Mukti, even those ignorant and lowly creatures who have no idea about the concept of the Atma, the pure consciousness (such as the bird), would serve the purpose.

[That is, if you regard being able to fly freely in the sky and the flier’s visibility as the only criterion for determining that liberated souls who have abandoned the gross body and have broken free from its shackles exist in the space of the sky then you can satisfy yourself by watching the bird or any other inane and gross thing that is visible in the sky, such as the kite or the cloud. But they are not the ones who fall under the criterion of liberated souls; they are not ‘Jivas’ or living beings even by any stretch of imagination. It would be most stupid and absolutely insane and incredulous to suggest it.]

An ignorant creature who is unaware of the ‘Atma’, the ethereal and pure consciousness, and who has not understood the real meaning of what constitutes ‘Mukti’ (spiritual liberation, deliverance, emancipation and salvation) and its intention, employs numerous means to attain the latter (Mukti)—such as for instance he attempts to gain Mukti by the use of material things (e.g. by giving wealth as donations, making charities of material wealth, doing sacrifices involving huge consumption of materials such as fuel, offerings etc.), or by employing various Mantras (spiritual formulas, and doing rituals with them, or doing Japa or repetition of these Mantras), or else by performing numerous deeds (such as doing auspicious deeds as going on pilgrimage, serving others, participating in religious activities etc.), or by waiting for the opportune moment to obtain Mukti (such as living in a holy site and waiting for natural death in the hope that Mukti would be found if one dies in such a place).

In other words, only those who are ignorant about the true nature of Mukti believe that it can be attained by making some physical effort and spending energy on its pursuance.

[The fact is that all these are erroneous ways of looking at the concept of Mukti. The Mukti that is envisaged by the Upanishad is different and not dependent upon any of the methods listed here. It is directly related to the knowledge of the truthful Atma, and identifying one’s self with the Atma and not the body in which the Atma lives. True Mukti is freedom from the stubborn shackle produced by ignorance and delusions.] (2).

3. This is not how the subject matter of Mukti¹ is treated by those who know the truth of the Atma (i.e. who are self-realised and know the truth of pure conscious soul). A person who is truly wise and enlightened is focused on the Atma only, and is not deviated by numerous ways the same truth is interpreted in this world by those who are deluded and ignorant.

He is contented with the knowledge that is known as ‘Vidya’, or the truthful knowledge of the Atma (i.e. the spiritual ‘truth’ that is related to the pure

consciousness), and does not run behind 'Avidya' or the false knowledge of things that are non-Atma (i.e. things that are non-truths) (3).

[Note—¹The term *Mukti* refers to a state of existence of the creature when he is free from all bondages and fetters. A person who has attained spiritual liberation, deliverance, emancipation and salvation is the one who has truly attained Mukti. Mere freedom from bodily bondages is not spiritual Mukti, and such freedom has only a limited meaning. A person may be an emperor or a king but he would not at all be regarded as being Mukta (free and liberated) if he is strongly shackled to this world of material objects, if he has not understood the true reason behind the cycle of birth and death as well as the fact why he has become a king while the other person is his subject or even his serf. Anyone who has not understood the true spiritual and metaphysical import of the meaning of the term 'Mukti' cannot be regarded as being free from bondages.

There are two terms usually used to mean freedom—one is 'Mukti' and the other is 'Moksha'. Overall they mean a person's spiritual freedom and deliverance, but while Mukti refers to liberation and deliverance, the term Moksha means final emancipation and salvation. Mukti and Moksha can be said to be the two sides of the same coin, and they are synonymous with each other.

The only path of Mukti is being enlightened about the Truth of Brahm. This is affirmed and espoused in *Tripadvibhut Maha-Narayan Upanishad* of Atharva Veda, in its Canto 4, paragraph no. 4.]

4. [Now, what is 'Avidya' is being explained—] To think that this world consists of so many material things that have a real existence, to believe these material things and the world of sense objects to be true is known as 'Avidya'—lack of true knowledge and dominance of ignorance.

All the things of the world consisting of material sense objects are the subject matter of Avidya. [Refer Canto 5, verse no. 19.]

[That is, when one is ignorant of the fact that the world is of a gross and artificial nature, and that it is entrapping as well as deluding for the Atma, he would pay attention to the material things of the mundane gross world; he would think of these things as having any kind of real value and importance which is worth paying attention to. It is 'Avidya' because such knowledge is not based on facts as the world and its material sense objects are un-truths; they are imaginary and deluding. They are like the mirage seen in a hot desert—appearing to be so alluring and real, but having no substance in it.]

Hence, a person who is known as 'Maha Yogi'—i.e. a great ascetic who is very wise and enlightened, who is well acquainted about the 'truth' of the Atma, abandons such fallacious and deluding notions (as outlined above) (4).

5. A person who is stupid and of low intellect would yearn for acquiring the various Siddhis (mystical powers that come by doing Yoga and other spiritual practices), and to obtain success in his endeavours he would adopt any method that he lays his hand on. All the numerous methods are like webs that would entangle him. He tries to obtain Siddhi by any method available, without paying attention to their effectiveness and worth (5).

[Note—The word *Siddhi* literally means to obtain success in one's endeavours, to be skilled in one's trade, to be an expert in any field. In the context of Yoga and spiritual practices, it refers to the achievement of certain mystical and super-natural powers. A man who is not wise thinks that by acquiring some or the other Siddhi he would be liberated and delivered from his worldly fetters. But he is deluded in this thinking. Instead of reaching his actual spiritual goal of finding 'true' Mukti—or 'real' freedom

from the bondage of the body and the world which comes with realizing the Truth known as the ‘self’ and the pure conscious Atma that is eternally free, he would be bogged down and trapped by following this or that method in his hurry to obtain some kind of Siddhi in the fallacious hope that these Siddhis would help him find Mukti. They do not; instead of liberating him they trap him further. When he attains Siddhis or when he acquires some sort of mystical and super-natural powers, he is usually filled with a sense of pride and achievement. There are good chances that he would boast of his prowess and powers, strutting around haughtily displaying them, and expecting honours and acclaim. Indeed, his wishes would be fulfilled because he would be crowded by favour seekers and those who need his intervention to solve their worldly problems, but in the bargain he loses his spiritual peace and attainments. Public advertisement of spiritual achievements would undermine his quest for spiritual upliftment and liberation; it would rob his soul of its yearning for peace, tranquility and serenity. Company of the world would distract him from his chosen path. Therefore, acquisition of various Siddhis by a man who is not sure of his goal in life would be similar to acquisition of material wealth by a greedy man who becomes so obsessed by it that he forgets everything else and his selfishness and greed increase exponentially instead of abetting in the least. He is also like a man who has acquired scriptural knowledge only with the intention of gaining worldly fame and as a means of livelihood, who wishes to milk this knowledge for pecuniary gains—for in the process his spirit is demeaned, denigrated and demoted.

Such persons can never hope to find spiritual welfare and upliftment. They can never hope to reach their final spiritual goal of finding Mukti. They are so foolish they have frittered away the golden chance of using Yoga as an instrument to achieve spiritual freedom and deliverance by bargaining its achievements such as acquisition of Siddhis to get worldly benefits. Refer verse no. 6 below.

The wise and enlightened ascetic is one who does not get deluded by the various Siddhis that naturally come to him as a reward of success in Yoga. This fact has been affirmed in the Yogtattva Upanishad, verse nos. 21-22, 62, 76-79, and the Yogshikha Upanishad, Canto 5, verse no. 62 of the Krishna Yajur Veda tradition.

The following Upanishads deal with the achievement of various Siddhis as a reward of doing Yoga—a) Krishna Yajur Veda—Yogshikha Upanishad, Canto 1, verse no. 151-155, Canto 5, verse nos. 46-55; Yogtattva Upanishad, verse nos. 56-102; Brahm Vidya Upanishad, verse nos. 23-24. (b) Atharva Veda—Sita Upanishad, verse no. 37 (which says that goddess Sita is like the Kamdhenu cow who grants the eight Siddhis); Annupurna Upanishad, Canto 4, verse nos. 5-8 (which says that a wise aspirant should not be deluded by Siddhis); Tripura Tapini Upanishad, Canto 2, paragraph no. 12 (which says that the eight Siddhis are enshrined in the first outer ring of the Sri Chakra used to worship Goddess Tripura).]

6. Material things of the world (such as wealth), Mantras (spiritual formulas used during various religious practices), various auspicious deeds and actions, as well as Kaal Shakti (the power of ‘death’ to provide a person freedom from the torments and numerous problems that he suffers from while he lived in the world and had a body, because with ‘death’ he leaves them behind) can be helpful in obtaining various worldly acclaim and super-natural powers known as ‘Siddhis’¹, but they can not provide the supreme Truth to the spiritual seeker. None of the Siddhis can ever provide the much sought-after ‘Param Pad’, literally meaning the supreme stature, or the state of being highly exalted and enlightened, to the spiritual aspirant.

[A man might do great sacrifices using immense wealth and huge amounts of material things as donations and charities in order to attain some special powers. He

might repeat some Mantras or undertake some mystical occult practices to acquire some mystical and super-natural powers. He might even spend his time and energy in doing auspicious deeds in the hope that some special mystical benefits would accrue to him, that he would acquire some sort of special powers and authority not available to others. He might even prefer to wait out his time to die so that he can find liberation and deliverance from his miseries. But all these would not give him access to the real and truthful form of Siddhi—i.e. he would not have achieved success in the real sense.

The reason is that all the so-called Siddhis bestow upon him some kind of super-natural powers that are enumerated below, and he would be swept off his feet by being able to perform miracles that other lesser mortals can't do. This would make him proud, arrogant and egoist; he would lose his footing or mooring or bearing when surrounded by acclaim and fame that come naturally to a person who has access to super-human powers. He would lose sight of the real goal of life to find final liberation and deliverance, to acquire knowledge of the essence known as the Truth. He would remain trapped in the cycle of birth and death; he would remain attached to the world and the body because of the simple fact that the mystical and super-natural powers acquired by him can be used only as long as there is a body.

This is because the Siddhis are dependent upon the body—they need the efforts of the body in their acquisition, and they can be employed only as long as the man is alive, for once he dies they become irrelevant. A dead man does not display any mystical powers. So obviously, the bondage of the body is still there; the dependence on the body is not done away with, and therefore no true freedom is obtained.

As for obtaining freedom after physical death of the body, this is also not possible because the creature would take another birth in order to fulfill his unrequited desires and to suffer the consequences of the deeds done in the previous life.

Hence, neither the obtaining of various Siddhis in the physical world that might give super-natural powers to the person would raise him to an exalted stature that would make him the supreme authority in this creation, nor can this stature be obtained upon death. This is because the 'supreme stature' that is referred to here is the stature beyond which nothing is to be attained or reached. In this context, the various Siddhis are just milestones marking the various stages of his spiritual progress, but they are not the final goal, they aren't his spiritual destination. Similarly, a creature would be re-born after death if he has not found 'true' form of liberation and deliverance or 'Mukti'.

Therefore, neither attaining super-natural powers known as Siddhis, nor the death of the physical body are any indications of one's attainment of the supreme state of exalted spiritual existence. That is, one cannot be called freed from the grossness of the existential world and the body if he acquires some sort of magical powers that can enable him to do super-natural things and perform miracles that other ordinary creatures cannot do—such as being able to lift himself against the forces of gravity, or being able to control his breath for prolonged periods of time, or being able to make himself small or large in size than what he actually is, or being able to leave the gross body for a limited time and travel in space like the wind. All these things can be done easily by acquiring the various Siddhis that come naturally as a reward of Yoga.

Similarly, one cannot be called freed from the fetters of the body as well as the world simply because he has died and left the gross body. If the mind and the heart had been hooked to this world and unwilling to leave the body at the time of death, though of course it had to do so because the body had withered away by the natural

process of aging, the creature is bound to take another birth so as to fulfill its desires and hopes of continuing to enjoy the world and the body.

Then, what is it? The answer lies in the realisation of the fact that the ‘true self’ is the Atma, that this Atma is the pure consciousness that is the universal ubiquitous Truth, that this Atma is synonymous with the supreme Brahm who is the only almighty Authority in creation, and that the Atma is endowed naturally with all the powers and authority that one seeks to get by obtaining the various Siddhis. This Atma is the eternally and perpetually free entity that is not under any kind of bondage or fetter, and therefore one need not die in order to attain freedom. Therefore it follows that when one has realised or attained the Atma, when one has become self-realised and has accessed the fount of pure consciousness residing in his own inner-self as his Atma—then he need not strive to obtain any other separate Siddhi or any other separate Mukti as they are attained immediately and simultaneously when one becomes self-realised and attains the knowledge of the Atma. In other words, realisation of the Atma is tantamount to attaining all the Siddhis and all forms of Muktis together.

Such divine and holistic views of the ‘self’ makes the aspirant convinced that he has attained the state of supremacy in this creation; this helps him to avoid pursuing various Siddhis in order to establish his powers and authority in this world. It also eliminates the need to die in order to obtain some exalted abode in the heaven, because for an enlightened man who has become self-realised there is no separate heaven somewhere in the sky but it is located in his inner-self where the Atma resides.

If obtaining Mukti, or liberation and deliverance, is his ultimate goal for which he does so many things, such as practicing Yoga by which he is gifted with many Siddhis that come naturally as a bonus by doing Yoga etc., then he would be well advised that ‘true and meaningful Mukti’ comes only when the spiritual aspirant or seeker realises his ‘true self’ as the Atma, the pure consciousness. This realisation gives him true Mukti because of the simple fact that the Atma is an ethereal and sublime entity that is never bound, that is eternally free, and that does not need some Siddhi to prove its super-natural powers and authority. The Atma is eternally all-knowing and omniscient; it is eternally powerful and almighty; it is eternally all-pervading and omnipresent; it is eternally truthful and one of its own kind. It has no dual existence, and therefore there is no need to seek a special form that is better and more powerful or more enlightened or more pure than what is it at present. The Atma does not need any special Mukti as such.] (6).

[Note—¹The word *Siddhi* refers to various mystical and occult powers that a spiritual aspirant acquires as a result of certain ritualistic practices.

There are eight Siddhis which are divine mystical powers which enables the person to accomplishment astounding feats. They are the following— (i) ‘Anima’ ‘अणिमा’ means the power to become microscopic or so minute that one becomes invisible to the naked eye; (ii) ‘Mahima’ is to have majesty, glory and fame; to be honoured and acknowledged for one’s achievements, wisdom, erudition, knowledge and skills; (iii) ‘Garima’ is to have weight, stature, dignity, decorum, gravity and significance; (iv) ‘Laghima’ is the grand virtue of being simple and humble inspite of being great, powerful and authoritative; it is to have simplicity and humility despite possessing grandeur, majesty, power, authority and magnificence; (v) ‘Praapti’ is to be able to attain or obtain anything wished or desired for; (vi) ‘Praakramya’ is to have valour, ardour, strength, powers, prowess, potential and punch leading to triumph, glory and majesty; (vii) ‘Ishwatwa’ is to be able to have lordship or sway over everything else; and (viii) ‘Vashitwa’ is to be able to control and subdue others, and exert influence on them so much so that they become obedient.

References—(a) Krishna Yajur Veda—Yogshikha Upanishad, Canto 1, verse no. 151-155, Canto 5, verse nos. 46-55; Yogtattva Upanishad, verse nos. 56-102; Brahm Vidya Upanishad, verse nos. 23-24.

The wise and enlightened ascetic is one who *does not get deluded by the various Siddhis* that naturally come to him as a reward of success in Yoga. This fact has been affirmed in Yogtattva Upanishad, verse nos. 21-22, 62, 76-79; and Yogshikha Upanishad, Canto 5, verse no. 62.

The two Siddhis—The Yogshikha Upanishad of Krishna Yajur Veda tradition, in its Canto 1, verse no. 151-155 classifies all Siddhis into two categories—Kalpit and A-Kalpit. The Kalpit Siddhis are the ones which are created with efforts made for them using various means and methods. They have a limited scope, are perishable, and have imaginable powers and potentials that can be predicted. On the other hand, the A-Kalpit Siddhis are those which are self-generated or uncreated by any artificial means, are natural and with unimaginable mystical potentials and powers that cannot be predicted.]

7. If a person has some kind of desire or hope, he would make relevant efforts and follow corresponding path that would help him fulfill the desire or obtain his goal that he hopes to reach.

On the other hand, if he has no desire or harbours no hope there would be no need to make any effort or follow any path. Such a man is perpetually contented and peaceful. He does not want anything; he does not hanker after some thing or the other (7).

8. Oh sage (Nidagh)! When one is fully enlightened about the reality of all material things in this world, it is only then that he can see the truth of the Atma. In other words, first he thinks that the world and its material sense objects are true, but with experience and close examination he finds this is not the case. Then he compares this knowledge of the world with that of the Atma which he has realised by meditation and contemplation. It is then that he discovers the difference, and comes face to face with the 'truth' of the Atma vis-à-vis the world and its material things.

[When a wise man analyses the world and its material things, he discovers that they are all illusionary and deluding by nature, and act as traps for the creature's soul. The world and its things are all gross, perishable and transient; they cannot provide sustainable peace and happiness. The semblance of comfort and pleasure that they do provide is temporary and more entangling than liberating. On the other hand, he finds that the Atma is an eternal and imperishable entity that is sublime and subtle, and the bliss and happiness that comes with its realisation, or experienced when the Atma is realised, is of an eternal and divine nature. While the world is imaginary, the Atma which is pure consciousness is true.]

With this realisation he finds that the world and the various Siddhis (achievements, successes, powers and acclaim) associated with it are futile to pursue, and are best discarded. Only those who are ignorant of the fact yearn for various Siddhis; it is only such people whose mind and sub-conscious have desires for obtaining Siddhis (8).

9. In order to attain the various Siddhis a person makes many difficult efforts—such as for example he does various severe penances by standing in cold water or subjecting himself to extreme heat by spreading fire and surrounding himself with it (or standing in hot sunshine), sometimes he worships the moon and at other times he stands upon the head or attempts to invert his body and reverse its functions (which is

a reference to the various difficult Mudras, Aasans, Bandhas and Pranayam practiced in Yoga).

But those who have attained 'Jivan Mukti'—i.e. those are truly liberated and free from ignorance and delusions, those who have attained spiritual enlightenment, do not act such foolishly. They do not allow themselves to be in doubt, and bogged down with confusion and perplexity.

[A Jivan Mukta person is one who has realised that there is no better achievement in life than success in realizing the Truth, and the latter is the realisation of the Atma which is pure consciousness. He also is aware of the fact that this Atma is his 'true self', and is the most powerful and dynamic force in creation.

Therefore, once he has become self-realised and accessed the infinite source of cosmic power that is inherently present in the Atma, there is no need for him to undertake so many difficult practices in order to access mystical power and authority.

He also realises that undertaking such difficult practices in order to find liberation and deliverance from the effects of his sins or evil deeds for which he is subjecting himself to such physical hardship which borders on self-inflicted torture is a futile exercise and most ridiculous. It is a total waste of time and energy and effort. This is simply because his 'self' known as the Atma is eternally pure and untainted, it has never done any deed and was never attached to any deed, and therefore the question of it being tainted with sins or the consequences of evil deeds for the riddance of which such severe penances and austerity are needed to be done does not arise at all.

Hence, he is never in doubt about his eternally liberated state, and therefore is never deluded to undertake such severe measures to find liberation.] (9).

10. Those who are ignorant and deluded imagine that the 'Param Tattva'¹ (the supreme essence or Truth of existence; the pure consciousness) can be accessed by attaining the various Siddhis (mystical powers) just like an ignorant man imagines that there is a snake in a length of lifeless rope. This leads them to get entangled in the web created by the numerous doctrines and philosophies as well as uncountable paths and their tempting rewards.

[In other words, if a man thinks that he would attain the highest state of spiritual enlightenment that would make him privy to the truth of the pure consciousness and thereby attain liberation and deliverance, or enjoy exemplary blissfulness and beatitude that accompanies such enlightenment by obtaining Siddhis or by following the various paths and numerous doctrines, then such a man is virtually seeking water in a mirage seen in the hot desert. In the example cited in this verse, he thinks that the lifeless length of rope is a snake and thereby gets terrified at its sight, raises a hue and cry, and ultimately proves himself to be a laughing stock, and gets humiliated at his stupidity.]

Therefore, a wise and erudite man is one who does not allow himself to be entangled in any kind of fallacious thinking that act like a web that would trap him instead of bestowing liberation and deliverance to him (10).

[Note—¹The concept of *Param Tattva* has been explained in note of verse no. 11 below.]

11. Those who are wise and erudite enough to concentrate their attention and efforts upon their main aim in life—which is to attain the 'Param Tattva' or the 'Param Pad'¹, the supreme stature of spiritual liberation when one becomes self-realised and gets acquainted with the pure Consciousness and the absolute Truth of creation as

well as of their own 'self'—remain focused on it, and they do not allow themselves to be deflected from this path, to be distracted in any manner, and get sucked in the vortex of confusions and never-ending bewilderments. They become indifferent to everything else; they renounce everything else; they pay no attention to anything else; they have nothing to do with anything other than the realisation of the Param Tattva as well as the Param Pad.

Such attained and self-realised aspirants are able to break free from the knots ('Granthis') symbolizing numerous delusions and confusions (about what is the truth and what is not) that has tied them down. Being thus freed, they live a life like a man who has been freed from all bondages.

[Here, 'breaking free from bondages' refers to the situations when one has overcome all traces of ignorance and delusions about the 'spiritual truth of existence' or the 'Tattva'. A man who is under the influences of delusions and ignorance tries to search this 'truth' everywhere else except the place where it should actually be searched. In other words, he tries to find the pure consciousness and its glories by following numerous tenets and philosophies, or by undertaking various difficult practices cited in verse no. 9 above. He also believes that by obtaining different Siddhis he would be able to access the consciousness and attain the supreme state of existence. Such a man is no better than a slave because he spends his entire life bonded to delusions and ignorance, and is deemed to be tied in 'Granthis' or knots. He is like a bullock that is yoked to a bullock-cart without ever finding rest and freedom to roam about at will.

The 'knot' of delusions and ignorance is broken only when true wisdom, erudition and enlightenment dawns upon the mental horizon of the aspirant. It is in their light that he sees the 'truth' and overcomes the darkness of ignorance that creates so many delusions. When he is acquainted with the Tattva or the principal truth about this creation, about his own self, about the rest of the world, it is then that he is deemed to have broken free from the shackles of ignorance and its attending delusions.] (11).

[Note—¹The terms *Param Tattva* and *Param Pad* are inter-related and almost synonymous with each other. It is like the case when a man can be called a 'medical doctor' only if he knows the 'science of medicine'. In other words, when a wise and enlightened man is aware of the Param Tattva he is deemed to have reached the Param Pad.

The word 'Param' means supreme and transcendental; that beyond which nothing exists. The word 'Tattva' or 'Tattwa' means the essence, the soul, the real meaning of something, the fundamental basis of anything, the hidden truth and reality about any given entity, the secret of anything.

The word 'Pad' means a state of existence, a stature, an honour and title, a pedestal upon which any given entity stands and which gives it its value, importance and significance, a designation, a step, a mark, a post or sign, a rank, a category, an occupation.

Now therefore, the 'Param Tattwa' is the supreme essence or the Absolute Truth of existence which is pure Consciousness. There is nothing beyond it to be known or accessed or realised. The 'Param Pad' is the supreme honour bestowed upon someone who has known the Param Tattva; it is the exalted and supreme stature that he acquires when he has accessed or known the Param Tattva; it is the ultimate citadel of spiritual endeavours and last destination of spiritual seekers.

In other words, when one has attained the supreme state of self-realisation and Brahm-realisation, when he has experienced the presence of the consciousness, when he has realised the falsehood of the external world and its equally false material objects and their charms, when he has realised that his 'self' is the pure conscious Atma or soul and not the body, when he has developed the eclectic view of Advaitya

or non-duality by seeing and experiencing the same Atma or consciousness everywhere in this creation and not only exclusively in some specified entity, when he has realised that true liberation and deliverance entails freedom from ignorance and delusions, and it does not mean to simply leave the body or forcibly tear one's self physically away from the world while mentally attached to it, and when he has developed so many other such sublime thoughts that naturally and automatically sprout in the bosom of a wise and enlightened man—i.e. when he has known the 'Tattva' that is 'Param', it is only then such a man is entitled to attain the 'Pad' that is 'Param'.

The *Param Pad* is the Absolute state of being, the Absolute state of existence. It is the supreme state of existence of consciousness which is regarded as being synonymous with the ultimate state in which anything can ever hope to exist, the state of perfection, truth and absoluteness. This Utopian state is the stature occupied by the only non-dual Truth in existence which the Upanishad prefer to call 'Brahm Pad', the stature of the truthful transcendental Supreme Being known as Brahm, the cosmic Truth and Consciousness.

It is a stature in which a creature reaches the supreme Lord and merges his own individual Atma with the Atma of the Supreme Being. The word 'Param' means the most exalted, supreme, greatest and the ultimate, while 'Pad' means feet, state, stature, honour, title etc. That is, the creature is honoured with the highest title obtainable in this creation in the form of salvation and emancipation of his soul. It also refers to achieving the goal of being near to his Lord. Param Pad is equivalent to spiritual utopia.

This destination is the supreme state which a spiritual aspirant aspires to achieve. It is not any physical place known as 'heaven' as such, but it is a symbolic destination whereby the soul of the individual creature reaches the citadel of spiritualism where the soul becomes one with its primary source, the supreme cosmic Soul, by merging with it. This is its final destination, and is called emancipation and salvation. The devotee reaches the destination which he aspires for. For example, devotees of Vishnu find an abode where that Lord resides, and that abode is called Vaikunth. Those who worship Viraat Purush reach Brahma Loka. Those who worship Brahm also reach Brahma Loka, but this abode is a symbolic heaven, for the worshippers of Brahm, there is no return to this mundane world as they would have merged their souls with the cosmic Soul known as Brahm.

In the realm of Upanishadic philosophy, this *Param Pad* refers to the ultimate citadel of spiritual achievement that any aspirant strives for. This is the culmination of his spiritual quest and the end of his spiritual journey. Briefly, when he has reached this state of existence, he is deemed to have removed and eliminated all distinctions and artificial demarcations that are supposed to exist for an ordinary creature between the 'self' and the supreme Brahm. He has merged his Atma, which is his pure and truthful 'self', with the cosmic Truth known as Brahm. He has realised that 'consciousness and truth' are always and indisputably 'one' and non-dual, and therefore there cannot be any distinction between himself and Brahm. Since the entire existence has its origin in this Brahm, and since his own 'self' is Brahm personified, it follows that there is no distinction between his own self and the rest of the creatures in this creation. This mystical, eclectic and divine realisation of the ultimate paramount spiritual truth of existence removes all causes of consternations, perplexities and vexations in him that confound all the creatures in this world. Such an enlightened and truly realised person becomes calm, quiet, peaceful, tranquil and serene, for he has found the elixir of eternal beatitude and felicity which leaves nothing more to be sought. That is, he has reached the citadel of spiritual realisation which makes him liberated and delivered from the fetters of ignorance-based delusions that shackle all his other brethren to this world of artificiality and perpetual restlessness. All creatures strive to reach some 'Pad' or acquire some good designation, honour, fame and name for themselves, and this 'Param Pad' is the

highest of any designations and honours that is attainable by a creature because it provides him with eternal happiness and peace.

A truly wise person is one who is not swept off his feet by external appearances but understands the reality behind each instance coming his way and then determines how to deal with it. In the realm of spiritualism and metaphysics, a wise and enlightenment man would be he who understands the truth that whatever is seen or unseen are all revelation of one supreme source of existence known as Brahm. This Brahm is the origin of all that exists so much so that each unit of this creation, from the minutest to the most colossal, is a manifestation of this single entity. For instance, gold can be moulded into innumerable variety of ornaments, but a truly wise man would see the universal presence of gold in all of them and determine their value on the fact of how much gold each unit contains rather than its outer look. The external look and design of a golden ornament can be very misleading; it can be changed and the ornament given a completely new look if it is melted down and re-moulded. What does not change in it is of course the 'gold' content. Moreover, suppose the same design and shape is moulded from some other metal such as iron or copper or even brass having almost the same external glaze and shine as gold, would the buyer pay the same price for them? Definitely not, simply because there is no 'gold' in it.

Likewise, a wise and enlightened man realises that everything he sees in this world is essentially one Brahm revealed in all these forms—and nothing else. The world has any value only because there is conscious life in it, and this life is intelligent life. So, when a wise man sees and interacts with the world, he is actually seeing and interacting with the supreme Lord of creation who is sought to be worshipped by fools and ignorant people alike by doing elaborate religious rituals, fire sacrifices, repeating of endless Mantras, going on pilgrimages, doing so many exclusive auspicious deeds such as making charity, giving alms and donations, visiting shrines and serving holy men etc. when they forget in the whole exercise that they need not indulge in separate enterprises to please and worship the Lord when the latter can be very easily and conveniently served in the routine course of daily life by merely fine-tuning one's view of the world and the self—which is to see the Lord in every single unit of creation as well as inside his own self as the pure conscious Atma. With this world-view, each single deed and action would be an offering as well as service to the all-knowing, omniscient, omnipresent and all-pervading Lord, and no special efforts are needed to be made separately to please and worship him. This is the holistic view of Brahm and his worship. This highly evolved state of the mind and intellect is called reaching the 'Param Pad'. This exalted stature is not somewhere in the sky or in a castle somewhere, but is here and now in our midst. What are needed are the vision and the sight to see this Param Pad, the exalted and divine abode where the supreme transcendental Lord dwells. Going by the timeless adage that one can reach one's target only when he sets his sight on it, a man who sets his sight on this Param Pad is the one who would ultimately reach it.

The view that this world is separate from the Supreme Being known as Brahm, that the other living being is distinct from my own 'true self', and that Brahm is to be worshipped as a holy and divine Being detached from this existence and 'me' is out of ignorance and delusions created by misconceptions about the 'truth'. Once one overcomes this ignorance, all delusions vanish, and the light of Truth and Reality shines through.

In the present Annapurna Upanishad, the Param Pad and the Param Tattwa have been further expounded upon in Canto 4, verse no. 8-84, and Canto 5, verse no. 43.]

12. Those who are truly wise, erudite, realised and enlightened maintain their cool in adversities as well as in favourable conditions; they remain calm and unruffled whether there is sorrow or joy; they do not lose their poise, neutrality, fortitude and equanimity under any circumstance.

They do not bother themselves with unnecessarily worrying or thinking about anything (pertaining to this mundane life).

The stability of their 'Chitta' (the mind and sub-conscious) can be compared to a mountain, or to a person who has stopped breathing. Such a person has indeed controlled his Chitta; he has actually restrained it. It is a metaphoric way of saying that his mind and sub-conscious have become 'dead'—or non-functional. In other words, none of the inputs of the deluding world would ever evoke any response from such a mind just like a dead man's mind does not respond to any stimuli.

[A mountain is obviously a clear simile of something that does not move, that is steady and constant. The reference to someone who has stopped breathing however does not mean a man who is dead, but to him who practices Yoga and does Pranayam. During this process, the inhaled air is withheld inside the body for prolonged periods of time, a phase of Pranayam that is called 'Kumbhak'. During Kumbhak the body is said to be in a hibernating state, with no activity, and the mind with all its components is fully restraint and free from its inherent natural restlessness.] (12).

13. The Mana (mind with its intellect and sub-conscious; the emotional aspect of the heart) that has been completely controlled and restrained or fully trained would not be ruffled even when confronted by something unexpected or sudden. Such a mind would neither feel depressed nor exhilarated; it would neither feel low nor reach some emotional high under varying situations. It treats tragedy and festivity equally. In fact, it would maintain its stoic demeanours, equanimity, dispassion, neutrality, calm and poise under all situations (13).

14. There are two forms in which the Chitta (the mind and sub-conscious) is controlled or restrained or tamed—one is known as 'Sarup' and the other as 'Arup'.

[The literal meaning of the term 'Sarup' is to have a physical form and shape, something that has a definite contour and describable attributes, and 'Arup' is the opposite of Sarup.]

The state of existence known as 'Jivan Mukti' (i.e. to be spiritually free inspite of being alive and having a physical gross body) is an instance of the Chitta that is controlled or tamed but has a 'Sarup' form.

On the other hand, the state of existence known as 'Videha Mukti' (i.e. to be spiritually free from the bondage of the physical gross body) is an instance of the Chitta that is controlled or tamed but has a 'Arup' form.

[In the case of Jivan Mukti where the aspirant is enlightened about the reality of the body and the world as well as his true 'self', the mind and sub-conscious are deemed to be tamed and controlled when he does not get mentally involved in either the activities of the body or the charms of the material sense objects of the world. He lives a life that is outwardly normal, but internally he is completely detached from everything and every situation. His mind is active only to the extent that is needed for the man to do the work at hand, but that is all. The mind is so detached from the world itself that it does not remember what was done a moment ago. It is a 'Sarup' form of tamed Chitta because outwardly the man's deeds and actions do not show that his mind is not involved or interested in the things done by the body, which however is very much active and fully involved in all the deeds that the creature does in this

physical world. Such a man might even wash himself daily and take normal care of the body as required of him, but his interest ends there—he does not hanker for the body's desire for gratification or pampering. Therefore, the state of complete neutrality and absolute detachment of the mind does not reflect in his actions which are taken by the body. If one were to judge an enlightened and self-realised man by the physical behaviour of the gross body it would be like treating an actor who takes the role of king or a slave on stage in any theatrical performance as a real king or a real slave! Nothing would be more ridiculous and absurd. But it must be kept in mind that the body cannot act on its own without instructions from the brain (mind, intellect and sub-conscious combine), because even the basic things that a body does in this world are somehow controlled and empowered by the mind. The importance here is not allowing the mind to get involved in the affairs of the body and the surrounding world to such an extent that it gets attracted to them or repulsed by them, is disturbed by them and annoyed by them, and create some hurdle in the path of the Jiva, the living being, to reach his final destination of spiritual peace, beatitude and felicity as well as the attainment of Mukti or liberation, deliverance, emancipation and salvation. As long as this goal is achieved, it really does not matter if the mind performs its duty to issue routine instruction to the body to routinely do the deeds in the world as required of it.

That is why this form of the Chitta is called a 'Sarup Chitta' because inspite of doing its normal duties in this world and helping the gross body to perform its own set of routine duties, it still does not allow itself to be influenced by or involved in any of the things that are done. In other words, this form of Sarup Chitta is a landmark of the creature's attaining 'Jivan Mukti'—it makes the living being free from all fetters and bondages inspite of living in this world and going about its daily routine affairs in a normal manner but with an exemplary level of neutrality, dispassion, non-involvement and detachment. Such a person is deemed to have renounced the world inspite of his enjoying it in the physical level.

Since the world recognizes the status of any thing by its physical appearances rather than its subtle form, such a Chitta is also known as Sarup because it is recognized by the way the body acts and behaves in this gross material world at the physical level. The ignorant world is not qualified enough to be able to see the 'real' state of the Chitta which is oblivious of anything. Hence, it is called the 'Sarup Chitta'.

Again, since the Chitta is rudimentarily and perfunctorily aware of the existence of the body and what it does for the simple reason that the former has to control the latter even in its routine affairs, this Chitta is known as the 'Sarup Chitta' because its existence is reflected in the deeds done and actions taken by the body which has a physical and visible form.

The second sort of tamed Chitta is 'Arup' that comes with 'Videha Mukti'. In the latter case, the aspirant is not even aware that the body exists—for instance he may not bathe for days but would be unaware of this fact; he would stand in hot sun but would not be conscious of heat. The word 'Videha' also means without a physical body, hence it refers to the state of transcendental existence when the spirit leaves the gross physical body. Obviously, the consciousness in this state is 'Arup' because it has no form. The Atma is an ethereal entity that has no specific form, shape, contours, colours, characters or other attributes. Since it is the mind and the sub-conscious that makes a man aware of the world around him, there is little difference between the term 'consciousness' as it is applied to the Atma or the true 'self' of the man, and when it is applied to the 'awareness of anything' that the mind and the sub-conscious

create for the man. Hence, when the awareness of the body is absent, the Chitta is said to exist in an Arup form.

How a 'Sarup Chitta' automatically transforms itself into an 'Arup Chitta' can be easily understood by a simple example. When we learn to drive a car in the beginning, all the attention of the body and mind are fixed on even the slightest movement of the machine. With practice however the body automatically controls the gear, the clutch, the brake, the steering wheel etc. The mind takes a back-seat and allows the body to function automatically. But does this mean that the body can drive the car if the mind does not want it to do so? Well, if this was the case then a sleeping man could have driven the car with the same ease and aplomb as a fully awake driver! So we deduce that the involvement of the mind is only rudimentary and routine. An expert driver's Chitta would be focused somewhere else; he might be thinking of so many things but driving, yet all the movements required of his body to drive the car are done expertly. Everything depends upon the expertise and practice the driver has in driving the car.

Similarly, the Sarup Chitta is the earlier and preliminary state of the mind and sub-conscious of a wise and enlightened man who is steadily moving ahead towards his higher and nobler spiritual goal, and the Arup Chitta is the later and more evolved state of the same mind and sub-conscious. The two terms 'Sarup' and 'Arup' are used only as indicators of the level of a person's spiritual evolvment and the degree of detachment, dispassion, non-involvement and neutrality from this body and the world that the Chitta has achieved. The Chitta that is assigned any of these two terms has already achieved these grand spiritual virtues, it is the depth and degree that differs.

The 'Arup Chitta' is a form of the mind that is higher in its spiritual achievement as compared to the 'Sarup Chitta'. The difference is just in the level of wisdom and enlightenment, and not that one is really different than the other. It is just like the case of the sun when viewed at different times during the day, and under different circumstances. The rising sun can be actually seen by the naked eye without getting blind, but the same sun would burn the retina of the eye if viewed during the day time. The rising sun is a large dish, but its size is diminished when it is right on the top of the head at noon. But does that mean that the sun's size or brilliance has changed in the least?

Similarly, the state of existence of the spiritual aspirant's Chitta (mind and sub-conscious) is known by these two terms only because the world sees it from two different planes, for otherwise both these two terms 'Sarup Chitta' and 'Arup Chitta' indicate that he has already attained an exalted spiritual state of truthful knowledge, enlightenment and wisdom.] (14).

15. The dominant role of the Chitta (mind and sub-conscious) in the life of a creature is the cause of all his worldly miseries and sorrows, while making the Chitta irrelevant or fully tamed and restrained in the way for attaining comfort, happiness and joy.

In other words, if one wishes to have freedom from miseries and sorrows he would have to overcome the influences of the Chitta, or make the latter redundant for all practical purposes. Therefore, true bliss, beatitude, felicity and peace come to a creature when he has effectively controlled and neutralized his Chitta, when he has trained it to remain uninterested in the world and the body so much so that inspite of performing the deeds as required of him by the virtue of his living in this world that depends upon actions and deeds for survival, the creature does them most dispassionately and does not allow any of the things of the world and the demands of

the body to ever influence his Chitta. For such a man, Jivan Mukti and Videha Mukti are the same situation.

[When the mind is active a creature would have a natural tendency to be attracted by the numerous material charms of the sense objects of the world, because it is the mind that actually analyses the inputs of the various sense organs of perception of the body such as the eye, the ear, the nose, the tongue and the skin to enlighten the creature about the existence of a fascinating world with its astounding array of fascinating charms and objects that give immense pleasures to the sense organs. The data collected and collated by the mind is stored in the sub-conscious which acts as a referral bank for the creature.

Since the mind is the only unit of the creature's body that can actually do the actual work of analyzing information, thinking and researching, and then deducing and making or taking final decisions, the individual creature is under its overall control much like an emperor who is not only guided by his advisors and ministers but is very much dependent upon them in practice, though the emperor is empowered theoretically to take his independent decisions on all matters. But even this independence of his is subject to the information provided to him by his ministers and advisors who have an overwhelming influence on the decision-making process of the sovereign.

Similarly, though the creature—here, incidentally, implying the 'Atma' or the pure conscious 'self' because this 'self' is the true identity of the concerned creature instead of his gross body—is theoretically empowered to make his own decisions, he is dependent upon the mind and its various components, such as the intellect, the sub-conscious, the memory bank and the conscience itself, that have an overbearing influence upon him. So, when the mind with all its limbs is active and uncontrolled, it is a constant nuisance for the creature; it never lets him rest in peace. Since the mind is part of the body complex, and not of the Atma, the mind is more inclined to please the body rather than the Atma. An illustration would explain the relationship more clearly. An emperor's advisors and ministers are part of the administrative structure of the empire, having their own priorities and vested interests, and are not part of the emperor's personal family who would be more personally concerned with his welfare. So, the actions, deeds and decisions of the advisors and ministers of the emperor would be different and would have different priorities as compared to those of his near family members.

This implies that a creature who thinks that the 'body is his self' would be more likely to be directly under the control of the mind as compared to the creature who maintains his distance from the body and knows that his 'self is the Atma which is different from the body'.

Hence, a mind that is controlled and put under direct control the 'self' is the cause of peace and happiness because then it would be a good companion and more interested in the welfare of the 'self' of the creature. A trained mind would be like a qualified advisor or minister who would independently sieve through all the rubbish and not allow the sovereign to be disturbed by the clutter of worldly inputs, it would not allow the Atma to be bothered by numerous options and false charms of the world, it would not advise the creature to go after the illusive happiness and joys of the world by pursuing its material sense objects. Thus the creature finds his peace and rest, his bliss and happiness.

On the other hand, an untamed mind would be like a selfish or incompetent minister or advisor who would be more concerned to make the emperor enjoy the pleasures of the world in expectation of some instant reward when the sovereign is

gratified. But this results in the long term ruin, decay and undoing of both the empire and the sovereign. So, an uncontrolled mind would allow the creature to run after the world and enjoy its temporary comforts and pleasures, but this would have a negative effect on the creature. The reason is that all the world and its charms are illusionary and transient by their basic nature, and once the creature becomes addicted to them it falls prey to an unending cycle of desires, aspirations, expectations and passions along with their attendant greed and longing for more that never ends. Since the world and its material comforts and pleasures are false and imaginary, no one can ever expect real and lasting peace and happiness from them. They are illusive, and the more the creature runs after them the more they recede from him. This fuels his dismay, restlessness, frustration and exasperation. This situation is obviously the opposite of the concept of peace, happiness and bliss that one expects to get by pursuing this world and remaining involved in it.

Therefore we conclude that a mind that is controlled is the cause of the creature's happiness and peace, while an uncontrolled and untamed mind is the cause of his sorrows and miseries. The former state of the mind gives him stability, while the latter state makes him erratic and unhappy.] (15).

16. Oh Anagh (sage Nidagh; the sinless one)! The rendering of the Mana (mind) as ineffective, to make it irrelevant and redundant, to rein it in and tame it is equivalent to making it annihilated. When this happens, the external behaviour of the creature is like one who is stupid and ignorant because he takes no interest or shows no initiative in anything. He does external deeds in a mechanical way, he remembers nothing of what has been done by him, he takes or accepts no rewards for the deeds done even if offered to him unasked, and in general he acts as if he is in a state of stupor, as if he is utterly dumb-witted and of a low-intellect. When this happens, he neither shows enthusiasm in doing a particular thing nor does he shy away from doing another thing. He neither enjoys any thing in this world nor shuns it. He neither laughs nor cries. He neither exults nor feels distraught and dismayed. He neither loves nor hates.

[Obviously since the mind is the workhorse of the body, when it ceases to function or refuses to react to the impulses of the world, the behaviour of the man would be like the one who is stupid and of a low mental development. But it is very misleading because internally the man is very alert and enlightened. The Mana has been made redundant out of his own free will, and not out of any compulsion or deformity of the brain or incompetence on its part. The man has voluntarily made the mind attain the state of sustained quietude in order to prevent it from constantly nagging him with this or that, and thereby constantly disturbing him. The result is that the man himself enjoys immense quietude and peace with a quiet and placid mind.]

This calm, serene, quiet and placid state of the mind would be its natural tendency and its natural habit once it is controlled and trained, and its fickleness, transience and restlessness overcome.

[Such a mind would be in a position to think and analyse rationally, logically and intelligently as compared to a restless and fidgety mind that is constantly on its edge. Since the mind is the most important tool in the hands of the creature in any of his endeavours, a cool and calm mind would be an efficient tool which would prove to be a boon for him instead of being his bane.] (16).

17. A man who has overcome even good Vasanas (natural passions and desires related to the world; attachments and attractions for the material things and sense objects of

the world) such as having the mental tendency to be friendly towards all is deemed to have become 'Jivan Mukta'.

[This means that to be actually free from this world and its entangling effects even while living in it—i.e. to obtain Jivan Mukti—one need to develop total neutrality, completed dispassion and absolute non-attachment. It is not merely sufficient to get rid of bad habits and thoughts, or avoiding unrighteous and inauspicious deeds and actions, and instead inculcating noble virtues such as being friendly, compassionate and graceful towards all others. One must avoid all involvement with the world at large in any manner whatsoever if one seeks to obtain true freedom from its entanglements.

This is very true. If being unfriendly would make a man face hostility from the world, being friendly would invite a large company, and in both the cases his calmness, serenity, peace and quietude would be compromised.]

A man is said to have attained Jivan Mukti when he does not have to take repeated births.

[In this context the advice of abandoning even the tendency of being friendly towards all assumes a different connotation. When one is friendly, he develops close relationship with the people around him. It creates a bond between him and them. The individual becomes concerned about the pains and sorrows of others, and though it is an excellent character trait on its own but it nevertheless creates a lot of mental dismay and misery for the person when he watches others in pain. Therefore his own peace of mind is disturbed, and a disturbed mind cannot allow him to live him in peace. He gets entangled indirectly in the chain of unintentional sorrows and pains.

Similarly, when he sees his friends happy he 'shares' their joy, he enjoys with them. This again creates involvement. Sharing someone's happiness and joys as well as sorrows and pains are good and noble character traits no doubt, but from the metaphysical point of view this is a sort of 'involvement' in the world as it is bound to affect the mind, and through it, the Atma. Any involvement with the world, whether good intentioned or of an evil design, is bound to rob the mind of its peace and stability as well as its desire to remain neutral and renounced.

Real freedom is achievable with any conditions attached. Being 'friendly' is one such condition. It creates its own shackling effect. Hence, a man who wishes to break free from the chain of birth and death must avoid even being friendly to anyone or towards anything in this world. He must treat all with equal detachment and neutrality. This would ensure that he is not bound to anything or anyone. A life that is lived with total and exemplary aloofness and detachment, with no involvement with the world whatsoever, is said to be Jivan Mukta.] (17).

18. Oh Nidagh! The apparent sign and the evident form that elimination of the Mana (mind) takes is called Jivan Mukti, while its subtle form or aspect and its sign is called Videha Mukti.

[As explained in verse nos. 16-17, when the mind becomes neutral and totally un-involved in the affairs of the world, the behaviour of the person would show his state of mind. This is the mind's 'visibly neutral form'. The detachment, dispassion and non-interest that a wise, erudite, enlightened and self-realised man displays are evident sign of his neutral and controlled state of mind.

On the other hand, the fact that inspite of living in this world and going about his life normally, doing his duties and living up to his obligations, answering questions and managing his affairs routinely, he still remains engrossed internally in perpetual meditation and contemplation at all times, externally appearing to be awake

but internally asleep or indifferent to the world, is indicative of his 'invisible and subtle state' of the mind. Such a man remains perpetually in a blissful and contented state inspite of all the turmoil that surrounds him outside.] (18).

19. Surely, the Atma that is independent of the body and with everything in which the body is involved is called 'Videha Mukta'.

[The word 'Videha' literally means one without a gross body, and 'Mukta' means to be free. Hence the phrase 'Videha Mukta' truly applies to a wise, enlightened and self-realised man who has realised that the Atma, the pure consciousness that is his 'true self', is independent of the body. The larger import of this understanding is that such a man need not physically shed his body by dying to actually free himself (i.e. his true 'self' which is his Atma, the pure conscious soul) from the body. He can do this even while alive—by breaking the link between the Atma and the body. A bonded man is one who erroneously thinks that his body is his 'self' and the Atma is just some part of the body that lives in the subtle heart, but a wise and enlightened man thinks that the 'self' is not the body but the pure consciousness known as the Atma that is independent of the body. For the man with the latter eclectic thoughts, the presence of the body is as external to his 'true self' as any third person.

Hence, true Videha Mukti does not necessarily mean leaving the body physically, but leaving it at the mental level and subtle level by completely disassociating one's self with it. When this grand state of existence is reached, no difference really exists between 'Jivan Mukti' and 'Videha Mukti'.]

As a result, all the different virtues and numerous characteristics that define this material world and the gross body become irrelevant, and only the 'truth' remains.

[That is why a realised and enlightened man stays quiet and poised inspite of being witness to such a colourful world and constant nagging by the body for self gratification. He also remains exemplarily quiet and equanimous inspite of being surrounded by the tumult of the world around him. This wise man has understood the false and entrapping nature of the world along with the fact that the body is the cause of all his entanglements with the world, and so it is best for him to neglect their joint provocations.] (19).

20. The Videha Mukta state of existence is most holy and auspicious in nature. When an aspirant reaches this exalted state of existence, all notions of existence of any thing gross in the world of material sense objects are eliminated.

[That is, once the enlightened state of being disassociated with the body is attained the spiritual aspirant loses all interests in this world because the existence of the world and its material sense objects are directly related with the body which actually perceives the world through its sense organs of perception and interacts with it with the help of the sense organs of action. Once the body is made redundant, the notion of non-existence of the world is a natural progression.] (20).

21. When the Chitta (mind and sub-conscious) is completely annihilated (or made redundant and irrelevant; when the Chitta is fully tamed and put under leash), nothing exists or matters. Neither any of the Gunas (numerous qualities of the world) exist or matter, nor their absence is felt; neither do worldly majesty, magnificence, grandeur and glory matter to an enlightened and wise aspirant, nor do they have any existence as far as he is concerned (21).

22. A wise and enlightened man who has fully controlled the Chitta lives in a state of complete neutrality and equanimity. His mind is extremely stable and non-involved in any thing related to the world so much so that nothing rises or sets for him (i.e. nothing changes for him; the sunrise and sunset are equal to him; there is uniformity and universality in everything he views; there is nothing that is high and exalted nor lowly and sunken).

For him there is no happiness or joy, and there are no sorrows, miseries or anguish either; there is no notion of speed or slow motion; there is no difference between the evening, the day and the night—all have equal meaning for him; all are equally irrelevant to him; he is uniformly unconcerned with any of them.

For him, there are no separate states of existence that can be segregated into various categories, such as one being auspicious, holy, exalted and authoritative, the other being lowly, humble and downtrodden, and the third being somewhere in between.

[In other words, an enlightened and self-realised man treats everything around him equally and with exemplary equanimity of attitude and neutrality of mind.] (22).

23. This most exalted, divine and spiritually enlightened state of existence is available to those who have trained their mind and intellect to transcend the gross and limited view of the world and existence in it, and instead be able to rise above the mundane and see beyond the routine and the apparent. Their mind-intellect has developed the insight to surgically incise through layers of delusions and deceit that are so characteristic of this material world with precision, and thereby see what actually lies behind the veil.

They live a free life like the air or wind that is freely present in the length and the breadth of the vast sky. Such men are called 'Jivan Mukta'—or ones who have obtained liberation and deliverance from all bondages, such as the bondage of their gross body and the equally gross world, even while they have a gross body with which they live in and interact with the gross world.

[The air or wind has no fetters attached to it; it can go anywhere it likes; it spreads uniformly and unhindered through the length and breadth of the sky. Likewise, a man who has developed a holistic view of life and the world is not bound by any fetters at any level, be it mental, intellectual, emotional or sentimental. They live in the world but remain totally detached from and untainted by it just like the air or wind that are unaffected by anything that is present in the sky; no obstacle can ever exclude one area of the sky from the reach of the air or wind element for the latter can always go around the obstacle to reach its desired destination.] (23).

24. A wise and enlightened spiritual aspirant who has completely annihilated (i.e. overcome, controlled and trained) the Chitta (mind and sub-conscious) becomes free from all sorts of mental disturbances and restlessness. He is at peace with himself, and has attained tranquility and serenity. All his agonies, sorrows and miseries are naturally overcome, or they cease to exist for all practical purposes.

[The reason being that it is the mind and its sub-conscious that create all the problems associated with perceptions. A situation may be the cause of annoyance for one person, while another may be enjoying it. For instance, loud rock music may cause a headache to one person, while another person would be rolling in merriment in it. Lack of worldly material things may be a reason for a man to fret and fume,

while for another it is so much the lesser burden on his head because he thinks that more things mean more botheration.]

Outwardly he may appear to be like a man who lacks interest in life, is stupid and mentally retarded, but inwardly he is calm and highly contented. He is like a man who is fast asleep in the Sushupta (deep sleep) state, for such a man is unbothered by what the world says and whatever is happening around him. Such a man would obviously be in a state of perpetual peace, tranquility and happiness.

He has risen to an exalted state of existence when he transcends the lower and the medium states of existences represented by the Tama and the Raja Gunas respectively. He has virtually abandoned them for good once he has experienced the quintessential sense of blessedness obtained by discarding the lower states of existence and establishing one's self in the highest state.

[In other words, he has raised himself to an exalted stature where all the qualities and virtues that are 'not the best' are abandoned. There are three Gunas—viz. Sata, Raja and Tama. The Sata is the best of the three, and regarded as the most auspicious and noble. It creates a desire in the creature to always look up and cultivate the best of qualities and virtues one can hope for. He endeavours to rise higher and higher in his spiritual life, and strives to reach the goal of emancipation and salvation. The Raja Guna is the second and medium quality which creates a desire for the world, not for reckless indulgence, self gratification and selfish motives but with a view to grow and develop along with the world at large. This may take a positive hue if the underlying pull of the Sata Guna is strong, and a negative hue if the Tama Guna has a greater pull. Finally, the Tama Guna is the least spiritually elevating, for it is very denigrating and demeaning for the soul. It is the grossest of the three Gunas and creates a natural tendency for vices and sins, making the creature very selfish and pervert.

In short, what this stanza implies is that a man who has controlled and properly trained his mind would pick and choose only the best virtues and qualities in life, those that would have a positive bearing on his life and general personality. He would always strive for the realisation of the ultimate state of blessedness marked by spiritual bliss and exemplary contentedness, he would always seek to find liberation and deliverance from this world, he would always attempt to find a way to break free from the endless cycle of birth and death along with the uncountable miseries and torments that are inherent in it and inseparable from it. For this, he would resolutely abandon the Raja and Tama Gunas, and instead focus on the Sata Guna.]

He would become one like the sky; he would assume an exalted stature that has the virtues of the sky inherent in it; he would live in this world like the sky lives in creation.

[In other words, he would attain a state of existence that has the unique characteristics of the sky, such as being uniform, immutable, steady, unmoved, untainted, calm, quiet and unfettered under all circumstances. When the Chitta is under control, the state of existence is compared to that of the sky.

The sky is the subtlest of the five elements of creation, the others being air/wind, fire/energy, water/liquid, and earth/solid. Like the sky, a man with a calmed mind and sub-conscious remains unruffled and unaffected by any of the numerous perceptions that the gross organs of the body constantly gather as impulses from the external world which is full of continuous turmoil, a world which is never at rest and never constant. All the noise, clamour and din of the hustle and bustle of life in the world are limited to the surface of the earth—a metaphor for grossness. As one rises higher and higher from the planes of the earth, say goes up a mountain, or rises up in

the sky in an air-balloon for instance, this noise diminishes exponentially with the increase of height and distance from the earth till a point is reached when it is not heard at all.

This means that the sky—which is inherently subtle and absolutely quiet as is evident when one reaches its higher levels far away from the earth—acquires the character of grossness so typical to earth when it is in close proximity with the latter. As we move away from the earth and reach the areas of the sky deep in its bowls, we experience absolute stillness and calmness.

In the context of the present verse it means that a person who has controlled his Chitta and has driven it away from any involvement with either the body or the earth would be able to bring the inherent shine out of a refined and tamed Chitta. A Chitta that is as far away as possible from the grossness of the world and the body, and as close as possible to the Atma which is pure consciousness is bound to replace its grossness of its earlier association with the body and the world with the subtleness and sublimity typical of the Atma.

Taken from another angle, this situation shows how and why the Chitta is able to give the Atma peace if it is far away from any involvement with the world and the body. As is well known, it is the Chitta consisting of the mind and sub-conscious that acts as a medium for the Atma to interact with the world through the medium of the sense organs of the body which the Chitta controls. So, if the Chitta is able to disconnect the link, the Atma would not be disturbed by anything of the world; the Atma would not even be aware of the very existence of the world in the first place. Hence, a controlled Chitta is a provider of peace, tranquility, bliss and happiness to the Atma of the creature. A controlled and trained Chitta acts like a shield that protects the sovereign from being unnecessarily perturbed by useless things in this life.

Therefore, a man with a tamed and trained mind can live peacefully and happily in this world amidst all the chaos and uproar that surround him without being bothered by any of them.]¹

When the Chitta is put under tight control, all vacillations cease; there is all-pervading calmness and quietude. This state resembles the state of the gross physical body that shows no movements and activities. In other words, it resembles the final conclusion of life—called the ‘Maha Anta’, the ‘great end’, the ‘final conclusion’. There is nothing left after the ‘final conclusion’.

[The phrase means an end to all the miseries and bewilderments that are a part of the normal life of a creature. When the Chitta is properly tamed and trained, the creature is able to obtain stability and focus in his life. He is able to save his vital energy and time from being frittered away in numerous perplexities and confusions associated with this mundane world of material sense objects, and instead concentrate on the Truth and Reality of existence on the one hand, and move steadily in the direction of attaining Mukti, or emancipation and salvation, on the other hand.] (24).

[Note—¹Sky or Akash—The sky or space is the subtlest of the five elements—viz. earth, water, fire, wind/air, space/sky. It pervades everywhere but is uncorrupt, unpolluted and faultless in all respects. The blemishes, faults, vices, evils, sins, corruptions, misdemeanors and all sorts of digressions and contaminations present in the world are like suspended dust particles, smoke, moisture, clouds, the numerous other things such as the various birds and the celestial bodies high up in the sky which create an illusion of a sky that is spotted or dotted or polluted or coloured or overcast with these uncountable objects that are extraneous to the sky, that are not integral to it but nevertheless appear to be a part of the sky. The sky has nothing to do with them; it remains absolutely unconcerned with and untainted by them, for once

they are removed from the scene the sky is uniform and spotless from one end of the horizon to the other. This example is very practical and can be observed by anyone. That is why 'sky' is used as a metaphor to describe anything that remains free from the influences of those things that appear to be an integral part of it but are in actual fact not related with it by even any remote chance.

The sky has the opposite types of characteristics present in it. For example, the space of the vast cosmos has no form but the space inside a bottle or a pot takes the shape of the bottle or the pot respectively. Similarly, the vast sky in its basic and truthful form is spotless and without any colours, but it appears to be spotted with so many stars and specs of clouds and smoke of different colours as well as with birds of different forms, colours and shapes flying here and there. The colour of the sky during the evening or morning hours present a canvas of so many colours which appear to be real, but they are obviously a reflection of the colours of the light of the sun as reflected from the various impurities present in the otherwise spotless sky.

This is what is meant here—though the Atma or Brahm are inherently and basically pristine pure and clean, but when they come in contact with this world, the different flaws and faults of the latter cast their shadow and make them appear to have some or the other kind of spots in them.

The sky has such grand and majestic attributes as being vast, measureless, uniform, immutable, spotless, clean, colourless, calm, all-pervading, all-encompassing etc. The sky is the measurement of Brahm in the sense that if it was ever possible to measure the length, breadth and depth of the sky, it would then have been possible to measure Brahm. But that is not at all the case. The calmness of the higher reaches of the sky is experienced by Para gliders and can even be witnessed on top of mountains which are high above the ground and located somewhere in the space around the earth, symbolised by the sky, where there is an eerie silence. The sky has no colours of its own; whatever colours that we see are actually the scattered sunlight.

Everything that exists does so in any one of these spaces. Every nook and corner where there is no solid or liquid is filled with space or 'Akash', which is a synonym of sky. It is omnipresent, all-pervading and all-encompassing. That is, these three forms of the skies, viz. the outer, the inner and that which is present inside the heart, are all the same; there is no distinction or demarcation or boundary or fundamental difference between any two skies. The apparent boundary or limitation imposed on the sky by the physical body or the membrane of the heart is only deceptive in nature. Once a person dies, for example, his body perishes, and the space present inside the heart merges indistinguishably with the space present inside the body when the body is cremated or decays when buried, and they together merge with the vast space present outside the body.

The 'sky', which was originally conceived as something that was 'void' or 'nothing', gets filled with 'air', simply because void can't exist, and the creation which came into being in this void needed some base for its origin and coming into being. The molecules or atoms of air are in a state of continuous agitation and flux; they collide with each other, they form a chain of molecules which give rise to different layers or strata of air which extend from the surface of this earth to the stratosphere. This continuous turmoil produces 'sound'. Various physical and chemical processes come into play, producing gases of varying density and characteristic features. Air has particles of dust and different gases, which produce the perception of touch. Friction of the various molecules present in the air produces static electricity which is observed as a scintillating display of atmospheric discharge of electrically charged particles in the sky often observed at the poles. This sparkle of static electric discharge is synonymous with 'fire'. Perhaps the Upanishadic sage got this brilliant idea when he observed a meteor shower during the night. The two elementary gases hydrogen and oxygen combine to form the molecule H_2O commonly known as 'water'. With all these essential ingredients in place, the

solidifying and cooling down process of nature starts its effect and produces soil and rocks which are symbolised by the 'earth' element. Then gravity and magnetic forces come into play, giving density, gravity and grossness, indicative of the grossness or heaviness of not only the earth but also of the air around it. Previously, before gravity and other forces of nature came into play, this air was subtle and very light; it spread universally and uniformly to all the corners of the cosmos. But with the gradual formation of different celestial bodies from the primordial cosmic gases, each having its own gravity and other natural physical and chemical forces, the air was pulled or sucked in, leaving the rest of the space beyond the reach of these celestial bodies into a big void.

The sky is pregnant with a wide variety of impurities. It is full of celestial bodies besides cosmic debris. It has the burning furnace of the sun as well as the cool pitcher of nectar symbolised by the moon. The black clouds of a storm with its stabs of ferocious lightening coexist with white fluffy clouds floating lazily across the calm sky. There are birds of prey and there are harmless kites flying in it. There is the polluted haze of the city as is the pristine clear atmosphere of a village and the mountain. There is the brightness of the day and the foreboding darkness of the night. But the wonder is that none of these really affect the sky at all—it remains clear and untainted in its basic nature and form. All these things cited here are extraneous to the fundamental nature and characteristic of the sky. The sky treats all of them with the same magnanimity and kindness. Similarly, a wise man treats all the creatures with whom he has to interact in this world with the same equanimity and fortitude as the sky.

The sky has a unique quality—it harbours the entire creation in its bosom as nothing that exist lies outside the outer periphery of the sky, but still it remains completely detached from each and every thing present inside it. The sky remains unaffected, uninfluenced, unattached with and untainted by anything that it harbours or shelters. Whatever visual attributes that one sees in the sky, such as its blue or azure haze, the changing colours at different times of the day, are only optical illusions created by various factors of Nature. Even the clouds or the sun in the day time and the stars and the moon in the night do not effect the neutral nature of the sky because while the sun is there the sky appears to be bright and sunny, and when the moon rises the same sky assumes the colour of the moonlight with no indication that it was so bright earlier. The overcast sky with dark clouds becomes crystal clear when the clouds go away, and the darkness of the night sky dotted with umpteen numbers of stars can give no indication that it would be brightly lit during the day with no trace of any single star. The plumes of pungent smoke being belched into the sky by factories and fires do not effect the bland and neutral form of the sky, for the sky absorbs them all with great equanimity and fortitude without being affected by them at all.

Everything in existence needs the sky to develop and grow. The fire needs space representing the sky to burn, the air needs it to flow, the earth needs it to remain in its place and move around the sun which in turn regulates the seasons and other environmental factors, the plants need it for their growth and development as is proved by the fact that they become stunted and die in the want of space to grow and spread their branches, the creature needs it to breathe, stand and grow, and so on and so forth. The air can be sucked out from an enclosed space to create a vacuum, but the 'sky' would still be there. The world would die and go into oblivion along with all its components, including the other four elements (earth, fire, water and air) at the time of conclusion of creation, but the sky would still be there; in fact it is in the vast bottomless pit of the sky that the creation would vanish then. And when the time comes for the emergence of the new creation, it would do so in the bowl of the sky. Nothing exists beyond the sky.

The incorruptible and untainted nature of the sky has been explicitly endorsed in Varaaha Upanishad of Krishna Yajur Veda, Canto 4, verse no. 24 by Lord Varaaha, the Boar incarnation of Lord Vishnu, himself.]

25. Oh the most wise Nidagh! Become free from all Vasanas (worldly passions, yearnings, desires, lust and wants; worldly attachments and attractions) of the mind. Strive to control the mind and its sub-conscious (as this effort would help you to overcome the Vasanas) (25).

[Note—Refer Canto 1, verse nos. 29-32, 54, and Canto 4, verse nos. 46-48.

Canto 5, verse no. 40 explains the importance of controlling the Vasanas, the Chitta as well as the Prans for an overall spiritual well-being of an aspirant.]

26. The Atma (the pure consciousness) is the only entity that makes this world alive, and enables the creature to see, experience and witness the world. This Atma is therefore self-illuminated (much like the sun which is also self-illuminated and illuminates the world around it so that the creature can see it).

[This is because it is the consciousness that is present inside the gross body of the creature that infuses or injects ‘life’ into it. Without this ‘consciousness’, the body would be dead, and a dead body would not see, experience and witness the world at all. It is the Atma present inside the body that makes it ‘aware’ of anything at all in the first place. Besides this, the world is of any worth because there is ‘life’ in it. Since ‘life’ is synonymous with ‘consciousness’, it follows that both the perceiver and the perceived, i.e. the creature who sees the world and the world that is seen, are manifestations of the Atma.]

It is the esoteric and mysterious entity that is at once the ‘seer’ as well as the ‘seen’. In other words, as the pure consciousness residing in the gross body of the creature, it is actually the Atma that perceives, experiences and witnesses the external world, and as the ‘living’ world present around the creature it is the same Atma that is perceived, experienced and witnessed by him.

[The body is merely an instrument by which the ‘living entity’ known as the Jiva perceives the world around it. This ‘living entity’ is actually the pure conscious Atma that lives inside the gross body of the creature, and a body that has no Atma in it is a dead body which perceives nothing. The ‘consciousness’ is the only divine and eclectic entity in creation that injects life in this world; without the ‘consciousness’ the world would be a dead thing. Therefore, when the creature sees anything in this ‘living world’ it is actually seeing the ‘consciousness’ in that particular form. Even as the same Atma assumes as many countless forms as there are species and numbers of creatures, the same Atma assumes the countless forms that this creation has taken externally in its visible diversities. Since Atma is a synonym for life, since change and movement are signs of life, since every change is a sort of movement from the previous situation, and therefore since everything in creation changes and moves, no matter how imperceptible that change and movement might be, it follows that whatever that exists in this ‘living world’ is a manifestation of the Atma. The world is undeniably changing and moving. Every moment from its inception up to its final conclusion, the world is subjected to change and movement; it can’t remain static and fixed.]

The Atma is the only witness to the world and whatever is there. This Atma is a universal entity that is present in the entire creation, because it is characterized by the grand and unique quality of being all-pervading and omnipresent. That is why it is called ‘Sarwa-Atma’—i.e. the Atma of all; the universal and ubiquitous Atma that uniformly pervades throughout this creation.

The Atma is most immaculate, uncorrupt, untainted and pristine pure (26).

27. It is the virtue of high level of knowledge, wisdom, erudition, sagacity and enlightenment that helps a creature to get established in this world and acquire fame and good name. Since it is the pure consciousness known as the Atma (soul; spirit) that is the 'true self' and identity of all living beings, it follows that all these virtues pertain to or are ascribed to the Atma.

The supreme transcendental Brahm, which is the cosmic super Consciousness, is untainted by the demeaning and denigrating qualities known as 'Agyan' or ignorance, which in effect means all the negative qualities that are the opposite of what have been enumerated above. Indeed, Brahm is truthful and Truth personified; it is an embodiment of Gyan (knowledge, wisdom, erudition, sagacity and enlightenment); it is a personification of the undiluted 'Sukha', or bliss, happiness, beatitude and felicity of the highest kind (27).

28. When a wise man realises that this Brahm is 'he' (i.e. when he becomes 'self-realised' to understand that his 'self' is none else but the transcendental Brahm, the supreme cosmic Consciousness that resides in the gross body), it is then that he feels extremely grateful, fulfilled and contented (28).

29. The supreme transcendental Brahm is the only established truthful and eternal entity in creation that is non-dual, and about which there is no dichotomy, doubt and confusion. Brahm is the one who has established this creation, and is the foundation upon which the latter rests.

Brahm is an image of 'Sat-Chit-Anand'¹—i.e. it is 'truthfulness', 'consciousness' and 'bliss' personified. Brahm is beyond description and comprehension of the mind and intellect. It is not the object that can be viewed or perceived by any of the sense organs (29).

[Note—¹Sat-Chit-Anand = refer (i) Krishna Yajur Veda's following Upanishad = Rudra Hridaya Upanishad, verse nos. 26-27; Panch Brahm Upanishad, verse no. 41; Varaaha Upanishad, Canto 2, verse nos. 6, 23; Saraswati Rahasya Upanishad, verse no. 46. (ii) Atharva Veda's Annapurna Upanishad, Canto 5, verse no. 68.]

30. That transcendental state of existence where the Supreme Being (Brahm) lives has no semblance to the world as it is known to the creature—e.g. there is no moon or sun shining there, no wind blows there, and neither are any gods or semi-gods there.

A wise creature who has become aware of this state of existence of Brahm (which means who has become aware of the real state of his own Atma), becomes absolutely neutral and unattached; he transcends all mundane levels of existence, and becomes enlightened (30).

31. All doubts and confusions in his heart about what the reality is, which are like knots that tie him down to this world, are removed, and the knots untied. All his doubts and confusions are dispelled for good. When a wise and enlightened creature attains the exalted stature of Brahm-realisation, all the negative effects of the deeds done by him are neutralized. [This is because he would not be involved in doing any of the deeds, fully realizing that it is the gross body that is actually doing the deed, and not the Atma.] (31).

32. On this body-like tree live two birds with beautiful wings. One represents the Jiva (the creature; the living being), and the other represents Maheswar (the realised One; the reference here is to Lord Shiva who is regarded as the most enlightened and self-realised amongst the Gods)¹.

Out of the two, the bird which represents the Jiva (the creature; the living being who is indulgent in the world and its material objects) spends its time and energy in enjoying the fruits of the tree.

[That is, the creature enjoys all the pleasures and comforts that are got by the gross body from the world and its material sense objects. The creature also picks and chooses what he wants and what he wishes to avoid. Similarly, the creature has to suffer from all the bad effects of his bad, unrighteous and improper deeds even as he enjoys the good effects of those deeds that are good, holy and auspicious.]

The other bird which represents the Maheshwar (i.e. the one which is self-realised, wise, enlightened and sagacious like Lord Shiva) would not indulge in such enjoyments, and neither would it be affected by the restlessness and miseries that make their appearance when the fruits are not available. This second bird that represents the Maheswar remains calm and shows no such inclination to hop from fruit to fruit because it represents the enlightened soul that remains ever-contented with whatever it has, and has overcome the temptations and urges of the sense organs, such as the organ of taste in this case, to seek self-gratification.

[This is because this bird represents a creature who has become aware of the truth of his 'self' as being the Atma which needs nothing, and which is self-contented. This wise bird realises that the enjoyments of relishing a sweet fruit is limited to the taste buds that are part of the gross body, and this taste is transient and temporary. To be drawn by the urge to taste fruits similar to the one already nibbled at would be an endless enterprise, and it would be tantamount to be trapped in the web of greed and temptation. If filling the stomach and satisfying hunger was the intention and aim, then only one fruit would serve the purpose for the bird. It is its greed for more fruit and sweeter ones than the first that motivates it to leap from branch to branch and from tree to tree, spoiling all the fruits in the process, littering the place and feeling unsatisfied and tired at the end of the day.

Like a wise and enlightened creature, this bird would remain calm and unruffled under all circumstances; it would not be interested in enjoyment of the sensual pleasures of the sense organs, nor would it be subservient to them like its companion that is fickle-minded and indulgent in the enjoyment of the sense organs and the gross world with its sense objects.

The metaphor of the two birds is used in this verse to describe the difference between the thought process and mental condition of two persons—one who is 'realised and wise', and the other 'who is not'. While the former is fickle, indulgent, restless and eternally unhappy, the other is calm, steady, rested and eternally peaceful. The bird representing the ordinary creature keeps hopping from branch to branch; it is never satisfied, biting one fruit with its beak and leaving it to jump to another in the hope that it is better, more succulent and sweeter even while the first fruit is left to rot. This bird can never satisfy its hunger, and remains ever fickle and fidgety like the ordinary creature who keeps on jumping from subject to subject, from deed to deed, from thing to thing, from birth to birth, without ever finding truthful satisfaction, rest and happiness.

The other bird is Maheshwar in the sense that it like a creature who has become 'self-realised'. This creature has become aware of the reality of the Atma, the eternally contented and peaceful pure consciousness that is the resident deity in the

body, and therefore remains aloof from the intransigent traps laid by the world and its temptations. Such a creature finds true satisfaction, peace and happiness. Lord Maheswar or Shiva is always in a state of meditation and deeply contemplative. He remains in a perpetual state of Samadhi which is the blissful state of transcendental existence. He is oblivious of the material world and has exemplary renunciation in him. The second bird personifies these virtues.

Consequently, at the end of the day the first bird representing the ignorant creature would be tired and worn out by its constant hopping around, the tree also suffers due its presence because it destroys all the fruits and litters the ground below, and environment would be disturbed by the incessant nuisance created by the bird's constant chirping, pricking and hopping around. On the other hand, the tree as well as the environment welcomes the second bird because not only the fruits are spared from being ruined but the ground is also kept clean and there is quietude and peace all around the immediate surrounding of the tree. The bird itself is rested and peaceful at the end of the day, and since it has eaten its fill from one succulent fruit which it selected carefully, it too remains contented like a wise creature who has diligently searched out the 'truth' about the Atma and enjoys its accompanying bliss peacefully, instead of remaining involved in the ever-changing world which is tantamount to pursuing water in a desert mirage to quench his spiritual thirst for peace, happiness and bliss. Refer verse no. 41 of this Canto 4 also in this context.]² (32).

[Note—¹Refer also to—(a) Krishna Yajur Veda's Rudra Hridaya Upanishad, verse no. 41; Shwetashwatar Upanishad, Canto 4, verse no. 6-7. (b) Atharva Veda's Mundak Upanishad, Mundak (Canto) 3, section 1, verse no. 1-2. (c) Shukla Yajur Veda's Paingal Upanishad, Canto 2, verse no. 13.

The metaphor of two birds sitting upon the same tree has been used to describe the relationship between the individual creature called the Jiva and the supreme Lord called Ishwar in a number of Upanishads. The tree is the body, while the two birds are the Jivatma and the Parmatma. This is done in the Krishna Yajur Veda's two Upanishads, viz. Rudra Hridaya Upanishad, verse no. 41, and Shwetashwatar Upanishad, Canto 4, verse no. 6-7 which use the metaphor of two birds to describe the relationship between the individual creature called the Jiva and the supreme Lord called Ishwar.

On the other hand, the Atharva Veda's Mundak Upanishad, Canto 3, section 1, verse nos. 1-2 use this metaphor to describe two types of creatures—one who remains engrossed in the world and the other who is totally dispassionate and watches it with total disinterest.

The Shukla Yajur Veda's Paingal Upanishad, Canto 2, verse no. 13 uses the metaphor of the bird finding rest in its nest to describe the Sushupta state of existence as follows—"The state of existence when the intellect is stable and uniform (i.e. when there is no distraction and agitation of any form) is like the 'deep sleep state' of existence when the man does not even dream and has no restlessness even in his dreams! [When he wakes up from this sleep, he is completely rested and refreshed.] Even as a bird that is tired of flying around heads towards its nest to take rest, and having reached there it folds up its wings to retire, the creature too, when it is tired and weary of the restlessness caused during its waking and dreaming states of existence, seeks rest, it retires to the state where there is no restlessness because there is no awareness or knowledge of the existence of the external world, nor the reception of any kind of stimuli that would disturb the peace of the mind and intellect and provoke it. This state is equivalent to being ignorant of any kind of happening that can disturb peace and equilibrium of the man, when he is blissfully at peace with himself. Thus, in this state the creature finds perpetual bliss which is devoid of any interfering annoyance created by the various stimuli either from the physical world of the waking state, or the imaginary world of the dreaming state.

But it must be noted that this state is marked by ‘ignorance’ of the reality, ‘unawareness’ of the truth.”

²Refer also to verse no. 41 in this context.]

33. The Lord of creation known as Maheshwar, i.e. the supreme transcendental Brahm, is merely a neutral witness to everything without getting involved in any of the things and deeds in this world, without either enjoying anything or suffering from anything.

This Maheshwar is self-illuminated. Any sense of duality or difference or dichotomy that exists between this Lord and the Jiva (the creature) is imaginary, and only out of the interfering Maya (delusions about the reality and truth).

When the Maya corrupts the Chitta (mind and sub-conscious), the creature begins to think that such difference does exist, while when this Chitta is freed from the corrupting influences of Maya, these imaginary views vanish (33).

34. When it is established by logic, proof, study, analysis and elimination process that there is actually no difference between the two types of ‘consciousness’—one at the macrocosmic level that is known as Brahm which is all-pervading and omnipresent, and the other at the microcosmic individual level of the creature that is known as the Atma—the creature has no more consternation, he does not worry and procrastinate, he is not torn between what is real and truthful and what is not, and consequentially he becomes wise and realised, he finds lasting rest, stability, peace and bliss (34).

35. It (Brahm) is the universal foundation and the basis of the entire world (creation). It is truthfulness and consciousness personified.

Oh sage! Be convinced of the fact that your ‘self’ (the Atma) is this same ‘consciousness’ (that is known as Brahm, the Lord of creation known as Maheshwar), think that ‘I am that (Brahm; consciousness)’, and therefore be reassured and freed from all spiritual ‘Shokas’ (restlessness, worries about your destiny and chances of salvation and emancipation, about how to get liberation and deliverance, etc.). Be calmed down with this eclectic thought that you are indeed Brahm personified (35).

36. It (Brahm; consciousness) lives as a self-illuminated entity inside the body (of the creature as the latter’s Atma), and is a witness to everything.

This eclectic and divine entity is witnessed and experienced by a Jiva (living being; a creature) who has become thoroughly clean and uncorrupt, and all the faults and shortcomings of whom have been completely eliminated.

On the contrary, when the Jiva is surrounded or covered by a veil of Maya¹ (delusions and its accompanying ignorance) he is not able to have any knowledge or awareness of this self-illuminated consciousness (representing Brahm) that is present in his inner-self. [This is like the case of a lamp being covered by a dark sheath. The light from the lamp would not be able to light the surrounding area, and any person standing even very close to the lamp would be in the same pitch darkness as the one who is miles away from it. This covering of Maya so much deludes and corrupts the mind-intellect and the sub-conscious that one begins to hallucinate and is unable to ‘see’ the truth from behind the curtain of falsehoods and illusions.] (36).

[Note—¹Maya: Refer verse no. 33 above of this Canto 4, and verse no. 76 of Canto 5.]

37. The knowledge of this divine and eclectic entity known as the 'self', which is pure consciousness, enables the learned Brahmin become self-realised, wise and enlightened (about the 'truth'). It is not possible to have the knowledge of this 'self' by pursuing any specific field of study or by getting entangled in a web of words (in the form of debates, discussions, studying of voluminous scriptures without being able to understand their essence and teachings).

[In other words, it is not possible to know what the 'Atma' is, what the 'consciousness' is, by trying to find the answer in anything other than turning inwards in deep contemplation and meditation. One can learn of this eclectic entity only by the path of self-realisation, self-witnessing and self-experiencing. It cannot be taught and learnt by any external means. The scriptures and teachers can at the best guide the spiritual aspirant on the correct path, and remove his doubts and confusions, but the actual achievement of success depends upon one's own endeavours, own sincerity, and on actually walking the path. Mere knowledge of the destination or availability of a means to go there would not make one reach his targeted place if one does not go there himself; any destination can be reached only by walking the path and not by being a scholar in the knowledge of the path or the destination.] (37).

38. Be steady and calmed-down by obtaining the knowledge of Brahm by becoming like a child (who is innocent, untainted, unprejudiced and uncorrupt)¹.

The knowledge of Brahm makes a man Brahm-realised, and this eclectic mental state is equivalent to that of a child as it is not only innocent, untainted, unprejudiced, uncorrupt and contented, but is also cheerful, happy, blissful and free from any worldly worries (38).

[Note—¹Refer the Holy Bible, *Gospel of St. Matthew*, 18/1-6—1: At the same time came the disciples unto Jesus, saying, Who is the greatest in the kingdom of heaven? 2: And Jesus called a little child unto him, and set him in the midst of them, 3: And said, Verily I say unto you, Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven. 4: Whosoever therefore shall humble himself as this little child, the same is greatest in the kingdom of heaven. 5: And whoso shall receive one such little child in my name receiveth me. 6: But whose shall offend one of these little ones which believe in me, it were better for him that a millstone were hanged about his neck, and that he were drowned in the depth of the sea.

Gospel of St. Mark, 9/36-37—36: And he took a child, and set him in the midst of them: and when he had taken him in his arms, he said unto them, 37: Whosoever shall receive one of such children in my name, receiveth me: and whosoever shall receive me, receiveth not me, but him that sent me.]

39. The divine entity that is hidden inside the inner-self of the creature (i.e. the pure conscious Atma) produces two types of sprouts (awareness; desires or wishes)—one that is auspicious, and the other that is inauspicious. The 'inauspicious' sprout is represented by or is a metaphor for being aware of the gross body and the gross world, and the accompanying desire to derive pleasures and comforts of the sense organs of the gross body from the relevant sense objects of this imaginary world. These 'inauspicious' sprouts are responsible for not only the creation of the gross body and the gross world but also help to enhance them, keep them active and relevant, fostering a close tie between this illusion and the creature himself, thereby decimating any vestiges of chance that he has for his peace and redemption. It is 'inauspicious' because it traps the creature in its web-like tentacles which create innumerable and intransigent problems for him.

[On the other hand, 'auspicious' sprout would be that which creates in the creature awareness of the 'truth' which is another way of saying that a creature is inspired to be aware of the 'truthful self', or has the desire to break free from the grossness associated with the body and the world, and instead seek higher and subtler state of existence when one becomes aware of the pure and blissful 'consciousness' that resides in one's own inner-self. Hence, while the 'inauspicious' sprouts create a tree that provides fruits that lead to grossness and worldly entanglements, miseries, restlessness and anguish, the 'auspicious' ones lead to a subtle existence of a high plane which leads to one's spiritual awakening, liberation, deliverance, emancipation and salvation.

In this verse, the term 'sprout' refers to the various Vasanas and Vrittis that a creature has. They are a creature's inherent and natural passions, yearnings, longings, aspirations, desires and wishes as well as his habits, inclinations and temperaments vis-à-vis the body and the world. Auspicious and noble Vasanas and their relevant Vrittis help a creature to attain higher goals in life and achieve an exalted state of existence, while evil Vasanas and their attendant negative Vrittis pull him down and lead to his downfall and denigration.] (39).

40. The notion that there is some shortage, there is some sort of want or unfulfilled desire that needs to be fulfilled or addressed is like some cursed family heirloom that is the cause of all sorrows, miseries and torments that afflict the possessor of such cursed heirloom. It snatches all his peace and happiness; it robs him of whatever bliss and tranquility that he might still possess. It affects the working of the creature's mind-intellect so much that he is not able to think coherently and cogently as his sub-conscious too has become foggy by being prejudiced and tainted.

The mind-intellect and the sub-conscious are subjected to the numerous desires and wants that a creature harbours in his inner-self, and the former cannot remain immune from the influences of the latter. [Hence, when the desires, wants, aspirations, ambitions and volitions become either non-existent or 'auspicious' as described in verse no. 39, it is only then that the creature can hope to find true rest, peace and bliss.] (40).

41. If the Chitta (mind and sub-conscious) is compared to a tree, then it is said that it has two kinds of seeds. These are 'Vritti' (natural desires, temperaments, tendencies and nature of a creature) and 'Vrat' (exemplary self-control, the various regulations and disciplines followed by the creature voluntarily for his self-improvement and enhancement; the various vows and self-regulatory principles that one rigidly follows in his life to make oneself disciplined and orderly).

The various 'Vrittis' that a creature has keeps the Pran (vital winds; the life-forces inside the body) active and inspires the creature to do so many things with his gross body in order to meet the demands of these Vrittis. On the other hand, the 'Vrats' inculcate in him the virtues of self-discipline and self-restraint.

While the Vrittis make the creature restless, fidgety and agitated (like a balloon filled with air that moves at the slightest movement in air, or a tall slender tree that sways when struck by a strong wind during storms), the Vrats on the other hand make him peaceful, serene and rested (like a balloon that is tied with a short string to a peg on the wall, or like a tall but sturdy tree which does not sway even in the strongest wind).

[The word 'Pran' in this verse refer to the life-forces in the creature's body. Since 'life' is a synonym for the pure conscious Atma, it follows that the Atma is subjected

to numerous problems due to the various Vrittis that are present in a living being. These Vrittis do not allow the Atma to rest in peace. They are like wild and untrained horses of a chariot; these horses would cause havoc for the charioteer and the passenger besides damaging the chariot itself.

On the other hand, the 'Vrats' are like the bridle and the whip used to tame and rein in the same wild horses.

In the example of the two types of trees cited here, while the tree representing the various 'Vrittis' of a creature makes life hell for him because of its constant swaying which makes the creature fearful of falling off its perch any moment, the one that is a metaphor for 'Vrats' provides calmness and peace to him.

In other word, the Jiva who allows the Chitta to harbour various Vrittis would be always restless and on the edge, while the Jiva who has learnt to practice various Vrats would be able to overcome the negative impact of the same Vrittis and maintain the peace, poise and calmness of his mind.] (41).

[Note—If we read this verse in conjunction with verse no. 32, its profundity with respect to its metaphysical import would be self-evident. We have two trees—viz. A and B. Tree 'A' sprouts from a seed that is known as 'Vrittis', meaning various worldly tendencies, inherent temperaments and natural habits that a creature inherits. Therefore this symbolic tree is said to be structurally weak and unsteady in as much as it sways easily under the slightest of breeze representing the numerous temptations of the world, some small and some big, as well as the natural tendencies of the sense organs of the body to seek self-gratification and swerve towards their respective objects in this material world. Obviously, a bird living on such a tree would be very uneasy, disturbed and restless. Even a bird symbolizing the Maheshwar (i.e. an enlightened, wise and self-realised creature) would be not spared from the buffeting effects of the Vrittis for the simple reason that as long as it lives on this tree it simply cannot avoid being influenced by its natural habitat or perch, so one can well imagine the disturbing condition of the other bird representing ordinary Jiva.

As compared to this is the tree called 'B' which sprouts from a seed known as 'Vrat'—meaning exemplary self discipline, self control and self restraint. The structural fiber of this tree can withstand even a storm, and thus stands steady and unmoving. The robust structure of this tree gives steadfast hold to the bird and it can rest peacefully in its nest or perch comfortably on its branch without getting agitated and restless, and without worrying for being felled. In this case, even the bird representing the ordinary Jiva would be comparatively comfortable and happy because its perch is steady and strong.

In essence this verse emphasizes the point that it is most important to control one's Vrittis and practice the virtues of Vrat if one wishes to obtain peace, tranquility, stability, happiness and bliss.]

42. When the Chitta (mind and sub-conscious) makes the Pran Vayu (the vital winds) active, life and consciousness begin to flow in the various Naadis (nerves and veins) present in the body of the creature. As a natural corollary it can be said that the cause of the origin of this world and its objects is due to the Chitta having various Vrittis inciting the Pran to become involved in this creation consisting of the gross body as well as the gross world.

[That is, the inherent desires and aspirations of a man motivate him to do so many varying deeds, and since doing of deeds need the active participation of the gross body it is said here that the Naadis have been made active by Pran. The word 'Pran' not only means vital winds but is also a metaphor for life, activity and movement. Various Upanishads enumerate how the Pran keeps the body active and

regulate its functioning. In this context, refer Canto 3, verse no. 10 and its accompanying note.

The life-giving vital winds keep the body alive and active, and such a body is said to be 'conscious' of its surroundings as opposed to a body from which the vital winds called Pran have made their exit or in which they have become dormant. An active and living body is said to have consciousness or vital signs of life pulsating in it because of the vital winds flowing through its Naadis; it is this spark of life present in the nerves and veins that keeps the creature alive in this world. This is because the body is made active only when the nerves and veins keep it alive. Since a person who has no desires would not be inclined to do anything in order to fulfill his desires, and therefore his body would not need to remain active, it is said here that Vrittis present in the Chitta incite the Pran to become active, and in turn activate the gross body so that the creature can do what the Chitta wants him to do.] (42).

[Note—In the context of the importance of the control of Pran and Chitta, refer to Canto 3, verse no. 10; Canto 4, verse no. 85-89.]

43. The Pran (vital winds) is made active, or the vital winds present inside the body begin to vibrate so as to make the body of the creature active and perform various deeds, upon being inspired or incited to be so by the Chitta Vrittis inherent in the creature.

[The mind and the sub-conscious of the creature which makes him do this and that in this world, and his various Vrittis (or natural tendencies, habits, inclinations and temperaments) motivate him to do a particular thing in preference to another. It is the creature's inherent Vrittis that compel him to swerve towards the material world of sense objects, and thereafter remain hitched to them. Had it not been for these Vrittis of the Chitta, the creature would have been restful, peaceful and calm. The Vrittis keep on gnawing at him and prodding him ceaselessly to do something desired by them. When given a choice, the Vrittis would decide which of the various options the creature selects.

Since all the activities of the body are controlled by the vital winds, it is said that the Chitta Vrittis motivate the Pran to become active and agile. This is because all the desires of the creature as inspired by the Chitta Vrittis can be realised only through the medium of the gross body, and the latter is under the control of the Prans. So unless the Pran works according to the dictates of the Chitta Vrittis, the latter cannot hope to fulfill its desires.

The cumulative effect of all this is borne by the Atma which is the 'real and truthful self' of the creature. The restlessness of the Prans under the influence of the Vrittis is reflected in the restlessness of the gross body as well as the mind. Since the Atma is a resident of this gross body, and the mind is its assistant in its dealings with the body as well as the world, the Atma is bound to be disturbed when both its habitat, the body, and its assistant, the mind, are disturbed. When the Vrittis make the creature entangled in the affairs of this material world of sense objects, and in the bargain keeps him agitated and restless, it is said that the Chitta Vrittis have made the Atma not only agitated and but entangled in this world unnecessarily.]

Hence, it is best to control this situation (if one wishes to find peace and happiness) by controlling the unnecessary movement of the Pran (that makes the creature unnecessarily involved in the world and pay unwarranted attention to the nagging of the gross organs of the body). This can be made possible by practicing the tenets of 'Vrat', or self discipline, self control and self restraint (because then the tendency of the Chitta to be restless, unsatisfied, greedy and rapacious would

automatically be done away with, resulting in calming down of the Pran, and with it, of the body.] (43).

44. Yogis (ascetics) strive to control their 'Chitta Vrittis' by regulating their Pran and its flow, or movement, inside the body. The method of regulating the Pran are many, such as doing 'Pranayam' (breath control), Dhyan (concentration or focus of the mind; contemplation), and such other time-tested paths or instruments of Yoga (meditation) (44).

45. You must understand that peace of the Chitta and its stability is the eclectic reward or the fruitful result of doing Pranayam. Those who are wise, learned and erudite, those who have a deep knowledge of this subject, assert that Pranayam is a bestower of 'Sukha' (the feeling or notion of having happiness, joy, peace, comfort, pleasure and good fortunes) as well as 'Swastha' (good health). [In other words, by practicing Pranayam, a Jiva finds mental peace as well as a rejuvenated and a healthy body. His mind is freed from all unnecessary clutter and inauspicious thoughts, and his body is freed from unnecessary tensions and their negative effect on its metabolism. Obviously, with such a peaceful mind and a invigorated body, the life becomes a happy journey, rather than a cumbersome burden, for the creature.] (45).

46. Be firm in your convictions and beliefs, and abandon procrastination. Do not worry about the past as well as the future. [And therefore, live in the present. Of course, this is the best antidote to worries and fears.]

Vasanas have been defined as having a desire to accept or grasp material sense objects of this world; as having yearnings, lust, greed and passions for material things and sensual objects of the world; as having a desire for gratification of the sense organs of the body (46).

[Note—Refer also to Canto 1, verse nos. 29-32, 54; and Canto 4, verse no. 25.]

47. The Chitta (mind and sub-conscious) cannot find peace, stability and rest till the time one abandons all things worthy of abandoning. [That is, all things that are gross, material and created out of the imagination of the mind should be discarded as being inconsequential if one wants to achieve the peace of the mind as well as of the Atma. This is because as long as the mind remains agitated, the Atma cannot find rest; it would be constantly nagged and irritated by incessant pricking by the mind and sub-conscious.]

Hence, one should discard every sort of disturbing element (such as various Vrittis and Vasanas) from interfering in one's calm and peaceful existence (47).

[Note—Refer also to Canto 4, verse nos. 85-86.]

48. As long as the Mana (mind and the emotional or sentimental aspect of the heart) is not freed from the clutches or influences of the Vasanas (worldly passions, desires, lust and longings; worldly attachments and attractions), it can never find peace and happiness. [This is because the Vasanas would constantly keep nagging at the creature, and cause immense perplexity and agitation in him.]

So, when the aspirant is able to keep the Mana free from any sort of Vasanas, it is only then that he obtains the eclectic state of existence known as 'Amanask'¹—i.e. the state of the mind when it is absolutely neutral towards and uninvolved in the surrounding material objects of the gross perishable world, as well as is immune to the constant prodding of the gross body and its sense organs demanding gratification.

This state of being 'Amanask' is a provider of exemplary peace, calmness, bliss, beatitude and felicity (48).

[Note—¹The concept of *Amanask* have been described in other Upanishads as well, for instance Shukla Yajur Veda's Mandal Brahmin Upanishad Brahman 2, section 2, verse nos.1-5; and Advai Tarak Upanishad, verse no. 7.

The word *Amanask* literally means without the influence or interference of the mind; being de-linked from the mind; annihilation of the mind; absence of the mind. This state leads to tranquility and peace for the creature and his soul. The Atma, which is truthful 'self' of the creature, generally interacts with the outside world through the mind-intellect complex. When the mind is snapped shut, the chain of receptions and responses of the Atma vis-à-vis the world also gets snapped. The Atma then remains cocooned in the sheath called the bliss sheath which surrounds it in the causal body. It is not impinged upon by the perplexing impetuses from the outside world because the circuit has been broken at the level of the mind. Hence, the Amanask state is when the Atma of the creature, i.e. the pure consciousness, becomes detached from and remains oblivious of the deluding external world along with its trademark problems, and consequential becomes rested, peaceful and tranquil. The Atma is uninvolved and aloof from all that the body might be doing in this world if the creature remains permanently in this Amanask state, because it is the mind and not the body that actually does the 'thinking, feeling, remembering, analyzing, deciding and responding' to the stimuli that the body receives from the external world on behalf of the creature. If the mind is stopped from functioning, then the body may be doing anything but the creature does not register that deed, and therefore the Atma is also not aware of what the body was doing and neither is it responsible for its consequences as it is not a participant in the entire process. That is why this state of Amanask is liberating for the creature's Atma. It also follows that the mind-intellect complex is the one that decides whether or not the creature gets involved in a deed.]

49. When one does not think about any given thing in this world, or when the mind is diverted elsewhere and one does not pay attention to it, then for all practical purposes that thing does not exist.

In a similar way, how can the Chitta (mind and the sub-conscious) have any existence when the heart is neutral and exists in a symbolic void like the one that is present in the sky? [A man is not interested in anything in this world when the heart is not interested in it or when it finds no attraction in it. In other words, a man is interested in anything in this world only as long as his heart likes it. A man feels emotionally attached to anything and feels happy to be associated with anything in this world only if his heart too plays ball with him. Should the heart decide to turn away from something or someone, no matter how important and significance that thing or person may be, the man is not interested in them any longer. A man finds anything worthwhile and worthy of paying attention only if the heart consents. It is only then that he is able to focus his mind on that particular thing at length, and his sub-conscious registers the presence of that thing along with its relevance and importance for the man. In order to keep the mind focused on any given thing it is of paramount importance that the heart should love it and long for it. Otherwise, the mind would move away from it and dwell on any other thing that sufficiently charms the heart. In other words, it is the heart that actually inspires the mind to focus on and register the presence of anything in this world. If the heart is disinterested, or when the heart exists in a virtual void, then the mind and the sub-conscious would not be bothered about that thing and would be inclined to move away from it.

The proof of the importance of the heart vis-à-vis the mind is when we say that we have learnt anything by heart. The process of learning is actually done by the

mind and not by the heart. But the implication is that when one was going through the process of learning, his heart was sincerely and diligently involved in the process; it had not created any hurdle by diverting his attention to something else more pleasant, but had rather assisted the learner to focus his attention on the thing to be learnt. Had it not been so, the man would not have been able to focus his attention fully on the thing to be learnt because the heart would have pulled him in some other direction. He would not have been able to maintain the drive and stick to the task at hand if the heart did not cooperate with him. Hence, for all practical purposes, the heart decides whether or not the mind can focus itself on any given thing, and remain focused on it.

We can take another example to understand the importance of the heart. When a man loves something and longs for it ‘whole-heartedly’, his entire being—including his mind and sub-conscious—becomes obsessed by it and remain focused on it. The mind would always think of it, and nothing else but that particular thing. The mind would constantly devise all imaginable ways to get the thing longed for by the heart, or be at least near to it, even when such obsessions are, more often than not, detrimental for the long term good of the man. On the opposite end of the spectrum is the scenario when the heart detests or loathes something—in this latter case, the same man would begin to despise the very thing which he would have died for had the heart longed to have it, even if the mind tells him that the particular thing is of great value and the heart is wrong on this count. The man might heed the advise of the mind and think of the thing under consideration for some time, but sooner or later he would lose interest in it because his heart would pull him away by telling him that there is another thing more pleasant and worthy of being paid attention to than the one which the mind had preferred.

So we conclude that that the heart and its emotional as well as sentimental powers are more powerful instruments as compared to the mind and its logical or reasoning powers when it comes to determining the natural inclinations, temperaments, tendencies and leanings of a man. The heart has a greater say to determine a man’s desires, yearnings, wants, longings, aspirations, volitions, hopes and expectations as compared to the mind.

A typical example of the sway of the heart is when a man falls in love—he overrides all advice given by the mind and becomes ‘blind in love’. This is because his thinking and analyzing mind, which actually enables a man to ‘see’ the reality and be practical in life, has been paralyzed, or made to sleep or become numb, under the relentless onslaught of the emotional and sentimental demands of the heart.] (49).

50. When one thinks that he does not have a certain thing in this world (but others have it), it is only then that he feels the dearth of it, it is only then that he begins to want it and get mentally hooked to it. But when a thing has no existence at all, then there is no question of feeling the lack of it, and therefore there is no question of desiring it or getting hooked to it.

This is the active state of the Chitta—because it is the Chitta that determines whether or not a particular thing is needed, its importance, relevance and worth, and the very fact that it exists at all in this world. Once this happens, the same Chitta conjures up a desire for that thing in the creature, and the creature begins to feel the need of that thing.

Then there is the case when one accepts a thing as it is or as it appears to him, without bothering too much about it or getting unduly involved in it. This case is called ‘A-Chitta’ state—i.e. a state of indifference, dispassion and neutrality of the mind and sub-conscious (50).

51. A wise, erudite and enlightened man willingly and consciously leaves everything related to this world, and disassociates his inner-self from having any kind of mental and emotional involvement with them. Consequentially, he develops great calmness, tranquility, serenity, peace and stability of the Chitta (mind and sub-conscious). His Vrittis (inherent tendencies and natural desires) are quietened (51).

52. Just like a new shoot does not emerge from a roasted seed, a person whose worldly desires and corrupt tendencies have been vanquished or crushed too does not take a birth again. In other words, he who has no Vasanas (worldly passions, desires, lust and longings; worldly attachments and attractions) is said to be the one who is 'Jivan Mukta'—i.e. he has obtained spiritual liberation and deliverance from the fetters that shackle an ordinary creature to this deluding and entrapping material world even though he is alive in it and has a gross body with which he does deeds ordained for him by destiny (52).

53. Those who are erudite, wise and realised understand the truth of everything, including this existence and their own self (as being 'consciousness personified'). They realise that the body is gross and not the real 'self', but the latter is the Atma that lives in this body, and this Atma is a divine, eternal, eclectic, subtle and sublime entity known as 'consciousness'. [That is, they do not see the exterior façade which is gross and deceptive, but are able to see the 'truth' which is pure consciousness that is hidden behind this exterior, the 'truth' that is the only absolute reality of existence. Therefore, they discard the falsehood and accept the truth.]

With this wisdom they develop a Chitta that is not involved in this world and the body in any manner whatsoever. Hence, when they leave the body and the world, they become as subtle and infinite as the sky; they lose all vestiges of grossness and become sublime and ethereal like the sky; they merge and become one with the sky. [The reason is that the Atma, being 'consciousness', is an ethereal and sublime entity that is often called the 'Spirit', and when the shell of the gross body is shed, it imperceptibly, automatically, and without the least of effort merges with its primary form that is as diffused, eternal, infinite and all-pervading as the sky element. That is, the individual Atma merges with the universal cosmic Consciousness that permeates everywhere in this creation.] (53).

54. When a creature becomes self-realised and truly enlightened about the Truth and Reality (as outlined in the foregoing verses), he abandons all his Vasanas and the tendency of the Pran to keep the body involved in this world. [When the creature has desires and passions, he would strive to fulfill them at any cost. This is a metaphoric way of saying that the Pran, or life-forces present inside the body, keep the latter involved in the world, as desires can be fulfilled by taking relevant actions or doing necessary deeds by the body.]

Hence, Gyan, or truthful knowledge, self-realisation, enlightenment and wisdom, helps one to abandon the Vasanas and the resultant agitation of the Pran. In other words, it is only then that he finds peace and rest. It is like the case of uprooting a tree from its roots, for then there are no chances of it producing new shoots and coming back to life once again. That is, if the Vasanas and Pran are controlled as a result of inculcating Gyan, or as a reward of acquisition of Gyan, then this control would be lasting and sustainable (54).

55. To have lingering attractions for things seen or imagined in some time in the past, to yearn for them, lust for them, be obsessed with their thoughts, and to be overcome by a staunch desire to have them and enjoy them, is called a 'reflected Vasana'. [It is 'reflected' because the thing or object of attraction or passion is not present currently, only its memory and thoughts remain in the mind and the sub-conscious. But this memory is so strong and unshakeable that it overwhelms the creature's being in the present moment; it literally 'possesses' him like an evil spirit. This longing for a particular thing or object is an 'echo' of the original Vasana that had submerged the creature earlier when the thing or the object had actually existed or imagined to be existing in the past.]

A creature is called intelligent, wise and erudite who makes diligent efforts to eliminate such imaginary and illusive thoughts from his sub-conscious, and clears his mind and intellect complex from being deluded by such hallucinating notions. [Otherwise, he would be foolish to allow himself to be unnecessarily agitated and flummoxed by imaginary things that have no existence, pith and matter.]

Therefore, a man must get rid of or overcome even the 'reflected Vasanas' (55).

56. Only if such Vasanas are not done away with that the creature is impelled or compelled to get entangled in this world. [It is because if he has lingering traces of Vasanas, he would strive to seek fulfillment of his hidden desires and satisfaction of his passions by getting involved in the material world and its mundane activities. And obviously this would tie the Atma to the gross body or compel it to surrender its inherent independence to the body, because without the body it is not possible to gratify or please the Vasanas.]

Therefore, to get proper and complete rid of the Vasanas is called 'Moksha'—or true liberation, deliverance, emancipation and salvation of the creature's 'self' (56).

57. You (Nidagh) must attain an exalted and self-realised state of existence where nothing matters. It should be a state of total indifference, detachment and neutrality, of total dispassion towards anything or anyone in this transient, material and deluding world, so much so that you must not have the notion of having, or deriving, any kind happiness or joy from anything whatsoever in this world.

But this does not mean that you would not have happiness in this world. Quite the contrary; in fact you would be so much drenched in the sort of 'Anand' (bliss, joy, happiness, beatitude and felicity) that has a sublime and subtle dimension, instead of an Anand having gross value that is derived from the material sense objects of the world, that you would be completely submerged and dissolved in this aforesaid grand virtue of Anand. That is, your whole being would be indistinguishable from Anand; you would be virtually Anand personified (57).

58. A creature who has no interest in anything of this world, which is, however, only the subject matter of perception of the sense organs of the body is said to have truthfully overcome the Vasanas. Such an exalted state of existence is equivalent to being in a state of virtual stupor as far as this gross existence and the gross world is concerned. [This is because such a man would not be interested in the affairs of the world and does not get involved or indulgent in it; he prefers to remain aloof in a contemplative mood of meditation, and lost in the deep thoughts of his own pure 'consciousness' that resides in his bosom. Since the world prefers to deal with someone who shows interest in it, it is natural that the former would neglect the latter

just as the latter neglects the former. For all practical purposes, the self-realised man who is indifferent to this gross world, its sense objects and their charms, and instead prefers to remain contemplative and focused in his inner-self, is of no worth for the world. The world is selfish and anyone who does not meet its vested interests is of no value to the world in spite of his being a good person and highly realised, wise and enlightened.]

Such a wise, self-realised and enlightened man who is fully detached from and dispassionate towards the world and its affairs may be doing all the routine works expected of him in this mundane world or mundane existence, but he is totally un-involved (at the mental, intellectual and emotional level) in the deeds that his body routinely does. That is, his 'self' is literally not doing anything at all. He is unaware of the gross material things of the world, and their charms, pleasures and comforts, he is not even aware of the body's actions and deeds because his mind—which is the actual center where all sensory perceptions are received, accepted and then analyzed to be interpreted in the form of existence of the world with its material sense objects, or the doing of the deed by the body, or the various comforts and pleasures that are derived by involvement of the body in the material sense objects of the world—has been trained to neglect the world and the body, to remain neutral and detached, to practice non-involvement and dispassion, and to generally shield the Atma from being disturbed by the various gross inputs from the body as well as the world.

He is virtually like a man in stupor or coma. He might be doing so many things externally, but internally he is not deemed to be doing anything at all. He becomes an ideal of such glorious virtues as neutrality, dispassion, equanimity, detachment, non-involvement and renunciation (58).

59. Being enlightened and self-realised, he lives in a state of mental void. He is totally unaware of what is happening around him, or what is present in the world around him. His heart—which is the progenitor of such emotions or feelings as attraction, longing, desire, affection, infatuation etc., which in turn lead to emotional involvement with anything in this world and being sentimental about—too remains in a virtual state of void or non-involvement.

In other words, his heart as well as the mind remain non-involved in, non-committed to, non-indulgent with and non-attached to this world and its material sense objects along with their attendant charms and temptations.

Such a person is said to be 'Jivan Mukta'—or one who has obtained spiritual liberation and deliverance from the fetters that shackle an ordinary creature to this world even while he is alive and lives in this world with a gross body with which he does so many deeds in this life (59).

60. The Atma (the pure conscious 'self' of the creature) has not the slightest trace of any kind of inherent Vasanas (worldly passions, desires, lust and longings; worldly attachments and attractions) in it. [The Atma is absolutely pure and immaculate, and such tainting qualities are simply not its cup of tea. The Atma does not possess any trace or vestige of any kind of Vasana that can be called its integral part or its inherent character. Whatever Vasanas it has are its acquisition when it comes in contact with the material sense objects of the mundane world. These things are so fascinating, charming, attractive and alluring that they delude the Atma into falling for the honey-trap. It's like the case of the eternally free sky-bound bird that allows its self voluntarily to be trapped by the bait kept by the bird-catcher. Therefore, if the Atma manages to keep itself aloof from the temptations offered by the world and the

demand for gratification by the sense organs of the body, it is able to keep itself free from being tainted by the Vasanas, and even overcome any trace of Vasana which might have inadvertently clung to it. The Atma would be able to maintain its immaculacy and pristine purity. If there are no Vasanas, there would be no Vrittis, and vice versa. This is because if one has no passions and lust, he would have any desire for anything in this world, and therefore his mind would not be conditioned to develop certain habits and preferences, it would not be inclined to move towards something or away from another impulsively.]

A wise, enlightened and self-realised man who has understood this fact becomes quiet and steady just like an innocent child or a man who is dumb. [A child or a dumb man is not able to express his desires and passions. Just like them, a man who has realised that the Atma has no Vasanas in it too remains mute and un-expressive in the sense that he does not have the faintest idea of what is known as desire, passion, lust, longing, yearning etc. Since he is totally oblivious of what constitutes 'Vasana', he is unable to express his longing or attraction or desire for anything or anyone in this world. Therefore he becomes 'mute'. He is 'steady' because he no longer is torn between this and that charm, between the worthiness of this object and the futility of that, between one desire and the next.] (60).

61. This state of total neutrality and non-involvement with anything or anyone in this gross mundane world is deemed to be the state of 'Mukti' (or liberation and deliverance from all sorts of fetters that shackle an ordinary creature) by those who are well-versed and wise in this field of metaphysics.

A man who adopts this eclectic tenet in his life and relies upon it is established in knowledge and is deemed to be wise, enlightened and self-realised. He does not get entangled or involved in the least in anything that has the remotest of chances of igniting any kind of Vasana in him (61).

62. A wise, enlightened and self-realised man should discard all sorts of Vasanas, and instead be established in the unmoving and the perpetual state of 'Samadhi'—i.e. he should be perpetually calm and quiet like a man in the higher state of meditation when he has reached the transcendental state which is trance-like. Such a man, for instance, does all the deeds with his body, but internally he is absolutely serene and unruffled, being un-involved mentally, intellectually, emotionally and sentimentally in any of the deeds or actions of the body because he is in a state of deep contemplation upon his 'self', or his Atma, which is pure consciousness residing inside his inner-self. His focus on the 'self' precludes any chance of his mind being involved in the outside world, as the extreme sense of bliss and ecstasy that he enjoys while being focused on the Atma has no match in the temporary and artificial and transient happiness that one derives by being engrossed in the gross world through the equally gross body.]

He becomes so engrossed in Samadhi (deep meditation and contemplation) that he loses awareness of even his own existence as a creature with a gross body in a material world. And therefore, he is deemed to have attained the exalted state of ethereal existence which is eternal and infinite, a state which is without a beginning and an end. That is, his conscious 'self' dissolves in, or merges with, or becomes one with the eclectic entity known as the cosmic Consciousness. In other words, though he is not aware of the mundane and gross world, though he is unaware of the gross body, yet he is very much awake and aware, but this awareness and awake-ness now pertains to the higher plane of existence rather than the gross and lowly (62).

63. In this eclectic and exalted state of Samadhi (as described in verse no. 62), the consciousness (the Atma, the person's true 'self') may be involved in various activities of the world—for instance the creature may be walking, may be touching different things, may be smelling something—but internally his subtle mind-intellect is not aware of any of these things. That is, he does not perceive anything in this world; for him there is no activity and no existence of the world. Therefore, he does not get involved or engrossed in any of the deeds done in this world, or any of the numerous activities of the body. [This is because the creature becomes aware of anything in this world only when the mind is ready and willing to receive the impulses picked up by the sense organs of perception in the body when they come in contact with the world, and then interpret these signals so as to conclude that such and such thing is there. If the mind is not willing to do so, then nothing matters, nothing exists. The best way to witness this phenomenon in practical life is when the mind is deeply thinking about a certain thing. In this case, a person might be intently staring at something or even listening to people talking animatedly on a subject, but he would not be aware of either of them. A person sees, smells, hears, feels or tastes anything only when the mind accepts the relevant signal picked up by the concerned sense organs of perception in the body. If the mind is pre-occupied somewhere else then the man is not at all aware of the world where the sense organ of the body might be focused.]

It is actually the mind that does the function of perception on behalf of the Atma, with the body being merely an instrument to felicitate the mind in this function because the body bears the organs of perception through which the mind receives the impulses originating in the external world; the mind does not receive these impulses directly on its own. If the mind refuses to accept any of the inputs from the world though the sense organs have picked up the necessary signal, the Atma would not be aware of that particular perception. So, if the mind decides to shut itself off, the world would be shut off for the Atma. In other words, if the mind is fully detached from, and uninterested and un-involved in the affairs of the world which the body is involved in, the Atma too would be deemed to be detached, uninterested and un-involved for all practical purposes.]

A creature who has reached such an exalted and sublime state of existence when his mind does not register any impulses pertaining to this mundane existence as it is engrossed in contemplation, and when he thus stays in a perpetual state of Samadhi (which is a trance-like state of transcendental existence of consciousness that remains aloof from all grossness associated with the body as well as the world), the creature is deemed not to be involved in anything. Such an exalted creature lives in a virtual state of Amanask (refer verse no. 48) which is like a state of stupor since his mind has completely retracted itself from the outside world and its awareness, the mind has abandoned all its involvements in the gross world and its temptations, and instead has become meditative and contemplative. The mind is now engrossed in the thoughts of the 'self' rather than in the thoughts of the gross world and its sense objects as well as in the thoughts of the body and its demands for gratification. This is the ideal state of the mind of an enlightened and self-realised Jiva (creature; living being).

Such a creature becomes exemplarily neutral and indifferent to both the notions of sorrows as well as of joys. He does not feel dismayed or exhilarated at anything. In fact, his mind even fails to register the bliss of experiencing the pure consciousness that comes naturally during the process of meditation and contemplation, and which is enhanced and becomes overwhelming when the aspirant

reaches the higher state of existence known as Samadhi—because the intensity of bliss and ecstasy experienced during this stage becomes so overwhelming, so overpowering, so intense and perpetual, reaching such a high pitch and acquiring such depth and amplitude that he becomes literally numbed by it. His mind and sub-conscious become so drenched and suffused by this ecstatic feeling of bliss, felicity and beatitude that he fails to especially register these feelings in his mind.

[This can be illustrated with a simple example—when one eats only sweets, then after some time the taste buds fail to register the intensity of sweetness in a given dish because they are numbed by the overpowering sense of sweetness and become immune to its titillating and delicious effect. After some point, the eater would not even know that he is eating some delectable sweet dish. In fact, if one continues to eat only sweets without interspersing it with some other dish, a time would come when he would vomit, what to talk of relishing it.

On the other hand, if he combines it with some salty dish, then even the smallest morsel of the sweet would taste extremely sweet, delicious and immensely pleasing for the taste buds. So, when the mind is involved in the world, it gets a liberal dose of sorrow and joy. These are like the salty and sweet dishes cited above. In this situation, the smallest cause that can provide happiness and bliss to him is marked out, and the man can experience these senses. But in the case of Samadhi, there is only one, all-engulfing feeling of bliss, with nothing to disturb it, so the senses become numb to the feeling of bliss as now there is only bliss all around, with no trace of sorrows and pains.]

Therefore, in the absence of any disturbance of any kind, the state of Samadhi, the state of non-involvement of the mind and the sub-conscious, gives immense spiritual happiness, comfort and pleasure to the creature.

Such an exalted living being may appear to be stupid, ill-witted and dull externally, but he is immensely wise, enlightened and realised internally. He is perpetually happy and blissful not because he is a block-head or a mental patient whose mind is not working properly but because he has reached a higher level of consciousness that transcends the gross and the mundane.

[Ordinary people who are not sufficiently spiritually enlightened and empowered and wise are subjected to being buffeted by wave after wave of sorrows and happiness alternating with each other. They are tossed and turned like a plank of wood in a choppy ocean. But a wise, self-realised and enlightened man has attained the density and the gravity that comes with attainment of super conscious state of existence which can be compared to a huge ship that remains steady, stable and unaffected by even a fierce storm in the ocean. Therefore, when a man has acquired the gravity, depth and intensity of spiritual knowledge that comes with self-realisation, he would not at all be affected by any emotions or sentiments related to the body and the world.] (63).

64. With such eclectic and most enlightened views (as expressed in the aforesaid verses), a wise and self-realised Jiva (creature; living being) crosses this seemingly interminable world of miseries and sorrows, though it requires certain degree of diligence and effort on his part to achieve the exalted state of existence that would enable him to realise his spiritual objective (64).

65. He does not treat anything as being special, or having any special importance for him. That is, he treats everything with stoic equality and great equanimity. Therefore he need not be attracted to or be disturbed by any given thing or situation as compared

to the other. He is not attracted towards, attached to, infatuated with, or longs for one thing more in preference to the other. He gives no especial importance or preference to any thing, person or situation. [In other words, he would be equally happy in different situations and equally contented with two different things, though one might be of an excellent quality and the other most lowly.]

He has become wise enough to understand that the universal Truth (i.e. the spiritual 'truth' about his own 'self' as being pure consciousness, and that the rest, including his dear body and the enticing world of astounding fascination, are all false) is only one, and it is immutable. It is great, grand, magnificent and majestic. It is the highest stature of existence that any wise and erudite man would aspire to achieve (65).

66. You (Nidagh) must inculcate the grand and noble view that the notion of there being different times and circumstances (called 'Kaal'), different phases or aspects of a thing (called 'Kalaa'), and different things and objects (called 'Vastu') in existence in this world is erroneous and fallacious. This notion of duality is fallacious and imaginary, and only leads to delusions, confusions and hallucinations.

In fact, there is no duality in creation; everything is one single whole that is viewed from different angles and perspectives, giving it the appearance of diversity, its myriad forms and uncountable variations. This 'single entity' is known as the universal Truth—because 'truth' is always one, and never two or more. From the perspective of metaphysics and spiritualism, this ubiquitous and quintessential Truth is known as the 'Consciousness' that is sublime and pure.

Hence, you must discard the deluding idea of there being two aspects, facets or parts of this existence. And instead be established in the eclectic notion of non-duality (Advaitya)—i.e. the notion that there is only one common denominator, which is the Absolute Truth, in the entire creation (66).

67. There is only one universal, all-pervading, non-dual and supreme Authority (known as Brahm) in this existence. It should be thought of as being a 'Vibhu'—or the one who is almighty, omnipresent, omnipotent, omniscient and eternal.

It is complete in all respects and wholesome. It is supremely blissful. It fills all the directions uniformly, being all-pervading, all-encompassing and omnipresent (67).

68. Be enlightened about the irrefutable fact that this Authority that permeates everywhere in this existence, and which is the cause of all that exists as well as all that is done in this creation—occupies the highest stature in existence, and it has no beginning or an end; it has no cause for its own coming into being, and neither is there any seed from which it originates, though it is the cause of the rest of the creation and the cosmic seed from which the rest of everything else germinates or sprouts (created) (68).

69. When an enlightened and self-realised aspirant becomes aware of this exalted state of existence or attains knowledge of the divine Authority as described above, it is then that his consciousness finds peace, rest and stability. [This is because the 'Authority' referred to here is the cosmic supreme Consciousness that is the same as the consciousness that resides in the spiritual aspirant's own bosom as the Atma. Since there is no basic difference between the two, when the aspirant becomes 'self-realised' he is actually realizing this cosmic Consciousness. Obviously, the fractional consciousness known as his 'self' or his Atma would plunge to become one with and

indistinguishable from the larger parent body of the cosmic ‘Self’ when true realisation happens.]

A person who has reached this exalted stature would no longer befallen with grief and sorrows of any kind (69).

70. It is this Vibhu (see verse no. 67) that is the cause of all the ‘Bhuts’ (primary elements such as earth, water, fire, air and sky, as well as all the mortal living beings) coming into existence, but it is a magical feat that the same Vibhu has no cause of its own creation or existence—i.e. it is eternal and infinite, being un-born and imperishable.

It is the essence and fundamental basis of all the other elements, and there is nothing superior to it (70).

71. It is in a clean mirror that all the things of this creation are seen. It is similar to the case of the image of a tall tree being reflected in the calm waters of the large pond or a lake on whose banks the tree grows.

[In the present context this analogy implies that when the mind and sub-conscious are clear and untainted as well as calm and quiet, it is only then that the consciousness can be experienced and witnessed by the aspirant. A disquiet and disturbed mind would not be able to focus its attention on the self and the Atma. Similarly, if the mind is corrupted by various Vasanas and Vrittis (worldly passions and tendencies for indulgence) it would be deluded, and therefore unable to perceive an entity that is as subtle and sublime as the Atma. This is akin to the case when there are ripples on the surface of the pond or the lake, in which case the image of the tree would not be visible in spite of the fact that both the tree as well as the reflecting surface are there.

Another interpretation of this verse can be as follows—once an aspirant achieves the exalted stature when he has successfully cleansed his inner-self of all impurities that taint his ‘self’, the Atma, when his mind-intellect has been sufficiently sharpened and made alert to perceive the hidden truth in this creation and discard the falsehood, it is then that he is able to realise that whatever that is visible in this creation, whatever that he had been treating as the reality till now are but only a ‘reflection’ of the supreme Brahm, and not Brahm itself. In other words, these sights only prove the presence of the supreme Brahm without which the world would not have been there in the first place, and that it is not the real Brahm but an image of Brahm just like it would be utterly stupid to see an image of any object in a mirror and treat the image as the real thing.] (71).

72. When the creature experiences the presence of the taintless pure consciousness known as the Atma, it is then that his Chitta (mind, sub-conscious as well as the heart) finds true rest and peace.

Be enlightened about the fact that a creature who has accessed this ‘truth’ and experienced this ‘consciousness’ is the one who overcomes all fears and consternations in this world. [This is because then he would have realised that all fears arising from the presence of gross things in this world—such as the body, for instance, getting old and infirm, or for instance the other man being an enemy who can harm one’s interest or even kill him, etc.—have no bearing and basis. The Atma is eternal and universal, it never dies, is neither harmed nor does it harm anyone else, and it is all-complete and fulfilled so as not to desire anything or harbour any shortage. So there is no cause for fear of any sort from anything or anybody for a

wise, erudite, self-realised and enlightened person who knows the ‘truth’ of the Atma.] (72).

73. I have enumerated to you the spiritual remedies for all sorts of miseries and agonies that afflict an ordinary creature in this world, and all of these problems can be soon and easily overcome by employing the remedial measures outlined above (73).

74. One should make diligent efforts to overcome the various Vasanas (worldly passions, desires, lust and longings; worldly attachments and attractions) that are inherent to all the creatures in varying degrees, and thereby attain the exalted stature that is marked by universal stability, uniformity, poise, peace, bliss and happiness. [Obviously, when the creature has nothing to distract his mind, when he is satisfied and fulfilled, or when he has overcome the ‘Vasanas’, he would be rested and peaceful. It is like a case when a man who has had a sumptuous meal would lie down to rest peacefully, and no matter what delicious dishes are offered to him, he would refuse them with total disinterest and without regret. This can be compared to a man who is hungry and greedy; he can never sleep or rest in peace.] (74).

75. When a creature becomes self-realised, he is said to be wise and enlightened so much so that he gets acquainted or becomes aware of the ‘Tattwa’, literally the essence and the fundamental element, which in the present case is the awareness of the Truth in the form of the pure consciousness or the Atma or the ‘self’. This realisation is instantaneous and spontaneous. Though theoretically it is an ethereal experience that is like a flash, but once it is experienced it becomes lasting. In other words, if one has overcome one’s Vasanas and Vrittis, one can make this fleeting ethereal experience of the Tattwa a permanent one. It is like virtually being able to grasp it firmly and keep it within one’s reach (though it is so difficult to access and retain because it is like a flash of lightening) (75).

[Note—In the beginning, the experience of the Atma, the pure consciousness residing in one’s bosom, is for a fleeting moment like a streak of brilliant lightening in the sky that is here now and gone the next moment, or like a dazzling spark that erupts momentarily when two live electric wires touch each other. But just like the case of this spark of electric translating itself in a continuous flow of electric current when the two ends of the wire are properly and firmly joined together, the moment of spiritual ecstasy and bliss that is attained upon the first moment of realisation of the Atma would become permanent if one continues to diligently practice focusing his mind on the Atma. Of course, there are various means to do so, and Yoga (meditation and contemplation) is one of them. The permanent state of realisation is called the Turiya state of consciousness which in turn translates into the state of Samadhi. The earlier stage of temporary bliss and ecstasy is equivalent to the Sushupta state of consciousness because then the experience of bliss and ecstasy was transient and experienced only for a fleeting moment.]

76. The exalted stature of self-realisation when one experiences the presence of the supreme universal Authority known as the ‘consciousness’ in one’s own self is normally fleeting and transient, but it can nevertheless be made permanent and steady by constant practice, diligent effort, persistence and sincerity (76).

77. Oh Nidagh! If you concentrate your attention and focus your mind on this essence known as ‘pure consciousness’ (i.e. the ‘self’, the ‘truth’, the Atma), and persist in your endeavours, then surely, by and by, you would be able to attain this exalted state

of existence known as the 'Tat-Padam'—i.e. that exalted and supreme state of existence or stature which is marked by total enlightenment and its accompanying bliss. [In other words, if you keep your mind focused on the chief target of your spiritual pursuit inspite of living in this world and going about your duties in a routine manner, you would still be able to achieve the much acclaimed stature of being realised, enlightened, liberated and delivered. That is, you can achieve 'Jivan Mukti'.] (77).

78. If you wish to fully eliminate and overcome your Vasanas, then you must realise that unless the Mana (mind and heart) is not completely and fully submerged in the supreme essence—i.e. unless you are fully committed to self-realisation and experiencing the pure conscious Atma in your inner-self, a commitment that should involve both your mind as well as your heart, and unless your Mana has not enjoyed the taste of the nectar of bliss, beatitude and felicity that comes with realisation of this Atma, and consequentially has not become fully contented and fulfilled—it is not possible to do so.

That is, only when the mind is drenched in the bliss and is fully satisfied by the high degree of contentedness that comes with spiritual enlightenment and realisation of the supreme Consciousness that it would abandon any thoughts of the world and attempt to find happiness and bliss in its material enjoyments. Hence, the ability to keep the Mana focused on the 'self' and enabling it to suckle at the nectar-like bliss dripping from the experience of the pure consciousness is the only way to control the various Vasanas and divert the Mana away from the various temptations of the world and the desire to gratify one's natural instincts that pertain to the sense organs of the body (78).

79. Unless the Vasanas are decimated, one cannot expect that the Chitta (mind and sub-conscious) will ever find rest and peace. Indeed, how can the Chitta find permanent rest, stability and peace if the creature does not find (access) the eternal source of rest, tranquility, stability, peace, happiness and bliss?

That is, how can the mind rest and allow the creature to rest till it finds what it wants—and it is the discovery of the pure consciousness, accompanied by its nectar-like bliss, happiness and contentedness, which would bestow the mind with the much wanted calmness, stability and peace that it so much yearns for, that it so much strives to attain, that it so much hopes it would access during this life (79).

80. Till the time the Chitta is calmed down and made focused, it is not possible to attain the Tattwa (essence; fundamental element; the Truth) which is the pure consciousness and the truth that is the essence of all spiritual happiness, peace, bliss, peace and tranquility. [In other words, if the mind and the sub-conscious are not rested and controlled, if they are agitated and in a state of constant flux, if they are not able to focus on the target, then obviously spiritual success would be illusive. Any enterprise needs a focused mind and an alert sub-conscious, and should they be distracted for whatsoever reason it is not possible to attain great success in one's efforts. An effort made with a distracted Chitta would be like doing something half-heartedly, and naturally anything done this way would not be the best thing done nor would its rewards or fruits be up to the mark.]

Similarly, unless the Vasanas are eliminated, is it possible to have knowledge of the Tattwa? Of course, the answer is 'not'.

In the same vein, unless the Tattwa is accessed, the Vasanas too can't be got rid of. [In this context, refer verse no. 78-79. In other words, the decimation of the various Vasanas, the control of the Mana and the Chitta, and the realisation of the Tattwa—all are inter-linked and intertwined. If one has to achieve success in any one of them, the others must be achieved simultaneously. That is, it is not feasible and plausible and practical to have the Vasanas eliminated but keep the Mana restless, and it is not possible to calm down the Mana while still harbouring various Vasanas in one's bosom.] (80).

81. Destruction or decimation of the various Vasanas and control of the Mana are said to be equivalent to having knowledge of the spiritual essence known as Tattwa-Gyan.

That is, the real fruit (benefit, reward) of wisdom and enlightenment is the destruction of one's passions and desires on the one hand, and control of the wayward tendencies and restlessness of the mind on the other hand. They—destruction/decimation of the Vasanas, and control of the Mana—complement and supplement each other; they are of equal importance to the creature if he wants to attain the exalted state of self-realisation and enlightenment, if he wishes to attain wisdom and access the supreme Truth called the Param Tattwa (81).

82-83. Those who are wise, enlightened and self-realised, those who have experienced the truth of the pure consciousness and the falsehood of the rest of the world, i.e. those who have the acquired 'Tattwa-Gyan'—they completely abandon all desires for gratification of their sense organs and enjoyment of the sense objects of this material world which is deluding and transient by nature. They discard such desires and longing from a great distance—i.e. they do not allow such thoughts to come near them, they keep a safe distance from all sorts of Vasanas.

They pay special attention to the triad (necessary for the exalted state of self-realisation and attainment of enlightenment) consisting of (i) elimination of Vasanas, (ii) acquisition of Vigyan (truthful, rational, empirical and systematic knowledge), and (iii) control or vanquishing of the Mana (the thinking mind and the emotional heart).

Oh wise one (Nidagh)! Success in these three spiritual necessities can be obtained by constant, consistent and persistent practice (82-83).

84. By properly and diligently practicing these three spiritual doctrines (elimination of the Vasanas, acquisition of correct Gyan, and control of the Mana) for a long time, the aspirant is able to crush even the stubborn attitudes and intransigent nature of the heart. He is literally able to break through the strong knots that tie down the heart. These knots—called the Hridaya Granthis—represent the stubborn and uncompromising attitude of the heart which likes to dwell on things which it deems to be pleasant and enchanting, and move away from those that it deems to be the opposite. That is, by diligent and steady practice, the aspirant is able to tame the tendency of the heart to seek pleasant and gratifying things of the senses and then get hooked to them, to long for them, to be infatuated with them, to develop affection for them, and to embrace them tightly.

[The heart is driven by emotions and sentiments rather than analytical reasoning and intelligent deductions from all available information to decide what is acceptable and what is unacceptable. This more often than not lands the creature in awkward situations. If the heart supersedes the advice of the mind, it would lead to the creature's ruin. This is because the heart is driven by emotions and sentiments,

while the mind is analytical and thoughtful in its approach to problems in this life. All the Vasanas and Vrittis have their epicenter in the heart. So it is very important to overcome the dictates of the heart if one is to move ahead fruitfully in one's endeavours, whether such endeavour is related to the affairs of the world or to spiritual affairs.

It is said that the Atma lives in the subtle space of the heart, known as the 'Hridaya Akash'. When the aspirant seeks to access this Atma ensconced in the heart, it is necessary for him to overcome the stubborn obstacles in the form of the various Vasanas and Vrittis that the heart possesses. For this, he needs a sharp Mana—because only an intelligent and conscientious mind that is determined, steadfast and steady in its pursuit would help him tide over all the problems created by the rigidity and stubbornness of the intransigent heart. Once this hurdle is overcome—which is like breaking through the strong knots of the heart, called the 'Granthis of the heart'—the Atma is easily accessible. Refer also to verse no. 11 of Canto 4.] (84).

85. The control of the Pran (vital winds) hold the same importance in acquisition of knowledge of the Tattwa (supreme essence or the Truth known as the consciousness or the Atma or the 'true self') as the elimination of the Vasanas. For this, a similar process and attitudes are required.

[Canto 5, verse no. 40 elucidates the direct relationship that exists between the control of the Pran, the Chitta and the Vasanas, along with the importance of such control for the overall spiritual welfare of the spiritual aspirant.]

Hence, those who are wise and learned endeavour to control the mind by controlling the various vital winds called the 'Prans'. [For this purpose, they follow the various procedures as prescribed in Yoga—such as Pranayam or breath control, Aasans or sitting postures, Bandhas or closures of all openings in the body, etc.] (85).

86. The Chitta (mind and sub-conscious) becomes quiet, tranquil and rested—i.e. it virtually becomes non-existent or dormant or non-interfering, or 'A-Chitta'—only when the Vasanas (worldly passions, desires, lust and longings; worldly attachments and attractions) are eliminated. [This is because as long as there are worldly desires, the mind cannot find rest; it would be constantly fidgety and in a state of flux, being buffeted and kept agitated by the pull and tug of the Vasanas. Refer also to verse nos. 47-48 of the present Canto 4, and verse no. 43 of Canto 5.]

Similarly, one can achieve great success in the spiritual field by reining in the vital winds and controlling their movement or vibrations. [It has been said earlier that the Prans control the functioning of the body and its various sense organs. When the Prans are controlled, the body would lose its tendency to be restless, and its sense organs would abandon their natural habit to move towards their respective sense objects in this world. The result would be that the creature would be left alone and at peace with himself. So we see that control of the Vasanas as well as the Pran play equally important role in giving peace and bliss to the spiritual aspirant. Refer also to Canto 3, verse no. 10, Canto 4, verse no. 42, and Canto 5, verse no. 5.] (86).

87. The movement of the Pran (vital winds) inside the body can be controlled or regulated by practicing Pranayam (breath control), doing various Aasans (sitting postures), and observing Ashan (fasting; moderation in eating), along with establishing a coordination between them as advised by a learned Guru (teacher).

[That is, in order to regulate the movement of Pran it is important to practice all the aforesaid three principles of Yoga simultaneously. They act like the three legs

of the tripod which support the aspirant's efforts to control the Pran and achieve success in his spiritual endeavours. Even if one leg is short or deformed, the tripod would be unsteady and face the risk of toppling over. Similarly, if one any of the three tenets are not properly followed, the aspirant cannot hope for reaching the desired goal of self-realisation. Refer also to Canto 5, verse no. 41 which also outlines how the Pran can be controlled.] (87).

88. Any endeavour that is done alone and without taking any sort of help is said to be 'A-Sanga'¹—literally 'one who has no company'. When anyone achieves success in any given enterprise relying upon his own efforts, he would not be under any obligation of anybody; he would be independent and free from the compulsion to please this or that. Therefore, when one becomes detached from the gross body he would be under no obligations to please the body and its sense organs, and fulfill their demands for gratification. And when extended further, it would also free him from the necessity of appeasing the world by offering the body in its service. Hence, all causes of fears and bondages are automatically done away with (88).

[Note—¹A-Sanga: Refer Canto 2, verse nos. 1-11 also.]

89. The movement or vibration or pulsation of the Pran (vital winds) inside the body is equivalent to the Chitta (mind and sub-conscious) remaining alive, active and agile in the body. [This is obvious because only as long as the body is kept alive by the vital winds would the mind and sub-conscious have any relevance to the creature. A dead body will have the gross aspect of the mind known as the 'tissue of the brain' intact, but it would be a lifeless mass of dead tissue, and not a live and vibrant entity known as the 'brain' which does stupendous things even without physically appearing to do so or even moving a bit to prove that it is alive and active. A dead body's brain-tissue would just be like the rest of the body in which the vital winds have stopped moving.]

Hence, those who are immensely wise and erudite strive and focus their efforts to control their Pran and its movement (by following the instructions given in verse no. 87) in order to control their mind and sub-conscious. [In this context, refer also to Canto 5, verse no. 40.] (89).

90. The Mana (mind and heart complex) cannot be vanquished or controlled without making diligent and proper efforts which are noble, righteous, auspicious and sincere.

Therefore, you (Nidagh) should make all efforts to inculcate noble and auspicious virtues in your self, become truly wise and enlightened, acquire correct and proper knowledge, and consequentially be totally neutral towards, indifferent to, and detached from all that is false, erroneous, misleading and deluding in this world. Be calm and poised; be rested and peaceful; be serene and tranquil (90).

91. Oh great soul (Nidagh)! All forms of knowledge except that which pertains to the pure consciousness should be discarded as being unworthy and untruthful by a truly wise, erudite and enlightened spiritual aspirant. Remember, to be wise is to know about that which is true and real.

Keeping this advise in mind, be free from the numerous and myriad emotions as well as the worldly desires, longings, passions, affections and attachments of the heart. Instead of these grosser tendencies of the heart, concentrate your attention on the subtle and sublime consciousness that resides in the same heart, and be firmly established in it, be focused on it.

Even when you have to do so many deeds in this world (which you cannot avoid doing because of the circumstantial compulsion of life that if you have a gross body and have to live in this material world, your life revolves around the doing of deeds and not sitting idle), you can still be deemed not to be doing them if you do them without involvement at the level of the heart and the mind, if you inculcate the grand view 'I am not the doer'. [Here, the word 'I' stands for your true self, which is the Atma, the pure consciousness, and not the body. But to say it honestly, and sincerely believe in what you say, you must be highly enlightened and self-realised. Otherwise it would be a contrived and a deceitful statement smacking of lie, pretension and falsehood.]

If this fructifies, you will be steady and rested, calm and poised. There would be no agitation or restlessness in you. [In other words, you would have achieved 'Jivan Mukti'—i.e. liberation and deliverance even while being alive and possessing a gross body, as well as being active in this world and doing deeds.] (91).

92. The endless thoughts and inherent inclinations of the mind and the sub-conscious can be reined in and controlled by you with a little amount of wise thinking, sincere effort and constant practice. A person who has been successful in controlling the Chitta (mind and sub-conscious) has indeed obtained the ripe fruits of being born as a human being. [That is, when the mind and the sub-conscious are controlled, the man can achieve astounding feats in this life itself. Usually it is said that if one is not able to complete his mission in life he takes another birth to complete the unfinished task, but for a man who has complete control over himself and his mind, nothing remains incomplete. From the metaphysical perspective it means that he would have realised that material gains and pursuance and enjoyment of sensual pleasures are not the aim of taking birth as a human being. Since birth as a human is the highest point in the evolutionary ladder, one must strive to make the best of it within the limited time-window that is available to him. If he fails to do so, it is obvious that he would fall down to the bottom of the pyramid and would then have to work his way up the ladder again, which would be a most horrifying prospect given the bitter experience he has had of his earlier lives. So a wise man would strive hard to find permanent liberation and deliverance of his soul in this life itself; he would make all-out efforts to remain free from any chance of having to assume a gross body once again, with all its accompanying pains, sorrows, miseries and torments. Hence, with this wisdom, he would focus the mind on those things that enable him to achieve this spiritual freedom, and for this to fructify it is important to make the mind fine-tuned and obedient. Because if the mind is left to its own natural tendencies and allowed to do what it wants, then all such efforts made by a man would be futile. Instead, the tug-and-pull caused by the countless Vasanas and Vrittis as well as the numerous temptations of the material world would drain the man of all the energy he has, leaving him bewildered, flummoxed and exhausted.] (92).

-----*****-----

Canto 5

[This Canto is a continuation of the preaching of Canto 4. The change in the numbering of the Canto is a sort of a small interlude to give rest to the disciple. It is like a break or a recess period in modern-day colleges before the lectures resume in the next session.]

1. He whose mind and sub-conscious are neutral towards and detached from every incoming impulse, when the mind harbours no thoughts whatsoever and the sub-conscious registers no information, whether the man walks or sits, whether he sleeps or remains awake—well, such a man is deemed to be like a man who is mentally dead. [In other words, such a man is no better than an unconscious man who has no active senses inspite of his being physically alive. An unconscious man's body lies like a dead body—his external gross organs show no signs of life and activity, and his mind-intellect is also unable to function. Such a man does not recollect any of the events that had occurred while he was unconscious. Therefore, if he has tamed his mind not to register any of the sensory perceptions of the world, then inspite of him living in the same world he is deemed to be like a man who is either unconscious or physically dead.] (1).

2. A man who has become extremely wise, self-realised and enlightened is able to 'see' the truth of his own 'self' in the 'light' of this wisdom and enlightenment. [Even as anything is visible only if there is light, the pure conscious Atma, which is the man's 'self', is only 'seen' (witnessed and experienced) in the 'light' of truthful knowledge. It follows that if there is no 'light of knowledge', this Atma cannot be seen. That is, if there is a thick blanket of darkness symbolizing spiritual ignorance and its accompanying delusions, the consciousness cannot be witnessed and experienced by anyone.]

Such a realised and enlightened man is afraid of none, and neither does he accept anything from anyone (as charity or donation). [He is afraid of none because he has no enemy as he treats everyone alike and like a close friend or brother. He sees the same Atma in all the living beings, and therefore treats everyone as his own image or sibling. He takes nothing from anyone because he has no desires of any kind; he is self-contented and fulfilled.]

He does not live a life of bondages, and neither does he feel humble and lowly. [He is without any bondage because his 'self' is not the gross body but the Atma which is eternally free and unshackled. He is not humble because this 'self' is the Atma which is an exalted, ethereal and divine entity that represents the supreme Brahm personified in its form. The Brahm is the supreme Authority of creation. How can an entity that is 'supreme' and 'the most exalted' Spirit be humble and lowly?] (2).

3. Even though a man may be wise, self-realised, highly erudite and enlightened, but if he eats, even inadvertently, anything that is polluted and unclean, a thing that is poisonous and toxic for the body, or a thing that has been obtained by unrighteous and unscrupulous means, the man is bound to be affected by it. It would ruin his body, would be injurious to his health, would make him diseased and weak, would corrupt his mind, and its cumulative effect would demean and denigrate his Atma.

[Therefore, merely being knowledgeable and wizened about the secrets of the Atma and being able to distinguish between the truth and the falsehood is not enough. One must be careful about what contacts or company one keeps. One must assiduously avoid any sort of contact with the 'falsehood' because the latter is bound to dilute and corrupt the immaculacy and pristine purity of the 'truth' if allowed to come too close to it and maintain its contact with it just like a wise man falling sick by eating infected and polluted food that is generally regarded as injurious to health. He may eat it unknowingly and even under force of circumstance, but his body would

react immediately nonetheless; the eater's ignorance of the type of food he eats is no excuse for the adverse chemical reaction that the food produces inside the body.

Hence, any contact with the artificial, deluding and entrapping gross world of material sense objects is bound to have a negative and degrading effect on even a most wise and highly self-realised man if he does not keep his guard.] (3).

[Note—The statement 'eating of poisonous food that would ruin the body' is an aphorism for accepting and indulging in the material things of the gross world. Since whatever one eats affects his body, so whatever contact one has with the world is bound to affect his inner-self. A man cannot remain immune to the negative and deluding influences of the world if he keeps company with it, if he is deeply engrossed in its affairs even at the level of the gross physical body in the hope that if he is able to control his mind he would manage to remain free from the corrupting affects of such contact. But it is almost impossible to do so, and by and by the world would cast its shadow on the mind. This is just like the case of a poisonous food harming the body irrespective of the fact that the food was eaten willingly or unwillingly. The world would invariably affect and taint the mind should the latter establish any contact with it which is more than what is absolutely necessary for survival. A man who remains indulgent in the world and seeks worldly honours and pecuniary benefits from his knowledge would fall from his exalted stature sooner than later. 'Mukti' and 'Moksh' (or spiritual liberation, deliverance, emancipation and salvation) would elude him no matter how hard he tries.

But the practical problem arises that if a man has to live in this world, he has to perform some deeds that are absolutely necessary, and without which it is impossible to survive. Well, here lies the importance of the control of the mind and the heart, collectively called the Mana. The idea is (i) not to allow the mind to think of evil thoughts, not to allow the sub-conscious to accept and harbour such thoughts, and not to allow the intellect to be deluded by the influence of such corrupted thoughts, and (ii) not to allow the heart to be emotionally attached to anything related to such thoughts and the things of the material gross world. If a man is able to achieve this, then for all practical purposes he is deemed to be non-involved in the world. This is because the real acceptance of the world and the real indulgence in it is done by a man at the level of his subtle mind and heart, and not by the gross body which is simply an instrument for the mind and the heart to carry out their wishes. So, if the Mana and the Chitta (the mind, the heart and the sub-conscious collectively) are able to maintain their neutrality, the man is deemed to be neutral towards the world.]

4. Moksha (final liberation, deliverance, salvation and emancipation) is equivalent to abandoning all sorts of company. [That is, to remain free from any contacts and relationships is tantamount to being free and liberated as the concerned person has no obligations to fulfill and no bondages to break free from. Refer Canto 4, verse no. 88.]

When one abandons all company and relationships, he has no fear of having to take any birth again (because he will have no unrequited or unfulfilled desires and passions left).

Oh Anagh (one who is sinless and uncorrupt—an epithet used for Nidagh)! Therefore, you must discard the company you may still have in the form of various thoughts, emotions, views and notions. [In other words, you must renounce all things gross and material in this world; you must withdraw yourself from all things except the pure conscious Atma which is your true 'self' and the absolute Truth in creation.]

This will entitle you to obtain Jivan Mukti—i.e. you would become free from all spiritual bondages even while you are alive and have a gross body in this world (4).

5. The notion of feeling happy and exhilarated when one possesses something which one longs for, or the opposite feeling of sorrow and frustration at the lack of it or not possessing it is the cause of all mental and emotional disorders and their attendant defects in the creature. They do not allow him peace and composure; they keep him constantly oscillating between bouts of happiness and frustrations.

Hence, the Vasanas (worldly passions, desires, lust and longings; worldly attachments and attractions) that pertain to material things or objects of the senses are called 'tainted Vasanas' as they do not give happiness, peace, bliss and rest to the creature. On the contrary, they keep him tormented, agitated and restless. He is persistently and constantly buffeted by desires and passions for this and that, and he never feels contented and fulfilled; he never feels peaceful and calm.

[This is because in the one instant he feels that he is the most lucky man to have possessed something, then his mind registers something new which it feels is better and nicer than the first simply because of the factor of jealousy and greed, and their psychological implications for the mind and sub-conscious that the man just forgets about his privileges and good fortunes, and instead feels that he is unlucky that he has yet not got this better or newer thing. This is an endless cycle and a quagmire from which it is very difficult to extricate one's self unless one develops total disinterest in things that are material, gross and transient by nature, and therefore understands that the pleasure and comfort derived from such things are equally immaterial, gross and transient. Real happiness and peace is obtained instead when a wise man focuses his mind and the sub-conscious on subtler and more important things of life that are everlasting, and which give him true spiritual peace and happiness.]

Therefore, a Jiva (the living being; the creature) who has abandoned all Vasanas for all things material and gross, all things that are transient and perishable, all things that are not directly concerned with his spiritual welfare, is said to be without any company, or as being alone. He is deemed to be peaceful and untainted, he is not under any obligations, and he is said to be leading a secluded and a serene life. [In other words, it is not the mere physical presence of another creature or the physical possession of something that is called 'having a company'; even harbouring some thought of someone or something is deemed to be 'living in a company', or 'having a company'. Hence, it is of paramount importance to eliminate all thoughts of everything, whether real or imaginary, if one really wishes to have no company and thereby be freed from all entanglements that having a company or contact or relationship with something or someone brings in its wake. This is called the ideal state of 'A-Sanga' as described and intended in Canto 1, verse nos. 1-11, and Canto 4, verse nos. 86 and 88.] (5).

6. The state of existence when a creature is not swayed by happiness or sorrows, when he does not oscillate between joys and exhilaration on the one hand, and bouts of depression and frustration on the other hand, when he is emotionally steady and neutral, maintains his calm and poise, and treats everything equally and with exemplary equanimity—it is only then that he is said to have a cleansed Buddhi (intellect that is untainted by corrupt thoughts), and only such a creature is able to obtain Jivan Mukti (which is freedom from all worldly fetters even while he is alive and has a gross body with which he interacts with the world). [This is because in spite of being in close proximity with the gross world and its numerous charms related to the objects of the senses, he is not interested in them, he keeps aloof and maintains a safe distance from them. He lives like a lotus flower that grows in a pond—no filth of

the water ever sticks to this flower inspite of the latter being surrounded by the former. Or like the case of the sky which remains inherently untainted and clean inspite of the myriad varieties of pollutants being always present in it.]

A person who has achieved this exalted state of Jivan Mukti is freed from having to take a birth again. [A creature takes a birth because, inter alia, his mind is attached to something in this material world which he very much loves, and at the time of death his whole being is thinking of this object of his adoration. So when the creature dies, in that instant, his Atma leaves the current body and immediately transmigrates to another body with the intention of remaining close to the object of love and adoration. This is one of the several reasons for taking a new birth. Another reason is that while he was alive, he had strived to achieve successes of different kinds and obtain so many things which he could not accomplish in the limited time-span of one life. So his unrequited desires and unrealized wants would compel him to take another birth to complete the unfinished task. But it is not that easy as it seems. For, in the new birth he would be engaging himself in doing fresher deeds and gather another cache of desires related to the material objects and worldly pleasures and comforts. This in their own turn would create newer and more desires and greed. The result is that the creature is sucked in a whirlpool from which he finds it impossible to extricate himself, and this means that he is pushed further away from the spiritual goal of finding Mukti or Moksha—i.e. finding freedom from worldly attachments and entanglements, freedom from worldly passions and greed, freedom from all worries and consternations etc. And the cycle continues to rotate for ever.]

The only way obviously to break free is to stop having desires, get rid of attachments, not have affections for anything, and stop hankering after worldly possessions. Since life in the physical world revolves around doing deeds and taking actions, it becomes imperative for a wise and enlightened man to do them without any mental and emotional attachment to them or having any sort of desire for results. That is, to do everything totally dispassionately, with a sense of complete neutrality and exemplary renunciation. One must not harbour any desire for rewards from his actions or deeds. At the same time, he must not be passionate about anything whatsoever in this world.] (6).

7. Oh Nidagh! You must not have sorrow or feel saddened when you face adversities or failure in achieving your objectives, and neither should you feel happy or exhilarated when you have good fortunes or are successful in anything. That is, you must learn to practice the highest degree of detachment, non-involvement, dispassion and renunciation, leading to the grand virtues of having equanimity, resilience and fortitude.

You must not feel that you are unable to overcome such emotions and thoughts, that they are too strong for you to be subdued. [That is, you must be confident and absolutely certain that you can practice these grand virtues and maintain your equilibrium, and that you can definitely overcome all sorts of temptations and delusions that may pull you down from the high spiritual platform where you have been striving to establish yourself successfully.]

This will be equivalent to your being 'without any company'—because when you have inculcated neutrality of attitude, you would be equally at ease under both the circumstances, the one that is favourable, and the one that is unfavourable. A man is disturbed when he keeps company, because then he has to keep his mind busy in order to deal with such company. It is not necessary that the company is favourable, and so

he keeps oscillating between pleasure of keeping one company and the pains of another company.

Therefore, when you have learnt to maintain your calm and poise under all circumstances, you would be like a person who is all alone, and there is no thing or no one to disturb him. You would be left to yourself (7).

8. Do not be afraid of, bewildered by and amazed at so many changing things and circumstances that are seen in this world in different phases of life and time. They are misleading and deluding. In fact, there is no duality anywhere, for only one non-dual 'consciousness' prevails everywhere and under all phases and planes of time. This universal cosmic 'consciousness' is known as Brahm, and it is the same consciousness that is also your own truthful 'self'. Therefore it logically follows that 'you' are 'Brahm' personified. In other words, be calmed down and feel peaceful in the eclectic thought 'I am Brahm personified'¹ (8).

[Note—¹This observation is the climax of self-realisation, and it forms one of the many 'Maha Vakyas' or the great spiritual sayings of the scriptures. There are numerous Upanishads that describe these Maha Vakyas in detail—viz.

(i) Rig Veda—Atmabodha Upanishad.

(ii) Sam Veda—Chandogya Upanishad, Canto 6, section 16, verse no. 3 (Tattwamasi).

(iii) Shukla Yajur Veda—Paingalo-panishad, Canto 3, verse no. 2-3, 8; Mandal Brahmin Upanishad, Brahman 2, section 2, verse no. 5; Brahman 2, section 4, verse no. 4; Brahman 3, section 1, verse no. 6; Brahman 3, section 2, verse no. 2; Adhyatma Upanishad, verse nos. 2, 10 (So-a-Ham), 30-31 (Tattwamasi).

(iv) Krishna Yajur Veda—Shuk Rahasayo-panishad, verse no. 22; Kaivalya Upanishad, verse no. 16; Sarwasaar Upanishad, verse no. 12-14; Varaaha Upanishad, Canto 4, verse nos. 32, 37; Avadhut Upanishad, verse no. 2.

(v) Atharva Veda—Atma Upanishad; Naradparivrajak Upanishad, Canto 7, verse no. 8; Tripadvibhut Maha Narayan Upanishad, Canto 5, paragraph no. 15; Canto 6, paragraph no. 22; Canto 8, paragraph no. 5; Ram Rahasya Upanishad, Canto 5, verse no. 13-14; Ram Purva Tapini Upanishad, Canto 3, verse no. 2; Ram Uttar Tapaini Upanishad, Canto 3, verse no. 9; Annapurna Upanishad, Canto 5, verse no. 8; Canto 5, verse nos. 20-21, 57, 65, 74, 95; Mahavakya Upanishad, verse nos. 6-8, 11; Hayagriva Upanishad, verse no. 15; Param Hans Parivrajak Upanishad, paragraph no. 3; paragraph no. 4.

Now, let us see briefly what the different Upanishads of the Atharva Veda tradition say are the Maha-Vakyas:

(i) *Naradparivrajak Upanishad*, Canto 7, verse no. 8—"Tattwamasi; Ayamaatma Brahm".

(ii) *Tripadvibhut Maha Narayan Upanishad*, Canto 5, paragraph no. 15—"So-a-Ham"; Canto 6, paragraph no. 22—"Twam Brahmasmi"; "Aham Brahmasmi"; "Twamewaaham"; "Ahamev Twam"; Canto 8, paragraph no. 5—"Brahmaasmi" or I am Brahm; "Ahamasmi" or Indeed it is I/me; "Brahmahamasmi" or I am indeed Brahm; "Yoahamasmi" or That is I/me; "Brahmaamashmi" or Brahm is I/me; "Ahamevaaham" or I am indeed I/me.);

(iii) *Ram Rahasya Upanishad*, Canto 5, verse no. 13-14—"Tat Twam Asi" or That Art Thou;

(iv) *Ram Purva Tapini Upanishad*, Canto 3, verse no. 2—"I am Lord Ram who is Brahm personified; there is no difference between me and Lord Ram";

(v) *Ram Uttar Tapaini Upanishad*, Canto 3, verse no. 9—"So-a-Ham; Atma-Ram";

(vi) *Annapurna Upanishad*, Canto 5, verse no. 8—"Brahmasmi—I am Brahm personified"; Canto 5, verse nos. 20—"Brahm is consciousness; Brahm is this entire

creation; Brahm is manifested as all the Bhuts (elements; mortal creatures) according to ancient tradition. I am Brahm. Everything is Brahm—therefore even the enemy is Brahm, the friend is Brahm, and this Brahm is also all other kith and kin, all compatriots and relations; Canto 5, verse no. 21—“Everything is Brahm and nothing else”; Canto 5, verse no. 57—“the ‘great and transcendental Authority known as the supreme Brahm is no one else but me (i.e. my ‘truthful self’ which is the pure consciousness called the Atma)’”; Canto 5, verse no. 65—“I am indeed Brahm personified”; Canto 5, verse no. 74—“I am Brahm; I am a personification of Brahm”; Canto 5, verse no. 95—“Brahm is none but me; I am no one else but Brahm”;

(vii) *Mahavakya Upanishad*, verse nos. 6-8—“Hans So-a-Ham” or the divine entity known as the Swan is none but me or my truthful form as the Atma; verse no. 11—“So-a-Hamarka” or that essence of creation known as the truth and the supreme consciousness is me;

(viii) *Hayagriva Upanishad*, verse no. 15—“Tattwamasi”—i.e. that supreme essence or truth is you; the second Maha Vakya is “Ayamatma”—i.e. that essence known as Brahm, the cosmic Consciousness, is my own Atma, my own ‘self’; the third Maha Vakya is “Brahm Aham”—i.e. Brahm is me; the fourth Maha Vakya is “Aham Brahmasmi”—i.e. I am Brahm);

(ix) *Param Hans Parivrajak Upanishad*, paragraph no. 3—“Brahm Twam Yagyastwam” or ‘Brahm, you are personified in the form of the sacred fire of the sacrifice; paragraph no. 4—“Tattwamasi”—that essence is you.

According to *Paingalo-panishad*, Canto 3, verse no. 2 of the Shukla Yajur Veda, the great sayings of the Upanishads, called the Mahavakyas, are the following—(a) ‘Tattwamasi’—that essence or Tattva is you; (b) ‘Twam-Tadasi’—you are that; (c) ‘Twam-Brahmasi’—thou art Brahm; and (d) ‘Aham-Brahmasi’—I am Brahm.

The *Adhyatma Upanishad* of the Shukla Yajur Veda tradition, in its verse nos. 2, 10 describe the great saying ‘So-a-Ham’, i.e. ‘that essence is me’, and in verse nos. 30-31 describe the other great saying ‘Tattwamasi’, i.e. ‘that essence is you’.

According to *Mandal Brahmin Upanishad*, of the Shukla Yajur Veda, they are the following—(a) ‘That is me’, or ‘that is I’ is mentioned in Brahman 2, section 2, verse no. 5; (b) ‘I am Tej or I am energy personified’, ‘I am Pragya or personified knowledge’, ‘I am one and immutable’, ‘I am pure and non-dual Brahm’—these are mentioned in Brahman 2, section 4, verse no. 4; (c) ‘I am the eternal and immaculate Parmatma’, ‘I am that essence’, ‘you are me’, ‘I am you’ are mentioned in Brahman 3, section 1, verse no. 6; (d) ‘I am Brahm’ appears in Brahman 3, section 2, verse no. 1; and finally (e) ‘You are me’ appears in Brahman 3, section 2, verse no. 2.

According to *Shuk Rahasaya Upanishad*, verse no. 22 of Krishna Yajur Veda, they are the following—(1) ‘OM Pragyanam Brahm’. [OM salutations! The truthful and pristine pure knowledge which is all-inclusive, most sublime and eclectic in nature is Brahm personified.] (2) ‘OM Aham Brahmasmi’. [OM salutations! Indeed, I am Brahm.] (3) ‘OM Tattwamasi’. [OM salutations! That Brahm is you; that Principal Absolute and essence is you; it is you; or ‘that art thou’.] (4) ‘OM Ayamatma Brahm’. [OM salutations! This Atma, the pure conscious soul or ‘self’ of the creature, is Brahm.]

The *Chandogya Upanishad* of Sam Veda tradition describes the great saying ‘Tattwamasi’ in great detail in its Canto 6, sections 1-16 with numerous examples when Uddyalak, son of Aruni, taught this great axiomatic maxim of the Vedas to his son Shwetketu. It winds up the exposition with the final declaration of ‘Tattwamasi’, ‘that art thou’, in verse no. 3, section 16 of Canto 6.

According to *Avadhut Upanishad* of Krishna Yajur Veda tradition, verse no. 2, an Avadhut Sanaysi is a living embodiment of the great saying ‘Tattwamasi’.

According to *Kaivalya Upanishad*, verse no. 16 of the Krishna Yajur Veda tradition, the Mahavakya is ‘That Brahm is you; you are it’. Verse no. 17-23 of this Upanishad also affirms that the truly realised person is one who sees ‘his own self in

every aspect of this creation' simply because the entire creation is nothing but a revelation of one single immutable and truthful entity known as Brahm.

The *Sarwasaaro-panishad*, verse no. 12-14 of Krishna Yajur Veda tradition explains the terms 'Tat' and 'Twam'.

According to *Varaaha Upanishad* of Krishna Yajur Veda tradition, Canto 4, verse no. 32, the great Mahavakya which is exclaimed by the self-realised ascetic as soon as he discovers the truth about himself is 'I am Shiva'. The word 'Shiva' refers to the supreme transcendental and quintessential Brahm which is the cosmic Absolute, the universal Truth and the only Reality in creation. The word 'Shiva' itself means 'one who is pure, auspicious, truthful, holy, divine, beautiful, renunciate, most wise and enlightened'.

A simple parable would illustrate the essence of the Mahavakyas. Once a teacher asked his disciple—"Son, do you see anything?" The disciple answered—"Yes sir, I see". The teacher—"By what light do you see?" The disciple—"Sir, by the light of the sun in the sky during the day time, and by the light of the lamp during the night". The teacher—"By what light do you see these lights?" The disciple—"Sir, by the light present in my eyes". The teacher—"By what light is the eye enabled to see?" The disciple—"Sir, by the light provided by the mind". The teacher—"By what light do you know the mind, or what lights up your mind and enables it to see and interpret the sight?" The disciple—"Sir, by the light provided by my self, for no one else outside can empower my mind to think for me". The teacher—"Well, there you are. You are the light of lights". The enlightened disciple exulted—"Yes indeed sir, that is I; that indeed is me".

Who can preach the Mahavakyas—The *Naradparivrajak Upanishad*, Canto 7, verse no. 8 says that only certain types of Sanyasis are authorised to preach the Mahavakyas. To quote—"The three types of Sanyasis such as the Turiyatit, the Avadhut and the Param-hans are the only ones who have the authority to preach the great sayings or the Mahavakyas of the scriptures such as 'Tattwamasi' (that essence and principle is you), 'Ayamaatma Brahm' (my Atma is Brahm) etc.

The other three types of Sanyasis such as the Kutichak, the Bahudak, and the Hans are not authorized to preach the Mahavakyas (8)."]

9. When you understand what has been mentioned and intended in the aforesaid teachings, you would succeed in firmly establishing yourself in the exalted state when you always think that you are internally freed from all fetters that had been shackling you to anything whatsoever till now, and the only entity that still appears to bind you down is your gross body in which your true 'self', i.e. your Atma, lives.

A man who has this firm belief (that he is eternally free in his truthful form which is his pure conscious 'self' known as the Atma, but it is only the gross body that acts as the fetter that still binds him to the gross world and acts as a hindrance in his complete and unconditional freedom) becomes absolutely steady, calm and poised in his approach to life and its problems; he develops a uniform and universal view of this world and the life in it. For him, all are equal, and he never gets disturbed or agitated by different situations. This gives him exemplary and outstanding peace, bliss and happiness.

Hence, if you inculcate these noble views and eclectic thoughts you too would enjoy the highest degree of spiritual bliss, beatitude and felicity (9).

10. There is no separate existence of entities known as 'Chitta' (mind and sub-conscious), 'Vidya as well as A-Vidya' (knowledge or the lack of it respectively), 'Mana' (mind and heart complex), or a 'Jiva' (living being). All of them are but

different manifestations of the single cosmic entity which is the supreme Consciousness, and which is also known as the supreme transcendental Brahm. This Brahm is the one that has no end or beginning as it is eternal, infinite and imperishable; it is the one that pulsates in this entire creation like the pulsations of the waves in an ocean.

[The wave is but another form of the water that also forms the main body of the ocean. In effect, there is no real difference between the wave and the ocean. The ocean and its wave cannot at all be separated from one another, for we cannot have an 'ocean wave' without the presence of the ocean or the wave. It ought to be noted here that both the ocean and the wave are but two forms of the same entity known as 'water'. The wave represents that aspect of water that is charged with movement, dynamism and energy vis-à-vis the rest of the body of the ocean which is heavy and dense, unmoving and grave as ever. Whereas the wave has a point of origin on some limited area of the surface of the vast ocean, the ocean itself is a endless and measureless reservoir of water which has no beginning or end. Whereas a wave rises meters high in the air, the ocean never leaves the surface of the earth. Whereas the wave can cause horrific destruction if it unleashes its wrath, the ocean harbours a healthy marine life without harming it in the least. Whereas the wave has a beginning, a span of life, a distance that it travels, and finally the end when it collapses back into the ocean, the ocean is an endless reservoir of water that has no beginning or end, and it neither rises, nor travels anywhere or collapses anywhere into anything.

In other words, the entities mentioned in this verse, viz. Chitta, Vidya, Mana and Jiva, which are all components of this existent world, are like the countless waves that come, live their course, and finally end. On the other hand, the cosmic Consciousness known as Brahm is like the ocean. It possesses all the characteristics of the ocean enumerated above. It is from this Brahm that the creation begins, derives its energy and dynamism, grows, expands, develops and spreads, and it is in this Brahm that it finally ends much like the waves that derive their energy from the ocean, spread over the surface of the ocean, and finally collapse into the same ocean to become indistinguishable from it.] (10).

11. Only as long as one is aware or conscious of the body and its importance does he have any sort of attraction for it and attachment with it. He then thinks, though erroneously, that the body is his own self, and that the body is his identity. Then he becomes possessive of the body; he is proud of it, proud of its abilities, strength and beauty.

As long as a person thinks that something or the other is 'mine' (in this case, the body, and in general all things of the material world), it is only till then that the mind is deluded, remains distracted, and diverted away from the reality. When the mind decides that it has nothing to do with either the gross body or the world with its myriad charms and uncountable material things or sense objects, it is then that it would become disinterested in either of them.

[In other words, all attachments and relationships are created only when a Jiva, the living being, thinks that a particular entity and he are related, and that he has something to gain by this link. This notion conditions all the reactions of the Jiva towards the body as well as the world—he would become possessive of things that serve his self-interest, and shun those that he thinks harm it. Gradually he gets hooked to things that he thinks are useful for him and gets emotionally attached to them. The result is that the mind becomes so much deluded that it is conditioned to believe that the thing belongs to the Jiva, and then it becomes possessive and jealous.

So, if a man becomes wise and erudite enough to understand that the world and the body are not only gross but perishable while the Atma is sublime, subtle and eternal, he would naturally opt for the latter instead of having to do anything with the former. Obviously, no man in his right senses would prefer to take something of lower value if he can get a thing of much higher value with the same effort. With this realisation, he would shun the body as well as the world, and remain focused on the thoughts of the pure conscious Atma.] (11).

12. Oh sage (Nidagh)! Those who treat the entire creation, literally the three worlds¹, as being inconsequential and of no importance as a blade of grass or a twig, and burns all of them (i.e. all the vestiges of desires for them) in the fire of enlightenment that burns constantly in his inner-self, it is then that all the delusions, erroneous thoughts, misleading perceptions and the vagrant nature of the Chitta (mind and sub-conscious) are eliminated.

[This is because the mind remains unsteady and on the boil only as long as it is tempted by the numerous temptations arising from the material world of sense objects and their charms. The mind wants this and that; it is torn between this option and the next; it accepts one thing and then finds the other thing is better and more useful, and so jumps and hops continuously from object to object, from subject to subject. Such a mind is never at rest. It is in a perpetual state of flux and bewilderment. On the other hand, a mind that has nothing to disturb it is able to remain focused on the single job at hand, and obviously it can fix all its intellectual abilities and analytical energy on this single subject. The result would be of top grade as compared to the result obtained when the mind is distracted and uneasy. Refer also to Canto 5, verse no. 33.] (12).

[Note—¹The three worlds are the terrestrial, the heavenly, and the nether world; the past, the present and the future; the good, the bad and the mediocre; the gross and visible, the subtle and invisible, and what lies in-between.]

13. Such a wise, enlightened and self-realised man thinks that there is no such concept as something being big and the other being small. [This is because he treats everything equally and with the highest degree of equanimity. For him, whatever that exists is nothing but the same Brahm or cosmic Consciousness in different forms, and therefore the fundamental essence of all are the same.]

He becomes aware of the eternal and irrefutable truth that his ‘true self’ is the eternal and imperishable Atma which is nothing but pure consciousness. He realises that this ‘self’ is one complete, immutable and uniform whole that has no fractions.

Hence, you should also develop this eclectic wisdom and feel yourself as being complete, whole and all-inclusive (13).

14. ‘Trishna’ (excessive worldly desires, rapacity, greed, yearning, lust, thirst for sensual objects and self-gratification) is like a spiritual poison which is as painful as the disease known as diarrhea. Trishna washes off or purges all spiritual inclinations, all good effects of learning the scriptures, and all the positive effects of the Mantras (spiritual formulas) employed by an aspirant to reach his goal in life.

The remedy of this spiritual ill which is known as ‘Trishna’ lies in holding fast to and relying upon the strength of the Spirit by focusing one’s attention on the thoughts of the Atma, in studying the scriptures and understanding their teachings and then implementing them in practice, and in employing the Mantras to help one focus the mind on one’s spiritual objectives by doing Japa (repetition) with these Mantras.

The various Trishnas freeze as a consequence—i.e. they become inactive and stop their constant pricking under these circumstances just like the water freezes in winter. [Even as liquid water flows freely while its frozen form is static, when the mind and the heart are able to overcome the various Trishnas, they can rest in peace without being bothered by them. If one takes the recourse of meditation and contemplation to remain focused on the Atma, if one takes the help of the scriptures to guide him as what to do and how to reach one's goal, and if one uses the Mantra as aids to focus his mind on the pure consciousness while meditating and contemplating—it is sure that all the uncountable desires and thirst for worldly objects would stop bothering him any longer. It is tantamount to them freezing and being rendered ineffective. The main focus here is on acquiring truthful knowledge along with reining-in of the mind and controlling its restlessness with the help of the Mantras. The Mantras also help to harness the cosmic energy, the divine powers and dynamism inherent in their letters which can be regarded as encrypted forms of cosmic sound containing its natural cosmic energy. All these steps collectively help the man to overcome the natural Trishnas that raise their hoods in his mind and heart. Refer Canto 1, verse no. 35 also.] (14).

15. Those who are wise and learned realise that it is best to first know what Vasanas (worldly passions, desires, lust and longings; worldly attachments and attractions) are, and then abandon them altogether.

They understand that the only Authority in creation which is universal and uniform is Consciousness, and that to attain it is the only way of obtaining the highest spiritual stature in existence (15).

16. The state of existence when all the Vasanas are eliminated is equivalent to the Sushupta state, or the deep sleep phase of one's consciousness. But this elimination of the Vasanas does not bestow any kind of 'Siddhis' (mystical powers) on the man.

[The deep sleep state is the third stage of existence of consciousness and the second step of the sleeping state. During this state, the mind and the sub-conscious go into inactivity, and the sleeping man finds complete rest. But ordinarily, this is only a transient phase as the man reverts back to the Swapna state or the dreaming stage when the sub-conscious and the subtle aspect of the mind are active. That is the reason why the man 'dreams' in the first place—because the sub-conscious is active and feeds upon its data-bank in a sort of playback of what it had experienced when the man was awake during the Jagrat state. Now, when all the Vasanas are eliminated, the mind and the sub-conscious would not be attracted by any of the material objects of the world or be nagged by the sense organs of the body for self gratification. Hence, the man would find complete peace of mind and have a calmed down sub-conscious which registers nothing which can even make a man dream of this or that attraction of the world.

It does not grant any Siddhis because it is a temporary, procedural and experimental phase in the spiritual life of a man. It is like the case when a student cannot be awarded a degree by the university by merely passing his sectional exams. The degree is awarded only when he completes his course—and in the present context, the completion comes when he reaches the next higher state of Turiya as described below.]

When this state of Sushupta or temporary annihilation of Vasanas becomes stabilized and perpetual, it is equivalent to the 'Turiya' state of consciousness. This is the higher form of existence that transcends the Sushupta state, and in this state the

man remains oblivious of the surrounding world even if he is awake. This eclectic and sublime state is obtained when all the Vasanas are completely exhausted and eliminated from the root, and not even a trace of them is left to produce a seed that can, by chance, create a new shoot of Vasana. The Vasanas are, therefore, naturally eliminated and exhausted, and this elimination is permanent. [Obviously, this state is reached by practicing the earlier state of temporary removal of Vasanas by conscious effort. As has been cited in verse no.14 above in relation to the Trishnas, it is a gradual affair that requires practice and effort. But once success is achieved, it becomes natural to the man and an integral part of his life, his thinking and his behaviour.] (16).

[Note—Canto 5, verse no. 46 describes the Turiya state of consciousness when the Chitta and the Vasanas are controlled.]

17. Even a remnant of Vasana that might be left unattended may be very dangerous and a spoil-sport for the spiritual aspirant just like the case when even the remnant of a doused fire can prove dangerous if it is not taken proper care of (because it can re-ignite by the least provocation and the slightest spark, and then burn the whole surroundings down), or like the case of a loan no matter how small it is (because it acts as a bondage that shackles the man to the vicious cycle of cumulative accrual of interest and his inability to repay the enhanced amount), or the case of a disease which can prove fatal if not eliminated completely (because it would gnaw at the body and nibble at its vitality and strength from the inside, leading to fall of health, vigour and general well being, as well as the chance of a sudden relapse that can be gravely threatening for one's life), or the case of those who are in the habit of keeping malice and jealousy (because they would be hated by one and all), or the case when one has the intemperate tendency to be easily infatuated with others or hate them at the slightest excuse (because this habit would land them in uncomfortable situations which could be easily avoided had they been more cautious and conscientious about their behaviour), or the case of one being too close to an animal that has horns (i.e. it is not a good idea to be unduly close to such an animal for it cannot be known when the animal gets annoyed or provoked and gore the man with its horns).

Likewise, even the slightest of Vasana is the cause of bondage for the creature. The Vasana undermines all his efforts, no matter how sincere these efforts are, to obtain Mukti (spiritual freedom) from this world (17).

18. Therefore, a man who has completely destroyed all the Vasanas and burnt down all the seeds (causes or reasons) that purport to be the progenitors or the creators of the Vasanas—verily, such a man is never subjected to any kind of torments and sorrows under any circumstances. He remains free from all miseries and grief whether he lives in this material world with a gross body, or has obtained freedom from them. [That is, notwithstanding his being involved in the routine affairs of the world or his renouncing them completely, he would nevertheless remain at peace under both the situations.] (18).

19. 'It is not Brahm (the supreme transcendental Consciousness and the Absolute Truth)'—to think of anything or anybody in this term is known as 'A-Vidya' or ignorance. [This is because everything in existence is one or the other form of the same Brahm. Brahm is a universal truthful entity that is all-pervading and constant in the entire creation.]

Hence, overcoming A-Vidya or ignorance is to be firmly convinced that all is Brahm personified, and there is nothing that is not Brahm (19).

[Note—Refer Canto 4, verse no. 4.]

20. Brahm is consciousness; Brahm is this entire creation; Brahm is manifested as all the Bhuts (elements; mortal creatures) according to ancient tradition.

I am Brahm. Everything is Brahm—therefore even the enemy is Brahm, the friend is Brahm, and this Brahm is also all other kith and kin, all compatriots and relations (20).

[Note—Refer Canto 5, verse nos. 8, 21, 56, 65, and 74.]

21. ‘Everything is Brahm and nothing else’—a person who develops this holistic and most eclectic view of this creation and the life in it, and is firmly convinced of it, indeed becomes a personification of Brahm himself. [The fragrance and radiance of his enlightenment and spiritual glory effuses from him much like the light emanating from the glow-worm or the sweet aroma of a flower. It comes automatically, and is a part of his overall personality and being.]

Such a man experiences Brahm everywhere, and his presence too is equivalent to the presence of Brahm there. He remains eternally established in the virtues of being calm, composed, steady, serene, peaceful and blissful; he becomes a personified form of the ‘consciousness’ known as Brahm. [He acquires all the grand and immaculate virtues associated with Brahm—he is enlightened, wise, immaculate, uncorrupt, perpetually calm and blissful, etc.] (21).

22. If the mind is focused somewhere else rather than on the path ahead, then a man would walk unsteadily, would totter and stumble frequently on the path even though there is adequate light, and the path too is even and straight. It is also akin to a man who lives a wayward, a reckless, a listless, an undisciplined, an unregulated, a pervert or an indulgent life that has no scruples or aim, a life that didn’t have the opportunity for moral and ethical education or guidance in its formative years.

Instead of this condition of the mind, if the latter is focused on the target, the person would be steady and calm.

Hence, a wise and enlightened man sees the Brahm who personifies pure consciousness everywhere, and this realisation or knowledge or awareness makes him unfaltering, unwavering, steady, calm, poised, serene and rested. He remains steady in his journey through life, and is never subjected to the buffeting effects of the tumultuous world around him and the myriad varieties of torments, miseries and grief that are inherently present in it (22).

23. Such a wise, self-realised and enlightened person would take the shelter of the pure conscious Atma (which is Brahm personified in his own bosom), and would have consequentially become absolutely calm, serene, tranquil and peaceful because he would have calmed down all his numerous ‘Sankalps’ (the various aspirations, vows, violations, promises and determinations vis-à-vis the material world and its sense objects). [This is because all desires related to the world deprive a man of his peace of mind, and as long as he thinks of anything that pertains to the material world, he can never hope to find lasting peace. So, when all Sankalps are decimated, the cause of a man’s uneasiness, frustration and dismay arising out of various volitions, desires, determinations, aspirations, hopes and expectations and his inability to fulfill or realise them are done away with. Refer also to Canto 5, verse nos. 47-48, 102-104.]

He becomes free from the entanglements and delusions created by deeds and actions in this material and gross world because he disengages himself from the deeds done or the actions taken by the gross body. [This happens as he realises that the body is not his 'true self', but the latter is his Atma, the pure consciousness, that merely lives in the gross body. So whatever the body does is independent of the Atma, and hence the latter is not responsible for anything done by the body.]

He completely discards or renounces whatever he might have done (or 'thinks' that he had done) in the past (out of the erroneous notion that 'he' is the 'doer' of deeds). His past is shed, and the present as well as the future are completely de-linked from it and its vestiges. [That is, even if he had thought in the past—by mistake or ignorance or under the influence of delusions—that 'he' has done certain thing, and therefore is entitled to its reward, or fears from the bad consequences of its negative results, as soon as true wisdom and enlightenment dawn upon his mental horizon he must realise that such thoughts are ill-conceived and erroneous. He is not the 'doer' of anything, as all the deeds are done by the body and not the Atma. And therefore there is no question of his either enjoying the rewards of such deeds or suffering from their bad results. Once this awareness arises vis-à-vis the past deeds or actions, it is a natural corollary that an enlightened man would no longer be involved in the deeds or actions of the body, and their accompanying results, in the present or in the future.] (23).

24. In this way, those who are of a stable and calm mind and sub-conscious, who are wise, self-realised and enlightened, and who are free from any sort of attachments, attractions or infatuations with anything or anyone in this world are the ones who neither criticize or speak ill of others on the one hand, nor do they praise or honour anyone.

[They would treat everyone equally because they would have developed the grand virtue of equanimity, dispassion and detachment of the highest order, and of seeing uniformity in this creation in its best form. They would see the same consciousness everywhere, in all persons in equal measure. So therefore they would be no basis for finding fault with one person and treating him as lowly as compared to the other. Since such notions of a person being good or bad is ordinarily judged depending upon what he does, how he acts, how he thinks, how he behaves or how he looks, for a truly wise and enlightened man this criterion does not hold water because he does not judge a man by his gross body but by his Atma. And this Atma is a universal and uniform entity that is immaculate and untainted. Then say, where is the question of one person being good or senior, and the other being bad or junior?]

For them, being alive or being dead are equal. [That is, they have risen high in the spiritual realm and have realised the fact that the concept of 'death' and 'life' is limited only to the gross body, and they do not apply to the Atma, because the latter is sublime, ethereal, eternal and imperishable, while the former is gross, moribund, mortal and perishable.] (24).

25. The Pran (life-factors in the creature's body; literally referring to the vital winds, especially the breath) is an entity that is constantly on the move. It remains perpetually pulsating or vibrating in the creature, and never ceases to move. Indeed, this Pran is dynamism of Brahm revealed in practical terms in the body of a living being; it represents the dynamic energy of Brahm in practice in this life.

This Pran moves in and out of the body, and has a natural tendency of rising high and up. [This observation specifically indicates that the term 'Pran' applies to the

‘breath’ because it is the breath that moves in and out of the body, and also has a natural tendency of ‘going up’ through the throat, as well as coming ‘in’ and moving ‘out’ through the nose.] (25).

26. Similarly, the Apaana Vayu is also a manifestation of the dynamism of Brahman. It too, like the Prana, is constantly on the move, moving in and out of the body. [The term ‘Apaana’ refers to the vital wind that moves down in the body—the wind that moves in the intestines and helps the food to be digested and expelled out of the body; it is mostly located in the lower part of the body below the throat.] (26).

[Note—When verse nos. 25 and 26 are read together in the context of what has been said earlier in verse nos. 19-21, and 24, the meaning assumes a different connotation. The Prana wind moves upward and is also located in the upper half of the body, e.g. in the lung and the throat. This is a metaphoric way of saying that there are certain people who are spiritually more elevated and enlightened, people in whom the mind-intellect apparatus is more developed and refined, and who are mentally inclined to look up and positively at this world and life. Such people would be like cream that floats on the surface of milk when it is churned. They are naturally inclined towards nobler and higher goals in life.

On the other hand, the Apaana wind has its dominant presence in the lower half of the body, such as the abdomen and the intestines. This obviously implies a lowly approach to life and its values. The Apaana wind is mainly concerned with digestion and elimination of waste from the body—indicative of the tendency of such people in whom the Apaana wind is more active as being literally indulgent in eating and drinking and making merry while they have the chance to do so! Such people have the habit of developing close relationship with the gross world and are inclined to gratify the demands of their sense organs.

The difference between the approach of the two types of people can be simply described as follows—while the man in whom the ‘Prana’ is more active would be inclined to spend his time and energy in studying the scriptures, seeking company of noble men, discussing spiritual and other eclectic topics, doing noble and righteous deeds, following auspicious path that would give peace to the mind, the heart and the soul, and generally spending their lives in pursuit of positive things, the man in whom the ‘Apaana’ wind is more active would do just the opposite. He would rather spend his time reading books that would have sensual value, do things that would gratify his natural urges and demands of the body, keep company with people who talk of worldly things and material pleasures, spend time in enjoyment of the comforts and pleasures of the world and the body, etc.

Therefore, ‘Prana wind’ would refer to those people who are good, wise, educated, of a high birth and occupy a high standing in society, and are spiritually enlightened, wise and realised, while the ‘Apaana wind’ would refer to those persons who are just the opposite.

The dissimilarity between the two situations is marked and obvious. The principle that both the Prana and Apaana are manifestations of the same Brahman’s dynamic powers on display would naturally also apply to the two types of people in the world. This is expected in the light of the fact that ‘everything and everyone is Brahman, and nothing but Brahman in this creation’ as affirmed in verse nos. 19-21. And that is why a wise disciple who has fully understood the teachings of the Upanishads treats all living beings alike—refer verse no. 24 above.]

27. This eclectic way of thinking is the best way of doing Pranayama constantly and consistently, even while one sleeps, from the metaphysical perspective.

Hence, those who know how Pranayama should be done in a holistic and comprehensive manner are duly rewarded by its auspicious and good effects.

[Pranayam is a form of Yoga exercise wherein the practitioner endeavours to control and harness the power of the breath and the other winds present inside the body for achieving his spiritual objectives. The import of this verse is tremendous—if one limits his Pranayam to mere physical exercises that can only be done for a limited time and that only when he is awake, then obviously their good effects would be also limited in scope. But if one develops the holistic and philosophically evolved form of doing Pranayam as described in verse nos. 25-26, then the same can have a profound effect on the spiritual aspirant's spiritual progress in life. If limited Pranayam can have great practical benefits in the form of good health and rejuvenated spirit, giving peace and bliss to the practitioner, then one can well imagine the heightened benefits if this Pranayam become perpetual and steady. The peace, bliss and tranquility that are derived by this perpetual and steady mode of Pranayam done with acquisition of truthful wisdom, enlightenment and self-realisation from the metaphysical perspective would be truly liberating and delivering for the creature.

If physical Pranayam means controlling of the flow of vital winds in the body, then its metaphysical connotation would mean a comprehensive regulation of life in general by the creature. This is because the vital winds control all the functions of the body of the creature. It is also because while physical Pranayam benefits only the gross body which is however inherently perishable and therefore would die one or the other day, thereby limiting the benefits of Pranayam, if the same Pranayam is done in a holistic manner then the entire life of a man undergoes a change for the better, he is able to realise the true potential of his 'self' which is however an eternal and imperishable entity. Therefore, it is wiser on his part to spend his time and effort to realise a benefit of doing Pranayam that has an eternal value as compared to a benefit that has a limited life-span and perishable value.] (27).

28. The Pran extends up to a distance of twelve fingers width outside the body. When the creature's 'self' is able to grasp it and pull it in, then this process is called 'Purak'. [This refers to the inhalation of breath to fill the body with the air that is present outside it.] (28).

[Note—We see a halo depicted around the head of divine souls or spiritually elevated persons in their portraits. This halo or aura symbolizes the Pran that has been activated and energized in such people. As has been said in this verse, this energized Pran extends for some distance around their head just like we have an aura around the flame of a lighted candle or the halo around the disc of the sun in the sky. This halo consists of charged particles just like the manner of the charged Pran wind established around the head of spiritual persons.

We have even two forms of electricity—one that moves in the wire, the 'dynamic electric current', and the other that is known as 'static electricity' which consists of static charged particles in the air immediately around certain things which are dynamic. Likewise, we have two forms of Pran—one that moves in and out of the body, the 'dynamic Pran', and the other that is steady around the head of spiritually attained persons, and it is charged with energy that is subtle but visible in the form of the halo or the aura their heads.

In this context, it would be interesting to see what the characters of a spiritually enlightened and self-realised holy man, known as a saint or a Sadhu, are. A true Saint or pious man known as a Sadhu, according to *Adhyatma Ramayan* of sage Veda Vyas, Aranya Kand, canto 3, verse no. 37-39, has the following characteristics—

“Those persons who are even-minded and stable, have equanimity and forbearance, are serene, placid, unruffled, unwavering, calm and balanced under adversities as well as favourable circumstances, both during sorrows, sufferings and troubles as well as under happy and joyous situations in this world; those who are

without any desires and wants whatsoever; those who do not have any attachment to their worldly assets such as their wealth and sons, nor harbour any desires pertaining to them; those who have restrained, conquered and suppressed their sense organs and their wayward tendencies or the urge for their gratification; those who are of a serene, calm, peaceful and tranquil temperament and mind; those who are sincerely devoted and dedicated to you; those who are devoid of and free from all desires, greed, avarice, yearnings and ambitions of all kinds (37); those who are even-keeled, have equanimity, remain neutral, unaffected, indifferent and aloof even while going through the throes of destruction (unfavourable circumstances) or construction (favourable circumstances); those who are without encumbrances and attachments of any kind; those who abandon and forsake involvement in all types of worldly deeds and getting involved in various actions, i.e. do not regard himself as the 'doer' of any deed, nor expects any reward or punishment for it; those who are always the followers of Brahm (i.e. pursue the path of righteousness that leads to the supreme, eternal One) (38); those who are endowed with 'Yam' and other virtues (e.g. self-restraint of passions and doing penances and austerities); and those who are contented and satisfied with whatever comes their way—such persons who possess these virtues are truly 'Sadhus' (saintly, pious, holy, divine, pure in mind and heart). Whenever one is fortunate to get communion and a chance to interact with such saints, one develops endearment for and interest in your divine stories (i.e. in spiritualism) (39)".]

29. Oh Suvrata (i.e. one who has auspicious inclinations and keep auspicious vows; referring to sage Nidagh)! The Moon is represented by the Apaana Vayu, while the Sun is represented by the Prana Vayu. The Apaana wind is present throughout the body, and it virtually reflects the glory and energy of the Prana wind in the body.

[The Apaana wind does not routinely move out of the body like the regular flow of the Prana wind which is also known as the breath. Apaana wind is the general term for the wind that moves in the lower parts of the body, and its general location is in the alimentary canal. While the Prana wind moves out of the body through the nose, the Apaana wind moves out through the anus. It is activated and enabled to carry out its functions—such as digestion and elimination of waste from the body—only as long as there is 'life' inside the body, and 'Prana' is synonymous with 'life', for if the man stops breathing he would not survive.

This is metaphorically depicted by saying that the Apaana is the Moon while the Prana is the Sun—because the Moon is lighted in the light of the Sun; the Moon shines only because its dark disc is lighted by the sunlight; the Moon would not have shined if there was no Sun. The Moon has no light—or 'life'—of its own, and had there been no Sun the Moon would not have 'lived' as a shining celestial body.

It is the latent heat and dynamism present in the Prana wind that enables the Apaana wind to acquire sufficient heat and energy to keep the body warm, digest the food eaten, and then expel the toxic residue from the body. The inherent heat and warmth in the creature's body is lent by the Prana wind, but carried to the different parts of the body by the way of the nutrients that are extracted by the Apaana wind from the food eaten by the creature.

While the Prana wind makes its presence apparent when one can feel the flow of breath by holding one's hands near the nostrils, or when one speaks because it is the Prana wind that produces sound by rubbing against the vocal cords in the throat, or when breath condenses to form a mist in the front of the head during extreme cold conditions, showing that the creature is alive and has energy and stamina, the Apaana wind on the other hand is hidden inside the body and silently performs all the internal duties assigned to it that actually enables the creature to perform his external duties in

the world. The importance of the Apaana wind cannot be underestimated because if it fails to perform its duties properly, the creature would not be able to eat, digest and eliminate waste from the body, and obviously he would fall ill and unable to perform anything in this world. In practice we know how difficult even routine work becomes when one feels gas accumulating inside the abdomen, when one becomes bloated and uncomfortable.

Therefore we conclude that the Pran and the Apaana are but the two sides of the same coin representing the dynamism, the vitality and the life-infusing and life-sustaining virtues of Brahm—one wind is useless or ineffective without the other.] (29).

30. When the time comes for the Pran Vayu (breath) to subside or become extinct (i.e. when the time of death approaches; when the man's breathing become short, slow and shallow; when 'life' begins to ebb and life-factors become weak and fragile), it appears that numerous Apaana Vayus (the wind present in the abdominal region) have made their appearance. [This is due to the slowing down of the overall functioning of the body, resulting in the incarceration of vital winds due to reduced metabolism and the inability to properly digest the ingested food. This results in accumulation of gases inside the body which reveal themselves as bloating, rumbling, gurgling, croaking of wind etc. in the abdominal cavity. There is a constant heaviness in the lower abdomen and in the intestines, and a constant desire to pass flatus as well as to belch. Such a man would take medicines in order to suppress the restlessness of the Apaana wind, forgetting that this restlessness is an indication that the Atma wishes to leave the gross body which has become feeble and decrepit. He wishes to cling to this body for as long as he can.]

When the Pran and Apaana Vayus are united with each other, or when they mix and become one (as is done during Yoga), the man is able to experience the consciousness inside him. He realises that the moribund and perishable gross body must be forsaken, and it is better to shed it voluntarily and peacefully rather than cling to its grossness for much longer because it will cause agony, pain and misery for the soul.

[A careful reading of these two stanzas would clear the difference in their meaning. The first stanza refers to a man who does not practice Yoga—so when his old age approaches, he is tormented by weak wind. His breathing slows down, and there is accumulation of gases in the body which give him a lot of discomfort. He does not want to leave the body, and takes medicines to overcome 'gases', but does not recognize this symptom as the desire of the Atma to leave the cage of the gross body.

On the other hand, the second stanza refers to a man who practices Yoga or meditation regularly. He has accustomed his body to slow down the movement of the Pran wind by practicing Pranayama (a technique of Yoga by which breath is controlled), and has also sufficiently energized his Apaana wind that it can rise up and mix with the Pran wind to reach up in the region of the head, at which time the practitioner experiences the thrill of self-realisation, and when this exercise is extended further the practitioner is able to voluntarily make his Pran-Apaana winds to make their exit through from the body by sneaking out through the skull by the path of the Brahm-Randhra which is a hair-like slit in the cranium bone. This results in his Mukti—or liberation and deliverance from the shackles represented by the gross physical body. Once outside, the Pran merges with the cosmic air or wind element

present outside the body, and becomes one with it. In other words, the individual's Pran or vital life-sustaining winds have discarded their earlier limited realm and scope to become universal and all-pervading like the wind or the air that is present in the sky outside the gross body.

In this scenario, the first type of person has to suffer numerous types of discomfort of the body and is utterly uneasy because the same Pran-Apaan complex, which is the basis of life in his body, now begins to torment him no end, while the second person is at peace with himself as he has obtained full control over the same Pran-Apaan complex by establishing a harmony between them, and therefore leaves the body comfortably and voluntarily.

There is another angle from which one can interpret this verse. The Pran wind stands for the Sun which symbolizes the light of knowledge, wisdom, erudition and self-realisation that a creature has. The Apaan wind stands for the Moon which symbolizes the heart and its emotional and sentimental aspects in a creature. Now, if the Pran is the dominant wind, then the person would be naturally inclined to be spiritually elevated and attracted towards nobler and sublime values and things in life. He would be driven by the thoughtful, analytical, rational and discriminating mind and intellect apparatus, and hence his life and its decisions would be well-thought after and balanced. On the other hand, a man in whom the Apaan wind is playing the decisive role would be driven by the heart, and obviously would be more impulsive, emotional and sentimental in whatever he does, thinks etc.

Again, a person in whom the Pran is more active would spend his time and life in pursuit of noble goals in life, while he in whom the Apaan is more agile would be indulgent in the world and a serf of the body.

Evidently thus, a person who has not fully controlled these two winds would be like a leaf tossed around in a storm, while he who has overcome the natural inclinations of the winds would be settled and calmed. The former sort of person would be torn between numerous opposing demands, habits, inclinations and tendencies of the body, the mind and the heart. He would be tossed and kicked around like a balloon or a ball. The Pran wind would pull him upwards, and the Apaan wind would try to pull him down.

The only way out of this predicament and spiritual dilemma is to create a balance and establish a harmony between the opposite pulls of the two important winds inside the body. Success in it would bestow the reward of rest, peace, calmness and tranquility. This success is achieved by practicing Pranayam. It not only helps to create a balance between these two vital winds but also harnesses their combined energy for the long term physical as well as spiritual well-being of the practitioner. The vibrations of the two winds now coalesce with each other to produce enhanced energy and dynamism, instead of working against each other and clashing with one another to cause upheaval and unnecessary discomfort for the Jiva.

The effect is magical to say the least—because the vibrations that had previously caused havoc for the creature now aid in his all round welfare and well-being. Instead of causing so much agony and torments for him, the two winds now make his life easy and comfortable. Their combined energy is able to lift him from having to live a humdrum life of misery, pain, uneasiness and shortages to a healthy life of peace, bliss and contentedness. He is catapulted from a lowly life of grossness to an exalted life of sublimity and holiness.

Its like two powerful kings joining hands for the general welfare of their kingdoms and subjects—then instead of constant skirmishes and warfare leading to

ruin, havoc and enmity all around, there is now eternal peace, contentedness, development, growth, happiness and cheer everywhere.] (30).

31. In a gross body where the Apaana wind completely calms down or subsides and stops its natural activities, there is not the slightest chance of the Prana wind ever making its appearance again. [When the Apaana wind becomes extinct, all the organs stop functioning and the body is deprived of nutrients. Naturally, the body cannot survive in this condition. This is indicated metaphorically by saying that the Prana wind that symbolizes life cannot make its appearance if the Apaana wind dies.]

Therefore, you (Nidagha) should take the shelter of the pure consciousness known as the Atma which is eternally steady, independent, self-reliant, self-sustaining, unmoving and uniform unlike the two winds. One who is wise would always prefer to accept something having eternal value and sovereign rather than something that is changeable and dependent upon something else.

[The vital winds known as Prana and Apaana infuse and control life in the gross body of a living being like the consciousness known as the Atma. But there is a vital difference between them—whereas the two winds are dependent upon each other for their survival, the Atma is independent, self-sustaining and self-sufficient. The two winds cannot stand alone by themselves—the Prana wind infuses life in the body by way of breath, and only as long as the body lives is the Apaana wind able to carry out its functions of digestion, extraction and distribution of nutrients, and expulsion of waste from the body. Similarly, it is only as long as the Apaana wind functions properly that the body is kept healthy and survive, for otherwise the body would bloat, breathing would be difficult, the body would be poisoned by accumulation of toxic matter inside it, and the person would die. In other words, the mere presence of the Prana wind or the Apaana wind would not be able to help the body survive and enable the creature to live a comfortable and healthy life if both of them do not coordinate their activities or work against each other.

On the other hand, the Atma does not depend on any other entity for its survival. Even if the present body dies, the Atma continues to live, because it is an ethereal Spirit that was trapped inside the former body and when the body dies this Spirit is freed from its prison. If the Atma does not make a body alive by injecting consciousness in it, the vital winds would not be able to do so. If the Atma leaves the body, the vital winds would not be able to keep the body alive on their own.

Besides this, a time comes when the two winds begin to give trouble to the creature as is clear from verse nos. 25-31. A wise man would wonder why any entity that is supposed to provide 'life' would ever give him trouble, and why would an entity that is supposed to be infinite ever subside and become extinct? Therefore he concludes that to treat the vital winds as the source of eternal and imperishable 'life' is an erroneous, a fallacious, a misconceived and a misplaced proposition. He also concludes that therefore there must be something else that is really responsible for the factor of 'life' in this creation. So he begins his search for this source of life, and upon research and study of the Upanishads he discovers that this true quintessential entity that is synonymous with life is known as the pure conscious Atma.

In other words, he deduces that the truthful factor that infuses real 'life' into the gross body is not the 'Prana' or the 'Apaana' but the 'Consciousness' that is known as the Atma. This Atma is eternal, imperishable and infinite; it never undergoes change as it is steady and constant unlike the two winds known as Prana and Apaana. Hence, if he takes the shelter of this Atma, the pure consciousness, then surely he is bound to be free from the torments and fears presented by relying upon the vital

winds for his life-sustenance. If he relies on the Pran and the Apaana to attain an eternal life, he would be cheating himself because sooner or later these two winds would become feeble by age, they would lose their energy and vitality as the body ages and begins to decay, and they would finally betray him by subsiding and resulting in life being snuffed out of the body. On the contrary, if he relies upon the Atma as a source of life, then he succeeds in his quest for obtaining an eternal source of life because the Atma is eternal and imperishable.

Whereas the presence and life-giving dynamism of the Pran and the Apaana is proved only when one breathes through the Pran and when the body carries out its varied functions, digestion being one of them, through the Apaana, the presence and dynamism of the Atma is known even without any vivid signs or perceptible symptoms. That is, the presence of Pran is known when one breathes or speaks, and as soon as the man stops breathing or speaking it is deemed that the Pran has left the body. Similarly, the presence of Apaana is known when the food is digested, the waste eliminated, the body gets proper nourishment, and kept warm. But the presence of the consciousness does not require such signs. Acclaimed ascetics are known to hold the movement of their vital winds for prolonged periods of time by various meditative techniques, but that does not mean that they are 'dead'.

From the metaphysical perspective this verse means that a wise, enlightened and self-realised person must understand that the vital wind can, and eventually would, come to an end, but the 'consciousness' is an eternal entity. And therefore, it is wise for him to treat the consciousness as his 'life' rather than the vital winds.

Therefore, if a wise man is given a choice to choose a synonym for 'life' between the two options of 'Pran-Apaana complex' and 'consciousness known as the Atma', he would certainly choose the latter.] (31).

32. You must strive to experience the presence of pure consciousness which is done (during the process of Yoga) when the Apaana wind is active but the Pran wind has stopped its movement. At this point of time, the practitioner of Yoga focuses his attention at the tip of his nose in order to concentrate his mind upon the consciousness¹. [This refers to the process of Pranayama when the flow of Pran (breath) is controlled, but the Apaana wind continuous with its routine activity.] (32).

[Note—This process has been described in detail in Shandilya Upanishad of the Atharva Veda, which is included as Chapter 14 of this volume, in its Canto 1, section 3, verse no. 5-6; section 5, verse no. 2; and section 7, verse no. 16.]

33. The entire creation consisting of the three Lokas (or aspects of creation, such as the terrestrial, the heavenly and the nether; the past, the present and the future) is neither true nor false. It only appears to be so; it only appears to be sometimes true and at other times false. [Refer Canto 5, verse no. 12. The very fact that a doubt is created as to whether the world is true or false is itself a proof of the deluding nature of the creation. Anything that is 'true' and 'real' cannot be subjected to such doubts.]

Those who are truthfully wise and exceptionally erudite assert that real metaphysical wisdom and enlightenment is to discard such doubts and delusions along with their attendant confusions, perplexities and consternations. [This is because such persons see only Brahm, the sublime, universal, all-pervading and pure cosmic Consciousness, as the irrefutable and incontrovertible truth and reality in this creation, and do not bother to pay any attention to the gross aspects of creation. Therefore, they have no doubts. In this context, refer verse nos. 19-21 above.] (33).

34. It is not possible to experience and witness the presence of the supreme transcendental Brahm by a corrupted and unclean mind, intellect and heart just like it is not possible to have a clean and sharp image of something in a tarnished, unpolished and unclean mirror, or one that has an uneven surface.

Therefore, do not be misled by the tainted view or notion of Brahm that is presented by this deluding and unreal world of imagination. You must abandon this deformed, corrupted and tainted view of Brahm.

[It is said that the world is a manifestation of Brahm, that Brahm pervades in each pore of this creation, and that whatever is seen is nothing but Brahm. On the other hand it is also said that this world is false and imaginary as well as corrupt and deluding. This apparently opposite situation might create an obvious confusion in the mind of a spiritual aspirant or a student of metaphysics. Hence it is said here that a wise man must not treat the exterior view and gross aspect of the world as being a synonym of Brahm—because that would be misleading and completely wrong. Brahm is the subtle but undisputed ‘truth’ known as the ‘consciousness’ that is hidden behind the false exterior, and which pulsates throughout the length and breadth of creation, the only factor without which nothing would ever ‘live and become conscious’ of anything at all. This ‘consciousness’ cannot be physically seen or verified, but it is nevertheless the core of creation.

For instance, when one sees a garland of flowers or a prayer rosary made of independent beads strunged together, one sees is external feature only. One sees a string of flowers or beads and takes it for granted that they would always be like it. But suppose the garland or the rosary breaks and the flowers or the beads scatter about—then an ordinary man is utterly dismayed and thinks that he has lost the garland or the rosary forever. On the other hand, a wise man knows that the garland or the rosary can be made again by threading the independent pieces of flowers or the beads together once again. Once this is done, the garland or the rosary reappears. So, a garland or the rosary do not owe their existence to this independent units but the underlying string or the thread that keeps them together to give them the shape of a garland or the rosary. It is the string or the thread hidden behind the external façade of the garland or the rosary that is actually responsible for their existence, though of course the flowers and the beads do contribute their might to give the finished product its unique features, character, beauty and function.

Similarly, it is Brahm that holds the creation together and gives it its form, its importance and its recognition. If one were to remove Brahm from this creation, then the latter would cease to exist inspite of the presence of the rest of the elements as before.

That is, if one judges what Brahm is by looking at the external features of this creation then he would get a distorted picture of the reality. He would be seeing the outer façade of Brahm, the way the latter is reflected in the external features of this creation. But just like the case of an image in the mirror not being the original thing but merely a reflection of it, this external world is merely an image of Brahm and not Brahm.

On the other hand, if a wise man peeps deep inside and behind the curtain of falsehoods and delusions that mark this world, it is only then that he would see the ‘real and truthful’ Brahm. The view of Brahm as seen in the physical gross world is a corrupted or a distorted version of the real and truthful nature of Brahm, while the view of Brahm that is understood upon self-realisation and enlightenment presents a true and honest picture of Brahm.] (34).

35. Don't pay attention to the Mana (mind) which is like a fiend that instills fear, creates inauspiciousness, steals courage, fortitude, forbearance, steadfastness and strength, and is the one which robs everything that is of any worth from the creature (such as his mental and emotional stability, rational thoughts, peace, tranquility, joys, happiness and bliss etc.).

Become steady and calm by freeing yourself from the clutches of the Mana. Keep it aside and don't bother about it. Don't be a serf to your Mana; don't obey its dictates. Stop unnecessarily procrastinating and dithering, stop having doubts and fears, and stop getting confused and bewildered (35).

36. Be steady, constant, unmoving, eternal, imperishable and infinite like the sky element that would be there even after the end of creation—because 'you' (i.e. your true 'self') are the pure consciousness that has these grand and eclectic virtues.

[In other words, realise that your 'true self' is the pure and sublime consciousness that is an eternal and ethereal Spirit, and not the gross and perishable body. So even if the world ends, or in other words the body ends or dies, you would continue to live in your ethereal and sublime form as the eternal Spirit. So, where is the cause for fear from death, or the fear of losing anything upon the end of the world?] (36).

37. One wants something only till the instant he feels that he lacks it. If he never feels that he is devoid of something, that there is a dearth of something, that he lacks something, or that he is unfulfilled or un-contented in some way or the other—then he would never want anything whatsoever; he would have no desires of any kind.

Hence, be fulfilled and fully contented; never allow yourself to think that you are not complete. Abandon all desires, yearnings, needs, wishes, aspirations and ambitions. [You do not want anything—because the Atma, which is your truthful 'self', is a sublime and complete entity that is self-sufficient and self-contained, while all the desires and wants are limited to the body which is gross and full of shortcomings. Remember—this body of yours is not the real thing, it is not your 'real self', and it is extraneous to your Atma which is actually your 'true self'.] (37).

38. Don't be oscillating between hopes and despairs; don't be swaying between having any kind of feeling for anything or anyone, or suffering from the lack of it. Don't even have a desire to become neutral and dispassionate—let this come to you automatically on its own, and not by making efforts to acquire it, because any effort would bind you to the result, you would hope for a positive outcome of your efforts, which in its wake would be counter-productive as it would ruin your intention of getting free from all sorts of desires in a holistic manner.

Discard all your association with these vicissitudinous and uncertain thoughts and emotions that are deluding and entrapping by their inherent nature (38).

39. When one withdraws one's self from getting involved in anything in this material world of sense objects as well as all the desires for self-gratification of the organs of the body, i.e. when he is able to control and annihilate the Vasanas, he acquires the grand and eclectic virtues which are similar to the sky element.

The sky accepts everything, has countless entities embedded in it (such as for example the celestial bodies, pollutants, birds, clouds, gases, moisture, dust particles etc.), but it is basically unaffected by any of them. It maintains its neutrality and un-involvement with things lodged in it. It maintains its primary form as an entity that

harbours everything in creation in its vast and fathomless cosmic bowl without any sort of discrimination, while its self remaining detached from all of them. The sky is eternally pure and untainted, and maintains its inherent cleanliness and pristine glory inspite of these gross things being lodged in it. None of these things limit the sky's reach and create any hurdle in its expansive path. Nothing gross lodged in the sky would make the sky gross; none of the heavy or dense objects lodged in the bosom of the sky would ever affect the inherent subtle and sublime nature of the sky element in any manner whatsoever. The sky harbours the sun, the planets and the stars and the rest of the cosmic objects, but itself remains absolutely distinct and unaffected by them. The sun may affect the planets and the rest of the things around its environment called the solar system, but it does not alter the nature of the sky element.

Similarly, a wise man who has no Vasanas in him lives in this world surrounded by everything gross and material, but internally he remains pure, untainted, unconcerned, unruffled, un-influenced, uncorrupted and unaffected by them. He maintains the pristine purity of the Atma inspite of the unclean world in which he lives (39).

40. The world is created or brought to an end by the Chitta (mind and sub-conscious) wanting it to be so. It is the rising and blooming of imaginations and desires in the Chitta that gives rise to the blossoming of a colourful and fascinating world of magnificent charm and myriad varieties. Similarly, when the Chitta decides to retract itself, when it wishes to conclude its own creation, the same world would collapse into non-existence. [In other words, the world exists because the Chitta is focused on imagining it, because the Chitta wants it to be so. On the contrary, should the Chitta decide that it has nothing to do with this imaginary thing, the latter would simply lose its relevance for the creature, and hence would be non-existent for all practical purposes. Therefore, it is the Chitta that decides whether or not the world exists as far as the creature is concerned. If the Chitta decides so, the world ceases to matter for the creature because his mind would not register the presence of the world at all, his organs of perception would not respond to any perceptions originating in the world, and his organs of action would consequentially not have to react and sub-sequentially interact with the world. On the other hand, if the Chitta so decides, the creature would not only perceive the world but also get involved in it and harbour its thoughts in his mind and sub-conscious.]

Awareness of the world sets off a chain reaction—the creature either is attracted to it or repulsed by it. Therefore the very basis of existence or non-existence of this world with its myriad charms and material sense objects directly depends upon the inclinations of the Chitta.]

You (Nidagh) should therefore control all your Vasanas (passions, yearnings and desires pertaining to the gross material world and its sense objects; worldly attractions and attachments) as well as the Pran (vital winds) in order to make your Chitta free from all desires and passions that arise in it for the enjoyment or acquisition of the countless things of the senses in the material world as well as the wish to gratify the sense organs of the body.

[If the inherent Vasanas that are hidden in the creature are removed, the Pran would automatically calm down. This is because when one desires or longs for certain thing in this world would he make diligent efforts to access that particular thing for which the mind and sub-conscious has inspired him. Since the body has to do deeds and take actions for acquiring the thing desired for by the mind, or because it is the sense organs of the body which would actually help the mind to access the thing

desired, it follows that only if the Pran, the vital wind which keeps the body active and perform its duties, is active would the mind be successful in fulfilling its much wanted desires.

On the hand, should the Pran be calmed down, the body too would calm down in equal measure, and remain inactive and neutral inspite of all the poking, pleading and prodding of the mind. Consequentially, the Vasanas would automatically be suppressed. Even if the mind wishes to do anything or acquire anything in this world it would fail to do so if the vital winds do not cooperate and keep the body active to enable to physically acquire the objects desired by the mind.

If the creature has no Vasanas in him he would be peaceful and rested. This is because his mind would no longer be forced to devise methods and search for means to fulfill the Vasanas on the one hand, and on the other hand be torn between failures and successes pertaining to the fulfillment of these Vasanas. The mind would no longer be distracted and bothered by the numerous desires, and the joys of getting them fulfilled or frustrations at failures.

So we conclude that it is imperative to control the Vasanas and the Pran in order to control the Chitta (mind and the sub-conscious), and thereby do away with the existence of a world with its numerous charms and temptations that is imagined by the Chitta which has Vasanas in it, or the Pran that keeps the body restless and agitated in its desire to reach for the objects that would appease the sense organs.

When the mind would have no desire for creating this world in which it hopes to find happiness and comfort, the sub-conscious would also not store any hidden desires for it—this is because the sub-conscious is merely a library, an information and data storage and retrieval system of the mind, assisting the latter much like a secretary who gives the boss relevant files and information when so desired by him. A vacant sub-conscious clears the clutter of inputs from the external world and does not keep on nagging at the mind from behind the curtain to act in a particular way.

In brief, the emphasis of this verse is to practice control of the three important factors that act as impediments in a person's all round spiritual welfare—viz. (i) control of the Chitta, (ii) control of the Pran, and (iii) control of the Vasanas.] (40).

[Note—Canto 4, verse nos. 41-92 elucidate elaborately on the importance of controlling the triad of Chitta, Pran and Vasanas for the spiritual welfare of an aspirant.]

41. The world consists of a cycle of creation or rising up or blooming, and the end or conclusion or collapsing and dying.

Similarly, the Pran (breath) also has a cycle—coming in (inhalation) and going out (exhalation).

Learn to control the flow or movement of the Pran (by doing Pranayam or breath control exercises as prescribed in Yoga), and this would also help you to control the cycle of creation and conclusion of the world. Practice it diligently. [Refer Canto 4, verse no. 87.]

[When the flow of Pran is stopped, it is called the 'Kumbhak' state. During this state, the wind is held or trapped inside the body immediately after the inhalation phase of Pranayam which is called the 'Purak' phase. If this is practiced for a sustained period of time, the practitioner is able to stop the metabolism of the body and prolong its life as long as he wants.

The analogy of the stoppage of the movement of the Pran is cited here vis-à-vis the creation of the world to emphasis the point that if it is possible to stop the flow of the wind which is inherently mobile and unstoppable, and that if it is possible that

the inherently unbound wind can be limited within the confines of the body if the creature does want it to be so, then it is not difficult to stop the mind from creating the world! In other words, nothing is impossible if there is a firm determination and a strong will in the spiritual aspirant.] (41).

42. Those who are foolish and unwise think that there is an 'Unmesh' (beginning, initiation, rising, blooming, brightening or opening) and a 'Nimesh' (the opposite of Unmesh; end, closure or conclusion) in this world. In other words, they think that there is a situation when a new life is born, and a time when it concludes. They believe that they are the doer of deeds which produce a corresponding result. They think that there is a conclusion or dooms-day for this world.

[The word 'Unmesh' refers to or implies the beginning of life, while the word 'Nimesh' refers to or implies the end or conclusion of life. These two metaphorically correspond to the inhalation and exhalation of breath respectively. Inhalation of wind symbolizes infusion of life in the body of the creature, and by extension it refers to the injection of life in the universe because the body of the individual is a microcosm of the cosmos. Similarly, exhalation of wind metaphorically stands for the ejection of life from the body, and by extension to the conclusion of creation.

This assumption that the creation has a 'life' that has some beginning and that ends at some point of time, a 'life' that comes in this world and goes out from it just like the vital winds coming in the body (inhalation) and goes out of it (exhalation), is a completely fallacious idea—simply because the truthful identity of the living being known as the Jiva is not the body but the pure conscious soul, the Atma, which is his 'true self' and which is an eternal and imperishable entity that is steady, constant, all-pervading, all-encompassing, immanent and omnipresent. Therefore the question of it (the Atma) coming in from somewhere and going out to somewhere else does not arise at all as much as the question of it taking a birth or dying.

The body has an Unmesh (birth) and a Nimesh (death), but the Atma is free from this limitation. The body wakes up (Unmesh) and goes to sleep (Nimesh), but the Atma remains steady, unchanging and constant.

In fact, the truthful entity that lends or injects 'life' to this creation is the cosmic supreme Consciousness which is steady, eternal and imperishable, and not the vital winds known as the Pran that change and show fluctuation. So there is no question of the Consciousness going anywhere or coming in from anywhere; it does not decay and become feeble, nor does it subside, die or conclude like the Pran. This universal Consciousness is known as the Atma, and this Atma is the true identity of the man. The Atma is not the doer of anything, but merely a neutral observer of the deeds done by the gross body in which it lives. The deeds are actually done by the gross body, and certainly not by the Atma. Hence, there is no locus standi in claiming that 'I am the doer of deeds', and therefore there is no claim on the results either.

If one does not have this wisdom then he is indeed a fool.]

Be wise to abandon this erroneous notion of you being the doer of deeds, and that there is an end for you (for your 'true self' is the Atma which does no deeds and which never dies). For this, you should take the advice, guidance and help of learned people who are well-versed in this field, as well as the help of scriptures which would lighten up the correct and truthful path for you. Don't fall prey to wrong ideas and erroneous notions which would be detrimental for your spiritual welfare, which would deceive you and lead you astray (42).

43. Those who are wise, realised and enlightened assert that when the Chitta (mind and sub-conscious) becomes neutral and non-involved in anything, it is only then that it finds true rest, tranquility, peace and bliss. This translates into the creature too experiencing or accessing these eclectic virtues once he is able to calm down his fidgety, uncertain, wandering and restless Chitta. A Chitta which loses its wandering and restless nature is deemed to be calmed down and 'A-Chetan'—literally meaning a situation when one is not aware, or not 'conscious', of his surroundings, when one is not aware of what the body does. Therefore, such a Chitta that has reached the state of 'A-Chetan' practically exists in a plane of existence which is equivalent to the state of 'non-existence' in the physical gross world. Such an 'A-Chetan' Chitta transcends the limits of the gross body and the gross world along with their attendant delusions and entrapments. [Refer Canto 4, verse nos. 48, 86.]

Control of the Pran wind enables the creature to obtain the exalted stature of transcendental existence called the 'Param Pad'—literally, the supreme state of existence. This is because when the Pran is controlled along with making the Chitta defunct, the creature becomes peaceful and steady; he is able to concentrate his attention and energy on higher goals of life and pursue his spiritual aims. He is not disturbed by numerous temptations that arise out of the various Vasanas when the Chitta and Pran are active. [Refer Canto 4, verse no. 11.]

[The control of the Chitta and making it virtually non-existent, the expunging of the various Vasanas as well as practicing control of the Pran is described in detail in the forgoing verses of the present Canto no. 5, as well as in verse nos. 41-92 of Canto 4.] (43).

44. Go beyond the limited vision (notion, idea, conception, view) of what constitutes the 'truth and reality' by not limiting your judgement to merely relying upon the physical perception of sight to see (perceive) things that are gross and visible in this world in order to determine about their existence and truth. [That is, you must not decide that a particular thing has a real and truthful existence in this world just because you can physically see it. You would be deceived. For instance, don't you know that there is no water in the mirage seen on the hot sand of the desert during summer, or that the sun does not actually move from its position though it moves across the sky from east to the west, or there is no object actually present in the mirror when you see its reflection in it, or that the disc of the moon has not changed a bit though it appears to change every night as seen from earth, and so on and so forth? Therefore, merely judging the truthfulness or otherwise of any given entity by merely relying upon the perception of sight would be like willingly falling in a blind well. Such judgements of anything being true and real which are based on completely erroneous premises ought to be rejected outright; they cannot be trusted.]

Rise and go beyond the pleasure and comfort and joys and happiness that you derive from seeing physical things in this world that appear charming and appealing to the senses, and focus your mind instead on something that is far more sublime and eclectic than these gross aspects of creation. [Because once you experience the bliss and beatitude of this sublime entity that is perceived in the transcendental state of existence, an entity known as 'pure consciousness', all the rest would fade into oblivion, would lose their attraction, luster and glamour, and become irrelevant and inconsequential for you. Besides this, all the physical charms, comforts and pleasures of the world are transient, short-lived, perishable and deluding because the platform upon which they are based, i.e. the gross physical world, is equally transient, short-

lived, perishable and un-sustainable. How can anything that is gross and perishable itself give sublime comfort or pleasure that has an eternal dimension?]

Understand and realise that there are certain things which are so ethereal, sublime and subtle that they are beyond the reach of the gross organs of perception (such as the eye). Thus, when you rise above the mundane and the physical, and when you are able to experience the existence of the sublime and ethereal entity that transcends such limitations and barriers of the physical gross world, it is then that you would be able to experience the profound bliss, happiness, joys, felicity and beatitude that is obtained by realizing Brahm.

[Since you can't see Brahm and the Atma, or the 'pure consciousness' in physical terms as you see or perceive other gross things in this world, it does not mean that they are not there, and that they are not true. The gross organs and their objects have a limited scope, but the cosmic Truth and Absolute Reality known as Brahm and Atma, or the cosmic super Consciousness personified, is an entity that is extremely sublime, subtle, ethereal, all-pervading, all-encompassing, omnipresent, immanent, immutable, constant, uniform and universal. You cannot deny it merely because you can't see it in physical terms.] (44).

45. The pleasure, bliss, joy and happiness in which the 'consciousness' is not involved are definitely not the real thing. They are imaginary, deluding, artificial, superficial and transient. On the other hand, pleasure and happiness etc. that is derived by involvement of the consciousness are true and real in essence; they are sustainable and sublime. [In other words, the pleasure that one gets from the material sense objects of the world is temporary and inconsequential, whereas the one that is got by realizing the pure consciousness is for real and truthful.]

When the Chitta (mind and sub-conscious) is controlled, and its natural nature and tendency to be restless and wandering is overcome (by diligent practice, meditation and contemplation), it is then that the 'pure consciousness' is realised. [This is because only a stable mind is able to focus on a thing that requires deep and penetrating insight to be realised. All great discoveries and inventions are made by a calm and focused mind, not by a restless, agitated, fidgety and worried mind that is in a flux, is distracted and unable to focus. If this is the situation in the physical gross world that is within the reach of the senses, one can well imagine the gravity and importance of the need of a focused mind in the field of spiritualism and metaphysics that goes beyond the reach of the physical senses.] (45).

46. When the Chitta permanently loses its inherent and natural character of being restless, wandering and uncertain, of being desirous of so many things and never be satisfied or contented by anything—in other words, of being full of Vasanas (passions, desires, lust and longings for this world and its numerous material temptations; worldly attachments and attractions for material things of the sense organs), it is then that it is said to be stable and steady. Such a Chitta exists in a perpetual state of calmness when the creature witnesses the ecstatic feeling of spiritual bliss and happiness that comes with the experience of pure consciousness in the transcendental state of existence known as 'Turiya'.

[The 'Turiya' state is the fourth state of existence of consciousness that goes beyond the 'Sushupta' or the deep sleep state, and in this the creature experiences bliss and calmness that comes when the mind and sub-conscious are made irrelevant, when they stop bothering the creature by their constant nagging and prodding.] (46).

[Note—Refer also to Canto 1, verse no. 25; Canto 3, verse nos. 10, 13, 16, 18; Canto 5, verse no. 16.]

47. A wise man who keeps aside or gets rid of all sorts of ‘Sankalps’ (volition, ambition, determination, resolution etc. that pertain to the affairs of the world), who is free from their fetters and being enslaved by them, is said to be the one who has a calm, rested and peaceful mind. [Refer Canto 5, verse no. 23.]

A high degree of renunciation, detachment, dispassion, non-involvement and contentedness in which all the Sankalps vis-à-vis the world are exhausted is known as ‘Sanyas’.

If you wish to have true Gyan (enlightenment, truthful knowledge, wisdom, erudition and self-realisation) and allow the development of the eclectic virtues of the Atma so that it blossoms in its finest and most profound glory and magnificence, then it is imperative that you inculcate this grand virtue of Sanyas in your inner self and empower your Atma with this spiritual power. This achievement in turn would pave the way for your Moksha, or your spiritual liberation and deliverance from all the miseries and agonies that torment you in this world.

[In other words, if a spiritual aspirant wishes to obtain peace, happiness and bliss that comes with attainment of self-realisation and enlightenment, if he wishes to break free from the trap of temptations proffered by the gross world of material sense objects, if he wishes to free himself from all bondages that tie down his soul to the gross body as well as the equally gross world, if he wishes to rise above the mundane and the humdrum of life in this world, if he wishes to detach himself from the grossness and the crassness of this world and attain a spiritual stature which is exalted and sublime, then he is obliged to discard all worldly desires, yearnings, lust, greed, volitions and ambitions. Instead, he should develop a high level of renunciation and detachment for the world of sense objects and its material charms that are nevertheless deluding, artificial and transient. This obviously would result in calming down his frayed mind, and enable him to obtain a high degree of stability and tranquility.] (47).

48. Therefore, you must completely vanquish, decimate and ultimately eliminate all sorts of Sankalps and Vasanas that have covered your inner-self much like the shroud of dark clouds in the sky (that blocks the sun’s brilliant light). You must become completely neutral, harbouring no emotions and thoughts related to anything in this world.

This state of eclectic and sublime existence when one has no desires or ambitions for the world, no attachments and infatuations with the world, and no thoughts and emotions related to anything in this world is a state of existence that is regarded as a metaphor for Brahm-realisation. In other words, the Atma which lives in this state is a personification of the supreme transcendental Brahm; this Atma is a microcosmic form of the supreme cosmic Consciousness itself. This is because the Atma represents the ‘true self’ of the spiritual aspirant who has completely overcome his Sankalps and Vasanas (48).

49. An ascetic who regularly practices only one type of spiritual philosophy symbolized by practicing only one type of Samadhi, and is steady and diligent in it—only such a wise and enlightened ascetic is able to expunge all other philosophies from his mental horizon, only he can prevent his mind from being confused and confounded about what to do and what to avoid. He can focus his efforts and attention

on his chosen path more effectively, and walk this path more stridently and confidently, overcoming all hurdles that may occur.

[The term 'Samadhi' broadly means to remain focused on the pure consciousness and to live in a plane of existence that is known as transcendental. When in this state, the person is unaware of the world and the body, along with any of their activities. Here it implies that a man who does not waver or remain wobbly by being uncertain of the veracity, the truthfulness and the effectiveness of the philosophy he is practicing, who does not keep oscillating between this and that as he is unable to decide what to do and what not to, who is certain as to what is true and what is false, and what his goal in life is, and who is certain and convinced of himself and the philosophy he practices—it is only such a man who can ever expect to succeed in his endeavour in any field in this world, whether mundane, secular or spiritual.

In other words, a spiritual aspirant must be of a firm and stabilized mind in order to realise his spiritual goals. An undecided, fluctuating and vicissitudinous mind which is a victim of confusion and perplexities can never ever lead the aspirant steadily to his spiritual goal. And what is this goal? It is to realise the truth of the Atma, the truth that comes with self-realisation that requires a focused mind and great diligence, the truth that, in its finer and higher forms, is equivalent to Brahman-realisation, and which translates into his final spiritual Mukti or Moksha (i.e. his spiritual liberation, deliverance, emancipation and salvation). He obtains freedom from all fetters representing delusions and ignorance that tie his soul down and shackle it to this world and the body. A freed creature enjoys bliss, beatitude and felicity; he enjoys happiness, ecstasy and contentedness that come when one has finally reached his desired goal or destination which had eluded him for generations. This is the fruition of Samadhi. Refer Canto 4, verse nos. 62-63 also.]

Such a wise and enlightened man realises that the essence to which the Sankhya philosophy¹ of Hinduism refers to is only 'one' and 'non-dual', and not many and varied. [He realises that the spiritual Truth known as 'consciousness' is only one and not two or more though the Sankhya philosophy refers to Tattwas or essential elements as being twenty-five in number.]

An ascetic who has known this secret is indeed not an ordinary man, but a highly attained and enlightened soul. He is 'living being' who has understood the truth of 'life' in a truthful manner. [In other words, he is not to be identified with a gross body now, but with the 'living Atma' that resides inside this body. Realisation or awareness of this 'truth' of life is a true form of wisdom and enlightenment.] (49).

[Note—¹The *Sankhya philosophy*—References—(i) Krishna Yajur Veda's Varaha Upanishad, Canto 2, verse no. 55, and Canto 4, verse no. 35; Shwetashwatar Upanishad, Canto 5-6. (ii) Shukla Yajur Veda's Brihad Aranyak Upanishad, Canto 2, Brahmin 5, verse no. 14; Mantriko-panishad, verse no. 14. (iii) Atharva Veda—Sita Upanishad, verse no. 33.

This is one of the six great schools of Indian philosophy. It was first propounded by sage Kapil as 'Sankhya Sutras'. [Refer Bhagwata 3/25-33, and Canto 5-6 of Shwetashwatar Upanishad of the Krishna Yajur Veda tradition.]

Sage Kapil was the celebrated sage who is regarded as the fifth incarnation of Lord Vishnu (Bhagavata, 1/3; 3/24). He is compared to Lord Krishna in Bhagavata (10/26). He was the brother-in-law of sage Vashistha, being the brother of his wife Arundhati, and the only son of sage Kardama and his wife Devahuti. He taught even his mother spiritual wisdom in Bhagavata, and hence this part of this scripture is called 'Kapil Gita' in which the sage has expounded upon the philosophies of

Sankhya Shastra, Ashtanga Yoga (the eight-fold path of Yoga) and Bhakti-yoga (the path of devotion for and submission to the Lord) (3/25-33).

Sage Kapil is however renowned for one of the six schools of Indian philosophies known as Sankhya Shastra.

The word *Shastra* means any body of knowledge which has been deeply researched and then systematically codified and made useful in a meaningful way.

The word *Sankhya*, according to some scholars, refers to the 'number' or 'numeral' that it refers to, because it says that there are twenty five elements or 'Tattwas' in creation. However, there are some others who assert that it refers to 'Gyan' or acquisition of truthful knowledge of the reality behind the façade of illusions. It stresses on Gyan or truthful knowledge as the only path leading to liberation and deliverance of the soul from this world, and its attaining final emancipation and salvation riding on the boat of knowledge.

Therefore, the combined word *Sankhya Shastra* refers to the philosophy that endeavours to unravel the great secrets of creation based on sound knowledge and rational logic. It has six chapters and contains five hundred twenty six Sutras or keys or codes that unlock the profound treasure of knowledge pertaining to who the creature actually is, how has he come to be what he is at present, and how he can be freed from this vicious cycle of birth and death. Only when one understands the beginning can he understand the end, because this so-called 'beginning' has its origin in the previous 'end'. That is, only after something ends and carries forward certain baggage with it does a new beginning can start. After all, this is based on the fundamental tenet of Nature that 'nothing can start from nothing; there must be something from which anything starts'. That is why we say that there cannot be smoke without a fire.

Now, if one goes back to the 'very beginning of creation' when there wasn't any prior life from which any new life could be born on the principles of 'deeds and their consequences', i.e. the theory that when a creature does any deed in this life then he would have to take a new birth to suffer the consequences of these deeds because they cannot be wished away, the question arises 'what started this creation then?' The Sankhya Shastra endeavours to answer precisely this question in a very logical and systematic manner.

This secret was revealed, according to the of the Krishna Yajur Veda tradition's Shwetashwatar Upanishad, 5/2, to sage and seer Kapil who was the first person to whom the esoteric secrets of creation were unraveled by the Supreme Being (Brahm) himself. In fact, the whole of Cantos 5 and 6 of this Upanishad are dedicated to this philosophy of Sankhya Shastra.

It was propagated by Kapil's disciple Aasuri, and then by the latter's disciple Pankashika.

This philosophy accepts only three basic yardsticks or valid sources of knowledge—viz. 'Pratakshya' or direct perception or cognition of anything such as directly seeing a thing for one's self, 'Anumaan' or implied knowledge or deduction of anything entails inference of something based on some other first hand knowledge, and 'Shabda' or the word affirming this knowledge which is like a testimony of some witness or any dependable source.

So this philosophy adopts the approach of reaching the unknown from what is known. It has reduced all that can be experienced in this world to two fundamental units of creation—the Purush (the Supreme Being; Brahm; cosmic Self) and Prakriti (Nature; the invisible matrix of all forms of natures and temperaments that characterize this creation). The basic argument of this philosophy is that 'nothing can be produced from nothing'. In other words, if the creation has come into being, then there must be something that pre-dates this present creation. If this creation is the effect of some past deed, then obviously there must have some occasion when certain deed was done which resulted in the present. It states that 'Karya (the result) pre-existed (had a truthful existence) in the Kaaran (the cause of the result)'. Suppose we

have an earthen lamp. This lamp, made of clay or mud, was inherently present in the un-moulded lump of clay or mud before it was shaped. Had it not been so, the clay or mud could not have been moulded into the shape of the lamp.

When this argument is applied to the experience of the world, one observes that there are three basic qualities exhibited by all things—one that gives pleasure and happiness, the other which is just the opposite, and the third which does not effect us at all, i.e. we remain neutral to it. Sankhya philosophy states that there are three 'Gunas' or basic virtues and qualities in creation which determine these three responses as well as the characters of things which evince these responses. These three Gunas are Sata which produce positive responses of happiness and bliss, Raja which create negative response of pain and sufferings, and Tama which generates neither.

In more physical terms, Sata Guna means pure and holy, and it is conducive to knowledge marked by these characteristics. The Raja Guna produces desires and ambitions which create restlessness in their wake. Tama Guna is meanest of them all, for it creates a tendency for resistance and inactivity. A man having the Tama Guna in excess would not do anything himself and neither would he allow others to do their duties.

It should be noted here that there is a situation when all these three Gunas can theatrically exist in perfect balance—this situation is the ideal situation and is synonymous with Prakriti at the cosmic level. This Prakriti, therefore, becomes perfectly 'neutral' and self centered; it is the perfect example of grossness because it remains in a state of perpetual coma or paralysis because of this balance. It is when this perfect balance is disturbed that it starts stretching and yawning like a man waking up from a deep slumber.

An example would illustrate. An electrolyte works when there is a difference of potential between the two electrodes—i.e. the cathode and the anode. A neutral solution having the same electrodes dipped in it would not perform the function of electrolysis.

On the other hand, the Purush is the cosmic Consciousness or the Atma or cosmic Soul.

The *evolution of the creation* starts when a union is established between this Purush and Prakriti. There arises a question here. Purush is neutral and absolutely unattached to anything, while Prakriti is gross and lifeless. How is their cooperation possible? Well this is illustrated by the example of physically handicapped intelligent man who has lost the leg and cannot walk and a blind man who cannot see but can walk. The blind can carry the lame on his back, and under the latter's guidance, can reach the destination.

The process of evolution of creation from this primary Nature or Prakriti is as follows—As the result of the three Gunas mixing with themselves, the first offspring was 'Mahat' or Buddhi (the cosmic intellect).

From the Raja Guna part of this Buddhi emerged Ahankar (cosmic pride and vanity, ego and the notion of individualism and selfish arrogance).

From the Sata Guna part of this Buddhi emerged Mana (the cosmic mind), the five organs of perceptions (eye, ear, nose, tongue and skin), the five organs of actions (hand, leg, mouth, excretory and genital).

From the Tama Guna part of Buddhi emerged the five Tanmatras (the five perceptions of sight, hearing, smell, taste and feeling) and from these further developed the five Bhuts or elements (such as the sky, air, fire, water and earth).

Thus, there would be twenty three such elements + Prakriti + Purush = *twenty five components of creation* in all.

There is another way at looking at this philosophy. It describes the origin of the cosmos from Brahm who created the macrocosmic first Male called Purush and his female counterpart, the Prakriti (Mother Nature), who are the basic cause of this vast and myriad creation. The individual male and female human beings are the

microcosmic forms of that macrocosmic Purush and Prakriti. It is their union which resulted in this cosmos. Their offspring were—Buddhi (intelligence, wisdom, mind), Ahankar (pride, ego), the mind-heart complex called the 'Mana', the five perceptions (of smell, hearing, touch, taste and sight) forming the subtle body of the creature, the five elements (space, wind, fire, water, earth), the ten sense organs (five organs of perception—ear, nose, tongue, eye and skin, and five organs of action—hand, leg, mouth, anus and genitals), which together formed the gross body of the creature, the invisible Atma (pure consciousness) and Prakriti (nature of the individual creature). These are the twenty five basic constituents of creation.

So, according to Sankhya Shastra, there are *twenty-five fundamental Elements or Tattwas* as follows—Purush (the primal cosmic Male; the Viraat Purush), Prakriti (primal Nature), Mahtattva (the powerful Buddhi or intellect), the Mana (mind), Ahankar (ego, pride), the five organs of perception (i.e. the eye, nose, ear, tongue and skin), the five organs of action (i.e. the hand, leg, mouth, excretory and genitals), the five perceptions (such as the spoken word or speech, sight, smell, touch and taste), the five Bhuts (i.e. the five primary elements—the earth, water, fire, air and space or sky) = 25.

It further postulates that Brahm created Nature (cosmos) because it allowed itself to be covered or mired by the three Gunas—'Sata' meaning righteousness and virtuousness which are the best and noblest of qualities, 'Raja' meaning worldly passions and desires which are the medium or mediocre qualities leading to worldly desires, and 'Tama' meaning evils, sins and other mean mentalities leading to perversions and vices. The Purush, though he remains aloof, still gets shackled or attached to Prakriti, the creation, because of these three Gunas which act as ropes or strings that tie him down. This fact has been very stated in Shwetashwatar Upanishad, 5/10-12 and 6/10.

Breaking one's habits is tantamount to liberation and deliverance from this bondage, and it is called Mukti. The three Gunas are the causes of the myriad temperaments, natures, thought patterns and behaviours of all the creatures, because they have all these three qualities or virtues in them, though they vary in ratio or proportion. These three Gunas are also present in Mother Nature, giving rise to a populace which is so varied and diametrically opposite to each other, even virtually getting at each other's throat, because of the infinite possibilities created by their mixing in different proportions to mould the innate nature, inclinations and temperaments of a creature.

This school of philosophy says that there are five elementary 'Bhuts' in this creation—they are the earth, water, fire, wind and space which, in different permutations and combinations, form all the creatures who have a gross body. A creature, it says, has eleven organs— five organs of perception (ears, nose, eyes, tongue and skin), five organs of action (hands, legs, mouth, anus and genitals) and one organ called the Mana (mind and heart).

According to Mahopanishad, 1/4 – 69 of Sam Veda tradition, these twenty-five elements or Tattwas are the following—five organs of perception (ear, nose, tongue, eye, skin) + five organs of action (hand, leg, mouth, genitals, excretory) + one Mana (mind) + one Ahankar (ego, pride, arrogance) + one Pran (the vital life-giving breath; the essential vibrations of life; the rhythm and essential functions pertaining to life) + one Atma (soul) + one Buddhi (intelligence, wisdom, discrimination) + five Perceptions (sight, smell, hearing, taste, touch) + five Bhuts (earth, water, fire, air, space) = twenty-five elements.

Another related philosophy is the *Sankhya Yoga*—This philosophy is a combination of Sankhya philosophy and Yoga philosophy. In Shwetashwatar Upanishad 6/13 it is stated that the Supreme Being can be known by the means of 'Sankhya Yoga', i.e. by an intelligent fusion of 'Sankhya' and 'Yoga'.

The second chapter of Bhagvata Gita is also called Sankhya Yoga. Now, let us analyse this word. It has two parts—viz. 'Sankhya' meaning learning and knowledge,

and 'Yoga' meaning a union, a conjunction, a fusion. Elsewhere, e.g. 5/5, this word has been used to signify 'Gyan' and 'Karma' or a conjunction of knowledge and the philosophy of doing deed. The 'Praanaagni-hotra Upanishad', 1, uses this word to mean 'intense thinking, deep contemplation or deep insight'. It is also, therefore, synonymous with 'Gyan Yoga' or the great concentration and diligent divergence of all energies of the creature to acquire truthful knowledge of the Truth and Reality behind what is apparent but not the whole truth, and what is not apparent at all.

These two paths are not separate, independent and distinct from one another. They are like the two legs by which one walks. The word Yoga also means to bring about a union between two entities, to create a synergy between the mundane and the spiritual. Here it refers to the union between the Atma and the Brahm, or the coordination of various elements of the creature's body so that congenial atmosphere conducive to spiritual upliftment and enlightenment is created for the realisation of the true nature of the 'self', which would mean realisation of the presence of Brahm inside the very own self of the seeker. To bring this about, deep concentration of mind is needed along with the focusing of all the energies of the body in one single pursuit; this is meditation and contemplation.

The word *Sankhya Yoga* therefore means a combination of both the eclectic values of Sankhya philosophy and that of Yoga. Hence, that which brings about a fusion or union between the known and the unknown, that which establishes a coordination between the creature's individual world and the cosmic world of the pure consciousness, that which brings the Atma, the pure 'self' of the creature close to the supreme 'Self' of the cosmos, that which links and ultimately brings about a merger of the single unit with its parent body, and that which helps in the creature's final liberation from the vicious cycle of birth and death, is called Sankhya Yoga.

Now the question arise how is this brought about? The answer is in the following the manifold path of Yoga besides acquisition of knowledge as expounded and espoused in the Upanishads. Yoga has basically two connotations—viz. (1) meditation and contemplation which aim in harnessing all the energy and potentials at the disposal of the creature and diverting them and concentrating them on one single goal chosen by the practitioner of Yoga; and (b) following other methods of achieving this aim as laid down in the scriptures dealing with Yoga.

There are *four paths of Yoga*--(i) Gyan Yoga, (ii) Bhakti Yoga, (iii) Karma Yoga and (iv) Raj Yoga.

(i) Gyan Yoga involves the intellect and mind to determine and delineate the true and the false; it helps to access and understand the reality and falsehood behind the manifested visible world which appears to be 'real' but is actually like a 'shadow of the truth'. This Gyan Yoga helps to establish the mind firmly into seeing unity in diversity. Those following Gyan Yoga are called 'seers' because they can 'see' beyond the visible, multifarious and bewildering variety of this false world. Gyan Yoga is in the realm of the intellect and discriminating mind of a creature.

(ii) Bhakti Yoga refers to having devotion for a chosen Godhead who is a person's ideal, on whom he showers all his adoration, and on whom he focuses his attention. He is emotionally and sentimentally involved with his deity. Hence, the heart is the realm of Bhakti Yoga; it helps to commune with the divine.

(iii) Karma Yoga expounds on the importance of doing deeds and taking actions, but with a different attitude. It stresses that we must not get 'involved or attached' to those deeds or action in as much as we shouldn't be bothered about the rewards or punishments incumbent on such deeds or actions. We must do them dispassionately and with detachment. The action or deed should be treated as one's offering to the God as well as an offering to the sacred fire sacrifice. This will ensure that the actions or deeds are not unrighteousness, corrupt or evil. On the contrary, whatever is done in which a person's subtle sub-conscious says is not the correct thing to do will be deemed to be unrighteous, unethical and unlawful, and therefore cannot be an offering to either the God or the sacred fire sacrifice.

(iv) Raj Yoga is the psycho-spiritual practice of exercise and breath control; it involves the various steps involved in meditation and contemplation, as is generally understood by the term Yoga. This Yoga lays emphasis on physical training of the body and the mind, and is the subject matter of numerous Upanishads dealing with such exercises (e.g. Yog Chudamani of Sam Veda). It deals with such subjects as Pranayam, purification and activation of Naadis, kindling of Chakras (subtle energy centers in the body) etc.

These four types of Yogas are not mutually exclusive; they coalesce and overlap with each other and their main aim is to help the aspirant seeker in his pursuit of 'self-realisation'.

There is another platform of Yoga as propounded by the greatest exponent of this philosophy, i.e. sage Patanjali. According to him, *Yoga consists of eight-fold path*. These are briefly the following—(1) 'Yam' or self restraint; (2) 'Niyam' or observance of certain sacrosanct rules; (3) 'Aasan' or postures for meditation; (4) 'Pranyam' or breath control exercises for purification of the body and mind; (5) 'Pratyahar' or withdrawal of the mind and its control; (6) 'Dhaarna' or having a firm conviction, faith and belief on the sanctity and truthfulness of the chosen path; (7) 'Dhyan' or contemplation and concentration of the faculties of the mind and intellect; and (8) 'Samadhi' or a perpetual trance-like state in which the aspirant loses all awareness of the external world and even himself, and remains perpetually in meditation. These eight-fold path of Yoga have been listed in Varaaha Upanishad, canto 5, verse no. 11—11 ½ of the Krishana Yajur Veda tradition.

The Mandal Brahmin Upanishad of the Shukla Yajur Veda tradition describes these terms in detail in its Brahman (canto) 1, section 1, verse nos. 3-10.]

50. Those great ascetics who have successfully controlled their various vital winds by diligently following the principles of Yoga (meditation), and have consequentially attained the high stature of self-realisation when they have experienced the glory and radiance of the consciousness residing inside their own self as their Atma—such ascetics become free from all diseases (both physical as well as spiritual), and attain a divine state of being (existence) which has no beginning or end (because they would have activated their dormant cosmic energy and shifted the focus of their identity from being that of the gross and perishable body that has a limit scope, to that of the Atma which is subtle, sublime, eternal, infinite and imperishable).

Such realised and acclaimed ascetics are renowned as being those who are truly expert in the knowledge of the Sankhya Shastra, as those who have truthfully understood the meaning of this school of Indian philosophy (50).

51. The spiritually exalted and eclectic state of sublime existence marked by natural and inherent virtues of exemplary peace, tranquility, serenity, bliss, beatitude and felicity is the one that should be the aim of all spiritual aspirants.

The only way of controlling the restless, vagrant and wayward tendency of the Chitta (mind and sub-conscious) is to exercise diligent control or restraint over the Prans (vital winds) with a singular aim of containing the Chitta. [Refer also to Canto 4, verse nos. 42-45, 53-54, 87, 89, 92; Canto 5, verse nos. 40-43.]

[That is, if one wishes to exercise restraint over his mind and contain its inherent restiveness, he should learn to practice the various methods by which the movement of the vital winds can be controlled. This implies, inter alia, practicing Pranayam and other methods prescribed according to the principles of Yoga. Its metaphysical connotation is that the aspirant should control the urges of the body and its sense organs to seek gratification, to run behind their respective sense objects in the material world in the hope of finding happiness, joy, comfort, pleasure,

satisfaction and bliss in them, and to allow one become a surf to one's inherent Vasanas (passions etc.), Vrittis (inherent and natural tendencies etc.), Sankalps (determinations, ambitions, volitions etc.), Kamnas (hopes, desires etc.) and all such natural inclinations of a man that are part and parcel of life in this mundane gross existence.

These natural tendencies of the man would compel his mind to instruct the body to take necessary steps in order to satisfy them. This is metaphorically indicated in the Prans being restless and active as all the functions and activities of the body are governed and controlled by different vital winds which are collectively called Pran. If the Pran is controlled, the activities of the body would be automatically controlled. If the body is controlled, the mind would not be disturbed by the constant flow of information from the gross external world which the organs of perception in the body collect and continuously pass on to the mind. In this context, refer to Canto 3, verse no. 10 and its accompanying note, and Canto 5, verse no. 41.

Obviously, when one frees one's self from these fetters that shackle the Spirit to the gross world can he ever expect to find peace and rest of the mind. And unless the mind is rested and quiet the sub-conscious cannot find rest simply because the latter acts as a store-house of information collected by the active mind for future referral and advice, and till the time the mind does not stop collecting inputs from the external world the sub-conscious cannot find rest. It's like the relationship between the boss and his secretary—the mind being the boss and the sub-conscious being the secretary.] (51).

52. When one high goal which is the chief aim of one's efforts is accomplished, all the rest of the milestones and subsidiary goals that come in the way of reaching this destination are deemed to have been successfully crossed or attained or accomplished.

[When one has accomplished success, say for instance, in reaching the state of Samadhi, or in obtaining the state of Turiya which is the fourth and transcendental state of existence of consciousness, then obviously other stages that come before these must have been passed successfully before one reaches this destination. Another more worldly example is this—if one has passed his post-graduate examination and successfully obtained his M.A. degree, it is natural to deduce that he must have already passed his under-graduate examination and must have acquired the B.A. degree. There is no doubt in it.

So, if one has become successful in controlling the Chitta, it follows that he must have successfully controlled the Prans as well as other factors such as the various Vasanas, Vrittis, Sankalps etc. which act as metaphoric milestones on the way up. If they are not crossed or literally vanquished, it is not possible to reach the eclectic goal of controlling the Chitta.

Similarly, the control of the Pran necessitates the control and regularization of the Chitta, because a wayward and restless mind would never allow the creature to ever rest in peace, and a restless creature is one whose sense organs are fidgety and ever desirous for self-gratification depending upon the intensity and measure of the Vasanas, Vrittis and Sankalps that he harbours. [Refer Canto 5, verse no. 40-49 in this context.]

Thus, achievement of the eclectic spiritual goal of self-realisation, Brahm-realisation, and of finding spiritual peace, eternity, beatitude and blissfulness is possible only by a coordinated effort to successfully overcoming all the intervening hurdles, and obtaining success in mastering the art of having complete control over all other factors that act as symbolic milestones en-route to the averred spiritual goal.]

When one has reached the highest state of spiritual realisation when he is neutral to the gross external world and the gross body, his Pran (life-factors present in the body and represented by the vital winds) and Chetna (consciousness) both become unified and one¹. [When a spiritual aspirant has reached the higher state of self-realisation, there is no difference between his vital winds and his consciousness. Both flow together in the various Naadis or nerves and veins in the body. That is why it is said in the Yoga Upanishads, while describing the process of Kundalini activation and diverting the Pran in to the Sushumna Naadi, that when the Pran reaches the top of the head the ascetic experiences the thrill and ecstasy that comes with witnessing the presence of supreme ‘consciousness’ inside him, and that when his Pran makes its exit out of the body by escaping through the Brahm Randhra, the hair-like slit in the cranium, the ascetic ‘himself’ is deemed to have left the gross body—this is because his ‘consciousness’ that is known as the Atma and the truthful ‘self’ of the ascetic has left the gross body in the guise of his subtle spark of life known as the Pran!] (52).

[Note—¹Other Upanishads that describe the relationship between the ‘Pran’ and the ‘consciousness’ are, inter alia, the following—(i) Atharva Veda = Prashna Upanishad, Canto 3, verse nos. 1-12. (ii) Krishna Yajur Veda = Katho-panishad, Canto 2, Valli 2, verse no. 10; Brahm Vidya Upanishad, verse no. 17. (iii) Shukla Yajur Veda = Brihad Aranyak Upanishad, Canto 4, Brahman 3, verse nos. 35-38; Canto 4, Brahman 4, verse nos. 1-2.]

53. Both these two entities—i.e. the Pran (vital winds that infuse life into the body of a creature) and the consciousness (known as the Atma and the truthful ‘self’)—are interdependent. One is the basis of the other. If one decays or comes to ruin, the other would follow suit.

[This is clear by simple logic. The vital winds keep the body alive, active, healthy and vibrant. They help in imbibing food and drink; they help in digestion, extraction of various nutrients from the food and drink imbibed, and their proper distribution to all the corners of the body uniformly so that each pore of the body is nourished. They help in the elimination of waste; they help in regulating circulation and other functions of the internal organs of the body, they help the body to remain robust and strong, they maintain pressure inside the body and give it its shape and contour. In short, the health, strength, energy, vitality, vigour and the overall functioning of the body have a direct relation to the vital winds.

If, say, the Apaana wind becomes feeble or refuses to carry out its designated functions properly, the food would not be digested, the nutrients would not be extracted, and the waste would accumulate inside the body. In other words, if the Prans become weak the ‘ascetic’ too becomes weak because the body becomes weak, and since the truthful identity or the ‘self’ of the ascetic is the ‘pure consciousness’ known as the Atma, it follows that the ‘consciousness’ too is subjected to miseries when the Pran becomes weak. This is because the Atma lives inside the body, and when the latter is subjected to miseries it is natural that the resident Atma would also suffer.

The role of the ‘consciousness’ is equally important for the ‘life’—literally called the ‘Pran’—of a creature. The term ‘consciousness’ is a synonym for life—when one organ is paralyzed, we say that it has lost its ‘consciousness’, that it is not conscious, and that it is therefore ‘dead’ though the vital winds may be functioning properly. Further, Yoga Upanishads describe how the ascetic is able to divert his vital winds into the Sushumna Naadi (the main duct running through the spinal cord) and enables them to reach the top of the head from where they exit out of the body through the Brahm-Randhra, thereby providing ‘Mukti’ of liberation and deliverance

to the 'ascetic' from the shackles of the gross body. The 'ascetic' here is obviously the 'Atma' because the latter is the true 'self' of any living being, and not the vital winds collectively known as the Pran.

The Atma and Pran share certain virtues that are common to them both—as for instance they are both all-pervading, all-encompassing, infinite, omnipresent, immanent, immutable, form-less, invisible, uniform, universal, and ethereal cosmic entities. As far as sustenance of life in this creation is concerned, they are both equally important and necessary. In this aspect they share a symbiotic relationship with each other. Rather, they are, for all practical purposes, synonymous with each other—for when we talk about life we imply both the Pran as well as the Atma. Life cannot be imagined in its full and truly vibrant form if we exclude any one of these two eclectic entities from its meaning.

But if one were to decide which of the two is superior, then the unequivocal answer would be—it is 'the Atma'.

It is just like giving two names to the same entity depending upon the situation and usage. So, if the 'consciousness' becomes weak, or when the ascetic has not realised his true 'self' and able to practices self-control over his senses, the Prans too become weak by remaining out of control and wasting their energy in senseless indulgences and worthless pursuit of the world by instigating the body to be involved in the myriad activities of the material world. Likewise, when the Pran becomes weak, the soul is subjected to immense sufferings because the body in which the soul lives suffers when the Prans are not able to sustain and support it properly.]

Thus, a wise and self-realised enlightened ascetic understands that his Mukti (spiritual liberation, deliverance, salvation and emancipation) depends upon establishing a synergy and coordination between the two—the Pran (vital winds) and the Chetna (consciousness) that are present inside his body. This is main objective of Yoga—to establish a harmony between these two quintessential units of the body of a living being (53).

54. You (Nidagh) must stop paying any attention at all that your mind and sub-conscious might be inclined to pay to the things in this world. You must abandon all sense of Ahankar (pride, ego) with relation to anything or anyone in this world. [In other words, first you must stop paying attention to this world and thinking that a particular thing or person is important, and therefore worthy of acquisition or being acquainted with. Then, as a second step, stop being proud of your possessions or acquaintances. Do not have any sense of ego or false pride in yourself or your acquisitions or contacts.]

When you are successful in developing this eclectic state of enlightened existence, you would be deemed to have attained the highest state of existence. [This is because you would be calm, serene, peaceful, blissful and rested; you would be deeply happy and fully contented; you would have no desires left to be fulfilled; you would have no wants and no attachments; you would not have any enmity with anyone on the one hand, and no affections for anyone on the other hand—which in turn would enable you to maintain neutrality, detachment and dispassion in this world.] (54).

55. The supreme Consciousness is the only supreme Authority in this creation; there is nothing beyond or superior to it. [That is, the supreme Brahm is the only Authority in creation; nothing transcends it.]

It is faultless and taintless; it is universal and uniform; it is immaculate, pure and clean; it has no ego, pride and haughtiness in it. [In other words, when you realise that your 'self' is an entity known as the 'consciousness', you would also realise that you have these above mentioned auspicious virtues in you. And, that you are not an ordinary creature who is part of this mortal world, but an exalted Being that is the supreme Authority in creation. In other words, you would realise that you are Brahm personified! But the magic is that this realisation would not make you egoistic, proud or haughty that you are the supreme Brahm personified. Instead, you would become humble, calm, tranquil, equanimous and holy with this realisation.] (55).

56. This grand and majestic supreme Consciousness is eternal and everlasting; it shines perpetually and steadily in this creation; it neither fades, nor rises and sets.

[It is like the celestial Sun. The latter is perpetually shining, and modern science has proved that the Sun neither rises nor sets, but it is the rotation of the earth around its own axis that creates this delusion. So, the 'consciousness' never takes a birth or dies; it remains steady. It is only out of ignorance of the reality that one thinks that he takes a birth and that he dies.]

This supreme Consciousness is known by various names—such as Brahm, the Parmatma, etc. In fact, this cosmic super Consciousness is the Supreme Being himself personified (56).

57. Oh Nidagh! Be fulfilled by being firmly convinced that the 'great and transcendental Authority known as the supreme Brahm is no one else but me (i.e. my 'truthful self' which is the pure consciousness called the Atma)'.

Do not worry for the future or brood for the past. [That is, live in the present. Since the cosmic Consciousness that Brahm is, is eternal and constant, and since your truthful 'self' is this same Consciousness called the Atma, it follows that what you are at present will be the same in the future, and was so in the past. You are stable and steady; you do not change in your essential form, though of course you have to adapt yourself to changing environment, situations or circumstances.] (57).

58. [Verse nos. 58-61 are fine examples of the principles of 'Positive Thinking'. If a man follows their advice, if he implements the prescribed maxims in his personal life, he would be energized by positive vibes which are bound to have a cumulative constructive influence on his psychology and his overall personality. He would be a changed man; he would observe that all negativity in his life would be dispelled by these thoughts, and their place would be taken by cheerfulness, happiness, contentedness, vibrancy and positivity. These eclectic ideals are further enumerated in verse nos. 68, and 91-92 of this Canto 5.]

Exist in the present; think of what you observe in the present. [Do not bother yourself of the unseen future or the unchangeable past over which you have no control. You have control over your present by the virtue of deciding how you respond to the given set of circumstances or choices that are before you. But this choice does not apply to the past or the unseen future.]

Since you have selected the best of what is available at the present point of time, be contented and happy. [In the present time you have decided to approach me, your teacher Ribhu, to learn how to get spiritual peace and deliverance, and you are being shown the best path available. So be greatly happy and feel most privileged at

the great good fortune that is made available to you; make a correct choice and rejoice. What is the point in lamenting your past, and how can your future be ruined when you make the correct choice now? So stop brooding, feeling depressed, and worrying unnecessarily. Don't bother about the past because you can't change it or do anything about it. Take care of the present because it has a direct bearing upon your future, and thus you can modify or control what your future would be. Be rested and assured about your future because it is now that it is being moulded, and it is you who can tweak it the way you like. Correct and positive actions taken by you now in the present would ensure a better and positive future for you inspite of the fact that your past was unpleasant and demeaning for you. Be rest assured of the truth and the effectivness of this doctrine; there is no doubt about it.] (58).

59. Be full of the eclectic and glorious virtues of equanimity, steadiness, uniformity and evenness of mind.

Think—'I do not criticize or demean or insult or cause any kind of slight to myself as well as to anybody else. I do not also praise or honour or laud anyone, including myself (i.e. I do not boast of my achievements or qualities; I do not feel proud and have any ego in me).

I do not feel exultant or cheerful or lucky or happy and excited when some auspicious or good situation or opportunity appears before me, nor do I sulk or regret or feel bad, dejected, depressed, sad, unfortunate and un-privileged under the opposite set of conditions which ordinarily would give immense sorrows and miseries to a less-enlightened and less-wiser man.'

That is, I have developed stellar spiritual qualities of remining detached, dispassionate, non-involved and renounced (59).

60. Oh sage! Think that your mind and heart have calmed down and have overcome their natural fickleness, frivolity and unsteady nature. Be free from all regrets, grief and sorrows.

Calm down your tendency of being always on the edge, fidgety and restless, meeting deadlines and being in a tearing hurry, racing against time and always feeling that you have not done enough, or that so much is to be done in so short a time, leaving you agitated, panting, huffy and short of breath. That is, do things at an easy pace; do not get unduly disturbed by the things to be done; do not get emotionally attached to what you do or the results of these deeds. Do not allow yourself to be too much involved in the deeds that you must do while living in this world, though you must do them diligently and honestly nonetheless because of the fact that you live in a world that survives on the philosophy of doing deeds and not remaining idle. You being an honest, noble and conscientious man are expected to be sincere, truthful, honest and diligent in whatever you engage yourself in.

This would help to calm down your mind, make it steady, and give it rest and peace. Think—I have a calm, steady, rested and peaceful mind. Therefore, I do not have any disease! [This is a very pertinent, significant and important observation. All the major ailments that afflict the creature have their genesis in the mind. An agitated, fidgety, upset and restless mind sets off a chain reaction in the body and secretes such chemicals that are injurious to the body's natural healthy condition. This is one of the reasons why a modern man suffers from so many diseases—his mind is never at rest and is in a constant state of flux, is jumpy and fidgety, is full of desires and rapacity, had deadlines to meet, ands is bombarded by information from all over the world. Its restless and fidgety nature is further poked by modern technology, such as the tablets

and the mobile phones connected to the internet, that a man uses even while he is in bed, and is supposed to give his weary body some rest.

Such a mind is therefore eternally un-contented and eternally restless. This is also the reason why spiritual pursuits, study of the scriptures, meditation and contemplation and other such noble pursuits are beneficial for health and the overall welfare of the aspirant—they calm down the mind and rein it in, they make it focused on the work at hand, and inculcates in it the grand virtues of peacefulness, tranquility, serenity and contentedness.] (60).

61. Oh Brahmin (Nidagh)! Think—‘I do not know the difference between someone being my friend and the other being a stranger. [In other words, all the living beings are the same for me; I treat all alike.]

I do not treat anything as being mine and the other as belonging to someone else. [For instance, I do not treat a person as being ‘my daughter or son’, and the other person as being not mine but someone else’s daughter or son. I do not consider the material things around me as belonging to me exclusively; I do not cling to them and become possessive. I know that all such notions and relations are limited to the gross body and not to the Atma which is free from such fetters of having physical ties or relationships. All are equal in my view, and therefore I do not regard something as being mine and get attached to it at the mental level, or treat it as belonging to someone else and getting jealous about it, because that ‘someone else’ is also another form of the pure consciousness known as the Atma that is also ‘me’. In other words, it is actually ‘me’ in that form which the ordinary world treats as ‘him’ or as the ‘other person’.]

In short, I have no sense of duality, or a notion of distinction between ‘this’ and ‘that’ in this world. I treat everything equally, and with the highest degree of equanimity, fortitude, uniformity of view and level-headedness that comes with having an eclectic wisdom and spiritual enlightenment that enables me to see the ‘truth’ and ‘reality’ behind external appearances. This ‘truth’ and ‘reality’ is always the same and uniformly ‘one’, and therefore I do not allow myself to be misled by differing external façades.’ (61).

62. If one vanquishes and eliminates the numerous Vasanas that are inherent in him (i.e. if he is able to overcome all the worldly passions, desires, lust and longings; all the attachments with and attractions for the numerous material things of the world and its sense objects), it is only then that he is sure of being free from the fear of old age and death.

[If a man has Vasanas in him then he would want to enjoy to the hilt the numerous comforts and pleasures that his sense organs derive by interacting with the respective objects of the material world. Lured by the charms of the world, he would yearn for it and would want more of everything that is available, never being contented with whatever he has. His desires, passions, lust and yearnings would have no end. But unfortunately, as old age approaches, his body would be worn out and not able to meet his demands. This causes extreme frustration and its accompanying dismay with a sense of increasing misery and an enhanced degree of greed and rapacity. The result is obvious to imagine—he would lose whatever semblance of comfort and pleasure that he thought he was enjoying earlier in life.

As old age takes over, the body and the vital winds become feeble and less active; they lose their stamina, vigour, abilities and energy. But if a man is not able to control his Vasanas, the weakened Prans and aging body are unable to cope with its

demands, leading to dissatisfaction, misery and dismay to the man. So, he begins to fear old age and an infirm body.

He fears death because he fears losing the much flaunted wealth and fame that he has so assiduously built or accumulated over years, and which he protected so selfishly all along. Death would snatch from him the physical world which was so charming and pleasing for him, the world that gave him so much material comfort and pleasure of the senses. Death would rob him of the opportunity of continuing to roll in and enjoy the material comforts of the world that gratify his sense organs. Death would deprive him of contact with the world of sense objects that he is so attached with, fond of, and longs for. Death would kill his body which he, out of his ignorance, delusions and stupidity, has all along been regarding as his 'true self' and identity, and no one wants himself to be harmed, no one wants to suffer. Death would take away from him a body that he had so painstakingly nourished and taken care of, the body for which he had done so many unscrupulous deeds and committed so many sins during his lifetime. In other words, all his efforts made during his long stint in this world are brought to a naught and knocked out in a jiffy by a single blow of 'death'. Hence, it is natural that he loathes the thought of dying; he begins to harbour a morbid fear of death.

On the other hand, a man who has no worldly Vasanas would not be mentally or emotionally attached to anything in the world, and so when his body becomes old and infirm he would not fret and fume at his inability to satisfy the urges of his organs. He would not be afraid of death because he is not attached to this world, and therefore has no worry that he would be forced to separate from something which is too dear to him to part from when he dies. Rather, he would be happy that at last and finally an opportunity has come to him to break free from the fetter of the gross body which had imprisoned his Atma for so long.

Besides this, he would have developed a high degree of equanimity and wisdom by this time to realise that this world as well as the gross body are perishable and transient entities which are destined to die, that 'death' occurs to the physical body and not the Atma which is his truthful 'self', and that all material things in this world are related to the body and not to the Atma in any manner whatsoever. Hence, there is no locus standi in his fearing for something that is on the one hand unavoidable, and on the other hand does not affect his 'true self'.]

That knowledge which comes when the mind is free from Vasanas—i.e. when the mind is unbiased and not pre-conditioned and prejudiced, when it can think rationally and intelligently without being prejudiced in favour of something or against something else—is said to be true knowledge. [It is this sort of truthful knowledge that would enable the man to reach high level of enlightenment and realisation. He would not be bogged down by mundane and deluding considerations; his decisions would not be tarnished by gross considerations pertaining to the material world that is however mortal and perishable.] (62).

63. When the Vasanas are eliminated from the Chitta (mind and sub-conscious), all sense of duality ends. This is because the natural urge to feel that 'what I have is inferior to what the other person has, and therefore I too must have it' is eliminated when the Vasanas are conquered. With this holistic view of existence, the sense of duality too ends. [Since the wise and enlightened man has no desires for anything left in him, his natural urge to think that there is a difference between what he has and what the other person has, and therefore he too must have it, also ends. Vasanas arise when a person thinks that he does not possess something which he finds so attractive

and pleasant in the world. This notion of deprivation ignites the desire to get that thing anyhow, by hook or by crook. The man's whole being becomes possessed by the thoughts of the thing longed for. But when he has developed detachment and dispassion, when he has inculcated in his inner-self a profound degree of equanimity and dispassion, he would no longer be attracted towards any of the material charms of this world; he would no longer be obsessed by their thoughts. So, he Chitta (mind and sub-conscious) would not harbour any thoughts of that thing. A Chitta that sees everything alike and is not prejudiced for or against any particular thing would obviously be calm and peaceful.

Thus, the end of the Vasanas and the eclectic thought that arise in the Chitta that there is no duality in this world go hand in hand.]

When the Chitta is freed from being torn between two things or two options, it becomes exemplarily calm, rested, serene, blissful and happy. It becomes free from all dilemmas, perplexities, bewilderments, confusions, doubts and indecisions related to the truth and reality (63).

64. In this state of eclectic and realised existence, what remains, after all the delusions, dichotomies and confusions are eliminated, is the 'essence' of everything in this creation. This 'essence' is the eclectic entity which is described as being Advaitya, or non-dual and one of its only kind.

This exalted and sublime entity, the 'essence', is without an end and a birth (as it is eternal, infinite and imperishable), is un-manifest and invisible (though it pervades throughout the creation uniformly, and this creation is in effect its revelation), is imperishable and does not undergo decay or decimation (because it is eternal, infinite, steady, constant, uniform and universal), is unruffled, calm, serene, tranquil and peaceful, is immune to and free from being demoted, denigrated, falling from grace, declining, or losing its exalted stature in creation, is unique, un-paralleled and one of its only kind in this creation so much so that it has no beginning and end (because it is endowed with the magnificent and mystical qualities of being infinite, eternal, constant, immutable, immanent, uniform, universal and steady in all phases of time and era).

When a spiritual aspirant develops this highly evolved vision of life and creation, he is able to attain the exalted state of transcendental existence when he sees uniformity and non-duality in this creation, when he sees only one spiritual 'truth' known as Consciousness or Brahm all around him, and thus he is deemed to have attained the highest spiritual stature obtainable in this world. This attainment or spiritual achievement makes him Brahm as well as 'self' realised (64).

65. This eclectic and sublime entity (referred to in verse nos. 63-64 above) is 'one' and only one of its kind. It is without a beginning or an end. It is pure and undiluted supreme Consciousness personified. It is without any sort of faults, impurities, taints, shortcomings and corruptions. It is vast, universal, all-encompassing, all-pervading and all-inclusive. It is so mysterious that nothing is subtler than it.

It is this divine and holy entity that is known as Brahm. And, indeed, it is 'me'. I am indeed Brahm personified! There is no trace of doubt or confusion in this fact. [That is, my truthful form called the 'self' or the Atma is the same supreme transcendental Brahm or the cosmic Consciousness that possesses the grand, magnificent and majestic virtues enumerated herein above, and that resides in my physical body, giving 'me' an identity and personality. 'I' am this 'Brahm' in its most sublime and subtle form. Of course, this statement should come from the heart to have

any meaning; otherwise it is a boastful claim lacking conviction; it would be hollow, and without pith and substance. Refer also to verse nos. 20-21 of the present Canto 5.] (65).

66. This eclectic and divine entity (i.e. the supreme transcendental Brahm which is pure cosmic super Consciousness) is beyond the purview of different dimensions of time and space. It is absolutely immaculate and exemplarily clean, pristine and uncorrupt. It is exceptionally beautiful, bewitching and charming.

It is always risen—i.e. it is always evident, is unchanging, constant and steady, is immanent and eminent, is an entity whose presence does not need proofs, verification or authentication.

It is vast and all-encompassing. It is wholesome and absolutely complete in every conceivable way.

Though it reveals itself in myriads of forms that encompasses all aspects of creation, but itself it is one and non-dual, having only one meaning and one interpretation. [That is, though the world—which is regarded as a manifestation of a single Brahm—is known by different names, is seen or perceived or interpreted differently by different people under different circumstances and premises, the ‘essence’ from which this world is made, i.e. Brahm, is only ‘one’ and has only one meaning. This meaning is one because it is the ‘truth and reality’, and it refers to the pure and cosmic Consciousness that is a universal, immutable, uniform and unchanging entity. There may be doubts and debates as to whether a given thing in this world is true or false; there may be different names of a single thing in different places, different eras and different languages, but the ‘truth’ known as the supreme transcendental Brahm, or as cosmic Consciousness, is one and universal by its inherent nature.]

You (Nidagh) must understand this and become as steady as Brahm by being Brahm-realised or self-realised. Remember, there is no difference between being Brahm and self ‘realised’, as the ‘self’ is none other but Brahm personified (66).

67. This sublime essence and eclectic entity of creation (known as Brahm and cosmic Consciousness) is the only thing that is of any worth in the entire existence; it is all there is to it, and there is nothing beyond it.

It is peaceful and serene. It is without a beginning, a middle or an end.

It is extremely neutral and fulfilled because it neither lacks anything nor does it want anything.

It does not take a birth (because it is universal, uniform, constant, unchanging, immutable, infinite, eternal, has never died or perished, and is without an end or beginning).

Be contented and rested with this eclectic and holistic view of creation and your own self (because your ‘self’ is the same divine, sublime and holy entity known as the cosmic Consciousness called Brahm) (67).

68. Think in these eclectic terms—‘I am not bonded or under any obligations; I am unfettered and eternally free. [This is because my truthful form is the Atma which is an ethereal entity that cannot be butted and bounded by artificial means; I am ‘consciousness personified’ that has no fetters attached to it.]

At the same time, I am not even free and liberated. [Since I was never under any sort of bondage in the first place, there is no separate existence for me now which can be regarded as being free and liberated. This notion of someone being free and

liberated, or being delivered from some bondage or misery or troubles applies to him who had been suffering from this torment earlier, but it does not apply to me in any measure whatsoever. I am eternally free and liberated.]

I am without any spiritual or moral ailments (taints, corruptions, flaws, shortcomings, inconsistencies, perversions, fetters and other such negativities). [I am holy, immaculate, wise, enlightened and self-realised. I have full control over myself and lead a well-regulated, righteous and auspicious life. So I do not suffer from any sort of moral and spiritual flaws or faults that can gnaw into my conscious and compromise my welfare much like a bodily disease eating into the health of the body, and sub-sequentially giving immense pain and discomfort to the creature.]

In fact, I am the supreme essence of everything in this living creation, the essence that is known as Brahm, the pure Consciousness.

I am absolutely free from all thoughts of duality. I am, on the other hand, fully convinced of the doctrine of non-duality, universality and uniformity in creation. [This doctrine is the basis of Vedanta or the Upanishads. Briefly, it stresses that there is only one truth and reality in creation that is known as 'consciousness'. At the cosmic level it is called Brahm, and at the individual level it is known as the Atma. It is the same consciousness that has assumed the form of this multifarious world of astounding diversity, but when one wishes to see the 'truth and reality' he would find that it is only 'one' and not two or more.]¹

This non-dual, sublime, eclectic, holy, divine, supreme and transcendental entity known as Brahm is indeed characterized by the grand and glorious virtues known as 'Sat' (truth and reality), 'Chit' (consciousness), 'Anand' (bliss, beatitude, felicity and happiness). Hence, this divine Brahm is known as 'Sat-Chit-Anand'².

You (Nidagh) must cultivate the habit of always thinking in these terms. This would make you attain the exalted state of 'Jivan Mukti'³—i.e. you would be freed from all fetters even while you are alive in this mortal and deluding world, and have a gross body (68).

[Note—¹In the context of this verse, refer verse nos. 58-61 of Canto 5.

²Refer verse no. 29 of Canto 4, and verse no. 74 of Canto 5.

³Refer Cantos 3 and 4 which describe the concept of Jivan Mukti elaborately.]

69. It is the gross body and its sense organs of perception that enables a creature to be aware of the external gross world of material things because the latter is perceived by the mind only through the medium of the sense organs. The organs of perception have corresponding sense objects in the external world towards which they are naturally inclined to be attracted and relate to. If the link is snapped, if one is successful in sufficiently training his sense organs to be self-restrained, then it is very easy for him to get rid of the external world, and along with this riddance comes the end of all accompanying delusions, distortions, hallucinations, nuisance and mischief that not only entangle the creature in a vicious grip but also rob him of his peace, tranquility, bliss, contentedness, steadiness and happiness. This is natural because a bonded creature is like a serf, and a serf or a slave can never be happy in the true sense.

Therefore, you (Nidagh) should get rid of this world and its entrapping temptations by exerting control over your own body and its sense organs. Once you achieve success in this, your inner-self would become calm, rested, peaceful, tranquil, contented, blissful and happy. You would, as a consequence, enjoy the nectar and beatitude and felicity that come with self-realisation, i.e. with experiencing the enlightenment that comes when one comes to be aware of the true essence of this existence known as the Atma, the pure consciousness.

[You cannot effect any change on this vast world which is beyond your means, reach and control, but of course you can surely and definitely control yourself. There is no excuse on this account. And once you do so, you would be able to enjoy the bliss and happiness that comes with riddance of all torments and miseries from which a person suffers because of his involvement with this world which is nevertheless a treasury of misfortunes, pains and miseries, and of which delusions and distortions are characteristic features. A creature would be deemed to be utterly stupid if he, in spite of all the sufferings that he is subjected to, does not even attempt to find a way out of the quagmire in which he has landed himself. So, you would be well advised to take care of your own spiritual welfare by controlling your own involvement with this world, and the easiest way is to exert control over your body and its sense organs.] (69).

70. ‘This thing is beautiful, attractive, charming and worth acquiring’, and ‘that thing is not so’—such thoughts that create a notion of distinctiveness, a sense of difference between two given things that one is better than the other, the idea which is the basis of conjuring the sense of duality, are the basic cause of your mind getting trapped in the web of prejudices that lead to delusions. This in turn distracts and diverts your mind from its chief goal and keeps it swiveling between the truth and the falsehood, which in turn create uncountable sorrows, troubles, grief and miseries for you. They keep you perpetually on the tenterhooks, making you miserable, unsatisfied, restless, fidgety, indecisive and agitated. Your life would be spent pursuing one and avoiding the other, without any chance of finding rest and peace ever. You would be swiveling between choices, and you would be tossed and turned violently in this deluding world without ever finding your goal.

A wise and intelligent man is one who strives to find peace, stability and rest by burning such fallacious notions and banishing such distracting thoughts from his inner-self by the fire of the eclectic virtues of equanimity and having an evenness of world-view. He who understands and practices the noble and grand tenets of non-duality or Advaitya, and trains his mind to remain firmly rooted in its eclectic philosophy without wavering and demurring in the least is indeed successful in achieving this grand spiritual goal in life.

Such a man would be of a steady, steadfast, calm and well composed mind and intellect. And it is such a mind and intellect that can be his aid in achieving an astounding and exemplary level of peace and tranquility in life. He no longer has to suffer from any of the dilemmas, delusions, perplexities and confusions that a distracted and bewildered mind forces him to face. He does not have to face the various torments and miseries that come in their wake.

[When you think that a particular thing is good your mind would be unconsciously and involuntarily attracted to it, get attached to it, and would long for it. Then you would be sub-consciously obsessed with that thing; that thing would literally ‘possess you’ at the mental and emotional level, making you a virtual slave of it. How can a person who is bonded and shackled as a serf can ever hope to lead a carefree and liberated life? On the other hand, if you think that a particular thing is not good for you, you again would be obsessed with the desire to get rid of it or avoid it. It is not always possible to do so in the prevailing circumstances in which you live in this world. So this thing would constantly pinch you, causing you endless miseries and grief. Obviously, you would be torn between these two opposing situations—one which would pull you towards itself, and the other that would cause revulsion in you. Your life and its time and energy would be consumed in oscillating between the two.

So the best way out is to be resilient, steady, unwavering, equanimous and fortitudinous.] (70).

71. Enhancement of truthful and correct knowledge that enables a man to distinguish between what is right and what is wrong, what is erroneous and what is truthful, is possible by the study of the scriptures and company or guidance of those who are wise, learned, experienced and erudite. [Refer Canto 5, verse nos. 81-82 in this context.] (71).

72. The truthful knowledge that pertains to the supreme transcendental Brahm is like a virtual spiritual remedy for all the ailments that torment a creature in this world.

[This is because this knowledge would enlighten him of the basic tenet of the Upanishads and other holy scriptures that whatever that exists in this creation is a manifestation of Brahm. The creature's own true 'self' is also this Brahm personified in the form of his Atma which is pure consciousness. This Brahm is characterized by the grand virtues of being, inter alia, all-pervading, all-encompassing, immaculate, eternal, imperishable, constant, wise, untainted and free from any corruptions and diseases. Refer also to Canto 5, verse nos. 64-68.

All the myriad miseries and sorrows that trouble the creature in this world are due to the ignorance of this truth and reality. Once he becomes well-informed and educated about who or what Brahm is by reading the scriptures and consulting wise men, he no longer would have to suffer from any of the spiritual dilemmas and bewilderments that keep an ordinary creature bogged down and squirming in discomfort throughout life. He would no longer would be torn between doubts and confusions; he would no longer feel miserable because all sorts of feelings and emotions that create a sense of misery, grief, trouble and sorrows are limited to the body and do not at all affect the Atma which is Brahm personified.]

This Brahm is the 'Truth' that is infinite, imperishable, eternal, steady, immutable, constant, universal and uniform. This Brahm has no beginning, middle or end. This Brahm is immaculate, pristine pure, untainted, sublime, divine and holy.

Brahm is indeed and truthfully 'supreme and transcendental' (72).

73. Brahm is a divine and sublime entity that is so mysterious, enigmatic and mystical that inspite of manifesting itself as the creation which is visible and experienced first hand by the living being, it is like the sky element which is seen everywhere, which pervades everywhere, which encloses everything in creation like an envelop, which harbours everything in creation and there is nothing that is not within the parameters of the sky or untouched by the sky, but ironically and mysteriously and miraculously which cannot be grasped or touched or felt by the sense organs of perception of the body of the creature no matter how hard he tries. [That is, Brahm possesses the unique characteristics of the sky element as enumerated above. Brahm is indisputably and unequivocally there—but it cannot be seen, felt, smelt or tasted like the sky element.]

Hence, Brahm cannot be touched and felt by the skin, seen the organ of sight (eye), tasted by the organ of taste (tongue), or smelt by the organ responsible for smelling (nose).

Brahm cannot be measured and known by any specific yardsticks or criterions. It is precisely for the above reason why it is honoured by the epithet of being 'supreme and transcendental' (73).

74. Oh Suvrat (one who is steadfast and committed to his chosen path; here referring to sage Nidagh)! Think positively and be firmly convinced in the holiness of your ‘true self’ which is the Atma that is fundamentally divine by nature as it is a personification of the supreme Brahm that is characterized by the grand virtues of being ‘Sat-Chit-Anand’ (i.e. truthful, consciousness, and bliss) and ‘Anant’ (i.e. one that has no end; one that is infinite and eternal). [Refer Canto 4, verse no. 29; Canto 5, verse no. 68.]

Think and believe—‘I am Brahm; I am a personification of Brahm’. I am that Brahm who is so absolutely perfect, immaculate, untainted and pure that there is nothing in him that can be considered as being un-worthy and fit for being got rid of. Such eclectic thoughts and firmness of conviction would pave the way for your permanent spiritual liberation, deliverance, emancipation and salvation. [Refer Canto 5, verse nos. 8, 20-21, 57 and 65 also.] (74).

75. With this holistic approach to your own ‘self’ you will realise that this Atma, which is the pure consciousness, is the only entity that prevails everywhere, whether you are in the state of Samadhi (which is a trance-like state obtained in higher stages of meditation) or interacting with other creatures in this world (i.e. are involved in the routine affairs of this world).

[When you are in the state of Samadhi, you would be experiencing the bliss that comes with the non-involvement of that aspect or part of your self that is sublime and subtle, i.e. your Atma, with the gross aspect or part of you which consists of the gross sense organs of the body. Since it would be deemed that ‘you’ (i.e. your ‘true self’; your Atma) have detached yourself from the body during Samadhi, it is natural that ‘you’ would also have detached yourself from the external material world, because it is the gross body that is in contact with the world, and not the Atma. Put simply, during the state of Samadhi, you would be non-involved with the world. Since the world is the cause of all your mental and spiritual problems, it is again natural that you would be protected from these problems, and this would translate into your experiencing bliss, contentedness, beatitude and felicity. Your physical body may be involved in the affairs of the world and suffer its consequences, but your Atma is free from such entanglements and their upshots.]

This Atma is eternal and constant, being steady and unchanging. It is all-pervading and omnipresent.

The Atma is known as ‘Kutastha’ because it is an entity that occupies a high position, is unalterable, unchanging, steady, immovable and constant, and is most secret, enigmatic, hidden and esoteric¹.

The Atma is free from all faults and shortcomings (75).

[Note—¹The *Sarwasaaro-panishad*, verse no. 10-11, and the *Tejobindu Upanishad*, Canto 6, verse no. 62, both of the Krishna Yajur Veda tradition, also describe the Atma as Kutastha.]

76. The fact that though Brahm is characterized by the grand virtue of being non-dual, immutable, indivisible and constant (which is a steady refrain of all the Upanishads) it still appears to be in numerous forms that are always changing and so divergent in nature by revealing itself in the form of this world that has mind-boggling number of uncountable forms is because of the factor of Maya (i.e. the delusion-creating power of Brahm) that acts as a conditioning element that tampers with the real Truth. [That is, Brahm appears to be so different, or having a dual nature, because of the interference of Maya. This Maya creates an artificial distortion and prevents the

reality to be known. It hides the Truth behind the smoke-screen of fallacious thinking, imaginations, delusions and misconceptions.]

It must not be forgotten that the Atma is fundamentally 'one' and 'non-dual', or Advaitya, because it is Brahm personified.

[That is, it must never be thought that two individuals having two different gross bodies would have two different Atmas; that therefore there are as many 'selves/selves' as there are creatures. The Atma is always 'one' and not 'two or more'. The uncountable number of creatures is simply the uncountable number of bodies that this single Atma has assumed for itself.

The simplest way to understand this concept is to take the example of water. A molecule of water consists of two atoms of Hydrogen and one atom of Oxygen, and its chemical formula is H₂O. For a chemist water would always mean H₂O, but a layman would differentiate between a sample of water in a cup and that in the river.

Water is also known by different names—viz. as liquid water, as any viscous fluid, as ice, vapour, moisture, mist, cloud or rain, as river, stream, sea, ocean, well, pond, lake and so on. But a wise man knows and understands that all of them are one or the other form of the same element called 'water' having the same chemical formula.

Similarly, a wise and enlightened man would know that the Atma in all the creatures is one, and therefore such a man would treat all the creatures alike. On the contrary, an ignorant man would think that all creatures are independent individuals, and that they have separate identities that are unique to them. Of course this latter notion is superficially true because this world is conditioned by Maya to treat the external gross body as the identity of all living beings, but fundamentally it is wrong and based on fallacious premise. This is because the 'true self' of all the creatures is their Atma, the pure consciousness residing in their bodies, and not the gross body itself.]

Therefore, the Atma is universally Advaitya or non-dual and one. The Atma has no delusions and misconceptions. It is not at all affected by any of the taints and delusions so characteristic of this gross world (76).

77. The sky element is a uniform entity that is universal and immutable because it cannot be divided or fractioned or portioned. But the same sky is given different names according to the space it occupies—for instance, it is called 'Ghatakash' when it is present in the vacant space of a pot, and 'Mahakash' when it is considered in its cosmic form that is present outside the body of the pot. And, when the pot is broken, both the forms of the sky, viz. the Ghatakash and the Mahakash, become one and the same, having no separate existence or name. Hence one concludes that the different names assigned to the sky element is basically fallacious, and has its genesis in ignorance of the fundamental truth about the sky. [Refer Canto 1, verse no. 16; Canto 2, verse no. 37; Canto 4, verse no. 24.]

Similarly, the Atma is universally the same entity; it uniformly pervades throughout the creation, both at the micro level of an individual creature, as well as the macro level at the plane of creation or world at large. Therefore, to treat the Jiva (a living being; a creature) as being separate or different from Ishwar (the Supreme Being) is an erroneous idea based on fallacious premises and ignorance of the truth.

[The Atma is the same in all the creatures, and this Atma is nothing but pure consciousness that is an entity established as being divine, sublime, subtle, universal, uniform, immutable, indivisible, eternal, all-pervading, all-encompassing, omnipresent etc. It is this same Atma that resides in the gross body of any given

individual as well as in all other creatures in existence. This is the micro-level view of the Atma. At the cosmic level, it is the same Consciousness that exists at every level of creation; it is this Consciousness that is the cause of this creation, its development, growth, expansion, and its conclusion. Even after the end of one cycle of birth and death, it is this Consciousness that prevails, and then becomes the fountainhead from which the next cycle sprouts forth, and upon which it rests.

This Consciousness known as the Atma is the central pivot around which the whole wheel of creation revolves. This fact is elucidated in a number of Upanishads¹. Since the Atma is one and immutable, it is the same irrespective of the level or plane of creation in which it exists. Again, the Atma is pure consciousness and nothing else. Therefore it follows that there is no fundamental difference between the Jiva and Ishwar as both are the same ‘consciousness’ or Atma personified.]

The treatment of an entity that is universally and indisputably ‘one’ and non-dual, i.e. which is never ‘two or more’, as having more than one forms or existences is indeed fallacious and extremely absurd.

Therefore, to treat the Jiva, the living being or the creature, and the Ishwar, the Supreme Being, as two distinct or separate entities is fallacious, erroneous and misconceived². This distinction or separation comes because one is not aware of the ‘truth and reality’, and is deluded to believe in the concept of duality or Dwaitya.

[Suppose we have different types of ornaments made of ‘gold’. A wise person is one who recognizes them all as ‘golden ornaments’, and not by their individual names, shapes or sizes, or even their usage. It is raw gold that has been crafted by the goldsmith into so many shapes and sizes, giving the same element known as ‘gold’ its myriad names and different market values. If ‘gold’ is removed from these ornaments, all of them lose their intrinsic value and inherent importance.

Similarly, everything in this creation—and that includes the Jiva—is a manifestation of Brahm. Since the Jiva is a living conscious entity that harbours the Atma, the pure consciousness, in its body, it has a special relationship with Brahm as the latter is the universal cosmic Consciousness that resides in each unit of creation. In other words, it is the cosmic Consciousness known as Brahm that has transformed itself into the living being known as the Jiva. It is just like ‘gold’ being transformed into an ornament having a name other than ‘gold’.] (77).

(d) Atharva Veda—Atmo-panishad; Annapurna Upanishad, Canto 5, verse nos. 77; Par Brahm Upanishad, last stanza of verse no. 2; Tripura Tapini Upanishad, Canto 5, verse nos. 20-21.

(e) Sam Veda—Maho-panishad, Canto 2, verse no. 7.]

78. When an ascetic becomes self-realised and enlightened by concentrating his mind on the pure conscious Atma which is sublime, subtle and self-illuminated, he is able to experience its divine illumination everywhere without exception. [That is, in the higher echelons of spiritual attainment, a self-realised ascetic begins to see the ‘truth’ of the doctrine of Advaita or non-duality all around him in the form of the universal presence of the cosmic Consciousness. In other words, he sees nothing but Brahm everywhere. He sees the universal ‘truth’ behind the façade of falsehood.]

When he is firmly established in deep meditation and contemplation, he naturally becomes self-realised and self-enlightened when the sublime illumination emanating naturally from the ‘consciousness’ comes to the fore and begins to shine and light up his inner-self in a brilliant light known as ‘spiritual realisation’. It is then that he gets acquainted with his ‘truthful self’, his ‘real self’. [This is his Atma; it is pure consciousness. It is distinct from the gross body which is ‘dark’ if it is not ‘lighted’ by the presence of the self-illuminated Atma from the inside.] (78).

79. When a self-realised and enlightened ascetic develops a holistic and natural view of non-duality as he begins to see all the creatures as a reflection of his own self, and the same time realises that there is no basic difference between his own self and the other creatures because all are mirror images of the same cosmic entity known as pure Consciousness—it is then that he truly becomes a personification of the supreme Brahm. [He would have realised that ‘he’ is not the physical gross body but the sublime ‘consciousness’ known as the Atma, and that this Atma is the same in all the creatures. This Atma or ‘consciousness’ is known as Brahm at the macrocosmic level of creation. Since the entire creation is a manifestation of this cosmic Brahm, it obviously follows that it is also a mirror image of ‘his’ own ‘self’, which is his Atma in the form of ‘consciousness’. His own Atma is Brahm personified in his gross body in the same way as it is present in the gross bodies of all living beings. Refer Canto 5, verse no. 61.] (79).

80. When an ascetic remains in a perpetual state of meditation and contemplation, and is able to develop a state of mind which sees no distinction between any two or more given things or situations in this world, when it has developed an exemplary level of wisdom that enables it to see the underlying uniformity and universality amidst external varieties, variations and dichotomies that are apparent in the external features of this creation—it is only then that such an ascetic is deemed to be inseparable and indistinguishable from the Atma. He is regarded as an image of the Atma which is universal and uniform in this creation (80).

81. [Verse nos. 81-89 outline how this eclectic state of existence is realizable by an ascetic. Seven steps are outlined in this connection, and they are called the ‘seven Bhumikas’.]

The way to achieve this glorious goal is to study the scriptures (especially the Upanishads which succinctly and wisely present a refined or distilled version of the voluminous scriptures which are otherwise like an ocean that is more prone to drown the aspirant than to take him to the other shore of spiritual liberation and deliverance), having or developing contacts with noble, enlightened, wise and learned men, developing a sense of renunciation, dispassion and detachment towards this world and the body, and constant, consistent and persistent practice. [Refer Canto 5, verse no. 71 in this context.]

This is considered as the first method or 'Bhumika'¹. It is the first step that an aspirant must take in order to realise his spiritual goals (81).

[Note—¹The word *Bhumika* refers to the stages of development of wisdom. It also means the background, characteristics, qualities, traits, attributes or virtues that helps one to become spiritually wise and enlightened. It would mean to view the pure conscious self known as the Atma against the backdrop or background of certain level of spiritual development. Bhumika is also the role certain characteristic features of this creation play in the spiritual evolvement of an aspirant. It involves inculcation of certain auspicious virtues in a man that would act as standards to determine the level of spiritual development or evolvement or enhancement he has attained. The Bhumikas would act as the gold-standard to judge a man's stature in the sphere of spiritualism. Hence, the term Bhumika would mean certain characteristics that must be present in a person, or certain spiritual criteria against which he must be weighed or judged if he is to be called an enlightened and self-realised person or a person who has obtained spiritual liberation and deliverance for himself, a person who has freed himself from the fetters that shackle others to the mundane life in this world.

Bhumika is an indication of the degree of spiritual achievement of an aspirant, and refers to one or the other aspect, step, level or stage of one's spiritual progress.

The concept of Bhumika has been explained in detail in two Upanishads of the Krishna Yajur Veda tradition, viz. (i) Akchu Upanishad which elucidates the seven Bhumikas of Yoga in its Canto 2, verse nos. 27-42, and (ii) Varaaha Upanishad, Canto 4, verse nos. 1-4—1.11, 1-35—2, and Canto 5, verse no. 71-75, which lays stress on Yoga and draws a parallel between Bhumika and the three steps of Pranayam, such as Purak, Kumbhak and Rechak.

The present Annapurna Upanishad describes the metaphysical connotations of the term Bhumika in the context of the steps that a spiritual aspirant is expected to follow before he becomes truly self-realised and enlightened, and thereby attain spiritual liberation and deliverance.

Types of Bhumikas—(i) Seven types of Bhumikas—refer: Varaaha Upanishad, Canto 4; Akchu Upanishad, Canto 2, verse nos. 27-42; the present Annapurna Upanishad, Canto 5, verse nos. 80-89. (ii) Four types of Bhumikas—refer: Varaaha Upanishad, Canto 5, verse nos. 71-75.]

82. The second Bhumika (method or step) is to deeply think, to ponder and contemplate.

The third Bhumika is to establish strong relationship with and have constant company of men who are noble, wise, self-realised and enlightened. [Compare this statement with what has been said in verse no. 81 where it was mentioned that one should develop contacts with them. In this verse he is advised to foster these contacts and mature them into healthy relationship. It is only then that the goodness of these holy men would transmit to the aspirant.]

The fourth Bhumika is the elimination or annihilation of the Vasanas that are natural to a person. [The Vasanas are the passions, lust, desires and yearnings that a creature has for the material world and its numerous charms and temptations. It is to be noted that a greater part of this Upanishad's Cantos 1 till 5 are dedicated to the

concept of Vasana, its negative affect on the creature's spiritual well-being, how to overcome these Vasanas, and what the benefits of elimination of Vasanas are. In the case of the present Canto 5, special reading can be made of verse nos. 15-18, 37-40, 48 and 62.] (82).

83. The fifth Bhumika is to remain in a perpetual pure state of existence marked by blissfulness and enlightenment that comes by realizing the truthful existence of the 'consciousness'. This state is untainted and unaffected by the grossness and delusions of the world around the aspirant.

Such enlightened and self-realised persons appear to be half awake and half asleep. They are 'awake' in the sense that outwardly they go about the routine of life in this world like other ordinary men, but internally they are un-involved in what the body does and unconcerned with the result as well. This happens because they are lost in the thoughts of the Atma, or are in a perpetual state of meditation and contemplation. Thus, for all practical purposes they are 'asleep' because their mind and sub-conscious do not register any of the events of the outside world like a man who is physically sleeping. [Obviously, this refers to the Turiya state of existence of consciousness which is equivalent to the state of Samadhi. Refer Canto 1, verse nos. 28, 48-52; Canto 4, verse no. 62-63; Canto 5, verse nos. 49, 78-80 in this context.]

Such persons are said to be Jivan Mukta—i.e. one who has attained spiritual liberation and deliverance inspite of going about his routine life in this world, and having a gross body that is still alive. [The concept of Jivan Mukti has been elaborately dealt with in Cantos 3 and 4 of this Upanishad.] (83).

84. This state of Jivan Mukta (as described above) marks the sixth Bhumika. In this state of existence, the creature is not aware of the external gross world and its material charms or temptations of its sense objects. His sense organs (and therefore the body) are no more attracted by their respective sense objects in this world because his mind and sub-conscious have virtually become defunct and inoperative. [This is a natural corollary of his having practiced the tenets of renunciation and detachment from the world, having studied the scriptures, and having established communion with wise men.]

During this state he lives blissfully and in a high level of ecstasy. It is equivalent to the Sushupta state of existence of consciousness.

[The Sushupta state is the deep sleep state of existence which is the third level of existence for the consciousness. During this state—which comes after the dreaming state known as Swapna—the mind and the sub-conscious are made inoperative as far as the relationship between the creature and the world is concerned. In this state, the creature does not even dreams, and hence he is completely rested and blissful. The reason is that even during dreams he is very much involved in the activities of the world of dreams at a subtle level of existence though his physical gross body might be resting in the physical gross world. So if he wakes up directly from dreams, he is restless and tired though the world thinks he had rested all the while he lay down sleeping. This is because his mind was not at all at rest during dreams. As a result, the creature is exhausted and drained of his energy if he dreams throughout the period of his sleep, and when he wakes up he is not refreshed but as weary as before. This condition is not applicable during the Sushupta state when the mind too goes to sleep. Therefore, during the Sushupta state the creature finds complete rest. It is a state of complete oblivion when the world—both at the gross plane as well as the subtle

plane—simply vanishes. The practical result is that when one sleeps soundly without dreaming, he wakes up refreshed and rejuvenated.

From the perspective of the physical existence in this world, the Sushupta state is a natural bestower of calmness, tranquility, restfulness and peacefulness to the troubled creature who is endlessly harassed by the countless problems of the existence in this physical gross world. From the perspective of metaphysics and spiritualism, it is a bestower of spiritual bliss and peace.] (84).

85. The transcendental state of existence, which corresponds to the fourth state of existence of consciousness, is known as 'Turiya'¹. It is one of its only kind, and marks that stage of consciousness when the bliss and peace obtained by it during the third state of Sushupta (as described in verse no. 84 above) becomes deep, permanent and steady. In this state the aspirant attains the level of peace, bliss, stability and calmness that is attainable only when one is truly free from all bondages and obligations. It is equivalent to his obtaining Mukti (liberation and deliverance; emancipation and salvation) of a high order, the Mukti which is known as 'Kaivalya' because it is unique and one of its only kind as no other form of freedom provides the spiritual aspirant such a high intensity of peace, bliss, calmness and stability which Turiya state does.

Hence, this Turiya state is the sixth Bhumika characterized by exemplary beauty and divine qualities of the Spirit marked by a high degree of glorious virtues such as 'Samtaa' (having equanimity; evenness of mind and thought; stability, calmness and poise; treating everything and everyone alike; remaining unfazed, unmoved and unaffected under all circumstances), 'Swachataa' (purity and cleanliness of the inner-self), and 'Saumyataa' (simplicity, humility, piety, gentleness and an unpretentious nature) (85).

[Note—¹Turiya state—refer Canto 1, verse no. 25; Canto 3, verse nos. 10, 13, 16, 18; and Canto 5, verse nos. 16, 46.]

86. The state of existence that is beyond the Turiya state, i.e. the fifth state of existence of consciousness corresponding to the sixth Bhumika (as narrated in verse no. 85) above is the higher state of transcendental existence known as 'Turiya-Teet' (literally 'one that is beyond Turiya'), provides the spiritual aspirant 'Nirvana', which is complete and absolute spiritual liberation and deliverance of the soul. It is the state when the ascetic obtains his final emancipation and salvation. It frees him, once and for all, from all the fetters that had been shackling him for generations after generations to this deluding world and the gross body. It is the final resting place and the destination for his soul, his Atma or his 'self'.

[It ought to be noted here that all the earlier Bhumikas are stepping-stones for the spiritual aspirant for reaching this final citadel of enlightenment when his Atma finds its final spiritual goal in life. When he reaches the Turiya-teet state of existence, he is finally and irrevocably Mukta—i.e. he will no longer be entangled in this world, he will no longer be influenced by Maya (delusions), Vasanas (worldly passions) and Vrittis (worldly tendencies) etc., he will no longer need any other kind of liberation and deliverance which can be superior to this state for he will have found his ultimate spiritual destination which would undoubtedly give him complete rest, bliss, peace, beatitude and felicity. It would mark the crowning glory of all his spiritual endeavours undertaken through generations. It is the pinnacle of self-realisation and synonymous with Brahm-realisation. It does not matter now whether or not he retains his gross body, for the latter has become irrelevant now. Similarly, it matters not now whether

or not he interacts with the world at the physical plane, for the world has become non-existent for him now. Such a highly evolved and exalted state of transcendental existence of the consciousness or the 'self' is known as 'Nirvana'.]

The seventh Bhumika (aspect, step, level, stage of one's spiritual progress) which is equivalent to the transcendental state of existence of consciousness—whether it is in the preliminary or earlier stage called the Turiya, or the higher echelons of spiritual realisation called the 'Turiya-teet'—is indeed the best and a highly mature stage in one's spiritual progress; it is literally the highest rung of the spiritual ladder for an ascetic.

It is not the stature that can be easily attained by all living beings. In other words, it is rare to be successful in attaining the Turiya-teet state of existence (86).

[Note—In the context of this verse, refer also to Canto 5, verse nos. 107, 109-114.]

87. The first three Bhumikas (outlined in verse nos. 81-82) correspond to the Jagrat or the waking state of consciousness which is the first state of existence in metaphysical terms. The fourth Bhumika (outlined in verse no. 82) when all awareness of the external physical world cease, and it appears to the world seen in one's dreams, corresponds to the second stage of existence of consciousness called the Swapna or dreaming state.

[During this state of existence of the spiritual aspirant, the entire world appears to be like a dream for him though he may appear to be active in this world and be a physical participant in its activities. But this participation or activity done by him is only superficial and perfunctory in nature, because internally he is totally oblivious of what is happening around him in the physical world. The reason is he is completely absorbed in meditation and contemplation; his mind and sub-conscious are trained to remain detached from the world and the gross body. Since it is the mind that makes a man aware of the world as well as of the activities of the body, when the mind is defunct, the world and the body too become non-existent for all practical purposes.

Hence, just like the case when a man is totally unaware of what is happening in the physical gross world when he is dreaming in his sleep, an ascetic who has successfully attained the fourth Bhumika or stage in his spiritual progress too remains oblivious of what his gross body physically does in this material world, as well as the physical fact that the material world of sense objects is actually there. His mind simply does not pick up any impulses brought in by the organs of perception in the body.

This eclectic fourth Bhumika is compared to the dreaming state of existence called 'Swapna' because during dreams the subtle aspect of the mind known as the sub-conscious is active and it conjures up a fascinating world of dreams which is a mirror image of the physical gross world in which the man lives. A man participates in the world of dreams much in the same manner as he does in the physical world, but his body is not involved and neither does he remember anything of it when he wakes up from dreams.

Similarly, a self-realised ascetic or spiritual aspirant who has progressed in his spiritual endeavours to reach the stage of fourth Bhumika appears to be physically involved or active in the gross world, but internally he is totally unaware of anything around him. He is absorbed in meditation and contemplation; he is lost in the thoughts of his Atma and experiencing the nectar of spiritual bliss that drips from it.

Therefore, for all practical purposes, the world is like a dream for him—an imaginary entity that has no substance and meaning, a fantasy of the mind that has no

reality and truth in it. He may look as if he is an active participant in the activities of the world, but none of the things of the world or the deeds done by his body affect his inner-self which remains steadfastly calm and composed as if nothing has happened at all. This eclectic state of existence is compared to dreams because in the latter case a man is also involved in numerous activities in the imaginary world created in his dreams, but when he wakes up into the realities of life none of the things that he had encountered during his dreams, and none of the events that had occurred in his dreams, have any relevance for him when he wakes up to face the realities in the practical life in this physical world. He will not even remember the things he did or saw during his dreaming phase of existence though at the time when he was seeing the dream he was an active and personal participant in all the events of the dream.] (87).

[Note—There are basically five states of existence of consciousness in metaphysical terms—viz. Jagrat or waking, Swapna or dreaming, Sushupta or deep sleep, Turiya or one that transcends the Sushupta but is the initial stage of complete spiritual attainment and self-realisation, and Turiya-teet which marks the higher stage of transcendental existence which is complete and absolute.]

88. True Anand (bliss, happiness, ecstasy, beatitude and felicity) is so overwhelming and all-embracing that it is like a thick bank of dense and dark cloud that covers the sky during the rainy season. It is obtained during the Sushupta state or the deep sleep state of existence of consciousness that comes after the Swapna or dreaming state.

When it is viewed with the perspective of the different Bhumikas, the Sushupta state of consciousness metaphorically corresponds to the fifth Bhumika. [Refer verse nos. 83-84.]

That is, the fifth Bhumika is that state of consciousness which is equivalent to the Sushupta state when the aspirant lives in the world much like he would do when he is in a state of deep sleep or sound asleep. There is no disturbance of any kind now—he does not even see a dream that might keep his subtle mind engaged and restless, which in turn would translate into the Atma being entangled at the subtle level of existence as it happens during the imaginary world of dreams. The Atma does not find peace and rest during the Swapna phase of sleep (i.e. during the dreaming state) because the subtle mind keeps nudging at the Atma constantly while the world of dreams lasts, thereby robbing the Atma of its chance of finding peace and tranquility in a serene environment which it seeks to obtain while it sleeps. During this phase of deep sleep called Sushupta, the Atma endeavours to eliminate all disturbances arising from the world by completely eliminating them by making the body sleep soundly and the organs of perception becoming totally defunct.

[This is the basic reason why a man wishes to ‘sleep’—his ‘true self’ known as the Atma wishes to find rest and peace. The Atma wishes to break free from the constant turmoil and miseries of worldly existence, and instead find some time to take complete rest and find peace in a tranquil and serene atmosphere to rejuvenate its self. When his body is physically asleep, the sense organs too go into hibernation. The effect is that the world ceases to matter because the latter is known by the man only through his various sense organs—such as the eye which sees, the nose which smells, the ears which hears, the tongue which tastes, and the skin which feels. So, when the man is asleep, his Atma is able to eliminate the physical gross world. But ironically, this is not the end of its troubles—because the sub-conscious mind is very much active even as the active aspect of the mind that actually perceives the world through

the inputs received by the body and its sense organs goes into hibernation when the physical body sleeps.

Hence, for all practical purposes, the Atma does not get what it had wanted by making the body 'sleep'. The Atma does not find true peace and rest when the man dreams even though he may be physically asleep because the subtle mind is active, and it in its turn keeps the Atma engaged in another world of imagination known as the world of dreams. The only difference between the two types of worlds is that while the world of the waking state was physical and gross, the one of the dreams is subtle and imaginary. Hence, the only difference between the engagements of the Atma in these two worlds is in the degree and level of involvement, and whether this engagement is of a gross nature or of a subtle nature. Other than this, involvement of any kind and the subsequent restlessness that it creates for the Atma is the same in both the cases if it is not properly trained to keep itself aloof from all entanglements altogether, whether at the gross level of the waking state or at the subtle level of the dreaming state.

Therefore the Sushupta state marks that stage in the Atma's quest for peace and tranquility when it shuns even the subtle world of dreams. It is this stage that is being referred to as the 'fifth Bhumika' in this verse.]

Metaphysically, this stage is characterized by bliss and peace because the mind and the sub-conscious are both defunct and inoperative. There is nothing to disturb the calmness, rest, peace, tranquility and serenity of the Atma in this stage of existence. It is the next higher step as compared to the Swapna stage.

[Whereas during the Swapna or dreaming state of existence the subtle aspect of the mind was active though its gross aspect was inactive, during the Sushupta state even this subtle aspect is made defunct. With the mind out of the scene, there is a sense of an all-encompassing and all-pervading tranquility and serenity as far as the Atma of the spiritual aspirant is concerned. The world vanishes even at the subtle level of imagination which was not the case during dreams, because in the latter case this subtle world existed.

With the world completely annihilated, there is no instigator or tempter left that would provoke any kind of restlessness and agitation in the Atma which incidentally happens to be the 'true self' of the spiritual aspirant or ascetic. Whereas in the earlier two stages of Jagrat and Swapna he was oscillating between two worlds—one of a physical variety and the other of a subtle kind respectively, in the Sushupta state both of them simply become non-existent, and hence irrelevant for a wise man. The peace and tranquility that he experiences at the Sushupta stage of existence of consciousness is holistic and overwhelming; it has depth and sublimity.]

The next higher stage is the sixth Bhumika. [Refer verse no. 85.] It corresponds to the Turiya state of existence which is metaphysically the fourth state of existence of consciousness. It is the preliminary stage of the higher levels of spiritual attainment, and marks a step further ahead than the one represented by the Sushupta stage.

[In this stage of Turiya, achievements of the Sushupta stage are made more permanent, stable and effective; they acquire depth. Whereas the consciousness is susceptible to reverting back to the Swapna state from the Sushupta state, and in fact it actually oscillates between the two, when it enters the Turiya state its peace and tranquility along with their attendant bliss and ecstasy become perpetual and robust. The Turiya state is the stepping stone for the highest state known as the Turiya-teet which literally means the one level of existence which transcends all known exalted states, and beyond which there is no higher state of blissful and divine existence.

However, the Turiya state itself is a state when self-realisation dawns upon the mental horizon of the spiritual aspirant. He is filled with an overwhelming sense of extreme spiritual bliss, tranquility, serenity, ecstasy, beatitude and felicity. It also corresponds to the state of Samadhi.] (88).

89. The seventh Bhumika corresponds to the last stage called the Turiya-teet state of existence of consciousness characterized by complete spiritual realisation, enlightenment and attainment. It is the highest level of transcendental existence of the consciousness. The achievements of the Turiya state are made strong, robust and permanent in the Turiya-teet state. [Refer verse no. 86.]

It is so mystical, mysterious, enigmatic, esoteric and profound that it cannot be fathomed or known or described or grasped by either the mind or the faculty of speech. That is, what one experiences during this state of existence cannot be explained by him in words; it cannot be understood by application of the mind and its ability to analyse, rationalize and logically prove something to be true. It is simply experienced and witnessed by the spiritual aspirant himself, and not by anyone else (89).

90. When the inner-self has been sufficiently trained to be completely indifferent to all the things of this world and their numerous temptations, when the inner-self becomes practically unconscious to them or immune towards them, when the world and its sense objects do not evoke any kind of reaction in a man, it is then that the spiritual aspirant is said to have attained Mukta—i.e. he is deemed to be liberated and delivered from all the entrapments, delusions and other faults related to this world, along with their attendant problems. There is no doubt about it. [The term 'Mukti' has been defined in Canto 4, verse nos. 1-3 and 56 also.]

This happens when the man develops a profound sense of equanimity and dispassion when he begins treating all things equally.

[He will not find one thing or situation more attractive or charming than the other, and therefore there is no attention paid to it. A wise and self-realised man who has reached a high level of enlightenment would treat everything in the same manner; he would see no difference between things that give the body comfort and pleasure, and the other thing that inflicts pain to it. Therefore he will not be tempted to be emotionally attached or infatuated with something vis-à-vis another thing. This exemplary attitude of neutrality, fortitude, indifference, non-attachment and dispassion that accompanies the virtue of profound equanimity that he is able to cultivate, the quality of having evenness of mind and thoughts that he inculcates, the ability of being steady, calm, serene, poised and unruffled despite being constantly buffeted and tossed around by the powerful forces of temptations of the world—these grand virtues will free his Atma from being attached to, or attracted towards, or yearn for any particular thing in this world. This situation is tantamount to his liberation and deliverance from the fetters that shackle an un-realised, ignorant and deluded man to the gross world and its material gross objects.] (90).

91. The high level of neutrality and equanimity that a wise, erudite, enlightened and self-realised aspirant develops inspires him to think in these eclectic terms—'I don't die or perish, nor do I take a birth and live a mortal life. I am not subject to debates as to whether I am truthful or false. I do not come within any worldly criteria and definitions. I am not anything that can be perceived by the organs of perception or grasped, judged and understood by the various faculties of the mind and intellect.'

[Here, the pronoun 'I' refers to the spiritual aspirant's 'self'—which is his pure conscious Atma, and not his gross physical body.]

A wise man who has developed these eclectic thoughts and wisdom becomes steady, consistent and unwavering in his calmness of demeanours as well as a composed and well-balanced approach to life and its problems. He is perfectly neutral, indifferent, unattached and dispassionate. He stops thinking about anything at all, and therefore is not subjected to numerous doubts, confusions and delusions that are hallmarks of this mortal and gross material world of ever-changing forms, a world of inconsistencies and delusions (91).

92. He thinks—'I am not attached to, infatuated with, attracted towards or longing for anything or anyone. I am imperishable and steady, and therefore immune to decay, disintegration, deformation and demotions. I do not have any lust, passion, desire or yearning for anything. All my Vasanas (worldly passions and yearnings) have calmed down and eliminated; I am free from them.

I am not a fraction of anybody else; I am complete and wholesome; I am immutable and indivisible. [That is, I am not a son of any father. I am not a fraction of the cosmic Consciousness, but rather I am this Consciousness entirely in its wholesome form.]

I am like the sky element that cannot be measured or fathomed, that is eternal and infinite, that is immutable, constant and unchanging.'

A person who thinks of himself in the above terms is indeed a spiritually liberated and delivered soul. Such a self-realised, wise and enlightened man thinks of nothing; he is completely neutral and dispassionate. He is not moribund but immortal. He is not gross but sublime and subtle (92).

[Note—Positive thoughts as proclaimed here have also been asserted in Canto 5, verse nos. 58-61, and 68.]

93. He is free from the mind that is tainted by the notion of ego and pride. He is a person with an immaculate, perfectly clean and uncorrupt mind and intellect. He is indeed wise, enlightened and realised.

He does not come to any sort of demotion and degeneration; he is imperishable and eternal. He remains calm, serene, tranquil and composed. He develops an exemplary degree of equanimity and neutrality towards all things and situations in this world.

A person who has successfully inculcated these eclectic virtues is indeed a spiritually liberated and delivered soul. Such a self-realised, wise and enlightened man thinks of nothing; he is completely neutral and dispassionate (93).

94. A wise, enlightened, self-realised and erudite spiritual aspirant who is convinced that the essential and most important factor that is uniformly and universally present in each and every unit of creation (the factor that keeps the creation intact, the factor without which the entire edifice of creation would fall apart like the beads of a garland when the thread is removed from it, the factor which infuses 'life' and 'consciousness' in the otherwise inane, inert, lifeless and gross creation)—the factor that is invariably and uniformly present in such diverse units of creation as the tip of a blade of grass or twig (that is miniscule and most minute like the point of a needle), the sky (that is all-pervading and all-encompassing, beyond which nothing exists, which harbours the entire gamut of creation within its parameters), the sun (which is the only celestial body that gives light, energy and heat to the entire world; which is

the sustainer, protector and nourisher of life on this earth; which forms the pivot of the solar system around which all the planets revolve), the human being (considered the most evolved and highly intelligent species living on earth, the species that keeps the rest of the creation under its control and rules over this world like a king), and the gods (who are auspicious souls that are superior and more powerful than the humans, and have control over them)—is indeed the factor that is also known as his ‘true self’, the entity that he calls ‘me’, is a person who is deemed to be liberated and delivered from all the entangling fetters of this world. He does not think of anything else at all; he is rested, peaceful, serene, calm and quiet. Verily, he is divine, holy and most exalted (94).

95. You (Nidagh) must rise above all mundane and material considerations in this world. Do not harbour any ideas, notions or thoughts that are basically entrapping, erroneous, misleading, gross and deluding. In other words, be blessed with a high degree of equanimity and neutrality of the mind and intellect; be unfazed by the ever-changing nature of the world and its equally transient charms, comforts and pleasures; do not have any emotional attachment with any of the material things of this world of sense objects.

When all delusions, doubts and confusions arising out of a sense of duality are removed, what remains is one single entity that is the ubiquitous and quintessential ‘truth’ which is non-dual, uniform, universal, irrevocable, unequivocal and irrefutable. This eclectic, unique and sublime entity is known as ‘Brahm’.

Think in this holistic way and realise the truth of the statement ‘this Brahm is none but me’, or ‘I am no one else but this Brahm.’ [This is one of the great Maha Vakyas or spiritual Truths as proclaimed in the scriptures. In this context, refer also to Canto 5, verse nos. 8, 20-21, 57, 65, 74 and 95.] (95).

96. A wise and enlightened man who has abandoned all thoughts of this material world of sense objects that come within the purview of the faculty of speech (i.e. the world that can be physically perceived, understood and analyzed, and then can be defined, described or narrated by words expressed through the medium of the faculty of speech), and instead focuses his attention on the entity that is beyond the scope and reach of the faculty of speech and its power to describe anything in words (i.e. the transcendental world and the state of existence of consciousness that is so sublime and subtle that it can neither be grasped by the mind and intellect, nor can it be understood and expressed in terms of words, because words have their own limitations and they are not able to describe an entity that is absolutely sublime and subtle, and is therefore indescribable and indefinable)—such a man attains the steady and transcendental state of extreme bliss, ecstasy, beatitude and felicity.

He remains submerged and engrossed in the thoughts of the pure conscious Atma; he lives in a transcendental subtle world of the sublime Atma where there is nothing but an all-pervading sense of bliss, happiness, ecstasy, beatitude and felicity.

[This world is not like the gross world that relates to the gross body and its various organs and faculties, and that is why the speech is unable to describe it in words. The mind is also a part of the gross body of the creature, though of course it is subtle in nature as compared to the other gross organs of the same body, such as the organs of perception (eye, nose, ear, tongue and skin) and the organs of action (hands, legs, mouth, excretory and genitals). It is actually the mind and the intellect that ‘expresses’ its experiences by the medium of words. That is, the faculty of speech is a vocal instrument of the mind and intellect by which it narrates about what it perceives

of the world. Since this physical world is gross, the mind and intellect are able to do so.

But when the same mind and intellect experiences something in the subtle world of the consciousness, a world that is transcendental in nature, a world that is so sublime and subtle that it is beyond the scope of the gross organs of the body to perceive in any way, the mind and the intellect fail miserably in their attempt to describe what they experience or witness in this highly ethereal state of existence of the creature.

[In brief, that which is extremely sublime and subtle such as the Atma cannot be subject matter of reach and description by a thing as gross as the vocal cord of the body, or even by the mind-intellect which is also a part of the gross body. Things that are extremely sublime and subtle cannot be described in words because words have their own limitations. For instance, one cannot exactly describe how 'sweet and succulent' a sweet dish is in words. The best way to know it is to actually taste it.]

The mind and the intellect do not have the necessary wherewithal, the caliber, the ability and the expertise, the sufficient knowledge and power to first comprehend what they experience or witness in the state of transcendental existence of consciousness, and then encapsulate this experience in apt words that can do justice to what has been actually experienced or witnessed. All attempts to narrate or define what has been experienced or witnessed fall far short of the actual thing. So the mind and intellect prefer to keep silent so as not to prove that they are incompetent and incapable. Obviously then there are no words to narrate what the aspirant experiences or witnesses during the transcendental state of his existence when only the subtle world of the Consciousness or the sublime world of the Atma lives.] (96).

97. A self-realised person who has attained the transcendental state of existence and realised that his 'true self' is not the gross body but the pure conscious Atma or soul is the one who literally abandons all involvement in worldly deeds (because the deeds are done by the gross body and limited to it alone, without affecting the purity and neutrality of the Atma in any manner whatsoever).

He is eternally contented and fulfilled (because he has no desires and wants as he has conquered all his Vasanas, or worldly yearnings and passions, as well as the various Vrittis, or his natural habits and inherent temperaments that are the basic cause of all sorts of discontent and discomfort of the creature).

He needs no support of anyone for his existence, and is independent of all. [That is because 'he' is the Atma which is an almighty ethereal Spirit that is all powerful and the supreme Authority of creation. This Atma is the supreme Brahm, the Lord of creation, personified. It is an entity that supports this creation from the within by revealing itself as the 'life-giving consciousness'; it supports the body by injecting 'life' or Pran inside it. It is the Atma that lends 'life' and 'consciousness' to the gross body, but it is not the other way round.]

It remains totally indifferent to, uninvolved in and unaffected by something being auspicious and righteous and the other being the opposite, because it is neutral, dispassionate and detached from this mundane world where such distinctions and differences exist and matter. His level of existence is much higher and ethereal, and is so spiritually evolved that he is unconcerned or un-influenced by worldly criteria that distinguish between two given things or situations or deeds, judging one as good and auspicious, and other as bad and inauspicious. For him, everything is the same and alike. He maintains an exemplary level of neutrality and equanimity of approach towards everything and everyone in this world. He is not bound to any fixed notions

or ideas; he is not biased against something or in favour of something else, treating one as being inauspicious and the other as auspicious respectively.

In other words, he is independent and free. He is not attached to any particular thing or obsessed by it.

[He is attached to none; he is neither attracted towards something that is good and auspicious, nor is repulsed by something that is bad and inauspicious. Nothing is righteous or unrighteous for him. In other words, he has put into practice the eclectic philosophy of Advaitya Vedanta that speaks of oneness and uniformity in creation, which emphasizes that there is only one fundamental Truth known as Consciousness that pervades throughout this creation as its essence and reality, and that this Truth is uniformly good, auspicious and holy. So there is no question polarization, leading to two options or choices—one that tells that a thing is good, and the other that defines a thing as bad.

This concept of one thing being good, auspicious and holy, and the other being the opposite of it does not apply to an enlightened and wise man, because he does not judge anything from its external appearances but from its internal or intrinsic value. And this 'internal factor', which really matters and is worth of paying any attention to in all entities in creation, is the universal Consciousness which is invariably pure, holy and auspicious. Hence, the question of one entity being good and the other being bad does not arise at all because all of them have the same universal Truth known as the Consciousness as their core, and it really does not matter how good or bad the exterior appears to be in this world.

Since Advaitya Vedanta affirms that there is fundamentally no difference between any two living entities in creation when their real and truthful form is examined, because this essence is the pure consciousness that is inherent in all the units of creation, there is therefore no locus standi in seeing any kind of difference between two given things. Hence, a wise and enlightened man does not judge a thing as being auspicious or inauspicious from its external appearances, but realises that the 'Truth' that actually matters is eternally auspicious and holy.

If the underlying Truth of creation, the universally pure 'consciousness' that forms the essence of all things that exist in this world, is unequivocally and indisputably good, holy and auspicious, then there is no ground to believe that something is good and the other is bad because these definitions are limited to the external gross aspects of creation which is different from the reality and the truth hidden behind it. In metaphysical field, this 'Truth' is known as the Atma or the 'self' of the creature. It is the 'consciousness' that lends the otherwise inane and gross things in this world their 'life' and 'worth'. It is always holy and auspicious¹.] (97).

[Note—¹We can take an example to understand this point. Suppose a priceless piece of diamond is covered by a thick layer of dust or mud or is smeared in slush; it might also be covered in a thick sheath of dirty cloth. Now, seen from the outside this diamond would appear a worthless piece of stone of no great value to a layman who would be more inclined to judge this diamond by its external looks, shine and polish rather than even attempt to find out its real intrinsic value or worth.

On the other hand, an expert diamond merchant or anyone who knows the real worth of a diamond would 'see' its intrinsic value and worth instead of being fooled by its covering of dust, slush or the dirty cloth. Even if the diamond appears lusterless and drab because it is not polished and therefore lacks its brilliant shine, he knows that this physical appearance is not the reason why he should reject it, nor is it the deciding factor as to the intrinsic or inherent worthiness or otherwise of the given sample of diamond.

Now, these two men are asked 'what is it'? The first man would reply that it is a worthless stone and should be thrown away, while the other would say it's a priceless gem and should immediately be grabbed. The majority of people who hear the second man would call him 'mad' because the diamond does not physically and externally appear to be what he says; rather it looks true that it is worthless as diagnosed by the first man. So, while the diamond is discarded by the first man, it is grabbed by both the hands by the second man. Amongst the audience, a person would be deemed to be wise and intelligent if he decides to research about the worthiness or otherwise of this diamond himself, or would prefer to accept the advice given by an expert in gems who knows his turf and is aware of what he is saying.

In the field of spiritualism and metaphysics, one would be doing well if he follows the advice given by the scriptures because they know precisely what they are saying better than anyone else. So we see that the external appearances can be very misleading, erroneous and fallacious. Hence, it is absolutely wrong to decide about the truth and reality of anything by relying upon its external appearances only.]

98. Even as the pure crystal, which is inherently colourless, only reflects the colour of its surroundings without itself become coloured or tainted, the basically pure inner-self only appears to be superficially involved in doing the various deeds necessitated by the demands of existential life in this world, but internally it is absolutely unaffected by any of the deeds or their results, good or bad. [In other words, a wise, erudite, self-realised and enlightened man is not at all moved by his surroundings or circumstances or events in this ever-changing world. He maintains his exemplary calmness, steadiness, tranquility, serenity and poise in spite of the turmoil and changes characteristic of this deluding and transient world that surges around him in a continuous flow of waves. He would do what he is supposed to do, and even do it with full attention of mind so that the task is done with the best of his abilities, but internally he is not at all influenced or affected by either the deed done or the consequences that accrue due to those deeds. In fact, he is a firm believer in the eclectic doctrine that his true 'self' known as the Atma is not the doer of anything, and that all the deeds that are done in this world are actually done by the gross body. He would have inculcated in him a high degree of dispassion and detachment not only from the deeds but also from the world so much so that he expects nothing as a fruit of the efforts made by him. His neutrality and non-involvement as well as his transcendental state of existence which goes beyond the gross and the mundane level in which this world exists is proved when he neither demands his share of the rewards of good and auspicious deeds, nor feels sorry or any measure of regret or frustration when the expected results are not forthcoming.

Thus, his inner-self remains pure and untainted as ever. It is not at all affected by the numerous delusions and faults associated with this world. None of the negativity associated with the gross world and equally gross body ever are able to corrupt his immaculacy and pure inner-self which remains as absolutely clean, pristine pure, incorruptible and untainted as a piece of pure crystal.

Just like the case of a crystal appearing to be superficially darkened when some shadow falls on it, or assumes the colour of its immediate surroundings without allowing its inherent purity and cleanliness to be at all affected by them, the inner-self of a wise, self-realised and enlightened man too appears to be superficially involved in the affairs of the world like an ordinary creature, but internally and intrinsically it is always consistently immaculate, untainted, un-corrupt and pristine pure.] (98).

99. He (i.e. the man who possesses the grand virtues outlined in the foregoing verses) moves around in the world as if he has no worries, regrets or sorrows of any kind, singing merrily like a lark and spending his time worshipping and singing praises to the supreme Lord. But internally he is calm and neutral.

[In other words, on the surface it appears that he is greatly enjoying his life which is devoted to the Lord and is involving himself in the various formal rituals that revolve around worshipping and showing honour to the Supreme Being because he exhibits such external signs as undertaking physical process of formal worship, participating in ceremonies and festivals, doing rituals and offering formal prayers etc., but actually these deeds or actions of his are only superficial and done by the body. Internally, his inner-self known as the Atma, which is his 'actual and truthful self', is not at involved in them in any of the formal forms of worship of the Lord at all. He knows that the Lord he worships and adores, the Lord to whom he offers prayers and whose glories he sings is not present outside anywhere in this world, but the Lord is present within his own 'inner-self' as the 'sublime, pure and divine consciousness' that is known as the Atma. This Atma is no other entity but the 'cosmic Atma' known as Brahm, the cosmic Consciousness itself, which resides inside his bosom as his 'true self'.

The visible signs of blessedness marked by ecstasy, exhilaration, happiness and joy are superficial or external indications of his being in constant communion with the supreme Lord internally. External forms of worship are done by the body, and prayers come within the jurisdiction of the faculty of speech. But it must be remembered that all these steps do not mark the pinnacle of spiritual enlightenment—simply because it has already been said that the Supreme Being is beyond the scope of the mind and intellect as well as the faculty of speech, and therefore he cannot be praised in words which have their own limitations, he cannot be worshipped in any gross form in an equally gross world. This is because 'he' is extremely sublime and subtle, and he has no physical forms and its attributes. The Lord is not present outside anywhere in the world; rather 'he' lives in the inner-self of the worshipper himself.

The supreme Brahm is formless and without any kind of attributes as it is an ethereal entity known as cosmic Consciousness. This 'cosmic Consciousness' resides in the gross body of the creature as his Atma or his 'pure self'. So how can Brahm be worshipped outside when it resides inside one's own bosom?

Besides this, a self-realised, truly wise and enlightened man is expected to have cultivated total neutrality towards everything that has an external dimension, and therefore remains aloof from whatever the body does. Since external forms of worship and offering of prayers involving the gross body and its sense organs as a way of honouring the Lord, paying obeisance to him and remembering him is a tradition in this mundane world which perceives and understands everything only from the physical perspective rather than the sublime and the subtle, the wise man also allows himself to participate in this ritual because otherwise he would be insulting the Lord. But internally he is just observing formalities associated with mundane existence.]

Such a wise, enlightened and self-realised person obtains a high degree of equanimity, neutrality and fortitude, always remaining stoic, even, calm, poised, unruffled, unmoved and unaffected by anything at all. Therefore, he is neither subjected to sorrows and grief on the one hand, or to happiness and joys on the other hand.

Even as pure crystal is unaffected or untainted internally by any of the numerous colours and the shadows of the surrounding world that fall on it (as described in detail in verse no. 98 above), such a man is also unaffected internally by

the company in which he has to live in this world. The world and the society have no influence upon him and his inner-self; none of their negativities, corruptions and shortcomings have any sort of effect upon him (99).

100. He does not praise anyone. He remains free from any kind of faults and shortcomings. He does not know what is worship or praiseworthy, nor does he know who is to be worshipped and praised.

[This is because of two basic reasons—(i) Firstly, he sees non-duality in this world. He sees only one transcendental Brahm or the cosmic supreme Consciousness prevailing everywhere, he knows that whatever that exists in this creation is nothing but one or the other form of Brahm or the cosmic supreme Consciousness, so there is no cause for distinguishing between any two given entities, and regarding one as being worthy of worship and honour, and the other as not. (ii) And secondly, he knows that this Brahm resides in his own ‘self’ as his Atma, as his own pure consciousness, that this Brahm is the only Truth in creation, that ‘Truth’ has no physical forms, that the ‘consciousness’ is beyond the reach of the faculty of speech and the grasp of the mind and the intellect, so therefore one would be doing wrong by praising someone or something else that is not this Brahm, not this consciousness, not this Truth. Hence, praising another man for instance, a man who has a gross body and numerous limitations that do not apply to the only Lord of creation, is best avoided as it is ignorance-based and would be highly improper, un-behaving and unbecoming for a wise and learned man of his enlightened and exalted stature.]

Such an enlightened and self-realised man does not distinguish between union and separation.

[This is because he has cultivated the eclectic view-point of non-duality in creation. He sees uniformity and universality in creation. He is of the view that the ‘true self’ of a creature is his pure conscious Atma which is an ethereal entity, this Atma is Brahm personified, Brahm has the sublime virtues associated with the sky or air element—i.e. it is immutable, indivisible, inalienable, uniform, universal, eternal and one infinite whole. Hence, there is no question of one entity in creation being ‘separate’ from the other in its fundamental form, or one creature being separated from the other due to any reason whatsoever, death for instance. This is because what separates the two creatures from one another, or what creates an illusion of separation between them, is the gross body which has physical dimensions, limitations and reach. The body of creature ‘A’ would be obviously different and therefore separate from the body of another creature ‘B’.

But the ‘true self’ of the concerned creatures is not their bodies but their Atma which is an ethereal, universal, divine and all-pervading cosmic entity known as the ‘consciousness’ which is non-dual, immutable and constant. Hence, this Atma is the same in all the living beings though their physical bodies are independent of each other. Therefore, in their basic form all the creatures are primarily inseparable and indistinguishable from one another, because their basic identity is their Atma and not the gross body.

Hence, for a wise, enlightened and self-realised man there is no cause of there being any kind of separation between any two given creatures or entities in creation.

For the same reason there is no reason for there being a separate ‘union’ between them—because there has been no separation in the first place. From the metaphysical and spiritual perspective it means that the individual’s Atma and the supreme Lord of creation known as the Parmatma are one entity that are inseparable from one another. The individual and the Parmatma appear to be different and

separated from one another because of the erroneous and fallacious notion that uses the gross body and its physical appearances to identify any single entity.

The only difference perhaps is in the plane of existence that they are perceived in—for while the individual's Atma exists at the plane of the gross perishable world, the Parmatma exists at the plane of the sublime and eternal world.

Another reason for this appearance of separation is that while the term 'Atma' is employed to indicate the cosmic consciousness as it exists at the microcosmic level in the body of the individual living being known as the Jiva, the term 'Parmatma', literally meaning the 'supreme Atma', is employed to indicate the same cosmic consciousness but exists at the macrocosmic level of existence. The term 'Parmatma' is synonymous with the Supreme Being, the supreme transcendental Brahm, while the term 'Atma' refers to the Soul, whether it is of the individual creature or of the entire creation.]

Being endowed with such highly evolved thoughts, eclectic views and ripened mind, being a thoroughly enlightened, extremely wizened and a highly self-realised man he remains free from the obligations and compulsions of having to conform to traditional ways of behaviour and conduct. He does not have to follow any routine set of rules and laws in this world. [In other words, he does not have to follow any given set of rituals to worship the Lord; he does not need a prayer book or remember any set of hymns by heart to pray to the Lord; he does not need to do any specific kind of auspicious or noble deed to cleanse his inner-self or absolve himself of the bad and evil consequences of his sins and misdemeanors; he does not have to practice any given set of sacraments and observe other religious practices in order to prove that he is a holy man; he is not expected to do anything or conform to anything to prove his enlightened and self-realised exalted and transcendental state of existence.

He therefore does not have to do anything especial to attain Mukti (liberation, deliverance, salvation, emancipation)—because Mukti is natural for him; it is a natural progression for him; it is effortlessly obtained by him. In fact, he has already broken free from the shackles of ignorance and delusions, and lives a life free as a bird flying freely in the sky.] (100).

101. For a truly wise and enlightened man it does not matter whether he leaves his gross body (i.e. dies) in a pilgrim site or in the house of a low-caste man, because for him both are equal. True knowledge has kindled enlightenment of the highest order in him, and he has no desire or preference for one kind of death over the other. Such a man is sure to find Mukti, or spiritual liberation and deliverance.

[He understands that the body is inherently gross and is like a sack of despicable things such as urine, stool, mucous, blood, bones, veins etc. None of the constituent parts of the body are holy and praiseworthy. Besides it, his 'true self' is the pure conscious Atma which is absolutely holy and immaculate as well as distinct from the body. The Atma leaves the body or discards it much like a snake peeling off its external cuticle and wriggling out of it. His spiritual destiny does not depend upon where this gross and despicable body is abandoned, but on what he had done during his lifetime as well as the thoughts that were in his mind and the desires he had at the time of leaving the gross body. So, if his mind is fixed on the supreme transcendental Brahm, he will surely reach this destination notwithstanding the physical place where he dies. If, on the contrary, his mind yearns for the world and its material comforts and pleasures at the time of death, if he is attached to this gross world and its charms, then merely dying in a pilgrim site would do him no good.] (101).

102. To have various Sankalps¹ (volitions, making vows, determinations, aspirations, firm desires related to anything in the world) is the main cause of tying a creature in fetters that shackle him to this world. Therefore, a wise and erudite man must abandon all forms of Sankalps.

True Moksha (real and final freedom; true emancipation and salvation; liberation and deliverance) comes when one has abandoned all kinds of Sankalps (102).

[Note—¹The word *Sankalp* refers to the various ambitions, desires and aspirations that a creature has, and his decision, his volition, his firm determination, the strong vows and resolutions that he makes in order to be successful in fulfilling them in this world. All these are all collectively called Sankalp. It is under the influence of delusions and erroneous conception of the 'truth' about the world and its material objects as well as about his own self and the real goal of life and spiritual well being that one harbours numerous ambitions and has so many aspirations that impel him to make so many resolutions and vows for their realisation, and then these decisions drive him to do so many things in the hope of achieving that illusive success in obtaining eternal well being and peace for himself which he so eagerly yearns for. These different Sankalps are therefore motivated and driven by delusions and erroneous conception of the 'truth'.

The concept is described in detail in the following Upanishads also—(i) Sam Veda's Chandogya Upanishad, Canto 7, section 4. (ii) Krishna Yajur Veda's Tejobindu Upanishad, Canto 3, verse no. 67, Canto 5, verse nos. 2, 16, 63, 97-98. (iii) Atharva Veda's, Prashna Upanishad, Canto 3, verse no. 10.

Refer also to our present Annapurna Upanishad, Canto 5, verse nos. 23, 43, 47-48, 103-104 in this context.]

103. Be alert that all desires, wants and yearnings related to this mundane and entrapping occur because there is a relationship or link between the thing desired or wanted or yearned for and the person who desires or wants or yearns for them. This creates a determination in the person to acquire those things that he desires; he will make a firm vow to do his best to attain success in reaching his goal desired for in life; he will make all efforts to fulfill his wishes; he aspires to achieve success in all his endeavours that would help him satisfy his hunger for the things desired or yearned for.

In short, the genesis of having various Sankalps lies in the existence of a link between this world and its objects on the one hand, and the concerned creature on the other hand. Obviously, if this link is broken or dismantled, the Sankalps would come to an automatic end.

Hence, in order to inculcate the auspicious and noble virtue of not having any kind of worldly Sankalps, i.e. to remain neutral, dispassionate, detached, indifferent and stable, one must break the link between his consciousness and the gross existence. In other words, he must cultivate wisdom of the highest order, become self-realised, and acquire true knowledge of the Truth and Reality of existence in order to find fruitful Moksha or Mukti, i.e. to find true freedom from all entanglements that tie down a creature to this world of delusions and its countless temptations that are basically entrapping by nature (103).

104. Do not have the notion that there is something worthy of acceptance, and that there is someone who accepts. Do not think in these terms that there is a distinction between one thing and the other.

In other words, do not harbour any kind of desires for any thing by thinking that you do not have it and therefore you must acquire it. If such thoughts are not

banished from you, they would impel you to harbour various desires and make determined bid to acquire them—which means you will harbour various Vasanas for them and then make numerous Sankalps to fulfill them. Therefore you would be well advised to discard all notions and thoughts of all kinds by becoming absolutely neutral and detached from everything in this world (104).

105. If you harbour even the slightest thought that a certain thing is dear to you or attractive for you or beneficial for you, then you are deemed to be shackled and bonded to it and the world in which it exists.

On the other hand, if you have developed the level of wisdom and neutrality that inspires a natural sense of detachment, dispassion and renunciation in you, when you naturally do not have any desire or attraction for anything arising in your inner-self, it is then that you are deemed to be liberated and delivered from all fetters that shackle ordinary creatures to this entrapping and deluding world and its numerous temptations inspite of your living in the same world like an ordinary creature.

[This is because internally you would be not attached to anything; you would not be shackled to anything, or bound in fetters by anything. You would be like a free man living in a house, rather than a bonded slave living in the same house. A wise man would be doing his assigned duties in the gross world through his equally gross body without getting involved in anything at the subtle level of his internal self. Therefore, his 'self', i.e. his Atma, remains free from all the entanglements that ordinarily results by being involved in this world. He is deemed to be Mukta or free.] (105).

106. Do not harbour any trace of attachment with or having any sort of interest in anything in this gross world, right from the inconsequential blade of grass or a worthless twig to your own body that seems to be so precious for you.

This exemplary level of un-attachment and dispassion should be all-inclusive and holistic in nature. That is, you must apply this noble and eclectic virtue on all things in this world—whether it is movable (such as living beings) or immovable (such as rocks and trees). Do not have any interest in them at any level of your existence [Refer also to verse no. 118 of the present Canto.] (106).

107. Do not harbour thoughts that a particular thing is truthful, good and auspicious, and the other is not. Become totally dispassionate and neutral towards everything. Develop equanimity and train your mind to remain even, calm, serene, detached and steady under all circumstances.

A person who has developed and practices such high level of detachment and dispassion is the one who lives a life in the Turiya state. That is, he lives a life of transcendental existence by rising above the mundane and gross considerations, and instead dwelling at a sublime plane of existence. He is able to translate the theoretical aspects of Turiya state of existence of consciousness into a practical way of life.

[That is, inspite of living in a gross world and allowing his body to do the necessary things as expected of him, he remains aloof from and untainted by any of the things of this gross world and its numerous deluding temptations.] (107).

108. The thoughts, beliefs, ideas, convictions and emotions that are auspicious, noble, righteous and holy, that are steady themselves and make the creature who is fortunate enough to possess them also equally steady and unwavering in his chosen spiritual path by inculcating in him a high degree of equanimity and evenness of mind, that

make him quiet, calm, serene, tranquil and rested (as opposed to those thoughts or emotions or beliefs that create an atmosphere of uncertainty, perplexities and confusion in him)—are the ones which empower and actually lead to the concerned creature's spiritual liberation and deliverance even while he is alive and has to live in a gross body that interacts with the gross physical world.

In other words, such a creature who acquires the above auspicious virtues attains 'Jivan Mukti'—i.e. he obtains the exalted state of being spiritually liberated and delivered from the shackles of this mundane life even while he is alive, has a gross body, and interacts in a routine manner with this mundane world of material sense objects. None of the temptations and turmoil of the physical world would ever be successful in chipping into and deforming or fracturing his eternally calm and peaceful inner-self (108).

109. The Turiya (i.e. the transcendental) state of exalted existence is neither the Jagrat state (or waking state) nor the Swpana state (or dreaming state)—because during the Turiya state there is no trace of any kind of Sankalps at all. [The Sankalps are the various volitions, vows, firm desires and determinations that a creature makes in relation to the gross world and its numerous sense objects as well as various achievements and fulfillments that are to be attained in this world. This situation prevails only as long as the creature is aware of the world; he desires fruits that accrue to him by voluntarily getting involved in doing various deed with an avowed aim of attaining success in fulfilling his desires in this world. When the mind and the sub-conscious become defunct during the Turiya state of existence, the world and its material attractions simply cease to exist and matter. For all practical purposes, a creature who has reached the transcendental state of Turiya is as good as dead vis-à-vis the world. He neither is concerned with the physical world that prevails in the Jagrat or waking state, or the imaginary world that exists in the Swapna or dreaming state.]

The Turiya state is not even the Sushupta state of existence (i.e. the deep sleep state) because in the latter case the creature lies like a gross and lifeless log of wood. [During the Sushupta state he neither thinks nor imagines. Since the mind is defunct, he does not perceive anything of the world, he does not have to apply his intelligence either to analyse them and make deductions and choices. At the same time, his sub-conscious is asleep, so that he does not even file away any sort of information in his memory bank for future referral. But the Turiya state is not lifeless and gross like the condition that prevails during the Sushupta state—for in the Turiya state he is very much alert and active, but this is limited to his physical body and that aspect of the mind that is concerned with routine mundane affairs. His inner-self, his sub-conscious and subtle mind is not at all involved in what his physical body does and remain immune to all the sensory impulses gathered by the sense organs of perception. So in effect it means that he would appear to be going about his life in a routine manner like other compatriots, but internally he is neither involved nor aware of anything. Thus, he is peaceful and calm inspite of being surrounded by the torrent of existential problems in this world. This is equivalent to the electic state of existence known as Samadhi.] (109).

110. Those who are of a calm, controlled and stable mind, temperament and demeanours, those who are truly wise, enlightened, sagacious and erudite see the physical world in which they live in the same way that they would see it in a Truiya (transcendental) state of existence.

[That is, they do not get involved in anything related to this gross world of deluding material charms; they do not allow their inner-self to be at all influenced by any of the tainting and deluding effects of the world despite living in it in an ordinary manner and participating in its activities in a normal manner; they do not get entangled in anything in this world, and remain aloof and distanced from them at all levels of existence, viz. the emotional, the sentimental, the intellectual, as well as both the active and subtle levels of the mind which includes the sub-conscious.

They do not shun the world and run away from their duties and responsibilities, but their inner-self remains fully anchored to the grand virtues of peace and tranquility that such wise and enlightened men have acquired for themselves. They are not affected by the world in the least; they do not lose their calm and poise under any circumstance or provocation; they treat the world and its material sense objects as being virtually non-existent at the level of their mind and sub-conscious. Thus, it really does not matter to them whether or not the world exists, whether or not they interact with it or perform various deeds in it.

They have realised that it is the gross body that actually lives and comes in contact with the equally gross world, and that their 'true self' is not the body but the pure conscious Atma which is immaculate and independent of both the body and the world. It is the body that does deeds and interacts with the world, it is the body that either suffers or enjoys the material charms and pleasures of the world, and not the Atma. The world is transient, unsteady, changing and perishable like the body, but the Atma is unlike them both. So, a wise man lives in a transcendental state of Turiya all the time. He treats the world and everything else with marked stoic neutrality, indifference, detachment and dispassion. His calmness and composure is never disturbed or affected; it is all-pervasive and overwhelming.]

On the other hand is a man who is ignorant and deluded. He treats this body as his 'self' and this world as 'true'. Therefore, he is submerged and sucked-in in the rapidly turning whirlpool of this ever-changing and unfaithful world that is most deluding and entrapping. He is then tossed and kicked around by its countless surging waves representing agonies, pains, miseries and torments, and is made all the more wretched, miserable and restless by the body's never-ending demands for gratification and its physical sufferings. He naturally would lose all semblances of peace and calmness; he is never steady, rested and composed. [His condition is like a plank of wood caught in the rough sea during a fierce storm, or in a vicious whirlpool somewhere in the middle of the ocean.] (110).

111. When all Ahankar (pride and ego) is extinguished, when one develops a high degree of equanimity, fortitude and neutrality as well as an evenness of mind and demeanours, and when all the mischief, restlessness and wayward tendencies of the Chitta (mind and sub-conscious) are reined in—it is then the creature is said to have achieved the Turiya (transcendental) state of existence (111).

112. It is an unequivocal opinion or a definitive proclamation of all the scriptures that when all Maya (delusions) and Avidya (ignorance) are eliminated, what remains is indeed the Truth. It corresponds to the transcendental supreme state of existence which is absolutely calm, peaceful, composed, serene and tranquil, as well as the state when there is no perplexity, consternation, confusion, bewilderment and doubt. This state is verily the exalted state of Brahm-realisation (112).

113. This Brahm (or the state of Brahm-hood) is marked by extreme calmness and peacefulness. It is like the eternal, infinite and imperishable sky. It is pure, untainted, un-corrupt and immaculate of the highest order. It is self-restrained and orderly. It is constant, unwavering, steady, unchanging and immutable.

Indeed, this Brahm is none but the Atma or soul of creation. It is the famous and almighty supreme Lord of creation (113).

114. Oh Anagh (one who is sinless; here referring to Nidagh)! Become silent and composed. Abandon all mental and intellectual restlessness and perplexities.

Discard all inclinations to think of anything; be neutral and immune to all thoughts (because any kind of thought would entangle you in a web of doubts and confusions as there are numerous doctrines and many aspects of the same Truth which would create more confusions in your mind than removing them, and two, thoughts would keep you on your toes and would not allow you to rest even for a while).

Leave aside all the Vrittis (natural inclinations and temperaments) that are the integral part of the Chitta (mind and sub-conscious). [Refer Canto 1, verse no. 42.]

Be of an exemplary calmness of mind and composed demeanours; cultivate a high degree of mental steadiness. This will pave the way for your Nirvana—or the final spiritual liberation, deliverance, salvation and emancipation. [Refer Canto 5, verse no. 86.] (114).

115. By dwelling in the thoughts of the Atma, the pure consciousness, by taking the shelter of the Atma, by remaining in close proximity of the Atma that resides in your (Nidagh's) inner-self, become as calm, tranquil, serene and peaceful as the Atma itself.

Acquire an external appearance of a man who is dumb and speaks nothing, a man who is blind and sees nothing, or a man who is deaf and hears nothing. [In other words, become quiet and self-contented. Behave as if you are ignorant and stupid inspite of being highly wise, self-realised and enlightened—because this unconventional and odd demeanour would help you to avoid unnecessary mental disturbance and constant nagging by this world, for you would be deemed to be useless for the inhabitants of this selfish world who have a natural tendency to tend to only those people who serve their self-interests. You would be left to yourself in obscurity to live a serene life in peace and tranquility.]

Turn inwards and dwell in your quintessential inner-self rather than being extrovert and dwelling on the objects of the senses in this material world of temptations.

Become thoroughly cleansed of, or be free from all worldly impurities, corruptions, shortcomings and faults that might taint your inner-self.

This will make you fully contented and fulfilled. You would have acquired wholesome enlightenment and self-realisation (115).

116. Oh Dwij (a respected Brahmin; a wise and learned man of high birth)! Even while you are awake, behave as if you are fast asleep. [That is, even while you go about your routine life in this world, remain totally indifferent to and detached from everything in it. It is an aphorism for remaining distanced from this world despite physically living in it. This is equivalent to the Turiya state of existence as described in this Upanishad.]

Do what is necessary and prudent in this world according to the demands of the prevailing condition or situation at the time, but do not allow your inner-self to be entangled in it or affected by it or influenced by it at any internal level of the sub-

conscious and the Atma. Remain internally detached and distanced from everything that you do with your gross external body while you interact with the world. Maintain your exemplary dispassionate attitude towards the world inspite of being buffeted by numerous inputs of temptations that constantly bombard you while you remain active in this physical world. Let none of the external behaviours and environment of the gross physical world of material sense objects ever affect or influence your inner-self; let none of the impurities, faults, shortcomings, pollutions and corruptions of the gross world ever taint or tarnish your inner-self and compromise on its immaculacy and pristine pure nature (116).

117. 'The Chitta (mind and sub-conscious) is powerful and authoritative, it can supersede me, it can undercut my resolve and firm determination to remain aloof and detached from this world, it can cause hindrance in my spiritual progress, and development of wisdom and enlightenment, it is hard to rein in, etc.'—these notions are the cause of all the great miseries and problems that you face.

On the other hand, the notion that the 'Chitta has no existence if I do not wish it to be relevant, that the Chitta has an importance only as long as I wish it to be so, or that the Chitta is subordinate to me' is a harbinger of great peace and happiness.

[The creature perceives this world and is tempted or attracted by the numerous objects in it by the medium of the mind and the sub-conscious. The mind keeps the creature on tenterhooks, and never allows him to rest in peace. He wants this and that; he is always un-contented and miserable. On the other hand, when the mind and the sub-conscious are tamed, the creature is able to find peace and rest.

Hence, to treat the Chitta as being the Authority which must be obeyed is the cause of all grief, and to treat the Chitta as being merely an instrument in attaining one's goals in life would make the same Chitta a provider of peace and happiness.]

Therefore, dissolve your Chitta in the Chidakash (the infinite subtle sky that surrounds the consciousness). Vanquish it for good.

[It is an aphorism for making the mind and sub-conscious irrelevant in the context of the consciousness. The sky is a vast, fathomless and infinite vacant space. Anything that is crushed and strewn in its deep bowls would be lost for ever, irretrievably and untraceably. So, the idea here is that a spiritual aspirant must vanquish his Chitta to such an extent that it becomes irrelevant and cause no obstacles in his spiritual progress and development once and for all.] (117).

118. Just like a piece of stone cannot distinguish between any given two entities and treat one as beautiful, charming and attractive while the other as ugly and repulsive, you too should adopt the same attitude towards everything in this mundane gross world. Treat all things equally, and develop a high degree of equanimity, neutrality and dispassion towards them. For you all things must be alike, whether they are charming, beautiful and attractive or not just like the instance of the stone cited herein above. [Refer Canto 5, verse no. 106 also.]

With this state of the mind and attitude it is possible for one to overcome all emotions and thoughts that develop in him vis-à-vis the world. He would be able to literally conquer the world (118).

119. The great philosophical truths that were proclaimed at the beginning of creation are the ones which are reiterated in the scriptures called the Vedanta or the Upanishads. It should not be taught to those who do not have the proper aptitude and properly attuned mind-intellect that can receive this knowledge and understand it

correctly. It should also not be taught to anyone who is not one's son or a devoted disciple. [That is, this eclectic knowledge should not be given to incompetent people as they would make a mockery of it. It is just like the case of not handing over the scalpel to an un-authorized or an incompetent or ill-trained or unscrupulous man who pretends to be surgeon, but is not even a third-rate doctor, as that would be tantamount to giving him a license for mass murder.] (119).

120. A fortunate person who is initiated into the grand and eclectic spiritual knowledge enshrined in this Annapurna Upanishad by a learned and acclaimed teacher is able to become Jivan Mukta (i.e. he is able to attain spiritual liberation and deliverance even while he is alive) and attain the high stature of being Brahm-realised. Indeed, he becomes a personified form of Brahm himself.

Verily, this is what this Upanishad proclaims. Amen! (120).

-----Shanti Paath-----

-----*****-----*****-----

Chapter 17

Surya Upanishad/Suryo-panishad

This Upanishad is dedicated to the Sun God as a manifestation of the supreme transcendental Brahm. It affirms that both are one and the same Divinity, the Sun being a visible form of the invisible Brahm, the Supreme Being.

Since this is the case, the famous Gayatri Mantra (narrated in verse no. 2) which is used to offer prayers and obeisance to the Sun God is deemed to be actually meant for Brahm who is being worshipped through it in his manifested splendour and brilliant form as the celestial Sun. In Vedic times, the Sun was the principal deity to whom all worships were offered.

The Sun obviously was the natural choice to represent Brahm for the ancient sages and seers when they were searching for a visible and practical metaphor to act as symbol for the stupendous glories of Brahm and to be an apt image for the Supreme Being who is so esoteric, enigmatic and mysterious that it was simply impossible to truthfully give an idea of the immensity of the divinity, powers and dynamism of Brahm except to point out to the Sun as a personification of Brahm. When one saw the brilliant Sun he got an idea of the profundity and stupendity of Brahm's glories. The Sun's brilliant illumination, exceptional radiance and dazzling splendour could be easily and most naturally used as a metaphor for the matchless glorious virtues and the sublime divinity of Brahm. Like Brahm, the Sun was the epicenter of life on earth, and just like Brahm the entire creation revolved around the Sun as far as the creature was concerned. Therefore, in practical and physical terms, the Sun was a visible manifestation of Brahm. All worship that was offered to the Sun God was actually being offered to Brahm, the Supreme Being. Or we can say that when one wished to offer prayers to the Supreme Being, he did it to the Sun because the latter was deemed to be Brahm himself personified. All hymns, including the

famous Gayatri Mantra, dedicated to the Sun God are therefore actually meant for Brahm.

The astronomical fact that all the planets of the solar system revolve around the Sun and are held in their respective place or position in the void of space by the gravitational and magnetic pull of the Sun is a proof of the metaphysical philosophy that the entire creation revolves around Brahm, and it is dependent upon Brahm just like the planets depend upon the Sun for their survival. Had there been no Sun, the planets would collide with each other or drift away and get lost in the vast and fathomless bowls of the cosmos.

This Upanishad begins by naming the Rishi (the seer or sage who had first conceptualized this eclectic doctrine and composed the hymns in honour of the Sun God), the Devta (the patron deity of the hymns to whom the prayers are offered), and the Chanda (the poetical style employed in composing the hymns) of the famous Gayatri Mantra narrated in verse no. 2 of this Upanishad.

Verse nos. 3-6 outline the origin of this creation from the Sun God, emphasizing in its course that all the Gods of the Trinity as well as the supreme Brahm are represented in visible form of the Sun. Verse no. 7 describes the eight-letter divine Mantra of the Sun God. It is called the 'Suryaasthakshari Mantra'. Finally, the benefits of repeating this Mantra are enumerated in verse no. 8. It is to be noted that this Upanishad gives results when its Mantras are offered to the Sun God in the Hindu month of Ashwini (roughly October) when the Sun is in the asterism of Hasta. It is believed that this empowers the worshipper to overcome the fear of death also.

A hymn especially dedicated to the Sun God, called the 'Surya Sukta', is included as a separate appendix of this volume. The Savitri Upanishad of the Sam Veda tradition is also very relevant in the context of this Surya Upanishad; it is included as Chapter 13 of volume no. 2 in this series.

-----*****-----

----Shanti Paath----

The meaning of this Shanti Paath is given in appendix no. 1 of this volume.

1. Now we shall elucidate upon the Upanishad expounded by sage Atharvaangiras¹. The Rishi (the one who had first pronounced it) of the great Mantra is Brahma, the creator; its Chanda (style of composition) is Gayatri²; and its Devta (patron God or deity to whom it is offered or who is honoured by its hymns) is Aditya, the Sun God.

Its Beej (seed) Mantra is 'Hansa' and 'So-a-Ham'³ which are empowered by the dynamism of the Fire God known as 'Agni-Narayan'. Its Shakti (inherent energy, vitality, strength and dynamism) is known as 'Hrillekha' (eager desire, agility, impatience, avidity, ardour, yearning and curiosity). Its Kilak (peg) is 'Viyat' (the infinite sky and other elements related to creation)⁴.

This Mantra (hymn of this Upanishad) is invoked for achieving success in obtaining all the four great fruits of one's endeavours⁵.

A wise and erudite person is known and honoured as Brahmin (i.e. a learned and wise one) only if he fully understands the metaphysical import and the significance of the Sun when he offers prayers in the form of the Gayatri Mantra and offers his worship to the Sun God. He must understand why worship is offered to the Sun instead of other entities, and the importance of the celestial Sun vis-à-vis the

creation from the perspective of life in this world (i.e. life on earth where he lives). He must realise that the celestial Sun is not merely a heavenly body like so many other stars in the cosmos but a living and personified form of Brahm, thereby making the invisible Brahm visible to the creature in all its magnificence, majesty, brilliance, splendour and finery.

The Sun is a living symbol, a visible image and an apt metaphor for the supreme transcendental Brahm. The Sun is the pivot around which the entire wheel of creation (i.e. life on earth; the world with which the worshipper is directly concerned) rotates. The Sun is the base which supports the edifice of life in this world. It is the harbinger of life, its progenitor, its sustainer, its nourisher and its protector.

The Sun is at the core of this world, and has the same relation with it as the Beej Mantra has with any given Mantra, and the vowels have with the Sanskrit language. The Sun God is present as the essence of the six vowels of the Sanskrit language⁶.

While offering worship, the Beej Mantra is employed to do what is known as Shandanga Nyas⁷. [It is the process whereby the energy and dynamism of any given Mantra are invoked and established on six important points on the body of the worshipper.] In the present case it implies that the Beej Mantra of the Sun God is invoked to do Shandanga Nyas by the worshipper. Shandanga Nyas is also called Anga-Nyas because the powers and dynamism of the Mantra is being invoked and established on 'six parts' ('Shad') of the worshipper's body ('Anga').

So, when a learned Brahmin offers his worship to the Sun God and uses the famous Gayatri Mantra to honour the Sun, or offers his oblations to the Sun God by making offerings to the sacred fire during the sacrifice—he is actually worshipping and paying his obeisance to the Supreme Being known as Brahm. When he is offering his worship to the celestial Sun, he is not doing so in favour of some lifeless celestial gross body which one of so many other brilliant stars in the vast bosom of the cosmos, but he is actually worshipping Brahm who is as dynamic, brilliant, luminous, radiant, splendorous, self-illuminated, eternal and life-sustaining as the Sun. He recognizes these facts and is fully aware that what he offers as oblations and whatever prayers he offers to the Sun are actually being offered to the Supreme Being. This wisdom and intellectual enlightenment is the basis why a person is called a true Brahmin.

[In other words, if he does not understand the significance and importance of the Sun from the perspective of metaphysics and spiritualism, his worshipping the Sun goes in vain. No spiritual benefit is obtained by him if he merely goes through the rituals and motions of offering worship or repeating a set pattern of words in the form of hymns mechanically without knowing to whom they are actually being offered or for whom they are meant.]

To facilitate worship and to aid easy access to the Lord known as the Sun God who represents Brahm, his form as a deity is visualized. This form of a deity has the following characteristics—The Sun God is honourably seated on a red lotus flower. He rides a magnificent and divine chariot having seven brilliant horses⁸. His countenance is like molten gold or yolk of an egg (i.e. shining or glowing yellow). He has four arms (like that of Lord Vishnu the sustainer and protector of creation) out of which two hold a lotus flower each, the third is held in the 'Var Mudra' (a posture that grants the boon of fulfillment of all the desires of his worshippers, devotees and refuge seekers), and the fourth hand is held in 'Abhaya Mudra' (a posture that grants fearlessness).

He is the divine Lord who keeps the 'Kaal Chakra' (the wheel of life consisting of an endless cycle of birth and death) rotating (1).

[Note—¹*Atharvaangiras*—The name is used to refer to two ancient sages who are credited for starting the worship of the Fire, and by implication of the Sun God as the latter is a cosmic receptacle of the eternal fire element. Now let us have a brief view of the life of these two great sages.

(a) *Sage Atharva*—Sage Atharva is the ancient sage who first revealed the fourth Veda called after his name, i.e. the Atharva Veda. He was the son of Brahma, the creator, according to Vedic mythology. He first brought down fire from the heaven to earth, and hence was the first sage to have propagated the worship of the sacred fire. The word 'athar' is the absolute word for the fire element, and hence this sage was named 'Atharvan' to commemorate this auspicious deed of his. He made the supreme Fire God, who is synonymous with the dynamic powers of the Supreme Being called Brahm, make this earth as his habitat, thereby paving the way for the forthcoming generations to utilise the stupendous powers and potentials of this fire element in practical terms here on earth itself. Since he brought the fire down on earth, he was also the first to initiate the process of worship of this element, both in its sublime form as the Fire God and its more tangible and gross form as the sacred fire worshipped during formal ritual of the fire sacrifice as well as in other informal forms as done by various sections of society in their daily lives. In fact, sage Atharva was considered as the Fire manifested, so pure and holy he was.

When he brought the Fire God in the form of the sacred fire from the heaven, he offered Soma (the extract of a herb called Som and used as a holy and sanctified liquid-offering meant to be offered to the Gods for their eternal life and sustenance) to him to please him and to show respect to this God who was now the guest of honour for Atharvan. In order to please him further while offering Soma to him, the sage chanted the hymns that he had learned from his father, the creator Brahma. This started the practice of offering of Soma to the sacred fire during the ritual of the fire sacrifice along with the chanting of hymns of the Atharva Veda.

According to the Purans, his earthly wife was Shanti, the daughter of Kardama Prajapati. He is regarded as a personification of the Fire God, and is often invoked in conjunction with another great sage named Angiras (who was another son of Brahma). In this form he is called 'Atharvangiras' (Atharvan + Angiras) and is regarded as the father of the Fire God to commemorate the fact that these two sages are responsible for the honour and exalted position that the Fire God occupies in the pantheon of Gods, and also the fact that they were responsible for propagating the worship of the fire as the most holy and the most sacred form of worship of the Supreme Being.

According to Mundakopanishad of Atharva Veda, Mundak 1, section 1, verse no. 1, Atharva is the eldest of the six mental-born sons of Brahma. Brahma had first taught him the best metaphysical knowledge called Brahm Vidya, and Atharva had later taught it to Angiras, his younger brother and first disciple (Mundakopanishad, 1/1/2). The descendents of Atharva came to be known as Atharvaan, and those of Angira as Angiras. One of the many important sages preached by sage Atharva was Shandilya/Shandilya, son of sage Shandila, and this teaching is contained in an Upanishad called the 'Shandilya Upanishad' dedicated to sage Shandilya to commemorate this great occasion. This is the fourteenth Upanishad of the Atharva Veda tradition and deals with Yoga and Brahm-realisation.

Since sage Atharva had started the practice of worship of the Fire God in the form of the sacred fire of the fire sacrifice and had used the initial Mantras taught to him by his father Brahma, the Mantra of this Veda came to be known after him as 'Atharvaa', and since his brother Angira had carried forward this practice started by his older brother by actually invoking these Mantras during formal sacrifices held from time to time after the first exercise, the Mantras came to be known after both the brothers 'Atharvaangiras'.

The Mantras of the Atharva Veda which were initially pronounced by sage Atharva came to be known after him as 'Atharvaa', and those by the two brothers jointly as 'Atharvaangiras'.

According to Mahabharat, the great epic related to Lord Krishna penned by sage Veda Vyas, Atharva had searched out the fire concealed in the ocean (Mahabharat, Vanparva, 222).

Some of the Upanishads taught by sage Atharva are the following—Atharva Veda's Prashna Upanishad, Mundak Upanishad, Atharva Shikha Upanishad and Shandilya Upanishad—all belonging to the Atharva Veda tradition.

Since he was the worshipper of the Fire God, it is natural for him to worship the Sun God as a manifestation not only of the supreme Brahm but also of the Fire God. The hymns dedicated to the Sun God as contained in the Surya Upanishad of the Atharva Veda, which is the seventh Upanishad of this Veda, is attributed jointly to sages Angira and Atharva.

(b) *Sage Angira*— This sage was associated with the branch of ancient sages who adored and worshipped the sacred Fire as a manifestation of the Supreme Being. A number of Vedic hymns are attributed to him. He is the sage who first started the ancient tradition of 'fire worship', was the first sacrificer and the forefather of sacred rituals. He had achieved such great mastery of the fire element that he could replace the Fire God and take over his duties during rituals if the latter did not oblige the worshipper. The Purans describe him variously as being the mental-born son of Brahma, the creator, and as having sprung forth from the sacrificial fire of the Varun God (the Water God; also sometimes referred to as the Sun because the latter is responsible for rains).

He is believed to have four wives who were actually personified eclectic virtues that he possessed rather than any physical woman—Vasuddhaa (personified absolute purity), Shraddhaa (personified faith and conviction), Svadhaa (personified self realisation and self restraint) and Sati (personified chastity and immaculacy). Brishaspati, the moral preceptor of the Gods, was one of his sons. The Pittars (the Spirits of dead ancestors) are also believed to be his sons. His daughters are the following—Raka, Sinivaalli, Kuhu which are actually phases of the moon rather than any physical lass.

He is lauded as the great teacher of Brahm Vidya, the metaphysical knowledge of Brahm, the supreme transcendental cosmic Absolute. This explains why he is associated with such prime and incorruptible elements of Nature as fire and light—the former is the great universal purifier and the infuser of life in this creation, while the latter is synonymous with truth, enlightenment, knowledge, erudition and wisdom. Being self-realised and a titan amongst the great sage of his time who initiated the tradition of worship of fire and light, he is regarded as an embodiment of illumination, and this is why he is visualised as being associated with illuminated objects in the dark sky, such as the planet Jupiter and a star in the constellation Ursa Major.

Being an exalted sage and seer, he is regarded as being one of the 'Saptarishis'—the great seven Rishis of the first Manvantara (the age or era of Manu, the first Male of creation).

The disciples of Angira adopted his name as their surname or title, and hence came to be known as 'Aangiras'—the descendants of Angira. They were Kshatriyas (the warrior class) by birth, but Brahmins by vocation and practice. They were said to be experts in sacerdotal laws, performance of occult practices such as magic and holding traditional rites.

Angira is credited with authoring the book of Law, called Angiras Smriti, and a book on Astronomy. The Angiras Smriti is a short book having 151 verses and deals mainly with repentance of sins.

Sage Angira was the younger brother of sage Atharva who was the eldest son of Brahma. Brahma had taught the great metaphysical knowledge called Brahm Vidya,

the knowledge that enlightens the creature about the supreme Brahm who is the ultimate Absolute Truth, the Reality and pure conscious cosmic Soul of creation, first to Atharva, and then Atharva had taught it to his brother Angira—refer Mundak Upanishad of Atharva Veda, Mundak (Canto) 1, section 1, verse no. 2. These two brothers are credited with starting the practice of worship of the Fire God in the form of the sacred fire of the fire sacrifice as well as other forms of the fire as worshipped by different sections of the society.

Since he was the worshipper of the Fire God, it is natural for him to worship the Sun God as a manifestation not only of the supreme Brahm but also of the Fire God. The hymns dedicated to the Sun God as contained in the Surya Upanishad of the Atharva Veda, which is the seventh Upanishad of this Veda, is attributed jointly to sages Angira and Atharva.

²Gayatri Chanda—The *Gayatri Chanda* has 24 letters and syllables in all which are divided into 3 steps or stanzas of 8 letters or syllables each. Hence the total is $3 \times 8 = 24$.

³References to the two eclectic Mantras *So-a-Ham* and *Hans*—(a) *So-a-Ham* = This Mantra has been described in a number of Upanishads—viz. (i) Sam Veda = Yogchudamani Upanishad, verse no. 83. (ii) Krishna Yajur Veda = Brahm Vidya Upanishad, verse no. 34, 78-79; Yogshikha Upanishad, Canto 1, verse nos. 131-133; Panch Brahm Upanishad, verse no. 28; Varaaha Upanishad, Canto 2, verse no. 17, Canto 4, verse nos. 1.11-2, Canto 5, verse nos. 69-72. (iii) Atharva Veda = Tripadvibhut Maha-Narayan Upanishad, Canto 5, paragraph no. 15; Pashupata Brahm Upanishad, Canto 1, verse nos. 12-32; Canto 2, verse no. 1; Surya Upanishad, verse no. 1.

(b) The Mantra *Hans*—There are a number of Upanishads that describe the Hans Mantra—viz. (a) Krishna Yajur Veda—Shwetashwatar Upanishad, Canto 2, verse no. 6; Canto 6, verse no. 15; Tejobindu Upanishad, Canto 1, verse no. 3-4; Dhyan Bindu Upanishad, verse nos. 24, 61-65; Brahm Vidya Upanishad, verse nos. 16, 20-28, 34, 60-64, 78-79; Yogshikha Upanishad, Canto 1, verse nos. 131, Canto 2, verse nos. 5, 9-11, Canto 6, verse no. 20, 53-54; Yogtattva Upanishad, verse no. 99; Varaaha Upanishad, Canto 5, verse no. 52, 54-55. (b) Shukla Yajur Veda—Hanso-panishad is exclusively dedicated to explain the concept of the pure conscious Atma by way of using the metaphor of a Hans. (c) Sam Veda—Yogchudamani Upanishad, verse no. 31-35, 82-83, 93. (iv) Atharva Veda—Tripadvibhut Maha-Narayan Upanishad, Canto 5, paragraph no. 15; Tripura Tapini Upanishad, Canto 4, paragraph no. 13 (which asserts that the Hans Mantra should be repeated continuously and silently by a spiritual aspirant); Surya Upanishad, verse no. 1.

⁴The *Beej Mantra*, its Shakti and its Kilak—The Beej Mantra is the seed from which the rest of the Mantra is formulated. Just like a huge tree depends upon its seed to come into being, the Mantra too depends upon the Beej Mantra for its structure coming into being. Sans the Beej Mantra, the rest of the Mantra loses its effect, dynamism, strength, vitality, powers and meaning. Likewise, the world would lose its energy and dynamism without the Sun. The world draws its strength, energy and vital life-sustaining forces from the Sun in the form of its light and heat just like the Mantra does from the Beej Mantra.

Any Mantra has the following six parts—

(i) The *Rishi of a Mantra* is the sage or 'seer' who had first visualised a particular Mantra as a divine formula having stupendous spiritual and mystical powers and potentials. He was the one who was the first person who had envisioned a particular metaphysical concept during one of his meditative trances.

He had first visualised or conceived this Mantra, he is the one who had first discovered this mystical formula, then determined and verified its astounding mystical and divine authority, majestic potentials, glorious spiritual powers, and proved its efficacy not only in the sphere of metaphysics and spiritualism but also in more materialistic terms as having certain mysterious powers, which when properly

harnessed, could give worldly rewards or benefits to the user of these mystical Mantras. He had tested the effectiveness and potential powers of the esoteric Mantra, and then given it the status of a holy and divine mystical formula which can enable the worshipper to attain desired results. Such divine and eclectic revelations were made known to the rest of the world in the form of hymns composed in various poetical composition styles called Chandas.

Hence, the Rishi of a Mantra is the one who had first conceptualised it, who had first discovered it, who had first composed its hymns and witnessed its powerful might first hand. He tested the mystical powers of this hymn and then taught about it to his disciples for their welfare. Therefore, the Rishi is the first exponent of a particular Mantra as well as its first teacher and preacher. He is honoured for this by first remembering him when worshipping a chosen deity through a particular Mantra in order to pay homage to his memory and seek his blessings. He was like a modern day scientist who does long research and arrives at some astounding discovery and tests its truthfulness and effectiveness in practical terms. Then that discovery is named after him.

The Mantra was prescribed as a divine mystical formula that could be used for doing Japa (repetition of some spiritual formula that can give the seeker the benefits that he seeks), as a mystical formula to be used during formal religious fire sacrificial rituals, as a means to concentrate the mind and intellect on the divinity during meditation and contemplation, and as esoteric and magical charm to be used as cryptic symbols of certain occult forms of worship where charm instruments, called the Yantra, are used to invoke divine blessings and intercession.

Thus, they rendered the otherwise mere neutral letter or group of letters into something divine and sublime, and infused it with supernatural powers, bestowing them with their renowned importance, significance and value. Therefore, the name of this particular sage or seer was invoked along with the invocation of the Mantra to honour his contribution as is the practice even in modern times when chemicals and formulae and various other scientific discoveries such as stars, comets, galaxies, distant black holes etc., or new concepts in physics, chemistry, mathematics, astronomy and other sciences are named after the scientist who first discovered them.

The difference between a *Rishi* and a *Muni* is that the latter did not divulge their realisation but preferred to keep their spiritual discoveries to themselves as the word 'Muni' is derived from the root Mana means the subtle mind and heart. On the other hand, the 'Rishis' used to preach and teach others about their astounding spiritual realisation and discoveries.

(ii) The *Chanda* is the classical style of poetic composition in which the Mantra is composed. For example, the most popular style is called 'Gayatri' in which there are three lines of eight letters or syllables, totaling twenty four letters or syllables in all.

(iii) The *Devta* or God is the patron deity to whom the Mantra is dedicated. Usually it is the supreme transcendental Brahm to whom the Mantra is devoted. But in case specific God or Goddess is being worshipped using a Mantra, then it would be obviously that particular God or Goddess who would be the Devta. For instance, Goddess Saraswati is the patron goddess being worshipped by using Mantras specifically dedicated to her as said in Saraswati Rahasya Upanidhad, verse no. 5 of Krishna Yajur Veda tradition.

(iv) The *Beej*, literally the seed, is the syllable or letter which is the basic sound-form from which the Mantra has sprouted much like a tall tree having its origin in the humble 'seed'. During formal ritualistic forms of worship using worship instruments as well as during the process of 'Anga Nyas', which is the invocation of the chosen deity and assigning various designated parts of the body where this deity is to invest its supernatural powers for the benefit of the worshipper. The Beej Mantra is the root or seed formula around which a particular Mantra is built, and which gives the Mantra its basic and inherent power and mystical strength.

(v) The *Shakti* of the Mantra is the mystical, astounding, divine and holy cosmic dynamic powers that the particular Mantra possesses; the latent and powerful energy of the Mantra which makes it so effective and praiseworthy. The Shakti is the concealed latent but most magnificent and dynamic potentials of the Mantra which are reflective of the patron deity's supernatural authority and powers. The Shakti is the mystical dynamic cosmic powers of Nature that are encrypted in the Mantra's syllables and letters. In other words, the mysterious power, authority and dynamism of the Mantra is called its 'Shakti'. Or, the Mantra is the worshipped deity manifested in the words or letters of the Mantra, complete with all its supernatural powers and authority. The word Shakti itself means 'energy', so the Shakti of the Mantra is the Mantra's dynamic energy that is subtly present in it in a coded form. Proper use of the Mantra helps to de-code this energy and unleash or activate it.

(vii) The *Kilak* is like the peg that helps a Mantra to be established in the body of the worshipper of a particular deity of that Mantra, or to the mystical worship instrument used during occult practices to invoke the supernatural powers of the deity thorough this Mantra and invest this instrument with these divine and mystical supernatural powers. It is like a nail to fix the Mantra at the designated point in the body.

⁵The four great fruits—(a) Artha—meaning wealth and material prosperity; (b) Kaam—meaning fulfillment of all desires; (c) Dharma—meaning possession of auspicious and righteous virtues; and (d) Moksha—meaning obtaining spiritual liberation, deliverance, emancipation and salvation.

⁶The vowels are at the core of the Sanskrit language. All sounds are based on these vowels. They are added as prefixes or suffixes to the consonants and other vowels to form different letters and words. Therefore, if the vowel is eliminated from the language, the latter would become a cacophony of meaningless sounds and unable to survive just like this vast world of myriad variations and countless forms which would not exist if there is no Sun.

The six basic vowel sounds of the Sanskrit language are the following—(i) 'A' as pronounced in *along*, *sun*; (ii) 'E' as in *if*, *nip*; (iii) 'U' as in *full*, *wool*; (iv) 'Ay' as in *may*, *ray*; (v) 'O' as in *oh*, *organ*; and (vi) 'Ri' as in *ring*, *wring*.

⁷*Shadanga Anga-Nyas* —*Anga Nyas* and *Kar Nyas* of any Mantra using its seed or root called the 'Beej' of that Mantra are the two basic rituals of invoking the divine powers of the Mantras which are basically mystical formulas employed in religious practice, specially during occult rites and meditation of which this Khechhari is a part. The word 'Kar' means hand, and 'Anga' means body, while 'Nyas' refers to an invocation, or vesting or assigning any entity with something, or entrusting an entity with some trust and responsibility; to deposit, repose, trust, pledge, entrust, keep, place, etc. This is a ritualistic process in which certain parts of the body are touched and certain Mantras are said. It also means the purification of the individual parts of the body and the installation of the individual letter of the invoked Mantra, complete with its full potentials, at those points. Therefore, Anga Nyas is a process of pledging utmost faith and conviction on the divine and holy Mantra's supernatural powers and potentials by invoking it and reposting it on the various locations of the body and its vital parts, such as the limbs, the abdomen and chest, the throat and forehead etc.

In other words, the process of doing Anga Nyas is to symbolically establish the Mantra's divine mystical powers in the worshipper's own body and make it sinless, holy, auspicious, sanctified and empowered. The deity being worshipped is symbolically requested to come and take its seat in the body, thereby ensuring that the worshipper is not only getting constant protection from this godhead but also has been dutifully purified and made auspicious. The body is now the symbolic seat of Divinity represented by the deity, and from the metaphysical perspective it has been now officially made the abode of Brahm as all the Gods are nothing but manifestations of Brahm, the supreme transcendental Authority of creation. With the deity firmly established in the body of the worshipper, the latter is deemed to

personify all the glorious, majestic, divine and magnificent virtues exemplified by the worshipped deity.

In the context of the Beej Mantras, it refers to invoking their divine cosmic dynamic powers and establishing them on various parts of the body, or assigning the patron Gods of these seed Mantras some specific part of the body so that they can establish themselves there.

Hence, doing Kar Nyas with the Beej Mantras would be to establish these symbolic Gods representing the cosmic, divine and mystical powers that are encrypted in the different Beej Mantras on the hand of the practitioner, while Anga Nyas would be to do the same on other parts of the body such as the chest, abdomen, shoulders, throat, forehead etc.

Primarily there are six sites according to the same Ram Rahasya Upanishad's verse no. 23 where the primary seed or root words, called the Beej Mantras, are invoked. They are the following—the Brahm-randhra (top of the skull), the central point of the eyebrows, the heart, the navel, and the two thighs = 6 sites. Hence, invoking the Beej of any given Mantra and sanctifying these six locations by it is called *Shandanga Nyas*—the word 'Shad' meaning 'six', the word 'Anga' meaning 'parts of the body', and the word 'Nyas' meaning 'establishing the Mantra on these parts'.

The Shuk Rahasya Upanishad of Krishna Yajur Veda tradition, in its verse no. 20, describes how the divine Mantra OM is used for the purpose of doing 'Shadanga Nyas' and 'Anga Nyas'.

⁸The *seven magnificent horses of the Sun God*—These are represented by the seven colours of the sunlight. These colours are violet, indigo, blue, green, yellow, orange and red.]

2. [This verse is the famous Gayatri Mantra¹ dedicated to the Sun God.]

It is the supreme transcendental Brahm represented by the divine ethereal and monosyllabic word OM who pervades uniformly in this creation consisting of three planes of existence—viz. the terrestrial world represented by the word 'Bhu', the extra-terrestrial world (or the world above the surface of the earth) represented by the word 'Bhuvaha', and the heavenly worlds represented by the word 'Suwaha'.

He (Brahm) is the creator, sustainer, nourisher and protector of this creation. His majesty, grandeur, brilliance, splendour, radiance, dynamism, energy, powers, prowess and authority are represented by the celestial Sun. Therefore, the Sun is honoured and revered as a representative of the supreme Brahm. The Sun is indeed a metaphor and a symbol of the dynamism, the glories, the majesty and the magnificence of Brahm.

We honour the Lord (the Sun God as a visible manifestation of Brahm) and meditate upon his divine form that is holy and sublime.

Let this Lord inspire or motivate us and our mind-intellect to move towards wisdom, erudition, sagacity, knowledge and enlightenment, and away from the darkness of ignorance and delusions. [Just like the arrival of the Sun in the horizon removes the all-engulfing darkness of the night, let the knowledge of Brahm illuminate our inner-selves so that we can see the spiritual 'truth' hidden in our own bosoms, behind a thick blanket of ignorance and delusions, as the pure consciousness known as the Atma.]

Let the Sun light our spiritual path and pave the way for our emancipation and salvation; let the Sun give us proper intellect with wisdom and enlightenment so that we are purified and move on a path that is auspicious, righteous and noble.' (2).

[Note—¹The Gyatri Mantra—(a) The *Gayatri Mantra* has two versions which are presented here. According to one version, it is based on the typical 'Gayatri Chanda'

which is a poetical composition consisting of three stanzas or lines each having eight letters or syllables. The total number of letters or syllables is thus twenty four. The Gayatri extolled by Brihad Aranyak Upanishad, Canto 5, Brahman 14 is the one strictly conforming to this rule. On the other hand, the usual and commonly known Gayatri Mantra has four steps or stanzas and is based on the composition style called the 'Anushtup Chanda'.

The 'Gayatri Chanda' is used to compose the sacred hymns of the Vedas. Amongst the different composition styles, this is regarded as the best style of Chanda in which the Vedas were revealed (Jaimini Brahmin, 2/227) because it has the divine virtue and supernatural powers that provides protection to the Pran of the person who says the Gayatri Chanda and elevates his stature to that of the celestial Sun.

Let us first see the typical *Gayatri Chand pattern* of this divine Mantra. The Gayatri Mantra based on the style of this poetical composition is described in Brihad Aranyak Upanishad, Canto 5, Brahman 14, of the Shukla Yajur Veda tradition. This Mantra having three steps is extolled as the one which is superior to other forms of the Gayatri Mantra having four steps because this three-stepped Mantra is synonymous with Pran, i.e. it is the life or the essence of all that exists.

The Gayatri Mantra having three lines is the following—"Tatsaviturvarnyam Dhimahi Dhiyo Yo Naha Prachodayat". The fourth line honours and glorifies this Gayatri as a manifestation of the Sun God, and as brilliant and splendorous as it. It is—"Paro Rajase Savadoma". Since the Sun is a visible manifestation of the supreme Brahm who is the Transcendental Consciousness of the entire creation at the macro level, having the Atma resident in the bosom of the individual creature as its micro level counterpart and Pran as its subtle manifestation, the Gayatri Mantra is in honour of the supreme Authority of creation, i.e. Brahm.

Now the question arises that if the three lines are the complete Mantra, then what was the purpose of including the fourth line? It must be especially noted in this context here that this fourth step of leg of the Gayatri Mantra does not consist of any word which is a part of the main Mantra, but is only meant to establish its divine stature as the citadel for all spiritual Mantras; it is intended to give this Gayatri its place of honour in the pantheon of divine Mantras. Besides this, the fourth leg is visualised as a symbol of stability because anything that has four legs is more stable and steady as compared to one with only three.

Therefore, last stanza is like an epithet highlighting the magnificent divinity and spiritual value of the Gayatri Mantra. It is akin to the Sun shining in the sky, and all other planets and their satellites such as the moon shine because they reflect this light from their surface. The Sun is at the centre of the solar system even as the Gayatri is at the symbolic hub of all divinity and spiritually empowered Mantras. It is also akin to the Pran which supports life in a gross body of a creature and is an acronym for life as a whole. The Pran symbolically illuminates the dark realm of the body from the inside while the Sun does the same from the outside.

The actual Gayatri Mantra that should be preached to the spiritual aspirant consists of the first three steps as described in verse nos. 1-3 of Brihad Aranyak Upanishad, Canto 5, Brahman 14.

This famous Mantra is dedicated to the Sun God who is a manifestation of the supreme transcendental Brahm. It is this Mantra—which is a group of ethereal words having profound spiritual value and metaphysical importance. It is called Gayatri because it gave protection to the Pran--Brihad Aranyak Upanishad, Canto 5, Brahman 14, verse no. 4. It has been accepted as a manifestation of Pran in Shatpath Brahman, 1/3/5/15, while it is praised as having the potentials of Agni (fire) present in the faculty of speech known as Vak in Taittiriya Sanhita, 3/2/9/3, as Tej (energy) in Shatpath Brahman, 1/8/2/13, and as Brahm (the supreme transcendental consciousness) in Maitri Brahman, 4/3/1. According to the Purans (mythological histories of the Hindus), the Gayatri has been praised having manifested in the form of the Trinity Gods—Brahma the creator, Vishnu the sustainer, and Shiva the

concluder--Skanda Puran, Kashi Khand, Purva, 4/9/58. Whatever that exists is a revelation of Gayatri because it is a manifestation of Brahm—Chandogya Upanishad, 3/12/1. In fact this whole earth that gives refuge to all the life forms in this world is a manifestation of Gayatri-- Chandogya Upanishad, 3/12/2. By worshipping it, a person is blessed with worldly assets such as abundant livestock and flourishing family, a long, healthy and active life, wealth and fortunes, good name and fame, as well as spiritual attainment in the form of Brahm realisation—Atharva Veda, 19/71/1.

The Brihajjabal Upanishad of the Atharva Veda tradition, in its Brahman 3, verse no. 6 describes that this Gayatri Mantra should be pronounced while one collects the urine of the cow as a necessary step in a ritualistic process of preparing the sacred Bhasma or the ash of the fire sacrifice that is to be worn by a spiritual aspirant.

The Gayatri Mantra is mentioned in its primary form in the Brihad Aranyak Upanishad, Canto 5, Brahman 14 and other Upanishads, such as the Savitri Upanishad which is entirely dedicated to it, the Maitrayanyu Upanishad, Canto 5, verse no. 7, the Chandogya Upanishad, Canto 3, Section 12, verse nos. 1-9 belonging to the Sam Veda tradition, and Narsingh Tapini Upanishad of the Atharva Veda tradition, in its verse nos. 5-9. Besides these, the Gayatri Upanishad appears as eight assorted verses or Kandikas numbering 31-38 of the Gopath Brahman belonging to the Atharva Veda.

It has been said in the scriptures that Brahmins, the highest class amongst the humans and who are regarded as the most learned and wise amongst them, were born from Gayatri, thereby drawing a parallel between the highest stature and exalted standing of Brahmins amongst the creatures and the Gayatri amongst the hymns. It is pertinent to note here by the way that Kshatriyas, the warrior class, were born from the Chanda known as Trishtup, and Vaishya, the trading class, from the Chanda known as Jagati. In other words, the divine and eclectic powers encrypted in the Trishtup Chanda revealed themselves as the Kshatriya, and those of the Jagati as the Vaishya. The Trishtup Chanda has four lines each having eleven letters or syllables, totaling forty four letters or syllables in all, while the Jagati Chanda has six lines with eight letters or syllables each, totaling to forty eight letters or syllables.

The Tripadvibhut Maha Narayan Upanishad of the Atharva Veda describes *four Gayatri Mantras*. Canto 7, paragraph no. 40 mentions three Gayatri Mantras—viz. the Nrisingh Gayatri, the Sudarshan Gayatri and the Brahm Gayatri, while Canto 7, paragraph no. 54 mentions the fourth Gayatri Mantra called the Veda-Gayatri. Let us see what they are

(a) The *Nrisingh Gayatri Mantra* is ‘Vajra-nakhaaye Vidmahe Tikshna-dantraaye Dhimahi Tannaha Singaha Prachodayat’. Briefly it means ‘The Lord has nails as strong as Vajra (the sturdy weapon of Indra); he is splendorous as the electric; his teeth are very sharp; he is an embodiment of knowledge and intelligent; and he is in the form of a lion. Let me move towards this Lord to seek his blessings.’

(b) The *Sudarshan Gayatri Mantra* is ‘Sudarshanaaye Vidmahe Hetirajaaye Dhimahi Tanna-schakra-ha Prachodayat’. Briefly it means ‘The divine Sudarshan Chakra of the Lord is dazzling and blindingly splendorous like the electric; it is most dear to the supreme Lord of creation (Vishnu) and enables him to rule over the entire creation; this Lord is an embodiment of wisdom and skills; and this Sudarshan Chakra is indeed a manifestation of the Lord himself. Let me move towards this Chakra to seek its blessings.’

(c) The *Brahma Gayatri Mantra* is ‘Tatsavituvarenyam Bhargo Devasya Dhimahi Dhiyo Yo Naha Prachodayaat’. Briefly it means ‘That truthful and divine supreme Lord is luminous and splendorous as the self-illuminated Sun. He is excellent, the best, the most exalted, a destroyer of sins, and a divine entity. I offer my oblations to him. May he imbibe, infuse and inspire my intellect with wisdom and enlightenment so that I am purified and move on the righteous and noble path.’

(d) The *Veda Gayatri Mantra* is ‘OM Tatsavituvarenyam, OM Bhargo Devasya Dhimahi, OM Dhiyo Yo Naha Prachodayaat, OM Paro Rajase Saavadom Omaapo

Jyoti Rajoamritam Brahm Bhu Bhurvaha Suvoram.’ Briefly it means ‘OM salutations! That truthful and divine supreme Lord is luminous and splendorous as the self-illuminated Sun. OM salutations! He is excellent, the best, and the most exalted divine Lord who is a destroyer of sins. OM salutations! I offer my oblations to him. May he imbibe, infuse and inspire my intellect with wisdom and enlightenment so that I am purified and move on the righteous and noble path. OM salutations! The Lord is the Supreme Creator of creation. He has created the sky, the Vedas, the water, the light and the ambrosia of life called Amrit. He is the Brahm who has created the terrestrial world (Bhu), the world of the sky or lower heavens (Bhurva) and the upper heaven or the higher reaches of the cosmos.’

(e) This Gaytri Mantra appears in the Vedas as follows—the Rig Veda (3/62/10), the Sam Veda (1462), and Yajur Veda (3/35, 22/9, 30/2, 36/6).

(iii) There are 24 *Rishis of Gayatri Mantra*. They are the following— Vamdev, Atri, Vashistha, Shukra, Kanva, Parashar, Vishwamitra, Kapil, Shaunk, Yagyawalkya, Bharadwaj, Jamdagni, Gautam, Mudgal, Veda Vyas, Lomas, Agstya, Kaushik, Vatsa, Pulastya, Manduka, Durvasa, Narad and Kshyap.

The 24 Chandas (metres) of Gayatri Mantra are the following— Gayatri, Ushnik, Anushtup, Vrihati, Pankti, Trishtup, Jagati, Ati Jagati, Shakvari, Ati Shakvari, Dhriti, Ati Dhriti, Viraat, Prastarapankti, Kriti, Prakriti, Akriti, Vikriti, Sankriti, Aksarapankti, Bhu, Bhuvaha, Swaha and Jyotismati.

There are 24 *Devtas (Gods or patron deities) of Gayatri Mantra*. They are the following—Aagneya, Prajapati, Saumyam, Ish, Savitri, Aditya, Bhrishapti, Maitravarun, Bhagdaivatya, Aryamaishvar, Ganesh, Twastra, Paushna, Indra, Vayu, Vamdeo, Maitra Varunidaiv, Vaishvadev, Matrik, Vaishnav, Vasu Dev, Rudra Dev, Kuber and Ashwini.

The 24 *Shaktis* (divine powers or the female aspects of creation) of Gayatri Mantra are the following— Vaamdevi, Priya, Satya, Vishva, Bhadravilasini, Prabhawati, Jaya, Santa, Kanthaa, Durga, Saraswati, Vidruma, Vishlesa, Vyapini, Vimla, Tamopaharini, Sukhma, Vishwa-yoni, Jaya-vasa, Padmalya, Paraa, Sobha, Bhadra and Tripada.

The 24 *Varnas (colours or shades) of Gayatri Mantra* are the following — Campakam (yellow), Atasi (hemp), Vidrum (coral), Sphatik (crystal), Padam (lotus), Tarun-aditya (rising sun-red), a mixture of Shankha (conch), Kunda (white jasmine) and Indu (moon), Pravaal Padma (red-lotus), Padmaraga (emerald), Indranilamani (sapphire), Mukta (pearl), Kumkum (a red colour or copper colour made from the pollen of the flower of the plant *Crocus sativus*), Anjam (collyrium-black), Rakta (blood red), Vaidurya, Ksaudra (champa; yellow), Haldi (turmeric yellow), Kunda Dugdha (white as jasmine), Ravikanthi (sun-white), Shukpuccha (a tail of a parrot), Shat-patra (white lotus), Ketaki (light yellow), Mallika and Karavira.

The 24 *Tattvas (essence, elements, fundamental principles) of Gayatri Mantra* are the following—earth, water, fire, air, space (called the 5 Mahabhuts), smell, taste, vision, sound, touch (called the 5 Tanmatras), generative organ, excretory organ, feet, hand, mouth (called 5 organs of action), nose, tongue, eyes, skin, ear (called 5 organs of perception), Pran, Apan, Vyan and Samaan (called vital airs).

The 24 *Mudras (postures) of Gayatri Mantra* are the following— Sumukham and Samputam, Vitatam and Vistrutam, Dwimukham and Trimukham, Chaturmukham and Panchmukham, Sanmukham, Adhomukham, Vyapakanajalikam, Shakatam, Yampasham, Sanmukho-mukham, Vilambam, Mustikam (closed fist), Matsyam (fish like), Kurmam (tortoise), Varahakam (boar like), Singhkrantham (lion like), Mahakrantham (a great lion like), Mudgar (Pelion like), Pallavam, Trishulyoni (trident like), Surabhi (cow like), Akshamala, Lingakam (phallus like) and Ambujam (blue lotus).]

3. The Sun God is the Atma (the soul, the essence and the basic life infusing, life supporting and life protecting element) of this creation. [That is, without the Sun no life in any form is imaginable or viable in this world.] It is the Sun that is the cause of all life forms coming into being in this world—i.e. it is the Sun God who is the progenitor of all living beings in this world because it is the Sun that provides the world with its energy, heat, light to sustain life in it; it is the Sun God who is the harbinger of life on earth; it is the Sun God from whom all the life forms are born.

It is from the Sun that the Yagya (fire sacrifices), the Parjanya (the life-giving rain), the Anna (food; crops) and the Atma (consciousness; life and its vital signs) have come into existence. And it is the Sun that sustains and protects them all (3).

[Note—When we talk of ‘life’ and the ‘world’, we mean life on earth. It is a matter of established fact that of all the planets it is only the earth that harbours life as we know of it. It is also an equally established fact that all forms of life, whether in the form of single-celled organism such as the amoeba or paramecium, or the complex form of life such as the human being or the animal, are all dependent upon the Sun for their survival, either directly or indirectly. Members of the plant kingdom as well as the animal kingdom owe their existence to the Sun. If there was no sunshine, life would freeze to death. The very existence of the habitat of earth—known as the solar system—is dependent upon the Sun, and it is from the latter that it derives its name ‘solar system’. It is the gravitational and magnetic field of the Sun that holds the planets in their fixed circuit in the vast fathomless void of deep space, and prevents them from floating or drifting away into the deep abyss of the cosmos. It is the Sun that makes the planets revolve around it in a pre-determined circuit and in a systematic manner.

‘Life’ and ‘Sun’ are synonymous with each other. Dependence of life on the Sun is a metaphoric way of saying that existence depends upon Brahm, because the Sun is said to be a visible manifestation of the invisible Brahm. The Sun symbolizes all the best of the virtues and glories of Brahm; the Sun is a personified form of the dynamism, energy, brilliance, magnificence, splendour and majesty of Brahm; the Sun is the best instance of the life-sustaining and life-protecting virtues of Brahm because no life is sustainable or tenable without the presence of the Sun.

- (d) Krishna Yajur Veda = Akchu Upanishad, Cantos 1 and 2; Brahmo-panishad, verse no. 1; Taittiriya Upanishad, Valli 1, Anuvaak 1, verse no. 1; Valli 1, Anuvaak 5, verse no. 2; Shwetashwatar Upanishad, Canto 2; Naryan Upanishad, verse no. 1.
- (e) Atharva Veda = Prashna Upanishad, Canto 1, verse nos. 4-8; Surya Upanishad; Gayatri Upanishad; Pashupata Brahm Upanishad, Canto 1, verse no. 24, 27-28 (says that the Sun is a metaphor for Brahm); Tripura Tapini Upanishad, Canto 4, paragraph no. 11 (which highlights the importance of the worship of the Sun God); Brihajjabal Upanishad, Brahman 6, verse no. 12; Nrisingh Tapini Upanishad, Canto 1, verse no. 3; Tripadvibhut Maha Narayan Upanishad, Canto 4, paragraph no. 4 (Brahm as splendorous as the Sun).

The Sanskrit word for the Sun God or Aditya is *Surya*. This word has three connotations—viz. (i) Sarteha—one who moves. This refers to the Sun because it moves constantly across the sky. It also refers to the supreme cosmic Consciousness that makes all movement possible. (ii) Sviryate—this means one who receives and accepts. This virtue refers to the fact that all offerings offered to the fire sacrifice are done in the presence of the Sun, and since the latter is the celestial cauldron of fire all

the offerings are deemed to be offered to it. In another plane, it refers to the Jiva, the living being, who receives stimuli from the world and then accepts them and deduces that the world from where they originate is real and true. (iii) Suvateha—meaning one who shines. This is very obvious in the case of the Sun. This virtue refers to the supreme Self or supreme Consciousness that is self-illuminated and self-effulgent.

Sun God or Surya appears first in the Rig Veda, 1/50. He is one of the chief Gods that sustain life. He is closely related to the Fire God; the Sun is a visible manifestation of the fire element. The sun is regarded as the 'eye' of the Viraat Purush, and at the time of creation when this Viraat Purush revealed himself as the individual creature such as for example a cow, a horse and a man, the Sun God took up residence in the eye (refer Aitereyo-panishad of Rig Veda, Canto 1, verse no. 4, and Canto 2, verse nos. 3-4). He is also regarded as visible manifestation of the supreme transcendental Brahm (refer Brihad Aranyaka Upanishad, 2/1/2; 2/5/5; 3/7/9). The Sun God watched the deeds done by all the creatures (Rig Veda, 1/50/2). The Sun is like the Atma of all the creatures (Akchu Upanishad, Canto 1, verse no. 1; Rig Veda, 1/115/1; Shatpath Brahman, 14/3/2/9).

The Sun is the brightest, the most splendid, the brilliantly radiant, the most majestic and grandest entity in the entire firmament. The whole length and breadth of the sky is lit with its light; all the objects present in the sky, visible or invisible, are illuminated by its light. It is the eternal and infinite celestial source of light, heat and energy; it inspires, fosters, sustains and protects life in this world; it is synonymous with and a metaphor for life in all its dimensions. Its splendour and radiance makes it an apt metaphor for knowledge, wisdom, erudition, sagacity and enlightenment. As an embodiment of this virtue of knowledge, wisdom, erudition and sagacity he has been held in high esteem and as the great teacher and preacher of eclectic knowledge pertaining to the philosophy expounded by the Upanishads. He had assumed the form of a horse and revealed the Shukla Yajur Veda to the great sage Yagyavalkya. He was also the teacher of Hanuman, said to be incarnate Wind God and Lord Shiva, and who was the great, most ardent and the wisest devotee of Lord Ram.

From the physical perspective also, the Sun is regarded as a fount of light, energy and heat which supports life in all forms in this physical world. No life is imaginable without the presence of the Sun.

According to mythological accounts, the Sun God was the son of sage Kashyap and his wife Aditi from whom all the Gods were born. He is said to be a revelation from the eye of the Viraat Purush also known as Vishnu who is the macrocosmic all-pervading and all-encompassing vast and invisible form of the Supreme Being known as the transcendental Brahm. The physical Sun in the sky is the Viraat Purush's visible form. He was married to Sangya, the daughter of Vishwakarma who is regarded as the architect, builder and planner of the Gods. Sangya had two sons and one daughter from the Sun God—viz. the sons named Shraadha-dev also called Vaivaswat Manu and Yam the god of death, and the daughter named Yamuna which is also the name of a famous river in India. Sangya could not bear the intensity of the Sun's heat and light, so she left her 'shadow' or image and herself went away disguised as a mare to do severe penance. From this 'shadow' were produced two sons and a daughter. The two sons were Shani God who is believed to be full of malice and evil forebodings reflecting the genes of his mother as a dark shadow, and Saarvarni Manu, and the daughter was Tapti literally meaning one who is fierce and hot. In due course of time, the Sun God found out that his real wife Sangya was involved in doing severe Tapa, so he was extremely pleased with her and brought her back. It was from her form as a mare that the Ashwini Kumars were born. They derived their name from the root 'Ashwa' meaning a horse. These twin sons of the Sun God are regarded as the medicine men of the Gods.

The Sun is the source of light, heat and energy for this earth. The Sun regulates seasons and rains, it controls the cycle of day and night, thereby regulating all aspects of life on earth. It is a symbolic personified and visible form of Brahm, the sublime

form of the Supreme Being also known as the Viraat Purush, the vast and infinite macrocosmic form of Brahm. No life is imaginable without the Sun. Therefore, it is Pran personified. The Moon is lighted because of the Sun; the Moon has no light of its own but shines due the light of the Sun falling upon it. Therefore, the Moon showcases the magical power of the Sun to light up even distant bodies which have no light of their own. In other words, this Pran element represented by the Sun is capable of injecting life in an entity which has no life of its own, here the instance of the Moon. Since the Moon is lighted due to the inspiration provided by the Sun, it is like the Rayi. The Sun is the inspirer, and the Moon is the inspired one.

The Sun is an excellent example of the gross and the subtle aspects of Brahm. The eternal fire that is burning inside the disc of the Sun is the subtle aspect of Brahm; it provides the power and energy to the Sun to shine and burn. This fire is the 'inspirer' of the gross aspect of Brahm. The disc of the Sun is the 'inspired'—the heat, light and energy that the physical body of the Sun gives is due to the fire burning inside it, but no one can see this fire. The viewer sees the disc of the luminous Sun only which is the inspired aspect of the Sun. The hidden fire in the Sun is the Pran of the Sun because it lends the latter its worth and power to shine. This 'Pran' of the Sun, i.e. the fire burning inside the Sun is Brahm manifested in its subtle form. The visible disc of the Sun, with its dazzling brilliance and splendour, giving out heat, light and energy is the manifested aspect of Pran or Brahm; it is the gross body of Pran or Brahm. Hence, it is the Rayi of the Sun.

But the fire burning inside the Sun is not the complete picture of Brahm which is a transcendental entity that surpasses all definitions. At the most, the fire represents only one of the numerous virtues of Brahm. Therefore, to say that the hidden fire inside the Sun is Brahm personified in a subtle form is only a 'part or fraction' of the entire truth. In fact, the fire is a 'subtle image' of Brahm just like the external luminous disc of the Sun is the 'gross image' of Brahm. The fire embodies some of the grand virtues and characteristics of Brahm. The fire is the 'inspired' aspect of Brahm, and hence it is the 'Rayi' of Brahm because it is inspired by Brahm to burn and give out light and heat. In the context of the Sun, this fire becomes the 'inspirer' and the Sun becomes the 'inspired'. The Sun being a visible manifestation of the stupendous glories of Brahm is therefore the 'inspired' aspect of Brahm. The 'inspirer' Brahm is invisible. So when one worships the Sun as a manifestation of Brahm, he does so both in its subtle ('Amurta') and gross ('Murta') forms as mentioned in this verse. When the gross is worshipped, the subtle is automatically deemed to be worshipped. They both represent the 'inspired' aspect of the sublime Brahm that transcends both the gross and the subtle. Brahm is the universal 'inspirer' of both.

The Sun is at the core of life on earth; it helps in producing food crops of all varieties such as cereals, pulses, vegetables etc. that are eaten by the living being to survive and gain energy and strength. Without the light, energy and heat of the Sun there would be no vegetation on earth. Hence, the Sun is the 'inspirer' and the 'food' that is produced by the grace of the Sun is the inspired. When the food is eaten it gives the creature energy, strength and vitality. Therefore, that secret and invisible aspect of food that is used by the creature to derive energy, strength and vitality is the Pran of the food, while its external form, its external body is the gross aspect of this Pran. When this food is eaten and digested by the eater, the Pran is transferred to the eater in the form of the latter's own Pran, and the strength, energetic activity and vitality that the body of the eater shows is the inspired aspect of this Pran. The food therefore is the Pran, and the eater is the Rayi.

All the units of Nature that depend upon some Principal, such as the Moon depending for its light on the Sun, are called Rayi. These units may be visible (having a gross form) or invisible (having a subtle form).

In mythology, the Sun God revealed himself as Sugriv, the king of the monkey race, during Treta-Yug when Lord Ram incarnated, and as Karna during Dwapar when

Lord Krishna came as an incarnation of Vishnu. Sun God rides a chariot driven by Arun who is the son of Vintaa (his mother) and the elder brother of Garud, the legendary heron or eagle who is the mount of Lord Vishnu. The seven horses of the chariot represent the seven colours of the Sun's light. He is constantly on the move and controls and regulates the seasons, months, solstice and year.

The Surya Mandal, i.e. the divine abode of the Sun God, has been narrated in the Vishnu Puran, section 2, canto 10, verse nos. 1-23. It is also referred to in the Tripadvibhuti Upanishad of the Atharva Veda, Canto 5, paragraph no. 15 as falling in the path of a spiritual aspirant who, upon leaving his gross body, is going astride the Garud (the divine vehicle of Vishnu which is represented by the OM Mantra here) through the path of the sky to the heaven where Lord Vishnu lives.

Atharva Veda's *Pashupata Brahm Upanishad*, Canto 1, verse no. 28 describes why Aditya or the Sun God is worshipped by wise men. "Aditya (the Sun) illuminates the world (i.e. it provides the world its light, life, energy, heat and dynamism). This is why Aditya is worshipped and honoured by wise and erudite persons who seek purity and knowledge.

[The Sun gives 'light' and removes 'darkness'. In other words, it grants knowledge and wisdom by removing the darkness of delusions and ignorance. Since the celestial Sun is employed as a metaphor for Brahm and the Atma, it follows that one meditates and contemplates upon the latter two entities to attain true spiritual knowledge and enlightenment that would remove one's darkness caused by worldly delusions, and which is the cause of all his fears and perplexities.] (28)."

According to Yoga Upanishads, the Sun God has his symbolic presence in the navel of the body in the Nabhi Chakra or the Manipur Chakra, and as the fire element in the Mooladhar Chakra, the Swadhisthan Chakra and the Kundalini. The dynamic energy of the sun represented by its life-giving powers is revealed in the form of consciousness that flows in the Pingla Naadi, the nerve passing through the right nostril.

The *Akshu Upanishad* of the Krishna Yajur Veda tradition lists some of the virtues of the Sun God in its Canto 1, verse no. 1 which is exclusively dedicated to his grand virtues as follows—he provides the creature with the ability to see; he lights up the world for him; he provides the creation with its life and sustains it; he moves across the sky with his army of light rays to protect the world from darkness; he personifies the three basic Gunas of Sata, Raja and Tama much like Brahm; he takes the creature away from darkness representing delusions and ignorance towards light symbolising wisdom, knowledge, erudition and enlightenment; he is like the Swan—pure and immaculate; he is the bearer of life; he is the Jatveda (one having whatever is born or created as his property; the all-possessor; one who knows everything and is known by all creation; the word is usually applied as an epithet for the eternal fire element of which the sun is a visible manifestation and container); he is as intrinsically valuable as molten and purified gold; he is Tapa (austerity, penance, sufferance for a noble cause) personified; he is the emperor of creation and is crowned with a glittering crown and wears an equally glittering robe consisting of rays of the sunlight; he is the son of Aditi, the mother of Gods, and he lives as 'sight' in our eyes.

Aditya or the Sun God, or his visible form as the celestial Sun, has been repeatedly regarded by the Upanishads as a visible *manifestation of the Viraat Purush* who himself is the macrocosmic gross body of Brahm. For example, Sam Veda's Chandogya Upanishad—1/6/3, 5, 6; 1/10/7; 2/9; 2/14; 2/24/12-14; 3/1-11; 3/18; 5/13; 6/4/2 etc.; Shukla Yajur Veda's Brihad Aranyak Upanishad—2/1/2; 2/5/5; 3/7/9; 3/9/5; 5/15; Krishna Yajur Veda's Brahmo-panishad, verse no. 1; Taittiriya Upanishad, Valli 1, Anuvaak 5, verse no. 2.

He is the *eye* of the Supreme Being—refer Aiteriyo-panishad of Rig Veda, Canto 1, verse no. 4, and finds his abode in the creature's eye—refer Aiteriyo-panishad, Canto 2, verse no. 4.

The *Prashna Upanishad* of Atharva Veda, Canto 1, verse nos. 4-6, 8 describes the Sun God as the *Pran*—the vital life giving factor in creation, the life consciousness, and in Canto 1, verse nos. 9, 12-15 as *Prajapati*—the creator, motivator, nourisher, sustainer, protector and caretaker of the subjects of this creation. He is called the Fire God or the Vaishwanar Agni, the Viraat Purush, the Pran or life consciousness that supports all life in this world—Canto 1, verse no. 7.

The *Akchu Upanishad* of the Krishna Yajur Veda tradition is fully dedicated to the Sun God. It has two parts—in its Canto 1 sage Sankriti offers prayers to the Sun God, and Canto 2 contains the metaphysical and spiritual teachings of the Sun God for the benefit of the sage.

The *Taittiriya Upanishad* of the Krishna Yajur Veda tradition, in its Valli 1, Anuvaak 1, verse no. 1, says that the Sun God is known as 'Mitra', literally meaning a friend. This is because the Sun God's benevolence and life-sustaining abilities make him a fast friend of every single living being in creation. He fosters life and is a friend of life rather than being its enemy by annihilating it. He helps the world to develop and grow as well as to acquire its stupendous magnificence and glory—refer *Taittiriya Upanishad*, Valli 1, Anuvaak 5, verse no. 2.

He is also known as 'Savita'—refer *Savitru-panishad* of Sam Veda tradition, and *Shwetashwatar Upanishad*, Canto 2 of Krishna Yajur Veda tradition.

The *Narayan Upanishad* of Krishna Yajur Veda, in its verse no. 1 says that he was born from Lord Narayan, i.e. Lord Vishnu. The same thing is asserted in *Brahmo-panishad* of Krishna Yajur Veda, verse no. 1 which states that Aditya, the Sun God, is a manifestation of Lord Vishnu. But this is understandable because Vishnu and the Viraat Purush is the same Lord having different names according to the degree of subtlety and the scriptural text one is referring to; both are synonymously used. Whereas the Viraat Purush was the macrocosmic gross body of the supreme transcendental Brahm that appeared in the first stage of creation when Brahm decided to initiate it, he was called Vishnu at a little later stage when the visible creation was just about to be initiated, because it is from Vishnu that Brahma the creator was born who later gave shape to the creation itself.

The *Ram Uttar Tapini Upanishad* of the Atharva Veda, Canto 5, verse no. 4/27 says that Surya or the Sun God is a manifestation of Lord Ram who himself is the supreme transcendental Brahm personified.

The Sun God is one of the ten Lokpals or custodians of the world because all forms of life on earth revolve around the benevolence of the Sun.

'Aditya' or the Sun God appears in the Vedas as follows—Rig Veda-- 1/41/4-6; 2/27; 8/47/14-18; 10/185; Sam Veda—395; 397; Yajur Veda—23/5; 34/54; Atharva Veda—5/3/9-10; 16/3.

The *Tripura Tapini Upanishad* of the Atharva Veda tradition, Canto 4, paragraph no. 11 describes the great Mantra of the Sun God.

The *Tripadvibhut Maha Narayan Upanishad* of the Atharva Veda tradition, Canto 4, paragraph no. 4 asserts that the supreme Brahm is comparable to the celestial Sun or Aditya in its splendour and visible glory.]

4. I bow most reverentially before Lord Aditya¹ (the Sun God). You are evidently the one who inspires all activities and the deeds done by all living beings. You are the visible manifestation of the Trinity Gods such as Brahma the creator, Vishnu the sustainer, nourisher and protector, and Rudra the concluder of creation. You are a personified form of the four Vedas, viz. the Rig, the Yajur, the Sam and the Atharva. Therefore, you are an evident revelation of the Chandas (because the Vedas are composed in Chandas which are special poetical styles in which their hymns are composed) (4).

[Note—¹Aditya— According to mythology, there are said to be *twelve Adityas* which are simply as many forms of the Sun God. These are the revelations of Brahm in the

form of the Sun to carry out the following functions of creation—(a) take care of the world (Rig Veda, 2/27/4); (b) are like the heads (Taittiriya Brahman, 1/2/3/3) and eyes (Jaimini, Uttar. 2/1/2/3) of all the creatures.

The *Ram Uttar Tapini Upanishad* of the Atharva Veda, Canto 5, verse no. 4/34 says that the Adityas are none but manifestations of Lord Ram who himself is the supreme transcendental Brahm personified.

These twelve Adityas appear first in the Rig Veda 1/41/4-6 and 2/27. They are the sons of Aditi, the mother of Gods (Atharva Veda, 8/9/21). They are the following—the eight Vasus + Indra + Sun + Vishnu + Shiva = twelve in number.

According to *Brihad Aranyak Upanishad* 3/9/5, the twelve months of the year represent these twelve Adityas, one month for one Aditya. In this Upanishad, sage Yagyawalkya draws a parallel between the twelve months of a year and the twelve Adityas for the following reasons—First, with the passage of one complete year, a corresponding number of years are subtracted from the total number of years that a person is supposed to live in this world. That is, death comes so much the nearer to him. The passage of the sun across the sky from dawn to dusk is used as a symbolic way of depicting the passage of the life of a man from his birth till his death. Since there are twelve mythological suns and twelve months in a year, a parallel is drawn between them and the life of a man.

Second, the whole life of an individual creature as well as the entire creation as a whole depends upon the various seasons that appear in a year. If even one of the seasons is disturbed, the entire cycle of life is disturbed correspondingly. For the smooth functioning of life, all the seasons must appear in a rhythmic and systematic manner, and it is a scientific fact that the seasons, upon which the life on earth is so dependent, also themselves depend upon the sun. That is why the Adityas are termed as being synonymous with the twelve months of the year as well as with the life cycle of creation.

According to Vishnu Puran, the twelve Adityas are the following—Dhata, Arayama, Mitra, Varun, Anshu, Bhug, Indra, Vivaswan, Pusha, Parjanya, Twashta and Vishnu.

The Sun God is worshipped by twelve names during the twelve months of a year. These names and the months are as follows—(1) as *Dhata* during the first Hindu month of Chaitra also known as Madhu (roughly corresponding to mid-March and mid-April); (2) as *Aryama* during the second Hindu month of Vaishakha also known as Madhav (roughly corresponding to mid-April to mid-May); (3) as *Mitra* during the third Hindu month of Jyestha also known as Shukra (roughly corresponding to mid-May and mid-June); (4) as *Varun* during the fourth Hindu month of Ashad also known as Shuchi (roughly corresponding to mid-June and mid-July); (5) as *Indra* during the fifth Hindu month of Sravan also known as Nabha (roughly corresponding to mid-July and mid-August); (6) as *Vivaswan* during the sixth Hindu month of Bhadrapad also known as Nabhasya (roughly corresponding to mid-August and mid-September); (7) as *Pusha* during the seventh Hindu month of Aashwani also known as Tapa (roughly corresponding to mid-September and mid-October); (8) as *Kratu* during the eighth Hindu month of Kartik also known as Tapasya (roughly corresponding to mid-October and mid-November); (9) as *Anshu* during the ninth Hindu month of Marga Shirsha also known as Saha (roughly corresponding to mid-November and mid-December); (10) as *Bhag* during the tenth Hindu month of Pausa also known as Pushya (roughly corresponding to mid-December and mid-January); (11) as *Twasta* during the eleventh Hindu month of Magh also known as Esh or Ish (roughly corresponding to mid-January and mid-February); and (12) as *Vishnu* during the twelfth Hindu month of Phalgun also known as Urj (roughly corresponding to mid-February and mid-March).

Since the Sun God is a manifestation of the Supreme Being known as Viraat Purush, he is like an Emperor who, during his sojourn across the sky which is like his vast realm, is accompanied by many sages called Rishis, celestial courtesans called

Apsaras, celestial musicians called Gandharvas, servants called Rakshas or demons, guards known as Bhalls, and serpents called Naags. The Rishis walk in the front singing the Lord's glories in sacred hymns; the Apsaras dance to the music scores by Gandharvas; the Rakshas (demons) push the chariot from rear; the Bhalls take care of the chariot and guide it along, while the Naags pull it forward.

These attendants are also different like the forms in which the Sun God is worshipped in different months as described above. The list is outlined month-wise in the following sequence—Rishi, Apsara, Gandharva, Raksha, Bhalla and Naag.

- (1) The month of Chaitra—Rishi is Pulastya; Apsara is Kritsthal; Gandharva is Tumburu; Raksha is Heti; Bhalla is Rathkrit; and Naag is Vasuki.
- (2) The month of Vaishakha—Rishi is Pulaha; Apsara is Punjiksthal; Gandharva is Narad; Raksha is Praheti; Bhalla is Ojaha; and Naag is Kachaneer.
- (3) The month of Jyestha—Rishi is Atri; Apsara is Menaka; Gandharva is Hahaa; Raksha is Paurusheya; Bhalla is Rathaswan; and Naag is Takshak.
- (4) The month of Ashadha—Rishi is Vashishta; Apsara is Rambha; Gandharva is Huhu; Raksha is Shukra; Bhalla is Chitraswan; and Naag is Sahajanya.
- (5) The month of Sravan—Rishi is Angira; Apsara is Pramlocha; Gandharva is Vishwaivasu; Raksha is Varya; Bhalla is Srota; and Naag is Elapatra.
- (6) The month of Bhadrapad—Rishi is Bhrgu; Apsara is Anumlocha; Gandharva is Ugrasen; Raksha is Vyagha; Bhalla is Aasaan; and Naag is Shankhapal.
- (7) The month of Ashwin—Rishi is Gautam; Apsara is Ghritaachi; Gandharva is Dhananjay; Raksha is Vaat; Bhalla is Suruchi; and Naag is Sushen.
- (8) The month of Kartik—Rishi is Bhardwaj; Apsara is Varchaa; Gandharva is Parjanya; Raksha is Senjit; Bhalla is Vishwa; and Naag is Earaawat.
- (9) The month of Margashirsha—Rishi is Kashyap; Apsara is Urvashi; Gandharva is Ritsen; Raksha is Vidyuchhatru; Bhalla is Taksharya; and Naag is Maashankha.
- (10) The month of Paush—Rishi is Aayu; Apsara is Purvachitti; Gandharva is Sfurja; Raksha is Arishtanemi; Bhalla is Uurna or Oorna; and Naag is Karkotak.
- (11) The month of Magh—Rishi is Jamdagni also known as Richik-tanaya; Apsara is Tilottama; Gandharva is Shatjit; Raksha is Brahmapet; Bhalla is Dhritrashttra; and Naag is Kambal.
- (12) The month of Phalgun—Rishi is Vishwamitra; Apsara is Rambha; Gandharva is Suryavarchaa; Raksha is Makhaapet; Bhalla is Satyajit; and Naag is Aswatar.

The *Nrisingh Purvatapini Upanishad* of the Atharva Veda, in its Brahman 1, verse no. 3 says that the Adityas, along with the Vasus and Rudras etc., were born out of the third step of the divine Anushtup Chanda in which the Mantra of Lord Nrisingh was revealed to the creator Brahma when he did severe Tapa in order to initiate the process of creation.

The *Devi Upanishad* of the Atharva Veda tradition, verse no. 4 says that the Adityas or the various forms of the Sun God are manifestations of the Mother Goddess, who actually represents the dynamism of the supreme transcendental Brahm, the Supreme Being. The Goddess is the energy, authority and powers of Brahm that are employed by the latter to create and control this creation, both at the macrocosmic level as well as the microcosmic level. The Aditya or the Sun God is this dynamism of Brahm revealed at the macrocosmic level.

The Sun is said to have *twelve Kalaas* (shapes, forms, dimensions or aspects) and the Sun with each Kalaa would therefore be known by that name. They are called 'Dwaadash Aditya', meaning the twelve forms in which the Sun God is known. They are the following—Tapini, Taapini, Dhumraa, Jwaalini, Ruchi, Shushumna, Bhogadaa, Vishwaa, Bodhini, Dhaarini and Kshamaa.

That is why lord Ram was said to belong to the solar race because he had twelve Kalaas possessed by the Sun. There is an obvious parallel here.

The *eight Adityas*—According to the Taittiriya Brahman, 1/1/9/1 gives the name of only eight Adityas—(i) Mitra, (ii) Varun (iii) Aryaman (iv) Ansha (v) Bhag (vi) Dhaata (vii) Indra, (viii) Vivaswan.]

5. It is from Aditya (the Sun God) that the primary elements of creation such as wind or air, earth, water and fire as well as light were born or created. The sky and directions also have their origin in Aditya. [These primary elements of creation owe their existence to the Sun.]

It is from Aditya that the Gods and the Vedas have emerged.

It is Aditya that heats up the universe in the sense that the former keeps the latter warm and provides it with its energy, vitality, strength and dynamism.

It is Aditya that is manifested in the form of the four aspects of the Anthakaran (the subtle aspects of the inner-self)—i.e. the Mana (subtle mind and subtle heart), Buddhi or intellect, Chitta or the mind and the sub-conscious, and Ahankar or pride and ego¹.

It is Aditya that is present in the form of the four vital winds called Pran that sustain and foster life in all living beings in this creation—viz. the Pran, Apaana, Samaana, Udaana, and Vyan².

It is Aditya (i.e. the dynamic but subtle life-infusing energy) that keeps the five organs of perception in the body active and alive. These organs are ears (that hear), skin (that feels), eyes (that see), tongue (that tastes and speaks), and nose (that smells and breathes).

It is Aditya that has revealed itself in the form of the five Tanmatras of the five organs of perception, or the active functions carried out by these five sense organs of perception—such as speech or voice (which relates to the ears because it is the ear that hears the word that is being spoken), touch and feeling (which relates to the skin), form, colour and shape (which relates to the eyes), taste (which relates to the tongue), and smell (which relates to the nose).

It is Aditya that has revealed itself in the form of the five Tanmatras of the five organs of action, or the active functions carried out by these five sense organs of action—such as the function of speech or voice which relates to the mouth (because it is the mouth through which a creature speaks), the function of taking, receiving or accepting anything which relates to the hands (because it is the hand by which a creature takes or receives or accepts anything), the function of going somewhere or the function of mobility which relates to the legs (because it is the leg which helps a creature to move and go to the desired destination), the function of excretion or elimination of waste from the body which relate to the excretory organs (because it is the anus and urinary organs which help a creature to remove waste products from the body), and the function of deriving pleasure which relates to the genital organ (because it is through this organ that a creature enjoys the immense pleasure that accompanies sex).

It is Aditya that is an embodiment of the virtues of Anand (bliss and happiness), Gyan (knowledge, wisdom, enlightenment), and Vigyan (analytical or higher level of Gyan)³ (5).

[Note—¹The four aspects of the *Antahakaran*—References: (i) Atharva Veda = Tripavibhuta Maha Narayan Upanishad, Canto 4, paragraph nos. 11-12; Canto 5, paragraph nos. 10-11 (how to clean the Antahakaran). (ii) Krishna Yajur Veda = Shaarirak Upanishad, verse no. 4. (iii) Shukla Yajur Veda = Trishikhi Brahman Upanishad, Canto 1, verse no. 6; Paingal Upanishad, Canto 1, verse no. 9; Canto 2, verse no. 3.

This is the subtle body of the creature consisting of four components such as the mind (Mana), the intellect (Buddhi), the faculty of reasoning, thought, discrimination, understanding and the ability to pay attention and focus the mind and intellect on any

subject (Chitta), and the notion of ego, pride and vanity, and their attendant arrogance and haughtiness (Ahankar).

The word *Antahakaran* literally means the ‘inner instrument’ of the creature by which his mind works and receives the world. The word has two components—viz. ‘Antaha’ meaning ‘inner’, and ‘Karan’ meaning ‘instrument that causes the mind to work’. The external organs of the body such as the eye, ear, nose, tongue and skin which are the organs of perception physically receive the inputs from the external world, but their actual functioning is due to this Antahakaran or the inner instrument of the subtle body consisting of the mind and intellect complex because if the latter malfunctions the former are useless.

Out the three states of existence of the creature, viz. the waking, the dreaming and the deep sleep states, the mind is active in the first two states only, and therefore the Antahakaran is related to only the first two states of existence. But even here its main field of activity is internal and not external as is implied in the word ‘Antaha’ itself which means ‘inner’. Therefore, the external organs of the body such as the organs of perception and action are only subsidiary and play an ancillary role only vis-à-vis the activity of the ‘inner self’ consisting of the mind, intellect and sub-conscious as well as the subtle heart which is the seat of various sentiments and emotions. This is simply because the inner self receives inputs from the outside world through the instrument of the external organs, and all the activity of the inner self in relation to the world in which the creature lives depend upon these external organs directly or indirectly.

The Antahakaran functions in four different ways and gets four different names according to these four functions. (1) It is called Chitta or sub-conscious mind and its ability to receive information and remember while performing the function of reception and retention. (2) It is called Mana or mind when it performs the function of questioning, doubting and willing. (3) It is called Buddhi or intellect when deducing, deciding and determining. And (4) it is called Ahankar or ego, self pride, arrogance of knowledge when it identifies itself with each of these functions—when it thinks that it has the ability to remember, to question and debate, to decide and will.

The word would therefore briefly mean the inner self of the creature consisting of the subtle body rather than the outer self consisting of the gross body. It is said to be one of the 19 Tattwas or essential elements that came into being at the very commencement of creation. According to the *Nrisingh Purvatapini Upanishad* of the Atharva Veda, Canto 4, verse no. 4, these 19 Tattwas are as follows—five organs of perception (eye, ear, nose, tongue and skin) + five organs of action (hand, leg, mouth, excretory and genital) + five Prans or vital winds or airs (Pran, Apaana, Samaana, Udaana and Vyan) + four Antahakarans (Mana, Buddhi, Chitta and Ahankar) = nineteen.

Depending upon how one interprets the word ‘Antahakaran’, it is said to have one, two, four or five components.

The Antahakaran *one dimension or aspect* is called the Mana, but this Mana itself has two subtler aspects—viz. the mind and the heart because the notion of Mana as it affects the inner self of the creature revolves around the various tugs, pulls, pushes and prodding that the different hues of character traits such as emotions, sentiments, impulsiveness, spontaneity etc. exert on the creature. The word ‘Mana’ cannot be restricted to the dictionary version of the term as meaning only the mind, because the heart plays an equal important role in the entire setup. This fact has been elaborately described in Tejobindu Upanishad of Krishna Yajur Veda, Canto 5, verse nos. 101-102.

The Antahakaran with *four dimensions* is described in Shaarirako-panishad of Krishna Yajur Veda tradition, in its verse no. 4. These four dimensions are Mana (mind), Buddhi (intellect), Chitta (sub-conscious) and Ahankar or Abhiman (pride, ego, arrogance, haughtiness, hypocrisy, vanity, false self-importance etc.). Again it would be noted that the subtle component of the heart play a secret role in this setup

because the ingredient of pride, ego, haughtiness and arrogance along with their sentimental and emotional quotient are very closely related with the heart.

The *Naradparivrajak Upanishad* of the Atharva Veda, in its Canto 5, verse no. 24 describes four Vrittis that affect a man's behaviour, thoughts, temperaments and deeds. These are also called the four Anthakaran.

The Anthakaran with *five dimensions or aspects* is described in Trishikhi Brahmin Upanishad, Canto 1, verse no. 6, and in Paingalo-panishad, Canto 1, verse no. 9, and in Canto 2, verse no. 3—both of the Shukla Yajur Veda tradition. The five components of Anthakaran are—(i) Mana (mind), (ii) Buddhi (intellect), (iii) Chitta (the faculty of concentration and memory; knowledge and consciousness), (iv) Ahankar (ego, pride, arrogance), and (v) Vrittis (inherent character, traits, habits, inclinations and temperaments of a creature) which decide the basic nature of a person and the way he would react to a given circumstance, the way he would deal, behave and interact with the world, the way he would interpret things, the way he thinks, the things that would appeal to him and the things he would abhor etc.—all depends upon the mental setup tinged with the fundamental character traits that are firmly ingrained in him.

Since the mind, intellect and the sub-conscious are involved in the definition of Anthakaran, it would follow that the following too would be included as the five components of Anthakaran—(i) Praman—knowledge that helps to establish the truth; (ii) Viparyaya—ignorance, delusions, illusions such as imagining a snake in a piece of rope; this is erroneous knowledge; (iii) Vikalp—alternatives; that knowledge which is acquired by hearing of it but may not present the correct picture, such as for example a wooden puppet—there seems an apparent difference between plain wood and the puppet, but they are basically the same and defined with the same word 'wood'; this knowledge is neither true nor false for to say that the puppet is different from an ordinary piece of wood because of its distinctive shape and value would be as much true as saying that it is plain wood; (iv) Nidra—meaning sleep; when a man remains oblivious of any truth just like anything gets hidden in darkness though it is very much there, that man is likened to a man sleeping soundly in spite of the goings on around him and therefore remaining unaware of them; and (v) Smriti—literally meaning memory; it refers to that knowledge which is based on experience and witnessing so that it is etched in memory; such knowledge becomes robust and gets soundly established in mind with the passage of time.

²The functions of the five vital winds are briefly as follows—(1) Pran— this is the main vital wind and usually refers to the breath without which life is not possible; it is the vital wind located in the upper part of the body. It is the wind that is exhaled as well as inhaled, and which is responsible for infusing and sustaining life in the body; it is considered the chief wind in the whole setup because without this wind infusing life in the body no other wind would be of any significance to the creature. It is present in the mouth, nose, heart, navel, big toe of the leg. (2) Apaana—this is the wind that passes down the intestines, and is responsible for ingestion of food, its digestion in the intestines and the final excretion of the waste product from the body—its grosser content through the anus and its fluid contents through the urinary system of the kidneys. This is the wind that moves down in the body and is chiefly located in the lower part of the body—in the intestines and anus, lower abdomen, thighs, knees. (3) Samaana—it is uniformly present throughout the body and as the name itself suggests it is responsible for uniform pressure and balance in the body besides equal distribution of nourishment throughout the body by maintaining proper circulation of blood. Therefore its functions somewhat resembles that of Vyan wind. It is said to be especially present in the ears which are said to be the specialized playing field for the Samaana wind as it helps maintain balance in the body through the semi-circular canals in the ears. It also helps to coordinate the ears and the intellect because the latter would base its decisions on what it hears with the aid of the ears. (4) Udaana—this is the wind that helps the body to rise and move about, it

also helps the body to expel toxic waste gases through the nostrils and mouth in the form of exhalation and cough. It is predominantly present in the hands, legs and the various joints of the body. (5) Vyan—this wind helps in maintaining equilibrium and pressure within the body as well as to ensure equal distribution of nutrients in the body by maintaining circulation. Hence, it works in close coordination with the Samaan wind. It also helps to control the functioning of the other winds. It is located in the ears, thighs, waist region, heels, shoulders and throat. Refer Prashna Upanishad of Atharva Veda, Canto 3, verse nos. 5-7.

³Aditya or the Sun God is a brilliant source of life in this creation. Without the Sun this world would be enveloped in a dense shroud of darkness. 'Light' is a term used for wisdom, knowledge and enlightenment. 'Darkness' on the other hand stands for ignorance and delusions. Knowledge removes all kinds of fears arising from ignorance and uncertainty which create confusion, consternation, perplexity and confoundedness in the creature.

Just like the brilliant light of the Sun removes the darkness of the night, the light of knowledge and wisdom removes all darkness of ignorance and delusions.]

6. I bow most reverentially before the Sun God who is like a dear friend for me (because he takes good care of me and of my welfare). Protect me from death (and its horrors and accompanying fears).

[The worshipper requests the Sun God to bless him with a long, healthy and fruitful life. All living beings are mortal, so even to think that a creature would become immortal by praying to any God is a foolhardy proposition. The basic idea is lead a healthy and productive life till the end. When a man leads an auspicious life governed by the laws of Dharma, i.e. a life that is righteous, noble and correct, then his honourable fame and pleasant memory lasts even after his gross body perishes or is shed at the time of its physical death. This is equivalent to his becoming immortal. On the other hand, if a man leads an ignoble life that is dominated by evil and preponderance of negativity, then obviously he is best forgotten as soon as his gross body dies, and this is tantamount to his actually dying and fading away from the memory of the society.

The Sun God provides energy, vitality and strength to the living being. Even modern science has established that sunlight is absolutely essential for the body because, amongst so many other reasons, one is to help the body to produce Vitamin D which is necessary for the strength of the bones. All living beings depend directly or indirectly upon the plants for their food, and plants produce food by the chemical process called 'photosynthesis', which again directly depends upon sunlight. The worshipper is requesting the Sun God to grant him a disease free and healthy life, a strong and active body, and a mind that is not only agile and intelligent but is inspired towards noble, auspicious and righteous path, a path shown by the eternal, fluorescent as well as incandescent source of brilliant light known as the 'Sun'.]

I bow most reverentially before the Sun God who is the cause for this world coming into being (as well as responsible for its sustenance, well-being, nourishment and protection), and who is magnificently radiant and brilliantly splendid.

[The brilliance and dazzle of the Sun is a measure of the intensity and profundity of the glory and divinity of Brahm, the Supreme Being and the Supreme Father, from whom the entire creation has come into being. This is because the Sun is a visible manifestation of Brahm. Just as nothing supersedes the brilliance and splendour of the Sun, nothing is greater than the virtues and glories of Brahm.]

It is due to the Sun that all living beings, whether they are able to move or not (i.e. animate or inanimate), have come into being, and it is the Sun that sustains,

nourishes, takes good care of and protects them. At the end, it is in the Sun that this creation collapses and dissolves.

[In this cosmic visualization of creation, the Sun stands as a visible manifestation of the Supreme Being known as Brahm. Since the creation has emerged from Brahm, it is sustained by Brahm, and it merges with Brahm in the end, it follows that it is deemed to have emerged in the presence of the Sun, is sustained by the Sun, and it ultimately dies in the presence of the Sun. This is why cremation is done by Hindus only during the day time in the presence of the Sun God.

Modern science has proved that energy changes its form but never vanishes or perishes. For instance, the electric energy is converted to light and heat in the electric bulb, and into kinetic and heat energy in an electric motor. Likewise, the dynamic life-sustaining energy and vitality of the Sun is transferred into the gross body of the creature when he takes birth, and is reversed at the time of his death.

The visible Sun in the sky is a tangible form of Brahm, and it suits this description because one cannot actually 'see' the blazing Sun with the gross organ of sight known as the eye without getting blinded just like it is impossible to actually 'see' Brahm with naked eyes. Brahm is 'indirectly seen' by way of experiencing the glory of pure consciousness that comes with the inner sight of wisdom, enlightenment and self-realisation even as the presence and existence of the celestial Sun can be witnessed by looking at it with closed eyes when its blazing splendour is reflected as a radiant glow which lights up the inner side of the closed eyelids. The entire living world around us is directly dependant upon the Sun, and it is impossible to imagine life without the Sun and its light, energy and heat.]

I am a personification of the Sun God.

[Here, the term 'I' refers to the pure and truthful 'self'—i.e. the Atma. Hence, this declaration means that the Sun is a visible image of the Atma which is the essence of life in this creation in the form of cosmic Consciousness that infuses life, vitality and dynamism in this creation, and signifies the latter's worth, importance, meaning and essence.

This statement is similar to and reflective of the other Maha-Vakyas or the great sayings of the scriptures in relation to Brahm and the enlightened view of a self-realised man who declares 'I am a personification of Brahm'. Since the Sun God is a symbolic embodiment of the glorious virtues of Brahm as manifested not only in the Sun's dazzling splendour and brilliant radiance but also in its ability to foster and protect life on earth, it is indeed an honest and truthful statement by a self-realised man when he declares 'I am a personification of the Sun God'.

It must be borne in mind here that the Sun that is being referred to here is not the gross physical sun that is one of the millions of celestial stars in the universe, but an entity that symbolically stands as a visible image of Brahm. Ancient sages and seers had chosen the Sun to represent Brahm as the former is the most brilliant and splendorous entity in the known world that could be singled out and chosen to represent a divine entity known as Brahm that is equally brilliant and splendorous. No other object matched the Sun in brilliance, radiance and splendour that it could be selected to represent Brahm.]

The Lord known as Savita (the Sun God) is my eyes.

[This alludes to the fact that the Sun is the symbolic eye of the Viraat Purush, the macrocosmic gross form of the supreme Brahm. It is this Viraat Purush who had transformed or metamorphosed himself as all living beings in creation. Therefore, the individual worshipper is one single unit of the myriad and uncountable individual microcosmic forms of the Viraat Purush, and by corollary the eye of this single

individual worshipper is a miniature form of the celestial Sun that represents the eye of the Viraat Purush.]

The Sun God is indeed the Lord famed by the name of 'Parvat' who has revealed himself as the eye.

[The word 'Parvat' literally means a mountain. Here it implies that the Sun is a cosmic source and a fountainhead of immense brilliant light which enables the creature to see the world in all directions. No other celestial entity is as eternal and brilliant a source of light as is the Sun. This is proved by the fact that the world is invisible during the darkness of the night when the Sun is not present though the moon and the stars are. All the lights of a big city shining simultaneously are not able to remove even a fraction of the darkness of the night which a single Sun is able to do even when it has still not come above the horizon at the time of dawn.

Hence, the 'eye' which stands for the Sun is not the gross organ of the body known as the physical eye, but the dynamic ability of the creature to perceive things with a form, colour and shape. The magical ability of the gross organ of the eye to 'see' and become aware of the world is regarded as a revelation of the Sun God to light up the world for the Atma which lives in the gross body. The Atma, the 'self' of the creature, would not be able to see the outside world without the help of the ability of the eye to 'see' just like the case of the world being not visible during the night when the Sun is absent. Since the individual creature is an image of the Viraat Purush, his eye is also an image of the Sun which is the eye of the Viraat Purush.]

Again, since the Sun is a metaphor for the eclectic virtues of wisdom, erudition, sagacity and knowledge, it follows that the ability of the creature to peer deep into the metaphysical aspects of creation and become aware of the hidden truth that cannot be seen by the external gross organ of sight known as the physical eye is the 'actual seeing' of this world. It is the inner-sight of wisdom, erudition and enlightenment that is a symbolic and metaphoric revelation of the Sun God inside the creature. Here, the word 'seeing' or 'the faculty of sight' do not refer to the gross viewing of the physical world of material sense objects, but refers to the awareness and realisation of the subtle and sublime aspects of life that deal with the absolute spiritual 'truth' that is hidden behind its exterior façade.]

Let the Lord known as Aditya who bears (sustains, nourishes, takes care of, and protects) all the living beings enable my eyes to see.

I know and am well acquainted with Aditya, the Sun God. I remember and meditate upon Lord Sun who is adorned by thousands of brilliant rays of light.

Let that Sun God inspire us and takes us forward.

Lord Savita (the Sun God) is present everywhere—in the front and the rear; in the north and the left direction, as well as in the south and the right direction.

Let Lord Savita create all things needed by me.

Let Lord Savita give me a long life (6).

7. 'OM' is the monosyllabic Mantra (divine word) representing the supreme transcendental Brahm, the Supreme Being. 'Ghrini' and 'Surya' are the two words, each having two letters or syllables. [Ghri + Ni = 2; Su + Rya = 2. The word 'Ghrini' means sunlight, heat, ray of light, wave of heat, light and energy. The word 'Surya' means Sun.] And finally, the word 'Aditya' has three letters or syllables. [Aa + Di + Tya = 3. The word Aditya refers to the Sun God.]

With the help of these words one derives the great eight-lettered Mantra known as the 'Suryaashtakshar Mantra' dedicated to the Sun God. [The word 'Ashtak' means eight. Hence, 'Suryaashtakshar' means a phrase (Mantra) having eight

letters or syllables. This eight-letter Mantra is therefore ‘OM Ghrini Surya Aditya’. It briefly means—‘Salutations to Brahm represented by the word OM. Your radiance and splendour are revealed in the form of the brilliant rays of the Sun and its heat, light and dynamism. You have revealed yourself as the visible celestial Sun, as well as the God known as Aditya in the heavens.’] (7).

8. A person who does Japa with this Mantra daily (i.e. who repeats this Mantra during meditation as a routine practice) is truly called a Brahmin (i.e. a wise and learned man). One is freed from the horrors and fears of great troubles and tribulations by doing Japa with this Mantra while facing the Sun. His poverty is eliminated. He is pardoned from the evil consequences or sin of eating things not meant to be eaten. He is exonerated from the sins of going on the wrong path (i.e. following a path or doing deeds in life that are regarded as sinful, pervert, inauspicious, improper and unrighteous). He is forgiven for speaking things not worthy of being spoken, such as telling lies, speaking ill of others, tattling, using uncouth words, being abusive, speaking when not required to do so, being insincere and dishonest in what one says, pretensions, boastfulness, conceit and deceit in the spoken word etc.

This Upanishad should be read as a prayer during the noon while sitting facing the Sun. A person who does this is immediately freed from the five horrible sins that he might have committed. [The five great sins are the following:- killing of a Brahmin, drinking wine, theft, having sex with the wife of one’s teacher, having lustful feelings for one’s daughter, and to keep company of those who indulge in any of these sins.]

This eclectic and divine knowledge is known as ‘Savitri Vidya’—literally meaning the profound knowledge pertaining to the radiance, splendour, glory, magnificence, light, energy and dynamism of Savita or the Sun God. It should not unnecessarily be praised in front of ineligible and incompetent people (because they would only ridicule it).

The man who is wise enough to read it or recite it in the morning hours is indeed fortunate and lucky. He is blessed with wealth in the form of abundance of livestock as well as the knowledge of the Vedas (scriptures). [That is, he gets respect and fame that comes with acquisition of material prosperity (symbolized by abundance of livestock) and knowledge of the primary scriptures known as the Vedas.

If this Upanishad is read or recited thrice daily, at dawn, noon and dusk, the person is rewarded with the auspicious effects equivalent to performing hundreds of fire sacrifices.

A person who offers worship to the Sun God using the Mantras incorporated in this Upanishad during the period when the Sun is in the asterism known as the Hasta (which falls roughly in the Hindu month of Ashwin, corresponding to the month of October)—is able to conquer or overcome death.

A person who is an expert of this Upanishad and its metaphysical import is also able to conquer or overcome death.

This is the grand Upanishad and its secret knowledge. Amen! (8).

Chapter 18

Atma Upanishad/Atmo-panishad

This Upanishad is dedicated exclusively to the theme of the Atma, the cosmic Consciousness that is at the root of life in the entire creation. The Upanishad expounds upon the three aspects of the Atma which is a cosmic entity that is primarily non-dual, immanent, omnipresent, single (i.e. without any company), immutable, indivisible, universal and uniformly one and wholesome as well as the common denominator in all units and aspects of this creation.

The *first* aspect of this universal Consciousness is known as the 'Atma'. The Atma is that aspect of creation which is its quintessential truth and soul, and without which this creation and its constituent units would have neither any meaning nor any substance whatsoever. The Atma is the cosmic Consciousness that pervades in each and every single unit or aspect of this living world, and without which this existence with all its myriad forms, its magnificent varieties, its stupendous charms and beauty, and its vibrant dynamism would just have no meaning or relevance. Without the Atma the gross body of the individual Jiva, the living being or the creature, would not be alive and active; the body and its components would be dead had there been no consciousness in them. Hence, broadly speaking, the term 'Atma' is applied to the soul of existence; it is synonymous with life and its magnificence, beauty, vitality, dynamism, energy and vibrancy. It is like the 'atom' in the physical sciences which is at the core of all elements in this creation, and nothing is imaginable without the atom.

The *second* aspect of the cosmic Consciousness is known as the 'Antaraatma'. This word has two parts—viz. 'Anatar' meaning inner or hidden or secret, and 'Atma' meaning of course the universal consciousness known as the soul. Therefore, the Antaraatma (or Antar-Atma) is that aspect of the cosmic and universal Consciousness that lives inside the body of an individual creature as his 'true self'. Generally speaking, when we use the term 'soul' vis-à-vis a living being, it is the Antaraatma that we refer to, because it is the consciousness residing inside the gross body of the individual that gives the individual his unique identity.

Therefore, whereas the plants also have the Atma in them for the simple reason that all plants are part of the same living creation to which the animals belong. In practice there is virtually no difference between the 'Atma' and the 'Antaraatma' because the latter means the former that lives inside the subtle space of the creature's body as his 'self'. When we talk of 'the voice of conscience', we mean the voice of the Antaraatma because it is the person's inner voice or inner self speaking to his mind and intellect at a subtle level of existence.

Further, if the Atma lends consciousness or life to the gross and inane body and its individual organs of action and perception, it is the Antaraatma which lives inside the same body as the 'self' of the individual creature. It is just like the case of assigning different names to the same sky element or the air element depending upon the function they perform or their existential circumstances. For instance, the sky inside the mud-pitcher is known as the 'Ghata-kash' ('Ghat' = pitcher; 'Akash' = sky) and the space within the walls of a monastery is known as the 'Matha-kash' ('Math' = monastery; 'Akash' = sky). Similarly, the same air element is known as 'Pran', 'Apan', 'Vyan', 'Udan', 'Samaan' etc. depending upon the location in the body and the different functions the air performs.

The above two terms used for the universal cosmic Consciousness, viz. the Atma and the Antaraatma, pertain to the grosser level of creation because they relate to the physical world limited to the creation that is of any relevance as far as the individual creature is concerned, and with which he is directly related. But it must be remembered that this Consciousness is 'universal, unbound, cosmic, ethereal, infinite, eternal, indivisible, immutable, immanent, omnipresent and all-pervading. Therefore surely there is definite *third* dimension to it—and this is the supreme transcendental Atma that is all-encompassing and almighty. This 'supreme transcendental and almighty Atma is known as the 'Param-Atma' or 'Parmatma' ('Param' = supreme, transcendental and one above or beyond which nothing exists). This Parmatma is Brahm, the Supreme Being.

The Parmatma is the cosmic and universal aspect of the Atma that is characterized by the grand virtues of being supreme, almighty and transcendental. The Parmatma is the grand Authority of creation.

The cosmic Consciousness known as Brahm is established as being an entity that is beyond comprehension, definitions, attributes, qualities, forms and rational logic; it is very unique, one of its only kind, and highly paradoxical by nature. It cannot be seen, but everything that is seen is due to Brahm, and is a manifestation of Brahm. It cannot be comprehended, but all knowledge is a form of Brahm. It itself has no forms, but all things that have a form are one or the other forms of Brahm. It cannot be heard, but whatever is heard is the sound of Brahm. [This is where the concept of 'Shabda Brahm' comes into play.]

This Upanishad expounds the tenet of non-duality or oneness between the Atma and the supreme transcendental Consciousness known as Brahm, as well as the great metaphysical truth that whatever that exists in this creation at all levels, whether visible or invisible, whether microcosmic or macrocosmic, whether living or inane, is a manifestation of one single Brahm. It outlines the astounding but paradoxical virtues and qualities of Brahm that makes it so unique and unparalleled in creation.

The Upanishad establishes beyond doubt the truth of the existence of Brahm. It cites several examples and similes to help elucidate the principles of metaphysics that it propounds. For instance, it takes the example of the sun which does not diminish in its brilliance inspite of appearing to be darkened during the solar eclipse to establish that Brahm and Atma always remain eternally untainted and uniform even though one attributes it with so many changeable virtues and colourful characteristics, some positive and others negative, because of their association with this delusion and ignorance ridden gross world.

Other examples cited to emphasize this fact are the mistaking of a piece of rope for a snake, and the dead left-over cuticle of a snake to be a live serpent. Then it cites the case of a child playing with toys, forgetting its hunger or pain, to help understand how wise people remain engrossed or submerged in the thoughts of Brahm and the Atma inspite of the incessant restlessness, the flux, the miseries, the troubles and tribulations along with the upheaval of the topsy-turvy world surrounding them.

Hence, the only way to realise the true nature of the Atma is to free one's self from delusions and ignorance. When this happens, the creature is deemed to have obtained Mukti, or spiritual liberation, deliverance, emancipation and salvation. This implies that he has obtained complete self-realisation whereby his one Atma is dissolved or merged with the cosmic Atma known as Brahm even as two samples of milk, oil or water become indistinguishable from one another when they are mixed together.

There is another Upanishad very similar to the present one, and it is called the ‘Atma Prabodha Upanishad’ as it teaches about the Atma and endeavours to make a spiritual aspirant enlightened about the sublime and eclectic concept of the Atma. It is included as Chapter no. 4 of volume no. 1 dealing with the Rig Veda Upanishads in this series.

-----*****-----

---Shanti Paath---

Please see appendix no. 1 for the English of this Shanti Paath.

1-A. The primordial Purush (i.e. the Supreme Being) who had no forms and attributes revealed himself in three forms, or he assumed a form which had three subtle aspects. These three forms are known as ‘Angiraa’—literally meaning a body with individual parts or organs or units. [‘Ang’ = body; ‘Angiraa’ = parts or units of the body just like sparkles of fire are called ‘Chingaari’.]

Therefore, the primary Purush—who is primarily non-dual, immutable, universal and one uniform whole—assumed three names depending upon the role he had to play in this creation. Each of these names is associated with a ‘form’ that has its own characteristic features, qualities and attributes. [A particular or specific name is assigned to anything that has a known specific form and a specific role. Anything that has no specific form or role cannot be given a specific name. For instance, ‘sky’ is an all-pervading, all-enclosing, immanent, indivisible and immutable element. But it is known by different names when it assumes different roles or forms—viz. ‘Ghat-aksh’ when it is present inside a clay pitcher, ‘Matha-kash’ when it is present inside the building of a monastery.]

These three forms of the cosmic Purush are known as the ‘Atma’, the ‘Antaraatma’, and the ‘Parmatma’. [It ought to be clearly understood here that the primary Purush being referred to is the supreme transcendental Brahm which is the cosmic Consciousness of creation. This ‘Consciousness’ is known as a ‘Purush’ because it lives inside this creation as its integral and inalienable part or component. It is like the case of the atom which lives as an integral and inseparable part of all things; if the atom is removed then the thing ceases to exist. Therefore, the Purush is the quintessential element that is the ‘soul and the spirit’ of everything in existence. No life is imaginable and tenable without the consciousness is soul that is also known as the Atma. It is ‘consciousness’ because without it life is not feasible and the creation dies.] (1-A).

[Note—The three aspects of the Atma are also described in Rudra Hridaya Upanishad of Krishna Yajur Veda, in its verse nos. 10-12.]

1-B. [Now, the distinctive features, the characteristic attributes and individual forms of these three aspects of the universal cosmic Purush, the Supreme Being known as Brahm, are being enumerated—]

The ‘Atma’ is that aspect of the cosmic Consciousness (known as Brahm or the supreme Purush) which has assumed or acquired a gross physical body having the following characteristic features—it has a skin, flesh, hairs, thumbs and toes, fingers, a spine that forms the rear part of the body, nails, knees, an abdomen, a navel, genital organs, waist, thighs, skull, eyebrows, forehead, arms, sides or flanks, a head, and

eyes. The Atma that has such a gross form is the one that goes on rotating in the endless cycle of birth and death. [It is because the Atma is virtually trapped in the cage of the gross body. It is much like the case of a free-flying bird voluntarily getting trapped in the snare of the bird catcher because of its greed for the bait laid out by him. The Atma too gets ensnared in the gross body because it wants to enjoy the material comforts and pleasures of the world, and the only way it can do so is by assuming a body, for it is through the organs of perception and action of this body that the world can be perceived and enjoyed.] (1-B).

1-C. Now, the subtle form of the same Atma which is distinct from its gross form is being described. It is called the 'Antaraatma' or the 'inner Atma', the 'inner-self'.

[The word 'inner-self' has two components—viz. 'inner' which literally refers to Atma that resides in the gross body as described in verse no. 1-B, and 'self' which refers to the fact that the Atma is the true identity of the creature. This Antaraatma is invisible as it is extremely subtle, and is hidden inside the grosser physical aspect of the Atma represented by the gross body. It represents all the subtle virtues and characteristic qualities that are inherent in any creature, and which together determine his overall personality and character. The Antaraatma defines the inherent and basic nature, inclination, temperament and thought processes of any given creature that mark the latter's subtle level of existence that is invisible to the naked eye as opposed to the gross aspects of his personality and characteristic features defined by the physical body that is visible.]

The 'Atma' is an all-pervading universal entity known as the 'cosmic Consciousness' that uniformly permeates throughout this creation and the living world. It gives life in the form of consciousness to all living beings, whether they live on the earth or in the sky. [The Atma is at the core of life, and in this sense it is like the atom in the physical sciences.]

The 'Antaraatma' is that aspect of the same cosmic Consciousness that resides inside the gross body of all living beings as their 'inner self'. This Antaraatma is the one that inspires or motivates the creature to do or not to do anything, and thereby regulate all his activities and deeds.

The Antaraatma is the Atma (pure consciousness) that lives in the subtle space of the gross body of the creature, a body that is made up of the 'earth element'.

It is the Antaraatma that exhibits emotions of either happiness or sorrows.

It is the Antaraatma that exhibits such characteristics as having Kaam (passions, lust, desires, yearnings) and Moha (attachments, infatuations, delusions).

It is the Antaraatma that has doubts and confusions, and it is the one that engages in debates and arguments. [This is because the Antaraatma is the 'true self' of the creature who has any doubt or confusion, or who engages in debates and discussions, and not the physical gross body which is not his 'true self'].

It is the Antaraatma that has a memory of past events, and is able to recall them. [Again this is due to the same reason that the Antaraatma is the 'true self' of the concerned creature who remembers anything of the past. The actual living entity that is recognized as the 'creature' is his Antaraatma, and not the physical body which harbours the mind and the sub-conscious that are merely instruments that the Antaraatma employs to remember and recall.]

It is the Antaraatma, as the living entity known as the creature, which distinguishes between a male and a female.

It is the Antaraatma that either makes a person magnanimous and charitable, or makes him miserly, of a selfish disposition, and greedy so much so that he has no regrets for usurping things belonging to others.

It is the Antaraatma that makes a man speak in different languages, and in different tones and tenors of speech. It makes him speak in different ways—such as in a whisper, speaking sweetly, softly and mildly, or in a shrill voice having a high pitch, or a voice that is grave and baritone, or in an irritable and angry voice full of rancour and spite, or scream either in pain or revulsion. It is the Antaraatma that expresses its feelings and emotions by way of the spoken word of grief, anguish, despair or sorrows on the one hand, and of cheerfulness, ecstasy, happiness and joy on the other hand.

It is the Antaraatma that makes a creature feel depressed or dejected on the one hand to such an extent that he sulks and loses all interest in life, or makes him exuberant, excited, exhilarated and ecstatic on the other hand so much so that he dances and sings with merriment and joyous abandonment.

It is the Antaraatma that thinks that it has an end, a beginning, and a course of growth and development. [This is because the Antaraatma, which is actually the pure conscious Atma that is the true self of the individual creature, becomes so much deluded by the virtue of its close association with the perishable and mortal gross body of the creature that it begins to identify its ‘self’ with the body, and in this process it forgets that it is the entity known as the Atma which is eternal, which remains steady, and which is unchanging. The Atma does not take a birth nor does it die because it is eternal and imperishable. The Atma is the spiritual ‘Truth’ of existence, and ‘Truth’ is something that remains steady, constant and eternal. Therefore, this statement that the Antaraatma thinks that it dies or has an end, that it takes a birth or has a beginning, and that it changes or grows and develops refers to the Atma that lives inside the gross body of the creature and has assumed the characteristics of the body. The very fact that the Atma begins to think that it has an end, it has a beginning, and it undergoes a change shows that it has undergone some sort of metamorphosis and has lost its pristine purity. This is because it becomes associated with the gross body which takes a birth, which develops and grows, and which dies.]

It is the Antaraatma that hears, smells, tastes, thinks, learns and knows, and does various deeds. [This statement reinforces the logic about the Antaraatma being that aspect of the Atma that has abandoned its subtle and sublime form as a pristine nature entity that is an ethereal Spirit and the cosmic Consciousness. Instead, it has assumed a grosser form of a body, the primary reason why the Atma is called the Antaraatma in the first place, and therefore begins to carry out the functions of the body—such as hearing, smelling, tasting, thinking, learning and doing deeds.]

In spite of all these shortcomings, the Antaraatma is known as the ‘Vigyan-Atma’—literally meaning the knowledgeable Atma, the Atma that is wise, all-knowing, omniscient, and enlightened. It is the one that not only hears but understands the real meaning and the intention of what he hears. It is the one that not only thinks but thinks wisely, righteously, intelligently and rationally. It is the one that not only reads the scriptures but understands their hidden meaning and intention. [This virtue of the Antaraatma of being wise and learned is due to the basic nature of the Atma which is nothing but pure and un-adulterated Consciousness. It is this aspect of the Atma that an ascetic or a wise man wishes to realise when he studies the scriptures, especially the Upanishads, and does meditation and contemplation. It is this aspect of the Atma that is understood and known by a self-realised and

enlightened man. It is this aspect of the Atma that distinguishes an ordinary creature from a highly wise and enlightened man.]

This wise, erudite, sagacious and intelligent aspect of the Antaraatma is the one which studies all the different scriptures and become learned in their philosophies and doctrines. It is the one that studies and learns the various branches of the scriptures—such as the Purans (ancient history), Nyaya (laws of conduct), Mimansa (thorough discussion and commentaries on the scriptures) and other limbs of scriptural study. It is this aspect of the Atma that actually hears them, understands them, accepts them and believes in them. It is the wise and intelligent Antaraatma that accomplishes stupendous feats in this life.

The Antaraatma is that aspect of the otherwise neutral and dispassionate Atma that develops some kind of attraction towards anything, or is inspired to do a thing because it finds it attractive and interesting (1-C).

1-D. That aspect of the Atma which is supreme and transcendental is known as the Parmatma. It is synonymous with Brahm which is 'Akshar'—i.e. a divine entity that is imperishable and eternal, as well as the one that is represented by the monosyllabic word OM that is known as the 'Akshar'. ['Akshar' means a letter as well as something that is imperishable.] It is this aspect of the Atma that is worthy of worship and honour.

This cosmic form of the Atma, the pure Consciousness, is known or attained by the means of the eight-fold path of Yoga (meditation). These eight means are the following—Pranayam (breath control), Pratyahar (control of the mind), Dharna (firmness of conviction and remaining steady in one's chosen path), Dhyana (contemplation and meditation on a chosen object), Samadhi (the trance-like state of transcendental existence), Yoga (physical exercises of meditation that bring about a coordination between the various vital winds, and helps one to establish a union between his individual 'self' with the cosmic Self known as Brahm), Anuman (imagination and deduction arrived at by analysis of available facts), Atma-Chintan (introspection, contemplation and deep pondering).

This cosmic form of the Atma is known as the Parmatma or the supreme Atma. It is also known as Brahm, the supreme transcendental Consciousness. It is as small as the seed of the huge banyan tree, is like a small grain of rice as compared to the whole crop, and is smaller than the hundredth-thousandth fraction of the tip of a hair follicle.

[In other words, the 'Consciousness' that is known by various names such as the Atma, Antaraatma and Parmatma is as small as the atom of an element in the field of physical science. The atom is the basic unit of all the elements in existence, and though it is itself extremely small and microscopic in form, it reveals itself in the form of huge things having magnificent and myriad shapes and sizes. The cosmic Consciousness known as Brahm is compared to the seed of the huge banyan tree because the tree is hidden inside the seed in a most subtle and microscopic form, and emerges from it in the form of a huge structure known as the banyan tree which finally perishes to leave its genes hidden inside the seed that produces a new generation of the banyan tree. Similarly, this creation has its subtle presence in Brahm, it emerges from Brahm, has the genes of Brahm in its every pore, and at the time of its conclusion it merges into Brahm, only to re-emerge from the same Brahm.

Just like the seed and the tree being intricately and inseparably related to each other, the cosmic Consciousness and the individual creature's 'self', the supreme

transcendental Brahm and the individual's Atma, the Parmatma and the Atma of creation are also inseparably linked with each other.

Again, the individual Atma (soul) of a creature is a representative of the cosmic Atma that lives in all the living beings in this creation. This universal truth is explained by the analogy of the Atma being like single grain of rice of a whole crop. All grains are alike; all the creatures are also alike because it is the same Atma that lives in them. The entire crop consists of individual units of the rice grain; the entire creation too consists of the individual creatures having the same Atma being present in them.

The Atma is miniscule and microscopic; it cannot be physically seen or measured or given a dimension just like the tip of the hair follicle.]

The irony is that while this Brahm is easily accessible to or attained by one person, it remains totally inaccessible to or unattained by another person inspite of the latter making the best of efforts to realise Brahm.

Brahm is never revealed in physical form, and hence it never dies. [Only things that are born or that make their presence in physical terms are destined to come to an end. Anything that is not born need not die.]

Brahm is neither dry nor succulent. It neither moves nor remains static. It does not shake or vibrate. It does not break up into parts. It is free from any specific Gunas (attributes, virtues, characteristics and qualities).

Brahm is the universal benchmark for Absolute Truth and Reality, and it cannot be measured against or compared with anything else. It is therefore one of its own kind, being matchless and unparalleled.

Brahm is the primary and most pure form of all the elements (Bhuts) in creation.

Brahm is a personified form of purity and immaculacy.

Brahm is the cosmic Atma or the universal Spirit or Soul that has no forms and attributes.

Brahm is one of its only kind, being non-dual and unparallel in creation.

Brahm is highly subtle, miniscule, microscopic and atomic in form.

Brahm is absolutely immaculate and pristine pure.

Brahm is faultless, taintless, uncorrupt, and without any blemishes and shortcomings.

Brahm has no word or sound by which it can be heard and known. Similarly, it cannot be felt by touching, cannot be seen because it has no physical gross form, cannot be perceived as some kind of taste, and has no smell that can be smelt.

Though Brahm is an eternal fount and an embodiment of Gyan (knowledge, wisdom, erudition and enlightenment), it is so neutral that it is deemed to exhibit no signs of Gyan.

Brahm is beyond the reach of imagination and thoughts.

Brahm has no desires, aspirations and expectations (because it is eternally fulfilled and contented).

Brahm is all-pervading, all-prevailing and omnipresent.

Brahm is an entity that is beyond comprehension; it is beyond the reach and purview of the mind and intellect. It is a supreme transcendental Atma about which nothing can be specifically or assertively said or ascertained.

Brahm is so holy and divine that it makes others, that are not holy and divine but with which it comes in contact, also holy and divine.

Brahm does no deeds.

This supreme Brahm (the cosmic Consciousness, the all-pervading Atma or the Supreme Being known as the Lord of creation called the Parmatma) has no world of its own (because it is formless and all-pervading; the entire creation is its abode). [The Sanskrit word for world is 'Sansar'—literally meaning something that is always on the move and is ever-changing. Therefore, Brahm has no Sansar in the sense that it is steady, unchanging and uniform.] (1-D).

1-E. This Brahm is a synonym of the Atma, the cosmic Consciousness. It is most immaculate and pristine pure. It is auspicious and a provider of all goodness and auspiciousness to others. It is only one and non-dual, being unparallel and without a second in creation. It is the universal and uniform Brahm which is all-pervading, all-encompassing and all-inclusive that is also known as the Atma, and vice versa (1-E).

2. It is Brahm that is manifested or revealed or visible in the form of this creation or world. Indeed, whatever is perceived, seen or known either out of wisdom and knowledge, or out of ignorance and delusions is nothing but this single Brahm in all these forms. Whatever distinctive forms that this basically uniform creation takes, distinctions that are created out of ignorance of the reality, or created out of wisdom when one is able to separate truth from falsehood, are nothing but Brahm (2).

3. It is Brahm that is visible in the form of a disciple as well as a teacher. [This is because the Atma in both of them is the same.]

In reality and truth, whatever that is seen, whatever that exists here, there and everywhere else, are nothing but the same Brahm in each of these individual and collective forms (3).

4. In fact there are no such separate concepts as Vidya (knowledge) and Avidya (ignorance). Similarly, there are no two distinctive possibilities of there actually being a world on the one hand, and there being no existence of the world at all on the other hand.

The essence of the matter is that Brahm can be known only when one becomes aware of the reality and the truth of creation (in the form of the all-pervading, invisible, formless, eternal, infinite, immutable, almighty and cosmic Consciousness known as the Atma). It is this 'Truth' that is the fundamental cause of creation; it is at the root of creation; it is the quintessence and the soul of creation (4).

5. 'This world is false'—this knowledge or realisation is in itself a provider of liberation from the shackle that tie the creature to this world. It is like the case when one sees a pot or pitcher in his front; he does not need any other proof of the pot's or pitcher's existence as he is seeing it himself first hand. Hence, when a person has become self-realised and understood the fact that besides the pure consciousness known as the Atma there is nothing that is spiritually true, he would not need any more convincing and prodding to treat the gross world, sans the Atma, as false.

[When he understands that this world is not true he would not be attracted to, tempted by and entangled in any of its material things or sense objects and their attractions and charms. Any wise man with basic intelligence would not like to deal with falsehoods and illusions. Therefore, this wisdom that the world is false and illusionary would automatically free him from remaining entangled in the world and tied down by the fetters represented by it and its temptations. No intelligent and wise man would like to deal with anything that has no permanence and truth.] (5).

6. Just like one not needing any proof to be convinced of the actual existence of anything that is clearly seen in front, one also does not need any proof to be convinced of the existence of the pure consciousness known as the Atma because it is clearly evident in all forms of life that are seen all around a wise and intelligent observer. This Atma is eternally and universally self-evident, self-illuminated and self-established. That is, since everything is a manifested form of Brahm, no separate or independent proof of the existence of Brahm, and by corollary the Atma, is needed. Both the Brahm and the Atma are self-proved.

[Since 'life' and 'consciousness' are synonymous with each other, since the Atma and Brahm are one and the same, because both the Atma and Brahm are synonymous with the cosmic and universal 'Consciousness', it logically follows that this 'living world', or world that has the universal factor of 'consciousness' in it, is an evident proof of the existence of the Atma and Brahm.

While the term 'Brahm' is applied to the universal Consciousness when we wish to speak of it at the macrocosmic level or plane of existence, the term 'Atma' applies to the same Consciousness that lives inside the body of an individual creature as his inner self or the Antaraatma. While Brahm is the Atma or the soul of creation because the latter cannot survive without the former, the Antaraatma is the Atma or the soul of the individual creature because the latter's body would not survive without the former. The common denominator in all aspects of the living world is the 'Atma', the 'Consciousness'. Sans this Atma, this world loses its meaning. Brahm is the cosmic form of the Atma, and therefore Brahm is also known as the Parmatma, the supreme Atma.

Taken in a broad perspective, even the spiritual knowledge enshrined in the scriptures is the latter's 'Atma' because if one were to remove this knowledge then the scriptures become merely voluminous treatises on mythology and literature. Study of such scriptures without grasping their spiritual message would be similar to the studying of any other book.] (6).

7. Even as one becomes sure about the identity of a person having, for instance, the name Devdutta when the latter identifies himself with this particular name, and this individual with the name Devdutta would always be the same person no matter where he lives and what time of the day it is, this essential truth known as the pure conscious Atma too is the same no matter in what form it exists, or no matter what form of a body it has assumed for its self. The Atma is a divine, sublime, living and conscious entity that is self-evident and self-established in all planes of existence and dimensions of time. Its sublime virtues, divine nature, unique identity, pristine purity and absolute truthfulness do not change under any circumstance. The Atma does not need some proof to establish its purity, immaculacy, divinity and holiness. The Atma is an eternal, uniform, immutable, steady and constant entity that will always be the same no matter what form it has taken (7).

8. When a self-realised person who has understood the truth of Brahm, the supreme transcendental cosmic Consciousness, as well as the truthful nature of his own Atma which is the same Consciousness residing in his inner-self, a person who has become fully enlightened and spiritually attained by experiencing the presence of Brahm within his own inner-self as the pure consciousness known as the Atma declares 'I am Brahm', it is deemed to be his honest and sincere statement of what he has personally experienced and witnessed.

[In other words, when a self-realised man says ‘I am Brahm’, he is referring to the fact that he has indeed realised the truth that his ‘self’ known as the Atma is none else but the supreme Brahm itself. The Brahm that resides in his body as his Atma becomes his Antaraatma, his truthful inner-being, his truthful inner-self. To put it differently, the Antaraatma is the microcosmic form of the cosmic Atma that is known as the Parmatma, the supreme Atma, the supreme transcendental cosmic Consciousness known as Brahm. Such a wise and enlightened man is not referring to the gross physical body when he uses the pronoun ‘I’ to mean Brahm.

The two factors of creation—the first being the individual unit known as the creature, and the second being the all-encompassing and all-inclusive aspect known as Brahm—have the Atma or the cosmic Consciousness as the common denominator. The former is known as the Antaraatma while the latter is known as the Parmatma.

Therefore, the term ‘I’ would refer to the Antaraatma, and the term ‘Brahm’ would refer to the Parmatma. Both have the common factor of the Atma, the cosmic Consciousness, as the unifying element. Hence, basically both are the same. Refer verse no. 22 below.]

Even as the entire world is illuminated by the light of the single sun, the whole creation is also illuminated or made live and conscious by the light and consciousness effusing and radiating out from a single, non-dual Brahm (8).

9. To cite any instances or logics or proofs to establish the existence and truth of Brahm would be unwarranted, irrational, incongruous and irrelevant because it would be wrong, unjustified, absurd and ridiculous to prove something that is a self-evident ‘truth’ by measuring it against or comparing it with things or instances that are themselves doubtful, contentious and untruthful. Such an attempt would be a disgraceful, despicable, lowly and mean effort because it is an attempt to cast aspersions or express doubts about an entity that is self-established, self-evident, self-illuminated, holy, divine, sublime, immaculate, and beyond reproach.

In other words, who can judge the truthfulness of the ‘Absolute Truth and Reality’? What or who can ever prove it? [That is, no one can prove something that is self-proved; no one can prove ‘truth’ to be ‘truthful’. No one can deny, for instance, that the Sun is self-illuminated.]

The divine and eclectic entity known as Brahm that ‘illuminates’ (gives life and meaning to) everything in this creation is indeed self-illuminated and self-evident (like the instance of the Sun cited above). [Just like the Sun that lights up the whole world with its own light and needs nothing to illuminate its own self, Brahm too gives life and meaning to this creation but does not need or require anything for its own existence. Just as the Sun needing no evidence or proof to establish its presence in the sky, Brahm too does not need any proof or evidence to establish its authenticity and truthfulness. The physical fact that the Sun is the sustainer and protector of life on this planet and is the center around which all the planets of the solar system revolve can be wisely used as a metaphor to drive home the point that Brahm is at the center and the source of all life in this world.

It is the same divine Brahm (as ‘Vigyan’ or refined knowledge) as a source of eternal ‘light’, a term used as metaphor for knowledge, wisdom, erudition, sagacity and enlightenment of the highest order, which makes the Vedas, the Purans and other primary scriptures have any meaning and worth. It is the same Brahm (as the ‘Atma’ or the cosmic Consciousness) that enables a gross body that is inherently inane and lifeless to become a ‘living being’ known as the Jiva or the creature.

[In other words, it is Brahm that is highlighted or illuminated in the form of knowledge and wisdom contained in the scriptures, and it is Brahm that is revealed in the form of the living world.]

(9).

10-11. Just like a child forgets about his hunger and bodily pains when he is enjoying himself while playing around with attractive things (toys) because he is absolutely engrossed in playing with his toys, a wise and enlightened person who remains engrossed and submerged in the thoughts of Brahm also derives such a high degree of bliss, ecstasy and spiritual thrill that he remains free or immune from the tainting effects caused on his inner-self by such negative qualities as having any kind of Mamta or Ahankar. ['Mamta' = attractions towards and infatuations with anything related to this gross world, along with its uncountable charms and temptations. 'Ahankar' = ego, false pride, vanity, arrogance and haughtiness.]

He is naturally inclined to be free from having any kind of desires, longings, yearnings, aspirations and wishes. He prefers to stay alone in a serene environment that is conducive to his spiritual peace and tranquility that comes when one is fully submerged in meditation and contemplating upon Brahm (10-11).

12. Such an acclaimed, wise, enlightened and self-realised man is contented within and without. He is happy and satisfied in the thoughts of his own Atma that is fully contented and fulfilled. He understands the fact that this Atma, which is his 'true self', has risen above the mundane and gross existence that imposes limits on his physical gross body. Therefore he feels always happy and ever-contented because sorrows and dissatisfactions are characteristics of the gross body and not of the subtle and sublime Atma. His 'truthful self' transcends the grossness and the shortcomings of the physical body which undergoes sufferings, pains and miseries of various denominations. This 'truthful self' known as the Atma is never disturbed by the problems associated with the body as well as the world. Therefore, such a self-realised person enjoys natural happiness, contentedness, peace and bliss of the purest kind.

Hence, a self-realised and enlightened man is always satisfied, and feels himself to be spiritually rich and well provided for inspite of his being poor in material wealth, and not possessing the sense objects of pleasure and comfort in this world. Similarly, even if he is helpless and lacks physical resources, he still regards himself as very powerful and resourceful (12).

13. Inspite of fasting or not having the opportunity to relish delicious food, or eating with great moderation whatever bland food that becomes available to him, a self-realised man still always feels contented and filled as if he has had a sumptuous meal.

Similarly, inspite of having to externally distinguish between different things, different situations and different creatures due to existential reasons in this world arising out of practical aspects of life, internally he treats them all alike and sees no difference between them. [This is because he has realised that differences and distinctions are limited to the gross physical body which is visible, and which is the one with which one interacts in this gross physical world. But this body is not the 'true identity' of the creature; it is the Atma that lives inside this body that is his 'true self and identity'. This Atma is not only the true identity of all living beings but is also a non-dual and immutable divine entity that is always the same, uniform and

unchanging. Therefore, externally he might see physical differences any two given entities, but internally he sees uniformity and universality in creation.]

Externally he does all deeds in the physical world, but internally he is not doing anything at all. [This is because the deeds are done by the gross physical body and not by the sublime and subtle Atma that lives inside the body. Since the Atma is his ‘true self’ and ‘real identity’, it is deemed that ‘he’ remains non-involved in the deeds done by the body which is only an external covering for the ‘Atma’. In simple terms it means that a wise, enlightened and self-realised man is one who does not get attached to deeds, who remains aloof from and indifferent to the deeds, and therefore does not expect any results from these deeds. For all practical purposes, ‘he’ has not done anything at all. He is merely a neutral and dispassionate observer of what his body does.]

Indeed, he has attained such a high level of equanimity, non-attachment, dispassion, indifference, neutrality and renunciation towards everything in this world that in spite of his appearing to be enjoying one or the other thing, he is deemed to be not enjoying of them from all practical angles. He might be enjoying or suffering in the physical world, but these are superficial emotions limited only to the gross body, and not affecting his ‘inner true self’ in the least (13).

[Note—This verse essentially describes how a self-realised man who has attained the citadel of spiritual knowledge feels, thinks and behaves.

He remains satisfied with whatever he eats. He treats everything, everyone and every situation with utmost equanimity, fortitude and dispassion though he might have to show preferences for some of them over others, but it is due to the compulsions of existential circumstances that he does so. In fact, he is completely non-partisan in his attitude; he is exemplarily neutral towards and detached from all of them.

Similarly, he goes about his routine life and its affairs in a detached and dispassionate way. This means that externally he appears to act and behave like other ordinary men, but internally he is unconcerned by what his body does and what would be the result of its deeds. This is the basic reason why he neither expects to be honoured for his good deeds, nor is he bothered if he is admonished or reprimanded for his misdeeds; he neither feels happy at being successful, nor is he dismayed at failures. No good results of the deeds done by him are able to tempt him to enjoy them or exult in them—for he knows that the good deed was done by the body and therefore ‘he’ (i.e. his true self, the Atma) has got no moral right to either enjoy its results or feel exhilarated at the laurels heaped on him. In other words, his Antaraatma remains calm and steady under all situations.

Therefore, his ‘true self’ known as the Antaraatma, the subtler form of the cosmic Atma residing in his inner self, has no reason why it should worry about the deeds done by him (i.e. by the enlightened man’s body) or why it should be entitled to either enjoy or suffer from the consequences of such deeds. [It is the gross physical body that does anything, and not the Atma. Therefore, there is no reason why the Atma should either be blamed for any misdeeds done by the person or praised for any good deed done by him.]

14. A truly wise, self-realised and enlightened person knows that the Atma actually has no physical gross body because it is an eternally ethereal and sublime Spirit or Consciousness that is most subtle by nature.

Since the Atma has no grossness in it, it follows that it does not have any kind of physical gross body, and therefore it cannot have any physical attributes, shapes and forms. Only something that has a physical existence in a gross world can have

any given set of parameters and definitions that distinguish it from other entities. This situation has a limiting affect, but the Atma has no such inhibitions.

But the paradox is that the same ethereal Atma begins to exhibit the gross limitations, inhibitions and compulsions because when it allows itself to be associated with the gross body of the creature in this physical world. Hence we deduce that though this ethereal Atma is inherently and eternally immaculate and free from any taints and restrictions, when it lives in a gross body of the creature it becomes tainted and contained like the body. In fact, this association creates an illusion that the Atma and the body are the same things; that they are inseparable and indistinguishable from one another. The reality is quite the contrary.

Therefore, inspite of living inside a body that cannot go everywhere it wants, and even if it goes somewhere it takes some time to reach its destination because it has to travel a physical distance which can be actually measured in physical terms, the Atma on the other hand can go anywhere it wishes in an instant, without facing any obstacles and having any kind of limitations imposed on its mobility and reach. [Put in simple words it means that a wise and self-realised man understands that though it may not be possible for him to reach the supreme Brahm in the physical sense of the word, or that it might not be possible for him to reach heaven with his body and enjoy the peace and happiness that prevails in heaven, he can well neigh to do so by shifting his attention to the Atma or the soul. It is this reason why self-realised ascetics who have accessed the Atma, or who have come to witness and experience the divine virtues, powers and glories of the Atma are said to have attained Brahm-hood as well as enjoy the eternal fount of bliss and peace that had always eluded them when they had thought that their 'self' was the physical body, and that it was this body that can be instrumental in their successful attainment of happiness, peace and bliss on the one hand, and liberation and deliverance from all worldly miseries and torments on the other hand.

A man who is fully convinced of this fact and is well-versed in all its implications is said to be an expert in the knowledge of Brahm. [This is because the Atma and Brahm are both the same cosmic Consciousness that is an ethereal, sublime, subtle, holy and divine entity which has no gross forms and physical attributes. This cosmic Consciousness known as Brahm is all-pervading, all-including, all-encompassing and omnipresent. While the term 'Brahm' is applied to the cosmic Consciousness when the latter is considered at the macrocosmic level or plane of existence, the term 'Atma' refers to the same Brahm when it permeates or pervades uniformly in this creation and lives inside it as its fundamental aspect, as its reality and essence, as its quintessential soul. The term 'Antaraatma' is to indicate the 'Atma that lives inside' the creature (the individual living being) as his true self at the microcosmic level of existence.

But from a broad perspective of metaphysics and spiritualism, all the three terms—viz. Brahm or the Parmatma, the Atma, and the Antaraatma—are the same, and synonymous with each other.] (14).

15-17. Such a highly wise, spiritually enlightened and self-realised man does not distinguish between one thing as being acceptable and the other as being unacceptable, or treating one entity as dear and the other as not being dear. [This is because he knows that the Atma is always one and the same, it never changes because it remains constant and steady, and that this Atma is the only thing worth paying attention to, so there is no point in distinguishing between any two entities based on

their physical features or attributes which are gross by nature, ever changing and not the true identity of the entity under consideration.]

Likewise, the notion of one thing being auspicious and the other being inauspicious does not have any meaning and importance for him.

To illustrate this point the instance of the solar eclipse can be taken. During the eclipse, the sun appears to be enveloped in a shroud of darkness. But this is an erroneous belief held only by those who are ignorant of the actual phenomenon, because the sun does not lose even a miniscule fraction of its brilliant light and luminosity during any of the phases of the eclipse. The darkened disc of the sun is only due to the interference of the moon as it comes between the sun and the viewer on the earth, and not due to any demon named Rahu (a demon with only a head; the torso is called Ketu which corresponds to the comets) devouring or ingesting the Sun God as a revenge for having his body dismembered. It is actually the shadow of the moon that appears as a dark shroud falling on the earth, and it has got nothing to do with the sun. The gradual eclipsing of the sun's bright disc and its subsequent restoration is also due to the movement of the moon in the front of the sun's disc as seen from the earth, and not due to the Sun God entering the demon Rahu's mouth and then coming out of his severed neck.

[This paragraph clearly shows that ancient seers and sages who had preached the Upanishads were not only expert in the intricacies of metaphysical philosophy but well acquainted with the physical sciences also. They knew that the solar eclipse is not due to some demon's head devouring some god known as the Sun but merely a physical phenomenon whereby the moon came in between the sun and earth in such a way that it obstructed the view of the sun as seen from the earth. It was the moon's movement in the front of the shining disc of the sun that gradually obscured its view from earth and gave the impression of the sun being gradually disappearing in the dark mouth of some unknown entity feared to be a demon. When the moon finally moved away from the front of the sun's bright disc, it was assumed that the Sun God has emerged from the demon's mouth. These bright and intelligent sages and seers knew that it was both the movement of the moon across the face of the sun's disc, and the dark shadow of the moon falling upon the earth that is known as the eclipse of the sun, and the notion that some severed head of a demon known as Rahu had devoured the Sun God is a cock-and-bull story perpetrated by mythology having no ground and truth in it.

Further, it is to their credit that they had the bold courage and the firmness conviction to take the risk of castigation, sneer and rebuke by upholding the truth and speaking out in its favour inspite of what they said going against traditional views and beliefs that were even endorsed by the Purans which themselves were part of the scriptures. Hence, they fearlessly debunked such ridiculous and absurd ideas of solar eclipses or lunar eclipses occurring due to either of the sun or the moon being devoured by some imaginary demon!

Indeed such highly wise and knowledgeable sages and seers were the chosen ones whom the Lord of creation had selected to preach the Upanishads and their truths because the Lord knew that His divine knowledge and wisdom can be safely entrusted in their hands. He knew that such men of wisdom and truth would not turn the truth on its head just to please the society or serve their vested self-interest. Therefore it follows that it is not everyone's cup of tea to either preach the eclectic philosophy and knowledge contained in the divine Upanishads, or to understand and accept such teaching as the irrefutable and incontrovertible quintessential 'truth' without falling prey to doubts and confusions about their authenticity and spiritual usefulness.]

Similarly, those who treat a self-realised and highly enlightened spiritual man who has knowledge of Brahm, a man who has experienced and witnessed Brahm first hand, as an ordinary man who has a gross physical body, or identify such an acclaimed and highly spiritual man only by his physical gross body and its characteristics, are definitely very stupid and highly ignorant.

The fact of the matter is that those who are Brahm-realised live like a snake living inside its dead cuticle till the time it comes out of it effortlessly. [That is, their true 'self' simply lives inside the gross body which is as good as dead for them. They live in this temporary dwelling till the time comes to leave it. For all practical purposes, such enlightened souls live a life that is perpetually detached and freed from the entrapments, the burden, the enslavement and the fetters represented by this gross body as well as the equally gross world of material sense objects (15-17).

[Note—In ordinary parlance, the term 'leaving the body' implies the physical death of the gross body when the Spirit is freed from its bondage. From the perspective of Yoga or meditation, it means voluntarily leaving the body as done by ascetics who withdraw all their vital winds or the life-giving Prans, and divert them to the head from which they escape into the outer atmosphere through the hair-like slit known as the Brahm-Randhra located in the top of the skull. This liberation is known as Videha Mukti—i.e. liberation and deliverance from the shackle of the body by abandoning it. It is also known as Kaivalya Mukti because it is a one-way freedom in the sense that the freed soul would not have to re-enter the prison of the body any time in the future.]

18. This gross body of the creature is moved here and there and kept active by the vital winds present inside the body, winds which are collectively known as Pran¹, just like pieces of wood floating on rivers and waterfalls are made to wobble, bob, toss, tumble, flop-flop, flick and dance around by the swift currents of water in these rivers and waterfalls (18).

[Note—¹The vital winds present inside the body of a creature are responsible for all the activities of the latter. The vital winds control all the internal and external functions of the organs of the body. There are a number of Upanishads that elaborately deal with this concept.

The way the vital winds control the functioning of the body has been explained in detail in note of verse no. 10, Canto 3 of the *Annarpurna Upanishad* which is Chapter no. 16 of this volume.]

19-20. A truly wise, learned and enlightened person understands that whatever circumstances he has to face in this life, both the pleasant and favourable ones as well as the unpleasant and unfavourable ones, are determined by his destiny over which he has no control. This is because the destiny is pre-determined and decided upon by the cumulative results of his past deeds as well as the desires that he had harboured then. He understands that the suffering that his body is being subjected to in the present life or time is not of his present creation, but a punishment or reaction for his past. So he cannot do anything about it, and therefore it is worthless to fret and fume. Instead, he would be wiser to bear whatever comes his way with exemplary calmness, fortitude, forbearance and equanimity because by adopting this attitude he would not lose his mental bearing and maintain his internal peace and happiness. Fretting and fuming would exhaust him without any positive outcome; feeling helpless and distressed would push him further down in the bog of miseries and grief.

Therefore he neither despairs nor regrets at his present situation or the sufferings he is being subjected to. He maintains his calmness and stoic attitude. He

does not even exult or celebrate or feels proud and superior to others for any good happenings or unexpected good fortunes coming his way for the same reason—because he knows that they would have come to him nevertheless, and when the good effects of his past deeds wear off, these good tidings would come to an end in spite of his best of efforts to retain them. Such sorrows and happiness are both transient and unreliable. He would be stupid to feel respectively despaired or exhilarated by them.

Besides this wisdom, he also knows that his ‘true self’ is the Atma, the pure consciousness known as the soul, and that all the sufferings and enjoyments are limited to the gross body and have no bearing upon this Atma. Hence, there is no point or reason to either feel unhappy or happy. All worldly emotions and feelings are limited to the gross body, and the pure conscious Atma has nothing to do with them.

Therefore, a truly wise, enlightened and self-realised person who knows that this ‘true self’ is the pure conscious Atma and not the gross body develops a holistic view of existential life, and remains neutral towards what the body does or does not do. He pays no attention to what is witnessed or experienced by the body in the gross world of material sense objects, such as the feelings of either distress or dismay on the one hand, or of happiness and elation on the other hand, because he understands that whatever the body faces in this life is simply the cumulative result of its past deeds that have determined its fate, lot or destiny. So it is better for him to remain calm and relaxed for he has no control over them because they are past and gone. They can neither be negated nor rectified. Getting restless and peeved by misfortunes, or exhilarated and excited at good fortunes is a misplaced idea and a fallacious notion which only snatches away his mental peace and spiritual bliss without giving any positive results that can be of any help to him.

Such a wise person who develops complete equanimity, neutrality, detachment, dispassion and non-involvement in what is seen, or even with what is not seen but imagined, is the one who is regarded as the most exalted and the best in the community of wise ones known as Brahm Gyani—literally those who are well-versed in the eclectic knowledge of the mysteries of the enigmatic, esoteric and mystical Brahm. In fact, they are Lord Shiva himself personified.

[This is because Lord Shiva is said to be extremely wise and highly self-realised. He remains in a perpetual state of Samadhi, a spiritual state of higher consciousness when the practitioner is constantly doing meditation and contemplating upon the Truth. Shiva is totally oblivious of the world around him so engaged is he in meditation and contemplation. Therefore he also remains submerged in an ocean of bliss and tranquility because nothing of this world ever disturbs his peace. A self-realised person also attains a similar state of existence which is full of spiritual bliss, mental peace and happiness.]

Such a Brahm-realised person who is deemed to be an image of Lord Shiva is regarded as spiritually liberated and delivered, one who has truly obtained emancipation and salvation though he is still alive and has a gross physical body (19-20).

21. When all external attributes, qualities, definitions and characteristics of the Atma, which are however absolutely superficial, inadequate and imaginary, are removed, the pristine pure and untainted Atma that remains is nothing but an image of Brahm, the supreme transcendental cosmic Consciousness. Hence, the Atma becomes one with Brahm and indistinguishable from the latter when all external considerations and qualifications which are extraneous to the Atma and not its intrinsic virtue or quality are removed.

[In other words, all the best of adjectives, epithets, definitions and qualifications that are ascribed to the Atma are insufficient to describe what the Atma actually is. They cannot even reflect the surface of the grandness, the magnificence, the divinity and the sublimity of the Atma, what to speak of them being able to describe the Atma comprehensibly. If fact, words which are the medium employed by anyone, even the scriptures, to make an attempt at describing the greatness of the Atma have their own limitations and reach. How can anything (i.e. the words of a language) that is itself limited and has a limited reach be ever able to grasp another entity that is limitless and infinite (i.e. the Atma)? The Atma cannot be butted and bounded within the parameters of words and definitions which are the usual conventional means to speak about and describe any known thing that is the 'truth' in this world. The 'truth' of the Atma is not the ordinary truth as the word is understood to mean in relation to the mortal things in this world; it the 'truth' about an entity that is immortal and infinite. Just like the principal (i.e. the Atma), this 'truth' is also immortal and infinite, and hence indescribable.]

It is like the case of an expert theatre artist who, while on stage, wears colourful costumes and assumes the personality of the character he portrays to such an extent that even his own kith and kin do not recognize him while he enacts his role on the stage. But behind the stage when he dons his own clothes, he reverts back to his original personality that is known to them.

[The Atma lives in a gross body, and for all practical purposes this body becomes its de-facto personality and identity as long as it lives inside it. In other words, like the expert theatre artist, the Atma too plays its role to perfection by adopting the characteristics and personality traits of the body. Since the Atma is the 'true self' of the creature, it follows that the latter also becomes identical with and identified by the body in which the Atma lives, instead of the Atma itself.

Being an expert and a perfectionist in whatever it does, the Atma plays its role to perfection, and the result is that even though the man may be internally well learned and enlightened his external behaviour is like an ordinary man.

But when the same Atma leaves the body (as happens in higher states of meditation when the pure consciousness, the Atma, leaves the gross body along with the vital winds known as the Pran through the hair-like slit in the top of the skull, called the 'Brahm-Randhra', to merge with the cosmic Consciousness present everywhere), or when it detaches itself from the body (again as it happens when one is highly enlightened, realised, renounced, detached and dispassionate)—it regains its primary form and virtues that are independent from those of the gross body. It is this Atma that is highly pure and enlightened, it is untainted and unshackled, it is unbound and unfettered, it is infinite and limitless, and it is eternal and immortal as opposed to the Atma that had lived in the shadow of the gross body.

The natural form and virtues of the Atma are like the brilliant and self-illuminated Sun, while the Atma that lives inside the gross body is like the Sun seen through a thick bank of clouds or during the solar eclipse.

The Atma with a gross body is known as the 'Jiva-Atma', while the Atma without the gross body is the 'Parmatma'.] (21).

[Note—It is the gross body of the creature which has given some kind of physical identity, countenance, form and contour to the otherwise formless, featureless and attribute-less Atma simply because the latter lives in the former just like air living inside the mud pitcher and acquiring the form and characteristic of the latter as cited in verse no. 22 below. When the body is discarded, either actually by the process of death, or symbolically by not paying any heed to it, the Atma is deemed to be liberated from this shackle. Once this comes about, the Atma is no longer identified

with its gross external sheath known as the body which covers it from all sides, but by its own subtle and sublime form which is ethereal and invisible, and which is Consciousness personified.

The Atma with a body is known as the Jiva-Atma, while the Atma without the gross body is the Parmatma. The Jiva-Atma is a mortal being, while the Parmatma is the immortal being. The Jiva-Atma has a number of shortcomings and limitations, while the Parmatma is not subjected to such inhibitions.]

22. A person who knows, understands and realises the true form and nature of Brahm indeed becomes a personified form of Brahm. [Refer verse no. 8 above. He understands that his 'true self' is the pure conscious Atma that is another form of the cosmic Consciousness known as Brahm. He understands that the body is only the temporary habitat of the Atma, and that it is not his truthful self.]

He appears distinct or different from Brahm only due to the gross form of the body in which he (i.e. his Atma, which is his true self) lives. He, in fact, is no one else but Brahm (because his 'true self' is the pure consciousness known as the Atma which is a microcosmic form of the cosmic Consciousness known as Brahm or the Parmatma).

It is like the case of the air trapped inside an empty clay pitcher assuming the form, shape and size of the body of the pitcher, but when the pitcher is broken this air merges completely and seamlessly with the outer atmospheric air, without any effort. [Here, the air inside the pitcher is the Atma, the body of the pitcher is the gross body of the creature, and the atmospheric air is Brahm. The breaking of the pitcher is like death of the physical body when the Atma merges with the cosmic Atma known as Brahm.] (22).

23-25. A person who is fully Brahm-realised and truly enlightened becomes one with Brahm. He becomes a personification of Brahm when all extraneous factors and gross considerations are eliminated.

Just like two separate samples of milk, oil and water become one and indistinguishable from one another when these two samples are mixed together, the condition of a self-realised ascetic who has experienced the Atma and who knows the truth of the Atma as well as his own 'self' is also the same. That is, there is no distinction left between him and his conscious Atma. His 'true identity' is no longer the physical gross body, but the pure consciousness known as the Atma.

Having attained this eclectic and the most exalted spiritual state of existence when he has risen above the limitations imposed by the gross body, and stops being known or identified by the virtue of his gross body, the self-realised and Brahm-realised aspirant is said to have attained Videha Mukti which is equivalent to Kaivalya Mukti. Videha Mukti is freedom of the 'self' known as the Atma from the fetters of the gross body known as the Deha. Kaivalya Mukti is so-called because it is a unique and matchless form of liberation and deliverance in the sense that when this sort of Mukti is obtained there is no fear or chance of ever getting trapped and shackled again. It is final emancipation and salvation of the soul. A person who obtains Kaivalya Mukti as a result of Videha Mukti does not have to take birth again in this world¹.

All forms of Avidya (delusions and ignorance) that act as causes which result in re-birth are burnt by him in the fire of knowledge and enlightenment that comes with realisation of the Atma, the pure consciousness (23-25).

[Note—¹It is like the case of the air present inside the clay pitcher merging with the outer air when the pitcher is *actually broken*. Even if the earlier air, known as the

Ghatakash, tries its best to go inside the pitcher once again, it would not be successful for the simple reason that the pitcher no longer exists as it has been *broken*. But a hypothetical situation exists when it can be said that this Ghatakash can enter another pitcher if it is very eager to remain trapped inside one when it finds residence in some new pitcher being moulded by the potter. So we come to a very interesting conclusion here—we have *two types of Videha Muktis*—one which is ‘Kaivalya Videha Mukti’ as outlined in this verse above, and the other is simply ‘Videha Mukti’ as symbolized by the Ghatakash entering another newly moulded pitcher.

The metaphysical import is obvious—a wise, enlightened and Brahm-realised person discards this gross body with total renunciation and detachment from both the world and the body and the countless temptations they offer. Such a man obtains ‘Kaivalya Videha Mukti’. On the other hand, if he has some desires left, even auspicious ones such as self-less service or studying the scriptures or doing charitable work, he would be inclined to take a new birth to fulfill his desires and unfinished tasks. Then he would be heading towards only ‘Videha Mukti’ by discarding the gross body at the time of death. Since he had been doing auspicious and noble deeds during his lifetime, and has noble intentions and desires, he would take a high and noble birth, and in his new life would be a torch-bearer for the rest of the society, but it would not be the termination of his journey through the cycle of birth and death.]

26. How is it possible that an enlightened and a highly realised ascetic who has virtually become Brahm personified after having attained high degree of self-realisation and its attendant enlightenment ever take a birth again because creation and its expansion are the effects created by Maya (the powers of Brahm to create delusions) which this ascetic has already conquered and eliminated from its roots.

All fetters and bondages having their genesis in Maya, and all obstacles that this Maya creates in the path of one’s Mukti (spiritual liberation and deliverance) would no longer apply to an ascetic who has eliminated Maya as a stepping-stone to Brahm-hood.

[The very fact that he is ‘wise and enlightened’, the fact that he has developed a high degree of renunciation and detachment from the world as well as the body and their respective allurements and temptations is due to his having vanquished Maya. Elimination of Maya is a pre-requisite for being Brahm-realised in the first place. Hence, when Maya is trounced, there is no question of this creation ever raising its evil hood again. All the problems are created when one is not aware of the truth and is instead enveloped in a shroud of ignorance and delusions. For instance, a man becomes terrified when he sees a length of harmless rope when he thinks, out of ignorance of the truth and its attendant delusions, that it is venomous snake. He is also horrified to see a lifeless cuticle of a snake if he does not know that this cuticle has no life in it and is simply a dead piece of discarded skin. But once he becomes aware of the truth, he loses all fears of these two things.

All spiritual problems are created by Maya; the Jiva (the living being) is subjected to all spiritual torments and mental dilemmas because he is embraced by Maya. When he breaks free from its clutches he is like a slave finding his final freedom from eternal slavery. Under the overpowering influence of Maya, he had erroneously treated his gross body as his ‘self’, and had treated the world as real and truthful. When this Maya is eliminated, then obviously this erroneous notion is dispelled and the light of true knowledge shines through much like the brilliant rays of the sunlight breaking through the shroud of thick cloud to illuminate the world, which in this case is his inner self. Say, how can the darkness of ignorance and its accompanying phantoms and ghosts live when the bright sun shines? He realises that his ‘self’ is not the body but the pure conscious Atma, and that this Atma is an eternal,

sublime, ethereal and a holy Spirit as compared to the gross body which has characters that are the opposite of those possessed by the Atma. For instance, the body dies and perishes while the Atma is an eternal and imperishable entity. He understands that birth and death are limited to the gross body and have no relevance vis-à-vis the Atma.

He also realises that this Atma is a microcosmic image of the macrocosmic Atma of the entire creation, and that the latter is known as Brahm. That is why when a self-realised ascetic proclaims 'I am Brahm' he is speaking an absolute truth without any pretensions and deceit.

The Atma in its cosmic form is known as the 'Parmatma', the supreme Atma. Neither the Atma nor the Parmatma ever takes a birth or dies.] (26).

27. When one is under the false impression that a harmless length of rope is a dangerous venomous snake, he is afraid of the former; he becomes terrified of the rope. But when he comes to know the truth, this fear disappears on its own. He would no longer be afraid of the rope because he knows that it is not a snake¹.

This explains the difference between false and misleading knowledge, and true knowledge that shows the correct path. While the former kind of knowledge leads one to be trapped in fetters of ignorance and delusions, the latter type of knowledge is liberating and a provider of deliverance to the creature. While ignorance creates a trap that shackles a creature in a snare of delusions, knowledge frees him and is emancipating as well as empowering. While ignorance bogs him down, knowledge sets him free (27).

[Note--¹References of this concept—(a) Krishna Yajur Veda: Kathrudra Upanishad, verse no. 17; Rudra Hridaya Upanishad, verse no. 34; Yogkundali Upanishad, Canto 1, verse no. 79-80; Yogshikha Upanishad, Canto 4, verse nos. 1-2, 22; Tejobindu Upanishad, Canto 5, verse nos. 48-49; Canto 6, verse no. 77. (b) Shukla Yajur Veda: Niralamba Upanishad, verse no. 14.]

28-29. Brahm has no pretensions and coverings; it has no deceit, conceit and falsehoods associated with it. Therefore, it is the unadulterated and naked 'truth' that has no distortions whatsoever.

Whether or not one believes in the existence of anything is actually the function of the intellect and the mind. It is the mind-intellect that decides for a creature whether anything exists or does not exist in this world.

This intellect-mind complex is a subtle part or component of the gross body which is like a covering of the Atma, the pure consciousness, representing Brahm. The fact of the matter is that Brahm has no such thing as a mind-intellect complex for the simple reason that Brahm has no gross body with its various components, including the subtle component known as the mind-intellect.

Therefore, Brahm, the pure cosmic Consciousness, is never deluded, is never confused and is never in any doubt about the 'truth' of anything, including this world. One of the obvious reasons for this is that Brahm is the one who has created this world by employing his own dynamic powers of creating Maya and has employed his own Shakti (powers, authority and energy) to give it its shape. Therefore Brahm clearly knows the secret of this world; he is aware how it has come into being; he is privy to its hidden mysteries.

Because of the fact that the Atma (the pure self) of a living being is none else but this Brahm in a personified form, it follows that a wise and self-realised person knows that this world is false and imaginary; that it is a creation of Maya and its

stupendous maverism known as Maya Shakti. He allows his 'self' to interact with this world only to the extent that is absolutely necessary for him because he has to live in it till the time the Atma has completed its journey and reached its destination. This 'destination' is final spiritual liberation and deliverance, final emancipation and salvation—which are collectively called 'Mukti'.

By corollary, once the world becomes irrelevant for a self-realised and enlightened man, his body too becomes equally irrelevant. This is because both the body and the world are gross and a part of the creation of Maya which has trapped his soul in its vice-like grip.

Since all delusory notions arising out of Maya that make the existence of the world possible (like the case of a snake existing in the rope) are functions of the mind-intellect, it follows that the Atma has no such conceptions arising in it because it is free from Maya and its effects, as the Atma is naturally and intrinsically highly enlightened, self-illuminated, knowledgeable and wise.

In other words, only when the Atma is under the influence of Maya does it regard the world as true, meaningful and relevant. Once the veil of Maya and its grip is removed, the Atma is able to perceive the truth of the world—and this 'truth' is that the world is imaginary and entrapping; it is the result of the imagination of the fertile mind, the mind that makes a man think that the rope is a snake!

When the stupidity and ignorance of the mind and intellect are done away with, both the fallacious conception of the rope being a snake, and the inherently false world to be true are done away with. Thereafter only the truth prevails, and this 'truth' is the spirituality of the 'self' which is nothing but the pure consciousness known as the Atma.

So we conclude that when Maya is removed, the Brahm (in its personified form as the Atma of the living being) is convinced that the world is false and gross by nature (28-29).

30. How can one imagine (i.e. one cannot and should not imagine) the presence of various artificial divisions or classifications in Brahm like the ones that are applied to the sky (by the virtue of which the sky is given many names, such as the Ghatakash or the space enclosed in an empty pitcher, the Mathakash or the space within the walls of a monastery, etc.). The fact is that Brahm is pure, untainted and immaculate, it has no Kalaas (divisions or fractions), it is neutral and un-involved in anything, it is calm, serene, placid, unmoving and tranquil, it is holy, sinless and divine, it has no darkness associated with anything negative, it is non-dual and matchless, and it is the supreme transcendental Atma, the cosmic Consciousness personified (30).

31. The truth of the matter is that Brahm presents an array of great paradoxes in creation. For instance, it neither takes a birth (because it never dies to take a new birth as it is eternal, imperishable, infinite, constant and immortal) nor can it be said that it has no birth (this is because the world is a visible manifestation of Brahm; it is Brahm that is revealed in the form of the world and its inhabitant creatures, both of which are known to have a beginning or have taken a birth).

Similarly, Brahm does not remain in fetters (because it is eternally free as the ethereal Spirit or the cosmic Consciousness or the Truth that can never be shackled by un-truth or delusions), but paradoxically it appears to be butted and bound (because it is revealed in the form of the physical world which has a parameter, and is clearly definable and limited by certain characteristic features).

[Brahm, in its primary form, is eternal, indefinable, infinite, form-less and attribute-less, but when the same Brahm is revealed in the form of this creation or the world it becomes finite and assumes for itself certain attributes and features so typical of this world.]

Brahm is not an aspirant of anything, it does not desire anything (because it is completely fulfilled and self-sustained), but when revealed in the form of a Jiva (the living being) it appears to have so many aspirations and desires (for the obvious reason that Brahm has allowed its self to be surrounded by Maya which creates the impression that Brahm needs something, that Brahm has to sustain itself by seeking sustenance from the outside world).

Brahm has no desire for Moksha (liberation, deliverance, emancipation and salvation—simply because it is eternally free).

Brahm is not Mukta (free) either (because he has the cosmic responsibility of looking after this creation which constantly dies and takes birth again in an endless cycle, making Brahm, the Supreme Being, virtually entangled in this responsibility).

This is indeed the great truth of the supreme Brahm. Indeed, Brahm is ‘supreme’ because there is nothing beyond it, and there is nothing without it. Nothing escapes Brahm; nothing exists that is not Brahm, but at the same time Brahm transcends everything known and understood in the form of this creation. Amen! (31).

Chapter 19

Pashupat Brahm Upanishad/ Pashupat Brahmo-panishad

This is a revealed Upanishad as it was first preached by the creator Brahma himself to sage Valikhilya. It is sub-divided into two parts—the first is known as Purva Kanda, and the second as Uttar Kanda. It primarily deals with the great metaphysical concepts of Brahm, the supreme transcendental cosmic Consciousness and the Absolute Truth of creation, and uses the metaphor of Hans, the divine Swan that is used as a symbol of high purity and wisdom, to establish that Brahm and the pure conscious Atma residing as the ‘true self’ in the inner-being of all living creatures are the same divine entities. Just like the divine Mantra OM which is dedicated to Brahm and is synonymous with the latter as it is deemed to be an all-pervading cosmic sound manifestation of Brahm, the word Hans, when used as a Mantra, also implies both the Atma as well as the Brahm. ‘Hans’ is a broad term that is used as a metaphor for all that is wise, divine, holy, pure, immaculate, uncorrupt, auspicious and noble, qualities that apply to both the Brahm and the Atma.

The Upanishad derives its name from the fact that Brahm is known as ‘Pashupati’ (Kanda1, verse no. 32) because Brahm, manifested in the form of the eclectic virtues of wisdom, conscience, intelligence, virtuousness, righteousness, nobility, propriety and auspiciousness, as well as in right deed, conduct and thought, helps a man overcome, vanquish and control the natural animal-like savage instincts

in a living being. It follows that anyone who has learnt to exercise exemplary control over his sense organs and their natural urges and instincts is a personification of Brahm. Since Brahm is represented by the Atma as well as by its symbol known as Pranav or OM, it follows that by taking the aid of the Atma or the word Mantra OM one can directly access Brahm.

Attainment of Brahm-hood is therefore directly related to the realisation of the Atma which is a microcosmic counterpart of the cosmic divinity known as Brahm. This Atma is the cosmic Consciousness that resides in the body of the individual creature and forms his true self. The word OM acts as a catalyst in the process of establishing a unity between this Atma and its principal form Brahm. Therefore, attainment of self-realisation and Brahm-hood are synonymous with each other and go hand in hand; they are marked by the grand virtues of wisdom, enlightenment and knowledge of the 'truth'. These virtues free the spiritual aspirant from the fetters of ignorance (Agyan) that had cast a thick veil of delusions (Maya) around him that acts as an abominable and foreboding obstacle in the path of his Mukti (which means his spiritual liberation, deliverance, emancipation and salvation).

The Upanishad emphasizes and establishes the fact that the best form of religious sacrifice as well as worship is that which is done internally as opposed to the external rituals and formalities. It goes on to elucidate that Brahm, the Supreme Being and the Lord of creation, is to be found in the inner-self of the worshipper and nowhere outside. It points out that all external paraphernalia of religion only have a symbolic value, and in this context it cites the instance of the sacred thread, the two great fire sacrifices known as the Vajpaye Yagya and the Ashwamedh Yagya, the observation of Sandhya which means the offering of prayers three times a day, the bird Hans, the Mantra OM employed during worship, and so on. True knowledge of Brahm that is rich in wisdom and a source of one's spiritual enlightenment and freedom is the Sutra (formula or thread) that links the Atma (i.e. the 'self') of the creature to the supreme Brahm (i.e. the Supreme Being and the supreme Self), and paves the way for his final Mukti. Then it also says that each unit of creation, including the great Trinity Gods, i.e. Brahma the creator, Vishnu the sustainer, and Rudra the concluder, are only 'images' of Brahm in as much as they depict one or the other of the countless glories and virtues of Brahm, but they are *not* Brahm in the complete sense (verse no. 10). This Kanda outlines the method of meditating upon Brahm with the help of aids such as Hans and Pranav. These grand topics are covered in Kanda (Canto) 1.

The ideas expressed in the first Kanda are further elaborated in Kanda 2 which outlines how the supreme Brahm has a paradoxical nature in the sense that while the whole creation is its image, is regulated and empowered by it from within, Brahm still is absolutely different from any of its images and things that it controls and empowers. During the course of enumerating the glories and virtues of Brahm, this Kanda also outlines the eclectic characters and way of thinking a Brahm-realised and enlightened person.

The knowledge of Brahm is the greatest spiritual asset that any wise and erudite person would strive to acquire because it leads to eternal contentedness and extreme spiritual bliss.

Since this world is a creation of Maya (delusions), it has no pith and substance, and to pursue it is like voluntarily falling in a dark pit. Brahm-realisation on the other hand helps one to finally break free from the endless cycle of birth and death by attaining emancipation and salvation.

-----Shanti Paath-----

Please see appendix no. 1 for the English of this Shanti Paath.

Purva Kand/Canto 1

1. Once upon a time, the self-born creator Brahma had a desire to initiate the process of creation and create the subjects or creatures that would inhabit or populate the would-be creation.

In this process, he created Lord Kameshwar (Lord Shiva who is regarded as the Lord who rules over, and therefore controls, all worldly passions and desires) and Vaisrawan (so-called as he is the son of Vaishrava, the creator of the world; he is also known as Kuber, the treasurer of Gods) (1).

2. Vaisrawan who was the son of the creator Brahm and was also known as sage Vaalkhilya¹ asked his father—‘Oh Lord! What is the knowledge of this world (or how can one know what this world is)? Who are the patron Gods or deities of the two extreme states of existence of consciousness known as the Jagrat (waking state) and Turiya (transcendental state)? Who controls this world (or who is the Authority that regulates everything in this creation)? What is the proof of the existence of Kaal (various aspects of time or phases of life; the end of everything that has come into existence)? By whose command and on whose strength do the moon and the sun rise and shine? Who or which is that Authority whose glories and virtues are as infinite, eternal, vast and immortal as the sky?

I wish to hear the answers to all these questions from you. So please be kind to elaborate upon them. No one else except you has knowledge of the answers of these questions. Therefore, oh Brahmin, please enlighten me about them.’ (2).

[Note—¹*Vaalkhilya*—He was the head of a family of sages born from Kratu, the father, and Kriyadevi, the mother. There are said to be sixty-thousand Vaalkhilyas who are supposed to be siblings. They were of the size of a thumb. Once they had helped sage Kashyap perform his fire sacrifice successfully, but became tired. When Indra, the king of Gods, saw them weary, he laughed at them, thereby incurring their wrath who cursed him that he would be punished for his impertinence and arrogance by Garud, the legendary vehicle of Lord Vishnu.]

3. The Swayambhu (self-born) Brahma (the creator) replied—‘The Maatrika Vidya¹ is the one that has created the entire world. [It is the knowledge that deals with the intricacies and finer subtle details of the process of creation, details that are esoteric and mysterious. It would answer your question ‘How was this creation created?’]’ (3).

[Note—¹The *Maatrika Vidya* is the esoteric and secret knowledge of creation that deals with the Shakti or the dynamic powers of the Supreme Being known as Brahm that first stirs the neutral and calm primordial cosmic gel by injecting in it the first spark of life, which in turn sets off a chain reaction that culminates in the form of the creation as it is known now. The word ‘Maatrika’ literally means a small mother. Since the process of creation is so complex that it required a number of complicated processes taking place simultaneously, with each individual element and each single dynamic source of energy playing its crucial role in the composite phenomenon of creation, these were called ‘Maatrikas’ because they were all like little mothers who had got together and used their combined energy, resources and abilities to create or conceive a cosmic embryo, nourish it, and allow it to develop to maturity so that the

creation could be revealed in the way it finally did. They conceived and harboured this creation in their collective womb, and had nourished and sustained it till the time it was born in the matured form as we know it today.

In modern science we know that any finished product requires a chain of steps to be meticulously undertaken before it is finally produced. The science of organic chemistry teaches us that numerous chemical products are created by tweaking the basic molecular structure of various elements in association with the ubiquitous carbon atom that is at the central core of all organic formulas.

Similarly, the creation of this universe was not an isolated event, but it required countless subtler steps undertaken in a systematic form that worked together towards one goal, and that goal was the revelation of this creation. Many small steps and countless numbers of subtle factors that were insignificant in themselves, but assumed great importance as part of the cosmic mosaic of creation, contributed to the creation of this world. Each of these factors and elements are the Maatrikas of this creation. This world is a 'creation' precisely for this reason—it was moulded from primary ingredients that had no significant value of their own, but when they were subjected to many adjustments and experimentations they produced a 'world' that is rich in dynamism and energy, a world that has no resemblance to any of these primary ingredients. Each step was equally important and equally significant, because one miss-step would have caused the entire process to malfunction and come to a standstill.

Each of these 'steps' are metaphorically cited as the various 'Maatrikas' in the field of metaphysical interpretation of this celestial phenomenon. Here, the word Maatrika is related to the Mantras which are divine formulas used in meditation and contemplation, and hence implies the hidden energy and dynamism of the letters of the Mantra which give it its inherent stupendous powers, potentials and authority as well as its holiness, divinity and sanctity.

The process of creation involved cosmic efforts by the creator who is said to have performed a cosmic fire sacrifice in order to initiate this process, and had obviously employed certain Mantras, as any fire sacrifice needs the use of Mantras for its proper sanctified process. As would be seen in due course, the Mantra employed by Brahma was *Hans* that is a synonym Mantra for *Pranav* or *OM*. The inherent dynamism and energy of this Mantra is contained in its syllables or letters, and it is this dynamism and energy that not only initiated the process of creation but also sustained it during its period of development and growth that culminated in the birth of the visible creation.

In brief therefore, the 'Maatrika Vidya' is the esoteric knowledge (science) which pertains to the individual letters or syllables of any given Mantra dedicated to any given deity who represents one or the other aspect or facet of the Supreme Being known as *Brahm*. The Maatrika Vidya deals with the mystical power, energy, authority and strength, i.e. the dynamism that is inherent in any given Mantra, but which is based on the individual units (i.e. the individual letters or syllables) of the Mantra. That is, if one knows what the individual units of a Mantra are, then he can correctly predict the power and abilities that not only this Mantra possesses but also of the deity that this Mantra represents.

For instance, it is well established that the Mantra 'OM' stands for *Brahm*. Therefore, the Maatrika Vidya of OM would be a comprehensive understanding of its finer sound components and their alphabetical counterparts, along with their spiritual significance and metaphysical import, as well as the combined astounding spiritual powers, dynamism and energy that they incorporate in themselves when they form the Mantra known as 'OM'.

References: (i) *Krishna Yajur Veda* = *Brahm Vidya Upanishad*, verse no. 62-63; *Yogtattva Upanishad*, verse nos. 21-22. (ii) *Atharva Veda* = *Tripura Tapini Upanishad*, Canto 2, paragraph no. 12 (which says that the first outer ring, called the

Chakra, of the worship instrument of Goddess Tripura has eight Matrikaas enshrined in it).]

4. This Vidya known as Maatrika Vidya has two forms—one with two syllables or letters (i.e. the Mantra ‘Hans’¹), and the other with three syllables or letters (i.e. the Mantra ‘OM’² or Pranav). In fact, both these two forms of the Maatrika Vidya are the same. It also has another eclectic but esoteric form or derivation or variation having four letters or syllables³ (4).

[Note—¹The *two letters of Hans* are ‘Han’ and ‘Sa’. This Mantra has been elaborately described in a number of Upanishads. Refer References for the term ‘Hans’ (a divine Swan)—(a) Krishna Yajur Veda—Shwetashwatar Upanishad, Canto 2, verse no. 6; Canto 6, verse no. 15; Tejobindu Upanishad, Canto 1, verse no. 3-4; Dhyan Bindu Upanishad, verse nos. 24, 61-65; Brahm Vidya Upanishad, verse nos. 16, 20-28, 34, 60-64, 78-79; Yogshikha Upanishad, Canto 1, verse nos. 131-132, Canto 2, verse nos. 9-11, Canto 6, verse no. 20, 35-36, 53-54; Yogtattva Upanishad, verse no. 99. (b) Shukla Yajur Veda—Hansopanishad is exclusively dedicated to explain the concept of the pure conscious Atma by way of using the metaphor of a Hans. (c) Sam Veda—Yogchudamani Upanishad, verse no. 31-35, 82-83, 93. (d) Atharva Veda—Naradparivrajak Upanishad, Canto 5, verse no. 4

²The *three letters of OM* are ‘A’, ‘U’ and ‘M’.

³The *four letters of OM* are ‘A’, ‘O’, ‘U’ and ‘M’.

The profound metaphysical and spiritual importance and significance of OM has been succinctly summarised in the following Upanishads. They are:--

(a) Rig Veda—Naad Bindu Upanishad.

(b) Krishna Yajur Veda—Taittiriya Upanishad, Valli (Canto) 1, Anuvak (sub-canto) 8; Amrit Naad Upanishad, verse no. 2, 4, 24-25, 31-32; Dhyan Bindu Upanishad, verse no. 2, 9-18 (which narrates how each letter of OM stands for different aspects of creation), 37, 102; Tejobindu Upanishad, Canto 1, verse nos. 1, 6; Yogtattva Upanishad, verse nos. 136-139; Brahm Vidya Upanishad, verse nos. 2-12, 69-71 ½ which narrates how each letter of OM stands for different aspects of creation; Varaaha Upanishad, Canto 4, verse nos. 1.11—1.34, and Canto 5, verse no. 70; Shuk Rahashya Upanishad, verse no. 20 describes how OM is used for the purpose of ritualistic worship according to the Tantra philosophy involving Anga Nyas, Shandanga Nyas etc.; Akchu Upanishad, Canto 2, verse nos. 42-43 ½ describe how the three states of existence (waking, dreaming and deep sleep) and the three types of bodies (gross, subtle and causal) came into existence as manifestations of the three letters A, U and M of the word OM; Rudra Hridaya Upanishad, verse no. 38.

(b) Shukla Yajur Veda—Taarsar Upanishad, Canto 2, and Canto 3, verse nos. 1-7; Hans Upanishad, verse nos. 6-17.

(c) Sam Veda—Yogchudamani Upanishad verse no. 74-81, 85-88; Pranavo Panishad which has only 13 verses dedicated to OM.

(d) Atharva Veda—Ram Tapiniopanishad, canto 3, verse no.5-9; Prashna Upanishad, full Canto 5; Mundak Upanishad, Canto 2, section 2, verse no. 4,6; Mandukya Upanishad, verse no. 8-12; Atharvashikha; Nrisingh Purvatapini Upanishad, Canto 2, verse nos. 2, 5; Canto 4, verse no. 3; Naradparivrajak Upanishad, Canto 8, verse nos. 2-8; Shandilya Upanishad, Canto 1, section 6, verse nos. 3-4.]

5. I, the creator Brahma, am the only Lord of the three worlds [That is, I am the sustainer, nourisher and protector of the three worlds consisting of the terrestrial realm, the heavens, and the nether world.] (5).

[Note—Here the pronoun ‘I’ that the creator Brahma uses actually is meant to imply the Supreme Being known as Brahm who has manifested or revealed himself in the form of the creator Brahma. In fact, the very name of the creator, i.e. ‘Brahma’, is

derived from the root 'Brahm', and it means the creative form of the Supreme Being. In other words, when Brahm, the Supreme Being, decided to create this world, he took the form of Brahma. Therefore, Brahma, the great and grand forefather of creation, is actually Brahm involved in the process of creation himself.

Being a direct and the first revelation of Brahm, the Supreme Being, before the initiation of creation which necessitated the involvement of Maya (delusions), the creator known as Brahma is regarded as the wisest and the enlightened One. That is why the primary scriptures known as the Vedas are his produce.

Later on, as the process of creation commenced and moved ahead, the need was felt for Maya because unadulterated Truth could not be made to appear in more than one form, and to make the world it was necessary to have wide variations of forms, qualities and features. So, either the creator could have abandoned the entire process of creation by deciding to maintain the Truth and shun all falsehood altogether, or to overlook this stumbling block and create delusions of reality if he actually wanted to give shape to his dream project of creation. Hence, the creator willingly set aside the real Truth and created its image in the form of an imaginary 'truth' that was so perfect that it seemed to be a real image of the Truth. But in reality the product was a complete 'falsehood' for the very simple reason that it was 'created' and not pre-existing.

This declaration of Brahma that 'I am the creator' is not boastful or wrong really. This is because he is the wise One and also the most enlightened One. His statement is reminiscent of what a self-realised and wise spiritual aspirant declares, and which is also endorsed by the Upanishads. He asserts 'I am Brahm; I am Brahm personified'—a declaration that is regarded as one of the many great sayings or the Maha Vakyas of the Vedas. Here, the pronoun 'I' does not mean the physical body of the person making this statement, but refers to his Atma which is his real and truthful 'self'. It is not at all a boastful and arrogant statement but one that comes spontaneously from the inner-self of a wise and honest man. This Atma is an image of Brahm that resides in the body. The individual is an image and a microcosm of the entire creation—with his gross body representing the visible aspect of creation and his Atma representing Brahm that lives in this world as its soul and essence.

Therefore, when the creator Brahma says that 'I have created this world', he is not being untruthful or boastful, but is making an honest declaration as he knows who his 'true self' is.

Therefore also he is indeed 'the only Lord of the entire world'—because he is the Supreme Being himself personified in his form.]

6. All phases of time and eras are under my control and command. [Like in the previous verse and in the following verses also, the pronouns 'my' or 'me' refer to the Supreme Being carrying out the divine work of creating the various components of creation.] (6).

7. It is me who has created and set out a pattern for the day and the night (7).

8. The Tej (light, illumination and dynamism) that is inherently present in the sun, the moon, all the stars and constellations are my glories on display (8).

9. The sky (which is incorruptible, vast, infinite, eternal, all-pervading and all-encompassing) is my subtle but macrocosmic form. The three Gunas (i.e. the subtle qualities that are inherent in all living beings in this creation, and which decide the character traits and the personality of each single individual in creation; the qualities known as Sata, Raja and Tama)¹, which are also called the three Shaktis (dynamic

powers), along with the Maya (the power of creating delusions)² are also my glories and dynamism revealed in these forms.

[In other words, whatever character traits and virtues that are displayed by all the living beings in this creation are reflections of the astoundingly varying forms that the cosmic authority, the power, the energy and the dynamism of the supreme Brahm can take. It also implies that the term Brahm has a holistic import as it incorporates the extremes of the good as well as the bad, and all that lies in between. There is no surprise in it simply because it conforms to the philosophy that says that there is nothing in this creation that is not Brahm. Hence, if goodness is Brahm, then the bad as well as the mediocre are also Brahm! This is why Brahm defies all definitions and parameters, and is the greatest paradox of creation. Brahm is the circumference of creation beyond which there is nothing.] (9).

[Note—¹The *three Gunas* are the basic three qualities that determine the character of all living beings in creation. They combine in different ratios to impart an individual with his unique personality and character traits. The creator needed these Gunas to give individuality to all the creatures of his creation.

Briefly, these three Gunas are the following—(a) The *Sata Guna* is the best of the three qualities present in any creature. It is a positive quality and is marked by a propensity for following the path of nobility, auspiciousness, probity, propriety, virtuousness, holiness and righteousness. Creatures that have a predominance of *Sata Guna* are inclined to do selfless service, be benevolent, merciful, kind and gracious, have coolness of head and a rationale and balanced mind, be contented, have humility and piety etc. Such creatures are devoted to good values in life and have a desire to acquire knowledge that would help them reach higher spiritual goals in life.

This *Sata Guna* is marked by high standards of ethical and moral existence that makes the bearer of such qualities highly respected in society. Such people have a spiritual dimension to their personality. This quality is spiritually uplifting and gives a divine halo to those who possess it and practice it.

The *Vasanas* that have the *Sata Guna* or quality dominant in them are like a veil covering the lamp or like a smoke covering the fire. A slight breeze will remove this smoke. Similarly a little bit of prayer and meditation will remove the *Satwic* desires; its removal requires the least effort.

(b) The second quality is the *Raja Guna* and it makes a man more attracted to this material world and its charms, and less spiritually inclined. The *Raja Guna* is the medium quality marked by a greater percentage of worldly passions, desires and attachments and their natural offshoots in a creature. It makes a creature inclined towards the material things of the gross world and their enjoyments, towards creation of wealth, its enhancement and protection, and generally having a desire for growth, development and expansion etc. It covers such qualities as worldly yearnings, passions, a stormy nature, agitated behaviour, ambitions, selfishness, expansionist tendencies, a desire to acquire, retain and develop such acquisitions even to the detriment of one's long term spiritual welfare and even if such actions cause pain to others. All these pertain to this materialistic world. Such qualities give worldly fame and prosperity. If these qualities are judiciously mixed with the *Satwic* qualities, then they provide the person the better of the two worlds, both in terms of worldly fame as well as spiritual well being.

The *Vasanas* that have the *Rajasic Guna* or quality dominant in them can be compared to dust on a mirror. In this case some dusting and rubbing is needed to clean the mirror; a greater effort is needed as compared to the case with *Satwic* quality.

(c) The third quality is called the *Tama Guna* and is the meanest and the basest of the three Gunas. It is a demeaning quality in a creature that leads to his downfall and perpetual entanglement with things that are considered improper and unethical. It creates an inclination for committing all sorts of sins, misdeeds and demeanours. It

leads the creature towards negativity and inspires him to acquire negative qualities such as various vices, evils, sins, perversions etc. It makes him inclined to be greedy, rapacious, haughty, arrogant, lustful, intoxicated, vile and wild to the extreme. Such a creature with a predominance of Tama Guna has utter disregard for propriety, noble virtues and ethics, for righteousness and morality.

In brief, it is the most degrading, denigrating and contemptible of the three characteristics in a person, and leads to such behaviour which is utterly immoral, denigrating and depraved, marked by grossness, crassness and recklessness. It therefore leads to his downfall, ignominy and ruin as well as ignorance, delusions, gloom, inertia, anger, frustration etc.

The Tamsic Guna or quality is like the embryonic membrane that covers the foetus in the womb. They cannot be removed easily and require great diligence, effort, persistence, dedication and careful handling requiring time and patience. It is the basest and the lowliest of the three characteristics, and the worst type to possess.

These three Gunas are called 'Shaktis' because they are powerful enough to determine the way the world behaves and thinks; they are the dynamic aspect of creation that control all characters and facets of personality of all the creatures of this creation. Being responsible for a creature's thought processes and how he acts and behaves, these Gunas even have a say on his future and destiny. These Gunas are the powerful and forceful drivers that determine where the destiny of the world is headed.

The *Naradparivrajak Upanishad* of the Atharva Veda, in its Canto 3, verse no. 77, says that these three Gunas are the basic Dhatus (elements) in creation.

The *Brihajjabal Upanishad* of the Atharva Veda tradition, Brahman 3, verse no. 1 says that all the three Gunas depend upon the level of one's Vidya or his level of wisdom, knowledge, erudition and enlightenment.

The *Yogshikha Upanishad* of Krishna Yajur Veda, Canto 1, verse no. 116 elucidates how these three Gunas are like the three Granthis (knots) of the body as far as the ascetic is concerned.

The *Shwetashwatar Upanishad* of Krishna Yajur Veda, in its Canto 4, verse no. 10 describes the relationship between Prakriti, Maya and Gunas in a very succinct manner.

How the three Gunas *affect the man's character* have been very precisely and expressly narrated in *Shaarirako-panishad* of Krishna Yajur Veda in its verse nos. 7-13.

How the three *Gunas were used by Brahm to create this world* has been beautifully described in *Paingalo-panishad*, 1/7 and 2/3. Canto 2, verse no. 3 describes how Sata and Raja were used, while Canto 1, verse no. 7 narrates the use of Tama.

The *Shwetashwatar Upanishad* of Krishna Yajur Veda tradition, in its Canto 6, verse no. 16, describes how the supreme Brahm was the creator of all the three Gunas.

The concept of *Gunas affecting the Atma* has been elaborately dealt with in various Upanishads, for example the *Maitrayanyu Upanishad*, 1/11, 2/5, 3/5, etc. of the Sam Veda tradition.

The *Ram Purva Tapini Upanishad* of the Atharva Veda tradition, Canto 2, verse no. 2 describes how the three Gunas were used by the supreme Creator to create this world.

Colour of the Gunas—Upanishads symbolically refer to the *three primary colours* when they describe these *three basic qualities* in the creature. They are white for the Sata Guna, red for the Raja Guna, and black for the Tama Guna. Refer—*Shwetashwatar Upanishad*, 4/5; and *Paingalo-panishad* 1/3. The *Dhyan Bindu Upanishad* of the Krishna Yajur Veda, in its verse nos. 9-13 describes these Gunas has having the following colours while it analyses the various components of the Manta OM. The colours are grey or white for the Sata Guna, yellow for Raja Guna, and dark for the Tama Guna.

The *Chandogya Upanishad*, 3/5/4-3/9 and 6/3-4 of the Sam Veda uses these three colours to describe the different types of characters called Sata, Raja and Tama defining the three basic types of creatures and their individual personality traits and temperaments that exist in this creation.

The *Dhyan Bindu Upanishad* of the Krishna Yajur Veda, in its verse nos. 9-13 describes the colours of the Gunas as follows—"The first letter 'A' is symbolically of a yellow colour and represents the predominance of the 'Raja Guna' in this creation. The second letter 'U' is symbolically of a white or grey hue and represents the predominance of 'Sata Guna' in this creation. Finally, the third letter 'M' is symbolically of a dark colour and represents the predominance of the 'Tama Guna' in predominance."

The *Paingal Upanishad*, 1/3-9 of the Shukla Yajur Veda clearly states that these three colours were the ones with which Nature representing creation was born and how the supreme creator had subtly entered the entire creation to be uniformly present in its very minutest of corner.

In Tantra texts, these three Gunas are treated as the three Granthis or knots. The *Yogshikha Upanishad* of Krishna Yajur Veda is one such. In its Canto 1, verse no. 116 it describes how the three inherent Gunas (qualities) of Sata, Raja and Tama that are naturally present in all the creatures are likened to knots or Granthis that create obstacles in his spiritual progress and the shine of his consciousness to come to the fore. Verse no. 117 describes the benefits of this achievement.

²*Maya*—The term broadly means 'delusions' or the situation which creates an illusion of reality which is devoid of truth and matter.

It is a manifestation of Brahma in the sense that it reflects his dynamism and glories to create wonders out of nothing and real-life illusions that resemble the truth so much that it is hard to distinguish the false from the truth.

Maya is also said to be of *three types*, called the 'Triguna Maya', because of the dominance of one or the other of the above three Gunas in any given situation. Thus, when the Maya is dominated by the Sata Guna, it is called 'Sata Guni Maya'; when it is dominated by the Raja Guna, it is called 'Raja Guni Maya'; and when it is dominated by the Tama Guna, it is called 'Tama Guni Maya'. These have been described in verse no. 10 below.

Maya has *three names*—viz. (a) Maha Maya—or the great powers exhibited by Brahm at the cosmic level. This Maya is the progenitor of all other types of Mayas which keep the individual creature trapped in their net. The Maha Maya is the virtual mistress of all the delusions and misconceptions and their attendant ignorance that keep all the creatures of this creation enthralled by their deceptive charm. (b) Yog Maya—this is the stupendous magical powers created by the union of the supreme authority of creation known as Brahm, and the mystical and esoteric powers that delusions and hallucinations can create for the creature. (c) Maya Shakti—this is the 'shakti' or power and authority displayed by Maya in association with Brahm from whom it acquires its stupendous energy and powers.

Refer also to Kanda/Canto 2, verse nos. 33, 44-45 of our present Upanishad in the context of Maya.]

10. The Maya that has the Tama Guna in dominance is represented by Rudra (the angry form of Shiva that brings about destruction and annihilation of creation).

The Maya that has the Sata Guna in dominance is represented by Vishnu (the sustainer, protector and the benevolent care-taker of creation).

The Maya that has the Raja Guna in dominance is represented by Brahma (the creator who indulged in the tricky job of creating all sorts of delusions and illusions, as well as the world with all its material sense objects and the subjects that would populate it and enjoy it, thereby keeping the creator engrossed in its magical charms).

The Maya that has a combination of the Raja Guna and the Tama Guna appearing in equal proportion as a dominant factor, with the Sata Guna taking the back seat, is represented by Indra and other Gods. None of the Gods in the countless number of Gods in the pantheon can be said to possess Satvic qualities—i.e. none of them can be cited as an example of exemplary qualities of virtuousness, nobility, auspiciousness, righteousness, truthfulness, holiness, piety, purity, chastity, incorruptibility, trust worthiness, sincerity, honesty and other good virtues that the Sata Guna stands for.

[None of the Gods are a perfect image of the Supreme Being known as Brahm as they represent only a tiny fraction of one or the other aspect of Brahm. So, while Brahm includes all of them in its being at once, none of them can claim to be Brahm in its entirety, for they represent only one particular aspect of Brahm. For instance, the creator Brahma represents that aspect of Brahm which ‘creates’; Vishnu symbolizes that aspect of Brahm which is concerned with the sustenance of creation; and Rudra stands for the power of Brahm to rein-in and crush even the most formidable of creatures and bring about an end of this creation mercilessly and ruthlessly if it spins out of control. It ought to be noted that the Sanskrit word ‘Rudra’ and the English word ‘ruthless’ have the same root—i.e. ‘ru’. Similarly, Shiva is that aspect of Brahm which is marked by the grand eclectic virtues of high wisdom, enlightenment, dispassion, renunciation and spiritual beauty. It is this aspect of Brahm that is lauded in this Upanishad as the ‘Pashupati Brahm’—i.e. the Brahm which has controlled the animal-like, evil and corrupt world. In other words, Shiva who trounces the wicked and the evil is the Lord regarded as the closest God to Brahm.]

Out of this pantheon of Gods it is only Lord Aghor (Shiva) who stands out as being neutral, full of equanimity, and as being indifferent to the effects of one or the other Gunas in the true sense.

[That is, he is not at all influenced by the dominance of one or the other Gunas. His character is absolutely immaculate, steady and untainted because it is not at all affected by the characteristic influences of any of the three Gunas. This is why Lord Shiva is equated with Brahm, the Supreme Being. This is also why he is called ‘Maheshwar’—the Great Lord, an epithet not even applied to Vishnu who is so loved by the creatures of the creation because he takes care of them. And therefore, this aspect of Shiva is equivalent to Brahm, the Lord who is also known as Pashupati—one who controls animal-like instincts which impel all creatures to remain indulged and engrossed in enjoying the sense organs and the sense objects of this world.] (10).

11. Pashupati Rudra (i.e. Lord Shiva)¹ is the doer or performer of all Yagyas (fire sacrifices; he represents the Brahma priest). Lord Vishnu is the Adhvaryu (the priest who takes care of the details of the rituals). And Indra (the king of Gods) is the Hota (a special category of priest)².

*The Supreme Being known as the ‘Maheshwar Brahm’³, the Great Ishwar (Lord God) known as Brahm, who resides in the inner-self (of all the living beings as the pure consciousness known as the Atma) is the patron deity, the Brahm (the God), to whom the sacrifice is offered, and he is the one who enjoys the benefits of the fire sacrifice. This supreme Lord is also known as ‘Manas Brahm’—literally the Supreme Being who lives in the subtle heart as well as in the conscious and the sub-conscious mind of the creature. It is this Lord who is the real beneficiary of all the good and auspicious deeds done by the creature. In other words, the real beneficiary of all good and auspicious deeds is the creature himself, and no one else. This is because the ‘true self’ of any creature (living being) is his Atma, his pure conscious soul, and the Atma

is a microcosmic counterpart, a perfect image, of the supreme Consciousness known as Brahm or Pranav.

[The term 'Mana' has two components—viz. the 'subtle heart' because it is here that the Atma lives, and 'subtle aspects of the conscious mind' because it is here that the grand virtues that distinguish Brahm, such as wisdom, enlightenment, knowledge, deep insight, intelligence, erudition, sagacity, the ability to discriminate and differentiate between the right and the wrong, etc. are located. That is, the real benefit of doing the fire sacrifice with devotion and faith is derived by the Atma or the inner-self of the creature which finds auspiciousness and holiness with this endeavour. The fire of the sacrifice symbolically burns all the taints and impurities that may have mired the purity and divinity of the Atma because of its association with this world full of corruptions and impurities.] (11).

[Note—*This stanza can be interpreted as follows also—'The real beneficiary of the fire sacrifice or any other forms of auspicious deeds is the supreme Lord known as 'Maheshwar', the Great Ishwar, who is also known as Brahm. This Brahm resides in the subtle Mana (heart, conscience and sub-conscious mind) of the aspirant as his Atma which is pure consciousness and the concerned individual's 'true self'. In other words, the real beneficiary of all good and auspicious deeds is the creature himself, and no one else.

¹The *Sharav Upanishad* of Atharva Veda, verse no. 14 which stresses that 'Isha' or the Lord Shiva, who is regarded as the supreme Lord of creation, is also known as 'Pashupati'. His divine consort is said to be 'Swaha'. In mythology, Swaha is a personification of the oblation offered to the fire sacrifice. Swaha is also depicted as the daughter of Daksha Prajapati and wife of Agni, the Fire-God; she is said to preside over burnt offerings. Her body consists of the four Vedas and her limbs are the branches of the Vedas, called Angas.

²The *Brahma priest* is the head, the senior most and elder class of priest who is a representative of Brahma, the creator and patriarch of creation. Brahma was the first God who did the cosmic fire sacrifice and started the tradition of fire sacrifices and worshipping of the Fire in order to empower one to successfully undertake any given enterprise. This priest uses the hymns of the Rig Veda.

The *Hota priest* is the priest who offers oblation to the sacred fire; he uses the hymns of the Atharva Veda. The Hota priest offers the oblations on behalf of the patron who finances the fire sacrifice. Since in earlier times only kings and other noble men had the wherewithal to hold elaborate fire sacrifices involving huge outlay of money, the king of Gods, Indra, is cited here as being the Hota priest as he made arrangements for the material things needed for the completion of the fire sacrifice. Besides this point, Indra was the God of rain, and therefore his nod was needed for a good harvest from which the grain could be collected to be offered to the supreme deity. Therefore, metaphorically and by implication it was Indra who was himself offering the oblations to the Supreme Being.

The *Adhvaryu priest* chants the hymns of the Yajur Veda. With the same logic as applied for the Hota priest, Vishnu was the Adhvaryu priest because he took care of the nitty-gritty of creation; Vishnu ensured that the details of maintenance of creation were taken care of like this priest who takes care of the Mantras associated with the various Gods and Goddesses who preside over the various aspect of the mundane life on earth.

³It is to be noted here that the term 'Maheshwar' is traditionally applied to Lord Shiva who is also known as Rudra. But a fine distinction must be made between Shiva who is honoured as Maheshwar, and Shiva who is known as Rudra. Rudra is not the complete Brahm as clearly stressed in verse no. 10 for the simple reason that the lowly quality of Tama Guna dominates him, and it is due to this Tama Guna that he is so angry and wrathful. On the other hand, that form of Shiva which is holy, wise, enlightened and self-realised, and which is the patron deity of ascetics and sages

is known as Aghor, the renunciate and dispassionate form of Shiva who is ever-submerged in meditation and contemplation. This Shiva is pure, holy, truthful, enlightened and blissful. These are the hallmark virtues of the Atma, the pure consciousness that is 'Chinmaya' (truthful, enlightened, blissful—refer verse no. 14). Hence, the Shiva who is 'Maheshwar' is the one who possesses the eclectic qualities possessed by the Atma at the individual level of creation, and of the supreme transcendental Atma known as the supreme Brahm at the cosmic level of creation.]

12. The 'Manas Brahm' (as described in verse no. 11 above) has a subtle, a divine and a sublime form or aspect or facet known as 'Hans'¹, 'So-a-Ham'², etc.

[This Manas Brahm obviously is the pure conscious Atma as the divine bird Hans, the Swan, is frequently used in the Upanishads as a metaphor for the Atma to indicate the latter's immaculacy, holiness, purity and divinity, along with a high degree of wisdom, enlightenment and erudition. Since the Atma is also the 'self' of the creature, a person who performs a fire sacrifice with a holistic approach is expected to become highly self-realised and spiritually awakened or enlightened so much so that when he declares 'I am that Brahm' (So-a-Ham), he actually means it and is not being pretentious or deceitful. He is deemed to have understood the esoteric meaning of the term 'Brahm' vis-à-vis his own truthful 'self' known as the Atma.]

This symbolic fire sacrifice (that is done to attain this eclectic state of existence when the aspirant becomes enough self-realised to understand that he is the supreme transcendental Brahm personified in the form of his Atma known as Hans) is actually done by practicing meditation upon Naad.

What is it? When the seeker of Brahm becomes completely submerged in the thoughts of Brahm and the Atma, when he continuously meditates upon the pure consciousness by employing the Mantra 'Hans' (as described in a number of Upanishads for this purpose), his inner-self begins to resonate with the sound of Naad³ (i.e. the cosmic sound which is said to be generated by the vibrations in the ether created by the resonance of the cosmic Consciousness). This sound flows in a continuous stream like the flow of oil on a clean surface. Its vibrations reverberate in the nerves and veins of the practitioner's body so much so that he becomes oblivious of everything else in this world.

Any disruption in this state of transcendental existence of continuous bliss and stability is the state of existence known as the Jiva—i.e. the Atma that lacks steadiness of bliss and tranquility, and is therefore tossed and tumbled around by the changing nature of the gross world around it.

[In other words, the 'Jiva' or the living being is an entity that is different from Brahm by the virtue of its losing its connection with the Atma, the pure consciousness. Otherwise, there is no distinction between the Jiva and Brahm.] (12).

[Note—¹The eclectic Mantra *Hans*—refer verse no. 4 of this Kanda/Canto 1 and its note. The metaphysical importance and relevance of a Swan vis-à-vis the Atma have been explained as note of verse no. 20 of the present Kanda/Canto 1 of this Upanishad.

²The Mantra *So-a-Ham*—This Mantra has been described in a number of Upanishads—viz. (i) Sam Veda = Yogchudamani Upanishad, verse no. 83. (ii) Krishna Yajur Veda = Brahm Vidya Upanishad, verse no. 34, 78-79; Yogshikha Upanishad, Canto 1, verse nos. 131-133; Panch Brahm Upanishad, verse no. 28; Varaaha Upanishad, Canto 2, verse no. 17, Canto 4, verse nos. 1.11-2, Canto 5, verse nos. 69-72. (iii) Atharva Veda = Tripadvibhut Maha-Narayan Upanishad, Canto 5, paragraph no. 15.

³*Naad* is the cosmic sound that is said to be generated in the cosmic ether due to the vibrations caused by pulsations of Consciousness. It is the subtlest form of sound

and stands for the subtlest form of dynamism of this cosmic Consciousness that the Upanishads prefer to call Brahm. In this manifestation of Naad, Brahm is called Pranav. The cosmic sound of Naad is encrypted in the form of the monosyllabic Mantra known as OM. Therefore it follows that OM is a word manifestation or representative of the cosmic Naad which stands for the cosmic form of life-generating energy and dynamism called Consciousness. The divine entity that possesses this virtue is the Supreme Being known as Brahm.

Now, Hans is a bird—i.e. it is a living being with a gross body which harbours the same Consciousness inside it in the form of the Atma. This Atma possesses all the eclectic virtues that Brahm possesses. Therefore, for all practical purposes, both the 'Hans' and 'OM' refer to the same cosmic Consciousness known as Brahm, albeit at two different levels of creation. While the term 'OM' refers to the existence of the Consciousness at the cosmic level in the form of Pranav or Brahm, the term 'Hans' refer to the same Consciousness that resides inside the gross body of the individual creature as his Atma.

This word OM is an ethereal sound that is used during Yoga or meditation exercises to contemplate upon Brahm because its repetition results in submerging the practitioner in a continuous and overwhelming stream of sound waves, of increasing frequency and pitch, that are generated by the vibrations caused by continuous repetition of OM. The sound reverberates throughout his inner being so much so that it reaches a crescendo. It is then that the practitioner is said to hear the cosmic Naad, the cosmic background sound in the ether which is believed to be generated by the cosmic Consciousness known as Brahm. It is much like the case of one listening to a favourite radio station only when he catches the particular frequency.]

13. This Hans (Atma) is an image or personification of Parmatma, the supreme Atma which is the cosmic Consciousness. Hans moves or prevails both in the outside world as well as in the inner-self of the creature (i.e. the microcosmic aspect of creation). In the inner-self, this Parmatma lives in the form of the 'Suparna' (a divine bird that is auspicious and with golden wings).

[Here, the Suparna refers to the Hans, the divine Swan from the perspective of the Upanishads. From the perspective of the Purans, the word 'Suparna' though refers to the bird Garuda which is the vehicle of Lord Vishnu. But since Vishnu is also known as the Viraat Purush, the macrocosmic, all-pervading, invisible gross body of Brahm.

Therefore, the verse, simply put, means that the Parmatma, the supreme transcendental Atma, lives in the inner-self of a living being as his individual Atma. This Atma is wise and enlightened. It is likened to the bird Swan because this bird is regarded as a metaphor for these grand virtues. Again, just like the Swan that floats majestically and with dignity on the surface of the water of a lake, remaining unaffected by the impurities present in the water, the Atma too lives in a body with the same attitude and dignity. A wise man understands that he bears the cosmic Consciousness in his inner-self as the Atma which is as immaculate and dignified as the Swan floating on the surface of a lake.

There is another reason why the metaphor of the Swan is used for a wise man who is lost in deep meditation on the 'self' and the 'truth'. The neck of the Swan is curved inwards like the alphabet U with its beak lying almost parallel to its abdomen as it floats calmly on the surface of the water. For a casual observer this posture reminds him of a person who is lost in some deep thoughts. Hence, when ancient sages and seers were searching for an instance to illustrate the state of existence of a man lost in deep meditation and contemplation they hit upon the metaphor of the Swan as being the most appropriate one.] (13).

14-15. [This verse describes the symbolic form of the Hans, the enlightened Atma, in its subtle form. In other words, a wise and enlightened creature who has become self-realised understands that Brahm has a subtle body as represented by the entities enumerated in this verse, and not a gross form as represented by the world and the way the different Gods have been depicted to exist in this creation by the Purans. This fact is also endorsed in verse no. 10 which expressly states that none of the Gods are truly holy and divine and complete in the correct sense! This is because all of them have one or the other of the three Gunas as the dominant factor, whereas Brahm is truly holy, divine and immaculate because he has all of them in equal proportions, thereby one neutralizes the other. In other words, the Gods are not neutral; they are not perfect. On the other hand, Brahm is not only neutral but also perfect. These Gods represent one or more than one divine aspects of Brahm, but not Brahm in its entirety.]

Anything that is extremely subtle and sublime cannot be visibly seen as opposed to one that is gross, but subtle and sublime entities have a wider reach, are infinite, and are inherently free from either worldly taints or limitations that come with being gross. That is why Brahm par-se is invisible while the same Brahm's various manifestations in the form of different Gods are visible to a devotee as endorsed in the Purans.

Now, Brahm also lives as the Atma of the individual Jiva (living being; the creature) and as the Gunas that this Jiva possesses. The obvious difference between the Gods and the Jiva lies in the degree of subtlety that their Atma displays. So whereas the Atma that lives inside the Jiva is surrounded by the grossness associated with the physical body, the Atma of the Gods is of a highly subtle nature. A Jiva can become God-like if he sheds his grossness and worldly tendencies. This is the aim of all spiritual practices. However, if the spiritual aspirant has even a trace of desires left in him, though this desire may be of a noble and righteous nature, he would not get complete Mukti, and instead become God-like. The Atma that has assumed a subtle body of a God becomes omnipresent and very powerful as compared to the Atma that lives in a gross body of a Jiva. While the Atma as the 'self' of a God has no shape and attribute, that which is the 'self' of the Jiva has a definite shape and attributes.]

The 'Hans' (Brahm; the cosmic Consciousness; the Atma) is revealed in this creation at a subtle and microcosmic plane in the form of the following—(i) as the ninety-six Tattwas (principal elements)¹ of creation, (ii) as the eclectic virtues (and the sublime entity represented by them or which is a personification of these virtues) that are compositely known as 'Chinmaya' (enlightenment, wisdom, consciousness, and bliss), (iii) as the three Gunas (inherent qualities in creation, such as Sata Guna, Raja Guna and Tama Guna), (iv) as the nine Tattwas², (v) as the three Trinity Gods such as Brahma the creator, Vishnu the sustainer, and Shiva the concluder of creation who are manifestations of the three aspects of the dynamic energy (the 'fire power' that drives the dynamo of creation) of this Hans (Brahm), (vi) as being either tied by the various Granthis³ (spiritual knots or stumbling block or mill-stones that act as obstacles in one's spiritual progress) on the one hand, and being free from their shackling effects by acknowledging the presence of the Advaitya Granthi (the presence of the non-dual Brahm in the form of the subtle Atma) on the other hand, and (vii) as being the wearer of the sacred thread (which means that the Jiva is diligent in both the performance of the fire sacrifices⁴ as well as pursuing the sacred knowledge of Brahm by following the various Sutras ('threads'; the various spiritual formulas) as prescribed in the Upanishads and other scriptures (14-15).

[Note—¹The ninety-six Tattwas—refer Krishna Yajur Veda's *Varaaha Upanishad*, Canto 1, verse nos. 2-14.

Reference: (i) Krishna Yajur Veda = *Varaaha Upanishad*, Canto 1, verse nos. 2-14. (ii) Atharva Veda = *Par Brahm Upanishad*, verse no. 5.

The *Varaaha Upanishad* of Krishna Yajur Veda describes the 96 Tattvas elaborately in Canto 1, verse nos. 2-14.

²The nine Tattwas—The three fundamental Gunas, i.e. the Sata, the Raja and the Tama, the three basic characters of the Atma known as Sat-Chit-Anand, i.e. Sat (truth), Chitta (consciousness) and Anand (bliss), and the three forms of divinity represented by the Trinity Gods, i.e. Brahma the creator, Vishnu the sustainer, and Rudra the concluder of creation, represent the nine Tattwas of creation.

³Granthi—The word *Granthi* literally means node, a nodule or module or knot or a wart-like or a gland-like structure. It has various connotations depending upon the context in which the word is used. For instance, it might symbolically mean the different gates in a strong fort which must be overcome or broken before one enters the fort or overruns it as done during war times.

The numerous emotional, sentimental and spiritual hurdles that an aspirant faces are also referred to as the Granthi because they are like the hard shell of the nut which is difficult to crack. Only when this shell is cracked can one find the nut. Similarly, only when one overcomes the numerous obstacles and hurdles faced by him in his spiritual pursuit that it is possible for him to have access to the fount of eternal bliss and peace that comes with Brahm realisation which is being aware of the Absolute Truth of existence.

According to the metaphysical interpretation of the term Granthi, it is the various knots present in the heart that shackle the Atma and prevent its liberation and deliverance. These Granthis are called Hridaya Granthis because they stand in the way of a man obtaining freedom from his fetters and keep him tied to this world. Once he is able to rupture them, he finds liberation even while he is still alive in this world. This fact has been clearly emphasized in *Kathopanishad*, Canto 2, Valli 3, verse no. 15 of Krishna Yajur Veda tradition. Refer also to *Mundak Upanishad* of Atharva Veda, *Mundak* (Canto) 2, section 2, verse no. 8.

From anatomical point of view, the Granthis refer to the ganglions that help to coordinate the different nerves just like major junction boxes in the network of electric wires in a building. The word Granthi also refers to the glands that control all the major functions of the body, including those of the nerves and veins. Just like a knot that helps to tie something, these Granthis of the body bind the subtle energy present inside the body and prevent it from being dissipated or going to waste; it helps to preserve energy and stops it from being released if not wanted. If we treat them as representing the ganglions then it means that by the process of Yoga in which the subtle energy of the Kundalini is released in the spinal cord, or the Sushumna Naadi to be precise, these hitherto clogged and inactive ganglions are reactivated and they begin to function in prime shape. If we consider them as glands then it would mean that the functioning of these glands is restored by the process of Yoga, and this in turn helps the body to work properly.

The Granthi symbolises the center of power and authority because it is the nodal point from where all the authority needed for governance of the body spread out. It is also like the seat of power and authority of a king, much like the strong fortress from where he rules over the kingdom. They represent the nodal points in the body where the Trinity Gods, i.e. Brahma the creator, Vishnu the sustainer and protector, and Shiva or Rudra the concluder, have their symbolic residence, and it is from here they control the functioning of the body of the individual as well as everything that he thinks and does. If the individual is regarded as the microcosm of the entire creation, then the Atma would be the supreme Brahm, and the various patron deities of the organs would be the different Gods of creation. The *Brahm Vidya Upanishad* of Krishna Yajur Veda, verse nos. 70-71 describes the three main Granthis where these

three Gods have their symbolic abodes in the body of the individual creature—viz. Brahm Granthi, Vishnu Granthi, and Rudra Granthi. They have also been described in (i) Krishna Yajur Veda's Yogshikha Upanishad, Canto 1, verse nos. 86-89; Yog Kundalini Upanishad, Canto 1, verse nos. 67-68, 85-86.

⁴The sacred thread is worn by Brahmins when they perform a fire sacrifice. Verse no. 11 above has already established the symbolism of the three types of Brahmin priests who perform the fire sacrifice. Since the sacred thread has three intertwined strands, it means here that all the three priests should work in a coordinated manner in order to derive any benefit from the fire sacrifice. Otherwise it loses its relevance and significance just like a sacred thread that is not woven according to a prescribed manner.

Conversely, it means that the honouring of the Trinity Gods and understanding the fact that they represent the supreme Brahm and his dynamism in the cosmic form is equivalent to wearing the sacred thread in a symbolic manner by the spiritual aspirant.

Taken in simple words this verse means that just as the important aspect of creature or a living being is his Atma for which the term 'Hans' is used as a metaphor, the understanding of the essential principles of creation, such as the question as to how it was created, how it is regulated and how it would ultimately end, and other such relevant metaphysical questions is equivalent to being acquainted with Brahm because the latter is the supreme Authority that is responsible for every aspect of this creation.

The 'sacred thread' is the eclectic knowledge of Brahm that binds all individual units of creation into one single whole. It is the knowledge that it is Brahm that is the thread which runs through the various units or components of this creation as enumerated in the aforesaid verse, stringing them together to make a structure that is known as this world. This structure has two aspects or facets—one that is visible and gross, and the other that is subtle and underlying.]

16. The sacred thread known as the Yagyopavit is also known as the Brahm-Sutra¹ (referred to in the closing lines of verse no. 15). This is because it refers to the divine spiritual knowledge that pertains to the supreme transcendental Brahm.

This sacred thread also stands for the different forms of the sacred fire sacrifices; these fire sacrifices can only be done when the person who performs them wears this thread. This is because this thread reminds him that the fire sacrifice is the medium which links him with Brahm.

Again, since the fire sacrifice itself is a personified form of Brahm, it is a natural corollary that the sacred thread also stands for Brahm.

Further, the Sanskrit term for the sacred thread is 'Sutra', literally having two connotations—one obviously means 'a thread', and the other more important meaning is 'a formula, a principle, or a tenet'. Hence, to wear the sacred thread actually means to know the secret tenets of Brahm, to be aware of the principles that pertain to the supreme Truth known as Brahm, to be conversant with the formula which can provide one with access to the pinnacle of spiritual glory and attainment, a knowledge of the Divine that can make one spiritually liberated and emancipated.

The sacred thread that is used (worn) as a symbol of purity during fire sacrifices has a gross form, but its subtler form represents the purity of the fire itself (because there is nothing as powerful as the fire as far as the ability to purify is concerned).

The sacred thread, once again, is used as a symbol of purity and holiness during religious ceremonies because it represents Brahm, the supreme deity worshipped during these ceremonies. It represents the virtues and glories of Brahm,

and it is this sublime and subtle aspect of the sacred thread that is the actual one which is of any benefit to the wearer.

It symbolizes the 'Brahm-Sutra'—the esoteric secrets of Brahm, the profound principles of Brahm, the grand tenets of the philosophy of Brahm. It is the link or the bridge between the Jiva who is unaware of Brahm, and the Brahm itself.

The physical form of the sacred thread reminds the wearer constantly that his body is a shrine in which the Supreme Being is consecrated as the Atma, and so he must be very careful of his thoughts, his deeds and his actions so as not to do anything that undermines or defiles the holy nature of this shrine (body).

Therefore, the sacred thread known as the Yagyopavit and the tenets of Brahm known as the Brahm-Sutra are synonyms of each other (16).

[Note—¹The Sacred Thread/Yagyopavit/Brahm Sutra/Tri Sutra—The *Trisutra* are the three threads used in making the sacred thread worn around the neck. These three threads stand for the three Gunas or qualities that Brahm possesses. These are the following--'Sata Guna or quality' is the noble, virtuous, auspicious and good qualities present in a creature. It is marked by such high standards of ethical existence that have, as their characteristic features, such qualities as coolness of head, peace, contentedness, humility, devotion, wisdom, mercy, compassion, creativity, selflessness, service, righteousness, virtuousness, holiness and nobility of thought and action etc. As is evident, these qualities are the best qualities that one can have in him; they have a spiritual dimension to them; they are spiritually uplifting and give a divine halo to those who practice them. (b) 'Raja Guna or quality' covers such qualities as worldly yearnings, passions, stormy nature, agitated behaviour, ambitions, desires, selfishness, expansionist tendencies, desire to sustain etc. All these pertain to this materialistic world. Such qualities give worldly fame and prosperity. If these qualities are judiciously mixed with the Satwic qualities, then they provide the person the better of the two worlds, both in terms of worldly fame as well as spiritual well being. (c) 'Tama Guna or quality' is the third quality; it is the most degrading, denigrating and contemptible of the three characteristics in a person, leading him to such negative traits as sins, vices, perversions, greed, avarice, haughtiness, pride, lust, attachments, yearnings, intoxication, wild behaviour, promiscuity, evils, utter disregard for anything which is righteous, ethical and noble etc.—i.e. in brief, immoral, denigrating and depraved behaviour marked by grossness, crassness and recklessness of misdemeanours. It is the lowest and meanest of the three qualities.

The proportion of the three Gunas decides the nature, natural temperament, tendencies, habits and inclination of the creatures. For example, a person with a greater proportion of 'Satvic' (noble) characteristic will be considered nobler than a man with a greater proportion of 'Rajasic' or 'Tamsic' qualities. So we can say that sages, seers, prophets, scholars and generally enlightened persons have a high degree of 'Satvic' qualities in them; kings and householders who live a noble life are example of those with higher amount of 'Rajasic' quality in them; while sinners, killers, drunks, rowdy elements, cheats etc. are those people with higher 'Tamsic' quality in them. Since the creation consists of all types of people, Brahm is deemed to possess all these qualities in him.

The external sacred thread is worn to remind the wearer of his duty and responsibility towards the Brahm who resides in his own bosom. When he has matured enough that he does not need any reminder for this purpose, it is expected of him to then discard the external thread, and instead remain engrossed in the thoughts of Brahm in all planes of existence, whether he is awake or asleep. This is actually what is done when one takes the vows of Sanyas (a life of renunciation) when he is ordained to discard all external symbols such as the sacred thread, the tuft of hair on the head, the water-pot, the ochre clothes, the monk's staff, etc.

The following Upanishads also deal with the concept of the sacred thread—(i) Krishna Yajur Veda = Brahmo-panishad, verse no. 4-15. (ii) Atharva Veda = Par

Brahm Upanishad, verse nos. 3-20; Narad Parivrajak Upanishad, Canto 3, verse nos. 17, 79, 80-82, 84-85, 88-89. The Mantra dedicated to the Yagyopavit is narrated in Narad Parivrajak Upanishad, Canto 4, verse no. 37.]

17. The various Matras (vowel sounds; the units, letters or syllables of any given Mantra; the length and duration of invocation of various Mantras during contemplation and meditation) are like the units or parts of the symbolic body of this Brahm Sutra. [Since the term ‘Sutra’ means a formula or principle which can be known or taught only by the medium of words, and words are built around letters and syllables, it is implied here that the Matras are the different metaphysical doctrines and eclectic principles which are an inseparable component of the secrets pertaining to Brahm. They are the ‘Sutra’—the thread—which links the individual creature to the supreme transcendental Divinity known as Brahm. They are the Sutra—the formula—that help the individual unravel the profound secrets of the divine Brahm. They are the Sutra—the sacred tenets—pertaining to Brahm.]

A wise, intelligent and self-realised spiritual aspirant is called a ‘Hans’ (i.e. he is treated as a wise man who has great wisdom and discriminatory powers to pick up the truth and discard the falsehood) when he remains perpetually submerged in doing meditation and contemplation upon the universal ubiquitous ‘truth’ known as Brahm, or upon his ‘self’ known as the Atma. This Atma is an image of the supreme transcendental Atma known as the Parmatma. The terms Atma, Parmatma and Brahm are synonyms of each other. When he does so, he is actually doing a fire sacrifice in the true sense, though it is done in a symbolic manner. This form of fire sacrifice is done internally as it involves the mind and its sub-conscious faculties which remain focused on the ‘self’ and the truth of creation.

This form of internal fire sacrifice has far greater spiritual value than the one done in the external world. The internal form of the fire sacrifice is subtle and sublime, and consequentially its results are also subtle and sublime in equal proportion. The external form of the fire sacrifice involving elaborate and time consuming rituals is done in a gross world and involves gross forms of physical offerings. Therefore its rewards are also gross and superficial. From the perspective of the long-term spiritual welfare of the Jiva, the internal form of the fire sacrifice has far more value than its external counterpart.

Hence, in this form of the internal fire sacrifice the various Mantras he employs to meditate and contemplate are the symbolic Sutra (the sacred thread) that is worn by a person performing the external forms of the fire sacrifice. [In other words, a wise man who uses the different Mantras to meditate upon the Atma and the supreme Brahm is deemed to be wearing the sacred thread even if he does not physically wear the thread on his body. These Mantras are equivalent to the sacred thread worn during formal forms of the fire sacrifice and are equally purifying and holy. The natural corollary to this observation is that those who meditate upon Brahm, who know the secret of Brahm, who are self-realised in as much as they are well-versed about the esoteric secrets of the Atma—such people need not bother about the necessity of wearing the sacred thread on their physical body. For such enlightened and wise persons, the various Mantras and their Matras are the instruments that he employs to attain the same spiritual glory and divine achievements that others get by doing elaborate fire sacrifices and purifying rituals.]

[Which Mantra does he employ to do the symbolic fire sacrifice? This is answered now—] The Pranav or the Mantra known as ‘OM’ is the symbolic Brahm-Sutra (the secret formula which leads one directly to Brahm-realisation as it is a sound

representative of the cosmic Consciousness) that is employed in doing the eclectic form of the fire sacrifice known as Brahm Yagya (which implies an internal form of fire sacrifice consisting of meditation and contemplation upon the pure cosmic Consciousness that resides inside one's own inner-self as the Atma, the form of the fire sacrifice endorsed in verse no. 12).

The subtle and sublime cosmic Consciousness that inspires the generation of the sound of OM, or which is at the heart of OM and forms its soul, is also known as Hans. Since OM refers to the supreme transcendental Consciousness known as Brahm, the 'Hans' here refers to this 'conscious' factor which not only enables the generation of sound in the otherwise lifeless, pacific and inert cosmic ether, but also enables an equally lifeless, inert and gross body of the creature to actually hear sound. [Why does a dead body not hear anything? It is because the 'Hans' residing inside it has flown away; the 'Atma' or the 'conscious soul' has left it.]

Doing a Brahm Yagya in the proper method is a means of obtaining Moksha. [That is, meditating and contemplating upon Brahm with true wisdom and enlightenment, sans any pretensions and deceit, is the only way for attaining spiritual liberation, deliverance, emancipation and salvation. It is the only way by which a creature can overcome the torments and tribulations associated with delusions. It is the only way by which he can break free from the cycle of birth and death to find eternal rest and peace. It is the only way by which he can find or discover the real and absolute 'Truth'.] (17).

[Note—The importance of the internal form of fire sacrifice has also been elaborately described in a number of Upanishads, viz. (i) Atharva Veda = The present Pashupata Brahmin Upanishad, Canto 1, verse nos. 12, 14-15, 17-22, 29-31; Mundak Upanishad, Canto 1, section 2, verse no. 7-10; Prashna Upanishad, Canto 4, verse nos. 3-4. (ii) Krishna Yajur Veda = (i) Avadhut Upanishad, verse no. 7; (ii) Pran Agnihotra Upanishad, verse nos. 21-22; (iii) Yog Kundalini Upanishad, Canto 1, verse nos. 3-4 (which describes that the food eaten by an individual should be treated as an offering made for Shiva residing inside the body as the Atma).

The importance and the significance of the word Hans has been elaborately explained in verse nos. 4 and 12 of this Kanda.]

18. Brahm Sandhya (remembering Brahm, offering oblations and prayers to him silently by meditation and contemplation at least three times a day—at dawn, at noon and at dusk) is the way of doing the mental or internal form of the fire sacrifice.

The doing of this Brahm Sandhya is a sign that the person is remembering Brahm internally (i.e. he is meditating and contemplating upon the cosmic Consciousness residing in his inner-self as the Atma; it is a sign that he has become self and Brahm realised). [Refer verse no. 20 also.] (18).

19. A true Brahmin¹ is one who wears the Yagya Sutra (the sacred thread worn during the performance of fire sacrifices, especially the symbolic one as narrated in verse no. 16), who employs the Pranav Mantra (i.e. the OM Mantra) for his religious needs (such as when doing Japa or repetition of a Mantra done during meditation or while invoking a deity during formal forms of worship, Yoga or meditation, Dhyana or contemplation, etc.), and who is well-versed in the principles of Brahm Yagya (spiritual practices which are equivalent to a formal fire sacrifice but done in a subtle and symbolic manner which lead directly to the realisation of the supreme cosmic Consciousness and the absolute Truth known as Brahm).

The Gods (the term is a metaphor for the virtues of auspiciousness, righteousness, holiness, divinity, nobility etc.) are to be found in the diligent

observance of the principles that define a man as a Brahmin. [That is, if a man is a true Brahmin as outlined above, he is deemed to be living God in the sense that he would possess all the eclectic virtues that collectively defined as being ‘godly’.]

The Hans (the enlightened Atma, the self-realised and Brahm-realised person) who adheres to the principles of Sutra (i.e. who follows the grand spiritual principles and scriptural tenets that lead to Brahm-realisation, who offers his obeisance to the Supreme Being in the manner outlined in this Upanishad, who leads a life like a true Brahmin as described above, and who understands the secrets of Brahm as well as that of the Atma as a representative of Brahm) is deemed to be doing the Yagya (the fire sacrifice) in the true sense.

There is no difference between the Hans and Pranav. That is, there is no difference between the immaculate Atma, the pure conscious ‘self’ known as the Hans, and the supreme transcendental Brahm known as Pranav. [Brahm is the cosmic Consciousness that produces vibrations of life in the ether that are heard in the form of Naad (refer verse no. 12). These dynamic vibrations in the cosmic ether produce sound that is encapsulated in the monosyllabic word OM. Hence, the OM is a sound form or the cosmic Naad known as Pranav which stands for Brahm because it is the latter which has generated this sound. Only something that has life, energy, vitality and dynamism in it, anything that has consciousness pulsating in it, would be able to generate similar energy and vibrations in another entity when it comes in contact with the former.

For instance, when electricity flows in a wire and another wire is joined to it, the latter also begins to conduct electricity, but if the earlier wire was dead and there was no electric current flowing in it then no matter how hard one tries the second wire will show no electric current in it.

Similarly, the cosmic ether is neutral and calm. It is the presence of the ‘Consciousness’ in it that creates subtle waves of energy which translate into the cosmic sound known as the Naad. If we take the example of the Swan floating in the placid water of the lake, it is the pulsation created by the breathing of the bird that generate subtle ripples in the otherwise absolute calm surface of the water.

If the Atma is personified as a divine Swan known as Hans, the supreme cosmic Atma known as Brahm is personified in the form of Pranav which is name assigned to the cosmic sound known as the Naad. This cosmic sound called Naad is represented by the word OM. [Refer verse no. 17 and 20 of this Canto 1 in this context.] (19).

[Note—¹Who a true Brahmin is has been outlined in other Upanishads as well.

References: (i) Krishna Yajur Veda tradition’s Dhyani Bindu Upanishad, verse no. 14.

(ii) Sam Veda tradition’s Vajrasuchika Upanishad, verse no. 9.

The *Gayatri Upanishad* of Atharva Veda (the Gopth Brahman, Kandika 31-38) describes the Gayatri Mantra and the Savitri Mantra, and in its discussion it describes a Brahmin as being a personification of Brahm (Kandika 38). It says that a Brahmin personifies Truth and knowledge of this Truth personified as Brahm (Kandika 35-36), and the Vedas (Kandika 37).]

20. The worship of Hans¹ (Brahm; Pranav; the Supreme Being; the cosmic Consciousness; the pure conscious Atma) is done three times a day, called the ‘Tri-Sandhya’. [This worship is called ‘Tri-Sandhya’ as it is done at three points of time in the day when one phase meets another. These are ‘dawn’ when the night meets the day, ‘noon’ when the morning meets the evening, and ‘dusk’ when the day meets the night. Refer also to verse no. 18.]

The three times symbolize the three Varnas (letters of the divine word OM standing for Brahm or Pranav). [The reference here is to the OM Mantra or the Pranav Mantra which is used to offer worship to the supreme transcendental Brahm three times of the day mentioned above. The word OM has three letters or syllables—‘A’ standing for initiation of creation symbolized by dawn, ‘O’ standing for development and growth of creation symbolized by the noon when the sun is at its best splendour and brilliance, and ‘M’ standing for end or conclusion of creation symbolized by dusk when the day ends and the darkness of night overtakes.]

This worship is accomplished by symbolically invoking the blessings of the three types of the sacred Fire².

The Atma, the pure ‘self’ and the cosmic ‘consciousness’, is a personification of these three sacred Fires. The Atma has the same characteristic virtues as that of the fire element. [That is, the Atma has the same magnificence, glory, splendour, radiance, powers, potentials, holiness, divinity and purity as the ‘fire element’. Just like the ‘fire’ gives energy, light, warmth and dynamism to the entire creation, and it is impossible to imagine life and creation without it, it is equally impossible to imagine this creation without the Atma. In the cosmic perspective, this Atma is known as Brahm. Hence, it is Brahm that infuses life and vitality into the otherwise lifeless and inane gross creation.]

While offering obeisance and worship to this Atma, the worshipper employs the ‘OM’ Mantra which also consists of three letters or syllables, and has the same potentials and divine powers as the Atma that represents the fire element because OM stands for Brahm, the Supreme Being and the transcendental cosmic Consciousness.

By corollary therefore, both the Atma and OM refer to the same divine entity (Brahm, the true self) that is symbolized by the bird Hans (Swan). [Refer verse no. 17.19.]

Meditating and contemplating upon this Hans is known as the internal form of doing the fire sacrifice (20).

[Note—¹*Hans*—The enlightened and realised person thinks of himself as a Swan and feels exhilarated that he is not an ordinary man bogged down by worldly fetters, but an exalted soul that is like a Swan.

The bird *Swan* or *Hans* is considered the most pure, clean, wise, erudite and clever among the birds. It is said to eat pearls, which means it picks up and accepts only the best amid the variety of things available to it in the form of an assortment of various gems and jewels representing the dazzling charms of this world. It is also reputed to drink milk leaving aside the water content in it symbolizing its ability to imbibe the essence and the best, and leave the rest aside. It is also the vehicle of Goddess Saraswati, the patron Goddess of knowledge, wisdom, intelligence, speech and learning, indicating that it bears these glorious virtues. Hence, the reference to a swan while describing a creature conscious of the vital wind or Pran passing through him means the basic, inherent and intrinsic tendency of that wisened and intelligent creature is to be the best, most pure and divine, wise, awakened and enlightened, adroit, clever and sagacious like the swan, and pick all the goodness and forsake all that is bad in this world. Saraswati rides on a swan, symbolizing the creature’s inborn enlightenment and excellence of his mental caliber. Symbolically, Saraswati resides in his Pran because it rides on the swan, i.e. in his heart, throat and mind—that is, his heart has purity of emotions, he speaks well of all, and his wise words are sought after by all as priceless gems of wisdom, and his mind is intelligent, discerning and noble.

A wise man is expected to pick up the truth and leave aside the non-truths from the basket full of worldly charms of astounding proportions and myriad forms of temptations present in this creation.

Those wise men who have developed the level of wisdom, erudition and sagacity that they can discriminate between what is good and what is not, what is true and what is false, what is liberating and what is ensnaring for their soul are also honoured by the epithet of being a 'Hans' (Swan) because they are just like the Swan which has the legendary ability to pick up pearls from an assortment of gems, and drink milk leaving behind water and other adulterants in it. Even amongst such wise and enlightened men, those who have realised the 'truth' about their own self in the real sense, i.e. have become 'self-realised' and hence 'Brahm-realised' truthfully, and have consequentially attained the highest level of enlightenment and wisdom are called 'Param Hans'—literally meaning those who have accessed the 'supreme type of enlightenment'. The grand and auspicious virtues and characteristics of such an exalted Sanyasi who is self and Brahm realised has been described in detail in the Param Hans Parivrajak Upanishad of the Atharva Veda tradition.

The alphabet 'Ha' of the word 'Hans' is sounded by the vibration of the exhaled wind passing through the vocal cords present in the throat or the wind pipe which connects to the nose, while the alphabet 'Sa' is sounded by the root of the tongue which opens into the mouth when the breath is inhaled. Both the nose and the mouth open in the same cavity called the throat. Hence, the inter relationship between 'Ha' and 'Sa' is evident. The main objective of this Upanishad is to make the Yogi (a person who follows its tenets of meditation) aware that he is like the divine swan, but he was unaware of his own divinity and sublimity, his exalted and noble stature, till that was pointed out to him. So he must become one like a 'swan', remind himself constantly that he is like a swan, and he must not do anything or act in anyway which is not befitting his exalted and superior status which is equivalent to a wise swan.

During the twenty-four hour period covering a single day and night, a person inhales and exhales, or breathes, roughly twenty-one thousand times, because each cycle of inhalation and exhalation is equivalent to saying one Mantra 'Hans' consisting of the two syllables 'Ha and Sa' (refer Dhyānbindu Upanishad, verse no. 63).

Hans, the divine Swan, is also one of the twenty-four incarnations of Lord Vishnu. Vishnu had once appeared as a divine Swan to preach the four celestial sages Sankaadi who were the mental sons of the creator Brahma.

It so happened that Sankaadi approached Brahma and wanted to know how can someone, who wished to have Moksha (final liberation and deliverance from this material world; freedom from attachment to the sense objects of this world; emancipation and salvation), effectively control his mind and sub-conscious and divert them away from the material charms of the world and its sense objects, and towards the inner self where the Atma, the pure consciousness, resides?

Brahma was confused and did not have the answer. So they meditated upon Lord Vishnu, the Supreme Being, from whom Brahma was born. Thus Vishnu appeared as a divine Swan. The sages could not recognise the Lord in that form and asked who he was. Then Vishnu, in his form as a Swan, preached the great tenets of metaphysics and Vedanta to Sankaadi. Thus, this revelation of Vishnu as a Swan was an embodiment of the greatest and the most refined form of spiritual knowledge, erudition, wisdom and enlightenment. Henceforth, Swan came to be known as a synonym for these eclectic and divine virtues. This story appears in Srimad Bhagwat, 11/13.

The Swan is depicted as a vehicle of Saraswati, the Goddess of knowledge and wisdom. In other words, those who worship Swan ride on the crest of knowledge, wisdom, erudition, sagacity and enlightenment.

The *Yogchudamani Upanishad*, verse no. 93 clearly asserts that the 'Hans' is a metaphor for Pran. So when it is said in the present verse that Hans shows movement for instance, it refers to the movement in the form of the vital winds such as Pran (breath) which comes in and goes out of the body, the Apaān wind that moves down the intestines and helps the movement of food in the intestines, the Udaān wind that

helps the body to rise etc. The proof of their movement lies in the fact that all the different functions of the body, including external movements such as walking, holding, speaking, eating and excreting etc. that are done by a man while awake are controlled by these winds, but when the man sleeps the external activities cease, making it appear that the vital winds are not moving. When a man is asleep, his vital winds are now moving inside his Naadis or nerves and veins in the form of his Pran or the vital life-giving factor called consciousness. But these winds present inside the body do not appear to move a bit; they do not show any vivid sign of movement at all; no one can observe the movement of the Udaan wind, the Vyaan wind or the Samaan wind and even the Apaana wind that are present inside the body of the creature. Even in the outside world, no one can actually see the wind or air move from one place to another; their movement is deduced indirectly when we observe the movement of leaves for example on a tree. Thus, this Hans in the form of the Pran shows movement on the one hand, and remains immobile on the other hand.

²The *three types of fire*:—References: (i) Sam Veda = Chandogya Upanishad, Canto 2, section 24; Canto 4, sections 11, 13, 14 and 17; Canto 5, sections 4-10, 19-24. (ii) Atharva Veda = Atharva-shikha Upanishad, Kandika 1; Nrisingh Purvatapini Upanishad, Canto 2, verse no. 2. (iii) Krishna Yajur Veda = Kathvalli Upanishad or Katho-panishad, Canto 1, Valli 1, verse nos. 7, 13-18; Canto 2, Valli 1, verse no. 8; Garbha Upanishad, paragraph no. 5; Kath Rudra Upanishad, verse no. 3

The three aspects of fire are said to be the following—the terrestrial fire that sustains life on the earth, the fire of the heavens which is used by the Gods, and the fire of the nether worlds or hell which is used to punish sinners.

Worship of the three important fires have been described in Chandogya Upanishad of the Sam Veda tradition in its Canto 2, section 24, while Canto 5, sections 4-10, 19-24 explain their great symbolic metaphysical significance.

The *Garhyapatya* fire—[Refer Chandogya Upanishad, 2/24/3-6, 4/11/1-2, 4/17/4.] This is the householder's fire. A householder has land and farm representing 'earth' in which he grows food. This food is grown with the help of the light of the Sun, and it is cooked in the fire of the fire-place in the house. Hence, the Garhyapatya fire, or the householder's fire, is intrinsically present and is implied in these 4 entities. It is an integral part of these four. The earth has the 'fire element' because without heat and warmth, no seed would germinate and no life can survive on this earth. The food has fire present inherently in it because it is the energy inherent in food which helps to energise the creature that eats it. The presence of heat in the sun does not need to be explained because it is very evident.

The fire was the central piece of all religious life in early times of the Vedic period when a fire sacrifice was deemed to be the best religious activity that a righteous man can expect to do. In this context, the Garhyapatya fire is the main fire lit during such formal fire sacrifices. The fire pit was either square-shaped or rounded. In the context of the fire sacrifice, it was used for the purpose of daily rituals, cooking or warming the offerings, heating of the vessels, to perform circumambulation, to act as a main cauldron or reservoir of the sacred fire which was to be kept perpetually burning throughout the life of the householder once it was lit.

Regarding the *origin* of the Garhyapatya fire, the Atharva-shikha Upanishad of the Atharva Veda tradition, in its Kandika 1 says that it was created along with Brahma the creator (the first of the Trinity Gods), the Rig Veda, the Vasus, and the Gaytri Chanda at the beginning of creation by the supreme Creator Brahm, the Supreme Being, and it represents the first leg of Brahm and corresponds to the first letter A of OM.

The *Dakshinagni* fire—[Refer Chandogya Upanishad, 2/24/7-10, 4/13/1-2, 4/17/5.] This holy fire is a witness to making of charities when some water is poured as libation to the Gods. It signifies that the Gods are offered water to drink. To give water to the thirsty is the greatest form of charity. Therefore, this fire is symbolically present in water, and when it is poured, it signifies that the heat produced by sins

committed by the person has been doused. Charities and donations make a man famous and renowned, hence the allusion to directions of the earth. His glory shines like the bright moon and he is called a star among human beings. He is the most exalted amongst his peers and compatriots even as the moon is most prominent amongst the stars in the sky.

Like in the case of the Garhyapatya fire, the fire that was lit in the main sacrificial shed or site just near the main fire pit but to the south of it and where donations and charities were made was called Dakshinagni fire. The fire pit for this fire was semi-circular or bow-shaped.

Regarding the *origin* of the Dakshinagni fire, the Atharva-shikha Upanishad of the Atharva Veda tradition, in its Kandika 1 says that it was created along with the Antariksha (the space above the earth), Lord Vishnu the sustainer (the second of the Trinity Gods) and Rudra (Brahm's macrocosmic form as the Viraat Purush), the Trishtup Chanda and the Yajur Veda by the supreme Creator Brahm, the Supreme Being, and it represents the second leg of Brahm and corresponds to the second letter 'U' of OM.

The *Ahawaniya* fire—[Refer Chandogya Upanishad, 2/24/11-16, 4/14/1-2, 4/17/6.] The Ahawaniya fire is lit during the fire sacrifices to respectfully invoke Gods, and invite them to come and participate in the sacrifice and accept offerings made to them. The word 'Aavaahan' in Sanskrit means to invite, invoke, to pray respectfully with the intention of welcoming. Since one uses one's mouth for these purposes, the fire in the form of the strength, energy and vigour of the spoken word and the power of speech residing in the mouth is called Ahawaniya fire. This fire was lit to invoke the Gods, and the Gods live in the heaven; hence the reference to the sky, heavens and electric. Since Pran is the best form of the vital winds, the allusion means that the Gods are the most exalted forms that exist in creation. The 'electric' is a metaphor for immense strength, potent and power, which of course the fire possesses. This inherent quality of Electric that it possess most stupendous powers and strength is likened to the presence of Brahm in it even as the great power and strength present in a man is due to the Atma or Pran present in him. Even as a man is useless without the presence of Pran in him, the Electric would lose its importance if there was no Brahm present in it which gives it its punch and strength.

In ancient times it was an established belief and tradition that the way to attain heaven was through the path of the fire sacrifice. The fire sacrifice was in effect a method to harness the spiritual energy inherent in the all pervading fire element which would sufficiently empower the person performing the fire sacrifice to achieve his goal. The sacrificial pit and the heat generated from it reminds one of the modern day nuclear reactors. Even as the strength and energy and powers of the atom can be harnessed for beneficial or ruinous effects through the nuclear reactor, depending upon the temperament and mental setup of the person who masters the science of atomic energy, the fire sacrifice could be similarly used either for auspicious purposes such as attaining eternal peace and tranquility for the tormented soul, or for attaining worldly glory and conquest. Harnessing of nuclear energy requires expertise, knowledge and skills not easy to master and not accessible to all. Building and operating a nuclear facility also is a daunting and elaborate job. Similarly, the ancient fire sacrifices required special skills and expertise, and it was not simply lighting any odd evening village community bonfire to the merriment of all those who sit around it to gossip about the day's events.

Regarding the *origin* of the Ahawaniya fire, the Atharva-shikha Upanishad of the Atharva Veda tradition, in its Kandika 1 says that it was created along with the Duloka (the heavens), the Aditya (the Sun God), Lord Rudra the concluder of creation (the third of the Trinity Gods), the Jagati Chanda and the hymns of the Sam Veda by the supreme Creator Brahm, the Supreme Being, and it represents the third leg of Brahm and corresponds to the third letter 'M' of OM.

From this perspective of doing a fire sacrifice in order to attain spiritual eternity and liberation, the ‘units’ of the special knowledge that Yam described to Nachiketa in verse no. 15 of Kathvalli Upanishad of the Krishna Yajur Veda tradition probably pertain to the steps to be followed in the construction of the fire pit—such as the type of bricks used, the number of bricks to be used, the geometrical design of the sacrificial pit, the type of wood to be used in the ceremony, the Mantras to be chanted, and other such finer details which must be diligently and strictly followed if any spiritual benefit is to be derived from the entire exercise. So, the sacrificial fire pit is like an oven in which the fuel of wood is added and the science of Mantras is used to order to generate immense energy that can empower the patron performing the fire sacrifice with stupendous potentials.

On the other hand, from the metaphysical perspective of harnessing the stupendous energy latent in the eternally burning fire element, Yam must have explained to Nachiketa the different forms of ‘fire’ as a manifestation of the supreme transcendental Brahm’s astounding energy, potentials, powers and strength. The visible symbol of the eternal fire is the sun in the sky and the energy inherently present in the body of all living beings. It is a well known fact that no life can ever exist without heat and energy of the fire element. In Chandogya Upanishad of the Sam Veda tradition (Canto 4, Sub-cantos 5 and 7) it has been stated that Brahm is characterized by light and illumination (as opposed to darkness) which are the characteristic virtues of the fire element. The entire Canto 3 is dedicated to the praise of the Sun God as the essence of life, and Sun is the celestial pitcher of fire element which burns eternally inside it.

The ‘fire’ has immense importance in metaphysics and it is a symbol of life and consciousness. Without ‘fire’ everything is deemed to be dead and gone.

The *importance* of the sacred Fire and its metaphysical angle has been explained elaborately by Yam, the god of death, to Nachiketa in Kathvalli Upanishad of Krishna Yajur Veda tradition, in its Canto 1, Valli 1, verse nos. 13-18.

The Nrisingh Purvatapini Upanishad of the Atharva Veda tradition, in its Canto 2, verse no. 2 says that these sacred fires represent the three letters of the Mantra OM. The first fire called the Garhyapatya Agni represents the first letter ‘A’, the second fire called the Dakshinagni represents the second letter ‘U’, and the third fire called the Ahavaniya Agni represents the third letter ‘M’.

The Garbha Upanishad of Krishna Yajur Veda tradition, in its paragraph no. 5 describes the following three types of fires—*Gyanagni*, *Darshanagni* and *Jatharaagni*.

Amongst these three forms of fires, Jathraagni is one that digests anything that is eaten, drunk, licked or sucked. Darshanagni is one which enables one to see things. And Gyanagni is the one which helps to discriminate between what is good deed and what is not. The divine ‘fire’ has three other forms also. Their locations in the body are as follows—the ‘Ahavaniya’ fire resides in the mouth, the ‘Garhyapatya’ fire lives in the abdomen, and the ‘Dakshinagni’ has its abode in the heart.”

According to some texts, the fire element has *three* legendary forms—viz. the ‘Agni’, which is the terrestrial fire on earth represented by the word Bhu, the ‘Jatvedas*’, which is the fire of the sky represented by the word Bhuvaha, and ‘Vaishwanar[#]’, which is the fire of the heavens represented by the word Swaha (Brihaddevatakaar, 1/67). The term appears in the Rig Veda approx. sixty times and is more often than not synonymous with both life as well as the fire element.

*The *Jatveda Fire* is the cosmic all-pervading Fire element that is uniformly and universally present wherever there is sky element or open space. It is represented by the word Bhuvaha.

Jatvedas is the name of the Sun God as well as the Fire God. The Sun is indeed the most evident form of the fire element and possesses all the virtues and qualities of the latter. When two pieces of wooden drills known as *Arani* are rubbed together vigorously, they produce fire though prior to this rubbing no fire was visibly there.

This rubbing is symbolic of the Tapa done by Brahm at the beginning of the creation to create the energy needed to initiate the process of creation which is represented by the latent fire element or its personified subtle form as the Fire God who is invisible. The more gross form of this fire element and the visible aspect of the Fire God is the celestial Sun. It has been explained by Yam, the death God, to Nachiketa in Kathvalli or Katho-panishad of Krishna Yajur Veda, in its Canto 2, Valli 1, verse no. 8.

[#]The same Upanishad, in its Canto 1, Valli 1, verse no. 7 describes the Vaishwanar Agni.

The Kath Rudra Upanishad of the Krishna Yajur Veda tradition, in its verse no. 3 prescribes that a man should establish the *three sacred fires* such as the Grihapatya, Dakshinagni and Ahawaniya in his own self at the time of taking the vows of Sanyas and moving out of the house.

The Fire God known as *Agni* refers to the legendary ‘fire element’, and it finds very prominent place in the scriptures. The Fire God or *Agni* appears in the Vedas as follows—Rig Veda—1/1; 1/12; 4/5; 5/1; 6/7-9; 7/1, 3-6; 12-13; 8/1, 23, 39; 10/1-7; 12/1-122 etc.; in Sam Veda—1-51; 53-55 etc.; in Yajur Veda—1/5; 2/4; 7/24; 18/72 etc.; and in Atharva Veda—6/119; 8/3; 12/3.

Since it was the first born amongst the various Gods, it was called ‘Agni’ meaning the one who comes first, that which precedes others. It is the inherent ‘fire’ element present in all the living creatures that distinguish them from non-living creatures. It is all-pervading and omnipresent, and infuses life to all the creatures (Kaushitaki Brahmin, 4/3; Brihad Aranyak Upanishad, Canto 5, Brahman 9, verse no.1). This fire helps in digestion of food (Shatpath Brahman, 148/10/1).

He is the foremost amongst the Gods worshipped on earth (Shatpath Brahman, 6/1/1/11). He is compared to the Sun in the heavens. He has 7 tongues representing the 7 colours of the rays of the Sun or the colours of light (Rig Veda, 1/146/1; 3/6/2). Since he provides nourishment to the Gods by accepting the offerings made to the sacrificial fire at the time of fire sacrifices, he is deemed to be their sustainer and father (Rig Veda, 1/69/1). Other names of the Fire God called Agni or Agne are the following—Vishwavedus, Kavi, Kavikratu, Jaatvedus, Vaishwaanar, Tanunpat, Matrishwa and Naraashansa. It is believed that he was born from the mouth of the Virrat Purush (Rig Veda 10/90/13).

The Ram Purva Tapini Upanishad of the Atharva Veda tradition, Canto 4, verse no. 38 says that Agni or the Fire God is one of the ten Digpaals or custodians of the ten directions of the celestial globe. He is the patron deity of the south-eastern direction and worshipped in that corner. Verse no. 39 says that his weapon is known as Shakti—i.e. dynamism, energy, vigour, vitality and strength.]

21. To remain deeply engrossed in the thoughts of the pure consciousness which is the true ‘self’ of the spiritual seeker, and meditating upon it to the exclusion of all other things, is known as the Turiya state of existence. This is therefore the transcendental state of existence of the creature.

If the inner-self is likened to the Sun, the esoteric and mystical entity that lends this Sun its power to give brilliant light, energy and heat to this world, which gives the Sun its glorious dynamism which not only enables it to be self-sustaining and self-illuminated but also enables it to sustain and illuminate the world around it, is known as ‘Hans’.

[In other words, it is the self-illuminated Atma hidden invisibly inside the dark gross body of the creature that inspires the latter to become active and alive; it is the consciousness living inside the body of the living being as the Atma that also lights up the world for him (i.e. enables him to perceive the world around him). This role of the Atma is similar to the eternal fire burning inside the Sun’s disc that enables the latter to remain self-illuminate and self-sustaining on the one hand, and sustain and

illuminate the world around it on the other hand. This Atma which is self-illuminated, and which lends its 'light' to the creature—i.e. provides the body of the creature with the all-important factor of existence known as the 'consciousness' that translates into 'life' of the creature—is known as Hans.

The Atma is compared to the celestial Sun because the survival of the gross body of a living being depends directly upon the Atma just like the case of the world directly depending upon the Sun for survival. Even as the living world would certainly perish without the Sun, the body, and therefore the very existence of the creature, would perish without the presence of the Atma inside it. Refer verse no. 12.] (21).

22. The fire sacrifices and its various components are like the assets of those who regard Brahm as their only spiritual wealth. This is known as 'Brahm Sampatti', the wealth that is symbolized by the grand spiritual accomplishments that comes with successfully doing various fire sacrifices.

[Refer also to Kanda 2, verse no. 1. Just like a worldly man jealously protects each unit of his material wealth—he would, for instance, fight even for a gram of gold and a small patch of land—those who know that Brahm is the only truthful spiritual wealth or asset in this creation that is worth pursuing and possessing, and that the fire sacrifices are deemed to be a manifestation of this Brahm, or they are the means for attaining Brahm, also are very careful about observing and maintaining the sanctity of the fire sacrifice.

They regard the fire sacrifice as a deemed manifestation of Brahm. One of the many reasons for this eclectic view is that the 'fire' is pure and holy like Brahm, it is self-illuminated like Brahm, and it personifies such glorious elements of creation as dynamism, energy, heat and light, factors which are absolutely essential requirements to not only inject but also maintain life in this creation.

Further, each step of the fire sacrifice represents one or the other of the countless aspects or facets of Brahm, and since the truthful knowledge of Brahm must be holistic and comprehensive to be of any spiritual good for the aspirant, it obviously follows that the fire sacrifice should be done properly and attention should be paid to each of its steps in order to derive full benefits from it. Otherwise, the fire sacrifice would be like a fractured view of Brahm. It is like the case of a orchestra when all the musicians and instruments must be in complete harmony, for one miss-step would result in the whole structure of music come crashing down. There should be zero tolerance for negligence and callousness.

The basic or central point of any fire sacrifice is the 'fire' itself. The 'fire' has the unique and paradoxical quality of being purifying as it burns all impurities which come in contact with it, but it also reduces to ashes anything that tries to play mischief with it, or which attempts to test its abilities. So, while the fire burns all impurities, it cannot burn anything is pure. For instance, the fire cannot burn pure gold, but it burns the impurities present in it.

Likewise, if one were to attain Brahm-hood, he would first have to become spiritually pure and holy from the inside. Any sort of impurities that might be clinging to the Atma would be first burnt before Brahm is realised. The creature who is accustomed to be in the company of numerous worldly attachments that have been clinging to the Atma for generations, and which have had so great an influence upon the Atma that it thinks that it cannot live without them in this world, is expected to first eliminate such spiritual bondages before he can ever hope to become Brahm-realised.

From the point of the fire sacrifice, its spiritual importance is that it helps the man to burn all his spiritual impurities and worldly taints just like gold that is freed from all its impurities if it is put in the fire. Again, if the fire is regarded as being equivalent to Brahm, it follows that meditation and contemplation upon Brahm also helps the spiritual aspirant to get rid of all his spiritual impurities and tainting effects. Once purified of all worldly taints and delusions, the Atma automatically realises the nature of its ‘pure self’—which is the ‘consciousness’, and which is Brahm personified.]

In order to attain Brahm one should devote one’s self in meditating upon Hans (i.e. the Atma) empowered by the Pranav Mantra (OM Mantra).

[That is, one should meditate and contemplate upon the pure consciousness by employing the OM Mantra during Yoga practices. This would empower them sufficiently to rise above the mundane, gross and mortal existence, and reach higher echelons of spiritualism by metaphorically riding on the back of the bird Hans or the divine Swan much like the case of one riding an airplane to go high up into the sky.

In Yoga Upanishads it has been described in great detail how the divine word OM is used in meditation to aid the ascetic to concentrate and focus his mind to realise the presence of the consciousness inside his own body. It has also been described how the two letters of the word ‘Hans’, i.e. ‘Ha’ and ‘Sa’, are used to meditate while inhaling and exhaling breath during the meditation exercise known as Pranayam or breath control. Refer *Dhyan Bindu Upanishad* of the Krishna Yajur Veda tradition, verse nos. 24, 61-65.

Therefore, an expert ascetic uses both the Mantras OM and Hans in order to attain success in his spiritual endeavours. While ‘OM’ links him directly to the cosmic vibrations generated by the cosmic Consciousness, ‘Hans’ enlightens him about who the Supreme Being is. This knowledge fills him with a sense of fulfillment and blessedness as it is the culmination of his endeavours; he experiences bliss and ecstasy that comes with self and Brahm realisation—or being acquainted with the ultimate Truth and Reality of creation that eliminates all causes for his spiritual miseries and bondages.] (22).’

23. The Brahm-putra (literally the son of Brahma, here referring to sage Vaalkhilya) once again asked Swayambhu (the self-born creator Brahma)—‘Oh Lord! How many Hans-Sutras (the different variations of the Hans Mantra¹ or its different interpretations) are there, what are their forms, and how do one measure their effectiveness, truthfulness and authority? You are all-knowing, so please be kind to enlighten me about it.’ (23).

[Note—¹The importance of the Hans Mantra has been described in Kanda/Canto 2, verse nos. 1-2 of this Upanishad.]

24. [Brahma replied--] ‘The symbolic Sun (representing the dynamic consciousness called the Atma of which another name is the ‘Hans’) that resides inside the subtle heart of the creature has ninety-six gloriously brilliant and splendid rays emanating from it and radiating out in every direction.

[The Atma is said to live in the subtle sky of the heart. This sky is known as ‘Hridaya Akash’. Just like the celestial Sun, the Atma too shines in this sky, from where it lends its light and vitality to the whole body of the creature which is regarded as a universe in a miniature form just like the Sun lighting up and injecting life in the whole world from its central location in the sky. Again, just like the Sun has rays radiating out from it, the Atma too effuses consciousness in the form of the ninety-six

rays. From the perspective of the physical gross body, these represent the main Naadis or nerves and veins in the body that carry life to all the corners of the creature's body. From the perspective of metaphysical concept of creation they represent the ninety-six Tattwas as outlined in verse no. 14 of this Canto 1.]

The Chit-Sutra that goes out from the nose in a continuous stream (i.e. the breath) also measures ninety-six fingers width in length.

[The term 'Chit-Sutra' refers to the breath because it is the symbolic Sutra or 'thread' that stitches together the dead entity known as the body and the 'consciousness or life factors' known as Chit. When the creature stops to breathe, the body dies, or loses its life. This breath is a continuous stream of vital air known as Pran which is a synonym for 'life and consciousness'.] (24).

25. The 'Param Hans' (i.e. the supreme Consciousness representing Brahm that resides in the body of the creature as his Atma) has its habitat in the region of the body between the left shoulder and the right side of the hip joint. [This is why the sacred thread representing Brahm is always worn by slinging it diagonally across the chest from the left side of the neck, crossing over the abdomen to the right side of the hip joint.]

But the irony is that this esoteric secret is not known to anyone.

[The location of Brahm in this area of the body is very significant because it is here that all the major internal organs of the body which are responsible for its maintenance are located. The Atma or the pure conscious soul is said to have its seat in the subtle space of the heart. This heart is the 'supreme organ' in the body for the practical reason that if the heart stops its function the body would die immediately. While the failure of other organs might not cause immediate death, failure of the heart results in instant death. No other organ of the body, either singly or collectively, would be able to keep the body alive if the heart gives up.

The Atma, being the 'supreme cause of existence', has therefore selected the heart, the 'supreme organ in the body' as explained above, to be its seat in the creature's body just like the Emperor who is seated on the best and the highest throne in the empire.

Above and below this area where the heart is located, no other vital organ is present that may affect the survival of the body. Of course one would argue that the mind and intellect located in the head (the brain) is equally an important a seat for Brahm because it has been said elsewhere in the Upanishads that the head is the seat of Brahm who had entered the body through the Brahm Randhra and enthroned himself in the mind to control the creation from there. This fact is stressed in the Aeiteriya Upanishad of the Rig Veda, Section 1, Canto 3, verse no. 12; and the Paingal Upanishad of Shukla Yajur Veda, Canto 1, verse no. 11.

But the importance is to understand the fact that the virtues of intelligence, wisdom, enlightenment, erudition and knowledge, as well as the ability to think and discriminate that are characteristic qualities of the mind and the intellect represent the grand attributes of Brahm whose true form is 'Consciousness'. It is this 'Consciousness' that we refer to when we talk of the Atma that resides in the heart. Say, what use are the mind and the intellect for a dead body, a body from which the Atma or 'life' has left? (25).

[Note—Besides this verse, there are other Upanishads which also endorse the view that Brahm *resides in the subtle space of the heart* of the creature—refer (i) Atharva Veda's Mundak Upanishad, Mundak 2, Section 1, verse nos. 9-10; Mundak 2, Section

2, verse no. 1, 6; 9; Mundak 3, Section 1, verse no. 7. (ii) Krishna Yajur Veda's Shewtashwatar Upanishad, Canto 3, verse no. 11.]

26. Those who have obtained access to Amrit (the nectar of Truth; the elixir of bliss and spiritualism) are the only ones who are acquainted with the eternally self-illuminated Hans (in the form of the Atma and Brahm). No one can obtain Mukti (spiritual liberation, deliverance, emancipation and salvation) without sincerely, honestly and truthfully, with dedication and faith, meditate and contemplate upon this Hans (26).

27. Those who wear the sacred thread consisting of nine coloured strands also wear it as a symbol of Brahm. But merely worshipping the sacred thread as a symbol of Brahm would not make them sufficiently wise, enlightened and self-realised so as to make them aware of the presence of the glorious Brahm in the form of the symbolic brilliant Sun (i.e. the Atma) present inside their own inner-self.

[That is, they worship Brahm in the external world which is fundamentally gross and perishable, and therefore not the truthful form of Brahm. The real Brahm is subtle and sublime, and it imperceptibly resides in the bosom as the pure consciousness known as the Atma. This Atma is as brilliantly self-illuminated, vibrant and dynamic as the celestial Sun which does not need any external source of light to shine, no external source to remain illuminated, and no external source to produce the fire of which it is an eternal celestial cauldron.] (27).

28. Aditya (the Sun) illuminates the world (i.e. it provides the world its light, life, energy, heat and dynamism). This is why Aditya is worshipped and honoured by wise and erudite persons who seek purity and knowledge.

[The Sun gives 'light' and removes 'darkness'. In other words, it grants knowledge and wisdom by removing the darkness of delusions and ignorance. Since the celestial Sun is employed as a metaphor for Brahm and the Atma, it follows that one meditates and contemplates upon the latter two entities to attain true spiritual knowledge and enlightenment that would remove one's darkness caused by worldly delusions, and which is the cause of all his fears and perplexities.] (28).

29. The Vajpaye Yagya¹ is the eliminator of animal-like despicable, mean, lowly, pervert and sinful instincts and negative qualities in the creature that pollute or corrupt his inner-self and are denigrating, demeaning and entangling for him. In this eclectic sense it is also the Pashuharta Yagya, literally meaning one in which animals are sacrificed (like the case of the Ashwa Medh Yagya when a horse is sacrificed)².

There is an Adhvaryu priest, and Indra (the king of Gods) is the Devta (the patron deity) of this fire sacrifice known as the Vajpaye Yagya when it is done externally in the physical world.

But when the same Vajpaye Yagya is done internally it is called a 'Dharma Yagya' (a fire sacrifice that strictly conforms to the principles of auspiciousness and righteousness) as it does not entail any killing or bloodshed or violence or pain to any creature, and therefore is most holy and pure form of sacrifice which does not leave any evil consequences (arising from killing of animals during fire sacrifices) in its wake. In this case, the Adhvaryu priest is the Param-Hans (the supremely pure and untainted Atma, the pure conscious 'self' of the worshipper) and the Devta is

Pashupati Parmatma (the supreme Lord who controls all the living beings in this creation; the supreme transcendental Brahm)³.

[The Lord is especially honoured by the epithet of ‘Pashupati’ because an enlightened worshipper targets all his spiritual endeavours towards attaining high levels of purity and holiness that entails that he first controls his basic animal-like natural instincts; he is expected to have completely exercised total self-restraint on his sense organs. Brahm is not sitting somewhere high up in the sky in an imaginary heaven, but the Lord resides inside one’s own inner-self as his Atma. This Atma is the Lord of the creature. So when a worshipper pays his obeisance to ‘Pashupati Parmatma’, he is actually honouring the Atma which has learnt to practice exemplary self-control over one’s natural animal-like instincts, characters, qualities and behaviour that are integral to all living beings, but which need to be overcome if the living being intends to find Mukti (freedom) in the real sense. Till this happens, he is virtually enslaved to these negative traits in his character which act as impediments in his spiritual upliftment and welfare.

In this context it would be pertinent to note that ‘Indra’ is not some God living high up in the heaven, but the term is a metaphor for the Authority that controls all the ‘Indris’ (the sense organs) of the body. Therefore, Indra is also another name for the Atma and Brahm, but to that aspect of the latter which is indulgent in the world. This fact is depicted in the character of Indra who is shown in the Purans as a passionate, lustful and jealous God who prefers material creature comforts and pleasures of the sense organs, rather than spiritual wisdom, enlightenment and bliss.] (29).

[Note—¹The *Vajpaye Yagya*—This is performed by one who desires unlimited dominion. This sacrifice had many special features and the number 17 plays a dominant role—for there are 17 animals that are sacrificed, 17 objects are distributed as fees for the priests, and it lasts for 17 days culminating in a chariot race in which the patron who does the fire sacrifice is made to win at any cost.

²The word ‘Pashu-harta’ has two parts—viz. ‘Pashu’ meaning an animal, and ‘Harta’ meaning to steal, remove, eliminate or dispossess. The acquisition of spiritual wisdom and enlightenment eliminates all animal-like instincts in a man. It brings out the shine and brilliance that is inherent in his Atma, the pure consciousness that resides in the body as the man’s ‘true self’. Hence, the endeavour that helps a man achieve this goal in life is called the ‘Pashuharta Yagya’.

³Animals were invariably sacrificed as part of the fire sacrifice ritual. This Upanishad strongly speaks against this practice by emphasizing the point that the actual benefit of a sacrifice is one’s own elevation from a lowly life that is no better than the one led by animals to a life befitting a human being who occupies the highest rung in the ladder of evolution and from whom auspicious virtues are expected by the virtue of his exalted stature in the hierarchy of creation. The human occupies the same position in the scheme of things that is occupied by an emperor, and therefore he is expected to behave and think nobly, righteously and auspiciously. In other words, the true benefit of doing a fire sacrifice is to kindle self-realisation, enlightenment and wisdom in a man whose Atma is unfortunately mired by the numerous faults and blemishes so characteristic, and almost unavoidable, when the Atma assumes a gross body that has to interact with a world which is equally gross. The true benefit of a fire sacrifice is to provide this Atma its final liberation and deliverance from the shackle that unfortunately binds it to this body as well as the world, a situation that has resulted in the Atma hitherto remaining trapped in a cycle of birth and death. The sacred and purifying fire of a sacrifice is expected to burn all the spiritual impurities and bring out the immaculacy in a creature, and if it fails to do so then spilling innocent blood of others (animals) would serve no purpose.

Sacrificing an innocent and helpless creature to satisfy one’s selfish desires can never, repeat *never*, please the Lord on any count. It is virtually murder on the pretext

of religion and rituals. This is why the Upanishads are regarded as so great and refined as they have no hesitation in speaking the truth and deriding unethical practices even though such practices had become a part of tradition and observed without asking questions.]

30. The divine and holy super transcendental Divinity known as ‘Brahm’ which is the subject matter of exposition, elucidation and discussion in the Upanishads, and which is espoused by the Vedas and the Upanishads as the ultimate Absolute Truth of creation, is the one which is the main focus of self-study, contemplation and research by those who are sincere to know about Brahm (i.e. by those who truly wish to obtain wisdom, enlightenment and spiritual salvation, those who wish to break free from the fetters of ignorance and delusions, those who wish not to enter the cycle of birth and death in this world, and those who wish to obtain the nectar of eternal bliss and its accompanying ecstasy) (30).

31. The actual implementation of the advice given for realisation of Brahm, the actual acquisition of wisdom, enlightenment and knowledge that leads to Brahm (as outlined in this Upanishad) is the symbolic form of the Ashwmedh Yagya¹ (the horse sacrifice).

By strictly following the tenets and philosophies that pertain to the actual truth of Brahm entitles and helps the seeker of Brahm to attain his objective successfully (i.e. to become Brahm-realised).

All the forms of Brahm Yagyas (i.e. spiritual enterprises that lead to realisation of Brahm, the supreme spiritual Truth) described in this Upanishad are equally effective in bestowing Mukti (liberation, deliverance, emancipation and salvation) to the creature.

[In other words, the main aim of a spiritual aspirant should be to become ‘Truth-realised’, which translates into being ‘self and Brahm realised’. Towards this end the Upanishads prescribe a number of paths, leaving it upon the seeker of this Truth to select the path best suited to him. The reason for the variety of path espoused in the Upanishads is because the latter realise that in practical terms no two individuals are alike just like no two patients having the same broad symptoms of any disease are alike.

To treat a patient in a holistic manner, an equal holistic approach is needed, and such approach is therefore specific to that individual. It ought to be noted here that this precisely is the approach in the field of Homeopathic system of treatment of a disease. Once a patient is treated in a comprehensive manner, there is no chance of the disease getting relapsed, and the prescribed medicine also has the least chance of adverse reaction.

Since no two situations and individuals are exactly alike, the spiritual path that would suit one would obviously not be the optimum one for the other. This is why the scriptures prescribe different and varying paths, but they all lead to one goal. The importance for a traveler is to reach his destination, and the vehicle that is used is of the least importance once the destination is reached. It is also like the case of doctor prescribing different set of medicines to different patients though their external symptoms may be the same.] (31).”

[Note—¹The *Ashwamedh Yagya*—This is called the horse sacrifice because a horse is sacrificed in it. It is most ancient sacrifice and can be successfully done by very powerful kings or emperors. The horse is let free to go anywhere it wants for one year and the land where it sets foot is either annexed by treaties or by force in war. The actual sacrifice is though for only three days. The sacrificial horse is protected by the

army and if by chance it is killed by the opposing king then the sacrifice is deemed to be defiled. In practical terms, it was a means to spread a king's area of influence.]

32. Brahm Putra (i.e. sage Vaalkhilya) exclaimed—‘The knowledge related to Hans has been revealed to me.’

When he thus proclaimed, Swayambhu (i.e. Brahma) disappeared from sight.

One must understand that the knowledge of the self-illuminated ‘Hans’ that has been revealed in this Upanishad deals with the eclectic and the divine knowledge of the pure cosmic Consciousness known as the Atma as well as Brahm.

This ‘Hans’ is also revealed in the form of Lord Rudra (Lord Shiva), who is also known as Lord Pashupati¹.

It is this Brahm that is represented by Pranav, the cosmic ethereal sound encapsulated in the word Mantra OM. It is this Pranav representing Brahm that provides one with liberation and deliverance from this mortal gross world (32).

[Note—¹Lord Shiva who has full control over his sense organs and their inherent animal-like instincts and behaviour—because he is a highly self-realised and enlightened deity who is chosen by exalted ascetics and spiritual aspirants as their patron God—is known as Pashupati, literally the Lord of animals. Since Lord Shiva tolerates no nonsense and ruthlessly overcomes the wayward tendencies of the sense organs and the mind, showing anger at them for their natural grossness and tendency to commit mischief and misdeeds, he is also known as ‘Rudra’, the angry one. Lord Shiva is uncompromising and unrelenting in his pursuit of immaculacy, purity, auspiciousness, righteousness, nobility, probity and propriety, and hence called Rudra, the angry God.

‘Rudra’ has zero tolerance for impertinence, mischief and nonsense. ‘Shiva’ is, on the other hand, calm, tolerant and forgiving. Shiva always remains in a state of meditation and contemplation, a state that is depicted in his posture of blissfulness and half-closed eyes. Rudra, on the other hand, spews fire and brimstone. While Shiva symbolizes the virtues of Brahm marked by blissfulness, tranquility, calmness, wisdom, enlightenment, self-awareness and contentedness, Rudra represents the qualities of dynamism, vitality, vigour, strength and energy present in Brahm.

The question arises ‘why did Shiva become Rudra (angry)?’ The answer is that when Shiva found that his sense organs and mind did not allow him the peace that he sought by meditation and contemplation upon the ‘Atma, the self’, he became angry over them, and severely took them to task—i.e. he became ‘Rudra’ or angry. It is like the case of a teacher who is of a very calm nature and loves his students like they were his own sons, but when he finds that his kindness and loving nature is being misused by the students who create ruckus in the class, he has to become stern and spank them in order to restore discipline and decorum. But that does not mean that he is cruel or wishes to harm his students in the least. This same thing applies to Shiva.

Shiva becomes Rudra in order to ruthlessly punish the creatures of this creation who behave like savages or animals. This is necessary for him as he is the Supreme Being who has the mandate to maintain order and balance in this creation, and he would be failing in his moral duties and obligations if he tries to maintain a false exterior of calmness when his interior is agitated by the upheaval all around. The Supreme Being that Shiva is has an obligation to uphold positive traits and the virtues of auspiciousness, righteousness, probity and propriety in this creation even if it means that his own image of being calm and forgiving is questioned and overshadowed by anger and vehemence.

Just as the case of severe and malignant diseases like cancer and tuberculosis requiring an equally strong medicine, the evil, pervert and demonic forces of creation require an equally strong antidote to be overcome.

Therefore, that aspect of Brahm, the Supreme Being, which helps the Jiva (the living beings of this creation) control evil tendencies and negativity which make him

animal-like is known as ‘Pashupat Brahm’, and the effort that a Jiva makes to achieve this eclectic goal is known as ‘Pashu-harta Yagya’.]

-----*****-----

Uttar Kanda/Canto 2

1. The Japa (repetition) of the Hans Mantra is equivalent to doing Japa of Brahm because this word is a letter form (word form) of Brahm. Brahm-realisation is inspired by it.

Brahm is the Parmatma (the supreme Atma, the Supreme Being) and the Purush (the primal Male; the cosmic Viraat Purush which is the invisible macrocosmic all-pervading sublime form of Brahm from whom the entire creation is revealed).

Brahm is fully endowed with grand spiritual virtues and magnificent divine glories that are compositely called ‘Brahm Sampatti’, the assets of Brahm. [Refer also to Kanda 1, verse no. 22.] (1).

[Note—The grand virtues of Brahm have been expounded in nearly all the Upanishads, some of them being the following—(a) Krishna Yajur Veda’s *Yogshikha Upanishad*, Canto 2, verse nos. 15-19, Canto 3, verse nos. 17-22; *Kathrudra Upanishad*, verse no. 12, 27-28, 30-31, 42; *Taittiriya Upanishad* Valli 3, Anuvak 10, verse no. 2-5; *Skanda Upanishad*, verse no. 13; *Dhyan Bindu Upanishad*, verse no. 4; *Varaaha Upanishad*, Canto 2, verse nos. 16, 20-21, 26, 29; Canto 3, verse no. 2; and Canto 4, verse nos. 31-32; *Yog Kundalini Upanishad*, Canto 3, verse no. 35; *Saraswati Upanishad*, verse no. 50-52; *Shwetashwatar Upanishad*.

(b) Atharva Veda’s = *Mundak Upanishad*, Mundak 1, section 1, verse no. 6; Mundak 2, section 2, verse no. 7, 9-11; Mundak 3, section 1, verse no. 3-5, 7-9; *Atharvashir Upanishad*, Kandika 4 (full); *Naradparivrajak Upanishad*, Canto 8 which is fully dedicated to enumerating the grand virtues of Brahm; Canto 9, verse nos. 3, 19-22; *Tripadvibhut Maha-Narayan Upanishad*, Canto 1, paragraph 4, Canto 4, paragraph no. 1; *Shandilya Upanishad*, Canto 2, section 1, verse nos. 2-5, and Canto 3, section 1, verse nos. 1-8, 11-14; *Annapurna Upanishad*, Canto 4, verse no. 27-31, 33, 67; Canto 4, verse nos. 35-38, 67; Canto 5, verse nos. 10, 20-21, 66-67, 72, 113; *Atma Upanishad*, verse nos. 1-D and 1-E, verse nos. 2-4, 9, 30-31; *Pashupat Brahm Upanishad*, Canto 1, verse nos. 11, 13-16; Canto 2, verse nos. 13-16, 26, 28-30, 44; *Tripura Tapini Upanishad*, Canto 5, verse no. 6, 8-9, 16-17, 22; *Ram Purva Tapini Upanishad*, Canto 1, verse no. 7.

(c) Shukla Yajur Veda’s following Upanishads—*Adhyatma Upanishad*, verse nos. 61-64; *Brihad Aranyaka Upanishad* Canto 2, Brahman 3 describes this Brahm’s two forms in detail.

(d) Sam Veda’s *Chandogya Upanishad*, *Keno Upanishad* and *Avyakta Upanishad*.

The uniformity and non-duality between *Shiva and Brahm* has been emphasized in— (i) Krishna Yajur Veda’s *Dakshin Murti* or *Dakshin Mukhi Upanishad*, *Pancha Brahm Upanishad*, verse no. 30, *Skanda Upanishad*, verse nos. 9, 13, and *Varaaha Upanishad*, Canto 4, verse no. 32. (ii) Atharva Veda’s *Shandilya Upanishad*, Canto 3, section 2, verse nos. 11-15; *Pashupat Brahm Upanishad*, Canto 1, verse nos. 11, 32.]

2. When a man has become truly self-realised and enlightened about the Atma and its eclectic grand virtues and divine glories, he is deemed to have acquired the knowledge of Brahm. Such a wise and enlightened man is equivalent to Brahm; he becomes an image of Brahm; he becomes one like Brahm. What more is to be said in this matter, for there is no doubt in it.

[That is, once a man becomes truly self-realised in as much as he has realised the presence of the Atma, the pure consciousness, in his inner-self as his true identity known as the 'self', when he has understood that this Atma is the same consciousness that also resides in the rest of the creation as the all-pervading cosmic Consciousness, and that this Consciousness is known as Brahm—it is then that he realises that 'he' is not the physical gross body with its limitations but the eternal and infinite 'consciousness' known as the Atma which represents the supreme transcendental Brahm. This means, he realises that his 'true self' is Brahm personified; it does not require any further proof to establish that 'he' (i.e. the true 'self' of the concerned person) is Brahm himself personified and established in this creation in that form.

When this wisdom dawns on the mental and intellectual horizon of a person, he is deemed to have acquired auspicious and noble characteristics and virtues equivalent to those possessed by Brahm by the virtue of his becoming self-realised and understanding the truth of the fact that his Atma, which is Brahm personified, is his 'true self'.

In other words, a self-realised and enlightened man is none else but Brahm personified.]

Those who are Gyani (wise, enlightened and realised) spend their precious time in talking and discussing about Brahm, in meditating and contemplating upon Brahm, and in worshipping Brahm.

With due practice, when a uniformity, compatibility, harmony and inseparability is established between the Atma and the Hans, there would be no chance for any external interference arising from the subjects of this mortal mundane world to create any disharmony or friction or dichotomy between the two.

[That is, when the spiritual aspirant is completely submerged and engrossed in meditating upon the Atma using the Mantra 'Hans' as advised in verse no. 1 of the present Kanda no. 2, as well as in verse no. 12-13, 19-20 of Kanda no. 1 previously, all his links with the outside gross world are broken. None of the creatures or material things of the external world are able to disturb him any longer. They are not able to break the link that is established between his own Atma and the supreme Atma known as Brahm through the medium of the 'thread' represented by the Mantra 'Hans'. The fact that this 'Hans' Mantra is like a 'thread' linking the individual soul to Brahm is endorsed in verse nos. 17, 19-20, 26-27 of Kanda no. 1.] (2).

3. When the inner-self resonates with the cosmic sound called Naad (as happens when the ethereal Mantra Pranav or OM is constantly and persistently repeated during the process of Yoga or meditation) so much so that it appears to the practitioner that this Naad is springing forth from his inner-self (like ripples or waves generated in the water of a lake), the Hans (i.e. the Atma) that is experienced and witnessed then implies that the spiritual aspirant has indeed become self-realised and has attained spiritual enlightenment.

[That is, when the aspirant is drowned in the vibrations created by doing Japa with the Pranav Mantra dedicated to Brahm, i.e. the Mantra OM, a time comes when he is able to experience the presence of the Consciousness inside his inner-self. It appears to the practitioner that these vibrations created by doing Japa or repetition of OM originate from a central point in his heart, and then spread out from it to cover each point of his being just like ripples appearing in the water of a lake having their origin at one point but spreading out to its furthest corner. It is then said that he has become self-realised because he has witnessed the presence of the Atma symbolized by the Hans inside his own bosom.

It is easy to visualize this phenomenon. Suppose there is a lake whose surface is absolutely calm and placid. Now suppose there is a swan floating on this surface. The bird would breathe, and this process creates a small expansion and contraction of the muscles of the body which each inhalation and exhalation. This in turn produces subtle rhythmic pulsations of the body of the swan which passes on to the water, thereby creating subtle waves on the surface of the otherwise absolutely calm water. When one observes these waves he finds that they have their point of origin at the spot where the swan floats.

In the context of metaphysics, the 'consciousness' residing in the inner self of the creature as his Atma has its abode in the space of the subtle aspect of the heart. It is from here that vibrations of life are generated, and when they begin to resonate in the inner being of the creature they resemble the cosmic Naad because the creature is an image of the cosmos in a miniature form.

The heart is made to beat by the spark of life known as 'consciousness' present in it. The subtle vibrations created by this beating are reinforced by the vibrations created by doing Japa with OM. The energy waves generated by the beating of the heart and the rhythmic chanting of OM reinforce each other, and the two coalesce with each other to gather momentum and energy that leads to a resonating sound that makes it possible for the man engrossed in meditation to hear a reverberating sound that resembles the sound of the cosmic Naad (sound) inside his being. What is primarily a subtle form of sound becomes an overwhelming resonance that virtually drowns the hearer in its reverberating crescendo.]

When one becomes enlightened internally, it is possible to know about the truth of all things externally.

[When one is inherently intelligent and wise, it is easy for him to learn anything in this world, as opposed to a man who is basically stupid, dull, block-head and ill-witted. No matter what great efforts are made to teach him anything, he would just not understand. The same teacher teaches a class of so many students, but out of them some reach the pinnacle of glory and achievement in life while others become complete failures. How can one blame the teacher, for if his teaching was faulty then how is it that some of his students do so excellently well in life in the field of knowledge taught by the teacher?] (3).

4. The eternal blissful world is known and experienced when there is a union of Shiva (Brahm) and Shakti (his dynamic energy).

[When the Atma or the 'self' of the ascetic, which is a personification of Brahm as well as the pure consciousness, and therefore symbolized by Shiva, unites with all dynamic factors, known as 'Shakti' that are present in the aspirant's body, such as his vital winds known as Pran that keep the body active and alive, and other such factors that are absolutely necessary not only for survival but also for the wholesome growth, development and well-being of his—it is then that the ascetic witnesses extreme spiritual bliss and contentedness. With the union of Shiva and Shakti, a world of high blissfulness is obtained. The state of existence of consciousness when this happens is equivalent to the Turiya state of transcendental existence. This is the situation at the subtle level of existence.

At the gross level it is said that this physical world has come into being as a result of a union between Shiva representing Brahm as the primal Male, and Shakti which is the dynamic powers of Brahm manifested as the primal Female. Their 'intercourse' or union resulted in this creation being conceptualized. Since the world is a 'conception', it is imagined, and therefore a conjecture of the imaginative mind.

However, the union itself brought Shiva (Brahm) and his dynamic Shakti (cosmic powers) together, and it gave Shiva immense bliss. This fact is reflected in day-to-day life when one feels immensely happy when united with someone very near to him but separated for some time. Since this creation is the result of this union, it gave immense bliss to Shiva (Brahm) as it was his off spring.

A king feels immensely happy, contented and blissful when he is assured of his unrivalled authority and sway over the kingdom. Imagine his precarious situation if this authority ('Shakti') of his is challenged or snatched away from him by his enemies! A king without his Shakti or power can never find peace and rest, and therefore loses his contentedness and happiness.

Brahm was peaceful, rested, contented and blissful when he was complete and wholesome, when his Shakti was united with him. But when Brahm decided to create this creation he had to utilise his Shakti to give shape to his decision to create. Since the actual 'truth' is that nothing exists except Brahm, so when Shakti had to create a world different from this 'truth', a world which should look different from Brahm, it had to create Maya or delusions. What was the necessity for this delusion? It was necessary because if there was no delusion then whatever existed would be exactly like Brahm, but we find that it is not. Brahm wished to remain aloof from his own creation, and so it necessitated that there must be some distance between this creation and Brahm.

In other words, Shakti had to move away from Brahm. When Brahm realised that Shakti had moved away from the Truth to create the world hallmarked by 'un-truth', it is natural that Brahm got irritated, i.e. he became restless and lost peace. This explains why Brahm known as 'Shiva' became Brahm known as 'Rudra'.

From the perspective of an ascetic, if he remains submerged in meditation and contemplation when he has withdrawn the sense organs and the mind from the external world and focused their attention on his inner self, he has literally withdrawn the Shakti represented by the dynamic powers of these instruments of the body into his inner-self, which is his 'true self' known as the Atma. For him, the world does not exist. His condition is equivalent to Brahm prior to the latter's decision to first create the world and then get involved in its caretaking. On the other hand, if the same ascetic allows his sense organs and the mind to wander towards the external world, his position would be like Brahm after the rolling forward the juggernaut of creation—that is, the ascetic would lose his calm and peace.

In the present context of this Upanishad, it implies that a self-realised ascetic experiences immense bliss when he is able to bring about synchronization between his Atma and his inner-self known as the Anthakaran, along with the latter's various components, such as the Mana (subtle heart and mind), Chitta (mind and sub-conscious), Buddhi (intelligence) and Ahankar (ego), as well as the inherent Varnas (passions and desires) and the Vrittis (inherent character, traits, habits, inclinations and temperaments that define a creature's nature and character).

When this union is effected, both the ascetic's inner world at the subtle level of existence, as well as the outer world at the gross level of existence become blissful for him. No miseries and troubles of the external world ever move him; they never disturb his calmness and composure. Refer the last stanza of verse no. 2 above.]

The three symbolic eyes of Shiva are represented by Naad, Bindu and Kalaa. It is with this eye that Shiva sees this world.

[That is, an enlightened ascetic sees this world through the eyes of wisdom instead of the physical eyes of the gross body. The physical eyes see only gross things and their external features. These eyes are unable to penetrate deep and see the truth

hidden behind the external façade. On the other hand, the third eye is the eye of wisdom which helps the ascetic to see this 'truth' just like modern X-rays help us to see behind the skin.

The Naad, Bindu and Kalaa are components of OM. Briefly, the 'Naad' refers to the concave dish-like sign on the symbol of OM; the 'Bindu' is the dot placed just above it at its focal point; and Kalaa is the changing notes of the sound produced by doing Japa with OM.

The light emanating from the third eye of Shiva seems to pulsate like the light of the glow-worm or the waxing and waning phases of the moon. Even as the phases of the moon are called its 'Kalaas', the pulsations of light emanating from the third eye are also called 'Shiva's Kalaas'. It is the same Shiva who uses the third eye to scorch the creation to ashes when he is angry, and to acquire wisdom and enlightenment when he is meditating and contemplating upon the 'self' and the 'truth'.] (4).

5. The Pranav or OM is understood to have a subtle form which is said to have three 'Angas' (parts or units), three 'Shikhas' (peaks, tips, crests), and two or three 'Matras' (vowel sounds, aspects or dimensions)¹.

When OM becomes an inseparable part of the inner-self so much so that its repetition is done automatically with each breath without any special effort, then one becomes enlightened about the secret Atma or the pure consciousness that resides in his inner-self. This realisation also implies that the ascetic is able to see the same Atma everywhere outside in this world.

[This is primarily because OM is a cosmic sound that prevails everywhere in the space of the sky in the form of Naad. In the higher echelons of Yoga, the ascetic realises that OM and the cosmic Consciousness resonate with the same frequency. When he uses OM as a medium for meditation and contemplation, he experiences this cosmic vibration of Naad resonating inside his being. Obviously, when these two forms or aspects of vibrations—viz. the one resonating inside him in the subtle space of inner organs of the body, and the one resonating in the space of the sky outside him—coalesce with each other, they reach a climax, a crescendo, when the ascetic's whole being gets submerged in the waves of ecstasy and thrill generated by the vibrations caused by the sound of the cosmic Naad reverberating throughout his inner being.] (5).

[Note—¹The *three Angas* of Pranav are the three letters of OM, viz. A, U and M.

The *three Shikhas* are the three phases of creation it represents—viz. the origin symbolized by the letter 'A', the expansion of creation till it reaches its zenith symbolized by the letter 'U', and the conclusion of creation symbolized by the letter 'M'.

The three Shikhas may also imply the three primary phases of Yoga, especially Pranayam or breath control when the Mantra OM is usually employed, viz. the Purak or inhalation of breath, Kumbhak or holding the breath inside the body, and Rechak or exhalation.

The *two or three Matras* refer to the two basic states of existence of consciousness, viz. the waking state and the sleeping state. They can be further divided into three stages, viz. the Jagrat or the waking state, the Swapna or the dreaming state, and Sushupta or the deep sleep state.

The sound of OM has two or three Matras depending upon how closely one meditates upon it and hears it. Ordinarily it seems to have only two sound—viz. 'O' and 'M'. But when analyzed closely it is discovered that it consists of three basic sounds which are equivalent to the alphabets 'A', 'U' and 'M'.]

6. A wise, erudite, sagacious and intelligent man is he who would voluntarily strive for and actually acquire the truthful knowledge of Brahm (instead of being prodded to do so though he is not sincerely interested in it, or becoming contented with some half-baked, distorted and crooked knowledge purporting to be that of Brahm who is the supreme, the divine, the perfect and the immaculate One).

When this holistic knowledge of Brahm is available to him, he himself would be characterized by the virtues of Brahm. [This is because he would realise that his 'true self' is the Atma that is a personification of Brahm. True Brahm-realisation is when the eclectic virtues of Brahm are displayed by the aspirant and reflected in his personality and behaviour so much so that he becomes a living personification of the divine glories of Brahm.]

Those who are an ocean of Gyan (i.e. those who have an abundance of spiritual knowledge and possess the glories virtues of enlightenment) assert that such a Brahm-realised man should always contemplate upon Hans (the Atma) as an image of the Sun (i.e. of the fire element) and Pranav (Brahm). [Refer verse nos. 19-20 of Kanda no. 1. See also note to verse nos. 15-16 of the present Kanda/Canto no. 2 of this Upanishad.]

[That is, they must understand that the Atma is not an ordinary entity but a divine one that possesses the glories, the dynamic powers and energy, and the supreme authority that Brahm possesses. He must understand that his Atma is as brilliantly illuminated and radiant as the celestial Sun and the Fire element, and the Sun itself is a personified form of Brahm—refer Kanda 1, verse nos. 8, 21-22, 24 and 27-28.

Therefore, much like the celestial Sun that lights up the world and gives its illumination and energy to the latter for its survival, the Atma too illuminates the body of the creature by injecting life and consciousness in it. The organs of the body are kept alive and are able to perceive the surrounding world because of the factor of consciousness present inside them. A dead body would not see or feel or hear or smell the world.

The Atma is the pivot or the axle around which the whole wheel of creation rotates or revolves just like the planets revolving around the Sun. If the Atma is removed from this creation, the latter would cease to exist and scatter away just like the planets that would drift away into the endless void of the cosmos and get lost for ever. Just like the Sun that holds all the planets in their pre-determined place in the fathomless and infinite vacuum of space, the Atma keeps the creation in place and prevents its disintegration and dissolution.

Just like a grave humming sound is heard in outer space just above the outer layer of the earth's atmosphere caused by various physical factors, one of them being the magnetic field around the rotating sphere of the earth, the cosmic Consciousness produces a humming sound in the ether that is heard as Naad. Ancient sages and seers heard this sound and called it 'Pranav'. Since only a living entity that has dynamism inherent in it can produce energy that translates into sound, they deduced correctly that Pranav is a synonym for the supreme Brahm.] (6).

7. When one has acquired a holistic knowledge of Brahm (as outlined in this Upanishad), it is only then that he can be rightly called an expert in Gyan or spiritual wisdom, knowledge and enlightenment.

Lord Shiva known as Pashupati is himself a witness of this fact; he exemplifies this fact. [This stanza explains why Shiva is known as Maheshwar and is regarded as a living manifestation of Brahm. This is because Shiva has completely

realised Brahm, the Supreme Being in the form of the pure conscious Atma. Why Brahm is known as 'Pashupati' has already been explained in verse no. 32 of Kanda no. 1.] (7).

8. The Lord (the Supreme Being known as 'Brahm') is the inspirer, commander and regulator of the Mana (emotions, sentiments and functioning of the mind and the heart) of all living beings. This motivates the Mana to get involved in all the sense objects of this material world. It is the inspiration and motivation provided by the Lord which enables the Pran (vital winds) to remain active, and the faculty of speech (voice) to speak words (8).

9-10. It is on the inspiration and command of the Lord that the eyes see things having forms and colours; it is on his orders and empowerment that the ears hear sounds. Similarly, all other sense organs work expressly on his command and are regulated by him. They are inclined to remain engrossed in their respective objects in the external world because the Lord has created them so that the Atma can perceive the beauty, the majestic charm and the magnificence of the creation crafted by the Lord through their medium.

[Since the Atma is a microcosmic personification of Brahm that lives in the gross body of the creature, it follows that it is actually Brahm himself who enjoys the sights of the world created by no one else but him. The Lord plays with his own creation through the medium of the Atma and the gross body of the creature in which this Atma lives!]

The different sense organs of perception (such as the eye which sees, the nose that smells, the ears that hear, the tongue that tastes, and the skin that feels and touches), as well as the organs of action (such as the hands that do deeds and receive anything, the legs that take Brahm albeit in the form of the resident Atma to its designated place, the mouth that helps Brahm to speak and eat, the excretory organs that helps Brahm to get rid of waste from its immediate vicinity inside the body, and the genitals that helps Brahm to reproduce the world and help it sustain its own self perpetually) are the instruments employed by Brahm to interact with and sustain the world of his own creation.

But it has been asserted in the Upanishads that the Atma is inherently neutral and dispassionate. So how and why does it get involved in the gross body through the medium of the above organs? The answer is that it is influenced by 'Maya'—the power of delusions. That is, the Jiva (living being) who is deluded and overcome by Maya is the one who gets involved or indulgent in the world, and the Jiva who is wise and enlightened is freed from this fetter. It is Maya that shrouds the Jiva's intellect and mind and makes him behave as if he is ignorant of the Truth though his 'truthful self' happens to the wise and enlightened Atma. This is the great paradox of creation.]

This inclination of the sense organs to be attracted towards their respective objects is due to Maya—i.e. by the dynamic power of Brahm which makes falsehoods appear to be real, thereby making the sense organs think that the objects of the world which they pursue are true and real, and that they would derive true pleasure and joy by being associated with them or being in their company. The sense organs are the instruments that the Atma, as a representative of Brahm residing inside the creature's body, uses to 'see', to interact and to sustain the gross world of material sense objects.

The desire of the creature to swerve towards the sense objects of the world is due to this affect of Maya, and it is not the creature's inherent and natural inclination. [This is because the true self of the creature is the Atma which is inherently

dispassionate and wise. It has no desire for material comforts and pleasures derived from the sense objects of the mortal world. But when Maya intervenes as the spoiler, the Atma gets deluded, and thereby it loses its pristine purity and becomes tainted.] (9-10).

11. The ears are dependent upon the Atma or the consciousness that resides inside the gross body. [This is because a dead body from which the Atma has left has the same ear, but it is worthless; it does not hear.] It is the supreme Brahm known as Pahasupati who subtly enters the ear as its faculty of hearing and empowers it to hear.

This is how Shiva—representing all living beings in the form of the truthful ‘self’, the ‘self’ that is as immaculate and holy as Brahm, the ‘self’ that lives in a gross body as its essential factor known as the ‘soul’ or the Atma—is able to hear (11).

12. Similarly, it is the Parmeshwar, the supreme Ishwar or Lord, who enters the Mana and regulates it from within. This is how the Mana is inspired and kept under control. This is also why the natural inclination of the Mana is always towards auspiciousness and righteousness. [Had it not been for the Maya, or the delusion creating power of Brahm, which makes the Mana, or the subtle heart, the subtle mind and sub-conscious, lose its sense of propriety, probity and bearing, the Mana would always have been immaculate and untainted.] (12).

13. [Verse nos. 13-16 emphasize the fact that Brahm is such an esoteric, mystical and enigmatic entity that logics, rationality, proofs, and application of mind and intelligence cannot help one to realise it. Brahm is beyond the grasp of any of the sense perceptions.]

The Supreme Being known as Mahehsvar, the Great Lord, is the one who not only injects life into all the sense organs of the creature’s body, but also sustains their activities besides exercising full control over them. But this Great Lord is not what is described or imagined to be (as he is beyond comprehension, and therefore beyond the purview of description) (13).

14. It is the Maheshwar that gives all the organs their shape, abilities and powers according to his desire, and in the way he wants them to act or perform specific functions to suit his cosmic plan. He also commands and controls them.

Therefore, none of the sense organs such as the eye, the mind, the organ of speech etc. can attain the same exalted stature as that possessed by their Lord. [For instance, no minister of an Emperor can claim the same stature and power as that possessed by the sovereign himself.]

None of the sense organs can ever match the natural and inherent in-built ability to act and inspire action in others as that possessed by their Lord who makes them act in accordance to his will, and strictly in line with his inspirations. [That is, left on their accord, none of the sense organs can do anything—e.g. the eye would not be able to see anything by its own. For instance, a dead man’s eye does not see anything though it is wide open. Hence, the divine entity or the quintessential factor or element that is responsible for all the organs functioning in the way they do is known as the Atma which is pure consciousness residing in the body of the creature. It is this Atma that is the ‘driver’ of all the organs and the ‘controller’ of all their functions.] (14).

15-16. A wise person who has realised that the Maheswar (Brahm) is an entity that is beyond the grasp of any of the sense perceptions of the gross body as well as the various faculties of the subtle mind-intellect complex, should discard taking recourse to rationality, logics and proofs to realise Brahm. Instead, he should concentrate on realizing Brahm by the medium of his inner-self—i.e. by contemplation and meditation, by turning inwards and focusing his attention on the pure consciousness that is self-illuminated and which resides in his bosom, rather than searching for Brahm in the external world. It is only then that he can attain true knowledge of Brahm, or become truly ‘Brahm-realised, wise and enlightened’.

It is the Atma that is self-illuminated, while the external world of Maya (or the world generated by delusions of the mind) is enveloped in darkness. Whereas the Atma is an embodiment of light and enlightenment, Maya on the other hand stands for darkness, delusions and ignorance.

[In other words, when a spiritual aspirant turns inwards in search of the ‘Great Truth’, he discovers an entity that is self-illuminated, radiant and glorious as the celestial Sun. This is the Atma. Like the Sun that can be said to be the virtual Lord of the solar system, this Atma is also the Lord of the microcosm known as the Jiva, the living being. Microcosm exists because there is a ‘macrocosm’; one logically proves the existence of the other. For instance, if there is a day then there must be a night, and vice-versa. So, if the Atma is a Lord of the Jiva, its macrocosmic counterpart would naturally be the Lord of the whole existence at the cosmic plane. The latter aspect of the omnipresent, ubiquitous, all-pervading, immutable and immanent Atma is therefore called ‘Maheshwar’, the supreme Lord the seeker was searching for when he had set out to find the truthful Lord of creation who is the ultimate and the supreme Authority. This Lord is known as Brahm, the Supreme Being.

Since the Atma is a representative of this Supreme Being residing in the inner-being of all the creatures, it follows that it is also Maheshwar. It is like the case of the same sky being assigned two different names of Ghata-Kash and Maha-kash by the virtue of the sky’s (‘Akash’) location inside the body of a hollow pitcher (‘Ghat’) and outside it respectively.

The Atma is like the flame of a lantern or a candle. This flame itself is self-illuminated, splendorous and a brilliant source of light; this flame illuminates the surrounding world by its light. Sans this flame, the surrounding area would be in pitch darkness. Similarly, the world would be enveloped in a thick veil of darkness if the Atma—the living factor of life known as the ‘consciousness’—were not present in it. To draw a parallel from the physical world, the latter would be a sea of darkness if there was no Sun to light it up.

From the metaphysical point of view, the outside world is dark because it is the creation of Maya—the power of this Maheshwar to willfully create a veil of delusions around himself. Why would the Maheshwar do so is answered in verse no. 1 of Kanda/Canto 1.

By corollary, Maya can be removed by its own creator. The clue to the creation of Maya is with the Maheshwar (Atma at the micro level, and Brahm at the macro level of creation), and therefore it is the Maheshwar himself who can dismantle it. This simply means that Maya can be overcome by the Atma itself should it decide to do so, and hence it also follows that the Jiva, the living being, is himself to blame for the shroud of delusions that he has weaved around himself because this Jiva’s truthful ‘self’ is the Atma.

The colourful world of fascinating charm and variety that is observed is actually a tapestry of delusions that the Maheshwar has created himself.] (15-16).

[Note—Earlier it has been said in Kanda/Canto 2, verse no. 6, as well as in Kanda/Canto 1, verse nos. 21, 24, 28 etc. that the Atma, known as the Hans, is like the Sun and the Pranav. The ‘Sun’ is the only self-illuminated body in the whole of the solar system. Space voyages in modern times has established beyond doubt that the outer space is completely dark. The sky that we see as lighted from earth during the daytime is actually due to refraction of sunlight from the uncountable impurities present in the atmosphere of the earth. But just outside the upper surface of the earth’s atmosphere, in the bottom-less vacuum of the outer space, the sky is absolute dark even though the same Sun is shining at the same place as before.

The other word ‘Pranav’ refers to the background sound in the cosmic space. Science has shown that there are a number of factors for this cosmic humming, such as the magnetic field around the revolving planets, ionized solar wind blowing in outer space, and other physical factors. It has been observed that a grave humming sound is heard just outside the earth’s outer atmosphere which makes it appear that the earth is groaning as it slowly revolves around its axis. We do not hear this sound on earth because of the surrounding pollution created by terrestrial noise, but since there is absolute quiet in outer space this subtle sound becomes stark against the all-pervading calmness.

Now we come to ‘Brahm’. The term Brahm applies to ‘everything’, without exception, that exists in this creation, and obviously therefore both the noise and the quietude come within the ambit of ‘Brahm’ as do the Sun and the Pranav! In other words, the Sun and the Pranav are one or the other aspects or facets of the ubiquitous Brahm. This is the picture at the cosmic plane of existence.

The void of the space has no life par-se, so the mysterious entity, which we like to call the inexplicable forces of Nature, that keeps the hanging celestial bodies in their fixed place in the universe, that keeps the Sun burning eternally without any replenishment in its stock of fuel, which creates sound from nowhere, which created the elements from nothing—is known as Brahm. Since something that has no life, vitality and dynamism in it cannot produce any other thing—dead entities don’t create—it follows that this Brahm is the cosmic Consciousness that is regarded as the seed of life and creation. This is the rough picture at the cosmic level of creation.

At the microcosmic plane, this Brahm is revealed as the ‘consciousness’, the essential life-infusing spark, that resides inside the gross body of the creature who represents the creation in a miniature form. This ‘consciousness’ is called the Atma as it is the most fundamental and basic entity without which the creature’s very existence as a ‘living being’ known as the Jiva would be questioned and jeopardized. The word ‘Atma’ means ‘the soul, the essence, the basis, the fundamental, the principal and the elementary form’ of anything.

Since the Atma not only lights up the inner being of the body with the light of life and consciousness but is also self-sustaining and self-illuminated, it is likened to the celestial Sun. Again, since the dead and the inane entity known as the body gets its power to live by the beating of the heart, the beating which creates a subtle thumping sound as well as a silent humming or whispering as the blood flows through the blood-vessels inside the body, the Atma is also likened to the Pranav, the cosmic background sound.

Elsewhere it is said in the Upanishads that the Sun is a visible manifestation of Brahm because the latter represents the brilliance and magnificence of the glories of Brahm. In this context, refer to the *Tripadvibhut Maha Narayan Upanishad* of the Atharva Veda tradition, Canto 4, paragraph no. 4. The *Surya Upanishad* of the Atharva Veda tradition, verse no. 3 asserts that all forms of life on earth depend upon the Sun God. The *Narayan Upanishad* of Krishna Yajur Veda, in its verse no. 1 says that he was born from Lord Narayan, i.e. Lord Vishnu. The same thing is asserted in *Brahmo-panishad* of Krishna Yajur Veda, verse no. 1 which states that Aditya, the Sun God, is a manifestation of Lord Vishnu. But this is understandable because Vishnu and the Viraat Purush is the same Lord having different names according to

the degree of subtlety and the scriptural text one is referring to; both are synonymously used. Whereas the Viraat Purush was the macrocosmic gross body of the supreme transcendental Brahm that appeared in the first stage of creation when Brahm decided to initiate it, he was called Vishnu at a little later stage when the visible creation was just about to be initiated, because it is from Vishnu that Brahma the creator was born who later gave shape to the creation itself.

Brahm in metaphysical context refers to the *pure consciousness* that has two levels of existence—one is the macro level, and the other is the micro level. At the macro level this refers to the cosmic Consciousness that is universal and uniform throughout this creation, and this fact that the cosmic Consciousness is the Supreme Being himself personified is endorsed in the Atharva Veda's *Annapurna Upanishad*, Canto 5, verse no. 56. At the micro level of creation, the term 'consciousness' refers to the individual's Atma, his soul. This Atma is his truthful 'self'.

In the context of the present verse of our Pashupat Brahm Upanishad, it is stunning to note that the Sun that is so blazingly splendid lives in a space of the outer sky filled with overwhelming darkness. This is how the idea of the 'Maheshwar being surrounded by darkness of Maya' originated!

It ought to be noted here that inspite of this all-engulfing darkness in outer space, the Sun continues to shine brilliantly, and any object that is turned towards the Sun too gets illuminated. In other words, inspite of the world being submerged in the delusions created by Maya, those who turn towards the 'truthful Brahm' get enlightenment and wisdom inspite of all odds stacked against them. But if they turn their back towards Brahm, they would see only miseries and insurmountable problems of life instead of hope and salvation!]

17-18. There is never a similarity between the self-evident and cognizable Atma, and the illusionary and deluding Maya.

It is well known and established by doing self research, applying of logic, contemplating and pondering deeply, separating fact from fiction, intelligent analysis and wise derivation of the truth that the supreme Atma, which is consciousness and self-illuminated, has nothing to do with Maya at all.

The debates about the truthfulness or otherwise of anything in this gross material world of sense objects that are marked by delusions are limited to the world. Such debates are the subject matters revolving around Vidya (knowledge, skill and expertise in any given subject) or A-vidya (the opposite of Vidya). It has no bearing on the Atma which is beyond the purview and jurisdiction of either the Vidya or the A-vidya for the simple reason that the Atma is an ethereal entity that transcends the defining boundaries of the gross world (17-18).

[Note—The Jiva, i.e. the living being, is either aware of things in this world or is unaware of them. The state of existence when the Jiva is aware of this world and its objects is known as 'Vidya' or knowledge and awareness, while the opposite would naturally be 'A-Vidya' or lack of knowledge and awareness. In the field of spiritualism, knowledge of the truth of the Atma is known as 'Vidya', and its lack is 'A-Vidya'.

Now, since the Atma is said to be eternally self-illuminated and enlightened, to cast doubts on its inherent divinity and greatness as well as its existence comes under the definition of 'A-Vidya', while to be sure and convinced of the same is categorized as 'Vidya'.]

19-20. From the basic or fundamental perspective of the Absolute Truth of creation, such debates are useless and a waste of time and energy. Actually, it is one Truth that is the fundamental Tattwa (essence, basis) of everything in existence.

[Here, 'Truth' refers to the Consciousness that pervades in this creation uniformly, and without which nothing would matter or exist. If there was no Consciousness, there would have been no life on Earth, and the world (earth) would be as barren a stretch of terrain as that on the planets Mars or Venus for instance!]

Whatever is visible in this physical world also appears to be 'true' because it is perceived first hand, but this 'truth' is cloaked in Maya as the instruments of the body which perceive it are themselves veiled in Maya. [Refer verse no. 9-18.]

Therefore, there is a sea of difference between the 'Truth' that is 'absolute', and the 'truth' that is 'not absolute' but is rather deluding.

The 'Absolute Truth' is a manifestation of or a metaphor for 'light' because it is self-evident and self-illuminated.

[It is different from the perceived or imagined 'truth' in the form of the world which is illuminated by the light of something else, for instance the light of the Sun. The Sun is self-illuminated and self-sustaining; it does not require anything else to make it shine and give light, or remain burning eternally. On the other hand the world is neither self-illuminated nor self-sustaining—i.e. it is not self-illuminated as it depends upon the light of the Sun to remain illuminated, and it is not self-sustaining as it depends upon the Sun for its heat, light and energy, factors that are absolute essentials for creation to survive.

Similarly, the Atma is self-illuminated and self-sustaining, whereas the body is dependent upon this Atma for its awareness of the world ('illumination') as well as its life ('sustenance')]

But, at the same time, the fact is that it is the 'light' that makes the Truth shine, whether at the cosmic level of the 'absolute' or the mundane level of the world which the creature sees with his organs of perception. This 'light' is the 'Consciousness' known as Brahm at the cosmic level, and the Atma at the individual level of the creature.

Hence, the 'light' (of knowledge) is a common denominator at all levels of existence that illuminates the Truth. That is, it is knowledge, wisdom and erudition that highlight the 'truth' by eliminating darkness in the form of ignorance of this 'truth' resulting in delusions arising out of misinterpretation, misconception, misperception, misinformation etc.

This 'light' representing the glorious virtue of knowledge, erudition, wisdom, enlightenment and sagacity that are the unique characteristics of the supreme Consciousness known as Brahm at the micro plane of existence, and as the Atma at the individual level of the creature's existence is therefore a non-dual or Advaitya virtue. It is uniform and universal in creation (because the virtues of knowledge and wisdom that stand for 'truth', instead of the ever-changing nature of 'un-truth', always remain steady, unchanging and one—or 'non-dual')

[If we regard the word 'light' as a metaphor for the enlightened Atma, then also the same logic applies, as the 'truthful Atma' is a universal, immutable, immanent and constant factor of creation, an unchallengeable factor without which this creation would lose its meaning and foundation.] (19-20).

21-22. In this way, it is the 'light' (symbolizing the knowledge or awareness of the ubiquitous factor of life known as the consciousness) that is the universal source of illumination (knowledge and wisdom) in this world. [That is, being enlightened about the truth of the Atma as a personified form of the cosmic Consciousness is a spiritually elevating and empowering experience. It not only enlightens the aspirant

about the truth of his own 'self' but also illuminates the path of his emancipation and salvation.]

It is wiser and prudent to keep quiet about it instead of speaking something about it (because it cannot be properly and completely described in words, thereby leaving it to be subjected to misinterpretation and misunderstanding, a situation that would be ruinous for the destiny of the hearer). Spiritual truths can only be experienced and witnessed first hand, and not taught or described or illustrated (like some physical experiment in a science laboratory of a college).

A person who is fortunate enough to have voluntarily obtained this eclectic divine knowledge (of Brahm and the Atma) is so unique that he cannot be categorized exclusively as being Brahm (personified divinity), or a Jiva (an ordinary living being), or anyone else in specific terms to the exclusion of others. That is, he is all of them at once; he is the 'non-dual' Brahm personified in his form. [Such a man is deemed to have reached the pinnacle of enlightenment and self-realisation. For him, it is the 'truth' that matters, and the 'truth' is always the same!]

He has no Varna¹ (i.e. he cannot be restricted to any particular class in society), or Ashram² (i.e. he cannot be categorized on the basis of any particular phase of life) (21-22).

[Note—¹The four *Varnas* are Brahmins or the upper learned class, Kshatriyas or the warrior class or noblemen, Vaishyas or the trading community, and Shudras or the working class, especially the labourers.

²The four *Ashrams* are Brahmacharya or the celibate life as a student, Grishatha or a householder, Vaanprastha or when one withdraws from active householder's life and prepares to leave home, perhaps to go for pilgrimage, and Sanyas or total renunciation.]

23-25. Such a spiritually realised man does not fall under the category of either those who obey the laws of Dharma (probity and propriety) or those who do not. Nothing is prohibited for him, nor is anything specially prescribed for him.

When he has developed a holistic view of creation whereby he sees non-duality everywhere in the sense that he sees nothing but Brahm everywhere, there is no question of his having a sense of sorrow or pain in one situation, and of joy and happiness in another situation. [23½.]

Such a highly enlightened and Brahm-realised man does not 'see' this world with its myriad forms and variations, a world which is inhabited by diverse species and types of creatures. This is because he sees or observes or perceives only 'one' (non-dual) Brahm everywhere; he sees only one 'consciousness' (Atma) lighted in this world in so many varieties and forms. He understands that all that he actually sees in the form of 'life' in this world around him with the gross organ of sight known as the eye is only the external façade which hides the reality of 'truth and consciousness' behind it. He sees nothing but Brahm in the form of this 'consciousness and truth' everywhere.

In this situation, the difference between what is Dharma and what is not do not apply to him (23-25).

26. The Atma which is supreme is characterized by being 'consciousness' that is eternal and steady. It has been in its present form since time immemorial. There are no divisions in this Atma. Any divisions or sub-divisions or forms that may be imagined of it are part of the one single whole known as the Atma, and not separate or distinct from it (26).

27. Whatever thing that exists or does not exist are but a form of Brahm. [That thing which physically exists is visible, and it represents the visible form of Brahm. That thing which is invisible represents the invisible form of Brahm.]

In this situation, a man who is truly Brahm-realised is not expected to either accept or reject anything or situation. [That is, if he sees something, he knows that it is revelation of Brahm in that particular form. If he does not see anything but learns about its presence from other sources, he is convinced that it must be true because it represents the subtle and invisible form or aspect of Brahm.] (27).

28. [Verse nos. 28-30 outline the cosmic formless aspect of Brahm which defies definition¹.]

The supreme transcendental Brahm, the Supreme Being, is the one who is the foundation and basis of all that exists; he establishes everything and everyone in creation.

He has no qualifications and attributes. He is comprehensible by the mind and describable by the faculty of speech. He is invisible to the gross organ of sight known as the eye. He cannot be accepted or grasped or perceived or understood by any means. He has no family lineage or ancestor from whom he can be supposed to have descended. He has no form and shape (28).

[Note—¹The following Upanishads are some of the ones which expound upon the glories and magnificence of Brahm:--

The all-encompassing and all-pervading aspect of Brahm, known as the *Vaishwanar Brahm*, have been described in the following Upanishads: (i) Atharva Veda's = Mandukya Upanishad, verse no. 3; Nrisingh Purvatapini Upanishad, Canto 4, verse no. 4; Narad Parivrajak Upanishad, Canto 8, verse no. 11. (ii) Krishna Yajur Veda's Brahma Upanishad, verse no. 21; Pran Agnihotra Upanishad, verse no. 15.

Non-duality or oneness or uniformity between *Brahm and the Atma* has been elaborately explained in all the major Upanishads because this is the basic theme around which the philosophy of the Upanishads is built. Some of these Upanishads are the following—

(i) Krishna Yajur Veda—Brahm Vidya Upanishad, verse nos. 17, 81-110; Tejo Bindu Upanishad, Canto 2, verse nos. 1-43, Canto 3, verse nos. 1-51, 60-64, Canto 4, verse nos. 2-30, 69-79, Canto 5, verse nos. 1-75, 90-96, Canto 6, verse nos. 1-72; Yogtattva Upanishad, verse nos. 7-8; Skanda Upanishad, verse nos. 2-7; Dhyan Bindu Upanishad, verse no. 93/15; Kathrudra Upanishad, verse no. 41-42.

(ii) Shukla Yajur Veda's Adhyatma Upanishad; Subalo-panishad, Canto 3, 5, 7 (verse no. 1), and 9 (verse no. 16); Paingalo-panishad, Canto 4, verse no.18; Niralamba.

(c) Rig Veda's Atma-poojo-panishad; Brihad Aranyaka Upanishad, Canto 5, Brahman 1.

(iii) Atharva Veda's Atmo-panishad; Mundak Upanishad, Canto 3, section 2, verse nos. 3-4, 8; Mandukya Upanishad, verse no. 2; Atharvashir Upanishad (which describes Rudra as a manifestation of Brahm); Tripadvibhut Maha-Narayan Upanishad, Canto 1, paragraph 4-6; Canto 8, paragraph no. 2; Shandilya Upanishad, Canto 3, section 2, verse no. 2-3; Atma Upanishad; Narad Parivrajak Upanishad, Canto 8, verse no. 7; Canto 9, verse nos. 7-8.

(iv) Sam Veda—Maho-panishad, Canto 3, verse no. 7; Keno-panishad; Chandogy Upanishad.

The *eclectic divine virtues* of Brahm have been enumerated in countless Upanishads, for instance in the following—

(a) Krishna Yajur Veda's *Yogshikha Upanishad*, Canto 2, verse nos. 15-19, Canto 3, verse nos. 17-22; *Kathrudra Upanishad*, verse no. 12, 27-28, 30-31, 42; *Taittiriya Upanishad* Valli 3, Anuvak 10, verse no. 2-5; *Skanda Upanishad*, verse no. 13; *Dhyan Bindu Upanishad*, verse no. 4; *Varaaha Upanishad*, Canto 2, verse nos. 16,

20-21, 26, 29; Canto 3, verse no. 2; and Canto 4, verse nos. 31-32; *Yog Kundalini Upanishad*, Canto 3, verse no. 35; *Saraswati Upanishad*, verse no. 50-52; *Shwetashwatar Upanishad*.

(b) Atharva Veda's = *Mundak Upanishad*, Mundak 1, section 1, verse no. 6; Mundak 2, section 2, verse no. 7, 9-11; Mundak 3, section 1, verse no. 3-5, 7-9; *Atharvashir Upanishad*, Kandika 4 (full); *Naradparivrajak Upanishad*, Canto 8 which is fully dedicated to enumerating the grand virtues of Brahm; Canto 9, verse nos. 3, 19-22; *Tripadvibhut Maha-Narayan Upanishad*, Canto 1, paragraph 4, Canto 4, paragraph no. 1; *Shandilya Upanishad*, Canto 2, section 1, verse nos. 2-5, and Canto 3, section 1, verse nos. 1-8, 11-14; *Annapurna Upanishad*, Canto 4, verse no. 27-31, 33, 67; Canto 4, verse nos. 35-38, 67; Canto 5, verse nos. 10, 20-21, 66-67, 72, 113; *Atma Upanishad*, verse nos. 1-D and 1-E, verse nos. 2-4, 9, 30-31; *Pashupata Brahm Upanishad*, Canto 1, verse nos. 11, 13-16; Canto 2, verse nos. 13-16, 26, 28-30, 44; *Tripura Tapini Upanishad*, Canto 5, verse no. 6, 8-9, 16-17, 22; *Ram Purva Tapini Upanishad*, Canto 1, verse no. 7.

(c) Shukla Yajur Veda's following Upanishads—*Adhyatma Upanishad*, verse nos. 61-64; *Brihad Aranyaka Upanishad* Canto 2, Brahman 3 describes this Brahm's two forms in detail.

(d) Sam Veda's *Chandogya Upanishad*, *Keno Upanishad* and *Avyakta Upanishad*.

Reconciliation between the concept of duality and non-duality—Atharva Veda's Ram Purva Tapini Upanishad, Canto 1, verse nos. 8-10.

Atharva Veda's Pashupat Brahm Upanishad assigns *various names to Brahm*—viz. Maheshwar Brahm (Kanda/Canto 1, verse no. 11), Manas Brahm (Kanda/Canto 1, verse no. 11-12), Hans (Kanda/Canto 1, verse nos. 12-15, 20-21, 32), Param Hans (Kanda/Canto 1, verse no. 25), Pashupati Parmatma (Kanda/Canto 1, verse no. 29), Pashupati or Pashupati Rudra (Kanda/Canto 1, verse no. 32); Parmatma and Purush (Kanda/Canto 2, verse no. 1).

The entire *creation was produced* by Brahm as the Viraat Purush—refer (i) Rig Veda's Aiteriya Upanishad, Canto 1, Section 1-3. (ii) Atharva Veda's Mundak Upanishad, Mundak (Canto) 1, section 1, verse no. 1, 7, 9; Mundak 1, section 2, verse no. 1; Mundak 2, section 1, verse nos. 1-10; Tripadvibhut Maha Narayan Upanishad, Canto 2, paragraph nos. 9-10. (iii) Krishna Yajur Veda's Shewatshwatar Upanishad, Canto 3, verse no. 4.

Brahm *resides in the subtle space of the heart* of the creature—refer (i) Atharva Veda's Mundak Upanishad, Mundak 2, Section 1, verse nos. 9-10; Mundak 2, Section 2, verse no. 1, 6; 9; Mundak 3, Section 1, verse no. 7; Pashupat Brahm Upanishad, Kanda/Canto 1, verse no. 25. (ii) Krishna Yajur Veda's Shewtashwatar Upanishad, Canto 3, verse no. 11.

Brahm *resides in the gross body* of the creature (as its Atma and Pran)—refer (i) Atharva Veda's Mundak Upanishad, Mundak 3, Section 1, verse no. 4-5 (as the creature's Pran); Naradparivrajak Upanishad, Canto 9, verse no. 15; Pashupata Brahm Upanishad, Canto 1, verse nos. 17, 19-20; Canto 2, verse nos. 13-16, 21-25, 31-46. (ii) Krishna Yajur Veda's Shewatshwatar Upanishad, Canto 3, verse no. 7; Panch Brahm Upanishad, verse no. 40; Brahmo-panishad, verse no. 4. (iii) Rig Veda's Aiteriya Upanishad, Canto 1, Section 2, verse no. 3; Canto 1, Section 3, verse no. 12-14.

Brahm is the *controller of the entire creation*—refer (i) Atharva Veda's Mundak Upanishad, Mundak 2, Section 2, verse no. 7. (ii) Krishna Yajur Veda's Shewtashwatar Upanishad, Canto 3, verse no. 1, 7.

Brahm has *countless mouths, ears, eyes and necks (heads)*—refer (i) Krishna Yajur Veda's Shewtashwatar Upanishad, Canto 3, verse no. 3, 11, 14, 16. (ii) Atharva Veda's Tripadvibhut Maha Narayan Upanishad, Canto 2, paragraph no. 11, and Canto 6, paragraph no. 11. The phrase 'having countless ears' simply means that Brahm, in the form of the Viraat Purush, assumed as many forms as there were creatures who

could hear. It also means that Brahm, as the living being's consciousness, heard or became aware of everything that was happening in this creation.

Brahm is *beyond comprehension*—refer Atharva Veda's Pashupata Brahm Upanishad, Canto 2, verse nos.13-20, 26-30; Annapurna Upanishad, Canto 4, verse no. 29.

Brahm is *Sat-Chit-Anand*—refer Annapurna Upanishad, Canto 4, verse no. 29.

Brahm *encloses this entire creation from all sides*, and nothing exists outside the boundary of Brahm. This fact has been asserted in the *Shwetashwatar Upanishad* of Krishna Yajur Veda, Canto 3, verse no. 7, 9; Canto 6, verse nos. 2, 9; and in *Gayatri Upanishad* of Atharva Veda, Gopath Brahman, Kandika 38.

The relationship between *Brahm and the world* has been explained in Kathrudra Upanishad of Krishna Yajur Veda, verse no. 42.

The uniformity and non-duality between *Shiva and Brahm* has been expounded in— (i) Krishna Yajur Veda's Dakshin Murti or Dakshin Mukhi Upanishad, Pancha Brahm Upanishad, verse no. 30, Skanda Upanishad, verse nos. 9, 13, and Varaaha Upanishad, Canto 4, verse no. 32. (ii) Atharva Veda's Shandilya Upanishad, Canto 3, section 2, verse nos. 11-15; Pashupat Brahm Upanishad, Canto 1, verse nos. 11, 32.

The *Pran or life consciousness* of all the living beings is *Brahm personified* in that form—refer Mudak Upanishad of Atharva Veda, Canto 3, section 1, verse no. 4; Pashupata Brahm Upanishad, Canto 1, verse nos. 17, 19-20; Canto 2, verse nos. 13-16, 21-25, 31-46.

The *Pran has its origin in Brahm*—Mundak Upanishad of Atharva Veda, Mundak (Canto) 2, section 1, verse no. 3.

The Atharva Veda's Pashupat Brahm Upanishad, Kanda/Canto 1, verse nos. 21, 24, 27, and Kanda/Canto 2, verse nos. 6, 15-16 assert that the *Sun and the Pranav (cosmic sound) are metaphors for both the Atma as well as the Brahm*.

The *four Paads*, literally meaning legs or pedestals or aspects of Brahm, have been elaborately described in the following Upanishads—(i) Sam Veda's Chandogya Upanishad, Canto 3, section 18, verse nos. 2-6, Canto 4, Section 5, verse no. 2, Canto 4, Section 6, verse no. 3, Canto 4, Section 7, verse no. 3, and Canto 4, Section 8, verse no. 3. (ii) Krishna Yajur Veda's Brahm Upanishad, verse no. 1. (iii) Atharva Veda's Mandukya Upanishad, verse nos. 3-7; Nrisingh Purvatapini Upanishad, Canto 4, verse nos. 4-7; Ram Uttar Tapini Upanishad, Canto 3, verse no. 5-8; Par Brahm Upanishad, verse no. 5; Narad Parivrajak Upanishad, Canto 8, verse nos. 9-19; Tripadvibhut Maha Narayan Upanishad, Canto 1, paragraph no. 5; Canto 4, paragraph nos. 2-3, 6; and Canto 8, paragraph no. 4.

Why Brahm or Ishwar, the Supreme Being, the supreme Lord and Authority of creation, had to become a Jiva (creature) has been explained in (i) Shukla Yajur Veda's Paingal Upanishad, Canto 1, verse no. 12, and the whole of Canto 2. (ii) Atharva Veda's Pashupata Brahm Upanishad, Canto 1, verse no. 12; Tripadvibhut Maha Narayan Upanishad, Canto 4, paragraph nos. 9, 11-13.

Brahm is *revealed in the form of the Bhuts (elements; creatures) and pervades uniformly* in this creation so much so that nothing is there that is not Brahm—this eclectic fact is highlighted in the Tripura Tapini Upanishad of the Atharva Veda tradition, Canto 5, verse nos. 6, 8-9, 16-17, 22.

The *non-duality of Brahm* has been exemplarily explained in the Tripadvibhut Maha Narayan Upanishad of the Atharva Veda tradition, Canto 8, paragraph no. 2 by citing the example of gold and water.

The Shandilya Upanishad of the Atharva Veda tradition, Canto 3, section 1, verse nos. 2-5 narrate the two aspects of Brahm as being *Sakal* and *Nishkal* when sage Shandilya asked sage Atharva about it.

The *various terms used to describe Brahm*, such as Vyasthi Brahm, Samasthi Brahm, Sanhaar Brahm, Sristhi Brahm, Ubhayaatmak Brahm, Baahaya Brahm, Vyavahaarik Brahm, Aarsha Brahm—these have been explained in the Atharva Veda's *Narad Parivrajak Upanishad*, Canto 8, verse no. 1.

The *various forms* of Brahm—(a) The *five forms* of Brahm called the ‘Panch Brahm’ have been listed in verse no. 1 and described in detail in verse nos. 5-23 of the Panch Brahm Upanishad of Krishna Yajur Veda.

(b) The *two forms of Brahm*—There are two names given to the two forms of Brahm, viz. (i) ‘Murta’ and ‘Amurta’ which have been described in Shukla Yajur Veda’s Advai Tarak Upanishad, verse no. 10; Mandal Brahman Upanishad, Brahman 1, section 3, verse no. 1; and (ii) ‘Purva Tarak’ and ‘Uttar Tarak’ which have been described in Shukla Yajur Veda’s Mandal Brahman Upanishad, Brahman 1, section 3, verse nos. 1, 3-4.]

29. He (Brahm) has no gross organs such as the eye, ear, hand and leg. He is ‘Nitya’, i.e. eternal, constant and ever-present.

He is ‘Vibhu’, i.e. he is the Lord who is almighty, omnipresent, all-pervading, all-encompassing, magnanimous, eternal, infinite, all-powerful, immovable, constant and immutable.

He is ‘Sarwagat’, i.e. he can go anywhere he likes and lives everywhere at the same time in the sense that he is omnipresent and all-pervading. Besides this, being a Sarwagat he is also all-knowing by the virtue of his presence everywhere, as nothing remains hidden from him.

He is ‘Su-Sukshma’, i.e. he is smaller than the smallest, and subtler than the subtlest.

He is ‘Avyaya’, i.e. he is imperishable, infinite and in-diminishable; he cannot be fractioned or reduced in dimension, importance or in any other way whatsoever. Hence, he is free from death (29).

30. He (Brahm) is present in every instant and in every place at the same time, as he is omnipresent and all-pervading. Therefore, he is present in the front and the rear, as well as in the north and the south—i.e. at the top and the bottom, the front and the back.

He is revealed in the form of the Amrit (nectar; elixir) that drips from the eclectic philosophy of the Vedas. He is an embodiment of extreme bliss, beatitude and felicity that is obtained by imbibing the Amrit (nectar; eclectic spiritual knowledge) of the Vedas.

This eclectic supreme transcendental Brahm, who is an embodiment of ‘Brahma-nand’, i.e. who is a fount of, a treasury of extreme bliss, beatitude and felicity, is present in the ‘south’ (symbolizing not only the geographical south but also implying the rear, the bottom, the nadir, and the right) as well as in the ‘north’ (symbolizing not only the geographical north but also implying the front, the top, the zenith and the left) (30).

31. When a wise and enlightened spiritual aspirant develops this holistic and all-incorporating view of Brahm, he begins to see everything in the context of Brahm. Hence, since Brahm is also reflected in his inner-self as his own Atma, he begins to see the entire creation as it is reflected in his Atma. [A wise and self-realised man becomes enlightened enough to see the ‘truth’ lying hidden behind the veil of delusions in this world. He sees the world as it is; he has developed the high level of wisdom and erudition to sieve through all information so as to separate the grain from the chaff, the truth from the falsehood. Since his Atma has gained its pristine pure form, it is able to reflect the world in its entirety and true form—that is, in the way it actually is just like a clean mirror presents a correct and truthful image of the object viewed in it.]

This all-encompassing and holistic view of Brahm and creation provides equal opportunity to attain Mukti (liberation and deliverance; emancipation and salvation) to the 'Gyanis' (i.e. those persons who are wise, erudite, learned, enlightened etc.) as well as to the 'Agyanis' (i.e. those who are not Gyanis). [That is, if one becomes enlightened enough about the Atma then it does not matter whether or not he has studied the voluminous scriptures or done Yoga. Knowledge of the 'self' is spiritually liberating and emancipating for all, whether the man has formal knowledge of the scriptures or not, whether he has done strenuous meditation exercises or not. In fact, even if he reads the scriptures and does Yoga but does not understand what the Atma is then all his efforts have gone to vain as far as his spiritual liberation and salvation, or his emancipation and salvation are concerned.] (31).

32. This eclectic spiritual achievement that leads to the acquisition of the highest form of knowledge of the supreme Divinity (Brahm and Atma), acquaintance with the 'truth' that is beyond doubt and irreproachable, success in doing Tapa (austerity, penance, strict following of the tenets of the scriptures inspite of odds), implementing Brahmcharya (observance of strict self-control over the sense organs and the wayward inclinations of the mind and heart; following the tenets that lead to Brahm-realisation), and other such grand qualities are obtainable only by following the path shown by Vedanta (the Upanishads) (32).

[Note—The importance of the study of the Upanishads has also been stressed in Krishna Yajur Veda's Yogkundali Upanishad, Canto 2, verse no. 10-13.]

33. Only those whose inner-self has been thoroughly cleansed of all sorts of blemishes, deficiencies, faults and shortcomings (associated with life in this corrupt mundane world which is thickly embedded with delusions and ignorance), and is thereby rendered holy, untainted and pure, are eligible to realise or receive or accept or see or witness and experience the supreme transcendental Divinity (Brahm) which is self-illuminated.

Those who are covered in a veil of Maya (delusions) cannot ever expect to have a divine sight or view of the supreme Lord (33).

[Note—It is like the case of a man whose eyesight is weak, or who wears spectacles with dirty, tinted or cracked glasses, or whose spectacles do not have correct lenses fitted in them. In any of these situations it is obvious that his view of the world would be affected by these anomalies; the distortion in what he sees, or the defect in the view would be in direct proportion to the type and intensity of the anomaly.

On the other hand, if he has normal vision in his eyes, or if his weak vision has been corrected by the use of proper spectacles, then his view of the surrounding world would be natural, truthful and correct; it would be devoid of all artificial distortions, and would make him aware of the things as they actually exist.]

34. A wise ascetic who understands the truth of his real 'self' (i.e. of his Atma which is pure consciousness and a personification of Brahm) attains complete fulfillment. He becomes as complete and whole as the Brahm, the Supreme Being, personified in the form of his truthful 'self' known as the Atma. As a consequence, he does not have to fall in the trap symbolized by the endless cycle of birth and death. [That is, when an ascetic attains complete spiritual enlightenment, he obtains Mukti or Moksha, which means he obtains spiritual liberation, deliverance, emancipation and salvation. He does not have to take a physical birth in this world again.] (34).

35. Just like the sky that is omnipresent and all-pervading, that is always steady and constant, not moving even the slightest from its present position, neither going anywhere nor coming from anywhere, the wise and self-realised enlightened ascetic who has understood the truth of his own 'self' as a personification of the supreme transcendental cosmic Consciousness and Truth known as 'Brahm' too does not move from his present position, he too does not have to go anywhere (upon death) nor come here from somewhere else (upon a new birth).

[In short, he neither goes to the heaven or hell, nor does he have to come back in this world from either of these two places to take a birth in the higher echelon of existence or being condemned to a lowly existence as a reward or punishment respectively. He is deemed to be eternally freed from the fetters of ignorance and delusions, he is unshackled and freed from the bondage created by the gross view of creation which has a limited horizon.

Having overcome the delusory effects of ignorance, he is able to reach the citadel of spiritual enlightenment when he becomes one with and inseparable from Brahm, a state of existence which is tantamount to his attaining Mukti or Moksha (freedom and deliverance) from all worldly bondages and spiritual shackles that had acted as fetters for him since time immemorial. That translates into his being eternal and imperishable like Brahm. That implies also that he neither dies nor takes a birth. He does not go to heaven or hell, and neither does he come back to live in a gross body interacting with a gross world. He is beyond such limited conceptions of creation. Like his primary form known as the Atma, which in turn is Brahm personified, he too becomes eternal, imperishable and infinite.] (35).

36. [This verse highlights the importance of eating food obtained by correct or righteous means.]

This exemplary and high degree of equanimity of the mind and thought reflects in his eating preferences when he does not distinguish between what is to be eaten and what is not to be eaten. [That is, he has conquered his taste buds and the natural urges of the tongue; he has controlled his desire for self-gratification. He eats not because something is tasty, but because it is a sort of offering to the Brahm residing in his inner-self. He treats each morsel of food as an oblation made to the symbolic form of the sacred fire burning inside him.]

This helps him to completely clean the mind and the sub-conscious of all impurities because the holiness and purity of the inner-self is directly dependent upon the type of food ingested. Food obtained by unrighteous means corrupts the mind and the inner-self, while food procured by rightful means cleanses them. So, when the food ingested is made pure and uncorrupt, the Chitta is automatically cleansed and made holy (36).

37. When the Chitta (mind and sub-conscious) is thoroughly cleansed of all impurities, faults, blemishes and shortcomings, it is only then that, on the one hand, Gyan (wisdom, erudition, sagacity, enlightenment, truthful knowledge, ability to distinguish between the right and the wrong) is proportionately enhanced, and on the other hand the numerous difficult knots of Agyan (ignorance and delusions), which are spiritual stumbling blocks for the ascetic, are progressively reduced and ultimately eliminated.

[That is, if one is able to control his mind and sub-conscious he is not only able to increase his treasure of right thoughts and wisdom but also get rid of negativity in the same ratio. His spiritual elevation thereby becomes rapid and easy.]

Therefore, only those who are not yet Brahm-realised lay importance on what to eat and what not to in order to keep themselves holy and clean.

[This statement is an indirect indictment of those who are very fussy in matters of eating only 'religiously sanctified food' that is cleaned and made holy by meaningless formalities and purification rites. Such things may fool the world into believing that the concerned person is very holy, religious and pious as he eats only clean and sanctified food, but such pretensions of holiness and purity would not actually lead to the cleaning of the inner-self of the person who finds one food as 'defiled' and the other as 'sanctified' for artificial and whimsical reasons. This is because he still has not become wise enough to understand that no external situation or thing can ever defile the nourishing quality of food that is inherently present in it, nor would any food become worthy of eating simply because some elaborate ritual was performed by it if the food is not good for the body.

The importance of any food lies in what good it does to the body of the creature who eats the food, what basic ingredients it contains, rather than the food's outer look, its monetary value, or anything else. The body is benefited by the nutrients, such as carbohydrates, proteins, fats, vitamins, minerals, other nutritional elements etc. that are inherently present in the food eaten, and not by its external look, texture, colour or dressing.

For a wise and enlightened man the main objective of eating anything is to extract the vital life-sustaining nutrients contained in the food eaten so as to sustain the body in which the Atma representing the Parmatma lives. It is like taking proper care of the shrine in which the deity has been consecrated. It is through a well-nourished and healthy body that the Atma can do good and righteous deeds, study the scriptures so that truthful knowledge can be accessed, and so on and so forth. A weak and decrepit body would make the incumbent Atma suffer like hell instead of living peacefully and comfortably.

Besides this, a truly wise man understands that the sacred fire is burning inside his body in a symbolic manner, being supported by the vital winds called Pran that circulate inside the body. Hence, the food eaten is not to satisfy one's taste buds but for offering oblations to this sacred fire. When food is eaten with this grand notion, the entire exercise of procuring, preparing and eating food becomes tantamount to doing a fire sacrifice in which eatables are offered to the raging fire as offerings meant for the divine Gods. In this case, the God is the Atma itself.

Say, how can any food, no matter how impure or unclean it might be, ever make the raging fire impure and unholy? Everything that is put into the fire is reduced to ashes without any distinction and favour. This is also applicable in the case of the food that is eaten by the man. Whatever variety of food one eats—whether it is delicious or bland, whether it is costly food or a staple and cheap food—all of them are reduced to fecal matter of the same type which must be eliminated at the first opportunity lest it would poison the body.] (37).

38. The reason is that the thoughts and approach to life of a true Gyani (i.e. a Brahm-realised person) is vastly different from one who is Agyani (i.e. who is not self and Brahm realised). A Gyani does not have any kind of thoughts that one thing is better than the other, or that one thing is more useful than its counterpart.

[A Gyani has developed a high degree of equanimity and uniformity of vision and thought. Since he is convinced about the truthfulness and the sacrosanct nature of the great declaration made by the Upanishads and other scriptures regarding the Advaitya (non-dual) nature of the ultimate Absolute Truth that is the actual reality of

creation, he knows that whatever exists in creation are all fundamentally the same though their exteriors and characteristics may vary widely and extensively.

The notion of one thing being attractive and the other repulsive, one situation being favourable while the other being unfavourable, one creature being a foe while the other being most dear—all such thoughts and deductions or conclusions made by a living being vis-à-vis the gross world are based on the perception of the latter by the equally gross organs of the gross body. Since the thing perceived and the medium of perception are both gross, the perception would naturally be proportionately gross.

The real ‘self’ of the wise, enlightened and self-realised man is not the gross body, but it is the Atma which is most sublime and subtle. This Atma is pure consciousness that resides in the physical body.

So, when the focus of what constitutes the ‘self’ shifts from the gross body to the subtle and sublime Atma, the notion of one thing being good and the other bad becomes redundant. It is the body that abhors certain things or situations in the world because they give pain to its organs, while it longs for others that fulfill its desire for gratification. The Atma is really unconcerned by these dilemmas and perplexities related to the world and the body because it is aloof from both of them; the Atma has the grand virtue of equanimity towards everything as well as detachment from everything as its characteristic quality.]

A true Gyani is one who regards the ‘he’ (i.e. the eater) who eats the food as Brahm, and the ‘food that is eaten’ as also being Brahm in its form.

[Though this statement appears to be ridiculous and most absurd on the face of it but when understood its hidden meaning it becomes an obvious truth. The person who eats the food is not the gross body known to the world as a certain Mr. X. The actual eater is the Atma, the ‘true self’ that resides in this body, and not the body itself, for if the body was the eater then even a dead body would eat food. The dead body does not eat, but it is the consciousness residing inside it as the Atma that keeps the body alive and enables it to eat anything. The Atma is the cosmic Consciousness known as Brahm that lives in the body of the eater known as Mr. X in the form of his ‘true self’; if the Atma leaves the body the latter would be dead, and no dead body eats anything. Hence, the real ‘eater’ is not Mr. X who is conventionally recognized by his physical gross body, but the real ‘eater’ is the Atma that is Brahm (Consciousness) living inside the body of Mr. X.

The ‘food eaten’ also has two components—one that is its gross exterior features or aspects represented by its shape, texture, form, size and colour, and the other is the subtle aspect represented by the nutrients that the food contains. The gross part of the food is worthless as the body automatically eliminates it as stool and urine. It is the subtle part of food that is accepted by the body. This ‘subtle’ component of food is the basic quality and value of the food; it is what lends the food its energy, dynamism, importance and life-sustaining properties much like the Atma which lends the gross body of the creature its value and importance as well as its life, strength, dynamism, vitality and consciousness. A cow eats grass to produce milk which a woman does by eating everything else *but* grass!

Hence, the inherent basic life-sustaining virtues present in the food are symbolic forms of Brahm who is the ‘life and consciousness’ of the entire creation. Even as food is absolutely necessary for conception, sustenance and growth of all living beings in this creation, and no life is imaginable without the nutritional abilities of food, no life is tenable without Brahm (or ‘consciousness’) in this creation.

This visible creation has a gross form like the visible gross form of the food eaten. No one can actually see the nutritional components of the food—such as the

various forms of minerals, trace elements, carbohydrates, proteins, fats, vitamins etc.—that are present in it. Likewise, no one is able to see Brahm present uniformly everywhere in this creation.

Again, the scriptures have asserted that the entire creation is a revelation of Brahm, and this creation has a gross aspect that is visible, that has certain limitations and qualifications, that has a certain origin and an end. But the same scriptures have said in the same breath that Brahm is invisible, subtle, sublime, infinite, imperishable, boundless and limitless. So how do we reconcile these two apparent contradictions? Well, this is what makes Brahm so unique and one of its only kind. The truth is that Brahm is both the former as well as the latter—that is, Brahm is both the gross physical world that is visible and which has its own set of characteristics, as well as the invisible subtle world that is sublime and indefinable. It is so because ‘everything without exception’ is Brahm, and the phrase ‘everything without exception’ *includes* both the visible and grosser aspects of creation as well as the invisible and the subtle and sublime aspects! Nothing escapes Brahm; nothing in existence is Brahm-less.] (38).

39. An ascetic who has become Brahm-realised sees all the creatures as a form of Brahm. Therefore, the notion that distinguishes between two human beings, treating one as a Brahmin and the other as a Kshatriya, is meaningless for him. He accepts these artificial distinctions created in this world just like he eats even the grosser parts of the food (such as solid food in the form of various edible roots, stems, leaves, vegetables, whole grain cereals etc., or liquids such as milk, fruit juice etc.), and then eliminates them from his system.

[That is, in order to live in this world he has to accept its norms just like in order to derive benefits from the nourishment contained in any food he has to eat its gross parts as well, because the vital nutrients contained in the food are hidden behind the gross form of the food. For instance, one eats the apple whole to derive benefit from the numerous vital nutritional elements that it contains. But once the nutritional elements are extracted by the body from the apple, the residual part of the fruit consisting of its grosser aspects are eliminated from the body as faecal matter and urine.

Similarly, a man has to interact with all kinds of people in this world; he cannot do without it. But a wise man is one who endeavours to benefit or learn from the auspicious and noble virtues that are present in all the categories of people to a lesser or greater degree. Just like the body extracting things that are of nutritional value from the food eaten and eliminating the rest, a wise man should pick up good and positive qualities from all those with whom he interacts in this world while rejecting their bad and negative qualities.

Further, he recognizes all individuals as one or the other form of Brahm—because he knows that the same Atma resides in their physical bodies which appear to be different from one another. It is just like the case of water contained in different containers of different shapes and sizes—the water assumes the contours of the vessel in which it is held but all the sample of water are the same in every respect, even chemically.

So, once a wise man has accepted all categories of people as Brahm personified, he gets rid of the artificial classifications that separate them into classes known as Brahmins, Kshatriyas, Vaishyas etc. just like the case of the body ejecting the gross part of the food as stool and urine after the vital nutrients contained in the food have been extracted and absorbed in the system.] (39).

40. [Verse nos. 40-43 should be read together to understand their true import.]

A wise aspirant who knows Brahm as the Lord for whom 'death' is a sort of food (i.e. who brings about the end of everything in this creation; who has no fear from death; who outlives death as he is eternal and infinite; who vanquishes death which is so powerful and formidable that nothing escapes its jaws) also becomes one like Brahm (i.e. he too loses fear of death; he overcomes death).

[Everything in creation collapses into the primary source from where they had originated in the beginning much like waves in the ocean collapsing and merging into the water of the surface of the ocean from where they had emerged. 'Death' brings about the end of various units of creation at a given time, but 'death' itself is not free from the cycle of creation and destruction. A time would finally come when the Supreme Being would decide to wind up the creation, and then there would be no use of 'death' as nothing would be left to be ended, nothing would need to die. This means 'death' would become redundant, or that it would 'die' a natural death. This virtually translates into 'death' being devoured by Brahm, the paramount Authority of creation who now has no utility of 'death' when there is no creation that needs to be ended.

But this 'Authority' which empowers and authorizes 'death' to kill and end every unit of creation outlives the end of creation, because the said 'Authority' is eternal, imperishable and infinite. That is why this 'Authority' is honoured by the epithet 'supreme and transcendental'.

So, when the spiritual aspirant becomes Brahm-realised he is transformed from being an ordinary living being to a personality that is Brahm personified himself. Hence, he acquires all the characteristics that are unique and typical of Brahm, including his fearlessness from death, his eternity and infinity. Being Brahm personified, the Brahm-realised person lasts even when everything else is finished in this creation. That is, he becomes eternal, imperishable and infinite like Brahm.]

With this eclectic and holistic vision of creation, the entire world becomes his 'food'—i.e. he begins to treat the whole world as the gross form within which lies its true worth, the 'truth' and 'acceptable essence' known as Brahm. He therefore regards the world as acceptable because it is a manifestation of Brahm, because it is through this world that he can easily recognize and access Brahm just like a wise man who accepts all forms or kinds of food (i.e. who eats a wide variety of food) so that he can derive the maximum benefit from the nutrition contained in all kinds of foods. He pays attention to the nutritional value of the food rather than its exterior form.

[Even as eating a wide variety of food is beneficial for the body as it allows the latter to get wholesome nutrition from a broad spectrum of sources, the wise man is one who interacts with all sorts of people in this world in order to learn something good and auspicious from them. He accepts the positive and rejects the negative.] (40).

41. When the world is known and accepted in its essential and primary form as the Atma (i.e. when one is wise enough to understand that the element that is worth paying attention to in this gross world is the 'consciousness' permeating everywhere in it because it is the only element that has breathed 'life' into the otherwise lifeless entity), the whole gross world is transformed into an acceptable entity in spite of its grossness, its shortcomings, its faults and its corruptions.

[Behind the exterior grossness lies the subtle 'truth' just like the instance of the most ordinary food having its own unique nutritional value and importance.

When one knows that the exterior form of the visible world hides the truthful and uncorrupted Atma inside it, he would not treat the world as something to be abhorred and abandoned. This statement has great practical importance in the sense that a wise man may live like an ordinary man in this world, enjoy its privileges and charms, but at the same time have total disregard to its gross and exterior form. Other ordinary persons might not understand the grand way he thinks and the high level of his intellectual standing, but they rather prefer to treat him as one like them. But this man is widely different from them, and he is not bothered by what they think of him. This is indeed the high water-mark of spiritual evolvment that distinguishes a truly self and Brahm realised person, a person who can be rightly called wise and enlightened. Such a person has indeed understood the true meaning of the term non-duality, equanimity, dispassion, detachment, non-involvement and renunciation. What is the use of going to the forest as a reclusive hermit or an ascetic if one's mind remains hooked to the world left behind?]

Brahm, who is eternal and imperishable, constantly devours ('accepts') its own self (in the form of this visible world of which the Atma is the essence). In other words, 'Brahm continues to devour this world formed in his own image'.

[The text has the word 'Bhaksha' which literally means to eat or devour. But it does not mean to eat something in the conventional meaning of the term. It implies acceptance of something, taking out from it its essential element and then rejecting the gross and the worthless part just like one eats food, extracts its nutrients, and then ejects the gross and worthless part of the food eaten as stool and urine.

Brahm is an enlightened Being, so he would accept the 'truth' and not the falsehood. From the perspective of the enlightened man, this means that he accepts the world because it is an image of Brahm. Since a wise, enlightened and truly realised man is a personification or an image of Brahm, so when 'he' accepts the world in its true form as the Atma hidden in it, when he accepts the 'truth' that is sublime and absolute while rejecting or discarding the falsehood that is gross and meaningless, it is said that 'Brahm is accepting the world'.

Since such a man willingly grabs everything like a hungry man in order to learn something good and of positive virtue from whatever he can find, before judiciously rejecting the worthless and the gross, he is metaphorically said to be eating or devouring the world just like the case of a man eating all sorts of food items to extract their nutrition before rejecting the grosser part of the food as urine and stool.

From the perspective of the Atma, it means that it accepts the world as it is its own self. From the perspective of the Supreme Being, it means accepting its own creation which has no refuge except for him. And from the perspective of a wise man it means that he accepts all the good virtues present in all its various forms in this world of exceptional diversity, while rejecting the bad.

A wise and Brahm-realised man accepts things of value from this world and rejects what is worthless. But in order this to happen he would have to first accept the world before separating the grain from the chaff. He would have to 'eat' the food to gain nutrition from it. Merely looking at the food would not help him extract nutrition. So, a wise man needs to plunge into this ocean-like world to actually witness the magic of Brahm revealed in the form of the world and put on vivid display!

The assertion made in this verse that 'Brahm continues to devour this world formed in his own image' explains why the physical world continues to die in spite of the fact that it is said to be a visible revelation of the primarily invisible Brahm. 'Devouring' or 'eating' are symbolic terms and used in a metaphoric sense implying

accepting something in its gross form only to extract its essence before rejecting its grosser aspects.

The concept of 'Brahm eating his own self' is further explained in verse no. 43 below.] (41).

42. When one becomes enlightened in the aforesaid manner the whole world is acceptable to him just like a hungry man who gladly eats anything that is available to him without bothering about its external appearances, its freshness, its taste and aroma, or whether the food has been properly purified or sanctified by following elaborate purification rituals.

Such an enlightened man treats the world as personification of the Atma or Brahm, and hence acceptable by all means. Such a broad and holistic vision of the world makes it worthy to be accepted and enjoyed and benefited from just like one accepts and enjoys and benefits from the food eaten by him.

[A wise and enlightened man disregards the gross aspects of the world around him, but rather treats it as manifestation of Brahm, the divine, holy and the perfect One. He accepts the world with its extremes of goodness and badness as a manifestation of Brahm, because Brahm is a term that includes 'everything' in creation, and the word 'everything' means just that—nothing escapes the parameter of the definition of Brahm, nothing is beyond Brahm; Brahm is invisible as well as visible; Brahm is an ubiquitous entity that is all-inclusive, all-encompassing and all-pervading; Brahm is an entity that permeates uniformly and universally in the entire creation, from the miniscule to the most colossal.

Therefore, if Brahm is invisible, subtle and sublime, then it is also visible, gross and ordinary simultaneously.] (42).

43. 'Brahm devours his own self' in a symbolic way. The primary reason of this highly paradoxical situation that appears to be incongruous and ridiculous on the face is that nothing exists in this creation that does not have Brahm at its core, or that does not represent one or the other aspect or virtue of Brahm, or that does not reflect Brahm in some way. Everything in existence, including the 'eater' and the 'food eaten', is a manifestation of Brahm like the rest of the creation. There is, in fact, nothing in this creation that is not Brahm!

[That is, both the thing that is eaten as well as the person who eats it are manifestations of Brahm. This deduction is based on the tenet of non-duality or 'Advaitya' which says that there is only one truth in creation, and therefore there cannot be two types of truths. Falsehood can be many, but truth is always one. Since Brahm is the quintessential 'truth' of creation, it naturally follows that (i) what ever that exists, such as the food that is eaten and the eater, are the same Brahm existing in these two forms, and (ii) to understand this apparently ridiculous proposition one has to have a well developed intellectual stature and spiritual evolvment.

For instance, it is only when one sees the earth from high up in the sky that one can understand the truth of the statement that the earth is not flat, but is a round ball-like structure hanging without any support in the fathomless void of space. For otherwise, if viewed from the surface, the same earth appears to be flat, with extremely high mountains that rise up to almost touch the sky on the one hand, or with deep chasms or canyons or furrows that go down in its seemingly depth-less bowls on the other hand. In fact, all these three things are true depending upon the level from which one views the earth.

Likewise, only those who have had acquired the depth of spiritual vision, the broadness of spiritual wisdom and a high level of spiritual enlightenment that enables one to see or understand something that is beyond the gross, the ordinary and the mundane aspects of creation, something that is supernatural and transcendental, can understand the true meaning of the statements associated with Brahm and the Atma. For the rest of the creatures, all these observations seem to be absurd and imaginary.]

The very fact that something exists is a proof of the existence of Brahm. Hence, both the eater and the food eaten are not only proofs of the existence of Brahm but also establishes that Brahm is the ‘eater’ as well as the entity that is ‘eaten’ (43).

44. Any Authority is established by its inherent and intrinsic dynamic powers, strength and potentials. When things are subjected to certain laws and regulations it is a sign that there is some Authority to control and regulate them. In other words, since the creation has an in-built regulatory mechanism that controls each and every phase of existence, it is too obvious to doubt that there is an invisible Authority that gives effect to this control and regulation mechanism. This ‘Authority’ is Brahm. Brahm and Authority are not separable from one another; they are synonymous with each other (just like a king and his royal authority are inseparable from one another and synonymous with each other).

Brahm is the ‘Supreme Authority’ in creation inasmuch there is no Authority beyond Brahm. Brahm is the only Authoritative Being in creation. Brahm is the Authority that has the power and the authority which are inviolable and sacrosanct. The fact is that there is no ‘Authority’ other than Brahm in this creation—and that makes Brahm ‘supreme’.

It is also a fact that Maya (delusions) has no real existence. [Maya is an instrument in the hands of Brahm to exercise his authority over creation. It is Maya that helps Brahm to keep the wheel of creation rotating endlessly by keeping the creatures deluded and trapped. When the time comes for winding up the creation, Brahm exercises his ‘authority’ and removes the smokescreen of Maya. This smokescreen can also be voluntarily removed by Brahm-realised persons because they are themselves Brahm personified!] (44).

45. Wise ascetics realise that Maya is a voluntary creation of the Atma that resides in their inner-self.

[In other words, they realise that no one else is to blame for the web of delusions that they have created around themselves voluntarily. This is because their Atma is their truthful ‘self’, and it is this Atma that has created the Maya.]

However, this Maya and its negative and deluding effects are blocked by the knowledge of Brahm. It then appears only as a neutral entity that is as ineffective as an image or reflection seen in a mirror.

[In other words, those ascetics who are Brahm-realised are not affected by the negative influences of Maya. The latter seems to exist in this world because for the simple reason that the world exists, as without the Maya this world cannot exist. Maya and the artificial world go hand-in-hand; they co-exist. In other word, both the Maya and the world are imaginations of the mind; if the mind so decides, both would vanish. Maya has any relevance only till the time a man acknowledges the presence of the gross world—because the latter is a product of the former. But once he becomes enlightened enough to understand that the world is imaginary and therefore non-truth, it is a natural corollary that the relevance of the Maya is done away with. Instead of delusions, he begins to see the ‘truth’ everywhere. And this ‘truth’ is Brahm.

Therefore, for a Brahm-realised person Maya ceases to exist, and with its cessation the world also ceases to exist.

This is all there is to Maya's importance and influence; it does not go any further than this point. It does not affect the inner-self of the wise ascetic who is freed from its cunning tricks, who understands that if he so determines he can easily overcome both the delusions and artificiality created by his imaginative mind.

This is why Brahm-realised and self-realised ascetics become enlightened and empowered enough that they can see the secret 'truth' in the same world in which other ordinary men cannot!

The reflection of any object that is seen in a mirror appears to be as true and real as the object itself, leading to so perfect a delusion that a man who does not know the real situation would begin to believe, after sometime, that the reflection or the image seen in the mirror is the object itself. This man forgets that what he sees is simply a 'reflection or an image' for the simple reason that the medium of seeing the object under question is a 'mirror' that has the grand virtue of creating a perfect image of the real thing.

When a wise man sees an image of an object in a mirror he immediately knows that there surely must be the object somewhere in the vicinity. So he looks around to find it, and then he is able to have a sight of the real thing. Say, is it not foolish to run behind the water seen in a mirage during a hot summer afternoon in desert even if one comes across a real source of water close at hand?

Therefore, is it not foolish to run behind the mirage-like world seeking peace and happiness when one knows that it is imaginary and misleading, as well as transient and perishable, instead of attempting to realise the 'spiritual truth' that would bestow him with peace and happiness that are not only everlasting but have depth and profundity as well.

The 'image or the reflection' seen in a mirror is never the real thing though it appears to be so. Similarly, when the supreme Truth (the cosmic Consciousness revealed in the form of 'life' in this creation) is seen against the background of Maya, it appears in the form of the visible gross world. When the same Truth is seen with the eyes of wisdom and enlightenment, it appears in the form of Brahm. Again, while the term 'Brahm' refers to the Truth at the macro level of creation, the same Truth is referred to as the 'Atma' when considered at the micro level of existence.

Hence, to conclude, a Brahm realised man sees this world as a reflection or an image of Brahm. It is in the mirror of existence that he sees Brahm being reflected. Therefore, even if the world is removed Brahm would still be there—just like the case of an object remaining in place even if the mirror that reflects its image is removed from sight.] (45).

46. In this way, a wise, enlightened and Brahm-realised spiritual aspirant who has acquired a holistic and truthful knowledge of Brahm sees this world that physically appears to be separate and distinct from him. Internally, he never treats it as a separate entity. Rather, he treats this entire world as his own reflection.

[This is because the world is a visible manifestation of Brahm, and the viewer himself is Brahm personified. So in effect it means that the world is his personal image. Or, that there is no difference between his 'true self' and the 'truth of the world'. This implies that he is talking about the subtle aspects of the world rather than its gross aspects, for the subtle aspect is known as the Atma while the gross aspect is obviously caused by Maya, and therefore is not the reality. The subtle aspect of the viewer's own self and the rest of the creatures is the same divine entity known as the

Atma which is non-dual, and therefore they are the same, while the gross aspect is obviously different as each unit has its own gross features that are unique to it and different from the other unit.

For instance, if water is put into containers of different sizes, shapes and colours, none of them would ever change the basic nature, the basic qualities, the chemical formula etc. of water in the least. The water would always remain water irrespective of the vessel in which it is held.]

Verily, this is the great and the grand Truth that this great Upanishad proclaims. Amen! (46).

Chapter 20

Par-Brahm Upanishad/ Parbrahmo-panishad

This Upanishad is primarily classified as a Sanyas Upanishad as it emphasizes the role of Sanyas in Brahm-realisation, or spiritual enlightenment and awakening. It has twenty Mantras or verses.

It opens with sage Shaunak asking sage Pippalaad where the things of this creation were before the latter came into existence, and who is the Lord who created them. In his answer Pippalaad outlines the grand and magnificent virtues of the supreme transcendental Brahm. This Upanishad derives its name from this very fact.

The term 'Brahm' must be understood with a holistic perspective. It refers to the cosmic Consciousness that is responsible for this creation coming into being and acquiring life. From the cosmic perspective of creation, this Consciousness is called Brahm, and from the point of view of the individual unit of the same creation, i.e. at the microcosmic level, it is called the Atma. Consciousness is synonymous with life, and the term 'Pran' is also synonymous with life, though technically 'Pran' means the vital wind or air that is present inside the body of the individual creature. Hence, Brahm, Atma, Pran and Consciousness are synonymous with each other, and they all refer to the same divine entity that is at the core of creation and the quintessential truth of life in this creation.

Everything alive is therefore Brahm in that form. Indeed, all aspects of creation are representative of some aspect or facet of Brahm. The term 'Brahm' as envisioned in this Upanishad incorporates all the aspects of creation, and therefore Brahm is said to have various forms, known as the 'Paads' (limbs, aspects, facets, branches etc.) of Brahm much like we have branches of a tree or divisions and sections of a scripture. To understand the scripture fully we need to have a thorough knowledge of all its sections or divisions; to learn about the tree we must have a composite view of all its branches. Similarly, to learn about Brahm we must know all the Paads of Brahm.

In the first half, this Upanishad elucidates upon the various Paads (limbs, aspects, facets, views) of Brahm and their metaphysical significance. These Paads are

the following—the Tripaad Brahm, i.e. the three planes of existence in which Brahm exists, the Chatush Paad Brahm which corresponds to the four planes of existence, and the Panch Paad Brahm which pertains to the five divine aspects of Brahm. From the metaphysical angle they correspond to the various states of existence of consciousness, viz. the Jagrat state or the waking state, the Swapna state or the dreaming state, the Sushupta state or the deep sleep state, the Turiya state or the post-Sushupta state, and the Turiyateet state which is the super-conscious state of transcendental existence.

The ordinary living being known as the Jiva corresponds to the first three states of existence, and hence to the Tripaad Brahm. When the same Jiva becomes enlightened and self-realised he attains the Chatush Paad of Brahm, and finally when he becomes Brahm-realised he attains the Panch Paad of Brahm. To achieve these eclectic states of existence, the Jiva is advised to take recourse to the 8-fold path of Yoga (verse no. 2). In this context, one should refer to the Tripadvibhut Mahanarayan Upanishad of the Atharva Veda tradition, which is included in this volume as Chapter no. 11.

Next comes the discussion about the importance and significance of the sacred thread (called the Yagyopavit or the Brahm Sutra) as well as the tuft of hair worn on the top of the head (called the Shikha) as symbols of Brahm. These concepts have been extensively dealt with in this Upanishad. They are of no real consequence if their true meaning is not understood and practiced in one's thoughts and actions (verse nos. 3, 6-11, 15-20). True sacred thread and tuft of hair is internal awakening and enlightenment about Brahm, the cosmic Consciousness that resides in the inner-self as the pure Atma, and this Gyan (knowledge) itself is like the Agni (the sacred fire) as it burns all spiritual impurities of the aspirant, and renders him holy, divine and pure (verse nos. 12-14).

Finally, the Upanishad concludes that a wise spiritual aspirant should discard external paraphernalia of Sanyas (life of renunciation) such as the sacred thread and the tuft of hair on the head, and instead concentrate on meditating upon Brahm by employing the Mantra 'OM', which he should treat as a representative of his sacred thread as well as the tuft of hair, for attaining Mukti (liberation and deliverance)

-----*****-----

----Shanti Paath----

Please see appendix no. 1 for the English of this Shanti Paath.

1. Once, the learned sage Shaunak¹ approached the great sage Pippalaad² who was born in the line of sage Angiras, and sat down attentively before him. Then Shaunak asked—'Were all the things and objects that were created in this world present earlier in the subtle space of sky in the divine heaven known as Brahm-pur?'

[The term 'pur' means a place or dwelling. Hence, the 'Brahm-pur' refers to the subtle heart of the supreme creator known as Brahm, because it is from this heart of Brahm that the desire to create originated. Brahm, in the purest sense, has no form, and therefore no heart. Brahm is nothing but the formless cosmic Consciousness. But when the latter initiated the process of creation, it acquired a form, albeit a form that was extremely sublime and subtle as compared to the physical visible world that eventually came into existence. This most subtle form of Brahm is known as the 'Hiranyagarbha'—the self-illuminated and golden cosmic embryo that harboured the

entire creation in its 'garbh' or womb. It was the cosmic Consciousness that lent this egg its power to create something out of nothing. The Hiranyagarbha imagined the world and had a desire to give shape to this imagination. It had its heart focused on creation of this world. Hence it is said here that the things of creation had their origin in the Brahm-pur.]

How were they created by the supreme Creator? What are the renowned glories and divine virtues of the eternal Atma (the cosmic Consciousness known as the Parmatma, the Supreme Atma, the eternal cosmic Being known as Brahm) who created them? How did this Lord known as Vibhu (one who is almighty, eternal and all-pervading) create them, and then divided them or classified them into countless forms with myriad variations? In other words, who is this Great Lord who could do such stupendous things in a miraculous way?

Pippalaad replied—'The great knowledge of the supreme Brahm which I shall now narrate to you is indeed the truth. That 'truthful Being' empowers the different Gods and the vital winds known as Pran to perform their assigned functions (duties).

This Supreme Being lives in the 'Brahm-pur' (literally the city of Brahm), and he is honoured as being 'Viraj' (neutral or immune to the effects of Raja and other Gunas such as Sata and Tama; one who is immaculate and holy) and 'Nishkal' (one who has no taints, blemishes, blights, shortcomings and impurities; one who has no parts or divisions or fractions as he is immutable and an indivisible whole).

He is 'Shubhra' (one who is auspicious and holy) and 'Akshar' (imperishable and eternal). His glory, divinity and magnificence is supreme, unquestioned and beyond reproach.

He is called 'Nirmak' as he is the supreme controller and regulator of everything in creation; he is the one who had designed 'destiny' of all things in existence; he is the supreme cosmic astute architect of this creation.

He is like a Madhukar (the honey-bee) because he collects the best elements in creation, and gives the best to the world he creates and rears. [Like the honey-bee which collects nectar from an assortment of flowers, and then transforms it into honey for the benefit of the rest of the world, the supreme astute Creator known as Brahm collects numerous primary elements of creation which are useless in themselves, and then moulds them in accordance to his wishes to produce a lively and dynamic creation of an astounding variety that is so productive, magnificent and beautiful.]

He remains absolutely neutral and dispassionate in his divine abode, appearing to do nothing. [In other words, after he had finished completing the task of creation, he assumed the role of a neutral guardian and judge who would dispassionately control this creation from within. His neutrality and restraint were a necessity for impartial regulation of this creation, to reward those who were good and punish who were evil.]

[The following example—that only those who are fools get mentally and emotionally involved in doing deeds, then expecting results from them, and then either enjoying them or suffering from them—is cited to explain why the Supreme Being became neutral once he has finished the task of creation. In fact, even during the actual process of creation he was dispassionate. He created the world simply because the latter had to be created as it was the time for its coming into being. It was destined to be created because there were so many countless creatures who had not yet finished the cycle of birth and death depending upon the deeds that were done by them before the creation suddenly ended at the time of dooms-day. The various laws of Nature and metaphysics demanded that the creation be re-started because its sudden demise or end could not lead to a natural dissipation of energy and subsidence

of desires in a gradual manner. The abrupt end brought about a build-up of unspent energy and pent-up desires which would burst out nevertheless like the steam trapped inside the body of the pressure cooker would make the latter burst if it is not allowed to escape from the nozzle. Hence, the 'end' had to be reversed, and creation 'started afresh'. This translates into a new beginning, called the 'birth' of the creation.]

An ordinary Jiva (creature; living being) who is not wise and enlightened does so many deeds with the aim of attaining some goal in life in the world in which he currently lives, as well as in the world of after-life much like a farmer who toils in his field to get rewards that are commensurate with his efforts. [If he works hard and takes proper care of his field, he is rewarded with a good harvest; otherwise he is ruined.]

On the other hand, a wise man who is aware of the philosophy of 'Karma'³ (that the doing of deeds in the sense that one becomes mentally and emotionally involved in them, and expecting results from them, is the root cause for getting trapped in the cycle of birth and death, or for being re-born) does deeds, but he does them for his internal cleansing and as a means of his worship and service of the Lord.

[That is, a wise man does not hanker for material benefits from his efforts. He does everything like an ordinary man, but his approach to doing deeds is vastly different from the ordinary man who is ignorant of the philosophy of Karma. The theory of Karma and its consequences states that what a Jiva does is bound to have its effect on his destiny. The operating phrase is 'doing something', and if one does not get involved at the mental, intellectual, sentimental and emotional level in any deed done by the body, then this phrase does not apply to him. So no consequences accrue to a man who is not involved in doing deeds. But usually this is difficult to achieve. The general situation is that all the creatures are neck-deep involved in doing deeds and expecting some reward for their efforts. So, at the time of their death some residual deed is left to be done and some rewards are yet to be enjoyed. This in turn creates a situation when he wishes to take a new birth to fulfill his unaccomplished desires and enjoy the fruits of his efforts. In the new birth, the past cycle is repeated. In this way, the wheel of birth and death continues to rotate infinitely, and the Jiva remains trapped in it like the ox tied to the water-wheel. The only way to stop it is to stop doing deeds.]

But since the Jiva lives in a gross world that moves on the wheel of deeds and actions, it is not practically feasible for him not to do anything at all if he has to survive in this world. So the trick is not to get involved in the deeds done or actions taken by the body at the mental, intellectual, sentimental and emotional level. This absolves the creature from being accused of doing anything. So naturally he is freed from the cycle of deeds and their consequences. When the time comes for his shedding the gross body, his Atma, i.e. his true 'self' does not desire to come back again to do any left-over deeds or to enjoy any rewards; he does not even expect any rewards in the first place. This means that he is freed—i.e. he finds his Mukti.]

A wise man who understands the philosophy of Karma and wishes to get rid of all sorts of worldly delusions and temptations does deeds selflessly, and with a holistic approach towards doing them. Which wise and erudite man would be so foolish as to willingly allow himself to get entangled in the web of deeds and their ensnaring consequences if he is aware of the true way, the right and the auspicious of doing deeds (as outlined above)? In other words, no wise man would allow himself to be entangled in the snare of deeds and their consequences. He would choose to remain free from this grave spiritual fetter.

[This explains why the Supreme Being could remain dispassionate and maintain his neutrality inspite of not only creating this world himself but also actively participating in its upkeep.] (1).

[Note—¹Sage *Shaunak*—A detailed note on this sage is appended to Mundak Upanishad, Mundak 1, section 1, verse no. 3. This Upanishad is Chapter 2 of this volume.

²Sage *Pippalaad*—Similarly, a detailed note on this sage is appended to the Prashna Upanishad, Canto 1, verse no. 1. This Upanishad is Chapter 1 of this volume.

³The *philosophy of Karma*—References of Upanishads dealing with the concept of deeds and actions:—

(ii) Sam Veda's Chandogya Upanishad, Canto 5, Section 3-10; Canto 7, Section 21.

(iii) Shukla Yajur Veda = Adhyatma Upanishad, verse nos. 49-60, 66; Niralambo-panishad, verse no. 11-12; Brihad Aranyak Upanishad, 3/1/3, 3/2/11-12, 3/9/28, 4/3/12, 4/3/33, 4/3/36, 4/4/1, 5/10-5/11, 6/1/1-6, 6/2/2, 14-16, etc.; Trishikhi Brahmin Upanishad, Canto 2, verse nos. 23-26; Mandal Brahmin Upanishad, 2/4/2-3.

(iv) Krishna Yajur Veda = Kathrudra Upanishad, verse no. 13, 20-26; Varaaha Upanishad, Canto 1, verse no. 12, Canto 2, verse no. 12, 48, Canto 4, verse no. 35; Rudra Hridaya Upanishad, verse no. 35; Shwetashwatar Upanishad, Canto 4, verse no. 7, and Canto 6, verse no. 3; Sarwasaar Upanishad, verse no. 6; Taittiriya Upanishad, Valli 2, Anuvak 6; Katho-panishad, Canto 1, Valli 1, verse no. 20, and the whole of Canto 1, Valli 2 right up to Canto 2, Valli 3; Skanda Upanishad, verse no. 7; Saraswati Rahasya Upanishad, verse no. 67.

(v) Atharva Veda—Mundak Upanishad, Mundak (Canto) 1, section 2, verse no. 12; Mundak (Canto) 3, section 1, verse no. 6; Mundak (Canto) 3, section 2, verse no. 1; Tripadvibhut Maha Narayan Upanishad, Canto 8, paragraph no. 14; Par Brahm Upanishad, verse no. 1.

The Atharva Veda's Mundak Upanishad describes the great spiritual rewards obtainine by an aspirant by doing selfless Karma or deed/service in its Mundak (Canto) 1, section 2, verse no. 12; Mundak (Canto) 3, section 1, verse no. 6; Mundak (Canto) 3, section 2, verse no. 1.

The Saraswati Rahasya Upanishad, verse no. 67 describes succinctly how Karma or deeds and their consequences can be overcome.

The Varaaha Upanishad of the Krishna Yajur Veda tradition, in its Canto 2, verse no. 48, and Canto 4, verse no. 35 describe the relationship between the deed, the doer and the cause.

The Adhyatma Upanishad of Shukla Yajur Veda tradition describes the concept of doing deeds and its effect on the spiritual liberation or bondage of the creature in fine detail in its verse nos. 49-60.

The Kathrudra Upanishad of Krishna Yajur Veda, in its verse no. 13 asserts that the supreme transcendental Brahm or the quintessential spiritual Truth of creation as well as Mukti or liberation and deliverance is not possible by doing various deeds in this mortal world. This same idea is endorsed in Rudra Hridaya Upanishad of Krishna Yajur Veda tradition, in its verse no. 35 which asserts that deeds or Karma do not provide the Atma of the creature with liberation and deliverance from this world but it is Gyan (truthful knowledge of the spiritual truths) that do.

The 'Karma Chakra' or the giant wheel of deeds and their consequences has been described in the Shwetashwatar Upanishad of Krishna Yajur Veda, in its Canto 6, verse no. 3. The three Paths followed by a creature according to the deeds done by him are referred to in Shwetashwatar Upanishad, 4/7. The Varaaha Upanishad of Krishna Yajur Veda, in its Canto 2, verse no. 48 describes how one can become free from the fetters created by 'deeds'. The Niralambo-panishad of Shukla Yajur Veda, in its verse no. 11-12 describes the concept of Karma. The Sarwasaar Upanishad of

Krishna Yajur Veda, in its verse no. 6 describes the concept of how and why the creature becomes the doer of deeds

What happens to ignorant people after death is explained in Brihad Aranyak 4/4/1. The Trishikhi Brahmin Upanishad of Shukla Yajur Veda tradition, in its Canto 2, verse nos. 23-26 defines what constitutes of true 'Karma Yoga'. The Mandal Brahmin Upanishad of Shukla Yajur Veda, 2/4/2-3 describes the philosophy of Deeds.

The Tripadvibhut Maha Narayan Upanishad, Canto 8, paragraph no. 14, states that there cannot be any Kaarya without a Kaaran.]

2. [The sage now narrates how the Pran, literally meaning vital factor of life that is a synonym of the consciousness present inside the body of all living beings, and which represents the supreme cosmic Consciousness known as Brahm, moves inside the body of the creature to keep the latter alive and active. Intertwined in this discussion are the various states of existence of the consciousness. It is then outlined how the Jiva, the living being who personifies Brahm, is able to attain Brahm-hood by following the 8-fold path of Yoga.]

The Pran, the life-bearing vital wind or air that sustains life in the body of the living being known as the Jiva, is regarded as being synonymous with 'consciousness'. This 'consciousness' is a universal constant factor of the living creation, an entity or factor without which there would be no existence of life.

This Pran moves in the body of the creature through the four chief Naadis (literally tubular ducts in the body through which life or consciousness flows inside the body of the creature). These Naadis are four in number and have the following names—Rama, Arama, Ichha, and Purnarbhava.

When the Pran gets tired or weary of wandering between the Rama and Arama Naadis during the two states of existence of the creature, such as the Jagrat or the waking state and the Swpana or the dreaming state respectively, tired like a kite or an eagle flying high in the sky, it (the Pran, the consciousness) wants to take rest. For this, the Pran enters the Sushupta or deep sleep state (which comes after the dreaming state is crossed, and is the state of existence when the Pran need not bother about moving anywhere, but rest blissfully).

The Pran, which is a personified form of the divine Lord (because it infuses life and consciousness into the otherwise lifeless, inert and inane gross body) moves unhindered in the body of the living being through the medium (channel; route) of the three Naadis representing the three states of existence of consciousness. [These three states are Jagrat or waking, Swapna or dreaming, and Sushupta or deep sleep states respectively.]

The Pran or life consciousness moves (pervades; pulsates) throughout the brightly illuminated sky ('Hiranya-maye Para-kash') represented by the inner-self of the creature like the eagle or kite flying in the sky that is brightly lit during the daytime.

[The creature is compared to the kite that leaves its perch on the ground and flies high in the sky brightly lit during the daytime. By evening or sunset it gets tired and comes back to its nest to rest. The Pran or the consciousness remains active in the world during the waking state which is the gross level of existence and corresponds to the kite remaining close to the ground. Then the Pran begins to imagine things just like a man sees dreams. Even during dreams the Pran or the consciousness cannot find rest because it is as active as it was during the actual involvement in the world during the waking state. The only difference is that now, during the dreaming state, this involvement is at the subtle level of existence. This second state of dreams is

compared to the kite flying high in the sky, because now the kite has left the gross physical surface of the earth and reached the subtle world of the sky, the sky which is illuminated by the rays of the sun. Obviously, the vision the kite gets from a high level in the sky would be broader and vast as compared to the limited area it could see when nearer to the surface of the earth. So, when the consciousness begins to dream, it conjures up a vastly fascinating world which is widely different from the reality of existence.

But none of these two states give the Jiva, the living being represented by the Pran or the consciousness present inside his body, the rest and peace that he desires to have. Therefore he moves to the third state of existence called the deep sleep state or the Sushupta state.

[Previously only two Naadis, i.e. the Rama and the Arama, were mentioned through which the Pran moved in the body. Now, the third Naadi named 'Iccha' is cited. It is through this Naadi that the Pran moves to the third state of Sushupta which is the state of deep sleep. The word 'Iccha' literally means to have a wish or desire. Hence, when the Pran 'wishes or desires' to rest, it moves through this Iccha Naadi.]

When the Pran (consciousness; the subtle 'living' dimension of the creature) enters this third state of existence known as the Sushupta, it finds rest and peace, which incidentally is its natural state. Hence, it is deemed to have attained its primary form—of being at complete rest, peace, serenity and tranquility; of being fully blissful.

These three stages of the Pran (life and consciousness) are representative of the three aspects of Brahm, called the 'Tripaad Brahm'. [This is because of two reasons—(i) all living beings pass through these three stages in life, i.e. they wake up, they dream, and they sleep soundly, and (ii) the fact that all living beings are visible images of the invisible Brahm. So the three stages of the living world are three dimensions of existence of Brahm for all practical purposes.]

In spite of flying high in the illuminated sky, the creature continues to fall and get trapped in the valley represented by these three stages. [The word 'creature' here refers to the Atma because it represents the living being's true self, and the 'illuminated sky' refers to the inherent wisdom that the Atma possesses. The 'falling from the sky' is a figure of speech to indicate demotion of the Atma from its exalted stature to that of creature ensnared in the affairs of the world and tied in fetters to the shackles of the mundane world consisting of a cycle of birth and death. It refers to the instance of the high-flying bird who can easily avoid getting trapped by a bird-catcher's net if it is not tempted by greed and overcome by ignorance, for then it voluntarily gets ensnared. The bird is greedy to eat the bait, and it is unaware that this bait is laid out to catch it rather than to feed it. Say then, who is to blame for the bird's ill-fate and precarious condition except the bird itself? Similarly, who is to be blamed for the creature getting trapped in the world other than the creature himself?]

Just like a man named Devdutta who is beaten by a stick and wounded while he was asleep gets so terrified at the prospect of going back to sleep again after he wakes up, a wise man who is 'awakened' or enlightened about the truth of existence, about the truth of the world (that it is false and ensnaring for the soul), and the truth about his own self (that it is eternally free and the quintessential consciousness known as the Atma which trapped in the gross body and unnecessarily suffering due to its ignorance) by means of studying of the scriptures or when taught by the Guru (spiritual advisor), he too would shun falling in the trap of this gross world and its equally gross mundane life characterized by the three states of existence in which the Pran (consciousness) oscillates as narrated above.

[Devdutta is an imaginary man who is beaten while asleep. The pain is so great that when he wakes up he becomes paranoid of sleep, and would be terrified at the prospect of falling asleep lest he would be subjected to more beating by his enemies. Similarly, a wise man who comes to realise that all the sufferings he is being subjected to in this world are his own making, and the cause is that he has forgotten about the exalted nature of his 'self' known as the Atma which is nothing but pure consciousness and eternally free and blissful, and has instead treated the gross body as his identity. Once he has become enlightened about the reality of his Atma and the falsehood of the world, he would certainly not do anything that would result in the Atma getting trapped in the snare of delusions that are so characteristic of this world. He would be terrified by the thought of taking birth in this world again because he has closely experienced the horrors of this world during his current life. So he would endeavour to do anything he can to ensure that he would not have to come back again. In other words, he would strive to obtain his final Mukti or Moksha, meaning attaining spiritual liberation and deliverance or spiritual emancipation and salvation. Like the man called Devdutta, he would be paranoid of this world and terrified of the prospects of getting involved in its affairs.]

Therefore, such an awakened and enlightened man would not allow himself to get trapped in the cycle of deeds and their consequences. He would shun doing either auspicious deeds or inauspicious deeds; he would keep a safe distance from both doing good deeds or bad deeds in order to achieve any worldly objectives because he knows that each deed would produce its own effects, and once he allows himself to fall prey to the temptation of doing certain deed to obtain certain objective he would be sucked in the vortex of deeds and consequences from which it would be almost impossible to extricate later on.

He knows that doing deeds with emotional involvement in them and with expectation of results from these deeds would be a sufficient ground to automatically trap him in the world from where it would be difficult for him to retrieve himself later on. So he maintains his dispassionate and detached attitude even if he is bound to do anything in this world due to exigencies of life. In other words, he does not allow his Atma to get involved in the deeds done by his body. This is practically possible if he does not allow his mind and heart to be involved in the deeds done by the body—i.e. if he does deeds dispassionately, with total detachment, and without expecting any rewards or results from doing deeds. He does them as and when they come along.

[Earlier in this verse, the example of the bird flying high is cited. This bird either gets tired by continuous flying during the day in search of prey, swooping down on it when sighted, and running away from its enemies in hot pursuit, or it gets trapped by the bird-catcher's net in its greed for the bait laid by the cunning bird-catcher. On the other hand, had the bird not wished to catch a prey, or had it remained contented with whatever it had, it would have remained calmly gliding in the sky and returned to its nest at the end of the day instead of getting tired by endlessly pursuing its prey or dodging its enemies, or getting trapped by the bird-catcher's snare. Likewise, a wise man who remains contented and fulfilled is always at peace with himself. He accepts whatever comes his way; he does deeds according to the necessities and exigencies of circumstances without getting unduly perturbed or agitated about the deed and its result.]

Such a wise and enlightened man finds comfort, happiness, peace and contentedness in any situation he lives in just like an innocent child who feels comfortable and happy in any toy it finds to play with without having preference for any particular thing.

[He is not perturbed and affected at all by the troubles and tribulations of the physical world which he faces and interacts with during his waking state. He is not at all concerned with what he imagines in his dreams; he does not wish that what he sees in his dreams impact his waking life. And of course he remains peaceful like one sleeping soundly during the deep sleep state. In other words, his composure and poise is perpetual and steady.]

A wise, enlightened and self-realised spiritual aspirant realises the divine nature of his truthful 'self' known as the Atma—that it is a fount and an embodiment of spiritual illumination and bliss, that it is as radiant and splendid as the brilliant rays of the bright sun shining in the otherwise dark sky—when he is enlightened about it by the teaching of his moral preceptor and teacher (known as the Guru) as well as by the study of the scriptures. With this knowledge, he is able to attain the citadel of bliss, felicity and beatitude. In other words, he becomes aware of the exalted stature of his 'true self' known as the Atma; he realises that his Atma is a personification of the supreme Atma known as Brahm, the Atma that is as brilliant and splendid as the celestial sun; he realises that this Atma is free from the countless blights and blemishes that are hallmarks of everything else in this gross creation. He discovers to his extreme delight that the genes of divinity and holiness are running through his system, and that he is no ordinary mortal creature squirming in misery and filth, but is an exalted being who is eternal, graceful and divine. He therefore has nothing more to achieve or claim.

He thus exults at this grand discovery of his own 'self', and with it he begins to radiate a divine spiritual halo that resembles the shine of the sun in the sky. He is so exhilarated and ecstatic that he indeed becomes a personification of eternal bliss that characterizes the Atma. Such a person is deemed to have realised the Parmatma, the supreme Atma known as Brahm, and he feels ever contented in the supreme bliss that this realisation brings to him as he understands that his own Atma is the supreme transcendental Brahm present in his inner-being as his 'true self'.

Auspiciousness and divinity are the characteristic virtues of Ishwar, the Supreme Being, and when this Ishwar is revealed inside one's own being, his own inner-self, it is obvious and natural that corresponding virtues of greatness, grandness, divinity, holiness and sublimity sprout in the inner-self of the realised person. This makes his Chitta (mind and sub-conscious) extremely happy and ever contented. When this state of enlightenment is experienced by him, he relishes it, he enjoys it, he exults in it, and he remains steady in it. He literally wishes to remain cocooned in the shell of bliss and contentedness that comes with self-realisation (much like an oyster that lives peacefully within its shell).

It is like the case of a man tired of the toil and torments of this physical world of his waking state going to sleep and seeing a pleasant dream where he lives a life of happiness and bliss. He would prefer to remain dreaming rather than waking up to the harsh realities of a world ridden with uncountable miseries and grief. So, when a person realises the truth of his 'self' which is blissful and contented, and which is equivalent to the state in which Brahm exists, he experiences the bliss that comes with knowing the Atma. He then realises the futility of his engagement in the world, doing various deeds and pursuing their results which snatch him of his peace, serenity and tranquility.

Even as a caterpillar easily migrates from one twig to another, a wise man easily transmits his inner-self from the symbolic physical state of existence in this gross material world where he is surrounded and tormented by its inherent miseries and problems to the symbolic world of dreams which give him peace and rest. That is,

though outwardly he may be living in the world and going about his routine life in an ordinary way, internally he remains aloof and distanced from everything surrounding him in this physical world. Thus he gets internal peace and stability inspite of being surrounded by tribulations and upheaval of the world that are marked by miseries and instability.

He acquires the ability to live in any state he wishes, whether it is the Jagrat, the Swapana or the Sushupta state. In other words, he can live in this world, he can dream and still remain wise, enlightened and fully self-realised. He is deemed to have mastered the art of Samadhi in a holistic manner. During this state of Samadhi, a man may be physically wide awake but he is as good as sleeping soundly in as much as he registers nothing of the gross and physical world in which he lives.

[Samadhi is a spiritual state of transcendental bliss obtained when one has accessed the super-consciousness. It is a trance-like state when the person is unaware of the surrounding world. He might be wide awake in the physical world at the physical plane of existence, but internally he is lost in deep meditation and contemplation. He might go about his daily routine but remains lost in his thoughts. It is not a mental disorder but a state of transcendental existence of consciousness.]

In this way, his own 'self' becomes one with the supreme 'Self'; his Atma becomes one with the Parmatma or Brahm. Or it can be said that his Atma becomes a personification of Brahm. Such a wise and enlightened man does not have to abandon his body to realise Brahm—Brahm rather lives in him; he becomes an image of the blissful and peaceful transcendental Brahm.

Now, if one is not able to attain this eclectic state of existence that makes him self and Brahm realised, that makes him experience the Atma and Brahm and their attendant bliss and peace first hand by listening to and studying of the scriptures alone, and is unable to find his final Mukti (spiritual liberation and deliverance), then he should take the help of Yoga with its eight branches or limbs. This is known as 'Kapaal-ashtak' process because it involves practicing all the eight steps of Yoga (meditation) in order to make his Pran (vital wind or air) rise up to his skull where he experiences extreme thrill and ecstasy, and finally escaping of this Pran through the Brahm-Randhra, which is the hair-like slit in the cranium, into the outer atmosphere to provide the practitioner of Yoga his final Mukti from the bondage of the physical gross body.

[The eight-fold path of Yoga, or the eight steps of doing Yoga comprehensively are the following—Yam, Niyam, Aasan, Pranayam, Pratyahar, Dharna, Dhyan and Samadhi².]

They should be employed to wash off all the taints and impurities of the inner-self and attain the knowledge of Brahm. The Atma lives in a docile, humble, inactive, un-awakened and un-aroused form in the subtle heart of the creature like an undeveloped, flacid or withered breast, and it is rejuvenated and awakened during the practice of the Kapaal-ashtak Yoga like a fully developed, fleshy, rounded and robust breast. It then rises up and blooms like the flower of the plantain tree. It is the path that leads to the auspicious Ishwar or the Lord known as Brahm. That is, it is the path that leads to self-realisation and experiencing of the cosmic Consciousness with its magnificent glories and extreme bliss in the inner-self of the aspirant. It is also called Indra Yoni or Veda Yoni.

[The Atma is called 'Indra Yoni' because it is the Atma that inspires and motivates the organs of the body of the creature to act and do things in this world. It is the Atma that harbours the desire to do deeds and then get involved doing them and enjoying their results. This is why it is called the 'yoni' or the womb. Should the

Atma decide that it does not want to get involved in the world, it would not inspire the organs of the body, called the 'Indris', to get involved in the world and its activities.

It is also called the 'Veda Yoni' as it is the Atma that inspires one to follow the path laid down by the scriptures known as the Vedas.]

In the aforesaid manner, one who contemplates and meditates upon the Ishwar in his lotus-like heart rises above the mundane considerations of one thing being auspicious, righteous, noble and good, and the other not being so. He never gets entangled in any kind of deeds, whether they are auspicious, noble and holy, or are not so.

[A spiritually enlightened and wise person remains dispassionate towards all kinds of deeds and their results. He becomes an epitome of the virtues of equanimity, neutrality and detachment. Even while he appears to be doing some deed in the physical world, his internal 'self' known as the Atma is absolutely unconcerned by what the gross body of his does.]

Who is that Ishwar who lives in the lotus-like heart? Well, he is the one who bestows all the other Gods with their happiness and joys. He lives in the inner-self of all living beings, and therefore knows everything, including the hidden thoughts, emotions, ideas and intentions of all. He is all alone; he is serene; he does not have company; he does not take sides; he is unpartisan and aloof. He is a personified form of the cosmic Consciousness. He is the primal Purush, the Viraat Purush who is the all-pervading and invisible almighty macrocosmic Lord from whom the creation is revealed.

He is the supreme transcendental Brahm that is known as 'Pranav Hans'—i.e. he is represented by the cosmic ethereal Consciousness known as Pranav, as well as by the divine bird Swan which is regarded as an epitome of purity and wisdom. But he is not the 'Pran Hans'—i.e. he is not the divine Swan that is used as a metaphor for the Prans known as the vital winds or airs present in their physical dimension inside the body of the creature in the form of breath and other winds that flow inside the physical gross body and keep it alive. [In other words, Brahm is the pure cosmic Consciousness that is much higher in stature than the vital airs known as Pran which infuse and sustain life in this creation, though this Consciousness is also responsible for infusing and sustaining life in the creation. The vital winds would not be able to do anything if there is no consciousness in the body of the creature. This is proved when a man becomes paralyzed in a single organ—the Pran present in the body is unable to keep the concerned organ active when the 'consciousness' decides to leave it.]

The Pranav or Brahm is also known as the Jiva, the individual living being. That is, there is no difference between the supreme transcendental Brahm representing the cosmic Consciousness and the truthful identity of the living being which is his Atma, his soul and true 'self'.

[In other words, Brahm is the cosmic, subtle and sublime Divinity that is represented by the cosmic Consciousness known as Pranav. This Pranav produces the cosmic sound called Naad, which in turn is represented by the monosyllabic word OM. The same Brahm is revealed as the Jiva, the living being, in the form of his truthful identity known as the Atma. This Atma is also known as Hans, the pure and immaculate soul of the creature.

This Brahm is not the physical air which is broadly known as Pran, but is the 'consciousness' known as the Atma that is at the core of everything in this living world. Brahm is the enigmatic and esoteric divine entity that is synonymous with life and consciousness in this creation, and therefore all entities that have life are

synonyms of Brahm. But it must be remembered that Brahm is a term applied to that aspect of 'consciousness' that has a cosmic, subtle, sublime and ethereal dimension, rather than a gross and physical one that is confined to this physical gross world.]

Brahm is 'Pranav' because it is the cosmic Consciousness that uniformly permeates each corner of creation, and this Consciousness generates the cosmic sound known as Naad which is recognized and accessed by the means of the word 'OM', which is itself a sound. In other words, Brahm has its manifested sound form as OM. Therefore we deduce that OM, being a word, is a representative of Brahm or Pranav. It is a name assigned to the formless and invisible entity known as the cosmic Consciousness represented by the terms Brahm as well as Pranav. Just like the Jiva (living being) having a particular name assigned to him, OM is a specific term assigned to Pranav and Brahm.

Brahm, who is the eternal and primary Lord, is also manifested as the Jiva, the living being. How a person who knows this esoteric secret can ever agree to accept that there is difference or some degree of distinction or separation between Brahm and the Jiva because he is convinced that they are one and the same?

He never imagines that there is a difference between Brahm and the Jiva³; he is convinced that both the Jiva and Brahm are in reality the same Consciousness existing in two different planes—with the Jiva symbolizing the grosser aspect of creation and Brahm standing for the subtler aspect of creation (2).

[Note—¹The various states of existence of consciousness have been referred to in verse no. 5 of the present Upanishad, and they have been called the four and five Paads of Brahm.

These states have also been explained in the following two Upanishads of this volume—(i) Ram Uttar Tapini Upanishad, Canto 3, verse no. 1-2 which is Chapter no. 13, and (ii) Param Hans Parivrajak Upanishad, paragraph no. 6 which is Chapter no. 15.

The various aspects of Pran, the vital wind, have been elucidated upon in Chapter 16 which is the Annapurna Upanishad, in a note appended to its Canto 3, verse no. 10.

²The concept of Yoga : For the study of this Upanishad, the terms mentioned in the eight steps of Yoga are briefly describes as follows—

(i) Yam*—broadly meaning self restraint and it covers such virtues as non-violence (Ahinsa), honesty and truthfulness (Stya), abhorring theft (Asteya), abstinence, celibacy and detachment from passions (Brahmacharya), and non-accumulation and non-possession (Aparigraha).

(ii) Niyam*—or observance of principles or codes of conduct in a religious pursuit. Such as having good habits and contentment, observing austerities and penances, self-study of scriptures, following a righteous, virtuous and noble way of life etc.

According to Skanda Puran, the 'Yam and Niyam' mentioned above are ten, and they have been described in Skanda Puran in these words:-

सत्यं क्षमाऽऽर्जवं ध्यानमांशं स्वमहिंसनम् ॥ दमः प्रसादो माधुर्यं मृदुतेति यमा दश ।
शौचं स्नानं तपो दानं मौने ज्याध्ययनं व्रतम् ॥ उपोषणो पस्थदण्डौ दशौ ते नियमाः स्मृताः ॥
(स्कन्दपु०, ब्रा० ध० मा० ५/१९-२१)

The ten 'Yams' are—truthfulness, forgiveness, simplicity, Dhyan (meditation, concentration of the mind), lack of cruelty (or presence of compassion and mercy), forsaking violence, restraint of mind and sense organs, pleasant demeanors and sweet towards all).

The ten 'Niyams' are—cleanliness/ablution, bath (purification of body), Tapa (austerities, penances, sufferings), alms and charities, keeping silence, Yagya (sacrifices, religious rituals), self study, observance of vows, keeping fasts, celibacy. (Skanda Puran, Bra. Dha. Ma. 5/19-21).

*The 10 Yams and 10 Niyams—These have been described in (i) the Varaha Upanishad of Krishna Yajur Veda tradition, Canto 5, verse nos 11-14; and (ii) the Shandilya Upanishad of Atharva Veda, Canto 1, sections 1-2.

(iii) Aasan—the various postures of the body adopted while doing Yoga or meditation. This is the physical aspect of Yoga. The various postures are designed to free the body from toxins, and they calm down the body as well as the mind which is trained to focus on Brahm or Atma, which is pure and infinite consciousness and a fount of light and enlightenment, instead of wandering aimlessly and getting entangled in a web of miseries and confusions represented by this world. Some of the Upanishads that describe the various Aasans are the following—(i) Shukla Yajur Veda = Trishikhi Brahmin Upanishad, Canto 2, verse nos. 35-52 describes seventeen Aasans; Mandal Brahmin, Brahman 1, section 1, verse no. 5. (ii) Krishna Yajur Veda = Varaha Upanishad, Canto 5, verse no. 15-17; Yog Kundali, Canto 1, verse nos. 5-6; Yog Tattva, verse no. 29; Yog Shikha, Canto 1, verse no. 84. (iii) Sam Veda = Jabal Darshan Upanishad, Canto 3, verse nos. 1-13. (iv) Atharva Veda = Shandilya Upanishad, Canto 1, section 3; Annapurna Upanishad, Canto 4, verse no. 87.

(iv) Pranayam—the control of the life-giving fresh breath or the vital wind force of life called Pran. It helps remove distractions and agitations of the mind, removes the various toxins present in the blood, opens up clogged veins and arteries, relaxes the nerves, and ultimately helps to elevate both the body and the mind. It activates and re-energies the battery of the body. The importance of Pranayam in Yoga can never be fully emphasised because it is the main tool of Yoga. Some of the Upanishads describing the process of Pranayam are the following—(i) Shukla Yajur Veda = Trishikhi Brahmin Upanishad, 2/53, 2/92-120. (ii) Sam Veda = The entire Canto 5-6 of Jabal Darshan Upanishad; Yoga Chudamani. (iii) Krishna Yajur Veda = Brahm Vidya, verse nos. 21-22, 66-76, Dhyana Bindu, Yoga Kundali, Canto 1, verse nos. 19-62, Yoga Tattva, Yogshikha. (iv) Atharva Veda = Shandilya Upanishad, Canto 1, section 5, verse nos. 2-4; Canto 1, section 6, verse nos. 1-5; and Canto 1, section 7, verse nos. 1-13; Annapurna Upanishad, Canto 4, verse no. 87.

(v) Pratyahar—this is the state of withdrawal of the mind from agitations caused by the stimuli-inputs reaching it from the five sensory organs of perception of the body, which act like radars collecting various information from the outside world. With the lack of inputs, i.e. the radar going blank, the mind does not have to bother itself about the output, which is the control of the organs of action. Hence, it finds time and energy to relax and contemplate and ponder upon other more important matters of life such as the spiritual and ethereal rather than spending its energy in the humdrum, routine work of the world. The entire Canto 7 of Jabal Darshan Upanishad of Sam Veda is devoted to this theme. Refer also to Shandilya Upanishad of Atharva Veda tradition, Canto 1, section 8 which describes five types of Pratyahars.

(vi) Dharna—it means training of the mind to focus on one point; it is concentration of the mind as opposed to its constant state of being in a flux, always volatile and restless. It helps sharpen the intellect and empowers it with tremendous potentials like the rays of laser —precise, incisive, sharp, powerful, effective and surgical in nature. It also refers to firm conviction, belief and faith in the chosen path. The entire Canto 8 of Jabal Darshan Upanishad of Sam Veda is devoted to this theme. Refer also to Shandilya Upanishad of Atharva Veda tradition, Canto 1, section 9 which describes three types of Dharnas.

(vii) Dhyana—uninterrupted contemplation and meditation without an object used as a medium to concentrate the mind. The intention here is to heighten awareness of the pure-self and to establish oneness with the macro-soul of the cosmos. It results in the achievement of calmness, peace and tranquility. The practical benefit in life is the calmness and serenity achieved by a seeker/aspirant during the process of Dhyana, and this calmness and tranquility spills over into all other aspects of life, thereby strengthening the emotional, intellectual and spiritual fabric of the creature. The entire Canto 9 of Jabal Darshan Upanishad of Sam Veda is devoted to this theme.

Refer also to Shandilya Upanishad of Atharva Veda tradition, Canto 1, section 10 which describes two types of Dhyanas.

(viii) Samadhi—it is the final step and final stage of meditation, and it is a trance-like state of existence wherein the creature remains virtually awake in this world, but on a subtle plane he remains totally oblivious of the existence of the surrounding gross world. This Samadhi leads to bliss and happiness. In this state, the seeker/aspirant merges himself with the supreme Self, which is the real Truth and absolute Reality. Such people become truly enlightened souls who have developed union with their parent, the Brahm. The entire Canto 10 of Jabal Darshan Upanishad of Sam Veda is devoted to this theme. Refer also to Shandilya Upanishad of Atharva Veda tradition, Canto 1, section 11 which describes Samadhi in a succinct way.

All these limbs of Yoga work together in unison. The 1st five steps are mainly concerned with tuning the body and mind leading to its focus on the truth in the 6th and the 7th steps. The integration of the body, mind and soul into one spiritual whole, and removing of the barrier between the microcosmic Atma/soul of the individual and the macrocosmic Atma/soul of the cosmos is achieved, resulting in ultimate felicity and beatitude of the 8th step.

³The concept of non-duality between Brahm and Jiva has been established in a number of Upanishads, viz. Skanda Upanishad, verse no. 5; Varaaha Upanishad, Canto 2, verse nos. 70, 73; Saraswati Rahasya Upanishad, verse no. 56-58; Rudra Hridaya Upanishad; Annapurna Upanishad, Canto 5, verse nos. 76-80.]

3. For a truly Brahm and self realised person, the external symbols of Brahm such as the Yagyopavit (the sacred thread) and the Shikha (the tuft of hair on the head) are represented by and replaced by his internal awareness of the 'truth' as well as the purity and holiness of his inner-self.

A Brahmin (i.e. a learned person) who is desirous of Moksha (spiritual liberation, deliverance, salvation and emancipation) should wear the internal form of the sacred thread and the tuft of hair rather than their external variety.

The householder is expected to wear the external forms of the sacred thread and the tuft of hair.

[These two statements clearly imply that the internal form of sacred thread and tuft of hair is prescribed for Sanyasis or those who have entered the last stage of life and have renounced all attachments with the world (household). The wearing of the sacred thread is important only as long as a person is not enlightened enough to remain focused on the truth of Brahm and his pure self. It merely serves to remind him that the Lord resides in his own being as the Atma, and that by accepting to wear the thread he has consented to follow the path of righteousness and auspiciousness, and therefore he should not do anything to the contrary. But this thread become redundant and superficial once enlightenment dawns upon the wearer and he remains focused on the thoughts that are truthful and holy. It is just like the case of a student needing to revise a subject till the time he has not mastered it, and after that he no longer needs any revision. It is also like the case of person needing to use soap and water only till the time his hands are unclean, for he does not need them if the hands are absolutely clean.

A householder is constantly engaged in the daily grind of life and the wearing of the sacred thread reminds him to be careful in his deeds and actions. For a Sanyasi this is not applicable as he has matured enough to be careful in a natural way.]

The internal form of the sacred thread and tuft of hair are not visible like their external counterparts. They are the ones which can help the spiritual aspirant attain Brahm which is also invisible. [External symbols of Brahm are gross, while internal

symbols are subtle. The latter are the nearest analogue of Brahm, and therefore it is easier to access Brahm with their help.] (3).

[Note—Refer *Pahupata Brahm Upanishad*, Purva Kanda/Canto 1, verse no. 16-17.

Yagyopavit—References—(i) Krishna Yajur Veda = *Brahmo-panishad*, verse no. 4-15. (ii) Atharva Veda = *Pashupat Brahm Upanishad*, Canto 1, verse nos. 14-19, 27; *Par Brahm Upanishad*, verse nos. 3-20; *Narad Parivrajak Upanishad*, Canto 3, verse nos. 17, 79, 80-82, 84-85, 88-89. The Mantra dedicated to the Yagyopavit is narrated in *Narad Parivrajak Upanishad*, Canto 4, verse no. 37.

The *Yagyopavit* or the 'sacred thread' is given to a Hindu child as part of his baptism rituals. It is a constant reminder to him as he grows up into an adult that he has certain moral obligations to live up to and certain basic standards that he must observe at all costs. He must be constantly on the vigil not to do anything that would undermine the authority and sanctity of this thread which acts as virtual string binding him to the vows of righteousness, auspiciousness and nobility in thought and action. It is his 'sacred' duty to uphold this path as laid down in the scriptures to which he had promised to adhere to at the time of his initiation or baptism. If he does not obey these rules and violates them in his life then what is the use of his wearing the Yagyopavit in the first place? It would be deceitful and cheating one's self. This is precisely the point here. The sacred thread is only an external sign indicating that the wearer occupies a noble stature amongst men, but if he does not live up to the expectations from a man who wears this insignia of holiness and purity then he is only committing a grave sin as he is defiling the very principles upon which the institution of the sacred thread is based.

From the metaphysical and spiritual point of view, the Yagyopavit represents the supreme Brahm. When it is worn by a wise person it serves as a constant reminder to him that he is a personification of Brahm, and therefore he must never do anything that demeans this holy and divine institution. This philosophical interpretation of the sacred thread is the central theme in the present *Par Brahm Upanishad* which asserts unequivocally that the sacred thread is a symbol of Brahm, the cosmic Consciousness and the universal Truth of creation.

The Yagyopavit consists of three interwoven threads, and it is therefore known as the *Trisutra*. It is worn around the neck or slung diagonally across the chest, from the left shoulder to the right side of the hip bone. The word *Sutra* in this term has great metaphysical meaning which has been described in the Atharva Veda's *Narad Parivrajak Upanishad*, Canto 3, verse nos. 83-85.

The sacred thread is a symbol that stands at once for (i) Brahm represented by Pranav, the cosmic vibration or ethereal sound encapsulated in the word OM, (ii) for the Atma that is also known as Hans, the divine Swan, (iii) for the Fire, and (iv) for Gyan or truthful knowledge, wisdom, erudition and enlightenment about the Truth of the self and Brahm. Refer: Atharva Veda = *Pashupat Brahm Upanishad*, Canto 1, verse nos. 14-19, 27; *Par Brahm Upanishad*, verse nos. 3-14, 16-17.

The sacred thread symbolizes all the subtle aspects of creation, called the Tattwas. These Tattwas are variously said to number ninety-six, twenty-seven, nine etc., and the sacred thread encompasses all of them. It is, in fact, a representative of Brahm in entirety. These facts are explained in detail in the Atharva Veda's *Par Brahm Upanishad*, verse no. 5, and *Pashupat Brahm Upanishad*, Canto 1, verse no. 14-15.

Great stress is laid in the Upanishads in getting deep into the hidden meaning of all things visible and understanding their essence and truth rather than being deluded by their external features. This is very evident in the case of the sacred thread where the Upanishad emphasizes that merely wearing the physical kind of the thread to get respect and material benefits in this world by being called a Brahmin (as they are the ones who wear it and are respected in society for their wisdom and high birth) is equivalent to cheating one's own self, and it would only lead to hell and give no real benefits. All external signs or symbols of Brahm-hood can hoodwink the world, but

not the inner-self which does not benefit by external show of religiosity and holiness if its profound principles are not imbodyed by the spiritual aspirant. Thus, it is better to discard the external sacred thread and wear it symbolically in the inner-self by understanding who or what is Brahman and Atma. These facts are expressly asserted in *Par Brahman Upanishad*, verse nos. 3-4, 6-20; *Pashupat Brahman Upanishad*, Canto 1, verse nos. 14-21, 26-27.

The *Shikha* is a tuft of hair on the top of the head. The metaphysical and spiritual importance and significance of the *Shikha* has been explained along with that of the sacred thread called the *Yagyopavit* in the present *Par Brahman Upanishad*, in its verse nos. 3, 5-20.

Its verse no. 13 says that the *Shikha* is as powerful and potent as the fire element. Verse no. 12 says that it is a symbol of Gyan or truthful knowledge. Verse no. 5 asserts that the *Shikha* stands for Karma (rituals, because it was an integral part for the performance of various sacred rites) as well as the knowledge of Brahman, and it also represents *Hans* (Brahman). This is because the area of the body where the *Shikha* is sported, viz. the top of the head, is also the site of Brahman as the latter had entered the body of the newly formed living being through the *Brahman-Randhra*, the hair-like slit on the top of the cranium, at the time of creation. Refer *Aiteryio Upanishad* of *Rig Veda*.]

4. The real form of Brahman is not ascertainable. It neither can be defined with the term 'Satya' (truth) or with the term 'Asatya' (non-truth). It is neither different from either the Satya or the Asatya, nor is it a combination of both. [This idea is expressed by the Vedas when they proclaim that Brahman is 'Neti-Neti'—i.e. it is neither this nor that; it is not this, it is definitely not what it is being defined as. Therefore, Brahman is a term which incorporates all that exists in creation, the Satya as well as the Asatya, for the simple reason that nothing exists that is not Brahman.]

Brahman is such a unique entity that it cannot be said to have any parts or fractions or separable units, nor can it be said that it does not have units or parts because it is one indivisible whole. Similarly, it is neither something in between¹.

Hence, only till the time one does not become aware of the truthful meaning and nature of Brahman that it is indefinable and incomprehensible, and that it is revealed in the form of the sublime and subtle Atma (i.e. the pure consciousness that resides invisibly in every living being or all the living aspects of creation) does one remain mired in ignorance and delusions about the truth of Brahman.

When one becomes enlightened about the truth and essence of Brahman, he discards all attempts to ascertain and know Brahman by its external and visible forms. Everything except the 'Truth' is false and impersonation. [This is why the external sacred thread and tuft of hair is to be abandoned by a self-realised Brahmin as asserted in verse no. 3.]

Since the real Truth that is 'absolute' can only be one and not more than one, it follows that Brahman, being the 'Absolute Truth' is always one and not more than one—i.e. Brahman is non-dual. Conversely, since Brahman is non-dual and universal in this creation, it follows that Brahman is also the 'Absolute Truth'. Either way, Brahman is not falsehood! (4).

[Note—¹The great paradoxes of Brahman have been outlined in the following Upanishads of the Atharva Veda: *Pashupat Brahman Upanishad*, Uttar Kand/Canto 2, verse no. 43; *Atma Upanishad*, verse no. 31.]

5. Brahman having five Paads or aspects, known as the 'Panch Paad Brahman', is the one that is all-encompassing and all-including. Nothing escapes Brahman or falls outside its jurisdiction or purview. [The five aspects of Brahman are represented by the five states

of consciousness—viz. the Jagrat or waking state, the Swapna or dreaming state, the Sushupta or the deep sleep state, the Turiya state or the earlier state of transcendental existence that comes beyond the Sushupta, and the Turiya-teet or the higher echelons of transcendental existence which is the climax of one's spiritual achievement.]

Brahm is present both at the macrocosmic level of existence as well as the microcosmic level. It is therefore all-pervading, omnipresent, all-incorporating and all-encompassing. It is present uniformly in the entire creation, revealing itself in the body of the individual creature known as the Jiva as the latter's Atma, the 'pure conscious soul' (refer the last stanzas of verse no. 2).

In the form of the Jiva, Brahm lives at four symbolic places—viz. the navel, the heart, the throat and the head. These are called the 'four Paads of Brahm' or the four seats where Brahm has revealed its 'self'. This Brahm is known as the 'Chatush Paad Brahm'¹. [Refer verse no. 15.]

[In the navel region, Brahm reveals itself as the network of Naadis that have their origin here and are responsible for carrying sense perceptions throughout the body of the Jiva. In the heart, Brahm is revealed in the form of the Atma or pure consciousness that is said to reside in its subtle space called the Hridaya Akash. The heart is the only pumping station of the body which helps in circulation of the life-infusing blood throughout the body. The third spot, the throat, is where Brahm lives in the form of Pran or breath. It is the breath that keeps the body alive, and it is the throat by which a man speaks and eats. Speech is a sound manifestation of the Brahm, and of course without eating no Jiva can survive as this aspect of Brahm is sustainer of creation by ingesting food and imbibing liquids for life. Finally, the head is the location of Brahm as it is here that the brain is located; it is the site of wisdom, erudition, intelligence, knowledge and sub-conscious and all other aspects associated with the mind that is the deemed revelation of Brahm's great ability to think and analyse.]

Brahm is attained in any of the four states of existence. That is, during the Jagrat or waking state, the Swapna or dreaming state, the Sushupta or the deep sleep state, the Turiya state or the earlier state of transcendental existence that comes beyond the Sushupta. A spiritual aspirant who has understood and become enlightened about Brahm in a holistic manner becomes aware of the truth that every single phase of existence, whether it is gross or subtle, is a manifestation or a revelation of Brahm. If this is true then all the four states of existence of consciousness are also one or the other forms of Brahm, the cosmic Consciousness. It is true because in all these phases or aspects of creation, it is the same 'consciousness' that pervades and plays the pivotal role. If there is no consciousness, there is no life, and therefore the question of 'existence' of any sort of world, whether it is of the gross type or of the subtle type, does not arise. A dead entity is not affected by whether the world is real or it is imaginary in one's dream. Therefore, a truly self and Brahm realised man sees the same Brahm as prevailing in the Jagrat state, in the Swapna state, in the Sushupta state, and the Turiya state. For him, each and every phase or aspect of existence is Brahm in that form; it is Brahm that manifests in that form.

Brahm is also revealed in the form of the Fire having four aspects, viz. the Ahawaniya, Garhapatya, Dakshina, and Sabhya². Therefore, a wise man should develop the metaphysical wisdom whereby he sees these fires as manifestations of the Atma in the sense that just like the Atma, which is the pure consciousness which infuses life in this otherwise lifeless and gross world, these fires too inject life in this creation in the form of energy, heat, light and dynamism. Obviously, no life is

imaginable and tenable without the 'fire'. The fire, in its different forms, is a manifestation of the dynamism, energy, heat, light, vitality and other vital ingredients of the life-infusing and life-sustaining abilities of Brahm. The fire embodies the eclectic virtues of purity and the ability of Brahm to burn all impurities in this creation, to purify the world by purging all the impure, and to eliminate darkness by its self-effusing illumination. The fire, in effect, is a personified form of these grand virtues that mark the eclectic glory and characteristic divine qualities of Brahm.

The supreme transcendental cosmic Consciousness known as Brahm is represented by Brahma the creator during the Jagrat state, by Vishnu during the Swapna state, by Rudra during the Sushupta state, and by the primary form of eternal Consciousness during the Turiya state.

[During the waking state known as the Jagrat state, the creature is aware of the physical world and is engaged in its activities just like the creator Brahma who is perpetually engaged in the process of creation, evolution and growth of this physical world. In iconography, Brahma the creator is depicted as having four heads facing the four directions of the compass. It is a symbolic way of saying that Brahma is alert and receptive to all that is happening in all the four corners of this creation; he remains wide awake to learn about the developments in all spheres of life in this creation. This state of existence of Brahma corresponds well to the Jagrat state when the organs of the creature who is awake remain ever vigilant towards their respective objects in this world—e.g. the eye is ready to see things, the ear is ready to hear, the tongue is ready to taste and speak, the skin is ready to feel, and the nose is ready to smell.]

Vishnu, on the other hand, is depicted in the scriptures as lying in a reclining state of Yog-Nidra, which is a state of virtual sleep as is observed by ascetics during meditation, to indicate Vishnu's deep concentration and his remaining submerged in the thoughts of finding means and ways to keep the creation sustained and happy. He remains aloof from the physical activities of the gross world unless he is required to actually intervene in the form of various incarnations. But this visibly sleeping mode of Vishnu doesn't mean that he is not involved in the affairs of the world—for the Lord is engaged in the thoughts of the world at the subtle level of existence, and constantly devising methods to deal with the ever-changing requirements of the equally ever-changing world. Vishnu is said to represent the dreaming state of consciousness, called the Swapna state, when the consciousness remains very much active, but this activity is of a subtle nature rather than of the gross sort as represented by the Jagrat state that Brahma, the creator, stands for. While Brahma is depicted with eyes fully open symbolizing the waking state of consciousness, Vishnu is depicted with eyes shut close like when a man sleeps to symbolize the dreaming state of consciousness.

[Vishnu is not actually sleeping, but he is 'dreaming' of the imaginary world that he himself has created in his more sublime and subtle form as the Viraat Purush. The Viraat Purush is the all-encompassing and all-pervading cosmic gross body of Brahm, and it is from this Viraat that the rest of the creation, including Brahma, has come into being.]

Dream is a state of the mind when it can achieve stupendous and most astounding things that are not possible for it to achieve in the waking state of reality. Dream lends wings to the imaginative mind to create things out of nothing, something that is not feasible in the background of the harsh realities of the waking state. Since this creation is imagined by the Viraat Purush, since this world is a 'creation' of the Viraat Purush, it is said that the latter's other form known as Vishnu rests in the

dreaming state of consciousness because it is in one's dreams that one can imagine of things that do not actually exist.]

Rudra refers to Lord Shiva who remains perpetually blissful and in a state of deep meditation. He is the patron God of ascetics. This is why he is represented by the deep sleep state known as Sushupta. [Like the ascetics, Rudra too remains in a perpetual state of meditation which results in his remaining in a state of blissfulness.]

Finally, there is the Turiya state which goes beyond the Sushupta state when the sleeping creature experiences utmost bliss which is perpetual and not interrupted by coming back to the waking state once again. It is sort of permanent Sushupta. During this state, the truthful character of the Atma is revealed, i.e. one feels bliss and ecstasy. It is a transcendental state of existence that is equivalent to the state of Samadhi, a spiritual state when the person is not aware of the surrounding world inspite of his being awake in it and going about his duties in a normal way externally, but remaining aloof from everything internally.]

Now, the symbolism of the sacred thread is being discussed because a true Sanyasi (a renunciate ascetic) is expected to wear this thread as a symbol of his attaining Brahm-hood.

The four states of existence as well as the four Paads of Brahm are represented by the four fingers that are used to weave the sacred thread as well as to sling the physical thread across the shoulder of the wearer.

All the ninety-six elements of creation³ are equally divided into three divisions and metaphorically incorporated in the three strands that are intertwined to constitute the sacred thread. Therefore, each strand symbolically stands for thirty-two elements. [96 / 3 = 32.]

Similarly, these three strands symbolize the three basic Gunas that determine the fundamental character of all units of creation (i.e. Sata Guna, Raja Guna and Tama Guna), the three invisible forms of Brahm known as the Trinity Gods at the macrocosmic level (i.e. Brahma, Vishnu and Shiva which have these three Gunas as their dominant characteristics—refer Pashupata Brahm Upanishad, Canto 1, verse no. 10), and the three visible forms of Brahm at the celestial level such as the sun, the moon and the fire. These three aspects of Brahm are intertwined with one another; they cannot be separated one from the other in order to maintain the texture of the fabric of creation intact. Hence, these represent the twenty-seven elements or Tattwas of creation that the sacred thread represents. [3 x 3 x 3 = 27.]

So, though the sacred thread actually consists of three individual strands, but they are so much an indivisible and inseparable part of it that when one talks of the sacred thread, all the strands and the entities that they represent are deemed to be included in the meaning.

Therefore, when the sacred thread is worn on the body with the aforesaid wisdom, slung across the chest from the left shoulder to the right side of the hip joint, the wearer is able to cleanse his mind of all delusions and ignorance regarding the metaphysical importance and spiritual benefits of wearing it. He begins to assign deep meaning to the sacred thread instead of it being just worn as matter of routine or because it is traditionally regarded as the proper thing to wear it. Wearing it without understanding the hidden metaphysical significance and spiritual importance of the sacred thread would be an exercise in futility as far as Brahm realisation is concerned. [Refer also to Pashupat Brahm Upanishad, Canto 1, verse no. 25.]

It must be clearly understood that inspite of the sacred thread representing so many various aspects of Tattwas (elements of creation), the basic Tattwa (essence; element) is only 'one', and this Tattwa is nothing but 'Brahm' for the simple reason

that all the Tattwas are one or the other aspect of the cosmic divine entity that is unquestionably single, immutable and non-dual—though of course it has taken so many varied forms and shapes that they defy comprehension. This can be explained with the instance of the pots and pans made of clay. Just like the case of these pots and pans made of clay having ‘clay’ as their fundamental element inspite of the diversity of their shapes, colours and sizes, whatever that exists in this creation is Brahm, and nothing but Brahm. [Here, the ‘clay’ is the fundamental element known as the Tattwa, while the various forms that it takes is equivalent to the various forms that the elements have taken, numbering ninety-six, thirty-two, twenty-seven etc., or as the various Gunas, Gods and celestial bodies that exist in this vast and colourful creation of astounding diversity and variety, whether in a visible form or in the invisible form.]

Hence, the true wearing of the sacred thread is when the spiritual aspirant is enlightened about the fact that he is a personification of the supreme Brahm represented by the Hans (the divine Swan) present in his inner-self as the Atma, the pure consciousness. This enlightenment is the symbolic wearing of the sacred thread internally. This eclectic thought helps one to attain the exalted stature of Brahm-realisation. The real sacred thread and the tuft of hair on the head of such enlightened and realised spiritual aspirants are not physically visible on their bodies (because they discard external signs of Brahm, and convert them into symbols of internal wisdom and enlightenment). These two signs of Brahm (i.e. the sacred thread and the tuft of hair) become an integral part of their inner-self, their personality.

The outer sign of the Shikha (tuft of hair) which represents Karma (rituals, because it was an integral part for the performance of various sacred rites) and the Yagyopavit (sacred thread) which represents Gyan (knowledge, as it was worn at the time of the initiation ceremony of a disciple who resided with his teacher to learn the scriptures) are to be worn by householders only. The tuft of hairs and the sacred thread made of yarn are only signs that a particular person is eligible to perform religious duties and sacred rites (such as the fire sacrifices). That is all. Actually, the sacred thread symbolizes Brahm in its entirety, including the ninety-six Tattwas or fundamental elements in which this Brahm has revealed itself³.

Some sacred threads constitute of nine strands. [Refer Pashupata Brahm Upanishad, Canto 1, verse no. 27.] They also stand for the nine Tattwas or revelations of Brahm⁴.

[The sacred thread has three main strands, and each of these further has other finer sub-strands. All of them are intricately intertwined with each other so much so that it is impossible to separate one from the other. This means that the elements created by Brahm do not have any independent value or existence in the context of creation; once they are integrated in the fabric of creation they all lose their individuality and become an integral part of creation. So, when a wise and erudite person attempts to understand the secrets of Brahm and this creation, he cannot compartmentalize them or segregate them into different sections. If he is to be truly Brahm-realised then he must have a holistic view of creation to understand the concept of Brahm.]

Brahm is only one, but many people devise many paths for attaining this Brahm. For all wise ones, whether they are learned Brahmins, great Brahm-rishis (sages and seers who have become Brahm-realised) or other men of wisdom and enlightenment known as Gyanis, the concepts of Mukti (spiritual liberation and deliverance; emancipation and salvation), Brahm (the cosmic Consciousness, the existential Truth, the Supreme Being) and Brahmin-hood or Brahm-realisation are one

and the same. They are like the three intertwined strands making up the sacred thread. That is, these three things mean the same thing.

[In other words, when one becomes Brahm-realised he is deemed to have obtained Mukti and known the Truth. If one knows the Truth, it is deemed that he is Brahm-realised and has attained Mukti. Similarly, when one attains Mukti, it is deemed that he is Brahm-realised and known the Truth. When applied to the sacred thread which is regarded as a symbol of Brahm, the analogy means that the three strands which constitute this thread correspond to Mukti, Truth and Brahm-realisation.

In other words, when one has achieved success in attaining these three aspects of spiritualism, he is deemed to be a personified form of Brahm, the Supreme Being himself. Again, it means that these three aspects of metaphysics go hand-in-hand and cannot be divorced from one another if one is to attain the exalted stature that is as divine and holy as Brahm.]

The various Varnas and Ashrams are independent of each other. Their laws and doctrines are separate from one another. But the philosophy of the tuft of hair and the sacred thread applies uniformly to them as it is a universal truth applicable across the spectrum of creation.

[The Varnas are the four segments of society, such as the Brahmins or the learned class, the Kshatriyas or the warrior class, the Vaishyas or the trading class, and the Shudras or the serving class, each having its own codes of conduct that regulate life in each of these classes in society. Similarly, there are four Ashrams in the society in which the life of a man is divided, each having its own laws and codes of conduct—viz. the Brahmcharya Ashram when a person studies, the Grihastha Ashram which is the householder phase when he marries, raises a family and attends to his worldly duties, the Vaanprastha Ashram when he hands over the responsibilities of his worldly affairs to his heirs and retires from active participation in the affairs of the mundane world, and the Sanyas Ashram when he totally renounces the world and spends the rest of life and time as a hermit or recluse, striving to attain final liberation and deliverance for his soul.]

For an ascetic who seeks Mukti, the tuft of hair and the sacred thread are represented by the ‘Pranav’ and the Mantra ‘OM’ respectively. For them, the true knowledge of the Hans (Brahm) is the symbolic way of sporting the physical tuft of hair on the top of the head, and the Mantra OM representing the Pranav (Brahm) is the symbolic way of wearing the sacred thread.

[Refer also to Pashupata Brahm Upanishad, Canto 1, verse nos. 12-22; Canto 2, verse nos. 1-3, 5-7 in this context.

The Pranav is the cosmic Consciousness that generates vibrations in ether, which in turn creates the cosmic sound known as Naad. Hence, Pranav and Brahm are synonymous with one another. OM is the word equivalent of Pranav; it is the name given to the Supreme Being known as Brahm like any name consisting of letters that is given to any particular person in order to distinguish him from all others.

Hans is a personified form of Brahm or Pranav. Brahm is the Supreme Being, so he occupies the highest seat in creation. In the context of the body of a creature, the highest point is the head; it is here that Brahm has his seat and abode. The term ‘Hans’ when used for Brahm implies that the latter is most holy, pure and wise because this bird is employed universally in the scriptures to denote these grand and eclectic virtues in any creature. Further, wisdom, discrimination, erudition, sagacity and intelligence are virtues of the brain (mind), and the brain is located in the head.

So, in brief, the tuft of hair that is also located on the top of the head is deemed to be a symbol of Pranav or Brahm.

Now we come to OM as a representative of the sacred thread. The word OM has three letters—‘A’, ‘U’ and ‘M’. These three letters stand for the three strands of the sacred thread. Even as none of these individual letters have any relevance if taken independently but assume a divine connotation when taken together as OM, the three strands of the sacred thread have no significance if taken individually but assume a holy meaning when taken together.

From the view-point of the teaching of this great Upanishad it means that in order to have a comprehensive knowledge of Brahm one should not attempt to understand something as esoteric and enigmatic as Brahm by adopting a biased or lop-sided view of creation. One should not attempt to understand Brahm by limiting one’s study to any one facet or angle of creation vis-à-vis Brahm, but one must realise that Brahm can only be attained, accessed, understood, witnessed or realised if a comprehensive, a holistic and an all-inclusive approach is adopted. Otherwise, it would be like observing an object by the medium of a viewing mirror that is either unclean or splintery and fractured.

The gross body of the ascetic who wears the sacred thread becomes as holy and pure as the gross body of the bird Swan (Hans). But his ‘true self’ is not this gross body but the divine Atma, the pure consciousness that is equivalent to Brahm, the cosmic Consciousness. Brahm is also said to be a Hans because of its purity, wisdom, immaculacy and holiness.]

The Naad (which is the cosmic sound that is generated in ether by the vibrations caused by the cosmic Consciousness known as Pranav) helps to establish a union between the ascetic and the supreme Brahm during Yoga.

[This is because the cosmic sound that is heard by the ascetic in the higher stages of meditation when his repetition of OM reaches a crescendo and culminates in his nerves and veins resonating with this sound, he experiences extreme thrill and ecstasy. All impulses originating from the external world cease to be registered by his brain (mind and sub-conscious) so much so that he would remain in a state of suspended animation vis-à-vis this material world of sense objects. This translates into his being in a transcendental state of existence that is obtained during the Turiya state. Hence, OM leads one to the Turiya state of transcendental existence when there is no difference between the Hans represented by the Atma or the individual ‘self’ of the ascetic, and the Hans represented by the supreme Brahm. They become one and the same.

When the ascetic meditates using the OM Mantra, the vibrations generated inside his body by constant repetition of OM coincide with the vibration generated in the ether by the cosmic Consciousness outside his body. When the two vibrations overlap with each other or coalesce with each other, the ascetic is able to experience oneness between the two types of vibrations—which means he begins to experience oneness between his own Atma and Brahm known as the supreme transcendental cosmic Atma.]

Now, the concept of the OM and Hans is applied to the sacred thread. The wearer of the sacred thread is the Hans or the truthful ‘self’ of the creature known as the Atma. The three letters of OM (i.e. A, U and M) represent the three strands of the sacred thread. Since OM represents Pranav or Brahm, it follows that the true wearer of this symbolic sacred thread lives in the heart because the Atma, represented by the metaphoric Hans, lives in the subtle heart of the creature. This Atma is pure consciousness.

Hence, Brahm has two manifestations—viz. one is the all-pervading cosmic form known as Pranav, and the other is the one that lives inside the individual as his Atma.

When one has become wise and enlightened enough to see nothing but the all-pervading ‘consciousness’ known as the Atma everywhere, he should discard the external forms of the sacred thread and the tuft of hair (5).

[Note—¹These four points in the body are also mentioned in the Brahm Upanishad of Krishna Yajur Veda tradition, in its verse no. 1.

These are the four sites are also where the four important *Chakras*, or the whirling circles of cosmic energy inside the body of the creature, are located. It is believed that these Chakras have trapped divine mystical energy which can be unleashed by means of Yoga, and once released they enable the aspirant acquire mystical powers that are rare and very potential. These four Chakras are called respectively the Nabhi Chakra, the Hridaya Chakra, the Kanth Chakra and the Brahm Randhra Chakra.

The *four Paads of Brahm* are narrated in the following Upanishads also—(i) Sam Veda’s Chandogya Upanishad, Canto 3, section 18, verse nos. 2-6, Canto 4, Section 5, verse no. 2, Canto 4, Section 6, verse no. 3, Canto 4, Section 7, verse no. 3, and Canto 4, Section 8, verse no. 3. (ii) Krishna Yajur Veda’s Brahm Upanishad, verse no. 1. (iii) Atharva Veda’s Mandukya Upanishad, verse nos. 3-7; Nrisingh Purvatapini Upanishad, Canto 4, verse nos. 4-7; Tripadvibhut Maha-Narayan Upanishad, Canto 1, paragraph 5; Canto 4, paragraph nos. 1-3, 6; Canto 8, paragraph no. 8; Ram Uttar Tapini Upanishad, Canto 3, verse no. 5-8.

The *difference* between the three Paads of Brahm (known as the Tripadvibhut Brahm) and its fourth Paad is explained in form of an inverted pyramid in the *Tripadvibhut Maha Narayan Upanishad* of the Atharva Veda tradition, Canto 4, paragraph no. 4.

²The four holy fires are ‘Garhyapatya’ which is the fire of the household hearth; the main fire of the formal fire sacrifice; the fire that every householder is supposed to keep alive and worship regularly and from which the first spark is taken for the rituals associated with religious ceremonies), (b) ‘Dakshinagni’ which is the fire used as a witness to making charities or any other religious festivity; the fire lit at the site of a sacrificial fire ritual, near its south end), (c) ‘Ahawaniya’ is the fire lit to invoke the Gods, to invite them to participate and accept the offerings made to them during a ritualistic fire sacrifice), and (d) ‘Sabhya’ refers to the fire of the Vedic period which was continuously lit).

The Nrisingh Purvatapini Upanishad of the Atharva Veda, in its Canto 2, verse no. 2 says that there are the following four sacred fires and they have their origin from the four aspects or syllables or letters of the divine Mantra OM as follows—the Garhyapatya fire has its origin in the first letter ‘A’, Dakshinagni has its origin in the second letter ‘U’, Ahawaniya fire has its origin in the third letter ‘M’, and Samvartak fire has its origing in the last part of OM which is a half-syllable called the Ardhha Matra.

³The ninety six elements have been narrated in great detail in the Krishna Yajur Veda’s Varaaha Upanishad, Canto 1, verse nos. 2-14. Refer also to the Atharva Veda’s Pashupata Brahm Upanishad, Canto 1, verse no. 14.

⁴The Pashupata Brahm Upanishad of the Atharva Veda tradition, Canto 1, verse no. 14 says that there are nine Tattvas which are actually subtle revelations of the supreme Brahm. They are the following—The three fundamental Gunas, i.e. the Sata, the Raja and the Tama, the three basic characters of the Atma known as Sat-Chit-Anand, i.e. Sat (truth), Chitta (consciousness) and Anand (bliss), and the three forms of divinity represented by the Trinity Gods, i.e. Brahma the creator, Vishnu the sustainer, and Rudra the concluder of creation, represent the nine Tattwas of creation.]

6. Those who are wise and enlightened should cut off their Shikha (tuft of hair on the top of the head) and discard the external form of the Sutra (the sacred thread). Instead, they should accept the imperishable and eternal Brahm in place of the Sutra (6).

7. In order to find freedom from the thread (fetter) of bondage that forces a creature to take birth again, a wise man should take the aid of the thread represented by Brahm. In other words, he should take the recourse of truthful knowledge and spiritual enlightenment in order to break free from the cycle of re-birth and death.

Since the thread is an indication of both the worldly fetters as well as Brahm, it is wise for a man to interpret its meaning correctly and use it correctly in order to achieve success in Brahm-realisation and attaining Mukti or spiritual freedom and deliverance (7).

8. A person who has understood the real and true import of the term 'Sutra' (literally the sacred thread as well as the formula that unfolds the path of Brahm-realisation) is the one who is eligible to attain Moksha (spiritual liberation, deliverance, emancipation and salvation), is a true Bhikshuk (a monk, a mendicant or a friar), is truly a Vedagya (one who is an expert in the Vedas and their tenets), is Sadachari (one who follows the path of truth and auspiciousness), and is a Vipra (a Brahmin; a learned and elderly man).

Such a man is not only holy himself but also makes those with whom he comes in contact holy and pure (8).

9. The supreme transcendental Brahm who is the thread that has knitted together all the units of creation and holds them in place like beads in a rosary or a garland, the ascetic who wears this sacred thread (i.e. who accepts Brahm as the basic essence of creation and honours Brahm exclusively) is indeed said to be an expert ascetic who is well-versed in the philosophy of Yoga (9).

10. A Brahmin (a learned man), an expert ascetic who is well-versed in Yoga, and a person who is a Gyani (a person who is wise, learned and enlightened) should abandon the external sacred thread, because the real thread that bestows spiritual liberation and deliverance is not the external thread made of a gross material (e.g. cotton thread or silk thread) but the symbolic sacred thread representing Brahm that is worn (accepted) internally.

When the sacred thread representing Brahm is symbolically worn internally, there is no fear of it ever getting defiled or polluted; it would be permanently holy and pure (10).

11. Those who wear the sacred thread after fully understanding its metaphysical importance and spiritual significance, those who have realised that this sacred thread represents Brahm in its entirety are the ones who wear it in the true sense, and therefore are eligible for the benefits that accrue by wearing it. [For the rest, it is merely a formality that can fool the world into believing that the wearer is a holy man, and nothing more. It would not serve them any real purpose, except worldly praise.] (11).

12. Those who wear the Shikha and the Sutra as symbols of Gyan (truthful knowledge, wisdom and enlightenment which kindles spiritual awakening and truth-

realisation) regard Gyan as the best thing in this world to acquire and aim for. This is because Gyan is the holiest and the purest thing in this world. [It shows the correct path to the aspirant, and never misleads him for some vested self-interest.] (12).

13. Those who are wise and enlightened assert that those persons who understand that the Shikha (tuft of hair on the head) is as powerful and potent as the fire element itself are the ones who are true wearers of it. For the rest, they are merely sporting a crop of hair on the head, and nothing more (13).

14. Those Brahmins who are engrossed merely in performing rituals and observing sacraments, or who are engaged in the mundane affairs of the world are Brahmins only for name's sake (and not true Brahmins), because they live only to fill their stomachs and enjoy the fame, comforts and pleasures that come with worldly respect. Such people go to hell at the end of their lives.

[That is, they continue to take birth and die again, and during each life they undergo sufferings and miseries that are part and parcel of gross mundane existence. They do not find Mukti or spiritual liberation and deliverance, nor do they find peace and bliss that comes with self and Brahm realisation. They do not have true Gyan, and are only pretending to have it by studying the scriptures in order to fulfill their worldly desires and gain fame and pecuniary benefits. In short, they are not true Brahmins, they are imposters, and they do not do justice to the institution of Brahmhood. They give the holy stature of being a Brahmin a bad name.

The question arises, who then is a true Brahmin?¹ The answer is self-evident in the foregoing as well as the following verses. That is, only those who have true knowledge of Brahm, and the depth of wisdom and enlightenment to understand what the term 'Brahm' is all about, who do not hanker after external purity and formalities but lay stress on inner cleansing and sincerity of purpose are true Brahmins. Such people would not be much bothered about sporting a tuft on the head or wearing the sacred thread to prove that they are Brahmins, but would instead strive to inculcate the glorious virtues that are so typical of those who have become self and Brahm realised, who have really understood the truth and reality of things.] (14).

[Note—¹The salient features of Brahmins are the following—they should possess these noble qualities—(1) 'Riju'-be expert in the Rig and the Yajur Vedas, (2) 'Tapa'-should be involved in doing penances, observing austerities and enduring sufferings for the welfare of the soul and the society, (3) 'Santosh'-be contented and satisfied, (4) 'Kshamaa'-to be forgiving and tolerant, (5) 'Sheel'-to have such virtues as good character, dignity, decorum and virtuousness, (6) 'Jitendriya'-to have self control over the sense organs, (7) 'Data'-to be a giver, one who sacrifices his own interests for the benefit of others, (8) 'Gyani'-one who is well learned, wise, enlightened and erudite, (9) 'Dayaalu'-to be merciful and compassionate. [Shatpath Brahman.]

An entire Upanishad called Vajra-shuchiko-panishad, belonging to the Sam Veda tradition is devoted to the subject. The eclectic virtues of Brahmins have been expounded in Brihad Aranyaka Upanishad, Canto 3, Brahman 5 as well as in Canto 3, Brahman 8, verse no. 10.

The Pashupata Brahm Upanishad of the Atharva Veda tradition, Canto 1, verse no. 19 describes who a true Brahmin.]

15. It is advisable for a learned person to wear the Brahm Sutra (the sacred thread symbolizing Brahm) slung across the chest from the left shoulder to the right side of the hip joint. This is how it should be worn physically on the gross body.

Internally, a wise man must realise that the Sutra (the basic essence; the elementary truth) of the sacred thread is 'Brahm' which is the supreme transcendental Consciousness and the only Truth of creation. He should accept this Brahm and symbolically wear the Brahm Sutra internally from the region of the navel to the top of the head where the Brahm-Randhra is situated.

[Refer verse no. 5. The reason for selecting this region of the body is that Brahm, in the form of the life-infusing consciousness, is present at four locations in the body—viz. the navel, the heart, the throat and the head.

Besides this, the central part of the body is where all the major functional organs are located—viz. the liver, the kidney, the heart, the intestines, the pancreas, the gall bladder, the reproductive organs etc. Each has its specific function and represents one or the other aspect of Brahm who has literally assumed the form of these organs to carry out the designated duty or function in creation. In the cosmic scale Brahm carries out his duties and functions in the form of the different Gods and elements of Nature, and in the microcosmic plane of creation when the same Brahm took up residence in the creature's body as his Atma, his pure conscious soul, Brahm created these organs to help the Atma carry on with its desired objectives in this world.

If Brahm can create the sun and the earth, if Brahm can create the sky, the air, the fire and the water, then there is no surprise in Brahm creating the various organs of the body in which he (Brahm) can live as the Atma. It is the same Consciousness that empowers the elements to carry on their functions at the cosmic level of creation that also empowers these organs to carry on with their functions in the body of the individual creature who is, in effect, the creation in a miniature form.] (15).

16. In this way, a wise man should wear the Brahm Sutra composed of the supreme essence of creation as well as of all spiritual endeavours known as Brahm.

A person for whom the Shikha (the tuft of hair on the head) and the Upvit (the sacred thread) are symbols of Gyan (true knowledge, high wisdom, enlightenment and self-realisation), everything is a personification or an embodiment of Brahm, and nothing else (16).

17. A person who knows the esoteric secrets, spiritual importance and metaphysical significance of the Yagyopavit (sacred thread) is the one who can be said to truly wearing it, and therefore is entitled to the benefits that accrue by wearing it. For instance, he is entitled to Mukti or spiritual liberation and deliverance (17).

18. A Vipra (Brahmin) who wears both the external as well as the internal forms of the sacred thread is actually eligible to take the vows of Sanyas (a life of total renunciation).

[By wearing the external thread he would be spending his routine life in an auspicious and righteous manner because he would be obliged to follow the dignified way of life expected of him by the virtue of his wearing the thread. He cannot do anything unrighteous because that would immediately invite scorn and ridicule from the society and make him outcaste. He would fulfill all his worldly obligations and responsibilities in a proper manner. All this while, he would be internally detached and dispassionate from what his external gross body is doing because he has become fully wise and enlightened about the true meaning of the sacred thread and its spiritual import. So, as a consequence, he would be internally self and Brahm realised at the same time of his doing external duties ordained by his destiny.]

Only a person in whom sincere renunciation and detachment has been kindled as a result of becoming enlightened and self-realised is entitled to take the vows and enter the life of Sanyas. By merely wearing the sacred thread one does not automatically become eligible for Sanyas (18).

19. Therefore, it is expected of an ascetic desirous of attaining liberation and deliverance, emancipation and salvation, to abandon the external form of the sacred thread, and instead wear it internally. [That is, instead of merely observing the formality of wearing it, he should understand its profound symbolism, and inculcate spiritual wisdom and enlightenment.] (19).

20. At the end of this discourse, sage Shaunak realised that it is imperative for him to discard the gross symbols of Brahm, i.e. the Shikha (the tuft of hair on the head) and the Yagyopavit (the sacred thread) worn externally on the body, and instead accept the true sublime form of Brahm represented by the 'Pranav Hans' (OM and the Atma respectively) as being true representative forms of the Shikha and the Yagyopavit in his efforts to attain Moksha (emancipation and salvation; spiritual liberation and deliverance).

[That is, instead of wasting time and energy on being obsessed about the physical Shikha and Yagyopavit, he should rather focus his energy and attention on their spiritually important subtle aspect that would actually be of any benefit for him. So he decided to discard both the Shikha and the Yagyopavit, and instead remain immersed in the thoughts of Brahm and his true self, the Atma. This way, he became a true ascetic and a Brahm-realised soul.]

This is the esoteric knowledge of immense spiritual import that is imparted by this Upanishad. Amen! (20).

Chapter 21

Tripura Tapini Upanishad

This Upanishad belongs to the Tapini category of Upanishads which narrate the dynamic Shakti (the all-powerful dynamism representing the cosmic energy) aspect of the Supreme Being. This Shakti is visualized in a female form as a divine Goddess. It employs numerous symbols and esoteric formulas to invoke this Shakti. In the present case, this Shakti is represented by Goddess 'Tripura'.

The word 'Tripura' has many connotations—viz. it refers to the Goddess who lives uniformly throughout the known three worlds in a subtle form, providing them with their inherent energy and vitality; it means the Goddess who has three divine forms as the Bindu (drop of energy and knowledge), the Bija (the seed from which the entire creation emerged) and the Naad (the primeval sound vibrations in the cosmic ether which was the primary source of creation); it means also the Trinity Gods (Brahma the creator, Vishnu the sustainer, and Shiva or Rudra the concluder)

personified; it implies the three Gunas (the Sata Guna, the Raja Guna and the Tama Guna); she represents the three divine dynamic aspects of the Trinity Gods, i.e. Saraswati (the power of knowledge and speech), Laxmi (the power of wealth and fame), and Parvati (the cosmic Mother). The Goddess Tripura is therefore a personified form of the dynamism of Brahm, the supreme transcendental Authority of creation, in entirety.

This Upanishad was revealed by Lord Shiva, the wisest and the most enlightened amongst the pantheon of Gods, as repeatedly mentioned in Canto 1, verse no. 17, Canto 2, verse nos. 1-2, Canto 3, verse no. 1, Canto 4, verse no. 1, and Canto 5, verse no. 1. Therefore we see that the Upanishad has five elaborate Cantos. While Cantos 1-4 are composed in the form of paragraphs, the last Canto 5 is in the form of verses. Canto 1 is primarily dedicated to espousing the divinity and supremacy of the Goddess, and explains how she is Brahm personified. Since the Tapini category of Upanishads describe esoteric forms of occult worship along with the secret formulas invoked for such worship, an instrument or a geometrical figure is needed for the purpose, and in the present case it is the Sri Chakra. This is elaborately described in Canto 2. The various Mudras (postures of the body during such worship) are described in Canto 3. The next Canto 4 is dedicated to the theme of Mukti or liberation, deliverance, emancipation and salvation of the soul, the various Mantra that aid the process, and how the worshipper can have a divine glimpse of the Goddess. Finally, Canto 5 is totally dedicated to elucidating upon the doctrines pertaining to Brahm-realisation and outlines the philosophy related to Brahm.

Three other Upanishads have special relevance here, one is the Tripura Upanishad, which is the 8th Upanishad of the Rig Veda tradition, the second is the Bhavricho-panishad which is the 10th Upanishad of the Rig Veda, and the third is the other is the Devi Upanishad, which is the 22nd Upanishad of the Atharva Veda tradition and hence appears as Chapter no. 22 of the current volume.

The charm instrument used in occult or mystical forms of worship is known as the ‘Sri Chakra’. A diagrammatic representation of it is included at the end of this Chapter.

-----*****-----

----Shanti Paath----

Please refer to appendix no. 1 for the English of this Shanti Paath.

Canto 1

1. [The true form of Goddess Tripura:--]

OM Salutations! Salutations to Lord Hari, the Supreme Being (Brahm)¹! He has taken the form of Goddess Tripura, literally meaning the one with three forms. These three forms are those of the creator Prajapati (Brahma), the sustainer Vishnu, and the concluder (Rudra; Shiva).

It is this dynamic cosmic force of Brahm revealed as Tripura which is the creator of the three worlds represented by the words Bhu (standing for the terrestrial world; mortal world; earth), Bhuvaha (the sky; the celestial world), and Swaha (the heavens). [It also implies the three worlds as follows—the earth, the nether world, and the heaven respectively.]

The Beej Mantra for this divine Shakti (dynamic energy and power of Brahm) is represented by the word ‘Hrim/Hrin(g)’.

She lives in the middle of the three mountains. [This is a symbolic representation of the spot of the forehead between the eyebrows and the root of the nose.]

She is an embodiment of the three Gunas. [That is, she represents all the three Gunas. These are the Sata Guna, the Raja Guna and the Tama Guna.]

She is the point where all the three worlds (the past, the present and the future; the mortal, the heavenly and the nether) finally collapse and merge into.

Such a Goddess is known as Tripura. I offer my obeisance and worship to Lord Tripura² who lives subtly everywhere in creation. [1].

[Note—¹Hari—The term 'Hari' is applied to Lord Vishnu who is the sustainer and protector of this creation. The word Hari literally means one who steals or takes away or eliminates. Vishnu removes all the miseries of the world and provides his devotees with solace and succour. He literally steals their pain and sufferings, hence is called Hari.

Lord Vishnu is that aspect of the Brahm, the Supreme Being, which is responsible for the upkeep of this creation. In fact, Brahm revealed his own self as the three Gods of the Trinity with the express purpose of carrying the three main functions of creation—viz. to create he became Brahma, to sustain and protect he became Vishnu, and to conclude he became Shiva.

Hari is one of the thousand names of Vishnu; it is a metaphoric way of saying that Brahm, the Supreme Being, has assumed countless forms having as many names and characteristic and virtues with the aim of carrying on with his divine intention of creating a world and then sustaining it. With his assuming the form and name of Hari, Brahm intended to give the signal that he would ensure that his off springs in the form of the creatures who would inhabit this creation would be offered protection against evil and sins; he also intended to tell all that he would remove any evil and sins if they raise their venomous hood to put to danger the Lord's creation.

Now, as we have seen in a number of Upanishads, the word OM is a monosyllabic Mantra especial for Brahm. Therefore the opening lines of this verse explicitly establish that the divine Being who is addressed in this whole Upanishad is Brahm and not any particular god or goddess. The fact of the matter is that all the gods and goddesses are revelations of one Supreme Being who has assumed their forms to carry out many and varied functions of creation. It is like the king or the emperor delegating his supreme authority to his juniors who act on his behalf and are deemed to have the same authority and powers as the sovereign.

Hence, obeisance is being paid to Brahm in the form of Hari in this verse. Lord Vishnu is also known as the Viraat Purush, the all-encompassing and all-pervading macrocosmic gross but invisible body of Brahm from whom even the creator Brahma emerged. The difference between Viraat and Vishnu is in the degree of subtlety, and nothing more. Whereas the 'Viraat', as the name itself suggest, is the all-inclusive and all-pervading colossus macrocosmic form of the Supreme Being in its more subtle form, Vishnu is the same Lord in a less subtle form as he performs the specific task of sustenance and protection of creation, and hence limited to the Trinity of Gods consisting of the other two aspects of creation—i.e. birth and death regulated by Brahma and Rudra (or Shiva) respectively.

Again, as has been repeatedly emphasized in the Upanishads, Brahm is a neutral cosmic entity that is nothing but pure Consciousness. Being 'neutral' does not mean that it is impotent and unable. The dynamism and vigour of Brahm is revealed in the form of Shakti, literally meaning energy, strength and authority. So, whenever Brahm wishes to do anything he does so through the medium of Shakti. This Shakti takes many forms just like the case of the emperor's authority and powers take many forms—such as the many branches of the administrative and military establishment. Thus, Shakti becomes Maya (the power to create delusions), the Gunas (inherent qualities in all creatures that control their behaviour and personality), the Trinity

Gods (Brahma the creator, Vishnu the sustainer, and Shiva the concluder), the various Goddesses such as the goddess Tripura to whom this Upanishad is dedicated. All of these entities are fundamentally revelations of the Shakti aspect of the Supreme Being. Hence, Goddess Tripura embodies the dynamism and authority of Brahm known as the latter's Shakti.

The word 'Tripura' literally means one who dwells at three places. Therefore, obviously, Goddess Tripura embodies the glories and virtues, the authorities and powers, the dynamism and strength of all the Trinity Gods in her divine form at one place. From this perspective, the Mantra OM is applicable to her as much as it is applicable for Brahm for the simple reason that these three Trinity Gods represent the three aspects of creation in which Brahm has revealed himself. The word OM has three letters—viz. A, U and M—standing for the birth or origin of creation, its expansion and development, and its conclusion respectively.

So while the three Gods of the Trinity have a limited scope and authority, Goddess Tripura has a wide scale of powers and authority. While Vishnu, for instance, represents Brahm only as a merciful sustainer and a benevolent protector of creation, Goddess Tripura can create, sustain and conclude simultaneously. So in a sense, Tripura is more authoritative and powerful than any one of the Trinity Gods or any other Gods and Goddesses in creation.

Goddess Tripura is a complete and whole embodiment of the dynamism, authority and strength of Brahm; she is a personification of Brahm in its entirety. Tripura is the Shakti of Brahm revealed in her form. As the three Gunas she controls and devises the various habits and nature of all living beings in creation. The influence of the three Gunas, viz. the Sata Guna, the Raja Guna, and the Tama Guna has been explained in detail in a note of verse no. 1 of Brahman 3 of the Brihajjabal Upanishad which is Chapter no. 6 of this volume, as well as in the Ram Purva Tapini Upanishad, Canto 4, verse no. 64 which is Chapter no. 13.

²This observation that 'Tripura' is both a female entity known as a Shakti or a Goddess, and a male entity known as the Lord (God) called 'Tripura' endorses the observations made in the note above. While the word 'Lord' refers to the Supreme Being known as Brahm, who is also called Hari (a male), the 'Goddess' refers to the dynamic aspect of the same Brahm that is known as Shakti.

For all practical purposes, both Brahm and his Shakti are inseparable and indivisible from one another just as the king and his royal authority are one and inseparable entities.]

2. [Now, the great Mantra of Tripura is being explained:--]

'Tatsaviturvarnyam Bhargo Devasya Dhimahi; Dhiyo Yo Naha Prachodayat'¹—this is the great Mantra dedicated to the supreme Goddess who represents the Raja Guna of Brahm (i.e. Goddess Tripura who represents the dynamic powers of the Supreme Being by which he created this creation).

Now, we shall analyse this Mantra, which is called the Gayatri Mantra and is primarily dedicated to the supreme Brahm, and see how it applies to Tripura.

'We invoke the magnificent glories of the Creator. He is beyond all trace of darkness. Let that Lord illuminate our mind and intellect.

Let us prepare the sanctified liquid known as Soma to be offered to the sacred fire known as Jatveda (which is the all-pervading fire element said to be present in the sky, or the celestial fire) when we worship the Goddess.

Let the Goddess in her form of Durga (who rides a lion) vanquish our enemies and neutralize or overcome their strength (or literally 'burn them to ashes').

Let the Goddess help us overcome all difficulties just like one easily crosses an ocean aboard a boat (or a ship).

I pray to Lord known as Trayambak (i.e. Lord Shiva who has three eyes) who grants the gross world with beauty and charm. By his worship, the worshipper is able to obtain Mukti just like the water melon is freed from its stem.

The esoteric knowledge pertaining to Goddess Tripura, the supreme Goddess, has two esoteric forms—one having three aspects, dimensions or forms, and the other having one hundred eight Varnas (letters; dimensions; aspects).

The Goddess Tripura has three aspects or dimensions, called the Paads, as stated above. These are the following—(i) The first Paad represents the four subtle aspects of Brahm, the supreme transcendental Consciousness. [These four letters are OM, Bhu, Bhuvaha and Swaha. The four aspects or dimensions of Brahm are creation, birth or emergence, growth and development, and death or conclusion. Brahm has four Paads or states of existence of consciousness—viz. the Jagrat or waking state, the Swapna or dreaming state, the Sushupta or deep sleep state, and the Turiya or the transcendental state.]

(ii) The second Paad symbolizes the dynamism of Brahm by which the entire visible creation came into existence. This is called the ‘Shakti Paad’.

(iii) And the third Paad refers to Shiva, the power of Brahm to bring this creation to conclusion. This aspect of the Goddess is known as ‘Shivaani’, literally the divine female consort of Shiva. [2].

[Note—¹This is the great Gayatri Mantra of the Vedas. References: (i) Shukla Yajur Veda = Brihad Aranyak Upanishad, Canto 5, Brahman 14. (ii) Sam Veda = Chandogya Upanishad, 3/12/1-9; Savitri Upanishad, which is entirely dedicated to it; Maitrayanyu Upanishad, Canto 5, verse no. 7. (iii) Atharva Veda = Surya Upanishad, verse no. 2; Brihajjabal Upanishad, Brahman 3, verse no. 6; Tripura Tapini Upanishad, Canto 1, verse no. 1-15; Narsingh Purva Tapini Upanishad, Canto/Upanishad 1, verse nos. 5-9; Gayatri Upanishad; Tripadvibhut Maha Narayan Upanishad, Canto 7, paragraph no. 40.

Other references: Rig Veda (3/62/10), the Sam Veda (1462), and Yajur Veda (3/35, 22/9, 30/2, 36/6).]

3. The entire creation, including the various Lokas (worlds), the Vedas, the Shastras (ancient scriptures), the Purans (mythological histories), the Dharma Shastras (codes of conduct; jurisprudence), the Chikitsa Shastra (the science of herbal medicine) and Jyotish (astrology), has come into being as a union of Shiva and Shakti (Brahm and his dynamic powers of creation). [3].

4. Now we shall describe the esoteric meaning of the various aspects or dimensions of the great Mantra of the Goddess (as narrated in paragraph no. 2).

The *first Paad* (aspect, dimension or part) of the divine Mantra pertaining to Goddess Tripura as Brahm personified is ‘Tat’—literally implying ‘that’. This term refers to the supreme transcendental Brahm or the Absolute Truth.

This Brahm is eternal, infinite, imperishable and immutable. Brahm is supreme and transcendental. Brahm is without attributes, forms and characteristics. Brahm is without any taints, faults and blemishes. Brahm is without any epithets, titles, qualifications and honours. Brahm is without any kind of prop to support it as it is self-supporting and self-sustaining. Brahm is the Lord who is benevolent and gracious towards all the creatures or living beings known as the Jiva, as well as the rest of the creation.

It is Brahm that¹ brings to the conclusion this creation; it is Brahm that thinks, sees, develops, gives consciousness, inspires everything and every action and deed in this creation, and it is Brahm that creates desires of all kinds in the creature. This is

why Brahm is also known as Kaam personified. [Kaam refers to doing of deeds and taking of actions to fulfill one's desires, wishes, passions, aspirations, yearnings and hopes.]

It is this single Brahm that creates, develops and concludes this visible world in the form of Shiva. [And that is why Shiva is called 'Maheshwar'—the Great Ishwar, the Great Lord.]

Brahm is the one that inspires ascetics and hermits to do religious sacrifices, and he is the one who fulfills what is inspired.

This Brahm however is inherently faultless and without any desires though it is the one who creates all the delusions and desires in this world. Brahm does not do anything or acts in anyway, though he is the one who inspires all actions and makes the creature do all deeds.

It is this Brahm that created the various categories of alphabets of the Sanskrit language—viz. the group of letters headed by A, Ka, Cha, Tta, Ta, Pa, Ya and Sha.

This is why Brahm is known as the Ishwar as he is the one who creates everything, including Kaam—meaning desires and commensurate actions. [Brahm represents all the desires of a creature as it is the supreme inspirer of creation. It is Brahm who desired that the languages be created so that the creature could communicate with each other and their thoughts can be transmitted. The alphabets are the building blocks of language just like the three Gunas such as Sata, Raja and Tama, as well as the three words Bhu, Bhuvaha and Swaha were the precursors of the known world with its unique character.]

Since the first letter of the word Kaam is 'Ka' (as in *kerb*), it follows that the Beej (seed; root) word for Kaam is also 'Ka'. Again, since Kaam is synonymous with Brahm in as much as all desires are inspired by Brahm, and the fact that this desire of Brahm to create is at the root of this creation coming into being in the first place, the first word of the Mantra, i.e. 'Tat', also refers to 'Kaam' (desires) and the letter 'Ka'. A wise person who understands the esoteric secret of this first Paad ('Tat') of the Mantra becomes one like the Brahm himself. [4].

[Note—¹It is to be noted that the pronoun 'that' or 'it' have been used to refer to Brahm for the simple reason that Brahm is the pure cosmic Consciousness, and the latter entity is neither a male nor a female gender—i.e. it is neutral. At the same time, the male pronoun 'he' is also employed to mean Brahm, but the context here is that the other aspect of Brahm is Shakti which is a feminine gender for which the pronoun 'she' is appropriate.

The esteemed reader is requested not to bother much about these technicalities of which pronoun is used and which should be used, but rather focus his attention in enjoying the spiritual nectar dripping from the texts of the Upanishads.]

5. The *second Paad* of the Mantra is 'Savitu-rvare-nya'. It represents the second Paad of Brahm. [Since this Upanishad is dedicated to Goddess Tripura, this second Paad, as well as all other Paads, represent the manifested form of Brahm as Goddess Tripura.]

The 'Shu' (pronounced as in shoe) element of the spoken word stands giving birth to living beings. The 'Savitu' part of the above word refers to the Sun that is a metaphor for all forms of life in this creation, representing the living beings as well as the energy, strength and vitality that they possess.

When it is applied to Goddess Tripura, it means she is the primary cosmic energy and dynamism that gave rise to the living beings and provided them with their natural energy, strength and vitality. Tripura is thus the supreme Goddess (representing Brahm).

It is this Goddess Tripura who is subtly present in the form of the dynamic subtle energy of the Kundalini (the coiled energy center at the base of the spine) representing the Jatveda fire (the universal fire element). A person who has this esoteric knowledge is able to access the divine energy and vitality that are unique virtues of the Jatveda fire. [That is, an ascetic, who is able to kindle the latent fire and unleash its dynamic energy that is centered around the Kundalini, is able to access stupendous source of divine energy that bestows upon him remarkable abilities and mystical powers.]

This energy takes the shape of a symbolic triangle in the body. Only those who are greatly fortunate are able to arouse or kindle it, and then harness this energy and its dynamism for their spiritual progress. [Reference: (i) Shukla Yajur Veda = Trishikhi Brahmin Upanishad, Canto 2, verse nos. 56-64. (ii) Atharva Veda = Shandilya Upanishad, Canto 1, section 4, verse no. 4.]

The energy trapped in the symbolic triangle located in the body (i.e. the region of the lower abdomen, from the navel to the groins, where the Kundalini is located at the base of the spine) is aroused or kindled with the help of the vowel sound 'Ae' (as in may, or ray).

The word 'Vare-nyam' means the best, the most eclectic and exalted; one that is worth honouring, showing respect to, acknowledging, welcoming, accepting and worshipping. Hence, that entity which is honoured and accepted by the term 'Vare-nyam' is also referred to by the letter 'Ae'. [In other words, the divine energy of creation that is present in the fire element as well as in the Kundalini symbolizes Goddess Tripura, and it is she who should be worshipped in these forms as a manifestation of the supreme transcendental Brahm complete with its cosmic authority and powers.] [5].

6. Now we shall discuss the esoteric meaning of the phrase 'Bhargo Devasya Dhimahi'.

This represents the *third Paad* of Brahm. [This is one of the many manifested Paads of Goddess Tripura.]

The first letter of the third word is 'Dha' (as in *breathe*), and it means Dharna. [Dharna roughly means to bear; to accept; to have belief, conviction and faith; to imagine; to think, to ponder, and to contemplate deeply.] It is with this element that one accepts the supreme Brahm. [That is, one accepts Brahm only when one is firmly convinced of his superiority, truth, authority and existence. One becomes 'realised and enlightened' on the strength of his spiritual beliefs and being steady in them. One contemplates upon Brahm, believes in Brahm and its supreme authority and divinity, has faith in Brahm, has no doubts about the truthfulness of Brahm, and always remains submerged in the thoughts of Brahm. Total commitment to Brahm in all spheres of life is to have unwavering Dharna of Brahm.]

'Bharga' refers to the illuminated and bright aspect of the Deva (Lord). [That is, it refers to that aspect of Brahm which is the opposite of darkness. Hence, Bharga refers to the light and illumination of eclectic dimensions that come with knowledge, wisdom, expertise, erudition, enlightenment and self-realisation. It is these eclectic virtues personified.]

Bharga refers to the central Authority. It represents the fourth aspect of the Deva known as Brahm that is also known as Turiya (i.e. the transcendental Brahm). This Deva (Brahm) is present in the inner-self of all mortal living beings called the Bhuts (as their Atma, their true 'self', their pure consciousness). [That is, it is the Atma or pure consciousness that is at the center of life and creation. It is the Atma that

resides in the inner-self of all the creatures. It is the Atma as an image of Brahm that possesses the characteristic virtues that are referred to as the ‘fourth aspect of consciousness’—i.e. the Turiya state of existence which is the transcendental state.]

The fourth aspect of the Deva (known as Brahm, and in the present context revealed in the form of the great Goddess Tripura) is represented by the vowel sound of ‘Ee’ (as in *eel*). [This refers to the letter ‘Dhi’ of the third word Dhimahi.]

‘Ee’ is the Beej Mantra of the Deva (who is being contemplated upon and invoked in this Mantra). It also refers to the letter ‘M’ (of the word OM). [OM has four letters or syllables—viz. A, O, U and M. Here, ‘M’ stands for the fourth state of consciousness that is known as the transcendental state.]

A wise man must understand the esoteric meaning of the words ‘Bhargo Devasya Dh’ in the above described manner.

[As has been said above, the letter ‘Dha’ refers to the ‘Deva’ who is being contemplated upon and firmly believed in by the worshipper. Hence, Dha + Ee completes the meaning. It means ‘I worship Brahm with firm conviction and belief; I know that he is the transcendental Authority of creation who lives in the inner-self of all living beings as their Atma and the truthful ‘self’, and that this Deva is none other than cosmic Consciousness that has revealed itself with all its dynamism in the form of Goddess Tripura.]

Now, we shall see what the word ‘Mahi’ means. It refers to an entity that is characterized by the presence of three elements—viz. Mahatwa (greatness, grandeur, stateliness, gravity, weight, magnificence, distinction, importance significance), Jadatwa (grossness) and Kathinya (hard, difficult, impregnable). This word refers to the ‘mother earth’ which possesses all these three characteristics. It is hard and difficult; it is full of oceans and mountains; it has seven continents or islands floating on the oceans; it is well endowed with forests; and it is bright and illuminated.

The letter ‘La’ (as in *luck*) stands for an entity that possesses all the grand and magnificent attributes of earth. [Since the supreme Creator has the life creating and sustaining powers as that possessed by earth, the letter ‘La’ applies to both Brahm as well as to earth. The importance of the earth vis-à-vis life in this creation is too obvious to need any explanation. Its grandeur and magnificence is show-cased by the beauty of its colourful and vibrant Nature. It is gross, heavy and dense to the core. It is hard to penetrate. But at the same time the earth harbours the most delicate and fragile forms of life and ecosystem, along with the hardest and the sternest forms.] [6].

7. Now, we shall discuss the next part of the Mantra, i.e. ‘Dhiyo Yo Naha Prachodayaat’.

This is the *fourth Paad* of Brahm¹. [As in the case of all the rest of Paads, this also represents the manifested form of Goddess Tripura as this Upanishad is dedicated to her.]

It refers to the Parmatma, the eternal Shiva, the one who is the most primary Bhut or element in creation, and who is supreme and transcendental.

‘Let this Lord live in us or amongst us, and inspire and direct our mind and the illuminated (pure conscious) Atma to have no desires for gross things, and instead think of and focus the attention on things that are sublime and divine by nature, things that are of unique holy dimension.’ One must silently contemplate in this manner.

It is this supreme transcendental cosmic entity (known as Parmatma; Brahm) that is self-illuminated, pure consciousness, ethereal, and without any form and body. This divine and eclectic entity lives in the subtle space of the heart of all creatures (as

their Atma). It is this entity that is revealed as the dynamic Shakti or energy and vitality of creation represented by the Beej Mantra ‘Hrim/Hrin(g)’.

This is how the attribute-less Divinity manifests as the Panch-Akshar, Panch-Bhuts, and Panchak. [The word ‘Panchak’ means ‘five’. Hence, (i) ‘Panch-Akshar’ are the five esoteric letter mentioned in this Canto—viz. Tat, Ae, Ee, La and Hrim/Hrin(g). (ii) The Panch-Bhuts are the five elements such as sky, air, fire, water and earth. And (iii) the Panchak are the five unique qualities such as it being self-illuminated, pure consciousness, ethereal, and without any form and body which lives in the subtle space of the heart of all creatures (as their Atma).]

A person who knows this esoteric secret gets corresponding rewards. [7].

[Note—¹The The 4 ‘Paads’, or limbs, legs, aspects, facets or pedestals of Brahm—The four ‘Paads’ of Brahm are the four legs upon which Brahm stands. These four Paads symbolically establish the greatness and supremacy of Brahm as the all-powerful and all-controlling Authority in this creation. Since Brahm is the supreme Divinity that has revealed itself in the from of this creation, since each and every unit of creation is a manifestation of Brahm and without Brahm nothing exists, nothing has any relevance and truth (refer *Tripadvibhut Maha-Narayan Upanishad*, Canto 1, paragraph 1), it follows that the entire creation represents Brahm’s four cosmic forms or aspects or facets—which are called the four legs or Paads of Brahm. This is a metaphoric way of saying that the supreme Brahm has manifested himself and is made known to this world by the means of these four mediums.

The four Paads of Brahm, literally meaning legs or pedestals or aspects of Brahm, stand, inter alia, for the four states of existence of consciousness—viz. the Jagrat or waking state, the Swapna or dreaming state, the Sushupta or deep sleep state, and the Turiya or transcendental state. This fact is affirmed in the Atharva Veda’s *Tripadvibhut Maha-Narayan Upanishad*, Canto 1, paragraph 5; Canto 4, paragraphs 1-3.

These four Paads of Brahm have been explained elaborately in the following Upanishads—(i) Sam Veda’s Chandogya Upanishad, Canto 3, section 18, verse nos. 2-6, Canto 4, Section 5, verse no. 2, Canto 4, Section 6, verse no. 3, Canto 4, Section 7, verse no. 3, and Canto 4, Section 8, verse no. 3. (ii) Krishna Yajur Veda’s Brahm Upanishad, verse no. 1. (iii) Atharva Veda’s Mandukya Upanishad, verse nos. 3-7; Nrisingh Purvatapini Upanishad, Canto 4, verse nos. 4-7; Ram Uttar Tapini Upanishad, Canto 3, verse no. 5-8; Par Brahm Upanishad, verse no. 5; Narad Parivrajak Upanishad, Canto 8, verse nos. 9-19; Tripadvibhut Maha Narayan Upanishad, Canto 1, paragraph no. 5; Canto 4, paragraph nos. 2-3, 6; and Canto 8, paragraph no. 4; Tripura Tapini Upanishad, Canto 1, verse/paragraph nos. 2-14.

The Atharva Veda’s *Par Brahm Upanishad*, verse no. 5 describes the four places in the body of the Jiva, the living being and an embodiment of Brahm. These are the navel, the heart, the throat and the head. These are called the ‘four Paads of Brahm’ or the four seats where Brahm has revealed its ‘self’. This Brahm is known as the ‘Chatush Paad Brahm’.

In the navel region, Brahm reveals itself as the network of Naadis that have their origin here and are responsible for carrying sense perceptions throughout the body of the Jiva. In the heart, Brahm is revealed in the form of the Atma or pure consciousness that is said to reside in its subtle space called the Hridaya Akash. The heart is the only pumping station of the body which helps in circulation of the life-infusing blood throughout the body. The third spot, the throat, is where Brahm lives in the form of Pran or breath. It is the breath that keeps the body alive, and it is the throat by which a man speaks and eats. Speech is a sound manifestation of the Brahm, and of course without eating no Jiva can survive as this aspect of Brahm is sustainer of creation by ingesting food and imbibing liquids for life. Finally, the head is the location of Brahm as it is here that the brain is located; it is the site of wisdom, erudition, intelligence, knowledge and sub-conscious and all other aspects associated

with the mind that is the deemed revelation of Brahm's great ability to think and analyse.]

8. The wise ones call the supreme power of 'desires' as the 'Kaam-koot'. [Kaam means desires, and Koot means a mountain or treasury. That is, now we shall discuss the same Mantra with stress on its ability to fulfill all the desires of the worshipper.]

The first word 'Tat' in the thirty-two letters of the Mantra 'Tat Savitur-varenyam' etc. refers to divine entity known as the Parmatma (the supreme transcendental Atma, Brahm, the cosmic Consciousness), the eternal Shiva who is Akshar (one who is imperishable), who is Vimal (without faults and taints; one who is immaculate and perfect), and who is Nirupaadhi (one who has no specific honours, epithets or titles).

The letter 'Ha' (as in *hut*) has a close similarity with Shiva, and hence it is a personified form of the Lord. [It ought to be noted here that 'Ha' is the first letter of the word Hans meaning a divine Swan which is used as a metaphor for the Atma as well as Brahm. An ascetic who is highly enlightened is known as a Hans because he is pure, immaculate, uncorrupt and holy. Since Shiva is an epitome of self-realisation, holiness and purity as well as the patron god of ascetics, he is known as Hans. Hence the relevance of the letter 'Ha' in the context of Shiva is evident.]

Inspite of being an Akshar, it is still not so. [Here, there is play on the word 'Akshar'. It means a letter on the one hand, and an entity that is imperishable on the other hand. Therefore, 'Ha' is a letter that is not merely a letter of an alphabet, but has eclectic virtues of being imperishable. Therefore, Shiva and Brahm both are imperishable. They are the ones who inspire or create all desires on the one hand, and trounce the desires, crush the desires, and overcome them on the other hand.]

Therefore, inspite of being a mere letter, it (Ha) symbolizes Shakti (the power of sublimity, divinity and holiness). [A dead or powerless entity won't have any desire. Similarly, strength and power are needed to fulfill one's desires. Therefore, 'desires' are pivoted on Shakti. Shakti is needed to create desires, and then either to fulfill them or crush them.] [8].

9. In accordance to the explanation given above in the context of the Mantra 'Tat Savitur', the Moon (whose Beej or representative letter is 'Sa' as in son) should be placed after the Sun (whose Beej or representative letter is 'Ha' as in *hut*). [This is obvious when we examine the word 'Hans'. 'Ha' comes before 'Sa'. In the practical world also, the Sun has precedence over the Moon because the latter shines due to the light of the former, and also because the latter rises after the former has set.]

The light of the Sun lights up the region of the body between the Mooladhar Chakra and the Brahm Randhra. [The Sun is said to reside in the region of the navel, in the whirling energy center called the Nabhi Chakra. The Mooladhar Chakra is the lowest part of the abdomen in the region of the groins, and the Brahm Randhra is on the top of the head, in the cranium. Hence, the light of the Sun shining in this area is a metaphoric way of saying that this is the primary area of the body which is vital for its life and survival.]

'Sa' is known as one of its kind. [The letter 'Sa' also means 'it' or that'. Hence, here the letter refers to the Sun, instead of the Moon, and the ability of the Sun to infuse or inject life in this creation. The Sun is regarded as a visible manifestation of Brahm and embodies all the grand glories of Brahm.]

The Lord who is remembered as a unified form of Shiva (Hans; the Parmatma; the eternal Brahm) and Shakti (dynamic aspect of Shiva) is referred to by the terms

‘Tat’ and ‘Savita’. [‘Tat’ means ‘that’, and ‘Savita’ refers to the ‘Sun’. Hence, the word ‘Tat’ refers to the dynamic powers and energy of Brahm, the Supreme Being, revealed in the form of Savita, the Sun, and the representative word for which is ‘Ha’. It is a fact; it is ‘Sa’—i.e. it is ‘that’ Brahm who is being honoured and invoked when one prays to the Sun by employing the Savitri Mantra or the Gayatri Mantra.]

Shiva is the supreme Lord, and his Shakti (dynamism and energy) is manifested as the Jiva (the creature).

Therefore, Hans refers to the unified form of the Sun (Shiva) and the Moon (Shakti). [The Sun is the primary source that gives light which makes the Moon shine. Similarly, Shiva or Brahm is the primary source which empowers Shakti to drive the dynamo of life in this world. Just as the Moon derives its illumination from the Sun’s light falling upon it, Shakti derives its powers and abilities by the virtue of authority delegated to it by Brahm, the Principal Authority of creation.] [9].

10. The supreme Shiva who creates everything also creates Kaam (desires and passions).

Hence, whereas the letter ‘Ka’ (as in *kerb*) stands for Kaam, the word ‘Varenyam’ stands for light and illumination. [It is the desire in a man which inspires him to do something to fulfill his desires. ‘Desire’ to attain something literally ‘illuminates’ that thing for him, because only when he is aware of the presence of a certain thing would he have a desire to obtain it.] [10].

11. Now, we shall discuss another esoteric meaning of ‘Tat Saviturva-neyam Bhargo Devaha’.

The eternal nectar of creation (‘Kshir’) that irrigates (produces, nourishes, helps to create and develop, activates, sustains, fosters, fructifies) the rewards of all deeds, and provides the medium for obtaining these rewards by doing deeds is always acceptable. [The Kshir that is being referred to here is the pure consciousness that inspires all creatures to do deeds to fulfill their desires. It also enlightens them about the path to follow to reach their goals. Here, the term ‘deed’ does not mean worldly deeds, but refers to the creature’s spiritual endeavours. The reward is Mukti or liberation and deliverance, as well as enlightenment in the way of self and Brahm realisation. This fact is endorsed below.]

It is attainable by the union of the Parmatma and Jivatma. [This refers to success in Yoga when the individual creature, the Jiva, becomes self-realised and attains the fruit of enlightenment by being united with the Parmatma.]

This is represented by the third state of existence of consciousness (i.e. the Sushupta state of deep sleep) and the letter ‘Ha’.

It is the Lord Shiva who exists in this state. The Lord is without any blights, blemishes and taints, and is self-realised, wise and enlightened. [The Sushupta state is the third state of existence of consciousness of the creature when he crosses the first two stages of consciousness, i.e. the Jagrat or waking state, and Swapna or dreaming state. During the Sushupta state, the mind and sub-conscious become defunct and the creature enjoys complete bliss and peace. This is the state in which ascetics live; this is the state in which Shiva lives perpetually. This is the neutral state when the Atma is not influenced by the inputs of the external world which constantly bombard it in the other two states of its existence. Hence, it is untainted and uncorrupted during this third state of its existence.] [11].

12. That is why this state is known as supreme.

The letter 'Dhi' (of the word Dhimahi) signifies Dharna (belief and faith; thinking and remembrance). [Refer paragraph no. 6.]

Though the letter 'La' (as in *luck*) represents the gross element known as the earth, but when it comes after the letter 'Ha' (as in *hut*) that stands for illumination and Shiva it would obviously not be something gross and dark. Therefore, it represents the supreme element known as the pure Consciousness. [That is why the earth harbours such an astounding variety and vibrant forms of life, both as flora and fauna, inspite of it being made of the hardest and the grossest things in creation, such as rocks, mountains, metals and hardened crusts that form the core of earth's existence.]

Let me have this wisdom. Let the enlightened Shiva inspire my mind to abandon its grossness, and aim for sublimity and enlightenment instead. [Let me not think that I can't be wise and enlightened because my mind is always pulled towards the gross material things of the world. If I determine for myself, the same mind will be a springboard for my spiritual emancipation and salvation.]

It (the mind) is the abode of Kaam and its maverick tricks. [All desires and aspirations have their origin in the mind. The same mind can lead one to worldly entanglements on the one hand, and to spiritual upliftment and salvation on the other hand. It is how one uses the abilities of the mind that determines the results one gets from it. It is just like the case of modern science which has proved a boon for the human race when it is in the right hands, and a bane when it falls in pervert and demonic hands.]

Those who follow these six paths are able to attain the divine abode of Lord Vishnu. [That is, those who understand the hidden meaning of the full Mantra as described herein above are able to attain Brahm who is also known as Vishnu in his macrocosmic form as the Viraat Purush.]

The Lord asserts that there is no other way. [12].

13. Now, the Gayatri Mantra of thirty-two letters is being described from another angle as being equivalent to Shakti, the dynamic energy and power of Brahm.

'Tat Savitur-varenyam': The Atma (cosmic Consciousness) creates the sky, and from the sky is created the air. Whatever is under the jurisdiction of these entities is implied in the term 'Varenyam'. [That is, these are the most adorable and acceptable subtle aspects of creation. These entities are the primary elements in creation which are immaculate and uncorrupt for the simple reason that there is nothing yet to corrupt them as well as the fact that they are ethereal and most subtle aspects of creation. The rest of the elements have varying degrees of grossness in them; they have limited presence, reach and powers as opposed to these three primary elements. They are not as neutral and all-incorporating as the Atma, the sky and the air elements.]

The union of the Jivatma and the Parmatma is equivalent to the 'Savitru' part of the Mantra. ['Savitru' refers to the Sun which is the visible manifestation of the supreme Brahm and its dynamic energy that infuses and sustains life in this known world in the form of heat, light and energy that the Sun provides. Hence, the metaphor of the Sun is employed to imply that the Shakti of Brahm represented by the heat, energy and light of the Sun establishes a link between the creature known as the Jiva and the supreme Brahm known as the Parmatma.]

The word that represents Jiva (i.e. Hans) surely refers to the illumination and energy that is the hallmark of the Parmatma and manifested as the celestial Sun that embodies the glorious virtues of Brahm. [The word Hans, meaning the divine Swan,

has two letters—‘Ha’ and ‘Sa’. While ‘Ha’ is the Beej letter for Sun representing the fire element as well as Brahm, ‘Sa’ stands for the Moon and the grosser aspect of creation. Refer paragraph no. 9. The full word ‘Hans’ stands for the enlightened creature who has become self and Brahm realised, as well as has developed a high degree of wisdom and enlightenment. Hence, he is no less than a Sun in a metaphoric sense because his enlightenment and wisdom makes him shine in the world with the light of his knowledge, wisdom and erudition, and the rest of the society benefits from his wisdom much like the Moon benefiting from the light of the Sun by becoming illuminated itself.] [13].

14. ‘Bhargo Devasya Dhi’—this refers to Lord Shiva (or Brahm) who is remembered and invoked as the Lord who bears everything in this creation.

‘Mahi’ etc. refer to the earth which is blessed with the grand virtues of attraction, beauty and other visible charming aspects of creation.

This is how the Shakti Koot is explained (visualized; imagined). [That is, it is the way how the supreme Creator, who harbours everything in his bosom, and who has not only created everything but has also full provided for its growth and development, is compared to the earth which also harbours everything in its bowls in the sense that all forms of life and all things required to sustain and develop life are available in earth and provided by it just like the supreme Creator does in the context of the universe. The term ‘earth’ represents the cosmic Brahm at the microcosmic or the terrestrial level of creation just like the Sun represents Brahm at the celestial or macrocosmic level. Earth is only one of the many planets of the solar system of which the Sun is the pivot, just like the human being is one of the many forms that Brahm has taken in this world, the other obvious forms are the members of the plant kingdom, and other members of the animal kingdom.] [14].

[Note—It ought to be noted here that verse/paragraph nos. 2-14 of this Upanishad primarily deal with the famous Mantra known as the ‘Gayatri Mantra’.

The Gayatri Mantra—References: (i) Shukla Yajur Veda = Brihad Aranyak Upanishad, Canto 5, Brahman 14. (ii) Sam Veda = Chandogya Upanishad, 3/12/1-9; Savitri Upanishad, which is entirely dedicated to it; Maitrayanyu Upanishad, Canto 5, verse no. 7. (iii) Atharva Veda = Surya Upanishad, verse no. 2; Brihajjabal Upanishad, Brahman 3, verse no. 6; Tripura Tapini Upanishad, Canto 1, verse no. 1-15; Narsingh Purva Tapini Upanishad, Canto/Upanishad 1, verse nos. 5-9; Gayatri Upanishad; Tripadvibhut Maha Narayan Upanishad, Canto 7, paragraph no. 40; Bhasma Jabal Upanishad, Canto 1, paragraph no. 4.

The *Gayatri Mantra* has *two versions* which are presented here. According to one version, it is based on the typical *Gayatri Chanda* which is a poetical composition consisting of three stanzas or lines each having eight letters or syllables. The total number of letters or syllables is thus twenty four. The Gayatri extolled by Brihad Aranyak Upanishad, Canto 5, Brahman 14 is the one strictly conforming to this rule. On the other hand, the usual and commonly known Gayatri Mantra has four steps or stanzas and is based on the composition style called the *Anushtup Chanda*.

The ‘Gayatri Chanda’ is used to compose the sacred hymns of the Vedas. Amongst the different composition styles, this is regarded as the best style of Chanda in which the Vedas were revealed (Jaimini Brahmin, 2/227) because it has the divine virtue and supernatural powers that provides protection to the Pran of the person who says the Gayatri Chanda and elevates his stature to that of the celestial Sun.

Let us first see the typical *Gayatri Chand pattern* of this divine Mantra. The Gayatri Mantra based on the style of this poetical composition is described in *Brihad Aranyak Upanishad*, Canto 5, Brahman 14, of the Shukla Yajur Veda tradition. This Mantra having three steps is extolled as the one which is superior to other forms of

the Gayatri Mantra having four steps because this three-stepped Mantra is synonymous with Pran, i.e. it is the life or the essence of all that exists.

The Gayatri Mantra having three lines is the following—“Tatsaviturvarnyam Dhimahi Dhiyo Yo Naha Prachodayat”. The fourth line honours and glorifies this Gayatri as a manifestation of the Sun God, and as brilliant and splendorous as it. It is—“Paro Rajase Savadoma”. Since the Sun is a visible manifestation of the supreme Brahm who is the Transcendental Consciousness of the entire creation at the macro level, having the Atma resident in the bosom of the individual creature as its micro level counterpart and Pran as its subtle manifestation, the Gayatri Mantra is in honour of the supreme Authority of creation, i.e. Brahm. The *Tripura Tapini Upanishad* of the Atharva Veda tradition, Canto 1, paragraph nos. 2-14 describes the Gayatri Mantra with these four lines in great detail in the context of Goddess Tripura who represents the dynamic cosmic power of creation that Brahm possesses.

Now the question arises that if the three lines are the complete Mantra, then what was the purpose of including the fourth line? It must be especially noted in this context here that this fourth step of leg of the Gayatri Mantra does not consist of any word which is a part of the main Mantra, but is only meant to establish its divine stature as the citadel for all spiritual Mantras; it is intended to give this Gayatri its place of honour in the pantheon of divine Mantras. Besides this, the fourth leg is visualised as a symbol of stability because anything that has four legs is more stable and steady as compared to one with only three.

Therefore, last stanza is like an epithet highlighting the magnificent divinity and spiritual value of the Gayatri Mantra. It is akin to the Sun shining in the sky, and all other planets and their satellites such as the moon shine because they reflect this light from their surface. The Sun is at the centre of the solar system even as the Gayatri is at the symbolic hub of all divinity and spiritually empowered Mantras. It is also akin to the Pran which supports life in a gross body of a creature and is an acronym for life as a whole. The Pran symbolically illuminates the dark realm of the body from the inside while the Sun does the same from the outside.

The actual Gayatri Mantra that should be preached to the spiritual aspirant consists of the first three steps as described in verse nos. 1-3 of Brihad Aranyak Upanishad, Canto 5, Brahman 14.

This famous Mantra is dedicated to the Sun God who is a manifestation of the supreme transcendental Brahm. It is this Mantra—which is a group of ethereal words having profound spiritual value and metaphysical importance. It is called Gayatri because it gave protection to the Pran—Brihad Aranyak Upanishad, Canto 5, Brahman 14, verse no. 4. It has been accepted as a manifestation of Pran in Shatpath Brahman, 1/3/5/15, while it is praised as having the potentials of Agni (fire) present in the faculty of speech known as Vak in Taittiriya Sanhita, 3/2/9/3, as Tej (energy) in Shatpath Brahman, 1/8/2/13, and as Brahm (the supreme transcendental consciousness) in Maitri Brahman, 4/3/1. According to the Purans (mythological histories of the Hindus), the Gayatri has been praised having manifested in the form of the Trinity Gods—Brahma the creator, Vishnu the sustainer, and Shiva the concluder—Skanda Puran, Kashi Khand, Purva, 4/9/58. Whatever that exists is a revelation of Gayatri because it is a manifestation of Brahm—Chandogya Upanishad, 3/12/1. In fact this whole earth that gives refuge to all the life forms in this world is a manifestation of Gayatri—Chandogya Upanishad, 3/12/2. By worshipping it, a person is blessed with worldly assets such as abundant livestock and flourishing family, a long, healthy and active life, wealth and fortunes, good name and fame, as well as spiritual attainment in the form of Brahm realisation—Atharva Veda, 19/71/1.

Atharva Veda tradition's *Brihajjabal Upanishad*, in its Brahman 3, verse no. 6, and the *Bhasma Jabal Upanishad*, in its Canto 1, paragraph no. 4 describe that this Gayatri Mantra should be pronounced while one collects the urine of the cow as a necessary step in a ritualistic process of preparing the sacred Bhasma or the ash of the fire sacrifice that is to be worn by a spiritual aspirant.

The *Gayatri Mantra* is mentioned in its primary form in the *Surya Upanishad* of the Atharva Veda, verse no. 2, which is exclusively dedicated to the Sun God. It has been expounded and elucidated upon also in *Brihad Aranyak Upanishad*, Canto 5, Brahman 14 and other Upanishads, such as the *Savitri Upanishad* which is entirely dedicated to it, the *Maitrayanyu Upanishad*, Canto 5, verse no. 7, the *Chandogya Upanishad*, Canto 3, Section 12, verse nos. 1-9 belonging to the Sam Veda tradition, and *Narsingh Purva Tapini Upanishad* of the Atharva Veda tradition, in its Canto/Upanishad 1, verse nos. 5-9. Besides these, the *Gayatri Upanishad* appears as eight assorted verses or Kandikas numbering 31-38 of the Gopath Brahman belonging to the Atharva Veda.

It has been said in the scriptures that Brahmins, the highest class amongst the humans and who are regarded as the most learned and wise amongst them, were born from Gayatri, thereby drawing a parallel between the highest stature and exalted standing of Brahmins amongst the creatures and the Gayatri amongst the hymns. It is pertinent to note here by the way that Kshatriyas, the warrior class, were born from the Chanda known as Trishtup, and Vaishya, the trading class, from the Chanda known as Jagati. In other words, the divine and eclectic powers encrypted in the Trishtup Chanda revealed themselves as the Kshatriya, and those of the Jagati as the Vaishya. The Trishtup Chanda has four lines each having eleven letters or syllables, totaling forty four letters or syllables in all, while the Jagati Chanda has six lines with eight letters or syllables each, totaling to forty eight letters or syllables.]

15. Those who worship Goddess Tripura with the Mantra of fifteen letters¹ that is dedicated to her is able to fulfill all his desires, enjoy all that is worth enjoying, conquer the world (i.e. gain lordship and fame in the world; is able to command respect in the world so much so that his orders are honoured), becomes an expert in the spoken word (i.e. becomes an expert orator and a wise speaker), becomes one with Lord Rudra (i.e. becomes enlightened and wise like Shiva), and reaches the highest citadel of spiritual salvation and emancipation to attain Brahm by transcending the celestial heaven where Lord Vishnu resides.

[That is, he attains ‘true Mukti’ by reaching the Turiyateet state, which is the super-conscious state of existence. How the different steps or stages of Mukti vary from one another have been vividly depicted in the Tripadvibhuta Mahanarayan Upanishad which is Chapter 11 of this volume. It describes vividly the spiritual aspirant’s voyage through the different layers of heavens known as Vaikunths (abodes of Vishnu) before he reaches his final destination of Kaivalya Mukti when his Atma merges with the supreme Atma known as the Parmatma.] [15].

[Note—¹The fifteen letters are as follows—Ta + Tsa + Vi + Tu + Rva + Re + Nyam + Bha + Rgo + De + Va + Sya + Dhi + Ma + Hi = 15 letters of the Mantra ‘Tatsaviturvarenyam Bhargo Devasya Dhimahi’.]

16. Now, the esoteric knowledge pertaining to the combined worship of Lord Shiva and Shakti is being narrated. This Vidya (knowledge) is the most primary form of esoteric knowledge and has the following *twelve forms*. [This Vidya has many subdivisions named after the great sages and hermits who practiced its particular phase in order to harness the divine Shakti (dynamic mystical powers) of Shiva.]

The first is the ‘Shakti Koot’ Vidya symbolizing Shiva and Shakti, and should be regarded as occupying the *first place*. [The word ‘Shakti’ means power, energy, strength and authority. The word ‘Koot’ means a collection, a group, a mountain or hill, a fort or citadel. Hence, this Vidya lists the group of esoteric letters that provide the subtle energy to the worshipper which is an integral part of the Mantra dedicated to Goddess Tripura. It is used in occult form of Tantra worship. The esoteric letters

that represent this Vidya are ‘Sa’ for Shiva, ‘Ka’ for Kaam, ‘La’ for earth as well as the powers to create that the supreme Brahm possesses, and ‘Hrim’ representing the Shakti or dynamic aspect of Brahm that creates the world. These correspond to the Jagrat or waking state, which refers to the first place.]

The next Vidya is called the ‘Lopa Mudra’ Vidya. It should be regarded as occupying the *second place*. [The word ‘Lopa’ means hidden or vanished from sight. This is the subtle state of existence which corresponds to the Swapna or dreaming state when the visible world vanishes from sight. The group of esoteric letters that represent this state are ‘Ha’ standing for Hans which implies the Atma; ‘Sa’ for the Moon which shines in the night as this state refers to dreams which occur when a creature sleeps during the night; ‘Ka’ for Kaam or desires that are generated during the waking state but remain unrequited, and therefore reflected in the dreams; ‘Ha’ for the Sun; ‘La’ for the world that exists in dreams much like the visible earth during the waking state; and ‘Hrim’ representing the Shakti or dynamic aspect of Brahm that creates dreams and makes them so lively and surreal that a creature who dreams regards the world of dreams as the real thing, a world which he thinks to be as real as the world which exists during the waking state.]

The third Vidya is the one that precedes the Shakti without its Bindu, and the one that precedes the letter Hrim. It should be regarded as occupying the *third place*. [This Vidya and its group of esoteric letters was first used by sage Durbasa, who was an epitome of anger, to worship Goddess Tripura. The group of esoteric letters that correspond to this secret Vidya are ‘Ha’, ‘Sa’, ‘Ka’, ‘Ha’, ‘La’ and ‘Hirm’. It is called ‘Durbasa Vidya’ to honour this sage. It corresponds to the Sushupta or deep sleep state. This shows that though sage Durvasa appeared to be an epitome of anger and vehemence, getting annoyed and cursive at the slightest provocation, internally he was a detached and an enlightened soul of a high degree, being unconcerned about the affairs of the world and what his actions would mean for the rest of the people around him. He therefore exemplified the paradoxical nature of realised souls. This unique character of sage Durvasa has been explicitly brought out in Gopal Uttar Tapini Upanishad of the Atharva Veda, and is Chapter no. 27 of the present volume.]

The ‘Vagvakoot’ of this ancient Vidya is also called Maanvi, Chaandri and Kaubari. [The word ‘Vagbhava’ refers to speech and the power of words, the Goddess who is their patron, as well as the inherent power, energy, strength and authority that they possess.]

First is the Manu Vidya or the Manavi Vidya. It was first employed by Manu, the first male, and hence named after him. It should be regarded as occupying the *fourth place*. For its construction, the following sequence is visualized—first is the Madan (the Lord of passions called Kamdeo), then the auspicious Vagbhava (the Goddess of speech), then Kaam Koot (letters representing Kaam or desires and passions), followed by Shakti Koot (letters representing Shakti). [The esoteric Manu or Manavi Vidya consists of the following letters—‘Ha’, ‘Sa’, ‘Ka’, ‘Ha’, ‘La’, ‘Hrim’, ‘Ka’, ‘Ae’, ‘Ee’, ‘La’ and ‘Hrim’. It corresponds to the Sushupta state of consciousness.]

The next esoteric Vidya is called ‘Chandra Vidya’. It is the fifth Vidya. It consists of Shiva-Shakti, followed by Vagbhava, and once again by Shiva-Shakti. It should be regarded as occupying the *fifth place*. [The Chandri Vidya consists of the following letters—‘Ha’, ‘Sa’, ‘Ka’, ‘Ha’, ‘La’, ‘Hrim’, ‘Ka’, ‘Ae’, ‘Ee’, ‘La’, ‘Hrim’, ‘Ha’, ‘Sa’, ‘Ka’, ‘Ha’, ‘La’, ‘Hrim’, ‘Sa’, ‘Ka’, ‘La’ and ‘Hrim’. It corresponds to the Turiya or the post-Sushupta state of consciousness.]

When the 'Chandri Vidya' is added to other Vidyas such as 'Shiva Vidya' etc., it transforms into the 'Kaubari Vidya' (i.e. the knowledge that helps the worshipper invoke the blessings of Kuber, the treasurer of Gods). It should be regarded as occupying the *sixth place*. Those who are well-versed in this knowledge are able to access wealth equivalent to that possessed by Kuber. [The esoteric letters that are used in this worship are the following—'Ha', 'Sa', 'Ka', 'Ha', 'La', 'Hrim', 'Ka', 'Ae', 'Ee', 'La', 'Hrim', 'Ha', 'Sa', 'Ka', 'Ha', 'La', 'Hrim', 'Sa', 'Ka', 'La', 'Hrim', 'Ha', 'Sa', 'Ka', 'Ha', 'La', 'Hrim'. This corresponds to the Pragya state of consciousness.]

When the fourth letter of the alphabet (i.e. 'Ee' as in *feel*) is removed from the sequence, and when each esoteric group of letters is prefixed by the Sun-letter (i.e. 'Ha') and suffixed by the Moon-letter (i.e. 'Sa'), the secret Mantra takes a form which is known as 'Agastya Vidya' (as it was formulated and first used by this sage). This Vidya provides the benefits of Kaam (fulfillment of desires) and Aishwarya (fame, majesty and glories) that sage Agastya possessed. It should be regarded as the *seventh* Mantra which can rapidly show mystical results. [The word 'Dhaamini' has a female connotation and refers to the Mantra, dedicated to a Goddess, which can bear quick results. The sequence of esoteric letters of this Vidya is as follows—'Ha', 'Sa', 'Ka', 'Ae', 'La', 'Hrim', 'Ha', 'Sa', 'Ha', 'Sa', 'Ka', 'Ha', 'La', 'Hrim', 'Ha', 'Sa', 'Sa', 'Ka', 'La' and 'Hrim'. This corresponds to the Viraj state of consciousness.]

For the next esoteric Mantra, the letter 'Ha' at the beginning of the Agastya Vidya should be repeated twice followed by the letters for Kaam, Madan, Shakti and the beginning of the consonant letters, i.e. the letter 'Ka'. In this Mantra, the vowel sound of the complete consonant letters 'Sa' and 'Ka' should be converted into half-syllables. This is called 'Nandi Vidya' (as it was pronounced by Nandi, the bull-mount of Lord Shiva). It is the *eighth* Vidya. It is also a quick provider of mystical results. [The 'Nandi Vidya' is the following esoteric sequence of letters—'Ha', 'Ha', 'Sa', 'Ka', 'Ha', 'Sa', 'Ka', 'Ae', 'La', 'Hrim', 'Ha', 'Sa', 'Ha', 'Sa', 'Ka', 'Ha', 'La', 'Hrim', 'Ha', 'Sa', 'Sa', 'Ka', 'La' and 'Hrim'. This Vidya corresponds to the state when the consciousness exists in its primary state as the Sutraatma—the subtle Atma.]

The Agastya Vidya consisting of Vagbhava (speech and the power of words; the Goddess who is the patron of speech; the inherent power, energy, strength and authority of letters), words (formed by letters and expressed in speech) and their subtle meaning, followed by Maya Shakti (the esoteric letter symbolizing the power of Maya or delusions) are collectively called the 'Prabhaakari Vidya'. It is the *ninth* Vidya. [The esoteric group of letters of this Vidya are the following—'Ka', 'Ae', 'Ee', 'La', 'Hrim', 'Ha', 'Sa', 'Ka', 'Ae', 'La', 'Hrim', 'Ha', 'Sa', 'Ha', 'Sa', 'Ka', 'Ha', 'La', 'Hrim', 'Ha', 'Sa', 'Sa', 'Ka', 'La', 'Hrim', 'Ha', 'Sa', 'Ka', 'Ha', 'La', 'Hrim', 'Sa', 'Ka', 'La', 'Hrim'.]

The next esoteric Vidya is known as the 'Shanmukha Vidya' because it was first formulated and used by sage Shanmukha. It is the *tenth* Vidya. It comes after the Agastya Vidya and Vagbhava Vidya, and consists of various esoteric letters and Beej Mantras arranged as follows—Shakti Beej (Hrim), the Kaam Beej (Klim), the Shiva-Shakti Beej (Hans), the Kaam Beej (Klim), the Dharaa Beej (Lum; this stands for the earth), the Maya Beej (Hrim), the Mahima Beej (Sa), and then the three Beejs (Hans, So-a-Ham, Hans). [The esoteric group of letters of this tenth Vidya are the following—'Hrim', 'Klim', 'Hans-ha', 'Klim', 'Lum', 'Hrim', 'Ha', 'Sa', 'Ka', 'Ha', 'La', 'Hrim', 'So-a-ham', 'Klim', 'Hans-ha', 'Hrim', 'Hans-ha', 'So-a-ham' and 'Hans-ha'.]

The next esoteric Vidya is known as 'Param Shiva Vidya'—i.e. the esoteric Vidya dedicated to the supreme Lord Shiva. When the Agastya Vidya is placed after the Shanmukha Vidya, the worshipper attains the supreme Shiva. This Lord is the patron God of the last stage of one's spiritual endeavours. This Vidya is the *eleventh* form of esoteric Vidya. A person who invokes this Vidya with faith and devotion is able to attain the state when he becomes one with Shiva. [The esoteric group of letters of this eleventh Vidya, called the Param Shiva Vidya, are the following—'Hrim', 'Klim', 'Hans-ha', 'Klim', 'Lum', 'Hrim', 'Ha', 'Sa', 'Ka', 'Ha', 'La', 'Hrim', 'So-a-ham', 'Klim', 'Hans-ha', 'Hrim', 'Hans-ha', 'So-a-ham', 'Hans-ha', 'Ha', 'Sa', 'Ka', 'Ae', 'La', 'Hrim', 'Ha', 'Sa', 'Ha', 'Sa', 'Ka', 'Ha', 'La', 'Hrim', 'Ha', 'Sa', 'Sa', 'Ka', 'La' and 'Hrim'.]

The final Vidya pertains to Lord Vishnu, the sustainer of creation and the invisible, all-incorporating macrocosmic gross form of Brahm, the Supreme Being. This is the *twelfth* Vidya, and is known as 'Vishnu Vidya'. It should be faithfully and devotionally invoked in order to attain Lord Vishnu. It is composed by placing Vagbhava Vidya with the Agastya Vidya, Kaubari Vidya, Kaam-kala Vidya, and Shakti Koot which is inferior to the Lopa Mudra. [The esoteric group of letters of this twelfth Vidya, called the Vishnu Vidya, are the following—'Ha', 'Sa', 'Ka', 'Ae', 'La', 'Hrim', 'Ha', 'Sa', 'Ha', 'Sa', 'Ka', 'Ha', 'La', 'Hrim', 'Ha', 'Sa', 'Ka', 'La', 'Hrim', 'Ka', 'Ae', 'Ee', 'La', 'Hrim', 'Ha', 'Sa', 'Ka', 'Ha', 'La', 'Hrim', 'Ka', 'Ae', 'Ee', 'La', 'Hrim', 'Ha', 'Sa', 'Ka', 'Ha', 'La', 'Hrim', 'Sa', 'Ka', 'La', 'Hrim', 'Ha', 'Sa', 'Ka', 'Ha', 'La', 'Hrim', 'Ha', 'Sa', 'Ka', 'Ha', 'La', 'Hrim', 'Sa', 'Ka', 'Ha', 'La' and 'Hrim'.] [16].

17. [Now, Lord Sada Shiva (the eternal Shiva) describes the magnificent glorious form of the divine Goddess known as Tripura as follows—]

The Lord (Shiva) said, 'When one hears this Vidya narrated by me and understands its profound metaphysical import, it is deemed that such a person becomes enlightened about the fact that everything is Brahm (the Supreme Being and the cosmic transcendental Consciousness personified). Whatever that appears to be different from Brahm is also Brahm. [In other words, all things, whether within grasp or not, whether visible or not, whether comprehensible or not, are nothing but Brahm. There is nothing in this creation, including the Goddess Tripura, that is not Brahm.]

One must accept this supreme transcendental Vidya and its patron Goddess (Tripura) with greatest of faith, reverence and devotion.

This great Goddess is known as Kamakhya (one who fulfills desires), Purva (the primary and most ancient), Turiya (the one who is liberated and without any limitations of the mortal world), Turiyateet (the one who is even beyond the Turiya; one who is eternally transcendental), Sarwotkata (the one who is the best and most exalted), and Sarwamantra-sanagata (the one who is worshipped by all the Mantras).

She is the deity established or consecrated on the major Peeths or sub-Peeths. [That is, she is the Goddess worshipped in the holy sites, whether major ones or minor ones, where the Goddesses are worshipped.]

She is surrounded on all the sides by Gods who pay their obeisance to her.

She has all the Kalaas (skill and expertise), and pervades uniformly in all the different Kalaas (units, divisions, fractions) of this creation.

She is delightful, happy, joyous and cheerful (Samoda).

She is as sweet as honey and nectar (Saparaga).

She has a most compassionate, accommodating and friendly heart (Sahridaya).

She is like an embodiment of Amrit, the invigorating elixir of life and eternity (Samrita).

She has all the skills and expertise that one can possess (Sakalam).

She is complete in all respects, having all the organs (that symbolize all the units of creation). That is, she is not handicapped in any manner whatsoever (Seindriyam).

She is always risen and shining (Sadoditam).

She is known as Trikuta and Tripura. [That is, she is the divine Goddess who lives on the three legendary mountains, and is the one who is the Goddess of the three worlds represented by the terms Bhu for the terrestrial world, Bhuvaha for the sky, and Swaha for the heavens. The term Tripura also refer to the divine consort of Shiva who is called Tripurari because he had killed the demon known as Tripurasur.]

She is a personification of the best aspects of Maya (the delusion-creating power of Brahm which is the primary force behind creation).

She is the supreme Goddess for the worshippers of Lord Vishnu (i.e. she is a personified form of Laxmi, the divine consort of Vishnu).

The worshipper should enshrine the Goddess, who is the supreme Bhagwati (one of the names of the cosmic Mother) as well as the eternal Maya (the delusion-creating power of Brahm which is the primary force behind creation) in the core of his lotus-like heart.

This Goddess is the one who controls and regulates all the organs of her devotees (i.e. she controls and regulates their deeds and actions), and provides their mind and heart with cheerfulness, delight, happiness and joys.

She holds a bow and arrow in her hands (as a sign of her eagerness to vanquish enemies and evil forces of creation).

She is the Goddess who is the patron deity of the tongue and the words it speaks.

She is the Goddess who is at the core (center) of the shining full moon. [That is, she forms the essence of the beauty, charm, grandeur, glory and magnificence of Nature that the full moon is a metaphor for.]

She is the moon with all its changing phases personified.

She has manifested herself as the seventeen subtle aspects of creation that form the Linga Deha of the living being. [These seventeen elements that constitute the Linga Deha of the creature are the following—the five organs of perception (ear, eye, nose, tongue and skin) + the five organs of action (hand, leg, mouth, anus and genital) + the five Prans (the five subtle forms of the vital winds present inside the body—such as Pran, Apaana, Samaana, Vyan and Udaana) + one Mana (mind) + one Buddhi (intellect) = 17. Refer Shaarirako-panishad of Krishna Yajur Veda, in its verse no. 16.]

The great Goddess is ever-present. She holds a snare ('Paash') and a goad ('Ankush') in her attractive hands (to indicate that she can put under leash, vanquish and control all reckless, sinful and evil creatures of creation).

The Goddess with three eyes (Trineta) is as radiant and splendid as well as powerful and majestic as the fully shining sun that has risen high up in the sky.

The worshipper should enshrine this great Goddess who is also Laxmi personified. [By alluding to Laxmi it is implied here that she is a personified form of the divine consort of Lord Vishnu, and can grant the worshipper all worldly wealth and glories.]

This great Goddess is endowed with all the virtues and attributes that are metaphorically represented by Laxmi (the Goddess of wealth, opulence and majesty).

She has all the divine attributes and virtues imaginable.

She is a personified form of Chaitanya—i.e. she is spiritually enlightened, awakened and realised.

She is without any faults, blemishes, corruptions or darkness of any other kind (Niranjan).

She is a resident of the Trikut (the legendary three mountains).

Her face is sweet and charming. She has a beautiful countenance (Smit-mukhi).

She is known as Maha-Maya, i.e. the personified form of the great delusion-creating powers of Brahm.

She is fortunate and is most beautiful; she has all the auspicious and glories virtues in her; her divine consort is eternal—i.e. she is never widowed (Subhaga).

She is revealed in the form of the stupendous power and energy contained in the Kundalini (the serpent-like coiled energy center of the body located at the lower end of the spine).

She is the cosmic energy that lives subtly in the center of the symbolic triangle present in the lower end of the body. [This refers to the *Kaamroop Peeth* which is situated in the center of the triangle formed by the Muladhar Chakra located in the perineum, the Swadisthan Chakra located at the base of the genital organs, and the Manipur Chakra located in the navel region. Refer Krishna Yajur Veda's Dhyani Bindu Upanishad, verse nos. 44-45; Yogshikha Upanishad, Canto 1, verse nos. 170-171, Canto 5, verse no. 8.]

She is indescribable and incomprehensible.

She is the divine Goddess who lives in the Sripeeth (i.e. the *Kaamroop Peeth* mentioned above).

She is the supreme Goddess known as Bhairavi (the divine consort of Bhairav, one of the forms of Lord Shiva), Chitkalaa (the various aspects of consciousness), and Maha Tripura.

The worshipper should meditate upon this great Goddess with great attention.

Those who understand this Goddess in the way described above are indeed very fortunate. This is the teaching of this great Upanishad. [17].

-----***-----

Canto 2

1. To read the great mantras of Goddess Tripura with the avowed aim of attaining the blessings of the Goddess, one should offer the Soma (the sanctified liquid) to the Jatveda fire.

The assembled sages requested Lord Shiva—‘Oh Lord! Please enumerate the various Beej Mantras that come before, during and at the end of the various Richas (hymns).’ [1].

2 The Lord replied—‘Incant the Richa (hymn) ‘Jatvedase Sunavam Somam’ (I respectfully offer the sanctified Soma to the Jatveda fire). Repeat the last Koot of the Adi Vidya in the reverse order. [The word ‘Koot’ refers to the sequence of esoteric letters of the Adi Vidya. The ‘Adi Vidya’ refers to the primary form of knowledge pertaining to the divinity. Hence, this Koot consists of the esoteric letters ‘Sa’, ‘Ka’, ‘La’ and ‘Hrim’]

Add the long vowel sound of the primary vowel (i.e. the sound of 'Aa' as in *master*; *rather*) to the first letters of the group of letters coming under the category of the first and second Koots. [Thus, the changed letters are: 'Ka' + Aa = Kaa; 'Ha' + Aa = Haa.]

It is said that the hymns such as 'Sunavam Somam' remove ignorance. These hymns destroy all kinds of ignorance and delusions that make one believe in anything other than Brahm; it eliminates all delusions about the fact that everything is Brahm and nothing but Brahm.

That is why it is called the best, the one that provides immense bliss and contentedness, and is most auspicious and holy. [2].

3. The first Koot (group of esoteric letters known as the Vagbhava Koot) is a treasury of all spiritual wealth and a provider of freedom from all sorts of entanglements.

The second Koot (called the Kaam Koot) is the one that is the cause of establishment; it establishes and fulfills desires for getting established.

The third Koot (known as the Shakti Koot) the cause for all other Koots. [This is because Shakti means energy and strength. These virtues are needed in success in any enterprise, temporal or spiritual.]

When one worships Goddess Tripura with her Mantra keeping this in mind or remembering these facts, it provides purity of Mana (mind, sub-conscious and heart).

When the Jatveda fire is worshipped by the hymn 'Jatvedas Sunavam Somam' keeping the above facts in mind, the great knowledge known as 'Maha Vidyeshwari' is accessed by the worshipper. [3].

4. Having faith in the Vidya pertaining to the Goddess Tripura, and repeating the hymn dedicated to the Jatveda fire along with the syllables of Pranav (i.e. of the Mantra 'OM', of which the three syllables are A, U and M) which stand as a symbol for the eternal cosmic Lord Shiva (Brahm), the worshipper is able to access the divine subtle energy that is represented by the auspicious Kundalini as well as by the symbolic triangle. [The Kundalini is the coiled energy center at the base of the spine which is aroused by Yoga or meditative exercises. The 'triangle' refers to the Kaamroop Peeth which is situated in the center of the triangle formed by the Muladhar Chakra located in the perineum, the Swadisthan Chakra located at the base of the genital organs, and the Manipur Chakra located in the navel region.] [4].

5. The patron deity of the first Koot (group of esoteric letters) of the Adi Vidya (primary knowledge) is Vagbhava. [The first Koot is the series of letters headed by 'Ka'.]

The patron deity of the second Koot of the Adi Vidya is Kaam-kalaalaya. [The second Koot is the series of letters headed by 'Ha'.]

[Now, first the importance of the Koot starting with the letter 'Ka' vis-à-vis the Supreme Being is being explained:—] The Parmatma (the Supreme Being) is evident in the pronunciation of the words 'Jat'. [The word 'Jatveda' refers to the cosmic and universal fire element. The latter has no form and specific attributes; it is invisible yet omnipresent; it is most powerful and potent element; it is pure itself and has the ability to purify. All these are the characteristic virtues of the Supreme Being.]

The word 'Jat' refers therefore to the eternal and supreme Lord Shiva.

A person begins to have desires as soon as he takes birth. When desires are abandoned, the man attains contentedness and fulfillment. Discarding of Kaam (desires) gives him a sense of completeness—this is what those who are Brahm-

realised ('Brahm Gyanis') say. I also reaffirm this fact. [In this context, the word 'Jat' implies 'birth'. It also means one's family lineage. Here, the lineage is from Brahm or Lord Shiva. Hence, when one overcomes desires, he is one like Shiva.]

The Beej letter of the earth is 'La'. It is also symbolic of the three eclectic states of the creature. Hence, 'La' assumes three forms called 'La-traya'. ['Traya' means three. These three states refer to 'Sat-Chit-Anand'. 'Sat' means 'truth', 'Chit' means 'consciousness', and 'Anand' means 'bliss'.]

So when one gets true bliss and realises the truth of the consciousness with the aid of Mantras, he is certainly the one who attains the same stature as that of Shiva who is an embodiment of the virtues of Sat, Chit and Anand. In other words, a wise worshipper sees these virtues in the letters of the Mantra. [He literally 'reads between the lines' in the sense that he sees more to the Mantra than their being merely a jumble of senseless alphabets.]

This is how the Gotra (lineage; inheritance) of the Mantras are explained. [That is, this is how the importance of the Mantras is explained. In other words, the real benefit from any given set of Mantra is derived when the worshipper contemplates upon Brahm and remembers the divine glories of Brahm while offering worship with any Mantra. He then gets the truthful spiritual reward in the form of attaining self and Brahm realisation which is marked by Sat-Chit-Anand.]

[Now, the importance of the second Koot starting with the letter 'Ha' is being explained:—] After this comes the Kaam-kalaa-laya Koot (that starts with the letter 'Ha'). The explanation given for the Vagbhava Koot (as described above) is also applicable here.

This eclectic and holistic knowledge of Mantras is applicable to all of them as all Mantras are always made up of letters. [5].

6. After having explained the worship of Goddess Tripura in the context of the worship of the Jatveda fire, what remains to be explained is its relevance to the Parmeshwar, the Supreme Being (Brahm) who is also known as 'Param Jyoti' as he is brilliantly self-illuminated.

The fourth state of consciousness known as the Turiya (transcendental state of consciousness) is equivalent to the complete light of enlightenment that is obtained when the worshipper experiences the glorious state of complete self-realisation. This is like the complete Mantra for Pranav having the Bindu. [This refers to the sign of OM which has a concave dish with a dot on its top placed above it. This sign in Yoga refers to complete enlightenment, and is a symbol of Shiva with Shakti, or a union of the individual creature with Brahm.]

One must understand that all the three states of existence, viz. the first state known as Jagrat, the second state known as Swapna, and the third state known as Sushupta, are incorporated in the fourth state of Turiya. [When the worshipper attains the Turiya state he becomes all-knowing.] Therefore, he is deemed to be aware of what is experienced during all these pervious states. In other words, the 'light' of knowledge that shines in the fourth state is comprehensive. It is equivalent to Shiva and his supreme enlightenment metaphorically depicted as 'light'.*

The notion 'I am' should also be understood in this context. That is, 'I' (the Atma) am the Shiva who is fully enlightened and stays in the Turiya state of transcendental existence.

The Sarwakaari Vidya should also be understood in a comprehensive manner in the sense that all the various Vidyas refer to the same universal essence known as the Atma that is a personification of the supreme Brahm.

This explains the esoteric meaning of the hymn ‘Jatvedas Sunavam Somam’ etc. that is read with other Mantras of the Sarwakari Vidya. They all refer to the Shiva and Shakti who are one unified form of Divinity, and not separate from one another.

A wise person who knows this Adi Vidya gets all protection from delusions, and is able to attain the abode of Lord Shiva. Such a person is most fortunate and auspicious [6].

[Note—*This part of the paragraph can be interpreted as follows also—All the three primary esoteric Vidyas, such as Vagbhava which is the first Vidya, the Kaam-koot Vidya which is the second one, and the Shakti-koot Vidya which is the third, are deemed to be incorporated in the Sarwa-rakshakari Vidya. When one understands the underlying philosophy of these independent Vidyas that each of them describes no one else but the supreme transcendental Brahm in its different aspects, such a wise person becomes all-knowing because there is nothing left to be known. This knowledge is ‘Sarwa-rakshakari’ because it protects against all delusions and ignorance; it protects the worshipper from getting entangled in countless doctrines that are more often than not contradictory to each other and cancel each other out. This is because they do not speak the ‘truth’, as ‘truth’ can never be two; ‘truth’ can never be more than one.]

7. Now we shall narrate the Vidya (esoteric knowledge) that pertains to Goddess Tripura as she is worshipped by the means of a ‘Chakra’ (a wheel for doing worship) which is built around various Beej Mantras (seed or root letters related to the various aspects of the dynamic powers of Brahm revealed as Goddess Tripura).

The Mantra ‘Jatvedas Sunavam Somam’ (that is said at the time of offering oblations of Soma to the sacred fire known as Jatvada) should be incanted alongside invoking Goddess Tripura who is an eternal manifestation of the combined virtues, glories, potentials and powers of Shiva and Shakti. [Here, Shiva stands for Brahm, the Supreme Being, and Shakti for the dynamic powers and authority of Brahm.]

‘Jatveda’ stands for Shiva, and the letter ‘Sa’ stands for Shakti.

The Goddess stands for Shiva (Brahm) and Adi-Shakti (i.e. the primordial energy), as well as for the Bhuts (elements; the creatures that came into existence as result of the union of Shiva and Shakti).

She resides in and moves around the Trikut (the legendary mountains having three peaks; here symbolizing the three worlds—the past, the present and the future, as well as the terrestrial, the celestial and the nether worlds).

She is manifested in the form of the Sun and the Moon.

She is obtainable or attainable by the medium of Mantras (divine formulas); she lives in a secret form in the Mantras, and lends them their powers and potentials.

She is Maha-Laxmi, the great Goddess of wealth and prosperity, as well as the divine consort of Lord Vishnu.

Goddess Tripura is always arisen and enlightened; she is always evident in her manifested forms.

The worshipper should say the Mantra ‘Jatvedas Sunavam Somam’ while remembering (keeping in mind) the knowledge preached above.

The word ‘Veda’ (Jat + ‘Vedas’) represent the consciousness that is eternal and truthful. [It also means the consciousness that has manifested itself as the Hans, the divine Swan which is employed to symbolize the Atma that is eternal and truthful.]

By placing a Bindu (a dot) on this word Veda (i.e. when it is pronounced as ‘Vedam’) and the worshipper sitting in the posture known as Siddhasan¹, he is able to properly worship Goddess Tripura. This is called ‘Tripura Malini Vidya’. [The Bindu

represents the 'Shakti' aspect of Brahm. Hence, the placing of the Bindu or the dot on the word Veda has two connotations—one, it helps the worshipper to invoke and activate the dynamic powers that are inherent in the Mantras or hymns of the Vedas, and two, it invokes the dynamic cosmic powers of the Supreme Being manifested in the form of Goddess Tripura by offering oblations to the Lord by the use of these hymns of the Vedas.]

The worshipper should say the Mantra 'Jatvedas Sunavam Somam' while remembering Goddess Tripura and deeply think that she (i.e. her dynamic powers) are present in a subtle form in the esoteric letters 'Ka' and 'La'. [It ought to be noted here that these two letters form the word 'Kalaa = Ka + Laa'. This word means aspect or facet. Hence, the worshipper is basically honouring the ability of the supreme Brahm to infuse the letters of the alphabet with their astounding powers which enable the words formed by their combination to express great things, and reveal the magnificence and glory of Brahm through the Vedas because the latter are also basically a combination of letters that form words of the hymns which constitute the text of the Vedas.]

Then, the worshipper should offer prayer to the image of Goddess Tripura who is the Goddess of the entire world. [That is, after having worshipped the Goddess in her manifestation as the Vedas, the fire known as Jatvedas, the letters represented by Ka and La, one should visualize the invisible Goddess in the form of an iconic image, known as a 'Murti'.]

He should incant the Mantras 'Jatvedas Sunavam Somam' and invoke the Goddess Tripura-Laxmi while offering oblations to the sacred fire. The 'fire' of the sacrifice, or the Jatvedas fire to which the oblations are being offered by the worshipper, is the mouth of the supreme Goddess who is an embodiment of three lights, known as Tri-jyoti. [The three Jyotis or lights refer to the three grand virtues of the Spirit, viz. Sat or truthfulness, Chit or consciousness, and Anand or bliss. It also refers to the three Gunas that constitute the basic elements that mould all characters in the world—viz. Sata Guna, Raja Guna, and Tama Guna.]

This is the knowledge pertaining to the proper way of offering of oblations to and worship of the Mother Goddess Tripura ('Tripur-amba' = 'Amba' means 'mother'). [7].

[Note—¹The Siddhasan:-This Aasan or sitting posture of Yoga has been described in Trishikhi Brahmin Upanishad of Shukla Yajur Veda tradition, in its Canto 2, verse no. 49 ½ as follows—"A Siddhasan or Siddha Aasan (literally, a posture that bestows mystical powers, or a posture that only accomplished experts can do) is when the ankle of the left foot is tucked under the suture (which is a fold of skin between the anus and the testicles) and the right foot is placed on the top of the genitals. The body is kept erect in this posture. To sit in this posture, the two legs are first stretched out. The left leg is then bent at the knee and folded in so that the heel touches the genitals and the sole lies flat against the inner thighs of the right leg. Then the right leg is folded in and the heel is placed in front of the pubic bone right above the testicles, and the sole touches the inner thigh of the previously folded left leg. The two hands are stretched out and the outer side of the wrist of each hand is placed on the bent knee joint of the respective side. The palm is opened and the thumb is touched by the bent first finger to form a virtual ring, with the remaining three fingers held out straight. The practitioner sits perfectly in a ram-rod straight position, with the spine, the neck and the head in a straight line. The mental sight is fixed on a spot in front of the nose, and this state of intense concentration is maintained as long as is feasible for the practitioner. Then the legs are gradually unfolded, and after some period of relaxation the process is repeated with the opposite leg being folded in first and placed below the other leg. [It is believed that this posture is one of the best postures

to be adopted for Yoga amongst the eighty four lakh (84×10^5) postures of meditation. The fact that there are as many numbers of Aasans as there are species of living beings is endorsed by Dyanbindu Upanishad, verse no. 42 of the Krishna Yajur Veda tradition. This Siddha Aasan is capable of cleansing all the seventy two thousand Naadis (ducts in the body), and is so-called because it is possible to access the divine source of cosmic energy trapped inside the body as well as experience the cosmic power of the kindled Spirit by employing this Aasan. The word 'Siddha' implies one who has acquired stupendous mystical and supernatural powers that are beyond the parameters of the physical and mundane world.] (49 ½).”]

8. The worshipper should remember and invoke the Goddess with the Mantra ‘Sa Naha Parshadati Durgaani Vishwaa’—i.e. the Goddess known as Durga is the one who lights up the whole creation, and is manifested in the form of the Bhuts, meaning the elements as well as the creatures.

She (Durga) should be regarded as the one Goddess who bears the whole world, sustains it and controls it. The esoteric Vidya (knowledge) related to her worship should be employed to successfully accomplish various Karmas or deeds. [8].

9. In this way we have outlined the eight esoteric Vidyas related to the great Goddess Tripura. [These eight Vidyas are the following—Tripura Vidya = the Vidya related to Goddess Tripura; Maha-Vishweshwari Vidya = the Vidya related to the Goddess of the creation; Sarwa-rakshaakari Vidya = the Vidya that provides all-round protection; Tripureshi Vidya = the Vidya related to the Ish or Goddess of the three worlds; Atma-san-rupini Vidya = the Vidya that establishes the uniformity between Brahm and the Atma; Shiva-Shakti-rupini Vidya = the Vidya that relates to the joint forces of creation represented by Shiva and his dynamic powers revealed as Shakti; Tripura-vasini Vidya = the Vidya related to the divine Goddess who lives in a subtle form in the three worlds and all its three aspects, such as the three phases of time (past, present and future), the three states of consciousness (Jagrat, Swapna and Sushupta), the three chief directions (zenith, center and nadir), the three bodies (gross, subtle and causal) etc.; and Tripur-amba Vidya = the Vidya related to the cosmic Mother known as Tripura.] [9].

10. [Now, the actual discussion of the Chakra begins.]

The Gods asked the Lord (Shiva), ‘Oh Lord! Please tell us about that chief and most powerful ‘Chakra’ that can fulfill all desires and wishes, that is available to all and can be employed easily, that encompasses in its form all forms of worship and stands as a single source for invoking divine powers (i.e. it is like a single-window solution for all worship needs of the aspirant), that is a symbolic face of the whole world (i.e. any offerings made to it would be deemed to be made to all the numerous patron deities who rule over the world), and that is the door or medium of attaining Moksha (liberation, deliverance, emancipation and salvation).

By worshipping this Chakra, Yogis (ascetics) are able to break all the formidable spiritual knots that exist in the form of doubts and confusions about the Truth and Reality, and attain the supreme transcendental Brahm who is beyond reproach and doubts.’ [10].

[Note—The Chakra is a wheel used in formal forms of ritualistic worship. It is geometric diagram having various sections marked by lines. In this sections or chambers the various Beej Mantras of different Gods and Goddess, symbolizing various aspects of divinity and powers of Brahm, are enshrined, thereby empowering the Chakra with stupendous occult powers. The Chakra is employed especially in

occult forms of worship of Goddesses, and form an integral part of Tantra worship. The word 'Tantra' itself implies an instrument, an instrument that can be used to harness cosmic powers, energy and dynamism of Nature to attain mystical abilities that are normally beyond reach of a creature.]

11. The Lord replied, 'I shall describe the 'Sri Chakra'.

[The Sanskrit text for the construction or drawing of the Sri Chakra is very complicated; hence a simplified version is narrated here.]

An equilateral triangle is first drawn. With this triangle as a measuring standard, four more consecutive triangles are drawn outside it in a proportionate way so that their lines are parallel to each other, the distance between any given two such triangles is constant, and their areas increase in a fixed ratio. Thus we have five such triangles.

Now, an inverted series of five equilateral triangles are drawn over this earlier set of triangles in a similar way such that they form mirror image of the first set. Thus, now there are a total of $5 + 5 = 10$ triangles. Out of these, five are erect triangles, and five are inverted triangles. That is, we have complex structure of crisscrossing and overlapping triangles which present a visual picture of triangles within triangles.

However, this pattern produces primarily two big outer triangles—one with the apex pointing up, and the other with its apex pointing down. Since each outer triangle has three points, there are a total of six outer points around which the first circle is drawn in such a manner that the six points of the outer two triangles touch this ring at six points.

Outside this first circle, called the 'Chakra' because it is circular in shape, a layer of eight petals of equal sizes is drawn. These petals encircle this first ring. [This is the first Chakra with petals.]

Outside this layer of petals, another ring (Chakra) is drawn with sixteen petals of equal sizes, encircling it. [This is the second Chakra with petals.]

Outside this layer of sixteen petals is drawn another ring in double layer. [This is the third Chakra with double layer.]

Out side of this last ring are drawn four doors or gateways on the four sides (i.e. north, east, south and west). These are linked with each other by a periphery wall of three parallel lines that surrounds the ring and encloses the complex of triangles [This is called the 'Bhupur'.]

The above narration briefly describes how the Sri Chakra (with the Bhupur) is made. It is a diagrammatic representation of the wheel of creation. It outlines the mystical creation which is the divine abode of the Goddess. [11].

[Note—It should be noted that a triangle has three cardinal points, and that any triangle resembles a hill or mountain because they are pyramidal in shape. The Goddess is known as 'Tripura'—the Goddess of the three Purs or cities, who lives in the 'Trikoot'—the three mountains. The analogy with the triangle is very obvious here. Then it is said that she surrounds the world from all sides, and that nothing exists beyond her. This is indicated by the Chakra or ring which symbolizes an entity that encircles everything, and nothing is outside of it.]

12. Now we shall narrate the nine divisions of this Chakra in the reverse order—i.e. we shall start from the outer periphery and move to its center.

The first Chakra (counting from the periphery) is endowed with the following mystical virtues—(i) it enchants and captivates the three worlds, the terrestrial, the heavenly and the nether world ('Trilokya-mohan'); (ii) it is empowered by the eight Siddhis¹; (iii) it has the eight Matrikaas² established in it; (iv) it can eliminate all the

ten kinds of agitations, restlessness, negative excitement, anguish, grief, distress, dismay and regrets ('Kshobh')³. Goddess Tripura is honourably enshrined in this Chakra in a 'Sarwa-sanksho-bhini Mudra', literally the posture of the hand that grants the boon of freedom from all kinds of worries to her worshippers and devotees. [12].

[Note—¹The *eight Siddhis* are the various supernatural mystical powers that a person can possess. (i) 'Anima' means the power to become microscopic or so minute that one becomes invisible to the naked eye; (ii) 'Mahima' is to have majesty, glory and fame; to be honoured and acknowledged for one's achievements, wisdom, erudition, knowledge and skills; (iii) 'Garima' is to have weight, stature, dignity, decorum, gravity and significance; (iv) 'Laghima' is the grand virtue of being simple and humble inspite of being great, powerful and authoritative; it is to have simplicity and humility despite possessing grandeur, majesty, power, authority and magnificence; (v) 'Praapti' is to be able to attain or obtain anything wished or desired for; (vi) 'Praakramya' is to have valour, ardour, strength, powers, prowess, potential and punch leading to triumph, glory and majesty; (vii) 'Ishwatwa' is to be able to have lordship or sway over everything else; and (viii) 'Vashitwa' is to be able to control and subdue others, and exert influence on them so much so that they become obedient.

References—(a) Krishna Yajur Veda—Yogshikha Upanishad, Canto 1, verse no. 151-155, Canto 5, verse nos. 46-55; Yogtattva Upanishad, verse nos. 56-102; Brahm Vidya Upanishad, verse nos. 23-24. (b) Atharva Veda—Annupurna Upanishad, Canto 4, verse nos. 5-8 (which says that a wise aspirant should not be deluded by Siddhis)

²The eight Maatrikaas—The *Maatrikaa* of a Mantra are the various Sanskrit letters or alphabets that collectively form the text of the Mantra. The word Maatrikaa literally means 'a little mother'. Since the Mantra represents the cosmic divinity known as the supreme transcendental Brahm in its numerous manifestations known as various Gods, the letters are called the Maatrikaas because they empower this Mantra with the stupendous mystical powers that this Mantra possesses much like Brahm employing his cosmic dynamic energy to enable him to initiate and then sustain and develop this creation, and even bring about its conclusion.

So, if the given Mantra is regarded as a personification of the given deity, then the Maatrikaa would be its energy and dynamism that is latent and inherent in it. The Mantra would lose its powers and potentials in the absence of the Maatrikaa just like the Supreme Being needed the power of the Shakti to create the world.

The word Maatrikaa literally means a 'little mother'. So it is given the same reverence that one would give to a mother because it is the mother that gives shape to the body of the offspring—in this case the main body of the Mantra. Shorn of the Maatrikaa, the Mantra would be meaningless and powerless.

The Beejnighantu text (Beej = seed Mantra; Nighantu = dictionary) written by Bharirava lists 50 such Beej Mantras and describes what they stand for. Another text known as Beej-vidhaan has 75 lines in the poetical style called the Anushtup Chanda describing the Beej Mantras like Hrim, Strim, Aim, Krim etc. representing different deities such as Aindri, Vaamekshana, Saraswati, Kali etc. respectively.

Similarly, the Ekakchar-kosha of Purshottamadeva lists the Beej Mantras of various Gods and Goddesses, such as 'A' for Vasudeo, 'Aa' for Pitaamaha (Brahma the creator of the visible world), 'Pa' for the Wind God called Pawan, 'Saa' for Laxmi the goddess of wealth as well as for Shiva the third God of the Trinity.

Another text called Mantraartha-bidhan by Varadaatantra also lists the Beej Mantra such as 'Haum' for Shiva, 'Dum' for Goddess Durga, 'Krim' for Goddess Kalikaa, 'Hrim' for Goddess Bhuvaneshwari, 'Klim' for Kaamdeo-cupid, the patron god of love and passion, 'Gam' for Ganesh, 'Kshraum' for Narshingh, the half-lion and half-man incarnation of Vishnu, etc.

According to Maatrikaanighantu by Mahidasa, the Beej Mantras and even the word Mantras of certain chief deities are as follows—'A' stands for Shrikantha (Shiva, the one with a blue-tinged throat), 'Keshava' for Krishna, 'Vaata' for the

Wind God of Pawan, 'Ka' for Maya, 'Ma' stands both for Vaikuntha, the abode for Lord Vishnu who is the second of the Trinity Gods and is responsible for sustenance of creation, as well as for Mahaakaal, one of the names of Shiva, 'Ya' stands for Yamuna etc.

In the context of our present Upanishad, the *eight Maatrikas* (or Beej Mantras) *pertaining to Goddess Tripura* are the esoteric letters that symbolize the eight forms of Goddesses that the cosmic Mother has taken. They are the following—'Hrim' for Aindri and Bhuvaneshwari, 'Strim' for Vaamekshana, 'Aim' for Saraswati, 'Krim' for Kali, 'Saa' for Laxmi, 'Dum' for Goddess Durga, 'Krim' for Goddess Kalikaa, and 'Klim' for Kaam.

References for Maatrikaa—(i) Krishna Yajur Veda = Brahm Vidya Upanishad, verse no. 62-63; Yogtattva Upanishad, verse nos. 21-22. (ii) Atharva Veda = Pashupata Brahm Upanishad, Canto 1, verse no. 3.

³The various 'Kshobhs' are the numerous problems that a creature faces in this world which cause a continuous chain of restlessness and perplexities for him. He is bewildered and confused. Some of them relate to his body which is subjected to numerous problems right from birth, such as various diseases, hunger, thirst, the pains of growing up and getting old, and finally dying. Similarly, the world creates its own hoard of problems for the creature once it jumps into its ocean of uncertainties—such as endless desires and ambitions, greed and lust, hopes and expectations, and such other things that never seem to come to an end. Then there are fears from enemies and thieves, grief of separation from one's dear ones, never ending chain of material needs and the necessity of protecting them once they are successfully attained, the desire to excel and achieve success, the strivings and their accompanying blues of frustrations and depressions at failures or highs of exultations and joys at success etc.

The concept of 'Kshobh/Kshov' is closely linked to another concept called 'Vikshep'. This term means 'deflection, dissipation, confusion, perplexity, obstruction, disturbance, scattering or tossing about in uncertainty and disarray, agitation of mind and spirit, fickleness, fragmentation, fission and disharmony etc.' Obviously, the two terms 'Kshobh' and 'Vikshep' are intertwined, and together they corrupt a man's thinking abilities and create delusions for him.

The concept of Vikshep has been described in Paingal Upanishad of Shukla Yajur Veda, Canto 1, verse no. 5.]

13. The second Chakra (counting from the periphery) can fulfill all the desires and aspirations of the worshipper and the devotee. It is endowed with sixteen powerful mystical powers or forces called 'Aakarshini Shaktis'¹—literally meaning the powers to attract, pull, charm and captivate others. It has secret esoteric powers. Goddess Tripura is enshrined and established in it in the Mudra (posture) called 'Sarwa-vidraa-vini'. [It is her presence that is manifested in the form of the various mystical powers that this ring has.] [13].

[Note—¹The *sixteen Aakarshini Shaktis* or the mystical powers to pull and attract others are the following—(i) the power possessed by Pran, the vital life-sustaining winds or airs which maintain the vibrations, the rhythm and the essential functions of life in this creation; (ii) the power that comes with having Shraddha, i.e. having the eclectic virtues of faith, believe, conviction, reverence, respect and devotion that one has for his chosen deity, for the Supreme Being, and for the aim of life one has set for himself; (iii) the power to be as vast, all-pervading and all-encompassing as the Sky element known as 'Akash'; (iv) the power that is equivalent to that possessed by the Wind or Air element known as 'Vayu' that is so essential for life and its sustenance, and its proof lies in the fact one would die for want of air; (v) the power that is known as 'Tej', literally meaning vigour, vitality, energy, dynamism etc. that are depicted by the Fire element known as 'Agni' that is so essential for life and its sustenance, and its proof lies in the fact one would die for want of heat and warmth; (vi) the powers

equivalent to those possessed by the Water element known as 'Apaha' that is so essential for life and its sustenance, and its proof lies in the fact one would die for want of water; (vii) the powers that are equivalent to the earth element known as 'Prithivi' which is the base or foundation for all mortal creation, the power that helps one to sustain others and therefore it makes a person much sought after; (viii) the powers displayed by the various sense organs of the body, called the 'Indriya', because it is these organs that enable the creature to achieve stupendous and most astounding tasks that are even beyond imagination; (ix) the immense and most lauded power of the mind and sub-conscious known as the 'Mana' which has formidable potentials and reach, keeping the creature firmly held in its grip, and without which power nothing can be done or any success achieved in any field whatsoever; (x) the power equivalent to that possessed by food or 'Anna' which is absolutely essential for survival and has such powerful force of attraction that people go long distances in search of food, even kill each other over it; (xi) the magnificent power to create and generate that is shown by the semen known as the 'Virya' which stands for courage, valour, potency, vitality and strength, vigour, dynamism etc., and anyone who possesses these glorious powers or virtues is surely much attractive and useful for others; (xii) the power that comes with doing 'Tapa', meaning austerity and penance, tolerance of hardship as a means of penitence, forbearance, carrying out strict religious vows in order to purify one's self, sufferance for some auspicious and noble cause, etc., virtues that make the person who possesses them have a magnetic appeal for others; (xiii) the powers inherent in the various mystical 'Mantras' which are great spiritual formulas with astounding potentials to fulfill all desires of the user; they are like keys to achieve success in any enterprise; it also refers to the ability to give good advice; the power to contemplate and think, concentrate and focus, and then logically arrive at a conclusion; the mystical powers that are an integral part of the Mantra and represent the various dynamic forces of Nature which could be invoked and harnessed by the creature and help him to utilise the latent cosmic energy, the strength, the dynamism and other magnificent powers incorporated in these Mantras for the benefit of creation at large; (xiv) the power to do various deeds and take actions, the strength, energy and stamina to perform even difficult tasks, the powers that are an integral part of the theory of doing Karma; (xv) the powers that makes a man so powerful that he can have control over the various worlds called the three Lokas, i.e. the mortal world where the creatures live on earth, the lower heaven called the Antariksha where the junior Gods and the Spirits of dead ancestors live, and the upper heaven or Brahm Loka where the senior Gods live; it also refers to the terrestrial world, the heavens and the nether world, as well as the different worlds as experienced during the waking state, the dreaming state and the deep sleep states of existence of the consciousness; and finally (xvi) the inherent power in one's good name, the power of 'Naam'; this gives the person fame, acclaim, authority and respect in society; it bestows reputation, honour and glory that a person so much seeks in this world. This power of good name and its value in terms of making the man famous and eternal in the memory of others is so attractive that everyone wishes to gain some good name for himself in this world. A person with good name attracts others towards himself.]

14. The third ring or Chakra (counting from the periphery) is able to eliminate all distresses and miseries, is most mysterious in the sense that the Goddess known as Tripur-Sundari (literally the one who is the most beautiful and charming in the three worlds), the Goddess who has no form or a physical gross body ('A-nang'), is enshrined here secretly. [14].

15. The fourth ring or Chakra (counting from the periphery) corresponds to the Turiya state of existence, and like the latter it is able to bestow all auspiciousness. It provides

freedom from all the fourteen kinds of agitations, restlessness, miseries, grief, distresses and perplexities ('Kshobh'). [Refer note no. 3 of paragraph 12 above.]

It is powerful and bestows all kinds of wealth (spiritual, temporal, mystical—'Sampradaayam').

Goddess Tripura is honourably enshrined or established here in the 'Sarwa-shankarini Mudra'. [15].

16. The fifth ring or Chakra (counting from the periphery) corresponds to the Turiya-teet (i.e. post Turiya) state of existence. It helps one to attain everything he aspires for or desires. It bestows all the Siddhis (mystical powers)¹ and has all the ten Shaktis (dynamic powers)² inherently present in it. It is absolutely certain that this Chakra grants the Siddhis and Shaktis that are in-built in it because Goddess Tripura-Maha-Laxmi (one of the forms of Tripura) is honourably enshrined or established in it. She sits with a 'Mahon-unmaadini Mudra'. [The word 'Maho' means 'great', and 'Unmaad' means 'excitement'. Here it means that the Goddess is extremely cheerful and ever eager to provide her devotees with the various Siddhis and Shaktis mentioned and promised in this Upanishad.] [16].

[Note—¹The *Siddhis*—refer paragraph no. 12 of this Canto 2 which deals with the first Chakra.

²The *ten Shaktis* are the following—First let us see what are the *nine Shaktis*, and then we shall see which is the *tenth Shakti*. are the various forms of the divine dynamic power, potential, authority and energy of the Supreme Being that has taken the form of nine Goddesses. These Goddesses are worshipped as Mothers of creation and they complement the Supreme Being. The nine divine Goddesses, also known as the patron Goddesses in Tantra literature dealing with occult forms of divine worship, are the following—'Maha Tripur Sundari', 'Tripur Amba', 'Tripur Siddhi', 'Tripur Malini', 'Tripura Sri', 'Tripur Vasini', 'Tripur Sundari', 'Tripur Reshi', and 'Tripura'. All these forms of the Goddess are deemed to be incorporated in one name *Maha-Laxmi* according to the present paragraph of this Upanishad.

According to another version, the nine divine Goddesses are the following—Vaamaa (the divine consort of Lord Vamdeo, one of the forms of Lord Shiva), Durga (the Goddess who rides a lion and is considered a manifestation of Parvati, the divine consort of Shiva, and who had slayed the demon named Durg), Gauri (the divine consort of Lord Shiva; another name of Parvati), Bhagwati (another name of Parvati; the divine Mother Nature personified and from whose womb the entire creation has emerged), Parvati (the consort of Shiva; had derived her name because she is said to be the daughter of the king of mountains, called 'Parvat' in Sanskrit), Laxmi (the divine consort of Lord Vishnu, the sustainer of creation, and the patron Goddess of good fortune, prosperity and wealth), Saraswati (the divine consort of Brahma, the creator, and the patron Goddess of knowledge), and Aditi (the mother of all the Gods).

The system of worshipping of the divine Goddess envisages that she is a personification of all the dynamic powers and essential energy of all the Gods rolled into one. The chief Goddess is known as Parvati, the divine consort of Lord Shiva who is regarded as the greatest and most senior amongst the pantheon of Gods, and hence honoured by the epithet 'Maheshwar'. Parvati is also known as Durga who is worshipped in nine different forms. These nine forms of Durga are called 'Nav Durgas' or nine Durgas. They are also called 'Nav-Shaktis' or the nine personified forms of the divine dynamic power and energy of the Supreme Being.

Thus, according to the Kavach Stotra of Devi-mahatamya, the nine Shaktis are the following—Shailputri (literally, the daughter of the Lord of Mountains), Brahmchaarini (one who is perpetually a celibate and self-restrained), Chandraghantaa (one who is as beautiful as the moon), Khushmaandaa (one who is

always cheerful), Skandamaata (the mother of Skanda, also known as Lord Kartikeya, the son of Shiva and Parvati and a commander of the army of Gods), Kaatyaani (the Goddess who personifies the holy consort of the great ancient sage of the Vedic period, named Var-ruchi Kaatyaan), Kaalraatri (a personification of the night of the doomsday), Mahagauri (the great Goddess known as Gauri, another name of Parvati, the divine consort of Maheshwar or Lord Shiva), and Siddhidaatri (one who gives mystical powers and bestows her devotees or worshipper with success in everything).

According to Brahmaand Puran, the names are the following—Neelkanthi (one whose throat is blue-tinged), Kshemankari (one who takes care of her dependents), Harasiddhi (one who gives all Siddhis—mystical powers), Vanadurga (the patron Goddess of the forest), Rudradurga (the Goddess who is as fierce as Lord Rudra), Agnidurga (the Goddess who is as fierce as Agni, the Fire God), Jayadurga (the Goddess who gives victory), Vindhyavaasini (the Goddess who lives in the Vindhya mountain ranges), and Ripumaaridurga (the Goddess who vanquishes enemies).

Besides the nine Shaktis listed above, the Chitta Shakti, or the stupendous powers of the cosmic Consciousness, is the *tenth Shakti*. It is the most powerful of the various Shaktis because it is the ‘consciousness’ that drives the entire system of creation as well as the fact that it refers directly to the supreme transcendental Brahm who is at the center of the entire creation.]

17. The sixth ring or Chakra (counting from the periphery) grants all-round protection to the worshipper (‘Sarwa-rakshaakar’). It has all the ten Shaktis which make the worshipper all-knowing and omniscient. It has a sanctum sanctorum (‘Sanigarbha’) where the Goddess Tirupra-Malini is enshrined or consecrated. She is sitting in the ‘Maha-Ankusha Mudra’. [That is, she has a goad in her hands because the word ‘Ankush’ means ‘a goad’.] [17].

18. The seventh ring or Chakra (counting from the periphery) is mystically empowered to eliminate all the different ailments of the worshipper and devotee of the Goddess. It is empowered with the eight mystical Shaktis¹ that destroys all the diseases or torments of the worshipper and devotee. Here, Goddess Tripura-Siddhya is present in a most secret form. She is present in the ‘Khechari Mudra’². [18].

[Note—¹The *eight Shaktis* are the various divine cosmic dynamic powers of the Supreme Being that have revealed themselves in the form of various Goddesses who are actually personifications of the various forces of Nature. These Goddesses are the following—Vimlaa, Utkarshini, Gyaanaa, Kriyaa, Yogaa, Prahavi, Satyaa, Ishaanaa and Anugrahaa. They are present in the tendril of the lotus having eight petals that is worshipped in the Yantra. They are established in a posture of granting various boons and bestowing fearlessness to the devotee who worships them.

In the present context, they are all embodied in the form of Goddess Tripura-siddhya.

The Ram Purva Tapini Upanishad of the Atharva Veda tradition, Canto 5, verse no. 5 mentions eight Shaktis that are to be invoked, honoured worshipped while offering formal form of ritualistic worship to Lord Ram using the Talisman or Charm instrument called the Pooja Yantra or the Bhupur Yantra.

²The *Khechari Mudra*—The word Khechari is derived from the root ‘Khe’ which stands for the sky, and ‘Chari’ means to move, to wonder or to roam. Therefore, the combined word ‘Khechari’ means one who can move in the sky.

This Mudra has been graphically described in Gherand Sanhita, Chapter 3, verse no. 25-28, besides the Yogshikha Upanishad, Canto 5, verse nos. 40-42, the entire Canto 2 of the Yog Kundalini Upanishad; and Dhyan Bindu Upanishad, verse nos. 81-93 of Krishna Yajur Veda; as well as in Yogchudamani Upanishad, verse nos. 52-64 of the Sam Veda tradition, in Mandal Brahmin Upanishad, verse no. 2/1/8 of

Shukla Yajur Veda tradition, and in Shandilya Upanishad of Atharva Veda, Canto 1, section 7, verse nos. 14-17, 39-42/2.

The Khechari Mudra is amongst the best and toughest body postures that can be adopted by any ascetic, but at the same time it can empower the practitioner with stupendous mystical and occult powers and potentials. It involves elongation of the tongue by constantly pulling it out and making it flexible by constant flexing, rolling and shaking from side to side. The nerves and veins at the lower end of the tongue, i.e. in its tendon, are cut so as to make them senseless. To obtain success in this, the tongue is smeared with butter and stretched by holding it with an iron tong. This results in the tongue getting sufficiently elongated as to reach the inner opening of the mouth by inverting it backwards, and then it is tucked at the base of the upper palate to close the opening of the nostrils at the roof of the mouth cavity. When the elongated and backwards bent tongue is stuffed here, these openings of the nostrils are closed by it, thereby blocking the flow of air (breath). Meanwhile, the sight is fixed unwaveringly at a point midway between the two eyebrows.

It is believed that the Khechari Mudra, along with the Vajroli Mudra, was made popular by sage Matyseyanandranath (10th century CE), the great ascetic of medieval times and the moral preceptor of the famed ascetic Guru Gorakhnath.

The Khechari Mudra is also called Vaishnavi Mudra according to Shandilya Upanishad of Atharva Veda, Canto 1, section 7, verse nos. 14-17½.]

19. The eighth ring or Chakra (counting from the periphery) bestows all the Siddhis (mystical powers) to the worshipper and devotee. [Refer paragraph no. 12.]

It has four weapons of the Goddess marked on it. [These four weapons are a goad, a snare, a bow and an arrow. Refer Canto 1, paragraph no. 17.]

It is very secret and enigmatic by nature. The Goddess Tripuramba (the Mother Goddess Tripura) is honourably enshrined or established in this Chakra in a 'Beej Mudra'. [The word 'Beej' means a 'seed'. Here it means that the Goddess is present in her most primary form as the 'Mother' of all creation. The cosmic 'Mother' provides the 'seed' or the egg from which the entire creation has evolved. This fact is alluded to in this paragraph because this Chakra lies next to the very core of the worship instrument. It will be noted that the inner-most ring described in the next paragraph no. 20 refers to the 'Yoni Mudra' which means the Mother's womb where the creation is conceived.] [19].

20. The ninth ring or Chakra (counting from the periphery) is the inner-most ring. It is the chief Chakra around which the entire figure revolves; hence it is called 'Chakra Nayak'—literally the 'chief Chakra'. [It refers to the supreme Brahman around which the entire creation revolves.

It possesses the eclectic virtues of all-round and complete bliss ('Sarwanandmaye'). It is fulfiller of all the three types of Kaams (desires and aspirations)¹ as well as a bestower of all Aishwarya (fame, majesty, magnificence, glory, powers and authority).

This ninth Chakra possesses secret and esoteric powers. The great Goddess known as 'Maha-Tripura-Sundari' is honourably enshrined and established here. She is in a 'Yoni Mudra'. [The word 'Yoni' refers to the womb of a mother. Here it implies that the cosmic Mother lives in her primary form as Mother Nature in whose womb the entire creation was conceived and developed.] [20].

[Note—¹The three Kaams relate to the fulfillment of spiritual desires, worldly desires for obtaining the numerous material objects that give pleasure and comfort, and the desire to gratification of the sense organs.]

21. All the ‘Chandas’ (the various modes or styles in which the hymns of the Vedas and other scriptures are composed) are symbolically present in the form of the various spokes of this Sri Chakra or the divine wheel dedicated to the Goddess.

This is known as the ‘Sri Chakra’. [21].

[Note—There are a number of Upanishads that describe the ‘Chakra’ or wheel in different contexts. References: (a) Atharva Veda = Prashna Upanishad, Canto 1, verse no. 11; Canto 6, verse no. 6; Mundak Upanishad, Mundak (Canto) 2, section 2, verse no. 6; Nrisingh Purvatapini Upanishad, Canto 5, verse nos. 2-7; Naradparivrajak Upanishad, Canto 9, verse no. 3-4, 6; Tripdvibhut Maha-Narayan Upanishad, Canto 7, paragraph 3-14 (which describes the ‘Sudarshan Chakra’ of Vishnu); Shandilya Upanishad, Canto 1, section 4, verse no. 6-7 (which describes the wheel or Chakra that is present in the navel and how it keeps the creature trapped in it). (b) Krishna Yajur Veda = Shwetashwatar Upanishad, Canto 1, verse no. 4, 6; Canto 5, verse no. 12; Canto 6, verse nos. 1-3. (c) Shukla Yajur Veda = Paingalo-panishad, Canto 4, verse nos. 3-4.]

22. In the ‘Nabhi’ (literally the navel, implying the center) of the Sri Chakra is established the ‘fire’, and it is here that the Sun and Moon are also present. This is also called the ‘Omkar Peeth’, the worship altar where the divine Brahm represented by the word OM is worshipped. [The Sun and the Moon are visible manifestations of Brahm and Shakti respectively. The word OM is the monosyllable Mantra dedicated to Brahm, hence it is used to worship Brahm and his dynamic powers and energy in their most primary form.]

Here, the primary sound of the cosmos represented by the ‘Akshar’ (a letter) known as the ‘Bindu’ (which is actually a half-syllable sound made by placing ‘dot’ on a letter of the Sanskrit language to give it the sound of ‘M’ as in *mum*) is located.

The ‘navel’ of this Sri Chakra represents the ‘Vyom’—the fathomless and infinite sky (because it was in the ether of the sky that the first sound of creation was heard).

This is known as the ‘Param Vyom Vidya’. [This Vidya is the esoteric knowledge that envisions the origin of creation in the subtle infinite sky element that was uniformly pervaded by the cosmic Consciousness that is the primary and only source or factor responsible for creation coming into being. This Consciousness made its presence felt by way of vibrations or movements in the otherwise calm and static ether. This movement produced waves of energy, which in turn powered the chain reaction that set off the process of creation in motion.]

The worshipper and devotee should invoke and worship Goddess Maha-Tripur-Sundari with the Mantra ‘Kshirena....Sharanum Gataha’, and employ this Maya-Laxmi Yantra for her worship. [It should be noted that the Sri Chakra is given another name here—‘the Maya-Laxmi Yantra’. This is primarily because the word ‘Maya’ refers to the dynamic powers of Brahm which was employed by the latter to create this world, and Goddess Tripura is a personified form of this dynamism of Brahm. The word ‘Laxmi’ refers to the Goddess who takes care of all the worldly needs of the creatures who were created by the Supreme Being, and it is therefore one of her several names—refer paragraph nos. 7 and 16 of the present Canto 2 as well as paragraph no. 17 of Canto 1 in this context.]

This is what the Lord (Shiva) said (in his reply to the Gods—refer paragraph no. 10). [22].

[Note—The Sri Chakra is envisioned as a miniature form of the cosmos. Its central point called its ‘navel’ is therefore the center from where the first ripples of sound waves were generated in the cosmic ether prior to the origin of the visible creation.

The factor that created these ripples that eventually produced strong vibratory sound waves, which in turn provided the first bundle of energy that was needed to kick-start the process of creation, must have had its center in a single unknown point somewhere in the depth of the infinite ether that filled the equally infinite space of the sky. The waves spread from this single point in all the directions, thereby scattering the energy so produced uniformly in every direction of the cosmic globe. This is like the modern 'Big Bang Theory' of the origin of cosmos. Since this primordial explosion occurred deep in the cosmic ether it was like a distant rumbling of the rain-bearing cloud, a sound that reverberated in ether and very closely resembled the sound of the letter 'M' as in 'mum'.

Sound is regarded as the first manifestation of Brahm, the cosmic 'consciousness', because only an entity that is 'conscious' can create or produce anything whatsoever, which in this case was the primary source of energy that created the first ripples in the cosmic ether. The rest was a chain reaction which once set in motion took care of its own course.

The *Nabhi* or a navel here is the core from where the creation originated; the *Bindu* is the point from where the ripples of sound waves emerged and gathered energy as they traveled forward; the *Akshar* or letters of the alphabet are the numerous hues of notes and meters that this primary sound assumed in due course of its spread and evolution; since the sound needs a open medium to travel it did so in the sky known as *Vyom*.]

23. By worshipping and offering prayers to the divine Goddess with the Mantras narrated above, she is pleased and gives her divine vision (or sight) to the worshipper or devotee. Hence, a person who worships her with these Mantras is able to acquire a divine sight which would enable him to have a vision of the supreme Brahm. Not only this, this would also entitle him to see everything that is beyond the sight of normal view—i.e. he acquires a transcendental vision and becomes all-knowing and omniscient.

He who knows this is able to acquire eternity and imperishability. This is what this great Upanishad says. [23].

-----*****-----

Canto 3

1. The Gods said to the Lord (Shiva) that they wished to create (or start, initiate) the process of doing various Mudras (i.e. the various ways in which the fingers are held while doing Yoga or meditation).

The Lord told them to initiate the system of doing various Mudras by first touching the knee to the ground (i.e. by kneeling down before the supreme Goddess to invoke her blessing before they do anything) and then do the primary posture known as 'Padmasan' (the 'Lotus posture'). [1].

2. [Now, the triangular Mudra known as the 'Yoni Mudra' is being narrated.]

A person who knows the esoteric and highly secret 'Yoni Mudra' acquires such mystical powers that he is able to attract everyone and enthrall them, he becomes all-knowing, he gets all the rewards or fruits that all creatures so much long for, he is able to vanquish all opposition and trounce his enemies. [2].

3. The *first Mudra* (here meaning the way the fingers are held) is made in the following way—The second finger (middle finger) is placed above the third finger

(ring finger), the tip of the thumb touches the tip of the fourth finger (the little finger) so as to form a rough ring, and the first finger (index finger) is unfolded and held in a straight line that is pointing ahead and in front at an angle that is roughly 45° below the horizontal. [3].

4. When the two second fingers (middle fingers) of both the hands are joined together while adopting the Mudra described above (as the first Mudra—in paragraph no. 3), then we get the *second Mudra*. [4].

5. The *third Mudra* is in the shape of an Ankush (a goad). [Obviously, this Mudra is made by holding all the fingers close to each other so that their tips touch. This would give a rough shape of a goad.] [5].

6. The *fourth Mudra* is done by rubbing the palms of the two hands against each other while they face in the opposite direction (i.e. if one of the palms has its fingers facing east, the other should have its fingers facing west). While rubbing them, the first finger of each hand should be folded-in tightly, and over it is placed the thumb to virtually clasp the first finger. The rest of the fingers are held straight out to facilitate the rubbing of the palms. [6].

7. The *fifth Mudra* is done as follows—The thumb is made to touch the nails of the second finger (middle finger), the first finger (index finger) is placed on top of the fourth finger (little finger), and the third finger (ring finger) is kept unfolded (i.e. straight) and held parallel to the second finger but slanting downwards at an angle from the horizontal. [7].

8. The *sixth Mudra* is done by repeating the fifth Mudra but making the tips of all the fingers and the thumb touch each other at a point. This would resemble a Ankush or a goad which has a pointed tip. [8].

9. The *seventh Mudra* is done as follows—The left hand is placed on the right hand. The third finger (ring finger) is bent and placed in the middle of the upper part of the fourth finger (little finger), the second finger (middle finger) is placed on the top of the first finger (index finger), and the thumb is held straight out. This is known as the Khechari Mudra. [9].

10. The *eighth Mudra* is done as follows—The best and most effective Aasan (sitting posture) envisages that the following Mudra is adopted. The fourth finger (little finger) of each hand is bent slightly up and placed between the second and third fingers, the first finger (index finger) is made to bend slightly down and touch the tip of the second and third fingers (so as to make a point like the end of a goad), and the straightened thumbs of both the hands touch each other. The outer flat ends of the two palms also touch each other. This results in the formation of a shape that resembles an oblong cup with a snout that is almost like a conch shell. [10].

11. The *ninth Mudra* is done as follows—The third finger (ring finger) is placed on the top of the second finger (middle finger), the fourth finger (little finger) is pressed by the thumb, and the first finger (index finger) is placed on the top of the pile. [11].

12. The *tenth Mudra* is done as follows—The fourth finger (little finger) is held close to the thumb, almost touching each other and ensuring that their tips are close to each other. Since the remaining fingers numbering three would be free to stand erect, it is known as the ‘Tri-khand Mudra’. [The word ‘Tri’ means ‘three’, and ‘Khand’ means ‘part, division, separation or unit’. During this Mudra, the first finger, the second finger and the third finger are slightly apart from each other instead of touching each other as was the case in all the previous Mudras. Hence the term ‘Tri-Khand’ is applied to this Mudra.]

The above discussion describes the various forms of ‘Panch Baan’ and ‘Panchaadi’ Mudras. [12].

13. [This paragraph lists the ten Beej (seed) Mantras.]

The Beej for the Ankush (goad) is ‘Kro’ (as in *crow*). The Beej for Khechhari (a type of Mudra) are ‘Ha’ (as in *hunt*), ‘Sa’ (as in *son*), ‘Kha’ (as in *blockhead*), and ‘Prem/Pren(g)’. The Beej of the Sun is ‘Ha’. The Beej for Kaam (passions, lust and desires) is ‘Strom’. The Beej for ‘Vaghava’ (speech) is ‘Ka’ (as in *kerb*); this is the ninth Beej. The Beej for ‘Kaam-koot’ is ‘Ha’; it is the tenth Beej.

He who knows this is said to be an expert in the Mantras. [13].

14. Now we shall narrate the Kaam-Kala Chakra—i.e. the formal forms of worship which helps the worshipper fulfill all his worldly or temporal desires.

The esoteric Beej Mantras ‘Hrim’, ‘Klim’, ‘Aim’, ‘Blum’ and ‘Strom’ pervade throughout the Kaam-Kala Chakra.

The Mantra used for worship in occult practices is formed from the above Beej Mantras as follows—the Beej ‘Strom’ is prefixed and suffixed by the Beej ‘Aim’. [Thus, we have ‘Aim Strom Aim’.]

To this is added the Beej ‘Blum’ as a prefix and suffix. [We now have ‘Blum Aim Strom Aim Blum’.]

The two Beejs ‘Aim’ should be attached to or tied to the objective or aim for the fulfillment of which this Mantra is being invoked. This Mantra is to be used for offering sacrifices to the deity on the leaf of the birch tree.

[That is, these Beej Mantras are to be written on the leaf of the birch tree in a ring, a ‘Chakra’, with the work to be accomplished written around the Beej Mantra ‘Aim’. Then offerings are to be made on this leaf.]

A person who knows this knows everything. He acquires the mystical power to attract the whole world and vanquish it, or hold it spell-bound and stunned.

When the Beej ‘Blum’ is added to the above Chakra (ring of Beej Mantras), it is empowered to vanquish and kill all the enemies of the worshipper; it creates a formidable block in their activities and hinders their progress. [In short, it protects the worshipper from his enemies.]

When it is multiplied by one lakh times [1 lakh = 1,00,000], i.e. when the worshipper repeats this Mantra a hundred thousand times, it empowers him to hold the entire world under his sway and command.

When he repeats this Mantra for nine hundred thousand times, he is able to attain access to the divine abode of Lord Shiva.

When it is especially empowered with the various Maatrikaas (the Beej Mantras for various Goddesses), one is able to attain victory.

If a man offers sacrifices and oblations in a fire pit shaped like a woman’s genital organs, he is able to attract and control women of his choice.

By doing sacrifices and offering oblations in a fire pit shaped like a circle, one is able to acquire immense and incomparable wealth and prosperity, fame and majesty, pomp and pageant.

By doing sacrifices and offering oblations in a fire pit shaped like a square or a rectangle, there is abundant rainfall.

By doing sacrifices and offering oblations in a fire pit shaped like a triangle, one's enemies are killed and their movement is blocked or hindered.

By doing sacrifices and offering oblations in a fire pit with flowers one gets victory.

By doing sacrifices and offering oblations in a fire pit with great juices (such as the juice of the Soma plant), one gets immense Anand or happiness and bliss. [14].

15. [Worship of Lord Ganesh is now narrated.]

Lord Ganesh, who is the head of Lord Shiva's attendants as well as the senior-most God, is worshipped by offering prayers to him. For this purpose, the Beej Mantra 'Gam/Gan(g)' dedicated to him is used. The following hymn is said while the worshipper touches his own body (to indicate that he is invoking Ganesh to give him protection). [This is called 'Anga-Nyas'.]

The Mantra is 'Ganaanam Twa Ganpatim Havaamahe Kavim Kavinaamupasra-vastabham; Jyestha Rajam Brahanam Brahmnapata Aa Naha Srinva-nnutubhiha Seed Saadanam'. [Briefly it means—'I pay my obeisance and respect to Lord Ganesh who is the most senior amongst all the attendants of the Lord and even the Gods. He is most exalted, wise and learned. He is like the biggest king or emperor amongst those who are enlightened about Brahm, and is Brahm himself personified. There is no one better or senior than you. Be gracious upon me; be pleased with me. I bow before you most humbly and submit myself before you.']

When this hymn is being said, the worshipper should prefix and suffix it with the Beej Mantra of Ganesh, which is the Sanskrit letter 'Ga' (as in gum) with a Bindu (dot) on top, and pronounced as 'Gam/Gan(g)' (pronounced as *gum* or *gun(g)*). [15].

[Note—Refer also to Canto 4, paragraph no. 12.]

16. Next, the worshipper should offer prayers to the 'Kshetra-dhakshya' (the custodian God of the realm) by the following hymn—'OM Namō Bhagwate Bhasmaanga-raagaayogratejase Han Han Daha Daha Pach Pach Math Math Vidhwansaya Vidhwansaya Hal-bhanjan Shul-mule Vyanjan-siddhi Kuru Kuru Samudram Pruva-pretisthitam Shoshya Shoshya Sthambhaya Sthambhaya Par-mantra Par-yantra Par-tantra Par-doot Par-katak Par-chhedhan Kar Vidaarayā Chhindhi Chhindhi Him Phat Swaha'. [This is a long esoteric Mantra used in occult worship of the custodian God, which in this case is Lord Shiva. Briefly it means 'OM salutations! I bow reverentially ('Namō') before the Lord God ('Bhagwate')! He has the ash of the sacrificial fire smeared all over his body ('Bhasmang-raagya'), and is endowed with the 'Tej' (energy, dynamism, radiance and splendour) derived from his doing Yoga (meditation) ('Yogra-tejase'). Trounce, vanquish, burn to ashes, scorch, crush, smash, squeeze, wring, rub underfoot, break apart, ruin and demolish ('Han, Daha, Pach, Math, Vindhvansaya, Bhanjan') all oppositions, enemies, torments and tribulations of mine. Make me an expert in the languages ('Vyanjan-siddhi'; Vyanjan literally means consonants of a language); please do it, do it. You are well established and fulfilled like an ocean since time immemorial; make me similarly well established ('Samudram Pruva-pretisthitam'). Make my enemies stunned ('Sthambha') and oppressed ('Shoshaya'). You are powerful and strong enough to rupture or pierce

through ('Chhedhan'—i.e. overcome, neutralize, subdue, trounce) all spells case by great magical Mantras ('Par-mantra'), great magical Yantras or instruments ('Par-yantra'), great magical charms ('Par-tantra'), great messenger of distress and troubles ('Par-doot'), and great armies and multitudes of wild elephants ('Par-katak'). Tear them apart; split them, spear them, pierce them, stab them, kill them, severe them, render them ineffective ('Bidaaraya'; 'Chhindhi'). For this objective, I am offering this oblation and worship to you. Him, Phat (be quick, split them apart). Swaha (I hereby offer this oblation to you).' [16].

17. [Now, the 'Kumari', the Virgin Goddess, is being worshipped.]

The Virgin Goddess is to be worshipped with the following hymn—'Kul Kumari Vidyamahe Mantrakoati-sudhimihi Tannha Kaulihi Prachodayat'. [Briefly it means—'I offer my worship and respect to the Virgin Goddess of our clan/family. Please inspire me towards great and auspicious things. Please make me an expert in all the great and esoteric Mantras and their usage, as well as able to benefit from them.'

An aspirant who meditates in the above described manner finds eternity, great fame and acclaim, and attains the exalted stature of being established in the (knowledge of the) supreme Brahm. [That is, he becomes Brahm-realised, wise and enlightened.]

A person who knows this secret is eligible to obtain the fruit or reward of this knowledge.

This is the great esoteric knowledge expounded by this Upanishad. [17].

-----*****-----

Canto 4

1. [Now, we shall discuss how one can obtain victory over death.]

The Gods asked the Lord (Shiva), 'Oh Lord! You have expounded for us the best Gayatri Mantra dedicated to the Goddess Tripura. The hymn 'Jatvedas' etc. incorporates in it the eight esoteric knowledge of Tripura. Ascetics find liberation and deliverance from the shackle of death by honouring the Goddess with this Gayatri Mantra along with these eight forms of esoteric knowledge pertaining to her.

Now, please preach us the knowledge called 'Mrityun-jay'—literally the knowledge which helps one to conquer death itself.'

Hearing this combined request of all the Gods, the Lord (Shiva) revealed the most potential and acclaimed 'Mritunjay' knowledge of Lord 'Trayambak'¹ (the three-eyed God of the three worlds) that was encrypted in the form of 'Anushtup Chanda'². [1].

[Note—¹Trayambak—Refer Canto 1, paragraph no. 2.

²The Anushtup Chanda— The *Anushtup Chanda* is a verse with 4 lines, each line having 8 letters = total 32 letters. It was first conceived by an ancient sage named Anustuv, hence it bears his name.]

2. What is etymology of the term 'Trayambak'? The Lord is called 'Trayambak' because he is the Lord of the three worlds. [These are the terrestrial, the heavenly and nether worlds. It also means the past world, the present world and the future world.]

Why is he 'Yajaamahe'? It is because the word 'Yajan' means worship and honour. So, with the combined word 'Yajan' and 'Mahe' we invoke the essential

Tattwa or the basic Truth that forms the fundamental element in creation. [By extension, Lord Trayambak refers to the supreme transcendental Consciousness known as Brahm.]

The Beej Mantra ‘Kum/Kam’ that follows the word ‘Trayamb’ indicates victory over death.

Hence, the phrase ‘Trayambakam Yajaamahe’ is used to offer worship and honour the Lord of the three worlds. [2].

3. Why is the word ‘Sugandhim’ used to worship him? The Lord is famous in all the directions, his auspicious glories and magnificent virtues are known everywhere, and they have a divine halo around them which is as invigorating and spiritually rejuvenating as the fragrance or aroma of a divine flower. Hence, the term is used for him. [The word ‘Sugandha’ means pleasant fragrance, sweet and attractive aroma, an enchanting scent.] [3].

4. Why is the term ‘Pushti-varadhan’ used to honour him? It is because he creates all the worlds, sustains them, protects them, nourishes them, makes them healthy, helps in their growth and development, and enhances their glories and importance by living in all of them uniformly as he is all-pervading, all-including and all-encompassing. Hence, he is honoured by the epithet ‘Pushti-varadhan’. [4].

5. Why is he called ‘Urwaaruk-miv Bandhanaan-mrityor-mukshi-yeti’. Just like the musk-melon is firmly attached to its stalk, a creature is also sternly clasped in the shackle of death. When he breaks free from this vicious grip of the cycle of birth and death, he finds Mukti or final liberation and deliverance. [Lord Shiva is the most enlightened of the Gods in the pantheon. This is why he is the patron deity of ascetics and hermits. He can liberate the creature from the cycle of birth and death. He is depicted in the Purans as having his terrestrial abode in the holy city of Kashi where he gives Mukti to the dying man who is brought for cremation on the banks of the holy river Ganges.] [5].

6. Why is the word ‘Mamritaam’ used during his worship? It is because the worshipper attains the elixir of life that gives him eternity and imperishability. He becomes one like Lord Rudra himself. [6].

[Note—The full Mantra for Lord Trayambak becomes—‘Trayambakam Yajaamahe Sugandhim Pushti-varadhan Urwaaruk-miv Bandhanaan-mrityor-mukshi-yeti Mamritaam’.]

7. The Gods asked the Lord (Shiva), ‘Oh Lord! You have answered all our questions. Now please tell us the divine Mantras of Lords Shiva, Vishnu, Surya (Sun God), and Ganesh by employing which one can sufficiently please Goddess Bhagwati (the Mother Goddess) so much so that she willingly gives her divine vision to the worshipper.’ [7].

8. [This paragraph describes the Mantra of Lord Shiva.]

The Lord (Shiva) replied, ‘You must worship the God who vanquishes death with the help of the Anushtup Chanda ‘Trayambak’ etc. (narrated above).

It has been said from the beginning that the monosyllabic word OM is a representative of the Lord (the supreme transcendental Brahm) who is universal and uniformly all-pervading, all-incorporating and all-encompassing.

Hence, those who worship the Lord with Mantra ‘OM Namaha Shivaaye’ of the Yajur Veda are able to attain the exalted stature equivalent to Lord Rudra. He is rewarded with auspiciousness. [This Mantra briefly means ‘Salutations to the Lord represented by the word OM! I bow before Lord Shiva who is this particular supreme transcendental Lord’.]

You must be fully enlightened about it. [That is, a spiritual aspirant who knows the profound import of this great Mantra uses it for offering worship to the Lord in order to attain the supreme state of enlightenment that gives him salvation and emancipation.] [8].

9. [Paragraph nos. 9-10 describe the divine abode and the Mantra of Lord Vishnu respectively.]

Those who are wise, learned and erudite see the divine abode of Lord Vishnu as stretching in the clean space of the sky as far as the eyes can see. It stretches across the sky from one end to the other. [Therefore, the abode of Lord Vishnu is the ‘sky’ itself. On the one hand it is as vast, fathomless, indescribable, remote and inaccessible as the bottomless reaches of the infinite sky element, and on the other hand it is easily reached, viewed, touched and accessed as the sky that is seen with the naked eyes, that surrounds everything at close quarters, and that touches each and every creature directly.]

Lord Vishnu is many-faced (i.e. he has uncountable forms and shapes; all the creatures and all the aspects of creation are some or the other form of Vishnu). He uniformly pervades everywhere in this creation; whatever that exists is completely soaked in and surrounded by Vishnu. There is nowhere where he is not present. His divine abode is the sky with a high summit. The Gods headed by Brahma the creator and the Sun God always look up to this divine abode of the Lord in the heaven to have his divine glimpse. They bear the Lord in their hearts.

Lord Vishnu lives in a subtle form in all the creatures of this creation. That is why is known as ‘Vasudeo’—one who lives in all.

[There is another connotation of the term ‘Vasudeo’. It means the Lord of the eight Vasus. These Vasus are the primary assets created by the supreme Creator, the Brahm, to provide for the welfare of the creation that he created. Thus, the Vasus include such elementary needs of creation as water and fire etc.

Lord Vishnu is also known as the Viraat Purush, the infinite, invisible macrocosmic gross body of Brahm, the supreme transcendental Consciousness from which the entire creation evolved or emerged. The Viraat Purush was the first gross form of Brahm. It was ‘gross’ only in a relative term vis-à-vis the Brahm himself, but when compared to all the other units of the forthcoming creation, this Viraat Purush was almost as subtle as Brahm himself. The difference between Brahm and the Viraat Purush was only of a measurement of a millionth of a million degree in subtlety. Now, it was from this Viraat Purush that the rest of creation evolved. Even the creator of the visible world, Brahma, emerged atop a divine lotus that rose from the navel of the Viraat Purush. Once the creation took shape, the Viraat Purush assumed for himself the role of its keeper and sustainer. Hence, Brahm assumed the role of the Viraat Purush to create the primary forces of creation, including the Gods of the Trinity, i.e. Brahm, Vishnu and Shiva, and once it was done, he assumed the role of the overall commander and controller of creation in the form of Lord Vishnu. This is why Vishnu is primarily regarded as being synonymous with Brahm, and treated as the Supreme Being.

Besides this, the virtues of Vishnu that he is all-pervading and all-encompassing are also applicable to Brahm, making him synonymous with the latter.] [9].

[Note—The word ‘Vishnu’ consists of two components—‘Vishwa’ meaning the world or the entire creation, and ‘Anu’ meaning an atom. Hence, this is made up of atoms called Vishnu, and therefore the latter pervades throughout this creation. The whole creation is a manifestation of Vishnu. The divine glories of Lord Vishnu have been extolled in the Tripadvibhuti Maha Narayan Upanishad of the Atharva Veda tradition, Canto 1, paragraph 5-6; Canto 8, paragraph nos. 17, as well as in Vishnu Puran, Chapter 1, Canto 2, verse nos. 1-32, 55-70.

The Ram Uttar Tapini Upanishad of the Atharva Veda, Canto 5, verse no. 4/32 says that the Vasus are none but manifestations of Lord Ram who himself is the supreme transcendental Brahm himself.

The Vasus are the Nature’s gift to creature. They were the natural assets formed by the supreme Brahm so as to make life feasible and convenient in creation. In other words, the supreme Brahm who is also known as Lord Ram not only created this world but ensured that it is well provided for and its basic needs are taken care of by manifesting himself in the form of these eight primary requirements of life. This is the reason why one of the names of Vishnu is ‘Vasudeo’—the Lord of Vasus. It ought to be noted here that Lord Ram is an incarnation of Vishnu or Vasudeo.]

10. ‘OM Namō’ has three letters. [OM + Na + Mo = 3. It means ‘I bow before the Lord represented by the word OM’. Or, ‘OM Salutations! I bow before the Lord.].

The next word ‘Bhagwate’ has four letters. [Bha + Ga + Wa + Te = 4. It refers to the Lord.]

The final word is ‘Vasudevaye’ which has five letters. [Va + Su + De + Va + Ye = 5. It means ‘who is the Lord of the Vasus’.]

This is the twelve-letter Mantra of Lord Vasudeo (Vishnu). He who knows it is able to cross over and overcome all debacles, obstacles and hindrances. He gets a full life (i.e. he lives long and does not die prematurely). He gets lordship over all other creatures. He acquires abundant livestock, especially cows, as well as immense wealth and prosperity.

The Lord is eternally blissful, the supreme Purush (the Viraat Purush), the supreme transcendental Brahm, and is in the form of Pranav (the cosmic sound element) that is represented by the three letters ‘A’, ‘U’ and ‘M’ of the ethereal word OM. [10].

[Note—The full Mantra is ‘OM Namō Bhagwate Vasudevaye’.]

11. [This paragraph is dedicated to the Sun as a visible manifestation of the dynamic powers of the Supreme Being which have revealed themselves as the divine Goddess. Just like the Goddess which has astounding powers which are benign when favourable but destructive when malignant, the Sun too plays a life infusing and sustaining role in its benign form, but scorches everything to ruin when it gets unfavourable. This is proved by the fact that the same Sun which gives the much needed heat, light and energy to this creation, which produces and regulates the seasons, the rainfall, and the cycle of day and night, also produces droughts and famines, and sucks out life from this world by its relentless heat and sunshine. It has been said elsewhere in the Upanishads that the Sun is visible manifestation of the supreme Brahm. The Sun is also regarded as a personified form of the Fire God as well as the ‘eye’ of the Supreme Being. see Note below.]

The three letters A, U and M combine together to form the word OM. [This word OM refers to Brahm.]

The 'Hans' (i.e. Brahm) that is virtuous, pure, holy and divine resides in the infinite sky. The 'Hota' (the priest who offers oblations to the sacred fire during the sacrifice) offers sacrifices to this Hans on the altar.

[This refers to the offering of oblations to the sacred fire that is meant to be accepted by the Supreme Being.]

This sacred fire is like an honoured guest, and lives in one's own household. [This statement has another connotation. It refers to the fact that the Fire God, in his elementary form as the fire element that provides energy, heat, warmth and light, resides in the creature's body in a subtle form. This Fire God would then be synonymous with the 'consciousness' living in the creature's body because the body is kept alive and energized by this conscious factor.]

Similarly, the seasons also live amongst the men and have their symbolic place in the sacrificial altar. They have been created from a combination of such factors of Nature as water, rays of the sun, truthfulness and mountains.

A wise man who offers worship to the Sun God—who is a fount of brilliance, radiance, splendour and light, who brings dusk in its wake (i.e. where there is no Sun there is darkness), and who symbolizes the stupendous potentials of Pragya (true and deep knowledge; the virtues of wisdom, erudition, sagacity, enlightenment, expertise)—is able to attain all the eclectic fruits or the best of rewards that one can expect in this world by doing auspicious deeds. This fact is evident in each word of the Mantra dedicated to the Sun God. [The Mantra is not mentioned here, but it is the Gayatri Mantra explained at length in Canto 1 of this Upanishad.]

The 'Adrija' is the divine Goddess who epitomizes the glorious virtues of Brahm in their dynamic manifestation. [The word 'Adrija' has two parts—'Adri' means a Mountain and 'Aja' means a daughter. Hence, the word refers to the 'daughter of the sacred Mountain'. This is a reference to Goddess Parvati, the divine consort of Shiva, who is the daughter of the King of the Mountains.]

She lives in the sky high above. [This refers to the Sun which epitomizes the dynamic energy and potentials of the Supreme Being in its most brilliant, powerful and evident form.] [11].

[Note—The *Sun God* or Surya—The Sanskrit word for the Sun God or Aditya is *Surya*. This word has three connotations—viz. (i) Sarteha—one how moves. This refers to the Sun because it moves constantly across the sky. It also refers to the supreme cosmic Consciousness that makes all movement possible. (ii) Sviryate—this means one who receives and accepts. This virtue refers to the fact that all offerings offered to the fire sacrifice are done in the presence of the Sun, and since the latter is the celestial cauldron of fire all the offerings are deemed to be offered to it. In another plane, it refers to the Jiva, the living being, who receives stimuli from the world and then accepts them and deduces that the world from where they originate is real and true. (iii) Suvateha—meaning one who shines. This is very obvious in the case of the Sun. This virtue refers to the supreme Self or supreme Consciousness that is self-illuminated and self-effulgent.

Sun God or Surya appears first in the Rig Veda, 1/50. He is one of the chief Gods that sustain life. He is closely related to the Fire God; the Sun is a visible manifestation of the fire element. The sun is regarded as the 'eye' of the Viraat Purush, and at the time of creation when this Viraat Purush revealed himself as the individual creature such as for example a cow, a horse and a man, the Sun God took up residence in the eye (refer Aitereyo-panishad of Rig Veda, Canto 1, verse no. 4, and Canto 2, verse nos. 3-4). He is also regarded as visible manifestation of the supreme transcendental Brahm (refer Brihad Aranyaka Upanishad, 2/1/2; 2/5/5; 3/7/9. The Sun God watched the deeds done by all the creatures (Rig Veda, 1/50/2). The

Sun is like the Atma of all the creatures (Akchu Upanishad, Canto 1, verse no. 1; Rig Veda, 1/115/1; Shatpath Brahman, 14/3/2/9).

The Sun is the brightest, the most splendourous, the brilliantly radiant, the most majestic and grandest entity in the entire firmament. The whole length and breadth of the sky is lit with its light; all the objects present in the sky, visible or invisible, are illuminated by its light. It is the eternal and infinite celestial source of light, heat and energy; it inspires, fosters, sustains and protects life in this world; it is synonymous with and a metaphor for life in all its dimensions. Its splendour and radiance makes it an apt metaphor for knowledge, wisdom, erudition, sagacity and enlightenment. As an embodiment of this virtue of knowledge, wisdom, erudition and sagacity he has been held in high esteem and as the great teacher and preacher of eclectic knowledge pertaining to the philosophy expounded by the Upanishads. He had assumed the form of a horse and revealed the Shukla Yajur Veda to the great sage Yagyavalkya. He was also the teacher of Hanuman, said to be incarnate Wind God and Lord Shiva, and who was the great, most ardent and the wisest devotee of Lord Ram.

From the physical perspective also, the Sun is regarded as a fount of light, energy and heat which supports life in all forms in this physical world. No life is imaginable without the presence of the Sun.

According to mythological accounts, the Sun God was the son of sage Kashyap and his wife Aditi from whom all the Gods were born. He is said to be a revelation from the eye of the Viraat Purush also known as Vishnu who is the macrocosmic all-pervading and all-encompassing vast and invisible form of the Supreme Being known as the transcendental Brahm. The physical Sun in the sky is the Viraat Purush's visible form. He was married to Sangya, the daughter of Vishwakarma who is regarded as the architect, builder and planner of the Gods. Sangya had two sons and one daughter from the Sun God—viz. the sons named Shraadhya-dev also called Vaivaswat Manu and Yam the god of death, and the daughter named Yamuna which is also the name of a famous river in India. Sangya could not bear the intensity of the Sun's heat and light, so she left her 'shadow' or image and herself went away disguised as a mare to do severe penance. From this 'shadow' were produced two sons and a daughter. The two sons were Shani God who is believed to be full of malice and evil forebodings reflecting the genes of his mother as a dark shadow, and Saarni Manu, and the daughter was Tapti literally meaning one who is fierce and hot. In due course of time, the Sun God found out that his real wife Sangya was involved in doing severe Tapa, so he was extremely pleased with her and brought her back. It was from her form as a mare that the Ashwini Kumars were born. They derived their name from the root 'Ashwa' meaning a horse. These twin sons of the Sun God are regarded as the medicine men of the Gods.

The Sun God revealed himself as Sugriv, the king of the monkey race, during Treta-Yug when Lord Ram incarnated, and as Karna during Dwapar when Lord Krishna came as an incarnation of Vishnu. Sun God rides a chariot driven by Arun who is the son of Vintaa (his mother) and the elder brother of Garud, the legendary heron or eagle who is the mount of Lord Vishnu. The seven horses of the chariot represent the seven colours of the Sun's light. He is constantly on the move and controls and regulates the seasons, months, solstice and year.

The Surya Mandal, i.e. the divine abode of the Sun God, has been narrated in the Vishnu Puran, section 2, canto 10, verse nos. 1-23. It is also referred to in the Tripadvibhuti Upanishad of the Atharva Veda, Canto 5, paragraph no. 15 as falling in the path of a spiritual aspirant who, upon leaving his gross body, is going astride the Garud (the divine vehicle of Vishnu which is represented by the OM Mantra here) through the path of the sky to the heaven where Lord Vishnu lives.

Atharva Veda's Pashupata Brahm Upanishad, Canto 1, verse no. 28 describes why Aditya or the Sun God is worshipped by wise men.

According to Yoga Upanishads, the Sun God has his symbolic presence in the naval of the body in the Nabhi Chakra or the Manipur Chakra, and as the fire element

in the Mooladhar Chakra, the Swadhisthan Chakra and the Kundalini. The dynamic energy of the sun represented by its life-giving powers is revealed in the form of consciousness that flows in the Pingla Naadi, the nerve passing through the right nostril.

The Akchu Upanishad lists some of the virtues of the Sun God in its Canto 1, verse no. 1 which is exclusively dedicated to his grand virtues as follows—he provides the creature with the ability to see; he lights up the world for him; he provides the creation with its life and sustains it; he moves across the sky with his army of light rays to protect the world from darkness; he personifies the three basic Gunas of Sata, Raja and Tama much like Brahm; he takes the creature away from darkness representing delusions and ignorance towards light symbolising wisdom, knowledge, erudition and enlightenment; he is like the Swan—pure and immaculate; he is the bearer of life; he is the Jatveda (one having whatever is born or created as his property; the all-possessor; one who knows everything and is known by all creation; the word is usually applied as an epithet for the eternal fire element of which the sun is a visible manifestation and container); he is as intrinsically valuable as molten and purified gold; he is Tapa (austerity, penance, sufferance for a noble cause) personified; he is the emperor of creation and is crowned with a glittering crown and wears an equally glittering robe consisting of rays of the sunlight; he is the son of Aditi, the mother of Gods, and he lives as ‘sight’ in our eyes.

Aditya or the Sun God, or his visible form as the celestial Sun, has been repeatedly regarded by the Upanishads as a visible *manifestation of the Viraat Purush* who himself is the macrocosmic gross body of Brahm. For example, Sam Veda’s Chandogya Upanishad—1/6/3, 5, 6; 1/10/7; 2/9; 2/14; 2/24/12-14; 3/1-11; 3/18; 5/13; 6/4/2 etc.; Shukla Yajur Veda’s Brihad Aranyak Upanishad—2/1/2; 2/5/5; 3/7/9; 3/9/5; 5/15; Krishna Yajur Veda’s Brahmo-panishad, verse no. 1; Taittiriya Upanishad, Valli 1, Anuvaak 5, verse no. 2.

He is the *eye* of the Supreme Being—refer Aiteriyo-panishad of Rig Veda, Canto 1, verse no. 4, and finds his abode in the creature’s eye—refer Aiteriyo-panishad, Canto 2, verse no. 4.

The Prashna Upanishad of Atharva Veda, Canto 1, verse nos. 4-6, 8 describes the Sun God as the Pran—the vital life giving factor in creation, the life consciousness, and in Canto 1, verse nos. 9, 12-15 as Prajapati—the creator, motivator, nourisher, sustainer, protector and caretaker of the subjects of this creation. He is called the Fire God or the Vaishwanar Agni, the Viraat Purush, the Pran or life consciousness that supports all life in this world—Canto 1, verse no. 7.

The Akchu Upanishad of the Krishna Yajur Veda tradition is fully dedicated to the Sun God. It has two parts—in its Canto 1 sage Sankriti offers prayers to the Sun God, and Canto 2 contains the metaphysical and spiritual teachings of the Sun God for the benefit of the sage.

The Taittiriya Upanishad of the Krishna Yajur Veda tradition, in its Valli 1, Anuvaak 1, verse no. 1, says that the Sun God is known as ‘Mitra’, literally meaning a friend. This is because the Sun God’s benevolence and life-sustaining abilities make him a fast friend of every single living being in creation. He fosters life and is a friend of life rather than being its enemy by annihilating it. He helps the world to develop and grow as well as to acquire its stupendous magnificence and glory—refer Taittiriya Upanishad, Valli 1, Anuvaak 5, verse no. 2.

He is also known as ‘Savita’—refer Savitru-panishad of Sam Veda tradition, and Shwetashwatar Upanishad, Canto 2 of Krishna Yajur Veda tradition.

The Narayan Upanishad of Krishna Yajur Veda, in its verse no. 1 says that he was born from Lord Narayan, i.e. Lord Vishnu. The same thing is asserted in Brahmo-panishad of Krishna Yajur Veda, verse no. 1 which states that Aditya, the Sun God, is a manifestation of Lord Vishnu. But this is understandable because Vishnu and the Viraat Purush is the same Lord having different names according to the degree of subtlety and the scriptural text one is referring to; both are

synonymously used. Whereas the Viraat Purush was the macrocosmic gross body of the supreme transcendental Brahm that appeared in the first stage of creation when Brahm decided to initiate it, he was called Vishnu at a little later stage when the visible creation was just about to be initiated, because it is from Vishnu that Brahma the creator was born who later gave shape to the creation itself.

The Ram Uttar Tapini Upanishad of the Atharva Veda, Canto 5, verse no. 4/27 says that Surya or the Sun God is a manifestation of Lord Ram who himself is the supreme transcendental Brahm personified.

‘Aditya’ or the Sun God appears in the Vedas as follows—Rig Veda-- 1/41/4-6; 2/27; 8/47/14-18; 10/185; Sam Veda—395; 397; Yajur Veda—23/5; 34/54; Atharva Veda—5/3/9-10; 16/3.

References of the Upanishads dealing with the Sun God—

(a) Rig Veda = Aiteriyo-panishad, Canto 1, verse no. 4, Canto 2, verse no. 4.

(b) Sam Veda = Chandogya Upanishad, 1/6/3, 5, 6; 1/10/7; 2/9; 2/14; 2/24/12-14; 3/1-11; 3/18; 5/13; 6/4/2 etc.; Savitri Upanishad.

(c) Shukla Yajur Veda = and Brihad Aranyak Upanishad of Shukla Yajur Veda—2/1/2; 2/5/5; 3/7/9; 3/9/5; 5/15.

(d) Krishna Yajur Veda = Akchu Upanishad, Cantos 1 and 2; Brahmo-panishad, verse no. 1; Taittiriya Upanishad, Valli 1, Anuvaak 1, verse no. 1; Valli 1, Anuvaak 5, verse no. 2; Shwetashwatar Upanishad, Canto 2; Naryan Upanishad, verse no. 1.

(e) Atharva Veda = Prashna Upanishad, Canto 1; Surya Upanishad; Gayatri Upanishad; Pashupata Brahm Upanishad, Canto 1, verse no. 24, 27-28 (says that the Sun is a metaphor for Brahm).]

12. [This paragraph describes the importance of the Mantra for Lord Ganesh.]

When the Lord is worshipped by prefixing the divine word OM (symbolizing Brahm) to the Mantra of Lord Ganesh composed in the style of a Trishtubh Chanda, i.e. the Mantra ‘Gannaanam Twam’ (as described in Canto 3, paragraph no. 15), one attains a stature that is equivalent to that possessed by Lord Ganesh. [12].

13. Now we shall narrate the Maatrikaa or the Mantra that is dedicated to Goddesses Gayatri, Savitri and Saraswati. They are to be repeated silently three times a day—at dawn when it is meant for Gayatri (the rising Sun), at noon when it is meant for Savitri (the Sun in its full glory and splendour), and at dusk when it is meant for Saraswati (the Goddess of knowledge).

This Mantra is ‘Aim/Ain(g) Vaagishwari Vidmahe Klim/Klin(g) Kaameshwari Dhimahi’. [‘Vaageshwari’ means the Goddess of speech and knowledge; ‘Vidman’ means one who is intelligent and wise; ‘Kaameshwari’ is the Goddess who fulfils all wishes; ‘Dhimahi’ refers to the Goddess who is most wise, expert and erudite. ‘Aim/Ain(g)’ is the Beej for ‘Vak’ or speech, words; ‘Klim/Klin(g)’ is the Beej for Shakti or dynamism, energy, strength, vigour, vitality.]

In the meantime, such a wise man continues to silently do Japa (repetition of Mantra) with the ‘Hans’ Mantra¹. [This implies that each breath of his is a form of Japa; the inhaled air stands for the letter ‘Ha’, and the exhaled air for the letter ‘Sa’.]

The Beej Mantras of all the Goddesses (standing for the various facets of the Supreme Being’s divine glories, virtues, powers and authority), called the ‘Maatrikaas’, are represented by the fifty subtle sounds of all the alphabets of the Sanskrit language, right from the first vowel sound ‘A’ to the last letter ‘Ksha’ (a combined sound of the letter ‘Ka’ and ‘Chh’). These sounds form the basis of the language and its alphabets, hence the Maatrikaas (represented by the fifty basic sounds of the alphabets) pervade throughout the Vedas and other scriptures as they are all composed with letters.

In this way it can be rightly and affirmatively said that the Goddess is all-pervading and omnipresent. [Since the presence of Goddess is deemed in the sound of letters, all forms of spoken word, all languages and all expressions are empowered by the divine Goddess. They have the presence of the Goddess even without her being visible; they are all manifestations of the same Goddess. In other words, all forms of sound, whether intelligible as words and languages, or as merely a sound as in the case of music, they are all manifestations of the same dynamic power of the Supreme Being that had powered the initial cosmic rumbling heard in the form of Pranav, and said as OM, and which the modern-day science likes to call the ‘Big Bang’ that was heard at the beginning of creation.]

Hence, bow most reverentially before her. [That is, one should pay the greatest of respect to the supreme Goddess who powers the creation from within and lends it its dynamism, energy, vitality and strength. Since ‘consciousness’ is also the empowering factor of creation, hidden in the latter and pervading uniformly everywhere, without which no existence can be imagined, it follows that the Goddess is the dynamism of the cosmic Consciousness on ‘active duty’!] [13].’

[Note—¹There are a number of Upanishads that describe the *Hans Mantra*—viz. (a) Krishna Yajur Veda—Shwetashwatar Upanishad, Canto 2, verse no. 6; Canto 6, verse no. 15; Tejobindu Upanishad, Canto 1, verse no. 3-4; Dhyan Bindu Upanishad, verse nos. 24, 61-65; Brahm Vidya Upanishad, verse nos. 16, 20-28, 34, 60-64, 78-79; Yogshikha Upanishad, Canto 1, verse nos. 131, Canto 2, verse nos. 5, 9-11, Canto 6, verse no. 20, 53-54; Yogtattva Upanishad, verse no. 99; Varaaha Upanishad, Canto 5, verse no. 52, 54-55. (b) Shukla Yajur Veda—Hansopanishad is exclusively dedicated to explain the concept of the pure conscious Atma by way of using the metaphor of a Hans. (c) Sam Veda—Yogchudamani Upanishad, verse no. 31-35, 82-83, 93. (iv) Atharva Veda—Tripadvibhut Maha-Narayan Upanishad, Canto 5, paragraph no. 15.

Refer especially to Brahm Vidya Upanishad of Krishna Yajur Veda, verse no. 16 which expressly states that the Hans Mantra should be repeated silently.]

14. The Lord (Shiva) said to the Gods, ‘He who offers worship to Goddess Bhagwati (the Mother Goddess) with the Mantras enumerated in this Upanishad is able to see everything. [That is, he acquires a transcendental vision.]

He who knows this (or who possesses the esoteric knowledge outlined in this Upanishad) finds the elixir of eternity, known as Amrit. This is what this great Upanishad says. [14].

-----*****-----

Canto 5

[This Canto is entirely dedicated to the eclectic concept of the supreme transcendental Brahm who has no attributes and who is almighty. It goes on to describe in detail the importance of controlling the Mana—the mind and its various components.]

1. The Gods said to the Lord (Shiva), ‘Lord, you have told us about Goddess Tripura in great detail. Now, please enlighten us about Brahm who is almighty and without any attributes.’

The Lord replied the Gods, ‘The word Turiya (transcendental state of existence) and Maya (the maverick power of delusions) are used to refer to the supreme Brahm who is personified as the ‘consciousness’ and the supreme ‘Purush’¹.

One must surely have knowledge of this divine and enigmatic Supreme Being that is the one who hears, sees, thinks, preaches, feels and touches, searches or enquires, is wise and erudite, is most highly enlightened, is the one who lives in the inner-self of all living beings as their true self as the Atma, the pure consciousness.

Brahm has no fixed Loka (abode), nor is without a Loka. [This is because Brahm lives in each single unit of creation which forms his Loka.]

He is neither a God nor is he a non-God. He is neither an animal nor a non-animal. He is neither someone who does Tapa and has become a hermit or ascetic, nor is he the opposite. He is neither a Brahmin nor a non-Brahmin. He is neither a Shudra nor a non-Shudra.

The supreme Brahm is completely calm, tranquil and serene. He is one of his kind. He is self-illuminated.

He is beyond the reach of Gods, sages and the Spirits of dead ancestors.

He is fully enlightened and an embodiment of all forms of knowledge.

There is a Sloka (verse or hymn) which describes the importance of the control of the Mana². It says that those who seek Mukti or Moksha (spiritual liberation, deliverance, emancipation and salvation) should make their Mana (mind and heart) free from having any kind of attractions for the sense objects of this material world as well as the desire for gratification of the sense organs, because this is the only way of finding true Mukti. [1].

[Note—¹The ‘consciousness’ refers to the Atma, the soul and the essence of creation. It is the Absolute Truth. The word ‘Purush’ refers to an entity that resides in a ‘Pur’, a city. The Atma lives in the body of the creature as his ‘true self’, and it gives the creature his life and identity. Refer Brihad Aranyaka Upanishad of the Shukla Yajur Veda, Canto 2, Brahman 5, verse no. 18. The individual creature is a single unit representative of the whole world. Hence, when this individual creature is regarded in his cosmic form he is called the Viraat Purush. The word ‘Viraat’ itself means an entity that is vast, colossus, huge, fathomless and measureless.

²The word *Mana* has a broad meaning, covering the combined apparatus of the subtle aspects of the creature’s body consisting of the subjective mind and the emotional heart. It brings in its ambit the thoughts of the mind and the emotional impulses of the sentimental heart. This is because they both work in conjunction to determine how and what a man thinks, believes, imagines and is attracted to, how he behaves and reacts to a given situation or circumstance. Therefore, the word ‘Mana’ refers to a complex structure consisting of the various emotions and thoughts, the dispositions and inclinations, the intentions, ideas and purpose of the mind as well as the wishes, attractions and desires of the heart, the attractions that tempt the mind, causing it to fix its attention on these attractions thereby also dragging the heart along which begins to love them and get attached to these attractions. All these factors have a composite effect on the sub-conscious. [Refer—Adhyatma Ramayan, Aranya Kand, Canto 4, verse no.38-39; the concept has been elaborately described in Chandogya Upanishad, canto 7, section 3.]

Heart is the center where all types of emotions and sentiments have their origin. On the other hand, the subjective mind and the objective intellect are the two components which are like the two limbs of the brain and they work in close cooperation with each other, being the controlling center where all sorts of thoughts and decisions are centered. The Mana plays a pivotal role in the creature falling into the trap of worldly delusions or being liberated and delivered from it. Further, all Mantras have had their origin in the mind and heart of ancient sages and seers when they contemplated upon any aspect of Divinity and arrived at some profound spiritual Truth in this creation. The great Maha Vakyas were then ‘revealed’ to them in their meditative trance. Hence the importance and primary source of everything in this creation as the Mana cannot be neglected or even over-emphasized.

The Mana is to be distinguished from Buddhi, for the former refers to the mind and the latter to the intellect. The most important component of a creature's body is his brain. It is the level of development of the brain that determines in which rung of evolutionary hierarchy the creature stands. The brain has two components—the grosser mind and the subtler intellect. The mind is always in a state of flux, remaining undecided and running hither and thither like a mischievous child let loose, while the intellect is marked by stability and is like an adult who knows what to do and what to choose. When the child, the mind, is put under the care of his parent, the adult intellect, it would have a proper upbringing and would not commit some grave error, while an uncared child would be a nuisance for the society. Likewise, the mind when it is under the supervision and guidance of the intellect is under leash and such a mind can be very productive for the man just like a properly raised child can give a lot to the world when he grows up.

The importance of Mana has been highlighted in Yogshika Upanishad of Krishna Yajur Veda tradition, Canto 5, verse no. 62, Canto 6, verse nos. 60-65; Yog Kundalini Upanishad of Krishna Yajur Veda, Canto 3, verse no. 5.

How the Mana creates the world has been explained in Yogshika Upanishad of Krishna Yajur Veda tradition, Canto 6, verse nos. 58-61, 70.

How the Mana acts as a fetter has been elucidated in the (i) Krishna Yajur Veda's Yogshika Upanishad Canto 1, verse nos. 59-61. (ii) Shukla Yajur Veda's Shatyayani Upanishad, verse nos. 1-3; Muktiko-panishad, Canto 2, verse nos. 33-39.

The Aeiteriyo Upanishad of Rig Veda, Canto 3, section 1, verse no. 2 says that Mana and Hridaya (heart) are synonymous with each other.

How the Mana can be controlled or dissolved or disassociated from its involvement with the world has been explained in the following Upanishads—(i) Krishna Yajur Veda's Kathrudra Upanishad, verse nos. 39-40; Yogshika Upanishad, Canto 1, verse nos. 62-65, 69-71. (ii) Atharva Veda's Shandilya Upanishad, Canto 1, section 7, verse no. 23-25; Annapurna Upanishad, Canto 1, verse nos. 20-27, 33-48, 56-57; Canto 2, verse nos. 12, 43; Canto 3, verse nos. 5-6; Canto 4, 12-16, 21.

How an ascetic can focus his attention on the 'self' during meditation by controlling the Mana is described in the Shandilya Upanishad of Atharva Veda, Canto 1, section 7, verse no. 18.

The Prashna Upanishad of Atharva Veda, Canto 4, verse no. 4 says that the Mana is the patron of the fire sacrifice, especially the one done internally when the Pran or the vital winds are offered as offerings to worship the deity known as the Atma residing in the body.]

2. The Mana is said to be of two types, one classified as Shudha (pure, uncorrupt, holy and clean), and the other as A-shudha (the opposite of Shudha).

The A-shudha Mana is one which has desires and passions, while the Shudha Mana is one which has no such inclinations which act as blights on the Atma (the 'self') of a spiritual aspirant. [2].

3. The Mana is the causative factor that either shackles a man, or sets him free.

If a man has numerous desires, he is deemed to be tied in shackles. If he has no such desires, he is a free man. [3].

4. When the Mana is freed from being tied to various sense objects, when it is trained to be restrained and self-disciplined, and when it focused on the inner-self (i.e. remains under tight leash of the voice of the consciousness originating from one's heart where the Atma lives)—then the Mana is said to have attained the eclectic state of 'Unmani'. [The term 'Unmani' refers to the state when the Mana becomes

indifferent to the various temptations originating from the material world of sense objects.]

This if effect is the supreme state of existence, called the 'Param Pad'. [4].

[Note—The concept of Unmani state is explained elsewhere in the Upanishads also. The *Unmani* state is a higher and exalted state of existence of the consciousness when it rises above the mundane and the gross, and lives in a sublime state. The word itself has two connotations—one is to rise and lift up, and other is to become indifferent to things that are gross and unattractive. The ascetic who practices the form of Yoga outlined in this Upanishad is able to 'lift' his 'self' from the gross level of existence, 'rise up' and reach an exalted state of existence when he is able to 'see' the sublime Tattwa, or experience the presence in his own inner self the eclectic entity that is the essence of existence and which in common parlance of Vedanta and metaphysics is known as the 'conscious self' or the pure conscious Atma. This Atma is the essence or the Tattwa that is self-illuminated and that is witnessed in the higher stages of Yoga as described in this verse. It is the realisation of this Atma that is the aim of all spiritual pursuits, and it is this realisation of the Atma that is the cosmic Truth known as Brahm which gives the feeling of unmatched exhilaration and ecstasy to the ascetic. That is why he is stunned and his eyebrows are raised in a crooked stance. He had never ever experienced this scintillating source of light earlier in his life, and when he actually 'sees' it, he is taken by surprise and utterly stunned and dazzled by its mere presence.

The word also means total renunciation. It is in this context that the word is used elsewhere—such as for example in the *Naradparivrajak Upanishad* of the Atharva Veda, in its Canto 8, verse nos. 2-8 while describing the various Tattwas of existence that represent or symbolize the cosmic form of the Viraat Purush, the macrocosmic gross body of the supreme transcendental Being known as Brahm.

The *Shandilya Upanishad* of the Atharva Veda tradition refers to the Unmani state in its Canto 1, section 7, verse no. 17 while describing the Khechhari Mudra.]

5. Oppose the wayward nature of the Mana till the time it is not fully controlled, and the heart is not at peace and rested. That is, till the time there is no agitations and restlessness.

This is the essential meaning of Gyan (true wisdom, enlightenment, knowledge, erudition) and Dhyān (concentration, contemplation, meditation, focus of the mind etc.). All else is simply elaboration of this basic fact and an expansion or an expansive playing around with a motley collection of words. [5].

6. Brahm is such an enigmatic entity that it cannot be said with certainty that it is a subject matter for thoughts of the mind, nor can it be said that it is not.

Think of Brahm subtly, even without not consciously thinking of this divine entity. When one becomes free from narrow-minded views of Brahm, it is only then that he is certainly able to have a divine view of Brahm; he is able to attain Brahm.

[That is, even when one thinks that he is not thinking of Brahm but of something else, he is actually thinking of Brahm in another form. This is because everything in this creation is one or the other form of Brahm; there is nothing that is not Brahm. Hence, whatever is being thought of is also a form of Brahm, though one erroneously thinks that he is not thinking of Brahm. For instance, one thinks that one is contemplating upon the Lord only while one is doing worship or meditating, but he forgets that even while doing his normal chores in this world when he has to voluntarily or involuntarily think of so many things he is still thinking of the same Brahm, albeit in a different form and role. This is how one can have a holistic view of

Brahm; this is how one can remain immersed in the thoughts of Brahm inspite of going about his normal affairs in this world.] [6].

7. Ascetics seek the Atma, the pure consciousness, in their own inner-self by meditating and contemplating. Thoughts of anything that is not Atma (i.e. anything that is not the 'truth') is not considered as thought in the real sense. [It is a waste of time and energy.] [7].

8. The Brahm which has no divisions, parts, forms and attributes is absolutely immaculate, faultless, uncorrupt and untainted, as well as non-dual, unique and unparalleled.

When the aspirant is fully convinced of the truth of the axiomatic maxim of the scriptures 'I am Brahm', he in fact becomes synonymous with Brahm; he becomes a personification of Brahm. [This will happen when he realises that the pronoun 'I' applies to his true self which is the pure conscious Atma and not the gross physical body.] [8].

9. By being acquainted with that divine entity (Brahm) that is 'Nirvikalp' (has no alternative, is non-dual, unique and unparalleled), that is 'Anant' (without an end, is eternal, imperishable and infinite), that is 'Hetu' (the cause of everything in this creation), that is 'Dristaanta Varjit' (cannot be seen or compared with anything, cannot be proved), that is 'Aprameya' (boundless, limitless, infinite, endless, immeasurable), and that is 'Anaadyantam' (without a beginning or end)—the wise and enlightened aspirant finds Mukti (i.e. he finds spiritual liberation, deliverance, emancipation and deliverance; he gets freedom from the fetters of delusions and ignorance). [9].

10. Real spiritual knowledge and true enlightenment is when the person develops a holistic view of creation so much so that he thinks that there is no obstruction or hindrance of any kind (for 'him', for 'he' is not the gross body but the ethereal Spirit known as the pure consciousness Atma that cannot be obstructed or hindered), that there is no birth or origin (as the Atma is eternal and without a birth), that there is no bondage, fetter or shackle (because the Atma is eternally free and cannot be put under bonds), that there is no separate entity who is called a 'seeker' that is distinct from the sought (because the 'seeker' is himself Brahm, the object that is sought), that there is no one who is bound and no one who is free (simply because all are Brahm personified, and there is no thing known as a bond or tie because the Atma, the holy Spirit, is an ethereal entity that cannot be bound and shackled). [10].

11. It is the same Atma, the pure consciousness, that pervades uniformly in the three states of existence of a creature—viz. the Jagrat or waking state, the Swapna or dreaming state, and Sushupta or deep sleep state.

A wise person who crosses these three states and enters the fourth, called the Turiya (which is the 'transcendental state of consciousness') does not take a birth again. [11].

[Note—According to the metaphysical interpretation of a man's various states of existence, the consciousness continues to oscillate between the three states of Jagrat, Swapna and Sushupta. A man is awake, he goes to sleep and dreams, then enters a phase of sleep known as deep sleep, then reverts back to the dreams, and then finally wakes up in the world. This is the routine of life. The 'transcendental' state is the one

when one crosses the threshold of Sushupta and enters the Turiya state. It is then that the oscillation stops.

The fact that the Atma continues to oscillate between the three states of Jagrat, Swapna and Sushupta has been elaborately explained in the (i) Shukla Yajur Veda's Brihad Aranyaka Upanishad of Shukla Yajur Veda, Canto 4, Brahman 3, verse nos. 16-18, 34-35; and (ii) Krishna Yajur Veda's Brahm/Amrit Bindu Upanishad, verse no. 11; Kaivalya Upanishad, verse nos. 12-14; Dhyan Bindu Upanishad, verse nos. 93/12-93/15; Brahm Upanishad, verse nos. 20-21.]

12. It is the same Atma that is universally present in a uniform manner in all individual creatures. In spite of being one it therefore appears to be separate, distinct, varied and different just like one sees many images of the same moon when it is seen as a reflection in as many pots of water. [12].

13. Even as the sky does not move (i.e. changes its basic character) when one moves a pitcher, the Atma too does not move (i.e. changes its basic character) in spite of the creature moving (or changing his body from one birth to another).

[Here, the Atma that resides inside the individual creature is likened to the space inside the pitcher or the sky element present inside the body of the empty pitcher, the body of the pitcher is likened to the body of the creature, and the sky outside the pitcher is likened to the universal Atma that is present everywhere outside the limitations of the gross mortal body of a creature. When the pitcher is moved, it is only the body of the pitcher that changes location and not the sky which is a universal entity. The sky that was present in its previous position is the same as that which is present in its new location. It is only the physical gross form of the pitcher that has changed location. It is not that the air inside the pitcher in, say, position 'A' would be any different from that of position 'B', and neither would this affect the air outside the pitcher. Further, the air inside one pitcher would be exactly alike the air in another pitcher, small or big, coloured or not. See the next verse no. 13]

Similarly, when a creature dies and takes a new birth, the Atma only shifts from its previous body to its new body, but its fundamental nature and characters do not change.] [13].

14. The sky or air remains the same even when it changes its location from one pitcher to another.

Similarly, the Atma changes its body but remains universally the same. A wise person who knows this knows everything, and he always sees uniformity and non-duality in creation. [14].

15. Only as long as a man is surrounded by Maya (delusions) and entangled in the web of 'Shabda' (words) does he see two different situations, separations, varieties, differences and dichotomies in this world. When the delusions and confusions created by Maya and the web of words known as Shabda are removed, a wise man sees only non-duality and oneness in this whole creation. That is, when the darkness of delusions and spiritual ignorance that shroud the inherently enlightened Atma are removed by careful study, analysis and understanding of the scriptures and their doctrines in the correct perspective, instead of merely having their literal knowledge and getting misled by their uncountable interpretations which add to perplexities instead of discounting them, it is only then that an awakened man is able to know the truth about his own self and the world surrounding him, along with the relationship between the two. He becomes enlightened about the Atma and Brahm in their

entirety. It is in the light of truth, wisdom, erudition and enlightenment that he is fortunate to get this eclectic knowledge. [15].

16. The supreme Brahm is manifested in the form of 'Shabda' (word having meaning and which makes sense), and when the meaning is snatched away from the word it becomes a useless collection of nonsense letters.

[This is an excellent analogy to explain Brahm. Words are made of letters, but these letters have relevance only till they are incorporated in a particular word. The word has any relevance only till it makes some sense, otherwise it is as worthless as a letter having no independent meaning or when it is simply a hotchpotch jumble of sounds. In other words, it is Brahm that gives sense to this creation. If Brahm is removed from this creation, the latter would lose its meaning and relevance. Brahm is the 'word', while each unit of this creation is the 'letter'. Just as each letter is as important as the other to form a particular word, each unit of creation is as important as the other to give the entire edifice of creation its meaning, and, in the process, to fully reveal Brahm in its entirety. This is because Brahm uniformly pervades in the entire creation, and because whatever that exists is Brahm personified. In other words, to imagine Brahm only as a living being, and not, say, as the other elements of creation such as a tree or the river or the cloud would be not understanding the true nature and form of Brahm. Hence, it would be like not understanding the true meaning of a word, and misunderstanding its finer nuances.

There is another connotation to this analogy. The 'Brahm' when likened to the 'word' would imply the macrocosm, while 'Brahm' when likened to the 'letter' that forms the word would be the microcosm. The relativity between any two given aspects of Brahm is further elucidated below in verse no. 17.]

Therefore, a person desirous of peace and bliss of the mind and heart concentrates and contemplates upon this Brahm who is 'Akshar'.

[There is a play on the word 'Akshar' here. This word has two meanings—one is a 'letter', and the other is 'imperishable, one that does not decay or come to ruin'. Just like the letter is the basic unit of a word, Brahm is the basic element of creation. At the same time, Brahm is eternal, wholesome, imperishable and infinite.] [16].

17. Therefore, a wise man should ponder upon two aspects of Brahm. One is the 'Shabda' (word), and the other is the 'Param' (supreme, transcendental) aspect of Brahm.

When one is fully enlightened about the 'Shabda Brahm', he is able to attain the Param Brahm. The Shabda Brahm is a stepping-stone to the 'Param Brahm'.

[One comes to learn about anything by the medium of words. He hears about it, reads about it, enquires about it, investigates about it from all available data and texts, and then comes to know about it. The object of such investigation has a definite name and virtues, because it is absolutely impossible to learn about something that is completely meaningless, incomprehensible and indefinable. So, in his search for Brahm which is synonymous with the Absolute Truth of creation, the seeker starts with the help of that aspect of Brahm which has been narrated in the Holy Scriptures, that is preached by wise teachers, and which is heard of and described as the only Truth and Reality of creation. How can one search for anything that has no names and characteristics, virtues that need 'word' to make sense. Otherwise, it would be like browsing for nothing in the vacant space, leading to nowhere. The Shabda Brahm helps one to identify his spiritual objective or aim; it helps him to call out to the Lord in the form of Mantras, prayers and hymns that he sings in the Lord's honour. It helps

him to focus his mind and attention on the 'one' divine Being, instead of allowing his mind to wander in the endless forest of so many forms that Brahm has taken. So a wise man, for instance, uses the word OM in his spiritual pursuit as it provides direct access to Brahm.

No one has seen Brahm with his physical eyes, so one can know Brahm only by the means of the word, the 'Shabda', that is prescribed by the scriptures for Brahm. For instance, when one goes out in search of someone he has never met before, he enquires about for him by his name. Even when he meets the person he asks whether he is the same person who was being searched by repeating the name. This would help to explain the importance and significance of the Shabda (word) aspect of Brahm.

But this is just the primary stage; it is just the launching stage towards the ultimate. Shabda Brahm is not the goal, but a medium to reach the goal which is the Param (supreme) aspect of Brahm which is described by words. Hence, the main target for all spiritual aspirants should be the supreme transcendental Brahm, and not remain entangled in the words of the scriptures and repetition of Mantras in the hope that this would give them liberation and deliverance from this delusory world and its cycle of birth and death, that they can become Brahm realised and enlightened by merely learning by rote the words of the scripture and doing formal forms of worship or going to pilgrims or chanting Mantras in the misconceived hope of finding spiritual peace and bliss, or emancipation and salvation. They would be living in a fool's paradise. The next verse nos. 18-19 are very explicit on this.] [17].

18. [Verse nos. 18-19 explain very beautifully why one should first study the scriptures and then discard them as follows—

Those who are really wise, erudite and learned should discard all the scriptures after having studied them thoroughly just like a rich man does not pay attention to useless animals such as hares and mares. [A poor man would be happy to have a hare or a mare as a pet, but a rich man treats these animals as too humble a creature to be kept as pet and would rather prefer high pedigree dogs and horses. Similarly, when a wise man (who can be compared to a rich man in this example) has understood the real meaning and intent of the scriptures, he would be least bothered about their trifling details and pay attention only to their higher objectives. He would not be bogged down by their too literal a meaning but attempt to gather the essence of their message that can provide his soul the nectar of spiritualism that it deserves.] [18].

[Note—Refer also to References =(i) Shukla Yajur Veda's Paingalo-panishad, Canto 4, verse no. 23; Adhyatma Upanishad, verse no. 3. (ii) Krishna Yajur Veda's Yogshikha Upanishad, Canto 1, verse nos. 4-5; Akchu Upanishad, Canto 2, verse nos. 41-41 ½; Varaaha Upanishad, Canto 4, verse no. 33; Avadhut Upanishad, verse nos. 15 ½, 18; Kathrudra Upanishad, verse no. 6; Rudra Hridaya Upanishad, verse nos. 28-30. (iii) Atharva Veda's Tripadvibhut Maha-Narayan Upanishad, Canto 6, paragraph no. 1.]

19. Just like different samples of milk drawn from many cows would have the same chemicals in them, the essential knowledge of the basic Truth that is drawn from myriad sources would always remain the same. [So, even as one benefits from the nutrients present in the milk and not from which cow this milk has come, it is the understanding of the knowledge of garnered from all types of sources that actually helps the seeker of Truth, and not the source from which this knowledge has come.] (19).

20. Focus your attention on the 'Gyan Netra'.

[This refers to center of the forehead, between the two eyebrows. It is here that 'Agya Chakra', or the subtle energy center which control wisdom and learning, is located. Ascetics strive to focus their attention on this spot, and when successfully done it gives them stupendous mystical ability to see and know the unseen and the unknown. This spot and the process of focusing on it are extensively described in the Upanishads dealing with Yoga. Here it means that the preacher, Lord Shiva, teaches his disciples, the Gods, to see the reality with the eyes of wisdom, erudition and enlightenment. Spiritual truths and esoteric realities cannot be seen with the gross organ of sight of the equally gross body, the organ known as the eye. To see the truth that is as enigmatic, mysterious and esoteric as the Atma and Brahm, one need to have the 'Eye of Gyan', known as the 'Gyan (enlightenment and wisdom) Netra (eye)'.]

This will help you to realise the truth of the statement 'I am Brahm'. [This is because you would have become self-realised; you would have experienced the presence of the self-illuminated Atma, the pure consciousness that pervades in each pore of your existential body. Since this Atma is a personification of Brahm, it is obvious that you would be convinced that you are indeed Brahm personified.]

This Brahm is supreme, great and majestic; this Brahm is the ultimate abode or destination; this Brahm has no parts and is immutable; this Brahm is taintless and immaculate; this Brahm is steady, constant, universal and uniform; this Brahm is absolutely calm, tranquil, peaceful and serene. [20].

21. He who knows that Brahm is a universal entity that lives uniformly in all the creatures of this creation, he is the wise one who lives submerged in the thoughts of Brahm. He virtually assumes a form which is as limitless, infinite, imperishable and eternal as the great and majestic element known as the Param Vyom (the great and infinite sky, beyond which there is nothing).

[This is because Brahm has all the grand virtues possessed by the sky, and the latter is the nearest analogue of Brahm. In the Upanishads, Brahm is said to have a form and virtues as that possessed by the Vyom (sky). Brahm pervades the Vyom, and the Vyom is a manifestation of Brahm. Therefore, they are treated as being equivalent to each other. In the present context it means that when a man has become wise and enlightened enough to understand who he is and who is Brahm, he automatically assumes the virtues of Vyom, i.e. he becomes as open-minded, broad-viewed, large-hearted, welcoming, all-accepting but at the same time remaining neutral and indifferent to all things as the sky. He lacks nothing; he is fulfilled like the sky which harbours everything in this creation and therefore it (the sky) wants nothing.]

Think—'I accept this fourth state of existence (i.e. the Turiya state of transcendental existence) which is equivalent to the 'Brahm Yoni'—i.e. which can enlighten me about and make me acquainted with Brahm (the Supreme Being; the cosmic Consciousness) and the Truth of existence. I bow before such a great Brahm.' [21].

22. The sky is the ultimate source from which all the other elements of creation have emerged. All of them were conceived and developed in the cosmic crucible known as the 'Akash' (sky). All the Bhuts (elements; creatures) have emerged from the sky, and finally collapse and dissolve (vanish) into the sky. They take birth in the space provided by the sky and live in the space provided by the sky. [It is like the case of a servant serving the master. The master gives him his bread and butter, as well as provides him with living quarters.]

Hence, treat the 'sky' as the Beej (seed) of everything. [Since the sky and Brahm are one, it is a natural corollary that it is Brahm that is being indirectly called the 'Beej' or seed of everything in existence.]

Therefore, treat that 'one entity' (Brahm) as the Akash-peeth (sky), Vayu-peeth (air or wind), Tej-peeth (fire), Amrit-peeth (water) and Ratna-peeth (earth).

[The word 'Peeth' literally means a seat where a deity is consecrated. In the present context it implies that the supreme Deity known as Brahm is enshrined in all these five fundamental elements of creation. Since the rest of the creation is moulded out of these five primary elements that form the basic ingredients of creation, it follows that Brahm is subtly enshrined in each form that the elements took and in any ratio they combined. The earth is called the 'Ratna-peeth' to indicate that the earth is full of minerals and gems as well as with all the necessary things needed to sustain life. Water is called 'Amrit', meaning nectar and ambrosia of life, because it is the elixir without which no life is sustainable and imaginable in this world.]

He who knows this attains eternity. [That is, he becomes Brahm-realised.]

He who knows that this fourth dimension of knowledge, called the Turiya state of existence (i.e. the transcendental state of existence as emphasized in verse no. 11) which is related to the Lord Kaam-raj (i.e. the Lord who fulfills all desires and aspiration, here meaning spiritual aspirations of a seeker), actually pertains to the supreme transcendental Brahm who is honoured by the epithet of 'Akshar' (that which does not decay or perish)—only such a wise man is said to have truly understood the real meaning of the term Turiya, and what this state of existence is all about.

[In other words, he who knows the true meaning and essence of the fourth state of consciousness, known as the Turiya state of transcendental existence that provides fulfillment of all spiritual desires, it is he alone who is able to know the imperishable and eternal form of Brahm. Such a man finds Mukti or liberation and deliverance. Such a man is truly wise, erudite, learned and enlightened; he is truly self-realised and Brahm-realised. This fact has been emphatically stressed in this entire Canto 5.]

This is the profound teaching of this great Upanishad. Amen! [22].

-----Shanti Paath-----

-----*****-----*****-----

Chapter 22

Devi Upanishad

This Upanishad was revealed as a preaching made by the divine Mother Goddess for the benefit of Gods. It describes the primary esoteric form of the Mother Goddess as a personified form of the cosmic authority, powers and dynamism, known as 'Shakti', of the Supreme Being. It stresses that whatever that exists in this vast and multifarious creation is actually the same venerable Goddess revealed in all these individual forms. It goes on to explain the Adi-Vidya, the primary knowledge, followed by the monosyllabic Mantra of the Goddess which is her Beej Mantra, and the nine-lettered Mantra which is called the Maha-Chandi Vidya, along with the rewards associated with them.

Though this Upanishad is brief, but for those who follow the occult science of Tantra Vidya it is of utmost importance and significance. The greatness of the 'Devi' as a personified form of the Shakti of Brahm, the Shakti that is responsible for not only the coming into being of this creation but also of its sustenance, growth and nourishment, the powerful force of Nature that controls and regulates each aspect and phase of creation right from its initiation till its conclusion, has been beautifully brought out in the Bahvaricho-panishad of the Rig Veda tradition. Two other Upanishads have special relevance here, one is the Tripura Upanishad, which is the eighth Upanishad of the Rig Veda tradition, and the other is the Tripura Tapini Upanishad, which is the twenty-first Upanishad of the Atharva Veda tradition. The latter Upanishad is included in the present volume.

-----*****-----

-----Shanti Paath-----

Please see appendix no. 1 for the English of this Shanti Paath.

1. Once, all the Gods presented themselves before the Devi (Mother Goddess) and requested her—'Oh the great and venerable Mother Goddess! Who are you? Please tell us.' (1).

2. She replied—'Oh Gods! I am a personification of Brahm (the supreme transcendental Consciousness; the Supreme Being). It is from me that this creation having two facets, a male and a female represented by the Purush and the Prakriti are produced or created.

[The word 'Purush' refers to the all-inclusive macrocosmic form of Brahm known as the Viraat Purush, and the individual male at the microcosmic level of creation. Similarly, the word 'Prakriti' refers to the Mother Nature at the macrocosmic level, and the female at the microcosmic level. It is their union that produces this creation at both the levels.

The following points should be borne in mind while one endeavours to understand what is meant in the aforesaid stanza of this verse. The Viraat Purush and the Prakriti are representatives of the macrocosmic gross body of Brahm, the cosmic Consciousness. Their microcosmic counterparts are the male and the female forms of the Jiva, the living being who is regarded as an image or a personification of Brahm.

The cosmic Consciousness that has assumed these forms is, however, extremely subtle and sublime. The above gross forms are revelations of this subtle Consciousness. The term 'gross' is a relative term vis-à-vis the Consciousness, and must not be taken too literally. That is, the Viraat Purush or the Prakriti have no physical gross body like the male and the female creatures born on earth, but relative to the 'cosmic Consciousness' they are grosser and less subtle.

The element of uniformity and oneness in all aspects of creation, whether at the macro level or at the micro level, is represented by this cosmic Consciousness that is the subtle and the only empowering entity living inherently in all these forms as their 'Shakti'. Without the Shakti the creation would be a dead entity, and no one would be bothered about an entity that is lifeless and useless.

This Shakti is the virtue of Brahm that lends each and every unit of creation, whether as the Viraat Purush or as the male creature, whether as the Prakriti or its counterpart as the female creature, their inherent energy, strength and power to do what they do. At the cosmic level this Consciousness is known as the Parmatma, the supreme Atma or the Soul of creation, and at the microcosmic level it is known as the individual creature's Atma or his 'self'.

So it becomes clear that though the grosser form of Brahm might be known by different names, such as the Viraat or the Prakriti, the fundamental element known as the 'Shakti of Brahm' is a universal entity that is equally present in all the forms that Brahm has taken. This Shakti is the authority, the power, the strength and the dynamism of Brahm that actually does anything in this creation on the behalf of the latter. It is the Shakti that lends Brahm its stupendous cosmic authority and sway. The Viraat Purush would be powerless in creating anything without the Shakti in the form of the Prakriti that harbours this creation in its fathomless bowls, and what would the Prakriti do if the Viraat Purush did not or could not seed it with life?

What then is the difference between the 'Viraat Purush' and the 'Prakriti'? Well, the answer is simple—whereas the Viraat Purush represents Brahm in its entirety, the powers, dynamism, vigour, potent, energy and authority that the Viraat Purush possesses comes from the 'Shakti' that is an integral part of Brahm, and is implied when one thinks of Brahm in a holistic manner as the Supreme Being who is responsible for every dimension and aspect of this magnificent creation, the Supreme Being who has revealed himself not only as the Trinity Gods known as Brahma the creator, Vishnu the sustainer and protector, and Shiva the concluder, but also as all other forces of Nature in this creation.

If Brahm is the Supreme Being of this creation, then his Prime Authority is represented by the Shakti. If Brahm is the Viraat Purush, the cosmic Male aspect of creation, then the Shakti of Brahm is manifested as the Goddess, known as 'Devi', who is the cosmic Female aspect of creation known as Mother Nature.

Brahm is the supreme Creator, and to 'create' he needs authority, energy, strength and powers. These come from Shakti. Without the Shakti, Brahm is as lusterless and insignificant as the Sun without its splendour and brilliance, the fire without its light, heat and energy, or the king without his royal authority, grandeur and powers. Brahm and Shakti cannot be divorced from one another even as the sun and the fire cannot be divested of their brilliant light, splendour, radiance and heat, or the king of his royal authority, majesty and powers.

The sun lives in the sky high above, but its light and energy fosters life on earth. The fire may not be visible everywhere, but its presence is evident when one imagines what would happen if there was no heat and warmth on earth—well, the life as we know it would simply freeze to extinction without the latent present of the fire

element everywhere. The king may be seated in his palace, but his authority and powers are used to run the far flung realms of the kingdom. Similarly, it is the Shakti of the Supreme Being that actually runs the affairs of this creation on his behalf.

As for the 'union' between the two creating and giving shape to this world, one can understand how it works with a simple illustration from the physical world. Even basic science teaches us that water consists of the formula H_2O . That means, if we are to have water as we know of this life-giving fluid to exist in this world then we have to take for granted that Hydrogen is irrevocably and inseparably married to or united with Oxygen. They must co-exist or tightly embrace each other if the molecule of water is to be as such. Thus, when we talk of water we think of Hydrogen and Oxygen as one single inseparable whole, and not as two distinct gases. Neither of these two gases have a physical gross form, but their union has produced 'water' as the off spring that is gross and visible.

Similarly, Brahm and Shakti unite to produce this visible and gross world. This world is the off spring resulting from the union of two subtle and sublime entities known as Brahm and Shakti. The Tripura Tapini Upanishad, Canto 1, verse nos. 9-10 assert and affirm this fact by saying that Shiva is Brahm personified, and it is the union of Shiva and Shakti that is the cause of this creation.]

For those who are ignorant, this creation is independent of me; or I am not present in it. For those who are wise and erudite, this creation is completely soaked with my subtle and sublime form which pervades uniformly in each and every unit of creation.

[That is, those who are not wise think that the Mother Goddess is to be found somewhere high up in the heaven located in the sky, but those who are wise see the same Goddess in each unit of creation, right in their midst. Since the Goddess represents the dynamism, the energy, the authority and the power of Brahm, since Brahm had used this power inherent in him not only to kick-start the process of creation but also to sustain it till its final conclusion, and even to bring about the happening of the 'conclusion' itself, since it is Brahm that has actually revealed himself as this creation and therefore is omnipresent and all-pervading, it follows that Brahm's dynamism cannot be present elsewhere like the authority of an Emperor always stays with him and no where else. Hence, alongside Brahm, the Mother Goddess also manifests and pervades uniformly and universally in this creation.

If Brahm is omnipresent and all-pervading, his Shakti also accompanies him like the authority, the majesty and royal powers of a king always accompanies him. Shakti accompanies Brahm like a shadow accompanies a person.]

It is me (i.e. the Devi, the Goddess representing the Shakti of Brahm in a personified form) who is both a personification of Anand (bliss, happiness, cheerfulness and joys) as well as of miseries and grief. Similarly, I am both in the form of Vidya (knowledge) as well as A-Vidya (ignorance)

[There is no confusion in this statement. It is a common observation that happiness and miseries co-exist in this world, so do knowledge and ignorance.

One man is writhing in pain while the other is enjoying the music and dancing to its tune; one man is fighting his own brother in a court of law or slitting his throat for property while the other lays down his life for others to whom he is not even distantly related.

One man is so intelligent that he reaches the deep bowls of the universe aboard a space-ship or creates computers and solves complicated problems of mathematics and sciences, while the other barely scraps through primary school and is good for nothing.

Since this world is uniformly pervaded by the Mother Goddess, both these seemingly opposing situations must have the same Goddess in them. This is because the Goddess is non-dual and one of her kind just like Brahm, as she is only the dynamic facet of the Principal Authority known as Brahm. The logic behind this dilemma is that this world is a composite of all qualities, both good and bad. It is like a bar-magnet that has two opposing poles, the north and the south, incorporated in its own body and co-habiting. If it were not so, this world would not have acquired the unique colourful and astoundingly diverse nature that it possesses, and it would be no different from the one-sided world of righteous and auspicious virtues, a world of complete bliss, tranquility, peace and happiness that is known as the divine heaven, the abode known as Brahm-Loka where the Supreme Being lives.

Upanishads have described the great paradoxes pertaining to Brahm, making the latter as the most enigmatic, esoteric and mysterious entity in the entire creation. Even the Vedas which are regarded as the embodiment of knowledge itself fail to fully define or narrate Brahm, and they ultimately surrender by saying 'Neti-Neti'—i.e. not this, not this. Or, Brahm is neither this nor that; Brahm cannot be limited to this or that definition, nor can it be said that either of these definitions do not define Brahm. Therefore, Brahm is visible as well as invisible, Brahm is subtle as well as gross, Brahm is true as well as it cannot be denied that what is false is not Brahm!

These apparently contradictory situations exist, are true, and are equally applicable to Brahm because of the fact that 'everything' is Brahm, and the word 'everything' includes all imaginable hues and shades of existence, extending from the credulous to the extreme height of incredulous.

Further, since Brahm and Shakti are inseparable from one another, it follows that all the paradoxes applicable to Brahm are equally applicable to Shakti.]

Surely, I am known as 'Brahmani' who is nothing but the dynamism of the supreme transcendental Brahm revealed in the form of Brahma, the creator.

[The word 'Brahmani' refers to the female counterpart of Brahma the creator. In other word, while the subtle world is created by Brahm, the Supreme Being, using his own powers that are equally subtle and known as Shakti, the gross world is created by Brahm's gross revelation in the form of Brahma the creator. As such, the dynamism of this creator of the visible gross world, known as Brahma, is called 'Brahmani'. Thus, 'Brahmani' is the dynamism of Brahma, the creator of the gross visible world, and who himself is a grosser macrocosmic form of Brahm, the Supreme Being.]

This is the Mantra or the principle established by the Atharva Veda (2).

3. [The following verses emphasize the fact that everything and every phase of creation is a revelation of the same divine Mother Goddess who represents the dynamism of Brahm in a vivid form.]

I am the combined form of the five Bhuts as well as their independent forms. [The five Bhuts are sky, air, fire, water, and earth. The entire creation is constituted from them. They therefore have independent existence as well as a joint existence.]

I am the whole visible world. [The entire gross world that is visible is my revelation.]

Veda (knowledge, wisdom, erudition, sagacity and literally skills) as well as A-Veda (the opposite of Veda) are both my forms. [This is because 'everything', the high and the low, are a revelation of the dynamism of Brahm.]

Similarly, Gyan (knowledge, enlightenment) and A-Gyan (ignorance, stupidity) are also my forms.

‘Ajaa’ (that which is un-born; the invisible form of creation) and ‘Non-Ajaa’ (that which is born; the visible form of creation) are both my forms.

The high and the mighty (such as the Gods, the exalted sages and ascetics, the kings and wise men), as well as the lowly and humble, such as the beast and other lowly forms of life in this creation (known as the ‘Tiryak’), are my forms too (3).

4. It is me who moves and prevails everywhere in the form of the various Rudras¹ and Vasus².

It is me who moves unhindered everywhere in the form of the Adityas³ (the Sun God) and the various Vishwa-Devas⁴ (the custodians of the world).

It is me who sustains, nourishes and takes general care of the Gods known as Mitra (the friendly God)⁵ and Varun (the Water God)⁶, as well as of Indra⁷ (the king of Gods), Agni⁸ (Fire God) and the two Ashwini-kumars⁹ (the twin sons of the Sun God and the medicine men of the Gods) (4).

[Note—¹*Rudras*—Rudra is a Vedic deity and has been eulogized in three full Suktas (hymns) dedicated to him. These are Rig Veda’s 1/114/1-11; 2/33/1-15, and Yajur Veda’s 16/1-66. Besides these Suktas, Rudra is honoured as a deity at a number of places in the Vedas—viz. Rig Veda—1/43/1-4, 5/42/11, 7/46/1-4, 7/59/12; Atharva Veda—5/6/3-4, 6/55/2-3, 7/92/1, 11/2; and Yajur Veda—11/54.

The Rudra is regarded as the father of the Wind God or the Maruts (Rig Veda, 2/33/1). Rudra assumes many forms—usually it is eleven forms (Taittiriya Sanhita, 3/4/9/7), but sometimes they are also said to be thirty-three in number (Taittiriya Sanhita, 1/4/11/1). Rudra is regarded as having a close relationship with Agni, the Fire God (Shatapath Brahman, 5/2/4/13). The Padma Puran, Swargakhanda, Chapter 8 mentions only eight Rudras. These eight, eleven or thirty-three forms of Rudra might mean as many aspects of Shiva.

However, in terms of the Upanishads, the eleven Rudras stand for the ten vital winds called Prans + one Mana or mind. The ten Prans are five chief Prans such as Pran (breath), Apaana, Samaana, Udaana and Vyana, and five subsidiary Prans such as Nag, Kurma, Krikara, Devdutta and Dhananjaya. [Refer—Trishikhi Brahmin Upanishad, Canto 2, verse nos. 77-87 of Shukla Yajur Veda tradition; Dhyana Bindu Upanishad, verse nos. 55^{1/2}-57 of Krishna Yajur Veda tradition.]

Rudra is said to have created such mythological figures as Bhuts (ghosts), Pretas (disembodied spirits), Pishacha (goblins), Khusmaandas (malignant imps).

In iconography, he has been depicted as wearing long tresses coiled on the head, has strong powerful arms, has a body decorated variously with serpents or priceless ornaments, and holds a strong and invincible bow and arrow as well as a thunderbolt. When necessary, he becomes ferocious and charges at his enemies on a chariot or on foot, while at the other times he is full of mercy and compassion. He is closely associated with forests and mountains, and is also the patron deity of herbs and medicinal plants. Hence, he is the killer of diseases and a great healer. Here, ‘healing’ would mean spiritual healing rather than physical ailments afflicting a creature.

He destroys sins and evil tendencies in the world, and grants the boon of liberation and happiness.

According to the epic Mahabharata, Anushasanaparva, Chapter 14, it is Shiva in the form of Rudra who destroys this creation at the end of one cycle of creation.

The Sharav Upanishad of the Atharva Veda, in its verse no. 6, describes Rudra as Sharav—the killer or destroyer. In this Upanishad, Lord Shiva had assumed this form to liberate Vishnu from the form of Nrisingh (a half man and half lion form) which the Lord had taken to kill the demon Hiranyakashipu who had been tormenting the devotees of Vishnu to such an extent that he did not spare even his son Prahalada. There is another connotation of the word ‘Sharav’. Since the word literally means the killer or slayer, it is that form of the Supreme Being which instills fear in the heart of

evil and pervert creatures, and kills or eliminates their evil tendencies. The word also refers to 'the Lord who shines in the heart of his devotees' as their Atma or pure consciousness.

The eleven Rudras are the following Gods who are the various manifestations of Lord Shiva— (i) Mannu, (ii) Manu, (iii) Mahinas, (iv) Mahaan, (v) Shiva, (vi) Ritdwaj, (vii) Ugrareta, (viii) Bhav, (ix) Kaal, (x) Vamdeo, and (xi) Dhritvrat.

The eleven Rudras appear in Rig Veda 1/43/1, and Taittiriya Brahman 3/4/9/7. The word Rudra means one who is angry, terrible and wrathful. Amongst the Rudras, Lord Shiva is regarded as the most senior and enlightened.

The eleven Rudras according to Vishnu Puran (1/1/15) are the following—Har, Bahuroop, Trayambak, Aparajaet, Shambhu, Vrishakapi, Kapardi, Raivat, Mrigvyadh, Sharva, and Kapaali.

Lord Shiva has eleven forms, and one of them is 'Rudra', which literally means anger, wrath and vehemence. The Lord is considered to be the most enlightened of the Trinity Gods, and is therefore called 'Maheshwar'. He always remains in a meditative posture, always contemplating and meditating on the supreme Soul and the Truth. But still he shows anger and mercilessness, because one of his tasks is to punish the evil and sinful ones by ruthlessly slaying them in order to protect the good and righteous souls in the creation. Further, when his meditation and peace is disturbed he also becomes angry. He remains aloof and disinterested in the world, because he is very wise and enlightened, and he stays in the form of an ascetic. Ordinary people think that he is proud, arrogant and haughty because he does not give a damn to worldly formalities and niceties of behaviour. Shiva's failure to conform to set norms of proper and sane conduct makes him look most odd God.

The word 'Rudra' is literally used as a metaphor for anger, wrath, vehemence and cussedness. But this is a very misleading title for Shiva because there are a number of great Upanishads which describe Rudra as none but the Supreme Being known as the transcendental Brahm from whom the entire creation has emerged, who sustains it and in whom the creation would finally collapse. It is this Brahm in the form of Rudra who is treated as the supreme Lord God of creation, and hence is called Maheshwar. The Rudra Hridaya Upanishad of the Krishna Yajur Veda tradition and Atharvashir Upanishad of the Atharva Veda tradition are exclusively dedicated to this theme. The Dakshin Murti Upanishad of the Krishna Yajur Veda describes the esoteric significance of the Shiva Tattva or the essential knowledge of Shiva who is the greatest Guru or moral preceptor and teacher of the creatures.

The Ram Uttar Tapini Upanishad of the Atharva Veda, Canto 5, verse no. 4/33 says that the eleven Rudras are manifestations of Lord Ram who himself is the supreme transcendental Brahm. In other words, Lord Ram had assumed the form of Rudra or Shiva in order to bring this creation to conclusion.

The Atharvashir Upanishad of Atharva Veda is especially relevant here because it explains the various epithets used to describe the virtues and glories of the supreme transcendental Brahm by Lord Rudra himself, and upon close reading it would be very clear that Rudra is describing Brahm when he describes himself.

The Nrisingh Purvatapini Upanishad of the Atharva Veda, in its Brahman 1, verse no. 3 says that the Rudras, along with the Vasus and Adityas etc., were born out of the third step of the divine Anushtup Chanda in which the Mantra of Lord Nrisingh was revealed to the creator Brahma when he did severe Tapa in order to initiate the process of creation.

²*Vasus*—There are said to be eight Vasus. These are the various patron Gods who preside over the essential elements of life. They are eight in number as follows— Vishnu who is the sustainer, Shiva who is the annihilator, Kuber who is the treasurer of the wealth of the Gods, the Sun, Water, Fire, Wealth represented by gems and gold, and 'Ray' representing glory and fame. The element 'Fire' is the most potent, prominent and essential force in creation, because without fire the world would freeze

to death. Hence, the Fire-God is said to be the chief amongst the Vasus. The 'fire' element is the active force in creation and is primarily responsible for kindling the cosmic cauldron that set in motion the process, and once having set it in motion it then sustained it and would finally annihilate it by burning it to cinders. On the other hand, Lord Vishnu is the passive force of creation represented by his other form of Viraat Purush which is the primary male aspect of creation. Lord Vishnu, who is the sustainer of the creation, is the Lord of Laxmi who is the Goddess of wealth, and is the supreme creator because Brahma, the old patriarch of creation who created the visible world and its creatures, was himself born atop the divine lotus that emerged from the navel of Lord Vishnu. Lord Vishnu utilizes the services of Laxmi who is the personification of the active forces of creation to create, sustain and annihilate the world. The Vasus are symbolic Gods who represent those essentials aspects of creation without which life would be difficult to conceive and sustain and finally conclude.

The eight Vasus are the patron Gods who provide succour and a dwelling place for the whole creation. They symbolize those primary necessities of life without which existence is not possible. They are— (i) Kuber (the God of wealth and prosperity), (ii) the Sun God (who provides energy and food) and his rays and radiance (i.e. sunlight and the energy that it provides), (iii) Shiva (the concluder or annihilator of the creation), (iv) Vishnu (the sustainer), (v) the Water God (called Varun), (vi) the Fire God (called Agni), (vii) any body of water such as a pond, a river etc., and (viii) holy and pious people (who give advice and guidance to the creatures of the creation). According to Brihad Aranyak Upanishad 3/9/3, the Vasus are the following—Fire, Earth, Air, Antariksha (the space of the solar system), Aditya (Sun), Duloka (heavens), the Moon, and the Nakshatras (the stars and the planets).

According to Purans, the eight Vasus are the following—Dhruv, Dhar, Som/Soma (the sap of an elixir-providing plant called Som/Soma which is used during religious ceremonies as sanctified liquid offered to the Gods; it is white in colour and is said to be stored in the moon), Aapha (water), Anil (wind), Anal (fire), Pratush and Prabhaas.

These eight Vasus are the semi-Gods who symbolize the various types of assets needed to sustain this world. They therefore represent such assets as jewels, precious stones and gems, gold and other forms of wealth and property. Vasus also refers to the fire and water elements as well as their grosser forms as the terrestrial fire and water bodies such as ponds and lakes; to the virtue of radiance, splendour and glory; to the ray of light; to Kuber (the treasurer of Gods), Shiva, Sun, Vishnu, and a simple and pious gentleman.

The Ekakchar Upanishad of Krishna Yajur Veda, in its verse no. 7, says that these Vasus are manifestations of Brahm in order to provide the creation with the necessities of life.

The Atharva-shikha Upanishad of the Atharva Veda, in its Kandika (Canto) 1 says that the Vasus were created in the beginning of creation from the first Matra 'A' of OM representing the first leg of the supreme Brahm along with Brahma the creator, the Rig Veda, the Gayatri Chand and the Grahapatya Agni.

The Brihajjabal Upanishad of the Atharva Veda, Brahman 4, verse no. 16 lists the eight Vasus as follows—Ghar, Dhruv, Soma, Kripa, Anil, Anal, Pratyush and Prabhash.

The Nrisingh Purvatapini Upanishad of the Atharva Veda, in its Brahman 1, verse no. 3 says that the Vasus, along with the Rudras and Adityas etc., were born out of the third step of the divine Anushtup Chanda in which the Mantra of Lord Nrisingh was revealed to the creator Brahma when he did severe Tapa in order to initiate the process of creation.

³Adityas—According to mythology, there are said to be twelve Adityas which are simply as many forms of the Sun God. These are the revelations of Brahm in the form

of the Sun to carry out the following functions of creation—(a) take care of the world (Rig Veda, 2/27/4); (b) are like the heads (Taittiriya Brahman, 1/2/3/3) and eyes (Jaimini, Uttar. 2/1/2/3) of all the creatures.

The Ram Uttar Tapini Upanishad of the Atharva Veda, Canto 5, verse no. 4/34 says that the Adityas are none but manifestations of Lord Ram who himself is the supreme transcendental Brahm personified.

These twelve Adityas appear first in the Rig Veda 1/41/4-6 and 2/27. They are the sons of Aditi, the mother of Gods (Atharva Veda, 8/9/21). They are the following—the eight Vasus + Indra + Sun + Vishnu + Shiva = twelve in number.

According to Vishnu Puran, the twelve Adityas are the following— Dhata, Arayama, Mitra, Varun, Anshu, Bhug, Indra, Vivaswan, Pusha, Parjanya, Twashta and Vishnu.

According to Brihad Aranyak Upanishad 3/9/5, the twelve months of the year represent these twelve Adityas, one month for one Aditya.

The Sun God is worshipped by twelve names during the twelve months of a year. These names and the months are as follows—(1) as Dhata during the first Hindu month of Chaitra also known as Madhu (roughly corresponding to mid-March and mid-April); (2) as Aryama during the second Hindu month of Vaishakha also known as Madhav (roughly corresponding to mid-April to mid-May); (3) as Mitra during the third Hindu month of Jyestha also known as Shukra (roughly corresponding to mid-May and mid-June); (4) as Varun during the fourth Hindu month of Ashad also known as Shuchi (roughly corresponding to mid-June and mid-July); (5) as Indra during the fifth Hindu month of Sravan also known as Nabha (roughly corresponding to mid-July and mid-August); (6) as Vivaswan during the sixth Hindu month of Bhadrapad also known as Nabhasya (roughly corresponding to mid-August and mid-September); (7) as Pusha during the seventh Hindu month of Aashwani also known as Tapa (roughly corresponding to mid-September and mid-October); (8) as Kratu during the eighth Hindu month of Kartik also known as Tapasya (roughly corresponding to mid-October and mid-November); (9) as Anshu during the ninth Hindu month of Marga Shirsha also known as Saha (roughly corresponding to mid-November and mid-December); (10) as Bhag during the tenth Hindu month of Pausa also known as Pushya (roughly corresponding to mid-December and mid-January); (11) as Twashta during the eleventh Hindu month of Magh also known as Esh or Ish (roughly corresponding to mid-January and mid-February); and (12) as Vishnu during the twelfth Hindu month of Phalgun also known as Urj (roughly corresponding to mid-February and mid-March).

The Nrisingh Purvatapini Upanishad of the Atharva Veda, in its Brahman 1, verse no. 3 says that the Adityas, along with the Vasus and Rudras etc., were born out of the third step of the divine Anushtup Chanda in which the Mantra of Lord Nrisingh was revealed to the creator Brahma when he did severe Tapa in order to initiate the process of creation.

⁴*Vishwa-Devas*—The Vishwa-Devas are the different Gods who take care of this creation in various forms and in different capacities. They are called ‘Digpals’ and ‘Lokpals’. There are said to be eight Digpals and eight Lokpals.

The various Digpals are the great and senior custodians of creation, the word ‘Dig’ implying ‘great and senior’, while the Lokpals are the different caretakers of the various realms of the physical world and are junior to the Digpals.

The Ram Uttar Tapini Upanishad of the Atharva Veda, Canto 5, verse no. 4/31 says that it is Lord Ram, a personification of the supreme transcendental Brahm, who has revealed himself as the eight Lokpals in order to take care of the eight directions of this creation.

The Ram Purva Tapini Upanishad of the Atharva Veda tradition, Canto 4, verse no. 36-37 mentions the name of eight Lokpals, and verse no. 38 mentions the names of eight Digpals. Verse no. 39 lists their weapons. Now let us see who they are—

(i) The eight Lokpals—The eight Lokpals are like the knights under a great King who in the present case is Lord Ram. They carry out the orders of the Lord in the physical world at a more mundane level of creation. These eight Lokpals are the following—Dhristi, Jayant, Vijai, Suraashtra, Raastravardhan, Akop, Dharmpaal and Sumantra. [Refer Ram Purva Tapini Upanishad, Canto 4, verse nos. 36-37.]

(ii) The eight Diggals—Indra who is the king of Gods and who has a thousand eyes on his body, and is therefore called ‘Sahastraaksha’, Agni or the Fire God, Yam or the God of Dharma (i.e. the God responsible to ensure that the great tenets of righteousness and proper conduct are observed by the creatures, and to punish those who violate these laws), Nirritiya (also known as Nairitya), Varun or the Water God, Anil or the Wind God, Indu or the Moon God (often replaced by Kuber who is the treasurer of Gods), Ishan or Lord Shiva, Brahma the creator, and Anant who is Lord Vishnu, the sustainer and protector of creation (or Lord Seshnath, the legendary serpent who holds the earth on its hoods in a symbolic gesture to indicate that Lord Vishnu is responsible for taking care of this creation).

The eight Diggals are the divine forces of creation in a personified form of various Gods who are assigned the task of taking care of the entire creation. They are the following—(i) Indra who is the king of Gods and responsible for production of rain as well as to control all other Gods who are said to be represented by the various independent forces of Nature; (ii) Agni is the personified form of the fire element responsible for providing heat, energy, light, vitality, strength, vigour and vibrancy to creation; (iii) Yam is the personified form of death as well as assigned the duty to uphold the laws of Dharma (or the auspicious virtues of righteousness, nobility, propriety, probity etc.), and to punish those who violate it; (iv) Nirriti or Nairitya who is the God responsible for the actual death and punishment of the sinful and unholy creatures in creation; (v) Varun is the personified form of the most essential ambrosia of life known as the water element that provides nourishment and lubrication to this creation, and is regarded as the basic element that harbours life in all its forms in its bosom; (vi) Anil is the personified form of the life-giving air or wind element which is also called Pran—literally meaning ‘life’ which is a proof of its importance and significance vis-à-vis this creation; (vii) Kuber is the treasurer of Gods and responsible to provide all the necessities of life to the inhabitants of this world; the Moon God is the custodian of the Amrit, the ambrosia of life and eternity which is a priceless asset for the creation; (viii) Ishan is Lord Shiva who is also known as Mahadev, the Great Lord, as well as the one who is responsible for maintain balance in this creation by controlling death, and hence is called the ‘concluder’; (ix) Brahma is the creator of the physical world as well as the body of knowledge known as the Vedas, and therefore assumes the role of a grand old patriarch of the family known as the world; and (x) Anant or Lord Vishnu who is so-called because he is eternal, infinite and endless, has infinite responsibilities, and is assigned the multi-prong duty of taking good care of the world in all respects. He is also called Anant as he is none but the eternal Brahm himself in the form of the Viraat Purush, the all-pervading, all-encompassing and almighty Lord of creation. In fact, even Brahma and Shiva are said to be born from this Viraat Purush. [Refer Ram Purva Tapini Upanishad, Canto 4, verse no. 38.]

These Diggals are responsible for the eight directions where they are worshipped as follows—(1) Indra (the king of Gods) is the custodian or guardian of the east direction. (2) Agni (the fire-God) is the custodian or guardian of the south-east direction. (3) Yama (the death-God) is the custodian or guardian of the south direction. (4) Nirriti or Nairitya is the custodian or guardian of the south-west direction. (5) Varun (the Water God) is the custodian or guardian of the west direction. (6) Vayu (the Wind God) is the custodian or guardian of the north-west direction. (7) Kuber (the treasurer of Gods) is the custodian or guardian of the north direction. (8) Ish (Lord Shiva; the chief Lord) is the custodian or guardian of the north-east direction.

According to the Tripadvibhūta Maha Narayan Upanishad of the Atharva Veda tradition, Canto 7, paragraph no. 58, the eight Lokpals are the following—Indra, Agni or the Fire God, Yama or the God of death, Nriiti, Varun or the God of water, Vayu or the God of wind, Soma or the Moon God, and Isha or Lord Shiva.

Besides the above eight Lokpals or Digpals, there are said to be two more Lokpals or Digpals or Vishwa-Devas—viz. Brahma the creator for zenith or the upper reaches of the sky (heavens), and Prithivi (Earth) for nether world.

The Sun is also regarded as a Lokpal, and truly so because without the Sun life would be impossible in this world. Hence, if the Sun is to be regarded as the Lokpal, then Brahma is replaced by the Sun God.

According to another version, Brahma and Anant (Vishnu) are also considered as the guardians of the world and are listed as the last two amongst the 10 Lokpals. Since they are very senior Gods, these two are often referred to as 'Digpals'.

⁵*Mitra*—The word Mitra literally means 'a friend', and the eclectic virtue of friendship and friendliness. He is regarded as the patron God of peace, friendship and tranquility. Hence, all forms of Gods that are benevolent and benefactors of the creation are technically one or the other forms of the Mitra God.

The word usually refers to the Sun God because it is the Sun that supports and fosters life on this earth and is a partner in its wellbeing and development. It is the Sun that provides all energy, heat and light to the world. The Mitra God is one of the twelve Adityas (Suns) who are the Gods born from Aditi, the mother of Gods. In fact, Aditya or the Sun God is worshipped as Mitra during the third Hindu month of Jyestha also known as Shukra (roughly corresponding to mid-May and mid-June).

He is equivalent to Savita (Rig Veda, 5/82/9). He is the patron God of the day (Atharva Veda, 9/3/18). He is said to support the three worlds, viz. the terrestrial, the sky above the earth, and the heavens (Kath Sanhita, 23/12). The newly born fire is regarded as the Varun God while its lighted form is Mitra (Rig Veda, 5/3/1). Mitra God protects his devotees from the fear of old age, death and sins (Rig Veda, 3/59/2). Mitra is usually worshipped in the form of the Sun God. He is one of the principal deities of the Rig Veda. In association with the Varun God (Water God and patron deity of the clouds) he gives rain. This is obvious because without the heat of the sun, evaporation of water from the oceans would not take place and therefore the clouds would not form. The cycle of season is also governed by the Sun God.

'Pran', the vital wind which supports all life-forms in this creation, is also the best friend of a creature because it is the breath that not only injects life into the body but also supports it. Therefore, the Wind God is also a form of Mitra. Similarly, the Water God and the Fire God also come under the category of Mitra God.

The Mitra God resides in the heavens (sky) and impels the people of the world towards constructive activities.

In the Vedas, he appears in Rig Veda—1/151/1, 3/59; Atharva Veda—3/8, 19/19/1 amongst other places.

Mitra God is usually shown in the company of the Varun God, and the duo is known as *Mitra-Varun*. There are two connotations of this term—(i) Varun is the deity of water, i.e. the Water God. No life is imaginable without the elixir of life known as water. Hence, Varun is regarded as the Mitra God. (ii) The Mitra-Varun God represents the twin factors of creation that are opposite to each other and help to maintain a cosmic equilibrium, such as the appearance of day (Mitra) and night (Varun) together. It is obvious that the day and night cohabit and it is impossible to imagine life without any one of them. Similarly, it is impossible to imagine life without either fire or sun represented by the Mitra God, and water or moon represented by the Varun God. Mitra-Varun are depicted as eternally youthful (Rig Veda, 3/54/10). They appear together in Rig Veda—1/37, 1/152, 3/62/16-18, 7/501, 7/61, 10/132/2-7; in Atharva Veda—5/24/5; in Yajur Veda—7/9, 21/8.

⁶*Varun*—Varun is also known as the Water God as he is the patron deity who rules over the water element as well as its many manifestations such as the cloud, river and ocean (Gopath Brahman, 1/1/7). He is regarded as the king amongst the Gods (Taittiriya Sanhita, 3/1/2/7). He is regarded as the patron God of the night (Atharva Veda, 9/3/18). The Duloka (the heavens) and the Prithivi (earth) are under his control and command (Rig Veda, 6/70/1). He determines the path taken by the Sun God during his journey across the sky (Kapisthal Kath Sanhita, 3/4). Varun God is so-called because he surrounds or engulfs or encompasses the whole world and everything where he is present as is the case of the dark rain-bearing clouds that covers the sky (Nirukta, 10/3), and as the dark veil of night (Atharva Veda, Saayan Bhasya, 1/3/3). He is usually depicted in the company of the Mitra God, and as such the duo is called as 'Mitra-Varun', with Mitra being regarded as the senior amongst the two. While Mitra is the patron deity of the day, Varun is the patron deity of the night. He is the lord of all the Bhuvans or abodes, and as such is regarded as the king of creation (Rig Veda, 5/85/3). He has thousands of eyes, and his knowledge and powers are unlimited. He is regarded as the keeper of moral law like the Yam God. In association with the Wind God known as Vayu, he sustains life by giving rain and protecting crops.

He is the presiding deity of the western direction and of water in all its forms including all aquatic life forms.

Iconographically, he is shown as riding on a crocodile. He has four arms—one holds a serpent, the other holds a snare or noose. Sometimes he is depicted as riding a chariot of Swans, and holds a lotus in his right front hand, a noose or snare in the front back arm, a vessel of gems in the left front arm, and a conch in the left back arm. There is a ceremonial umbrella over his head.

This Varun God is offered prayers and honoured in the Vedas in numerous places, such as the following—Rig Veda—1/25; 2/28; 5/85; 7/86-89; 8/41; 10/124/5, 7, 8; Sam Veda—589; Yajur Veda—4/31; 10/7; Atharva Veda—5/1-2; 20/92.

The 'Aditya' or the Sun God is also worshipped as Varun during the fourth Hindu month of Ashad also known as Shuchi (roughly corresponding to mid-June and mid-July).

The 'Mitra-Varun' God represents the clubbing together of the twin factors of creation that are apparently opposite to each other but nevertheless help to maintain a cosmic equilibrium, such as the appearance of day (Mitra) and night (Varun) together. It is obvious that the day and night cohabit and it is impossible to imagine life without any one of them.

Varun is the deity of water, i.e. the Water God. No life is imaginable without the elixir of life known as water. Hence, Varun is regarded as the Mitra God.

Similarly, it is impossible to imagine life without either fire or sun represented by the Mitra God, and water or moon represented by the Varun God.

Mitra-Varun are depicted as eternally youthful (Rig Veda, 3/54/10). They appear together in Rig Veda—1/37, 1/152, 3/62/16-18, 7/501, 7/61, 10/132/2-7; in Atharva Veda—5/24/5; in Yajur Veda—7/9, 21/8.

The Ram Purva Tapini Upanishad of the Atharva Veda tradition, Canto 4, verse no. 38 says that Varun or the Water God is one of the ten Digpaals or custodians of the ten directions of the celestial globe. He is the patron deity of the western direction and worshipped in that corner. Verse no. 39 says that his weapon is known as Paash or sling or snare.

⁷*Indra*—*Indra* is the king of Gods who can fulfill all the desires of the aspirant like any king when he is pleased by the person who prays to him for his gracious intervention. Indra represents the chief forces of life that controls the functioning of Nature. He derives his name from 'Indri' meaning the sense organs of the body—five organs of perception and five organs of action. The vital functions and the virtues of each of these organs are personified as a God, and the authority who controls them is

their Lord called Indra. Indra is a metaphor for, or a personification of the combined virtues and characteristics that define all these organs and their functioning. Being at the helm of affairs, Indra is like the King or Emperor of all the other personified forces and powers of creation.

At the macro level of creation he is like the supreme Brahman who is the Lord of all that exists, while at the micro level of the individual creature he is like the Atma (pure consciousness) and the Pran (the vital winds that sustain life inside the body).

The various functions that the organs perform inside the body of the creature are represented by their own set of patron Gods who personify these functions and the various qualities of these individual organs. Since Pran, the vital winds present in the body that govern its functioning, is at the core of life in a creature's body, it is like Indra at the micro level.

Since the heart is at the core of life of a man, the central authority that regulates all these Gods is also said to have its seat in the heart. That authority is the emperor of the body and its organs, and it is known as the Atma. Therefore, this Atma is also like Indra as far as the individual creature is concerned.

The Tejobindu Upanishad of Krishna Yajur Veda, Canto 5, verse no. 62 describes that the Atma, the pure consciousness has manifested itself as Indra as well as all other Gods including Rudra (an angry form of Shiva) and Brahma (the creator). This is because Indra is the Lord of all the Gods who are represented by the various forces of Nature and is also the Lord of the creature as he is the Lord of his organs. The word Indra is derived from the root 'Indri' meaning 'organs of the body' such as the five organs of perception and five organs of action. He is the Lord of rains indicating his prominence as the Lord of life, fertility and vibrancy because the rains and clouds bring life to this world. He has the vital wind force as his comrade-in-arm, indicating his control over all forms of activity and movement that characteristic life in this world. He enjoys the best things in heaven, being the king of Gods. He is very powerful and holds the thunderbolt in his hands to subdue his enemies. The Atma also exhibits these virtues.

According to Brihad Aranyak Upanishad of the Shukla Yajur Veda tradition, canto 2, Brahman 1, verse no. 6, this Indra is a synonym for *Brahman* both at the macro level because Brahman is the supreme Lord of the entire creation represented by the innumerable forces of Nature called the various Gods at the macro level (and that is why we have so many Gods), as well as at the micro level of the individual creature because the Pran is the vital life supporting entity present in the body without which none of the organs would have their relevance, as well as the Atma or pure consciousness without which even this Pran would lose its relevance.

The king is offered the best of foods and drinks that are available in his kingdom. So this Indra God is also offered the best food and drink in the form of the ambrosia called 'Som'. It is an invigorating drink that is extracted from a creeper by the same name. It is used during sacrificial rituals, and it is offered to Gods that is supposed to bestow them with an eternal life of bliss. It is said to be stored in the heavenly pitcher of the moon. From the metaphysical point of view, since Indra represents the superior authority that controls all the other Gods representing the various sense organs, it follows that whatever the organs acquire are first offered to Indra before the other Gods representing these organs partake of it. Amongst the organs, it is the hand that helps the body to acquire things from the outside world. Since the organs have an intrinsic tendency to move towards pleasing things in this world and move away from unpleasant things, it is deemed that their messenger, the hand, brings to them only selected and best of things available, which is like bringing Amrit or Som for them so that they can offer it to their king Indra.

In Taithiriyo-panishad of the Krishna Yajur Veda tradition, in its Valli (Canto) 1, Anuvak (sub-canto) 4, Indra is the God who is offered worship through the fire sacrifice invoking his divine intercession and patronage so that the aspirant is blessed

with obtaining success in acquiring eclectic qualities and wisdom as well as material well being and worldly fame.

Indra is both the 'Atma' of the living being because the latter is the undisputed emperor of the body as its consciousness, as well as the 'Pran' or the various vital winds present in the body that control all its vital functions and sustain life.

Indra is also the Lord of rains and clouds, and since rain is a metaphor for life and fertility, and the clouds are the carriers of such life-bearing seeds, Indra too is regarded as the Lord of life and its protector, sustainer and developer. That is why Indra, in this role, is regarded as one of the eight Digpals.

Indra, who is the king of Gods and who has a thousand eyes on his body, is therefore called 'Sahastraaksha',

In Taittiriya Upanishad of Krishna Yajur Veda tradition, Valli 1, Anuvak 4, verse no. 1 (stanza 3), Indra is invoked by the wise teacher to bless him with the virtues of Medhaa (i.e. with the virtues of intelligence, wisdom, prudence, wit, understanding and comprehension).

The Ram Purva Tapini Upanishad of the Atharva Veda tradition, Canto 4, verse no. 38 says that Indra is one of the ten Digpals or custodians of the ten directions of the celestial globe. He is the patron deity of the eastern direction and worshipped in that corner. Verse no. 39 says that his weapon is Vajra. This weapon is made of the hardest material in existence and is said to be manifested in the form of the thunderbolt. This is because Indra is said to be the commander of the rains and rain-bearing clouds.

According to the Rig Veda, 1/ 4-5; 51-57, Indra represents the combined forces of Nature represented by the different Gods. He loves to drink Som, the elixir of bliss and eternity (Rig Veda, 3/ 36/ 8). He has the Wind God called Marut as his chief assistant.

Indra appears in the Vedas as follows-- Rig Veda—1/4-5, 51-57; 5/29; 7/19-32; 8/15-17; 10/111-113; Sam Veda—52/115-148 etc.; Yajur Veda—3/34; 7/5; 7/39; Atharva Veda—8/8; 20/1.

⁸Agni or the Fire God—The legendary 'fire element' has a very prominent place in the scriptures. The Fire God or Agni appears in the Vedas as follows—Rig Veda—1/1; 1/12; 4/5; 5/1; 6/7-9; 7/1, 3-6; 12-13; 8/1, 23, 39; 10/1-7; 12/1-122 etc.; in Sam Veda—1-51; 53-55 etc.; in Yajur Veda—1/5; 2/4; 7/24; 18/72 etc.; and in Atharva Veda—6/119; 8/3; 12/3.

Since it was the first born amongst the various Gods, it was called 'Agni' meaning the one who comes first, that which precedes others. It is the inherent 'fire' element present in all the living creatures that distinguish them from non-living creatures. It is all-pervading and omnipresent, and infuses life to all the creatures (Kaushitaki Brahmin, 4/3; Brihad Aranyak Upanishad, Canto 5, Brahman 9, verse no.1). This fire helps in digestion of food (Shatpath Brahman, 148/10/1).

He is the foremost amongst the Gods worshipped on earth (Shatpath Brahman, 6/1/1/11). He is compared to the Sun in the heavens. He has 7 tongues representing the 7 colours of the rays of the Sun or the colours of light (Rig Veda, 1/146/1; 3/6/2). Since he provides nourishment to the Gods by accepting the offerings made to the sacrificial fire at the time of fire sacrifices, he is deemed to be their sustainer and father (Rig Veda, 1/69/1). Other names of the Fire God called Agni or Agne are the following—Vishwavedus, Kavi, Kavikratu, Jaatvedas, Vaishwaanar, Tanunpat, Matrishwa and Naraashansa. It is believed that he was born from the mouth of the Virrat Purush (Rig Veda 10/90/13).

The Ram Purva Tapini Upanishad of the Atharva Veda tradition, Canto 4, verse no. 38 says that Agni or the Fire God is one of the ten Digpals or custodians of the ten directions of the celestial globe. He is the patron deity of the south-eastern direction and worshipped in that corner. Verse no. 39 says that his weapon is known as Shakti—i.e. dynamism, energy, vigour, vitality and strength.

The metaphysical importance and significance of Agni has been extensively discussed in numerous Upanishads as it is regarded as the most purifying and holy of all the elements. The knowledge is called 'Agni Vidya' and the Upanishads that describe it, inter alia, are the following—(a) 5 Holy Fires—(i) Krishna Yajur Veda's Kathvalli or Katho-panishad, Canto 1, Valli 1, verse no. 13-18; Pran Agnihotra Upanishad, verse nos. 12, 19; Yogshikha Upanishad, Canto 5, verse nos. 29-32. (ii) Sam Veda's Chandogya Upanishad, Canto 4, sections 10 to 13. (b) 4 Holy Fires—(i) Atharv Veda's Nrisingh Purvatapini Upanishad, Canto 2, verse no. 2; Par Brahm Upanishad, verse no. 5. (c) 3 Holy Fires—(i) Krishna Yajur Veda's Garbha Upanishad, paragraph no. 5; Kath Rudra Upanishad, verse no. 3; Katho-panishad, Canto 1, Valli 1, verse no. 7; Canto 2, Valli 1, verse no. 8.

The worship of the Fire has been described in Sam Veda's Chandogya Upanishad, Canto 2, section 24, while Canto 5, sections 4-10, 19-24; Atharva Veda's Mundak Upanishad, Canto 1, section 2.

The relationship between the universality of the fire element and the pure conscious Atma has been described very beautifully in Katho-panishad, Canto 2, Valli 2, verse no. 9 of the Krishna Yajur Veda.

The relationship between the universality of the fire element and the pure conscious Atma has been described very beautifully in Katho-panishad, Canto 2, Valli 2, verse no. 9 of the Krishna Yajur Veda.

The Agni or the Fire God has two names—viz. Vaishwanar and Samvartak. The word *Vaishwanar Agni* refers to the eternal fire which burns in the cosmos in a subtle and imperceptible form to keep the flame of life inherently and constantly burning. It represents the 'consciousness' factor of the creation; the 'warmth' of fire is a sign of life whereas 'cold' is a harbinger of and synonym with death. Amongst the five elements created at the time of creation (earth, water, fire, air, space), it is the fire which is the only element which has energy, heat, light, splendour, dazzle and radiance. The water will be nothing else but ice and of no use to the creature without fire as far as its ability to harbour and sustain life is concerned. Similarly, the earth would freeze cold and covered with a thick sheet of ice were it not for the eternal fire burning inside it, even under the ocean bed covered to the brim with water which acts as an antidote to fire. This very fact shows that the Supreme Lord is active in the fire and prevents it from being doused by water because the Lord needs it to sustain life as much as he needs the water. Further, without heat there will be no seasons, no currents, no movements in the air. There will be no formation of clouds and there will be no rainfall in the absence of heat. In brief, the vital spark of life in this world is represented by the 'fire element', hence, it is called the 'Lord of the Vishwa', or Lord Vaishwanar. This fire element derives its vitality, stamina, energy and potentials from Brahm.

According to Maitrenyu Upanishad, canto 2, verse no.8 of the Sam Veda tradition, this Vaishwanar is the fire present in the living creature giving it the vital energy to digest the food eaten by it.

The *Samvartak Agni* refers to the fire that engulfs the earth at the time of dooms-day, or the fire that brings about the conclusion of creation and which represents that phase of the fire sacrifice when offering of oblations are complete and the sacred fire is let to burn out and calm down, because the word 'Samvartak' means the end of an era or a period of time, and Agni means fire.

It also has two other connotations—viz. (1) The dooms-day cloud, because at the time of conclusion of one cycle of creation and destruction there is torrential rain which causes a deluge that drown the entire habitation on the surface of the earth. In this scenario, only certain forms of aquatic life survive, and from it the seed of the next cycle of creation is sown. (2) The fire burning under the bed of the ocean and in the bowls of the earth which keeps the water of the ocean as well as the underground springs warm. This fire is called 'Barwaanal' or 'Badvaanal'. In the present verse, this fire has been personified as the sage who first conceptualised this Upanishad.

The Atharva-shikha Upanishad of the Atharva Veda tradition, in its Kandika 1 says that the Samvartak Agni was created by the supreme Creator Brahm, the Supreme Being, at the beginning of creation along with the Moon God, the Mantras of the Atharva Veda, the Maruts (the Wind God), and the Viraat Chanda. It represents the fourth leg of Brahm and corresponds to the 'Ardha Matra' or the half syllable that follows the third letter 'M' of OM. This latter fact is also affirmed in the Nrsingh Purvatapini Upanishad of the Atharva Veda, in its Canto 2, verse no. 2.

⁹Ashwini Kumars— These are the twin sons of the Sun God, and regarded as the physician of the Gods (Rig Veda, 8/88; Taittiriya Brahman, 3/1/2/11). They are first mentioned in the Rig Veda, 1/34; 1/46. According to Niruktaakar Yaska, 12/2, one is the son of the day and the other of the night.]

5. I am the one who bears or harbours or gives shelter to, as well as reveal myself in the forms of Soma¹, Pusha², Twasta³, and Bhag⁴. [That is, these entities are revelations or personified forms of the Shakti of Brahm. At the same time, it is the Brahm who supports them by employing his Shakti.]

In order to surround the entire creation and to pervade it uniformly, it is me who bears or supports or empowers (or manifests in the form of) Lord Vishnu whose foot is represented by this mortal world and who had measured the whole creation in his three steps⁵, and the Creator in his two forms—one at the macrocosmic level of creation which is invisible, in which case this Creator is called 'Brahma', and the other at the microcosmic level of the visible world, in which case the Creator is known as Prajapati⁶. [Refer verse no. 6 below.] (5).

[Note—¹Soma— Soma appears first in the Rig Veda, 1/43/7-9; 1/11. He is the third most important God. Som is the personification of those elements that give bliss and happiness as well as bestows eternal life marked by these virtues. It has its origin in the divine creeper called 'Som Lata'; the extract of it is used as a sanctified drink before and during a fire sacrifice. It is rejuvenating and bliss providing, and is known as Amrit. (Yajur Veda, 17/72). It gives eternity to the Gods and is the ambrosia for which the legendary churning of the ocean was done. It is stored in the moon; that is why the latter is also called 'Som'. It is the best extract or essence of life giving herbs, and is therefore called the 'king of the vegetable kingdom' (Rig Veda, 9/114/2). He is regarded as the patron God of directions.

Soma appears in the Vedas as follows—Rig Veda—1/43/7-9; 1/91; 3/62/13-15; 7/104/9, 12, 13; 8/48; 10/124/6; Sam Veda—422; Atharva Veda—6/2; 14/1/1-5.

Soma is stored in the moon which is often addressed as Indu, another name of Som—Rig Veda—1/129/6; Atharva Veda—18/3/54.

The word 'Soma' refers to the Moon God as well as the juice of the Soma plant which is used as sanctified liquid during fire sacrifices and an offering for the Gods. The Soma is borne by the Mother Goddess, and is also her manifestation. The 'Mother Goddess' is actually a revelation of the dynamic powers, authority, strength and potentials of the supreme transcendental Brahm, the Supreme Being. The Goddess represents the dynamism of Brahm that is employed by the latter to create, control, sustain and protect this creation, both at the macrocosmic level as well as the microcosmic level. The Soma is therefore the invigorating virtues of Brahm revealed in the form of the sanctified liquid of this name as well as the soothing celestial body known as the Moon.

Traditionally it is held that the moon is the pitcher that holds the ambrosia of eternity and bliss called Soma. It is the rejuvenating, invigorating, life-sustaining elixir drunk by Gods, and used as a sanctified drink during religious fire sacrifices. This offering in the fire sacrifice gives sustenance to the Gods. These Gods represent the different powerful forces and powers of Nature. They symbolic residence in the different organs of the body of the creature, controlling their functioning and thereby

regulating life in the creation at the micro level, and as the heavenly Gods they control the functioning of Nature at the macro level of creation. These Gods are eternal in the context of the individual creature because the creature has a limited life span which is miniscule in terms of the span of the creation during the currency of which these Gods would live. When these Gods are properly fed and nourished, it is a symbolic way of saying that the vital life-sustaining forces are working in their prime form and are robust and healthy.

Since the moon is considered a pitcher of Soma, the God's ambrosia, it is a metaphor for all fundamental qualities or essential elements that can sustain a healthy and vibrant life. Only Brahm has this qualification of being able to maintain a life in creation that is healthy and robust. Therefore the moon is a manifestation of Brahm in the form of Soma, the elixir of life; Brahm is indeed the elixir of life. Rather, being the supreme authority, Brahm is the 'king' of all the vital functions, all the powerful powers and forces of Nature; Brahm embodies these virtues. The Soma is a metaphor for these qualities of Brahm, and the moon is an image of that Brahm.

Another name of Soma is *Uksha* or *Rishabh* is a medicinal herb found in the Himalayan range of mountains in the north of India. It is said to so powerful that it makes a man as potent as a bull; it is said to improve fertility and manliness, virility and masculinity. It is also known as the legendary Som plant in ancient texts. It is especially lauded as a powerful stimulant in *Susrut Sanhita*, section 1, chapter 38 which mentions thirty seven such powerful and potent herbs. Its roots and leaves resemble garlic, and its cousin called the *Rishabh* plant is shaped like the horns of a bull—hence the name 'Rishabh', meaning a bull. It is also called *Jivak* or the 'life-giver'. These herbs enhance virility, masculinity, strength, stamina, vitality, vigour and life giving energy in the form of sperms disguised as a blob of mucous. They are sweet to taste and fragrance, and medically neutralize the bad effects of excessive bile and acidity in the body. They are used as antidotes for cough and rheumatism.

²*Pusha*—This God appears first in the Rig Veda, 1/23/13/5. He is the patron God of nourishment, supply of essential needs of life, as well as their fulfillment. He is considered equivalent to the Sun God (Rig Veda, 2/40/5). He gives protection against thieves and robbers and other obstacles in journey of travelers (Rig Veda, 1/42/2).

The present verse says that Pusha is borne by the Mother Goddess, and is also her manifestation. The 'Mother Goddess' is actually a revelation of the dynamic powers, authority, strength and potentials of the supreme transcendental Brahm, the Supreme Being. The Goddess represents the dynamism of Brahm that is employed by the latter to create, control, sustain and protect this creation, both at the macrocosmic level as well as the microcosmic level. The Pusha God is therefore this dynamic power of Brahm to give protection to the creation as revealed in the form of Mother Goddess.

³*Twashtha*—He is the builder for the Gods; he is their mason, sculptor, architect, smith and craftsman (*Taittiriya Brahman*, 2/7/2/1). He is mentioned first in the Rig Veda, 1/13/10; 15/3; and in Yajur Veda, 2/24; 20/44. He has created the weapons for the Gods as well as their utensils such as the ladle and spatula, the pots and pitchers used during fire sacrifices (Rig Veda, 1/20/6). He is deemed to be the patron God of art and craft which depend on the hands (Rig Veda, 3/54/12). His name appears 65 times in the Rig Veda. According to the Purans, this word is also used for Vishnu, Brahma and Shiva. He is regarded as the 11th Aditya (the Sun God). He is also synonymous with the Fire God because, as the Sun God he has tremendous heat. His son was Trishira, and the daughter was called Sangya. She was married to the Sun God, but she could not bear the latter's heat. So her father, Twashtha, put the disc of the Sun's blazing ring on his lathe and scrapped it to reduce its stinging ferocity and burning scorch. From the scrapings, he moulded Vishnu's discus, Shiva's trident, and all other weapons of the Gods.

The word 'Twashta' refers to Vishnu the sustainer, protector and nourisher of creation, Shiva the concluder, Prajapati Brahma the creator of the visible world and the creatures who populate it, Vishwakarma is the heavenly architect for the Gods who had given shape to the various abodes where the Gods would live as well as to the world where the creatures would live, and the eleventh Aditya or the Sun God who provides this creation with its heat, light, energy and dynamism. Without these Gods it is impossible for the Supreme Being, known as Brahm, to give shape to his notion of creation. Twashta therefore represents all these Gods at once. He is borne by the Mother Goddess, and is also her manifestation. The 'Mother Goddess' is actually a revelation of the dynamic powers, authority, strength and potentials of the supreme transcendental Brahm, the Supreme Being. The Goddess represents the dynamism of Brahm that is employed by the latter to create, develop, control, sustain and protect this creation, both at the macrocosmic level as well as the microcosmic level. The Twashta is therefore the various forms, such as Vishnu, Shiva, Brahma, Vishwakarma and Aditya, that this dynamism of Brahm has taken to take care of the creation at different levels and at different phases of its conception, development, growth, expansion and final conclusion.

⁴*Bhug*—The word means the womb of a mother. In the context of the Upanishads dealing with the supreme Brahm as the Creator of this universe, the term 'Bhug' would mean the cosmic womb of Brahm who has manifested himself as the Mother Goddess expressly for this purpose. It was in this 'Bhug' that the entire creation was conceived. The 'Mother Goddess' is actually a revelation of the dynamic powers, authority, strength and potentials of the supreme transcendental Brahm, the Supreme Being, by which the latter gave shape to his desires and ideas. The Goddess represents the dynamism of Brahm that is employed by the latter to create, develop, control, sustain and protect this creation, both at the macrocosmic level as well as the microcosmic level. The term 'Bhug' therefore represents the macrocosmic 'womb' of the Supreme Being in which he conceived this creation, nourished it, protected it during its developmental steps, gave it its shape, and finally gave birth to it just like an ordinary mother conceives her child in her womb brings it forth in this world.

According to Vishnu Puran, one of the twelve Adityas is known as 'Bhug'. This is obvious allusion to the fact that the Sun is the provider of energy, heat, warmth and light to the creation as well as the controller of seasons and rainfall without anyone of them life would be not feasible at all.

From the perspective of Yoga Upanishads and the Tantra form of worship, the 'Bhug' corresponds to the 'Bhug Chakra' which is triangular in shape and represents the female genital organ. It is also called 'Kaam Roop Peeth' from where all passions and desires originate (refer Yogshikha Upanishad, Canto 1, verse no. 170-171). It also closely related to the 'Swadhisthan Chakra' which is located in the region of the groins of males and the Bhug (genital) area of females. It has a 5-headed male phallus like a sprouting seed, and its counterpart in the female is the clitoris.

⁵*Vishnu*—This verse effectively says that Vishnu is actually a manifestation of the Shakti, which is the cosmic dynamic powers and energy of Brahm, the Supreme Being, employed by the Lord to take care of this creation which the same Lord has created in his manifestation as Brahma the creator.

The word 'Vishnu' consists of two components—'Vishwa' meaning the world or the entire creation, and 'Anu' meaning an atom. Hence, this is made up of atoms called Vishnu, and therefore the latter pervades throughout this creation. The whole creation is a manifestation of Vishnu.

The divine glories of Lord Vishnu have been extolled in the Tripadvibhuta Maha Narayan Upanishad of the Atharva Veda tradition, Canto 1, paragraph 5-6; Canto 2, paragraph 12. Refer also Vishnu Puran, Chapter 1, Canto 2, verse nos. 1-32, 55-70.

Lord Vishnu is the sustainer, nourisher and the caretaker of the world. Therefore, he is regarded as one of the eight mighty Diggals/Digpaals (the main caretakers and superior custodian Gods) of creation. He is the most important of the Trinity Gods consisting of Brahma, the creator, and Shiva, the concluder. It's easy to produce and destroy, but a mammoth task to sustain and nourish what has been born.

Lord Vishnu is also depicted as the Viraat Purush, the macrocosmic gross body of Brahm, the Supreme Being, from whose body the rest of the creation is said to have been formed; the Viraat embodies the whole creation in his own self. The word 'Viraat' itself means measureless, infinite, colossus and vast.

According to Purans, even Brahma and Shiva have been created from Vishnu. Brahma emerged sitting atop a divine Lotus that sprouted from the Vishnu's navel in his subtler form as the Viraat Purush, a form that existed before the creation began to take shape in its grosser forms, as he lay reclined in the celestial ocean of milk, known as the Kshir-Sagar, on the bedstead of Sheshnath, the legendary serpent that floated on the surface of this ocean. On the other hand, Shiva is said to be born from his forehead when the Viraat Purush deeply meditated and a few drops of sweat emerged due to intense concentration and effort he was making.

His name first appears in the Rig Veda, 1/154-156. The Lord represents all that is virtuous, noble, righteous, auspicious, high and glorious in this creation. He is all pervading, all encompassing and omnipresent.

He is a personification of Yagya, or the various religious sacrifices (Shatpath Brahman, 1/1/2/13). The Lord has taken numerous forms and revealed himself on different occasions to uphold good and righteous, and trounce bad and evil. Lord Vishnu is also depicted as a synonymous deity for Brahm; he is Brahm personified.

Lord Narayan and Vishnu are synonymously treated in the scriptures. The etymology of the word 'Narayan' is—the primary one who has his abode in the primordial causal waters of the cosmos; one who is the abode of all living creatures; one who has his residence in the bosom of all living beings as their Atma or pure self or consciousness; one who is the final goal of all spiritual pursuits. When the transcendental Supreme Being decided to initiate creation, his first revelation was Hiranyagarbha which represented the macrocosmic subtle body of creation, and from it emerged the 'Viraat Purush' who is the macrocosmic gross body of creation. This 'Viraat' is literally the vast, infinite, measureless, fathomless and colossal form of the supreme Brahm, a form which is all-pervasive, all-encompassing, all-inclusive, immanent and omnipresent in creation. The 'Purush' is literally an entity that lives inside a dwelling, here referring to as the pure consciousness that lives as the Atma of all the living beings. (Brihad Aranyaka Upanishad, 2/5/18-19). This Viraat Purush is therefore the vast and all-inclusive cosmic Consciousness that entered the gross body of the creature and found a comfortable abode in the heart as his Atma. This Viraat Purush at the macro level of creation is known as Vishnu, the one who lives immanently in this creation, inseparable from it and forming its integral part.

Since Narayan or Vishnu is the term used to imply the Viraat Purush who is Brahm personified at the macrocosmic level of creation, it follows that Narayan or Vishnu is the supreme Lord of creation. It is from him that the rest of the creation has emerged. All forces of creation, right from their origin till their conclusion, have this Narayan representing Brahm as their primary source. It is Narayan that is the eternal fountain from which they all the dynamic forces of creation derive their independent strengths, abilities, authorities, potentials and powers. The primary forces are represented by Brahma the creator, Vishnu the sustainer, protector and nourisher, and Shiva the concluder. The other elements of creation are the sky, air, fire, water and earth. Indra represents the chief force that controls all other unit forces of creation, and therefore he has been depicted as the 'king of Gods' because all the Gods are deemed to personify one or the other aspects of the divine forces of creation which are responsible for controlling the various facets of the multifarious and varied creation. For example, Aditya or the Sun gives light, heat and energy to the creation

in their twelve forms, including the visible Sun in the sky. The Vasus represent the essential assets that are needed to sustain all forms of life on this earth. Rudras represent the dynamic and forceful nature of a creature that helps it be pro-active and assertive in this world, to protect the assets generated by him and give protection to the society and his dependants by the use of force if necessary. And so on and so forth.

⁶Creator *Brahma* and *Prajapati*—(a) Prajapati (Brahma) is a manifestation of the supreme cosmic transcendental Creator known as Brahm, the Supreme Being. In his role as the creator of the visible creation, this Supreme Being came to be known as Brahma, the creator of the gross world.

Brahma, the patriarch of the creation, has certain characteristic qualities which are exclusive to him and which make him the nearest analogue to Brahm, the Supreme Being who is the Supreme Soul of the cosmos. Brahma has the power to create and control destiny—and therefore he virtually decides the time of annihilation or death of the world, though the actual task of annihilating or ending this world or causing death is delegated to Lord Shiva, but the mandate to do so comes from the supreme authority, who is not Brahma but Brahm, but the former has been delegated this authority by the latter. Brahma unfolded the world when he turned his head in the four directions and uttered the four basic words Bhu, Bhuvaha, Swaha and Maha (symbolising the creation of the earth, the sky, the heavens and the great creation having countless varieties and numbers of creatures, small and big, who would populate it) as well as the Vedas (Rig, Yajur, Sam and Atharva) and the profound body of wisdom and knowledge contained in them. (See Mahopanishad, Canto 1, verse no. 9 of the Sam Veda tradition). Knowledge, wisdom and enlightenment are the chief characteristic of Brahm represented by the Atma/soul. Brahma also has these characteristic features because he is the one who has not only created the physical world but also the great body of knowledge in the form of the Vedas. Brahma is depicted as a white-bearded and learned grandfather of creation. This is a symbolic way of saying that he is the oldest and wisest one amongst all those who live. Even Vishnu and Shiva and all the other Gods are much younger to him. Both the two Gods (Vishnu and Shiva) are known to exhibit some elements of Rajoguna and Tamogunas, i.e. they have some sort of worldly characteristics such as showing anger, having passion etc., or assuming different forms as in the case of their various manifestations, but Brahma, the old bearded patriarch, remains one original without any manifestation, much like the supreme Brahm who remains detached from and dispassionate towards the creation, although he is the cause of it, is responsible for it and is the resting place for it.

The Maho-panishad of Sam Veda, Canto 1, verse no. 8 describes how Brahma came into existence. The sweat drops from the forehead of Viraat Purush formed the water element which coagulated into the primary cosmic gel that glowed with energy. It was called the cosmic egg or Hiranyagarbha. It was from the latter that Brahma emerged atop a lotus.

The Prashna Upanishad of Atharva Veda, in its Canto 1 says that the Sun God is the Prajapati because the Sun is responsible for life on earth.

The Ram Purva Tapini Upanishad of the Atharva Veda tradition, Canto 4, verse no. 38 says that Brahma the creator is one of the ten Digpaals or custodians of the ten directions of the celestial globe. He is the patron deity of the zenith and his abode, the Brahma Loka, is situated at a point between the exact north and the north-eastern direction. He is worshipped in that corner. Verse no. 39 says that he holds a lotus.

The 'Mother Goddess' is actually a revelation of the dynamic powers, authority, strength and potentials of the supreme transcendental Brahm, the Supreme Being. The Goddess represents the dynamism of Brahm that is employed by the latter to create, develop, sustain, nourish, control and protect this creation, both at the macrocosmic level as well as the microcosmic level. Since Brahma is the God who carries out the

function of creation, it is absolutely apt to call him a personification of Mother Goddess, or the revelation of dynamism of Brahm that resulted in the creation of this visible world.

Brahma is called *Prajapati* because he is the God who is responsible for the welfare of all the subjects of this vast creation without having any distinction between them. Since Brahma is the creator, he is like the father, and since he has established the laws that are to be followed by the subjects of this creation he is also like the king who decides the laws that form the codes of conduct in his realm. But the question arises that if Brahm is supposed to look after his creation with equality, then why does one creature suffer while the other does not. The answer lies the fact that one creature suffers and the other does not is none of Brahma's faults but that of the creature itself because it goes berserk and does not follow the sanctioned paths as laid down in the different Upanishads, especially highlighted in this Valli in a very specific manner, and therefore has to undergo the consequences for its actions. The reason is that this world is characterized by the theory of action and reward, and what one does he is bound to enjoy or suffer from its results.]

6. It is me who takes the Havi to the Gods. [The Havi is the offerings made to the sacred fire during sacrifices which are meant for the Gods.]

It is me who bears all the wealth that is needed to produce and acquire these Havis along with the Soma (sanctified liquid procured from the plant of the same name that is used during sacrifices) used by the patron who carefully does the fire sacrifice called the Soma Yagya. [This is special fire sacrifice in which Soma juice is liberally used along with the chanting of the hymns of the Sam Veda.]

I am the supreme Goddess of the whole world. I provide my worshipper wealth and prosperity.

I am a personification of Gyan (truthful knowledge, wisdom, erudition, enlightenment, skills and expertise), and hence am known as 'Gyan-wati', literally meaning one who possesses the virtue of Gyan.

I am the one who produces the supreme Father of the world who supports the world from all sides. [The 'supreme Father' here refers to the Gods known as Vishnu and Brahma. Refer verse no. 5 above.] (6).

7. The cosmic ocean that is filled with ether symbolizing the water element in its most primary form, as well as the terrestrial ocean which is filled with the elixir of life known as water in its grosser form, is my womb, the former at the macrocosmic level and the latter at the microcosmic level. [The former aspect of the Shakti is known as Prakriti. Refer verse no. 8 below.]

A person who knows these facts is able to attain the glories associated with me and my divine forms (7).'

8. The Gods prayed once again—'Oh the great and venerable Mother Goddess! We bow before you. We pay our obeisance to the great, auspicious, divine and holy Goddess who inspires and helps even the highly acclaimed, the most learned and very wise men to follow the righteous and auspicious path. We reverentially bow before the Goddess who has manifested in the form of 'Prakriti' or Mother Nature, as well as 'Bhadra', literally meaning the most cultured, polite, civil, gracious, kind, lovable, adorable and amiable Goddess. We always pray to and bow before the great Goddess (8).

9. The divine Goddess has a complexion that is as glowing as the fire. She is radiant and splendorous with the energy generated by doing Tapa (austerity, penance, and sufferance of hardship for an auspicious and noble cause). And she effuses a divine light and brilliant radiance from her auspicious form.

We (the Gods) take the shelter of the holy feet of such a great and venerable Mother Goddess who is known as Durga, and we reverentially bow before her for the purpose of fulfillment of our wishes and realisation of our aims and objectives.

Please be benevolent upon us and completely remove the 'Tama' (darkness symbolizing ignorance and delusions) that surrounds us (9).

10. The Gods who are personifications of the various Prans (vital life infusing and life supporting winds; the life-factors present in the body) have produced the faculty of speech and sound which lets all creatures of this creation speak in their own unique tongue. The sound produced by the dynamic energy of Pran is a universal language, not restricted to any particular language, or the class and category of creatures. In other words, it is the great Goddess who has revealed herself as the Pran, which in turn produces sound that is the universal language of creation. In this form of 'sound', it is the great Goddess who is actually revealed. We bow before such a sublime and cosmic form of the divine Mother Goddess.

['Sound' is a revelation of the ability of Brahm to express himself, and this ability is represented by the Goddess because she symbolizes the dynamic powers of the Supreme Being in all spheres of creation.]

The venerable Mother Goddess is like the all wish-fulfilling cow (known as Kaam-dhenu), as well as the one who provides all food and strength that are needed for sustenance, nourishment, growth and development of creation. Let this great Mother be pleased with us when we pray to her so much so that she reveals her divine form before us (10).

11. We bow before the great and venerable Mother Goddess who is like the great night of the dooms-day (because she is the one who concludes the creation in the form of Rudra), who is honoured and praised by the Vedas as being Brahm personified, who is a personification of Lord Vishnu as well as his divine consort (Laxmi), who is the mother of Skanda (Kartikeya, the commander of the army of Gods, and hence is known as Parvati or Uma who is the divine consort of Lord Shiva), who is known as Saraswati (the Goddess of knowledge, learning, wisdom, speech and languages), who is the mother of Gods known as Aditi, and who is the daughter of Daksha (one of the Prajapatis; hence the divine consort of Lord Shiva known as Goddess Parvati).

The Goddess is most auspicious, holy, divine, truthful and enlightened. In fact, she is a divine personification of the virtues embodied by the word 'Shivam'. [The word 'Shivam' literally means one who is pure, holy, divine, pious, truthful, beautiful, enlightened, calm, serene and peaceful; one who is the best in creation.] (11).

12. We recognize her as the great and venerable Goddess known as Maha-Laxmi, the divine consort of Lord Vishnu and the patron Goddess who provides this creation with all its material needs. As such, we constantly enshrine in our heart that great Goddess who bestows upon her devotees all mystical powers and success in all endeavours they enter into.

Let that great Goddess inspire us towards auspicious and righteous path and deeds (12).

13. Oh Daksha (one of the Prajapatis and the father of Parvati, the divine consort of Lord Shiva and regarded as the cosmic Mother)! Your daughter, who is known as Aditi (the mother of Gods), is most praise-worthy and honoured. It is she who has produced the holy Gods who possess auspicious virtues (13).

14. This Goddess has esoteric forms which are most mysterious.

She has revealed herself as Kaam (desires, passions, yearnings etc.), as Yoni (the female genitals; the womb representing the cosmic womb of Brahm known as the Prakriti in which the entire creation was conceived and nurtured), as Vajrapaani (one who holds the weapon known as Vajra, a reference to Indra, the king of Gods), as the cave-like secret realms (of the mind and heart) that hide various shades and hues of passions, lust and desires in a creature, as the letters 'Ha' and 'Sa' (indicating the word 'Hans' which is used in the Upanishads to indicate the Atma and Brahm), as the Maatarishwa (one of the names of the Fire God), as the Abhra ('Mica' which has a shining surface; here the word represents the priceless, glittering, glistening and shining minerals and other wealth found in earth, as well as all the auspicious—'white, shining, glorious'—virtues of creation), and as Indra (derived from the word 'Indri' meaning the sense organs of the body of the creature and implying the powers that are inherent in them which makes doing everything possible in this world).

She is very secret, enigmatic, esoteric and mysterious, and lives in a subtle and imperceptible form in the entire creation. She is revealed in the form of Maya (i.e. the powers of delusions), as well as in the form of the Purush (i.e. the Viraat Purush who is the macrocosmic Male from whom the entire creation has come into being, as well as the powers of Maya which this Purush employed to create this world).

[This statement itself goes to show irrefutably and incontrovertibly that 'Shakti' and 'Brahm' are one and the same. The cosmic powers that the Viraat Purush has are actually revelations of Shakti possessed by Brahm, the Supreme Being. It is like the case of the fire and its inherent virtue of giving light and heat, a virtue that cannot be separated from the fire. The Viraat Purush cannot be divested or divorced from his cosmic authority and powers manifested as the Shakti. Refer verse no. 15 below.]

She is the primary Mother of the entire creation or the whole universe. She is the most ancient and primordial divinity in creation, and therefore the knowledge that pertains to her is also known as 'Adi-Vidya'—literally, the most ancient and primary knowledge (14).

15. This universal and venerable Mother of the entire world is the supreme Shakti or the divine power of the Supreme Being (Brahm) that attracts and captivates everyone and everything. That is, it is she that holds the creation together.

She holds a snare, a goad, an arrow and a bow. [This is a visual depiction of the superseding authority and powers that the Goddess possesses as visualized in iconography.]

The esoteric knowledge that pertains to her secret form is known as 'Sri Maha Vidya' (15).

16. A person who knows the venerable Mother Goddess in her majestic form, and is acquainted with her esoteric form and divine glories, finds freedom from all misfortunes, grief, miseries, troubles and tribulations (16).

17. Oh Goddess Bhagwati! We bow before you. Oh Mother! Please protect us in all respects (17).

18. [In this verse, the Gods praise the great Mother Goddess once again, reiterating and reaffirming the fact that all the major or principal forms of creation that the venerable Goddess had earlier said she has taken in verse nos. 3-7 are indeed true.]

It is the same Mother Goddess who is revealed in the form of the eight Vasus, the eleven Rudras, and the twelve Adityas.

All the Vishwa-Devas who accept the offering known as Soma (derived from the juice of the Soma plant and offered during fire sacrifices) as well as those who do not are all a revelation of the same Mother Goddess.

It this Mother Goddess who has manifested herself in all forms of creatures, from the bad and evil ones such as the Yatudhaans (a form of non-gods), the Rakshas (the demons), the Asurs (the non-gods) and the Pishachas (devils, Satan, fiends and evil spirits) on the one hand, to the Yakshas (a sort of semi-gods in mythology who are employed by Kuber, the treasurer of the Gods, to guard his treasury and keep his gardens) and the Siddhas (those ascetics who have mystical powers; the acclaimed ones) on the other hand.

The three fundamental Gunas known as Sata Guna, the Raja Guna and the Tama Guna¹ are also revelations of the mystical powers of Goddess to mould the character of each individual in creation and make him unique.

It is the same Mother Goddess who has manifested in the form of the Trinity Gods known as Brahma (the creator), Vishnu (the sustainer and protector), and Rudra (the concluder).

It is the Mother Goddess who has revealed herself as Prajapati (the Lord of the subjects of creation), Indra (the king of Gods) and Manu (the first male human beings from whom the rest of the human race was born).

All the stars, constellations and planets are nothing but her manifestation.

And it is she who is in the form of various skills and crafts (called 'Kalaa'), all forms of plants represented by wood of a tree (called 'Kashta'), and the end of creation personified as 'death' (known as 'Kaal') (18).

[Note—¹The three Gunas are the basic determining factors that decide the character, nature, temperament, inclinations and personality of all creatures. They are the common denominators in all the creatures, but it is their ratio that differs and changes from one to another creature, thereby differentiating one creature from the other and making them all unique in themselves. The higher the quantum of the Sata Guna, the more would be the best virtues of auspiciousness, righteousness, probity and propriety that dominate the horizon of the creature's personality, while a dominance of Raja Guna would make him prone to be attracted to the charms and temptations of the world and remain engrossed in its affairs, and predominance of the Tama Guna would incite all the vices that should be better avoided.

The *Sata Guna* is the best of the three qualities present in any creature. It is a positive quality and is marked by a propensity for following the path of nobility, auspiciousness, probity, propriety, virtuousness, holiness and righteousness. Creatures that have a predominance of Sata Guna are inclined to do selfless service, be benevolent, merciful, kind and gracious, have coolness of head and a rationale and balanced mind, be contented, have humility and piety etc. Such creatures are devoted to good values in life and have a desire to acquire knowledge that would help them reach higher spiritual goals in life.

This Sata Guna is marked by high standards of ethical and moral existence that makes the bearer of such qualities highly respected in society. Such people have a

spiritual dimension to their personality. This quality is spiritually uplifting and gives a divine halo to those who possess it and practice it.

The Vasanas that have the Sata Guna or quality dominant in them are like a veil covering the lamp or like a smoke covering the fire. A slight breeze will remove this smoke. Similarly a little bit of prayer and meditation will remove the Satwic desires; its removal requires the least effort.

(b) The second quality is the *Raja Guna* and it makes a man more attracted to this material world and its charms, and less spiritually inclined. The Raja Guna is the medium quality marked by a greater percentage of worldly passions, desires and attachments and their natural offshoots in a creature. It makes a creature inclined towards the material things of the gross world and their enjoyments, towards creation of wealth, its enhancement and protection, and generally having a desire for growth, development and expansion etc. It covers such qualities as worldly yearnings, passions, a stormy nature, agitated behaviour, ambitions, selfishness, expansionist tendencies, a desire to acquire, retain and develop such acquisitions even to the detriment of one's long term spiritual welfare and even if such actions cause pain to others. All these pertain to this materialistic world. Such qualities give worldly fame and prosperity. If these qualities are judiciously mixed with the Satwic qualities, then they provide the person the better of the two worlds, both in terms of worldly fame as well as spiritual well being.

The Vasanas that have the Rajsic Guna or quality dominant in them can be compared to dust on a mirror. In this case some dusting and rubbing is needed to clean the mirror; a greater effort is needed as compared to the case with Satwic quality.

(c) The third quality is called the *Tama Guna* and is the meanest and the basest of the three Gunas. It is a demeaning quality in a creature that leads to his downfall and perpetual entanglement with things that are considered improper and unethical. It creates an inclination for committing all sorts of sins, misdeeds and demeanours. It leads the creature towards negativity and inspires him to acquire negative qualities such as various vices, evils, sins, perversions etc. It makes him inclined to be greedy, rapacious, haughty, arrogant, lustful, intoxicated, vile and wild to the extreme. Such a creature with a predominance of Tama Guna has utter disregard for propriety, noble virtues and ethics, for righteousness and morality.

In brief, it is the most degrading, denigrating and contemptible of the three characteristics in a person, and leads to such behaviour which is utterly immoral, denigrating and depraved, marked by grossness, crassness and recklessness. It therefore leads to his downfall, ignominy and ruin as well as ignorance, delusions, gloom, inertia, anger, frustration etc.

The Tamsic Guna or quality is like the embryonic membrane that covers the foetus in the womb. They cannot be removed easily and require great diligence, effort, persistence, dedication and careful handling requiring time and patience. It is the basest and the lowliest of the three characteristics, and the worst type to possess.

The Vasanas that have the Tama Guna in dominance are regarded as the 'bad Vasanas' or better still the 'worst type of Vasana' that any individual can have.

The varying quantity and intensity of these three in any given individual would decide his specific character and how he is inclined to deal with the world and a given circumstance. The various permutations and combinations of these three qualities create a particular nature of an individual, giving him his individuality and his special personality which are unique to him; they determine his temperament, behaviour, thought process, et al. Two individuals having the same external form of the gross body might look very much alike but they vary immensely in their nature, habit, temperaments, inclinations, behaviour, thinking, outlook, the way they act and do their deeds, the way they tackle the problems of life, the level of their wisdom and intelligence, their personality and their general way of living.]

19. The Mother Goddess is the destroyer of all 'Taaps' (miseries, pains, torments and tribulations) of the creature.

She is the one who bestows Moksha (liberation, deliverance, emancipation and salvation) as well as 'Bhog' (pleasures, comforts and enjoyments) to all.

She possesses infinite virtues, is the deity of victory, is faultless, without blemishes, pristine pure and uncorrupt, and is worthy of seeking refuge and shelter with.

She is the one who grants auspiciousness, and is herself auspicious, holy and divine.

We always bow with the greatest of respect before this divine and venerable Mother Goddess (19).

20. The Beej Mantra (the seed word, letter or syllable) especially dedicated to the Goddess is endowed with the virtues of the vastness, infinity and all-inclusive nature that is possessed by the sky, has the long sound of the Sanskrit vowel 'Ee' (as in *eel*) attached to it, has the fire element inherent in it, and is crowned or adorned by the crescent moon with the dot (i.e. the sign of the dot that is placed on the top of letters to give them the sound of 'Mm' as in *mum*). [The Beej Mantra is 'Hrim/Hrin(g)'.]

It is very potent and powerful enough to fulfill all the aspirations, wishes and desires of the worshipper (devotee) (20).

21. This monosyllable letter is a word manifestation of the supreme transcendental Brahm (just like the word OM). [Whereas the word OM is synonymous with Pranav or the cosmic sound produced by the vibrations created in the all-pervading cosmic Consciousness, also known as Brahm, the word Hrim/Hrin(g) stands for the Goddess who is a personified form of the same Brahm's energy and dynamism. So, in effect, they are the two sides of the same coin.]

This Beej Mantra, Hrim/Hrin(g), is meditated and contemplated upon by sages, seers, ascetics and other pious people who have a pure and uncorrupt mind, who are full of spiritual bliss, and who are an ocean of profound wisdom, erudition, enlightenment and knowledge of the 'truth' (21).

22-23. The following nine-lettered Mantra of the Mother Goddess, and by extension of the supreme Brahm, are providers of Anand (bliss and happiness) as well as exalted stature of Brahm-realisation to the seekers.

The nine letters of the Mantra constitute of the following units—

(i) The Vaak Shakti, i.e. the powers and potentials of the faculty of speech and voice, represented by the Beej Mantra 'Aim/Ain(g)'.

(ii) The Maya Shakti, i.e. the stupendous powers and potentials of the power of delusions represented by the Beej Mantra 'Hrim/Hrin(g)'.

(iii) The Brahm, the Supreme Being, whose magnificent powers and potentials were revealed in the form of the various 'Bhuts' or elements in creation (such as the sky, air, fire, water, sky) as well as the mortal creatures who are also known as 'Bhuts'. This aspect of the Shakti (power, energy, authority and dynamism of Brahm manifested as the Goddess) which helps fulfill Brahm's desire to take care of this creation is known as the 'Kaam Shakti', and it is represented by the Beej Mantra 'Klim/Klin(g)'.

(iv) The sixth letter of the consonant (i.e. the letter 'Cha' pronounced as in *champion*) with the long vowel sound of 'A' (i.e. 'Aa' pronounced as in *calm*) added to it. The word is therefore 'Chaa' (pronounced as in *char*).

(v) The Surya or the Sun God, represented by the letter 'Ma' (pronounced as in *mother*).

(vi) The left ear represented by the letter 'U' or 'Oo' (pronounced as in *full*).

(vii) The letter 'M' (pronounced as in *mother*) with the sound of short 'U' appended to it and a dot placed on the top (making it sound as in *mundane*).

(viii) The third letter from the alphabet 'Ta', i.e. the letter 'Da' (pronounced as in *lord*), with the long sound of 'A' appended to it. This gives the letter 'Daa' (pronounced as in *dance*).

(ix) The letter that is common to both the words Narayan and Vayu, i.e. the letter 'Ya' (pronounced as in *yearn*; *year*; *young*) with the long vowel sound of 'Aye' (pronounced as in *dye*) put on its top. The resultant letter is 'Yeya' (pronounced as in *yeah*).

(x) And the final component of the Mantra is the word 'Viche' (pronounced as in *wicked* + *change*).

This word for Lord Narayan, i.e. the Mantra OM, is to be added to the resultant Mantra formed by the nine components as mentioned above.

[The composite nine letter Mantra thus becomes 'OM Aim/Ain(g) Hrim/Hrin(g) Klim/Klin(g) Chaamundaaye Vichee'.

It meaning in brief is as follows—'Salutations to Lord Narayan (Brahm) represented by the word OM. It is you who has revealed your divine Shakti (dynamic powers, potentials and authority) in the form of the faculty of speech and the power of the word (represented by the monosyllabic word 'Aim/Ain(g)'). It is you who has revealed your stunning ability to create delusions in the form of Maya Shakti (represented by the monosyllabic word 'Hrim/Hrin(g)'). It is you who has revealed yourself as the Kaam Shakti, the power of desires, passions and aspirations (represented by the monosyllabic word 'Klim/Klin(g)'). It is you who has revealed yourself as Goddess Chamundaa (the great Goddess of war and victory) who enables all the devotees or worshippers to overcome enemies represented by unrighteous, inauspicious, evil, sinful, corrupt, pervert and demeaning forces of creation. Rupture and crush, eliminate and demolish all obstacles and oppositions that come in the way of our spiritual endeavours. We pay our obeisance to you.'] (22-23).

24. The divine and venerable Goddess is enshrined in the center of the lotus-like heart of the devotees.

She is as glorious and influential as the sun rising in the morning.

She holds a snare and a goad.

She is most polite, composed, calm and amiable.

She holds her hands in postures known as 'Abhaya Mudra' and 'Var Mudra' indicating that she is ever eager to grant the boons of fearlessness and fulfillment of desires to her devotees and worshippers who seek these boons from her.

She has three eyes—two conventional eyes, the third eye of wisdom said to be located in the forehead between the two eyebrows. [Usually it is Lord Shiva who is depicted as having these three eyes, and this is why he is called 'Trineta'—the Lord with three eyes. To say that the Goddess also has three eyes is to establish oneness and inseparability between the two—i.e. between Shiva who is Brahm personified, and the Goddess who is the Shakti of this Brahm personified.]

She wears red clothes (which is the auspicious colour and represents the glowing radiance of the fire element).

She fulfills all the aspirations, desires, wishes, hopes and expectations of her devotees (24).

25. I bow most reverentially before the divine Mother Goddess who removes even the greatest of fears, is able to calm down the torments and agonies created by the greatest of miseries and misfortunes, and who is most compassionate, kind, gracious and benevolent (25).

26. The divine and venerable Mother Goddess is known as 'Agyea' (literally meaning one who is not known or who is inaccessible) because even the great Gods such as Brahma the creator are not able to know about her or her glories.

She is known as 'Anantaa' because she has no end, and is infinite and eternal.

She is known as 'Alakshyaa' because no one can see her in the conventional term, and neither can she be understood and comprehended. This is because she is most esoteric, mysterious and enigmatic, as well as subtle, sublime and invisible.

She is known as 'Ajaa' because no one knows anything about her birth; she is eternal and imperishable, hence without a birth and a beginning (like the principal Brahm whom she represents).

She is known as 'Ekaa' because she alone uniformly pervades in this creation and has a universal presence; she is one of her own kind, being supreme, transcendental, non-dual, unique and unparalleled in creation; she is alone, moves alone and stays alone; she keep no company and lives serenely all by herself. She has no double or duplicate like her own self.

She is known as 'Naikaa' because she is the only one that has revealed her single self in the form of the entire creation which is however astoundingly diverse and multifaceted. This makes her unique and most mystical. She is always fresh and rejuvenated.

This is why she is compositely honoured by the terms Ageya, Anantaa, Alakshyaa, Ajaa, Ekaa, and Naikaa (26).

27. The divine and venerable Mother Goddess is present inherently in all the Mantras as their 'Maatrikaas'¹ (seed letters, subtle sounds, hidden powers and secret meaning) as well as in all words as their meaning and usage.

She represents the state of extreme realisation, enlightenment and wisdom in the realm of Gyan (knowledge).

She is the only entity that remains in complete vacuum, as the witness to that vacuum. [This is a metaphoric way of saying that when the creation is exhausted and nothing remains, the Goddess as a synonym of Brahm is the only entity that lasts.] (27).

[Note--¹*Maatrikaa*—Other references (i) Krishna Yajur Veda = Brahm Vidya Upanishad, verse no. 62-63; Yogtattva Upanishad, verse nos. 21-22. (ii) Atharva Veda = Pashupata Brahm Upanishad, Canto 1, verse no. 3-4; Tripura Tapini Upanishad, Canto 2, paragraph no. 12 (which says that the first outer ring, called the Chakra, of the worship instrument of Goddess Tripura has eight Matrikaas enshrined in it).

The *Maatrika Vidya* is the esoteric and secret knowledge of creation that deals with the Shakti or the dynamic powers of the Supreme Being known as Brahm that first stirs the neutral and calm primordial cosmic gel by injecting in it the first spark of life, which in turn sets off a chain reaction that culminates in the form of the creation as it is known now. The word 'Maatrika' literally means a small mother. Since the process of creation is so complex that it required a number of complicated processes taking place simultaneously, with each individual element and each single dynamic source of energy playing its crucial role in the composite phenomenon of

creation, these were called 'Maatrikas' because they were all like little mothers who had got together and used their combined energy, resources and abilities to create or conceive a cosmic embryo, nourish it, and allow it to develop to maturity so that the creation could be revealed in the way it finally did. They conceived and harboured this creation in their collective womb, and had nourished and sustained it till the time it was born in the matured form as we know it today.

The 'Maatrika Vidya' is the esoteric knowledge (science) which pertains to the individual letters or syllables of any given Mantra dedicated to any given deity who represents one or the other aspect or facet of the Supreme Being known as Brahm. The Maatrika Vidya deals with the mystical power, energy, authority and strength, i.e. the dynamism that is inherent in any given Mantra, but which is based on the individual units (i.e. the individual letters or syllables) of the Mantra. That is, if one knows what the individual units of a Mantra are, then he can correctly predict the power and abilities that not only this Mantra possesses but also of the deity that this Mantra represents.

For instance, it is well established that the Mantra 'OM' stands for Brahm. Therefore, the Maatrika Vidya of OM would be a comprehensive understanding of its finer sound components and their alphabetical counterparts, along with their spiritual significance and metaphysical import, as well as the combined astounding spiritual powers, dynamism and energy that they incorporate in themselves when they form the Mantra known as 'OM'.

In modern science we know that any finished product requires a chain of steps to be meticulously undertaken before it is finally produced. The science of organic chemistry teaches us that numerous chemical products are created by tweaking the basic molecular structure of various elements in association with the ubiquitous carbon atom that is at the central core of all organic formulas.

Similarly, the creation of this universe was not an isolated event, but it required countless subtler steps undertaken in a systematic form that worked together towards one goal, and that goal was the revelation of this creation. Many small steps and countless numbers of subtle factors that were insignificant in themselves, but assumed great importance as part of the cosmic mosaic of creation, contributed to the creation of this world. Each of these factors and elements are the Maatrikas of this creation. This world is a 'creation' precisely for this reason—it was moulded from primary ingredients that had no significant value of their own, but when they were subjected to many adjustments and experimentations they produced a 'world' that is rich in dynamism and energy, a world that has no resemblance to any of these primary ingredients. Each step was equally important and equally significant, because one miss-step would have caused the entire process to malfunction and come to a standstill.

Each of these 'steps' are metaphorically cited as the various 'Maatrikas' in the field of metaphysical interpretation of this celestial phenomenon. Here, the word Maatrika is related to the Mantras which are divine formulas used in meditation and contemplation, and hence implies the hidden energy and dynamism of the letters of the Mantra which give it its inherent stupendous powers, potentials and authority as well as its holiness, divinity and sanctity.

The process of creation involved cosmic efforts by the creator who is said to have performed a cosmic fire sacrifice in order to initiate this process, and had obviously employed certain Mantras, as any fire sacrifice needs the use of Mantras for its proper sanctified process. As would be seen in due course, the Mantra employed by Brahma was Hans that is a synonym Mantra for Pranav or OM. The inherent dynamism and energy of this Mantra is contained in its syllables or letters, and it is this dynamism and energy that not only initiated the process of creation but also sustained it during its period of development and growth that culminated in the birth of the visible creation.

The *Maatrika* of a Mantra are the various Sanskrit letters or alphabets that collectively form the text of the Mantra. The word Maatrikaa literally means ‘a little mother’. Since the Mantra represents the cosmic divinity known as the supreme transcendental Brahm in its numerous manifestations known as various Gods, the letters are called the Maatrikaas because they empower this Mantra with the stupendous mystical powers that this Mantra possesses much like Brahm employing his cosmic dynamic energy to enable him to initiate and then sustain and develop this creation, and even bring about its conclusion.

Brahm initiated this creation with the help of his cosmic dynamic powers and energy represented and encrypted in the Beej Mantra. But as it happened, the unfolded creation had numerous Gods and Goddesses. These Gods actually symbolise the various aspects of Brahm’s cosmic powers and authority, and the Goddesses represent their empowerment and strength to give effect to their mandate. This is a classic case of delegation of authority.

Mere letters and words or phrases of the Mantra would be neutral if not given their powers, or if they are not ‘empowered’ and ‘enabled’ much like Brahm which was a neutral entity until it empowered and armed itself with the cosmic dynamic energy, the necessary strength and authority to enable itself to initiate the process of creation. So, the Maatrikaa or Beej Mantras are the empowering aspect of the main body of the Mantra.

Each Mantra has two components—subtle and gross. The subtle part is its ‘Beej Mantra’ which is like the seed from where the huge tree grows. The gross part is the larger and extended part of the Mantra having a number of letters or words or phrases. The Beej Mantra consists of a consonant and the vowel sound attached to it with a dot on top to indicate its point-source of cosmic energy as well as to indicate its anointment as the chief component of the Mantra. The dot is called the Anuswar, and it produces the nasal sound in association with the vowel sign preceding it. For example, in the Mantra ‘Hans’ as described in the Brahm Vidya Upanishad, verse nos. 62-63, the Beej Mantra is the Sanskrit consonant ‘Ha’ + the vowel sound of the letter ‘A’ with a dot on top—producing the sound equivalent of ‘*hunt + suns or sons*’ = ‘hans’. Since this word ‘Hans’ refers to the cosmic transcendental supreme Brahm and its counterpart as the Atma or pure consciousness present in the body of an individual creature, the letter ‘Ha’ represents Brahm, while the letter ‘Sa’, which is a sibilant sound following the main Beej Mantra, means ‘like that’ or ‘like it’ referring to the Atma because the Atma is ‘like that Brahm’.

The Beej Mantra is like the ‘seed or root’ from which the rest of the Mantra evolves and is said to derive its mystical and stupendous powers and potentials. This Beej Mantra is like the seed having the tree secretly present in it, and the Mantra would then be like the fully grown-up tree. Even when grown, the tree needs the root to anchor it and derive its nourishment from the ground. Hence the two epithets ‘seed’ and ‘root’ used to describe the Beej Mantra. Each deity has a specific Beej Mantra dedicated to it, and one Beej Mantra may apply to more than one deity.

In Hinduism, meditation and contemplation upon a chosen deity is done by the help of a Mantra as a specific formula dedicated to invoke its powers as well as to concentrate the mind and its various faculties on the deity along with aiding the process of meditation and contemplation. This is done by doing Japa which involves repetition of the given Mantra. In fact, Japa is an integral part of any religious exercise, even for success in Yoga because it helps to harness the latent and dormant energy in the body by focusing the mind on the purpose at hand. The Beej Mantra is used for its concentrated energy and strength alongside its ease of use and usefulness in offering oblations or doing Anga Nyas (which is establishing the divine powers of the deity on the different parts of the body to purify them, empower them and strengthen them with dynamic energy and holiness associated with the Mantra).

In metaphysics, the supreme Brahm is the deity worshipped, and his Manta is OM which is a monosyllabic word. The Brahm Vidya Upanishad however describes

the Mantra as 'Hans' because it refers to the pure consciousness called the Atma as a manifestation of Brahm in the body of the individual creature, and repetition of this Mantra is like establishing a union between the two of them and reminding the spiritual aspirant that his 'true self' is the Atma which is none other than the Supreme Being known as Brahm. That is why there are a number of Yoga Upanishads that extol the virtues of this Hans Mantra during the process of various meditation and contemplation exercises.

The single point source of everything in existence is indisputably Brahm represented by the Beej Mantra. If the letter of the Beej Mantra represents this Brahm, then the dot and the vowel sign of the Beej Mantra are like the dynamic powers, energy and authority of Brahm. The extended part of the Mantra would then be equivalent to the revelation of Brahm in the form of myriad Gods representing one or the other virtues and qualities of Brahm, and their divine counterparts called the various Goddesses would represent the powers and authority vested in these Gods by the supreme Authority so that they can carry out their assigned duties.

In Tantra form of occult worship, the Supreme Being is worshipped as a divine cosmic Shakti or cosmic Mother which is actually the cosmic powers and dynamic energy of the supreme Brahm that is responsible for the creation coming into being, its development, growth and sustenance, and is even responsible for its conclusion. If the Supreme Being is regarded as the cosmic Male, then the opposite force, the cosmic Female, is envisioned as the Shakti, or the dynamic energy and vital powers, potentials and authority of this Supreme Being. The cosmic Male provided the vital spark of life in the form of the cosmic Consciousness which is like the 'sperm', while the cosmic Shakti is the female counter-part, called the 'Prakriti' which received this 'sperm' and nourished it in its womb to produce the offspring in the form of this vast creation. It was in the Prakriti's womb that the creation was conceived, developed and grew to emerge as the mysterious creation which is as mystical and enigmatic as its father, the Supreme Being. Obviously, the cosmic sperm would have been wasted if it was not accepted by the cosmic Mother known as Prakriti.

In Tantra philosophy, the Supreme Being is known as Mahadeva or Shiva, and the female part or Shakti is known as Uma or Parvati. In the language of the Upanishads or Vedanta, the same Supreme Being is known as the Viraat Purush, the macrocosmic gross body of the supreme transcendental Brahm from which the entire creation sprouted like the tree from a seed, and the cosmic Shakti is called Maya or Prakriti. The Maya is nothing but the Viraat Purush's dynamic powers that brought about the beginning of creation, sustains it and would finally conclude it; the Prakriti is the womb where the creation conceived and developed. The embryo is the Hiranyagarbha which is the subtle body of Brahm, and this embryo developed and revealed the Viraat Purush.

So if the given Mantra is regarded as a personification of the given deity, then the Maatrikaa would be its energy and dynamism that is latent and inherent in it. The Mantra would lose its powers and potentials in the absence of the Maatrikaa just like the Supreme Being needed the power of the Shakti to create the world.

The word Maatrikaa literally means a 'little mother'. So it is given the same reverence that one would give to a mother because it is the mother that gives shape to the body of the offspring—in this case the main body of the Mantra. Shorn of the Maatrikaa, the Mantra would be meaningless and powerless.

In Tantra form of worship, the term 'Maatrika' is used to indicate the following seven Goddesses—Brahmi, Maheshwari, Kaumari, Vaishnavi, Vaaraahi, Indraani, and Chamunda.

The *Beejnighantu* text (Beej = seed Mantra; Nighantu = dictionary) written by Bharirava lists 50 such Beej Mantras and describes what they stand for. Another text known as Beej-vidhaan has 75 lines in the poetical style called the Anushtup Chanda describing the Beej Mantras like Hrim, Strim, Aim, Krim etc. representing different deities such as Aindri, Vaamekshana, Saraswati, Kali etc. respectively.

Similarly, the *Ekakchar-kosha of Purshottamadeva* lists the Beej Mantras of various Gods and Goddesses, such as ‘A’ for Vasudeo, ‘Aa’ for Pitaamaha (Brahma the creator of the visible world), ‘Pa’ for the Wind God called Pawan, ‘Saa’ for Laxmi the goddess of wealth as well as for Shiva the third God of the Trinity.

Another text called *Mantraartha-bidhan by Varadaatantra* also lists the Beej Mantra such as ‘Haum’ for Shiva, ‘Dum’ for Goddess Durga, ‘Krim’ for Goddess Kalikaa, ‘Hrim’ for Goddess Bhuvaneshwari, ‘Klim’ for Kaamdeo-cupid, the patron god of love and passion, ‘Gam’ for Ganesh, ‘Kshraum’ for Narshingh, the half-lion and half-man incarnation of Vishnu, etc.

According to *Maatrikaanighantu by Mahidasa*, the Beej Mantras and even the word Mantras of certain chief deities are as follows—‘A’ stands for Shrikantha (Shiva, the one with a blue-tinged throat), ‘Keshava’ for Krishna, ‘Vaata’ for the Wind God of Pawan, ‘Ka’ for Maya, ‘Ma’ stands both for Vaikuntha, the abode for Lord Vishnu who is the second of the Trinity Gods and is responsible for sustenance of creation, as well as for Mahaakaal, one of the names of Shiva, ‘Ya’ stands for Yamuna etc.

There are said to be *eight Maatrikas* or Beej Mantras pertaining to *Goddess Tripura*. These are the esoteric letters that symbolize the eight forms of Goddesses that the universal cosmic Mother has taken. They are the following—‘Hrim’ for Aindri and Bhuvaneshwari, ‘Strim’ for Vaamekshana, ‘Aim’ for Saraswati, ‘Krim’ for Kali, ‘Saa’ for Laxmi, ‘Dum’ for Goddess Durga, ‘Krim’ for Goddess Kalikaa, and ‘Klim’ for Kaam. These eight Maatrikaas of Goddess Tripura are enshrined in the outer first Chakra (ring) of the worship instrument employed to offer mystical worship to Goddess Tripura as described in *Tripura Tapini Upanishad* of the Atharva Veda tradition, Canto 2, paragraph no. 12.

The *Brahm Vidya Upanishad* of the Krishna Yajur Veda tradition, verse no. 63 asserts that no Mantra has any value if there is no Maatrikaa in it. To quote—“Nowhere is any Mantra (which is an esoteric and mystical group of letters or words or phrases used to worship or pay tributes to a deity) preached or nowhere does it have any meaning, value or even an existence if there is no Maatrikaa in it (63).”

This Upanishad has elaborately described the ‘Hans Mantra’ in its various verses, e.g. verse nos. 16, 20-28, 34, 60-64, 78-79. In the present case, the Mantra is ‘Hans’ referring to Brahm in the form of the Atma or pure consciousness present inside the body of the spiritual aspirant.

Similar idea is the basis of the *Pashupata Brahm Upanishad* of the Atharva Veda tradition which is entirely dedicated to the philosophy that employs the metaphor of the Hans to refer to and describe the grand virtues of the supreme Brahm and the Atma.]

28. The Mother Goddess, from whom nothing is superior, more powerful and better, is famous as Durga.

I, who am terrified by the world, bow most reverentially before that Goddess Durga who overcomes all sins and perversions, is difficult to comprehend and grasp, and is the one who can take a creature across the formidable world which is as uncrossable and horrifying as the vast and infinite ocean (28).

29-30. [Verse nos. 29-31 outline the benefits or rewards derived by the study and proper understanding of the great tenets of the divine knowledge espoused in this holy Upanishad.]

A person who reads (diligently studies and repeats devotionally) the holy Mantras of this ‘Atharva-shirsha’ (literally, the best of the Mantras of the Atharva Veda) is able to get the fruit (reward, benefit) of having read all the five Atharva-shirshas.

[The word ‘Atharva-shir’ is also the name of fourth Upanishad of the Atharva Veda. It lists various divine names of Brahm, and is especially dedicated to Lord Shiva. The figure of ‘five’ Atharva-shirhas’ mentioned in the present verse probably refer to its first five Kandikas or Cantos which describe all the various Mantras dedicated to the supreme Brahm. Here it means that the Goddess represents all the very best of the qualities and virtues that exist in this creation. She also represents the five Paads or aspects of Brahm as symbolized by the five states of existence of consciousness—viz. the Jagrat or waking state, the Swapna or the dreaming state, the Sushupta or the deep sleep state, and the Turiya or the post-Sushupta state.]

A person who does not understand the esoteric meaning, the spiritual significance and metaphysical import and gravity of this single Atharva-shirsha (the best and basic tenet of the Atharva Veda that describes the uniformity and universality of Brahm), and instead worships (Brahm) by doing formal forms of ritualistic worship known as ‘Archa’ (by establishing and consecrating altars and idols), does not find any gain or achieves any Siddhis (mystical powers and success in any endeavour, specially spiritual) by repeating the Atharva-shirshas even for seven hundred thousand times.

[That is, if one does not understand the meaning of worship and who is actually being worshipped, he would be wasting his time and effort by offering oblations to gross idols and altars made of brick and mortar, or mechanically repeating the words of the hymns like a parrot. This fact is repeatedly emphasized in the Upanishads, and herein lie their uniqueness. Whereas the Purans lay emphasis on rituals and formal worship of a plethora of Gods and Goddesses, and the Vedas themselves revolve around fire sacrifice offered to a wide variety of Gods representing various forces of creation, the Upanishads stress that all this is nuisance as the fundamental essence in all the forms to which worship is offered or for whom the hymns are made is only one and non-dual divine entity known as Brahm. This Brahm is revealed in all the forms of Gods and Goddesses, and the best thing is that this Brahm resides in the inner-self of the worshipper as his own Atma, the pure consciousness. Therefore, to search Brahm, the Supreme Being, outside rather than the inside of one’s own self is like a musk deer running around the forest in search of the fragrance that emerges from its own body.]¹

Normally, it is prescribed to repeat this hymn one hundred and eight times. [This figure of one hundred eight is regarded as an auspicious figure. The implication however is that the doctrine stressed in these verses would be firmly engrained in one’s mind when he repeats it for one hundred eight times with full faith, belief and conviction.] (29-30).

[Note—¹This prohibition of worship of idols made of material things such as wood, stone, metals etc. or other symbols of worship, or for that matter any kind of external worship is expressly mentioned in the following Upanishads—(i) Sam Veda tradition—Maitreyu-panishad, Canto 2, verse no. 21, 26; Jabal Darshan Upanishad, Canto 4, verse nos. 50-59; and Sanyaso-panishad, Canto 2, verse no. 74-75, 97. (ii) Atharva Veda tradition—Naradparivrajak Upanishad, Canto 5, verse no. 20.

External forms of worship have been prohibited in—(a) Krishna Yajur Veda’s following Upanishads—Pran Agnihotra Upanishad; Varaaha Upanishad, Canto 2, verse no. 69, 74; Canto 3, verse no. 26, 29-30; Tejobindu Upanishad, Canto 6, verse nos. 21-24. (b) Shukla Yajur Veda’s Advai Tarak Upanishad, verse nos. 5, 10, 13. (c) Atharva Veda’s Naradparivrajak Upanishad, Canto 5, verse no. 20, Canto 6, verse nos. 7, 37-38, Canto 7, verse no. 1.]

30. A person who reads (i.e. studies carefully) this Upanishad for even ten times is quickly able to cross over or overcome even the most formidable of troubles and tribulations, or other spiritual hurdles and oppositions, and obtains freedom from the evil effects of his sins and misdemeanors by the grace of the great Goddess (30).

31. By reading this Upanishad in the morning, the person is able to nullify or neutralize the bad effects of the sins and misdeeds of the previous night, and when read in the evening the same good benefit is got for the sins and misdemeanors of the day time. If it is read twice a day, at dawn and at dusk, the sinner is therefore freed from his sins and their evil consequences.

[It ought to be noted here that merely 'reading' would not help. This blanket pardon given by this Upanishad should not be construed as a license for doing wrong in the belief that any wrong-doings of the day would be forgiven when this holy Upanishad is read in the evening, and all evils of the night would be made null and void by reading it in the morning. Nothing would be more stupid than to think this way. The primary idea is that if a man has inadvertently or under the forces of circumstances done something wrong, then he has all the right to claim pardon and find a means for redemption. He may have erred, but he has the right for Mukti from sins, or freedom from the fetters that are created by committing sins. So if he reads this Upanishad sincerely and with commitment, he is bound to become wise and enlightened, he is bound to become spiritually inclined as opposed to indulgent men engrossed in self-gratification and an endless pursuit of the world and its material objects of pleasure and comfort. Such holy and pious men are indeed eligible for pardon and redemption. The unsaid condition is that the sin should not be repeated. If it is, then the purpose of reading this Upanishad is defeated and the reader is simply mouthing meaningless jumble of words in the guise of saying hymns or offering prayers. He has no fear of the Lord in him and neither has he understood the true meaning of the teachings of the Upanishad which repeatedly say that the Supreme Being resides in one's bosom as his Atma. Had a man properly read and understood what the Upanishads say, and had he known that the Lord resides in his own bosom, then say how can his evil deeds be hidden from the Supreme Being, and for that matter how dare he even think of committing sins when the Lord is enshrined in his own body which has now become holy and consecrated like a shrine? The very fact that he remains indulgent in the corrupts world and its equally corrupt affairs shows that he has not understood what he reads.]

When this Upanishad is repeated in the middle of the night when the spiritual aspirant is most peaceful and rested and undisturbed, the state of the mind which is equivalent to the Turiya state of consciousness, one is able to attain perfection of the faculty of speech, and his voice or words acquire mystical powers called Siddhi. [That is, whatever he speaks is the truth; he stops lying and deceiving. What he says becomes true.]

When these hymns are repeated in the front of one's chosen deity, he finds nearness to the deity; he comes closer to the deity.

[In other words, the worshipper develops enough wisdom and sagacity to understand the real essence of the deity and what it stands for. The worshipper becomes enlightened that the deity is no one else but Brahm in that form. Hence, in due course of time, the worshipper stops worshipping the physical form of the deity, but worships the inherent divinity and holiness present in that deity who represents Brahm. The worshipper begins to worship the supreme, sublime and transcendental 'Brahm' instead of the gross physical form of the deity. He has recognized the

underlying ‘truth’ in the gross form of the deity, and once thus realised, he abandons the gross form and pursues the sublime form of the deity, which however is the universal Brahm. If he has not understood this basic fact then he has not understood this Upanishad.]

When the hymns of this Upanishad dedicated to the great and powerful Mother Goddess are repeated in her front during the ‘Amrit Siddhi Yog’, i.e. a special combination of stars that occurs on the Tuesday of the Ashwini Nakshatra (asterism), the man who does so is able to conquer the great fear of death.

These are the doctrines of this Upanishad; this is what this Upanishad preaches. Amen! (32).

Chapter 23

Bhavana Upanishad

This Upanishad emphasizes the point that the body of the spiritual aspirant itself is the holy altar where a wise man visualizes the presence of the Divinity, the Supreme Being and his dynamic Shakti. A lot of symbolism is employed in this Upanishad to emphasize the great metaphysical truth that it is the same universal Brahm who is the supreme transcendental Authority and Lord of this creation, the cosmic Consciousness and the dynamic powerhouse that drives this creation from the inside as well as from the outside that has revealed itself in the form of the various units of the individual creature’s body which is like a microcosm, as well as the visible world on a large scale which is the macrocosm.

In this visualization, the Upanishad draws a parallel between the various units of the body of a living being at three level of its microcosmic existence, viz. the gross, the subtle and the causal, and the different units of this visible creation at the macrocosmic level. The supreme transcendental Brahm, i.e. the cosmic Consciousness, and its dynamism in the form of Shakti, i.e. the strength, the power, the energy, the vitality and the vigour that actually drives this whole creation on behalf of Brahm, is inherently present in all of these units, whether at the level of the body or the level of the creation. The dynamism of Brahm in the form of its Shakti is the underlying power that controls and operates this world from the inside as well as from the outside. This Shakti drives the world and empowers each unit of its various components to function smoothly according to the larger scheme of things.

Since a deity is worshipped on an altar, especially the Goddess whose place of worship is called a ‘Shakti Peeth’ which is literally a seat or center of energy, vitality, power and strength, the vital points of the body are also known as Peeths.

Another important point to note is that a wise spiritual aspirant is advised to understand the subtle philosophy and the metaphysical imports of the various steps involved in formal ritualistic forms of worship, and use these as symbolisms to offer his obeisance to the Supreme Being in the correct manner which would be a truthful form of worship and would actually be of any spiritual benefit to him. Mere

formalities would be of no real good to him if he has not grasped their essence. It is like eating food to fill the stomach or satisfy one's taste buds but not being able to digest the food that is eaten, for the body actually benefits when the nutrients of the food are absorbed by it and not merely by filling up the intestines with tasty food. The gross food would be expelled and the body would remain weak and under-nourished inspite of the man eating to his full. So is the case when the worship is done as ritual involving formalities, without actually understanding what it means and what its intention is.

The word 'Bhavana' has many shades of meaning. It means appearance, being, becoming, turning to or imagining to be, transition into, a condition or state believed to be the truth, any state of mind or body or heart, way of thinking or feeling, emotions or sentiments or feelings, opinion, disposition, conjecture, supposition, purported meaning and sense, a fundamental view about a certain thing or situation, visualization, imagery, reflection, belief, faith, conviction, an idea, thoughts.

All these meanings should be comprehensively applied when one reads this Upanishad to grasp the profundity of its teaching because it uses an array of metaphors, analogies and similes to explain profound metaphysical and spiritual truths and principles. This Upanishad has only four verses, out of which the first one is like a prologue and the fourth like an epilogue, while the two other verses form the main text.

The symbolisms used in this present Upanishad reminds one of the Shaarirak Upanishad of the Krishna Yajur Veda to which it has an uncanny and striking resemblance.

-----*****-----

---Shanti Paath---

Please see appendix no. 1 for the English of this Shanti Paath.

1. OM Salutations! Salutations to Lord Hari¹! The Atma is immutable, indivisible and one uniform whole. It is all-pervading and all-encompassing; it assumes the form of the body of creation in which it lives. The entire universe is its body. It is self-illuminated. One must focus one's attention on this eclectic Atma².

OM Salutations! The wise, learned and enlightened Guru (a moral preceptor, guide and teacher) is a true advisor and guide for a spiritual aspirant. He is the one who acts as the primary source of strength and support that empowers the person to move ahead on his spiritual path and ultimately attain success in his endeavours. He is the virtual 'Shakti' or source of energy, motivation, strength, power and authority that provides the necessary support, impetus and dynamism to all the efforts made by the aspirant to reach his goal in life successfully. But for this to materialize, the Guru himself should be an expert in his field, and inclined to helpful and supporting; he should be a teacher, a preceptor, a motivator, an advisor, a friend and a guide all rolled into one. He is the primary source of Shakti (strength, energy, vitality, vigour and authority) for the spiritual aspirant and is his primary advisor and moral support. The aspirant relies on the authority of the Guru and his knowledge to faithfully move ahead in a field which is still unknown to him and un-chartered by him, without the fear of going on the wrong path or falling prey to uncertainties.

[This verse is a sort of salutation to the teacher, and showing of honour and respect to him. He is the one who deftly guides the student of spiritualism, or for that

matter in any field of learning, on the correct path, warning him of the numerous pitfalls, and how to overcome them successfully. In this context, this verse can be read as follows also—A man who is wise, learned and enlightened is the one who is eligible to become a true teacher who guides and advises a spiritual aspirant. Such a teacher is the disciple's or a student's real friend and support; he provides his ward (the disciple or the student) the much-needed moral support, guidance, motivation and inspiration to move ahead even when the former appears to have lost hope and the drive to move ahead. It is the teacher or the Guru who removes all darkness symbolized by ignorance and delusions, and instead lights up the path to success for his ward. The Guru picks up the ward whenever he stumbles and falls, or is down in the docks; the Guru instills confidence and hope in him when he is dejected and hopeless. The Guru provides the necessary impetus to the disciple to move ahead and rise up against all odds and misfortunes. This is why the Guru is called the primary form of Shakti for the spiritual aspirant. Even as any endeavour needs 'Shakti' (dynamism, energy, vitality, strength, impetus, drive) to succeed, the Guru is the one who provides this much-needed Shakti to the spiritual aspirant.] (1).

[Note—¹The various Upanishads deal extensively and exhaustively on the concept of the *Atma*, the knowledge of which is central to the philosophy of spiritualism and metaphysics espoused in the Upanishads.

The *characteristics* and eclectic divine *virtues of the Atma* have been enumerated in the way of proclamations made by a self-realised person in (i) Shukla Yajur Veda's Subalo-panishad, Canto 3, verse no. 3; Adhyatma Upanishad, verse nos. 1-2. (ii) Krishna Yajur Veda's Brahm Vidya Upanishad, verse nos. 17, 81-110; Tejo Bindu Upanishad, Canto 2, verse nos. 1-43, Canto 3, verse nos. 1-51, 60-64, Canto 4, verse nos. 2-30, 69-79, Canto 5, verse nos. 1-75, 90-96, Canto 6, verse nos. 1-72; Yog Kundalini Upanishad, Canto 3, verse no. 25. They have also been enumerated in Varaaha Upanishad, Canto 2, verse nos. 13, 18; Canto 3, verse nos. 2-3, 6, 8-10. (iii) Atharva Veda's Annapurna Upanishad, Canto 5, verse nos. 74-75; Tripura Tapini Upanishad, Canto 5, verse nos. 7, 10-15; Ram Uttar Tapini Upanishad, Canto 3, verse nos. 8-9; Canto 4, verse no. 1; Pashupat Brahm Upanishad, Uttar Kanda/Canto 2, verse no. 26; Bhavana Upanishad, verse no. 1.

Other references regarding the *Atma*—(a) Krishna Yajur Veda's Yogtattva Upanishad, verse nos. 7-8; Skanda Upanishad, verse nos. 2-7; Yog Kundalini Upanishad, Canto 3, verse no. 25; Kathwalli Upanishad.

(b) Shukla Yajur Veda's Adhyatma Upanishad; Subalo-panishad, Canto 3, 5, 7 (verse no. 1), and 9 (verse no. 16); Paingalo-panishad, Canto 4, verse no. 18; Niralamba.

(c) Rig Veda's Atma-poojo-panishad; Brihad Aranyaka Upanishad, Canto 5, Brahman 1.

(d) Atharva Veda's Atmo-panishad; Prashna Upanishad, Canto 3, verse no. 3, 6; Mundak Upanishad, Canto 2, section 2, verse no. 4-7; Canto 3, section 1, verse no. 5; Canto 3, section 2, verse no. 3-4; Mandukya Upanishad, verse no. 2; Annapurna Upanishad, Canto 1, verse nos. 1-4, 20-21, 34, 36, 38, 41; Canto 2, verse nos. 19-24; Canto 4, verse nos. 26, 37, 53, 60; Canto 5, verse nos. 75, 77 etc.

Now, what is the *Atma*? The word basically means something that is fundamental and essential for the existence of another thing; it means the soul of any given entity, its basic truth and reality. The *Atma*, in metaphysical terms, is the pure consciousness that lives inside the gross body of the creature and is his true self, his truthful identity. Sans the *Atma* the body has no value, life, importance and relevance.

The *Atma* has the same relation with the body as Brahm, the cosmic Consciousness, has with the creation. That is, the virtues of the *Atma* and Brahm are alike—i.e. the *Atma* is eternal, infinite, without a birth and an end, imperishable, formless, all-pervading, all-encompassing, omnipresent, omnipotent, omniscient, and so on and so forth.

The Atma in fact is the cosmic Consciousness residing in the gross body of the individual who represents the cosmos in a miniature form.

It is the microcosmic form of the cosmic Soul which resides in the heart of an individual creature and which is an image of the macrocosmic supreme Soul of the cosmos; the pure conscious self; the pure consciousness; the true identity of the creature; that entity that is deemed to be truthful, immutable, eternal and infinite, that is pristine pure, that is a fount of wisdom and enlightenment, is immaculate and impeccable, and is all-pervading, omnipresent, omniscient, omnipotent and almighty like its principle called the supreme Brahm.

The Atma is a sublime and subtle entity that has no grossness and physical form. Hence, it is not visible just like the atom of any given element is not visible. But the fact is that the element, such as for instance gold or iron, exist in their physical form that is both visible and can be touched and felt only because of the atom—because the atom is its basic and only identity. Likewise, though the Atma is not visible in physical terms like the atom, the existence of the visible world and the life present in it is an ample and incontrovertible proof of the existence of the Atma just like the presence of gold and iron are proofs for the existence of their respective atoms. All things made of gold or iron would have the corresponding atom; all living beings and the existence itself are similarly uniformly pervaded by the Atma.

Non-duality or oneness or uniformity *between the Atma and the world*—This concept has been explained in *Mahopanishad* of Sam Veda, Canto 2, verse no. 7.

The *Chandogya Upanishad* of the Sam Veda tradition, in its Canto 8, section 1, verse no. 1 declares that the supreme *Brahm resides in the lotus-like heart as the Atma* of the creature.

The *five aspects of the Atma* are described in *Kathrudra Upanishad* of Krishna Yajur Veda, verse no. 41. These are Pratyagatma (verse no. 16), Anna Maye Atma (verse no. 21), Pran Maye Atma and Mano Maye Atma (verse no. 22), and Vigyan Maye Atma and Anand Maye Atma (verse no. 23).

The *four aspects of Paads of the Atma* have been described in Atharva Veda's *Narad Parivrajak Upanishad*, Canto 8, verse nos. 9-19 in the context of Brahm. This is because Atma and Brahm are the same thing, the only difference being that the term is used for the Consciousness when dealing with at the microcosmic level, and Brahm when dealing with it at the macrocosmic level of creation.

The *three aspects of the Atma* are described in *Rudra Hridaya Upanishad* of Krishna Yajur Veda, in its verse nos. 10-12, and in the *Atma Upanishad* of the Atharva Veda, verse nos. 1-A to 1-E. These three aspects are Atma, Parmatma and Antaratma.

The question *why the eternal Atma becomes a Jiva* is explained in *Yogtattva Upanishad*, verse no. 12-13; *Dhyan Bindu Upanishad*, verse no. 93/1-93/15; *Yogshikha Upanishad*, Canto 1, verse no. 16, 21; *Naradparivrajak Upanishad*, Canto 6, verse no. 3-4.

The *relationship between the Atma and the body* has been elaborately explained in *Varaaha Upanishad* of Krishna Yajur Veda, Canto 2, verse no. 24, and *Naradparivrajak Upanishad* of Atharva Veda, Canto 6, verse no. 4.

Atma lives in the (subtle) heart of the creature—Refer (i) *Shukla Yajur Veda's Subalo-panishad*, Canto 8, verse no. 1. (ii) *Atharva Veda's Prashna Upanishd*, Canto 3, verse no. 6; *Mundak Upanishad*, Canto 2, section 2, verse no. 6-9; *Naradparivrajak Upanishad*, Canto 6, verse no. 3; *Sharav Upanishad*, verse no. 21.

The *Prashna Upanishad*, Canto 3, verse no. 3 also declares that the *Pran*, the vital winds that represent the life consciousness in the body, *has its origin in the Atma*.

Brahm and Atma are the same—The universal and unequivocal truth that Brahm and the Atma are synonymous with each other is a constant refrain of all the Upanishads. Refer especially to—*Kathrudra Upanishad* of Krishna Yajur Veda, verse no. 41; *Mundak Upanishad* of Atharva Veda, *Mundak* (Canto) 2, section 2, verse nos.

6-9; Mundak 3, section 1, verse no. 5; Mandukya Upanishad, verse no. 2; Naradparivrajak Upanishad, Canto 6, verse no. 4.

The *universality of the Atma* has been expressly described in the *Tripura Tapini Upanishad* of the Atharva Veda tradition, Canto 5, verse nos. 12-14.

The concept of the 'Atma Tattwa', i.e. the essential meaning as well as the sublime and subtle aspects of the divine entity known as the pure consciousness that forms the 'true self' of all living beings and is also known as the 'soul', has been elaborately expounded upon in the Atharva Veda's *Annapurna Upanishad*, Canto 1.

The *Prashna Upanishad* of the Atharva Veda tradition, in its Canto 3, verse no. 3 says that the Pran is like the shadow of the Atma.

Why the *Atma appears to have different aspects and nature*, why it appears to look different when viewed from different perspectives in different creatures inspite of it being essentially one, indivisible, immutable, uniform and universal entity is narrated in the following Upanishads—(i) Krishna Yajur Veda's = *Dhyan Bindu Upanishad*, verse no. 93/1-93/15. (ii) Atharva Veda's = Narad Parivrajak Upanishad, Canto 6, verse no. 3.

Atma is a personification or revelation of the three sacred fires—reference Atharva Veda's Pashupat Brahm Upanishad, Purva Kanda/Canto 1, verse no. 20. These three fires are the Garhyapata fire, the Dakshinagni fire, and the Ahawaniya fire.

The universal question—*why is the Atma called the 'Jiva-Atma'*—has been explained in Atharva Veda's *Narad Parivrajak Upanishad*, Canto 6, verse no. 3.

The *different names and subtle forms of the Atma*—(i) The Rudra Hridaya Upanishad of Krishna Yajur Veda, verse nos. 10-12 describe the *three aspects* of the same consciousness called Atma; (ii) The Kathrudra Upanishad of Krishna Yajur Veda, in its verse nos. 16, 21-24 describes the *five aspects* of the Atma; (iii) The Atma Upanishad of the Atharva Veda tradition, in its verse nos. 1-A to 1-D says that the Atma has *three names or subtle forms*—viz. Atma, Antaratma and Parmatma.

The eternal question *why does the otherwise immaculate and perfect Atma appear to be tainted and become a Jiva* has been explained in a number of Upanishads, viz. Yogtattva Upanishad, verse no. 12-13; Dhyan Bindu Upanishad, verse no. 93/1-93/15; Yogshikha Upanishad, Canto 1, verse no. 16, 21; Naradparivrajak Upanishad, Canto 6, verse no. 3-4.

The Yogshikha Upanishad, Canto 1, verse no. 72 says that the transcendental Supreme Being or *Brahm resides in the heart* of the creature as his pure consciousness or Atma. The Chandogya Upanishad, Canto 8, section 1, verse no. 1 says the same thing and asserts that this heart is like a divine lotus.

The Brahm Vidya Upanishad of Krishna Yajur Veda, verse no. 17 proclaims that the *Pran and the Atma are synonymous* with each other.

²The importance of the *Guru* has been emphasized in a number of Upanishads, viz. The importance of a Guru has been emphasised in a number of Upanishads, viz.—

(a) Shukla Yajur Veda's following Upanishads—Advai Tarak Upanishad, verse no. 14-18; Shatyayani Upanishad, verse no. 39; Niralamba Upanishad, verse no. 30.

(b) Krishna Yajur Veda's following Upanishads—Rudra Hridaya Upanishad, verse no. 35; Tejobindu Upanishad, Canto 6, verse no. 44; Yogshikha Upanishad, Canto 5, verse nos. 56-59, and Canto 6, verse no. 79; Kathrudra Upanishad, verse no. 39; Shuk Rahasya Upanishad, in its verse no. 21; Brahm Vidya Upanishad, verse nos. 52-53; Yog Kundalini Upanishad, Canto 2, verse nos. 3-4; and Canto 2, verse nos. 12-13; Varaaha Upanishad, Canto 2, verse no. 76; Rudra Upanishad, verse no. 3 (Lord Rudra is the universal Guru).

(c) Atharva Veda's following Upanishad—Manduka Upanishad, Mundak (Canto) 1, section 2, verse nos. 12-13; Tripadvibhuta Maha-Narayan Upanishad, Canto 5, paragraph nos. 10-11, and Canto 8, paragraph no. 17, 1st stanza; Bhavana Upanishad, verse no. 1.

(d) A minor Upanishad named the 'Dwayo-panishad' is entirely dedicated to enumerating the chief characteristics of a Guru. It is not known to which Veda it precisely belongs.

The word *Guru* has two parts—viz. 'Gu' meaning darkness, and 'Ru' meaning light. Hence the word 'Guru' means a person who can remove the darkness symbolising ignorance and illusions that has engulfed the disciple from all sides and act as a hindrance or an obstacle in his emancipation and salvation by showing him the truthful path, or lighting his path with the light of knowledge and holding out his hands to support him when he falters. Therefore he is an exalted, revered and much sought after person who can remove the darkness of ignorance of his follower by showing him the light of knowledge and guides him whenever he finds himself in a moral dilemma and quandary. He is the person who is both the moral preceptor as well as the spiritual guide of his disciple. He is supposed to act as a neutral advisor to his ward in all matters temporal and spiritual. The disciple is expected to confide in him his greatest of secrets without the fear of betrayal or blackmail. He is the one who is expected to have risen above all kinds of vested interests and keeps the welfare of the disciple as his main objective. He is the one who has transcended the mundane and has acquired sublime awareness of the supreme Reality, because only those who are themselves aware of anything can hope to tell others about it. Therefore it is deemed that only a person of high mental, intellectual, spiritual and ethical calibre can become a true Guru.

A true Guru is treated as being equivalent to the 'Trinity Gods'—(1) Brahma, the creator, because he creates or helps to take birth good virtues and noble qualities in his disciple; (2) Vishnu, the sustainer, because he nourishes, sustains and helps to inculcate and develop wisdom and enlightenment in his disciple and leads him on the truthful path; and (3) Shiva, the concluder, because he helps to end, conclude and eliminate ignorance and negative traits in his disciple. He is 'God like' because he functions in all these capacities at the same time, besides being exalted in all knowledge, being virtuous, of high moral character and beyond reproach, being a source of unbound spiritual energy, being self realised and enlightened, and being eternal in the sense that what he advises to his disciple, the path he shows, the light that he lights in the dark heart of the creature, makes him immortal. The Rudra Upanishad, verse no. 3 explicitly asserts that Lord Shiva is the universal Guru of all, and that the Guru is Shiva personified in this form.

Therefore, a Guru is honoured for the divine virtues that he represents and embodies, that he teaches and implements in his life, for the divinity, for the Lord and for the personification of the great teachings of the scriptures that he exemplifies.

The Guru is regarded as a personification of the great knowledge of the scriptures (refer Tripadvibut Maha-Narayan Upanishad of Atharva Veda, Canto 5, paragraph no. 10), as well as Lord Maha Vishnu himself (refer Tripadvibut Maha-Narayan Upanishad of Atharva Veda, Canto 8, paragraph no. 17, 1st stanza). It is not his physical body that is of any value for veneration, for the eternal 'soul' and not the physical gross body is venerable.

There is a minor Upanishad called Dwayo-panishad which describes the chief characteristics of a true Guru. It has only seven Mantras. This Upanishad is being cited here verse by verse to clearly highlight the main features of a Guru:---

'(a) Verse nos.1-2= A person is called a Guru if he is endowed with enlightenment and wisdom making him well versed and skilled in the Vedas, both in their literal knowledge as well as in the profound wisdom and the ethereal and eclectic metaphysical and spiritual philosophy they contain, who is an ardent devotee and sincere follower of Lord Vishnu, who is free from such negative traits as jealousy, envy and malice, who is well versed and skilled in the various holy and divine Mantras, their usage, their ethereal importance and spiritual significance as well as all other matters related with them, who is sincerity devoted to those Mantras

and has firm belief, conviction and faith in them, who seeks the shelter and refuge of those Mantras, who is pure and immaculate, uncorrupt and unpolluted in any form, who is devoted and dedicated to his own Guru, and who is well versed and skilled not only in all the Purans but all other scriptures as well.

(b) Verse no.3= A person is called a Guru who has a comprehensive and holistic knowledge and understanding of all the scriptures, and who not only preaches righteousness, probity and propriety as well as nobility of thoughts and actions but also lives them and implements them in their letter and spirit in his personal life.

(c) Verse no. 4= The letter 'Gu' means darkness, while the letter 'Ru' means that which remove that darkness. Hence, Guru is one who removes the darkness representing ignorance and delusions that are so typically associated with this deluding world.

(d) Verse no.5= A true Guru is equivalent to the supreme and transcendental Brahm; he is the ultimate destination for a seeker; he is a fount of the supreme knowledge and the source of the best of such knowledge; he is deemed to be the best and the greatest asset for a man.

(e) Verse no.6= A Guru is the best thing a wise seeker seeks and searches for, he is the best and the supreme place for seeking refuge and shelter with, and he being a dispenser of the profoundest of wisdom and knowledge is deemed to be a person who is the most important, who has the highest standards of greatness and magnificence, who is most dignified and meritorious, who is most weighty and significant, and who is most distinct and outstanding in all aspects.

(f) Verse no.7= Pronouncing the word 'Guru' even once enables the aspirant to access liberation and deliverance from this entrapping and deluding world. All his efforts are deemed to have been successful by simply saying this powerful word sincerely. Such a man does never come back (enters the cycle of birth and death) in this world again—verily, this is the truth. Those who understand this fact correctly get the desired fruit'.]

2. [Since this verse is long in the form of a narrative paragraph, it is therefore hereby divided into smaller stanzas or units for the sake of convenience of narration.]

2/1-2. [The disciple asked the Guru—] 'The gross body (of the creature; a man; any living being called a Jiva) has nine apertures or outlets or openings¹. The Sri Chakra (the instrument designed like a wheel that is used to offer worship to the divine Goddess—refer Tripura Tapini Upanishad) also has nine cosmic Shaktis² (dynamic cosmic powers and energy of creation) enshrined in it or placed in its various vital or crucial or important points that are sensitive as well as significant. Now therefore, how do we draw a parallel between them? How do we link the nine apertures of the body to the nine centers of cosmic energy symbolically marked on the worship instrument that is used to offer worship to the cosmic manifestation of the dynamism and powers of Brahm, the Supreme Being? In other words, how does the body of the Jiva resemble the body of the creation, and by corollary would be equivalent to the worship instrument that is used to offer oblations to the cosmic Shakti of Brahm?' (2/1-2).

[Note—¹There are *nine* so-called Doors of the body, and they are two ears, two eyes, two nostrils, one mouth, one anus, and one urethra. Refer: (i) Krishna Yajur Veda tradition—Shwetashwatar Upanishad, 3/18; Yog Tattva Upanishad, verse no. 141; and Kshuriko-panishad, verse nos. 2-5. (ii) Sam Veda—Yogchudamani Upanishad, verse no. 107.

²The *nine cosmic Shaktis* are personified as nine Goddesses. These nine Shaktis are the various forms of the divine dynamic power, potential, authority and energy of the Supreme Being that has taken the form of nine Goddesses. These Goddesses are

worshipped as Mothers of creation and they complement the Supreme Being. The nine divine Goddesses, also known as the patron Goddesses in Tantra literature dealing with occult forms of divine worship, are the following—‘Maha Tripur Sundari’ (महा त्रिपुर सुन्दरी), ‘Tripur Amba’ (त्रिपुर अम्बा), ‘Tripur Siddhi’ (त्रिपुर सिद्धि), ‘Tripur Malini’ (त्रिपुर मालिनी), ‘Tripura Sri’ (त्रिपुरा श्री), ‘Tripur Vasini’ (त्रिपुर वासिनी), ‘Tripur Sundari’ (त्रिपुर सुन्दरी), ‘Tripur Reshi’ (त्रिपुर रेशि), ‘Tripura’ (त्रिपुरा).

According to another version, the nine divine Goddesses are the following—Vaamaa (the divine consort of Lord Vamdeo, one of the forms of Lord Shiva), Durga (the Goddess who rides a lion and is considered a manifestation of Parvati, the divine consort of Shiva, and who had slayed the demon named Durg), Gauri (the divine consort of Lord Shiva; another name of Parvati), Bhagwati (another name of Parvati; the divine Mother Nature personified and from whose womb the entire creation has emerged), Parvati (the consort of Shiva; had derived her name because she is said to be the daughter of the king of mountains, called ‘Parvat’ in Sanskrit), Laxmi (the divine consort of Lord Vishnu, the sustainer of creation, and the patron Goddess of good fortune, prosperity and wealth), Saraswati (the divine consort of Brahma, the creator, and the patron Goddess of knowledge), and Aditi (the mother of all the Gods).

The system of worshipping of the divine Goddess envisages that she is a personification of all the dynamic powers and essential energy of all the Gods rolled into one. The chief Goddess is known as Parvati, the divine consort of Lord Shiva who is regarded as the greatest and most senior amongst the pantheon of Gods, and hence honoured by the epithet ‘Maheshwar’. Parvati is also known as Durga who is worshipped in nine different forms. These nine forms of Durga are called ‘Nav Durgas’ or nine Durgas. They are also called ‘Nav-Shaktis’ or the nine personified forms of the divine dynamic power and energy of the Supreme Being.

Thus, according to the Kavach Stotra of Devi-mahatmya, the nine Shaktis are the following—Shailputri (literally, the daughter of the Lord of Mountains), Brahmchaarini (one who is perpetually a celibate and self-restrained), Chandraghantaa (one who is as beautiful as the moon), Khushmaandaa (one who is always cheerful), Skandamaata (the mother of Skanda, also known as Lord Kartikeya, the son of Shiva and Parvati and a commander of the army of Gods), Kaatyaani (the Goddess who personifies the holy consort of the great ancient sage of the Vedic period, named Var-ruchi Kaatyaan), Kaalraatri (a personification of the night of the doomsday), Mahagauri (the great Goddess known as Gauri, another name of Parvati, the divine consort of Maheshwar or Lord Shiva), and Siddhidaatri (one who gives mystical powers and bestows her devotees or worshipper with success in everything).

According to Brahmaand Puran, the names are the following—Neelkanthi (one whose throat is blue-tinged), Kshemankari (one who takes care of her dependents), Harasiddhi (one who gives all Siddhis—mystical powers), Vanadurga (the patron Goddess of the forest), Rudradurga (the Goddess who is as fierce as Lord Rudra), Agnidurga (the Goddess who is as fierce as Agni, the Fire God), Jayadurga (the Goddess who gives victory), Vindhyavaasini (the Goddess who lives in the Vindhya mountain ranges), and Ripumaaridurga (the Goddess who vanquishes enemies).]

2/3-4. [The Guru replied—] ‘The father of this body is known as ‘Vaaraahi¹, and its mother is known as ‘Kurukulla Devi². [Both are female forms of the cosmic Authority, the cosmic Father known as Brahm.] (2/3-4).

[Note—¹Vaaraahi is a female form of Lord Varaaha, the boar incarnation of Lord Vishnu who himself is the Viraat Purush, the macrocosmic all-incorporating gross body of Brahm, the Supreme Being, from whose body the entire creation is said to have been formed. In other words, the creation is a revealed form of the Viraat Purush, albeit in his cosmic form of Vishnu.

When we take a close look at the word 'Viraat Purush' we find that it means a vast and colossus form ('Viraat') of the cosmic Male ('Purush') who not only created this world but took up residence in it as its sovereign.

He is called the 'Father' because Brahm, in his cosmic form of the Viraat Purush or Vishnu, is the primary Creator of creation. Even the creator of the physical world, i.e. Lord Brahma, also emerged from the navel of Vishnu as the latter reclined on the bedstead made of the coiled body of the legendary serpent known as the Seshnath who floated idly on the surface of the celestial ocean of milk known as Kshirsagar. So, in effect, it is Brahm creating this world in the form of Brahma the creator.

When the creation came into being, this Brahm, also known as the cosmic Consciousness, entered the body of the individual creature to become the Atma which is not only the 'true self' of the concerned individual but also the only factor that infuses life and vitality to the body. It is this subtle and sublime entity known as the 'consciousness' that injects the vital spark of life and vitality in the otherwise gross, inane and inert body of the individual creature just like the sperm that inject life into the egg to initiate the process of creation. Hence, the Atma and the consciousness at the micro level of creation, and Brahm and the cosmic Consciousness at the macro level of creation are the de-facto 'father' of creation.

To create something necessary dynamism, authority, energy and strength are needed. These virtues of Brahm manifested themselves as the 'Shakti'. So, if Brahm is the cosmic Father, his Shakti is the cosmic Mother. Again, if Brahm became the 'God', then obviously his divine authority and dynamism became 'Goddess'. Hence, Gods and Goddesses are nothing but personifications of the cosmic Consciousness known as Brahm, and the latter's stupendous and profound cosmic powers and energy known as Shakti.

The gross body of all living beings is primarily made up of the earth element. Herein lies the relevance of Lord *Varaaha* vis-à-vis the creature. According to legends, this is the third incarnation of Vishnu in which he killed the demon Hiranyaaksha and lifted the earth from the flood water where it had vanished. According to some versions, this demon had hidden the earth in the bowls of the ocean. This extrication and resurrection of the earth is a symbolic way of saying that the Lord saves the creation from being submerged in the vast ocean of sins and evil. An Upanishad preached by Lord *Varaaha* appears in the Krishna Yajur Veda tradition as its 30th Upanishad.

From the perspective of the present verse, since the bodies of all living beings are made up of the 'earth element', the almighty power and strength of the Supreme Being which helps the body to be alive and active is therefore the 'Shakti' (the dynamism and energy) of the Lord known as *Varaaha* (Lord Vishnu or Lord Viraat Purush or Brahm, the Supreme Being). Now, once again, since Brahm lives in the body of the creature as his true self, i.e. as the Atma, it follows that this Shakti is actually the dynamism, the authority, the energy, the potent abilities and vigour of the Atma in action.

It is thus Lord *Varaaha* in his manifestation as the Atma that sustains and supports the body of the creature made up of the earth element. The personified form of the Shakti of *Varaaha* is known as *Vaaraahi*. Since the Atma is a personified form of the cosmic Shakti of Consciousness, it is logical to conclude that the dynamism and the divine powers possessed and displayed by the Atma is the *Vaaraahi* aspect of the cosmic Consciousness. The Atma, the pure self of the creature, employs the strength and vitality inherent in the consciousness to enable the creature's body to become alive, active and survive.

The Durga-shapta-sati, an ancient text of the Shakti cult, describes the seven divine forms of the cosmic Mother, the cosmic Shakti, known as the 'Sapta-Maatrikaas'. [Refer: 8/13-21 of Durga-shapta-sati.] These are the seven divine aspects of the divine Cosmic Mother. These Mothers are actually the female aspects of the seven divine aspects of the Cosmic Male, known as the Viraat Purush, who in

turn has manifested himself as the seven Gods, such as Shiva, Vishnu, Brahma, Indra etc. In this context, Goddess Vaaraahi is regarded as the female aspect of Lord Varaaha, the third incarnation of Vishnu which he took to resurrect the earth.

In iconography, Goddess Vaaraahi is depicted as a boar-faced goddess having a dark complexion and four or six arms. On the right side she shows the Vara-Mudra (a posture which indicates that she grants boons), and holds a Danda (a club or a stick) as well as an Asi (a sword). On the left side she shows the Abhaya-Mudra (a posture that grants fearlessness), and holds a Carma (shield) as well as a Paatra (a pot). Her mount is shown to be either an elephant or a buffalo.

²The Goddess known as *Kurukulla Devi* is a manifestation of the Shakti of Brahm which enables the body to do its deeds and perform actions. The word 'Kurukulla' consists of two parts—'kuru' meaning to do, and 'kulla' means activity, and the word 'Devi' of course means a goddess.]

2/5. The four great efforts that the body makes, called the 'Purushaartha' are like the four great oceans of this world (2/5).

[Note—The four efforts are 'Dharma' or making auspicious and righteous efforts, 'Artha' or making efforts to produce wealth and acquire prosperity, 'Kaam' or making efforts for the fulfillment of wishes and acquiring of pleasure, and 'Moksha' or making efforts to attain liberation, deliverance, emancipation and salvation.

It ought to be noted here that a lot of imagery is employed in this Upanishad.]

2/6. This body is like a continent of nine gems (2/6).

[Note—The 9 precious stones, gems and jewels are the following—pearl, emerald, quartz, zircon, diamond, coral, cat's eye, ruby and sapphire.]

2/7. The nine forms of Shaktis (subtle strength, power, energy) that support this continent (the body of the aspirant or any living being) are Maha-Tripura Sundari etc. (2/7)

[Note—These nine forms of Shaktis (subtle strength, power, energy) that support the body of the aspirant or any living being are the various forms of the divine dynamic power, potential, authority and energy of the Supreme Being that has taken the form of nine Goddesses. These Goddesses are worshipped as Mothers of creation and they complement the Supreme Being. The nine divine Goddesses, also known as the patron Goddesses in Tantra literature dealing with occult forms of divine worship, are the following—'Maha Tripur Sundari', 'Tripur Amba', 'Tripur Siddhi', 'Tripur Malini', 'Tripura Sri', 'Tripur Vasini', 'Tripur Sundari', 'Tripur Reshi', 'Tripura'. All these names of the Goddess are mentioned in the Tripura Tapini Upanishad of Atharva Veda tradition, in its Canto nos. 1-2.

According to another version, the nine divine Goddesses are the following—Vaamaa (the divine consort of Lord Vamdeo, one of the forms of Lord Shiva), Durga (the Goddess who rides a lion and is considered a manifestation of Parvati, the divine consort of Shiva, and who had slayed the demon named Durg), Gauri (the divine consort of Lord Shiva; another name of Parvati), Bhagwati (another name of Parvati; the divine Mother Nature personified and from whose womb the entire creation has emerged), Parvati (the consort of Shiva; had derived her name because she is said to be the daughter of the king of mountains, called 'Parvat' in Sanskrit), Laxmi (the divine consort of Lord Vishnu, the sustainer of creation, and the patron Goddess of good fortune, prosperity and wealth), Saraswati (the divine consort of Brahma, the creator, and the patron Goddess of knowledge), and Aditi (the mother of all the Gods).]

2/8. The 'Kalpa-Vriksha (or the Kalpa Tree)' (i.e. the evergreen tree which is said to be all wish-fulfilling) is represented by the body made up of the seven 'Dhaatus'

(elements) such as the skin etc., as well as the numerous internal and external ‘Sankalps’ (volitions, aspirations, ambitions, determinations, vows etc.) that this body makes.

[The body is like the aforesaid all wish-fulfilling tree that helps the Atma to accomplish what it desires. The Atma would not be able to do anything without the help of the body. In a sense, the body is an extended arm of the Atma which the latter employs for its wish fulfillment.

For instance, if the Atma—which incidentally is the truthful ‘self’ of the living being—wishes to eat something, then it uses the body to search for the food it wants to eat, go to fetch it, actually procure it, then cook it, eat it, then enjoy its taste and aroma, digest it and extract nourishment from that food, and finally eliminate waste that is not needed.

The Atma is an ‘ethereal spirit’, and as such it cannot physically do anything in this physical world. For this purpose it needs an instrument that is compatible with the world and its physical gross nature, and the body fits the bill perfectly.] (2/8).

[Note—The seven Dhaatus which make up the body are the following— The 7 Dhaatus—The structural features of the gross physical body consists of the so-called seven Dhaatus. These stand for the structural constituent of the body which supports and sustains its existence. According to ancient Indian system of medicine, they are the following—(1) Rasa (lymph and mucous; sap), (2) Rakta (blood), (3) Maansa (flesh), (4) Meda (fat and muscles), (5) Ashthi (bones and cartilage), (6) Meja (marrow), and (7) Shukra (semen).

According to other interpretations, these seven Dhaatus which form the structural features of the gross body and give it its shape and support it are the following—(1) all forms of fluid ingredients such as blood, urine, mucous, lymph etc, (2) bone and cartilage, (3) marrow, (4) flesh, fat and muscles, (5) abdominal organs such as stomach etc, (6) skin, and (7) Naadis (arteries, veins, capillaries and nerves).

The body of a creature as a Tree—Reference: (i) Krishna Yajur Veda = Rudra Hridaya Upanishad, verse no. 41. (ii) Shukla Yajur Veda = Brihad Aranyaka Upanishad, Canto 3, Brahman 9, verse no. 28.

The Kalpa Tree is cited here because it provides all desired fruits and fulfills all wishes of a seeker. Similarly, this body is used by the Atma, the true ‘self’ of the creature to fulfill all its wishes, and at the same time help it to acquire and enjoy all fruits of its endeavours.]

2/9. The ‘Tej’ (energy, warmth, heat, vitality, vigour, virility, strength, dynamism, radiance) that is inherently present in the body of all living beings is like the garden full of Kalpa Trees.

[The earlier stanza says that the body is like a Kalpa Tree, so since there are millions of creatures in this world, the latter is aptly compared to a dense forest or a large garden full of Kalpa Trees.] (2/9).

2/10. The six tastes that the tongue feels are like the six seasons in this world. These six tastes are sweet, acidic, bitter, pungent, sour and salty (2/10).

[Note—Refer Garbho-panishad, verse no. 1 of Krishna Yajur Veda tradition which also deals with the six tastes.

The six seasons are the following—early winter (Nov.-Dec.), late winter or the season of snowfall (Jan.-Feb.), spring (March-April), summer (May-June), rainy (July-August) and autumn or fall (Sept.-Oct.). The Prashna Upanishad of Atharva Veda, Canto 1, verse no. 11 says that the Sun God is like a wheel having six spokes. These refer to the six seasons of the year.]

2/11. The symbolic ‘Peeth’ or seat where the consecrated deity is installed is represented by the virtue known as ‘Kriya’—literally the power of deeds and actions; the acclaim and the authority that comes to the Atma by doing deeds and taking actions. It is this deity and its divine Shakti (dynamism of Brahm revealed as the Atma—which is the pure cosmic Consciousness in a personified form that resides in the body of the creature) that empowers the creature and his body to do various deeds and take various actions, and to bring them to successful conclusion. Hence, it is called the ‘Kriya Shakti’.

[The dynamic powers of the supreme Brahm which enable all the creatures to do anything are established in the latter’s body as Shakti (personified dynamic energy and powers of Brahm). Since ‘Shakti’ is visualized as a Mother Goddess, the place where she is enshrined is known as a ‘Peeth’ or a holy seat. Hence, the body is the ‘Peeth’ where the deity known as the Shakti is established and which in turn controls and presides over all the ‘Kriyas’ (activities, the deeds and the actions) of the creature. Hence, the primary energy, ability and dynamism that empowers the body to do anything and fulfill the wishes of the creature’s true self, i.e. his Atma, is known as *Kriya Shakti*.] (2/11).

[Note—The *theory of Karma* or doing deeds correctly and with the correct perspective—Karma Yoga or the Yoga philosophy based on doing deeds and taking actions is intricately linked to the philosophy *Kriya Shakti*. Kriya Shakti refers to the power of the gross physical body to act as per wishes of the mind and intellect. It is the Kriya Shakti which enables the supreme Authority to carry out its wishes through the organs of the body by taking various actions and doing different deeds. It is the ability of the body to actually do the deeds or take the actions and bring them to fruition. It also represents the ability to enjoy the results of doing such deeds and actions taken by the creature. The word also refers to being active and enterprising and the opposite of being lethargic and indolent. It is the actual ability to carry out his plans to their successful completion, i.e. to do deeds, to take actions and enter into enterprise, because simply sitting and procrastinating endlessly wouldn’t give success unless there is assiduous activity and diligent effort, no matter how wise a man is and how determined he might be. The body is prompted into taking action by the desires and aspirations originating in the mind and intellect complex. If these desires are world-centric, then our actions and deeds would be also world-centric and so would be the result. This is because every activity gathers its quality from the texture of the desire that has prompted a particular action or deed. So, when the desire is to enjoy the outside world and its sense objects, the deeds and actions become entrapping and the cause of all world related miseries. On the other hand, if the desires are auspicious and noble, the same deed and action would become an instrument for spiritual upliftment as well as liberation and deliverance. In this context, the term Karma Yoga would be to coordinate the effort of the body and the mind not towards fulfilling worldly aspirations that would be ensnaring and enslaving in the long run but to divert them towards the divine goal of spiritual liberation and deliverance. And the tool in this endeavour would be to have auspicious, noble and righteous desires, aspirations and wishes, collectively called the different Vasanas or Ichaas inherent in a man, instead of the worldly ones. Once the desires are purified and chastened, the activities and deeds to fulfill or accomplish those Vasanas or Ichaas are purified and chastened proportionately. At its height, the total renunciation of desires for enjoying anything related to the external world of sense organs and their respective objects is called ‘Vairagya’. This Kriya Shakti is more developed in those people who have a predominance of the Raja Guna or the second category of three basic qualities that decide the habits, temperaments and nature of any man. The Raja Guna makes a man more inclined towards enjoying the sense objects of the world and remain engrossed in the activities related to the gross world.

Karma Yoga expounds on the importance of doing deeds and taking actions, but with a different attitude. It stresses that we must not get ‘involved or attached’ to those deeds or action in as much as we shouldn’t be bothered about the rewards or punishments incumbent on such deeds or actions. We must do them dispassionately and with detachment. The action or deed should be treated as one’s offering to the God as well as an offering to the sacred fire sacrifice. This will ensure that the actions or deeds are not unrighteousness, corrupt or evil. On the contrary, whatever is done in which a person’s subtle sub-conscious says is not the correct thing to do will be deemed to be unrighteous, unethical and unlawful, and therefore cannot be an offering to either the God or the sacred fire sacrifice.

References of Upanishads dealing with the concept of deeds and actions, or the eclectic concept of ‘Kriya’:—

- (i) Rig Veda’s Kaushitaki Brahmin Upanishad, Canto 1.
- (ii) Sam Veda’s Chandogya Upanishad, Canto 5, Section 3-10; Canto 7, Section 21.
- (iii) Shukla Yajur Veda = Adhyatma Upanishad, verse nos. 49-60, 66; Niralambo-panishad, verse no. 11-12; Brihad Aranyak Upanishad, 3/1/3, 3/2/11-12, 3/9/28, 4/3/12, 4/3/33, 4/3/36, 4/4/1, 5/10-5/11, 6/1/1-6, 6/2/2, 14-16, etc.; Trishikhi Brahmin Upanishad, Canto 2, verse nos. 23-26; Mandal Brahmin Upanishad, 2/4/2-3.
- (iv) Krishna Yajur Veda = Kathrudra Upanishad, verse no. 13, 20-26; Varaaha Upanishad, Canto 1, verse no. 12, Canto 2, verse no. 12, 48, Canto 4, verse no. 35; Rudra Hridaya Upanishad, verse no. 35; Shwetashwatar Upanishad, Canto 4, verse no. 7, and Canto 6, verse no. 3; Sarwasaar Upanishad, verse no. 6; Taittiriya Upanishad, Valli 2, Anuvak 6; Katho-panishad, Canto 1, Valli 1, verse no. 20, and the whole of Canto 1, Valli 2 right up to Canto 2, Valli 3; Skanda Upanishad, verse no. 7; Saraswati Rahasya Upanishad, verse no. 67.
- (v) Atharva Veda—Mundak Upanishad, Mundak (Canto) 1, section 2, verse no. 12; Mundak (Canto) 3, section 1, verse no. 6; Mundak (Canto) 3, section 2, verse no. 1; Tripadvibhut Maha Narayan Upanishad, Canto 8, paragraph no. 14; Par Brahm Upanishad, verse no. 1.]

2/12. The profoundly esoteric but highly eclectic knowledge that the astounding cosmic Shakti of Brahm (i.e. the cosmic energy, stupendous powers and the dynamism of Brahm) resides inside the aspirant’s own body in a subtle manner inside the coiled energy center called the Kundalini (which is a coiled energy center located at the base of the spine in the body) is known as ‘Gyan Shakti’.

[This is because it is not easy to come to know about it, and only self-realised and enlightened ascetics who have attained a high level of spiritual attainment are able to witness the Kundalini, and experience its exceptional power and energy. Further, unfolding the energy trapped in the Kundalini is a tedious process of Yoga, but once successfully done it opens the door for the ascetic to acquire immense mystical powers that are super-human. He can do many things which an ordinary man just cannot imagine even in his dreams. For a enlightened ascetic who has known the powers of the Kundalini and has harnessed it, there is no limitations to what he can do or achieve.] (2/12).

[Note—The concept of Kundalini, and the process of kindling its dormant energy and releasing it, has been described in a number of Upanishads dealing with Yoga or meditation.

The process of activating the Kundalini has been elaborately described in the book ‘The Serpent Power’ by Arthur Avalon & Sir John Woodroffe.

The Upanishads that deal with Kundalini and its activation are the following—(a) Krishna Yajur Veda’s Yog Kundali Upanishad, Canto 1, verse nos. 7-8, 43-46, 65-74, 76, 82-84; Dhyandindu Upanishad, verse no. 66-69; Yogshikha Upanishad, Canto 1,

verse nos. 82-139; Yogtattva Upanishad, verse nos. 81-84. (b) Sam Veda's Yogchudamani Upanishad, verse no. 36-39. (c) Atharva Veda's Shandilya Upanishad, Canto 1, section 4, verse nos. 8; and Canto 1, section 7, verse nos. 36/1-4.

The positive effect of Kundalini activation on the body has been described in Krishna Yajur Veda's Yog Kundali Upanishad, Canto 1, verse nos. 65-66, 70-71, 77-78.]

2/13. The creature's power of making wishes and having aspirations or desires, and the ability to fulfill them are known as the 'Iccha Shakti'. It is a manifestation of the great Goddess known as Maha-Tripur Sundari. [That is, it is the great Goddess who represents the dynamic powers of Brahm that has revealed herself in the form of the Iccha Shakti.] (2/13).

[Note—When a creature wants something, when he desires something, when he aspires for something, it is only then he would make efforts to fulfill his desires, satisfy his wants and accomplish his aspirations. The 'Iccha' is the motivation that impels the creature to do something and make an all-out effort to succeed. In fact, it was the Iccha Shakti of the supreme Brahm that he wished to create something that was the inspiration for him which made him make necessary efforts and evolve the means and the wherewithal needed to accomplish the task of creation. Had he no desire to create, he would have made no efforts, he would not have got his act together and got on with the arduous task of creation, and the world would not have existed. Hence, it is the 'Iccha' that is the principal motivator for all creatures. Even the desire to obtain Mukti and Moksha (liberation, deliverance, emancipation and salvation) is a 'Iccha Shakti', because it is only then that the creature does realise his goal of final freedom from the world and its snares.

In brief, the world goes around because it is powered by the astounding energy and resources generated by the Iccha Shakti.]

2/14. The 'Gyata' (one who has Gyan; one who knows, is wise and enlightened) is the 'Hota' (the person who does the fire sacrifice).

The 'Gyan' (truthful knowledge, wisdom and enlightenment) is the 'Agni' (the sacred fire).

And the 'Gyea' (the objective, the aim of the fire sacrifice; the entity wished to be known by spiritual endeavours; the target of all efforts) is the 'Havi' (offerings made to the sacred fire). (2/14).

[Note—The symbolism must be understood here. The body is a great sacrificial pit because it is made of the earth element. The eternal fire element resides and burns inside it as is proved by the fact that the body is always warm and energized. It is this fire that injects life and vitality to the body. The deity to whom the offerings are made in the sacred fire is Brahm, the Supreme Being, and it is the same Brahm who lives in the body as the Atma, the pure conscious soul. At the time of creation, all the Gods were created from the cosmic gross body of Brahm known as the Viraat Purush. When the human body was created in an image of the Viraat Purush, these Gods entered this body to take up their respective residences there. For instance, the Sun God entered the eye because he was created from the cosmic eye of the Viraat Purush. These mysterious facts are explained in the Aeiteriya Upanishad of the Rig Veda tradition, in its Canto 1, sections 1 and 2.

In the context of the body, the food that a man eats is meant to sustain the Atma that lives in it as the incarnate Lord. So, if the body is the fire pit, the fire element living in it is the sacred fire, and the Atma is the deity to whom the offering is made, then the food eaten is the Havi or the formal offerings made during formal forms of fire sacrifices.

The actual performer of a fire sacrifice is the Atma because it is the ‘true self’ of the concerned person. The Atma is inherently enlightened and wise, so the Hota is regarded as one who is wise and enlightened. In other words, when a person does a fire sacrifice with this knowledge, he is actually doing it in the proper way. In the context of the body it implies that a man should eat with proper wisdom that the basic intention of eating is to sustain and provide nourishment to the Atma so that it can carry on with its objectives in this creation. Food should not be eaten as a means to satisfy the urges of the organs of the body for self-gratification—such as for its taste, its smell, its texture and softness, or its physical features of charm and colour. One must not indulge in food and throw it to waste, but give it its due respect as an offering meant for the Viraat Purush residing in the body as the Atma.

Just like all sorts of offerings made to the sacred fire raging in the physical fire pit of a formal sacrifice are reduced to ash, all sorts of food eaten by a man are also reduced to excreta. Only the best is accepted by the Supreme Being, and this means that it is the nutritional content of the food that counts and not the external features or the taste and smell of the food.

From the perspective of ‘knowledge’ it means that the wise man is he who accepts all forms and sources of knowledge, but extracts the truth from them while discarding the rest as waste. He accepts Brahm and the Atma as the essence in this creation, the cosmic Consciousness as the actual ‘truth’ of creation, and rejects all other things as falsehood.]

2/15. To see no distinction between the above three units of the fire sacrifice, i.e. to treat the Gyata, the Gyan and the Gyea as a composite whole, as an integral and inseparable part of the fire sacrifice, is equivalent to the worship of the Sri Chakra in a holistic manner (2/15).

[Note—The Sri Chakra consists of various units—such as the geometrical diagram with its divisions and sub-divisions, the various Mantras and Beej Mantras written on it, the different Gods and Goddess that are invoked and enshrined in it, many systems prescribed for worship, and so forth. So, a comprehensive worship of this Chakra or wheel of worship entails seeing the entire structure as a composite symbol of Brahm who is an immutable and indivisible cosmic entity. Brahm cannot be portioned and fractured into units and divisions. Brahm is the one non-dual entity that has revealed itself as the performer of the fire sacrifice, as the offerings made to the fire, as the fire itself, as the deity worshipped, and as the objective of the fire sacrifice.

In other words, when one worships the Goddess by the medium of the Sri Chakra, he must understand, inter alia, that all the forms that the Goddess has taken, all the many Mantras and Beej Mantras used for worship, all the rituals and formalities, and all the rest of the things taken together have only one real meaning, and this essential meaning refers to the supreme transcendental Brahm. It is this Brahm that is the ‘Truth’ revealed as the many Goddesses, as many Mantras and Beej Mantras, in the different forms of worship prescribed for different Gods and Goddesses, etc. They all have one underlying essence or principle in them, and it is the ‘Truth’ known as Brahm that should be the aim of all spiritual endeavours.

A wise man knows that his Atma and the supreme transcendental Brahm are one and the same, the only difference being in the level or plane of their existence. While the Atma is a term used to imply the cosmic Consciousness at the micro level of creation, the term Brahm refers to the same entity at the cosmic level.

Again, since both the Atma and Brahm are manifestations of the cosmic Consciousness that is the only truth in creation, and since ‘truth’ can be only one and not more than one, it obviously follows that Atma and Brahm are one and not two.

Since ‘everything in existence that is truthful and holy is a manifestation of Brahm’, it follows that the Havi, the offering to the fire, is also a manifestation of Brahm as much as is the fire to which it is offered. In fact, it is the Brahm existing in

both these forms—one that accepts (i.e. the fire) and the one that is offered (the offering). Extended further it implies that the deity to whom all worship is made is also Brahm who may be worshipped in the form of various Gods and Goddesses.

This is what is meant and implied in these two stanza nos. 2/14-15.]

2/16. The nine Siddhis¹ (mystical powers) such as Anima etc. are related to the Niyati (destiny, fate and the basic nature of the creature) along with the nine Rasas² (sentimental and emotional quotient) that also determine the creature's natural inclinations and temperament (2/16).

[Note—¹The nine Siddhis are the following—(i) 'Anima' means the power to become microscopic or so minute that one becomes invisible to the naked eye; (ii) 'Mahima' is to have majesty, glory and fame; to be honoured and acknowledged for one's achievements, wisdom, erudition, knowledge and skills; (iii) 'Garima' is to have weight, stature, dignity, decorum, gravity and significance; (iv) 'Laghima' is the grand virtue of being simple and humble inspite of being great, powerful and authoritative; it is to have simplicity and humility despite possessing grandeur, majesty, power, authority and magnificence; (v) 'Praapti' is to be able to attain or obtain anything wished or desired for; (vi) 'Praakramya' is to have valour, ardour, strength, powers, prowess, potential and punch leading to triumph, glory and majesty; (vii) 'Ishwatwa' is to be able to have lordship or sway over everything else; (viii) 'Vashitwa' is to be able to control and subdue others, and exert influence on them so much so that they become obedient; and (ix) 'Mukti', or to obtain liberation and deliverance from all sorts of bondages and fetters. It is closely related to Moksha meaning final spiritual emancipation and deliverance of the aspirant.

According to some accounts, 'Bhukti'—i.e. the ability to enjoy whatever one wishes to acquire and enjoy, is also one of the nine Siddhis.

²The term 'Rasa' stands for emotions and sentiments. It has nine kinds—the amorous, the heroic, the wondrous, the ridiculous, the compassionate, humourous, fearful, horrifying, and loathsome. The word 'Rasa' also means the sap of a plant, the juice of a fruit, a fluid or liquid, the taste and flavour of something eaten or drunk, to taste and enjoy something, the essence or extract of something, the enjoyment and pleasure one gets when one is in a favourable circumstance.]

2/17. The eight formidable Shaktis (forces) of creation created by Brahm, the supreme Creator, that are difficult to overcome and which shape all deeds and actions of the creature as well as their destiny and nature are the following—Kaam (worldly passions, lust, desires), Krodh (anger), Lobh (greed, yearning, rapacity), Moha (attachments, infatuations, attractions for the world and its material sense objects), Mada (arrogance, haughtiness, hypocrisy), Matsarya (jealousy, ill-will, malice), Punya (auspicious deeds and their equally holy results) and Paap (inauspicious and unrighteous deeds and their equivalent results). [Refer verse no. 2/26.] (2/17).

2/18. The sixteen Shaktis (forces of Nature) are the following—Prithivi (earth), Apaha (water), Tej (fire), Vayu (air; wind), Akash (sky), Srotra (ears), Twak (skin), Chakshu (eyes), Jivhaha (tongue), Ghraana (ears), Vaani (speech), Paani (hand), Paad (leg), Upastha (excretory organs) and Mana (mind) and its various Vikaars (faults)¹ (2/18).

[Note—¹The sixteen types of Vikaars are mentioned in the Yogtattva Upanishad of Krishna Yajur Veda, in its verse nos. 12-13. They are briefly the following—Kaam (worldly desires, passions and lust), Krodh (anger, indignation and wrath causing spite and ill-temper), Bhaya (fear and consternation), Moha (attractions, attachments, delusions, infatuations, longing), Mada (arrogance, haughtiness and intoxication), Raja (the second of the three qualities creating worldly tendencies and desires related

to this world), Janma-Mritu (the cycle of birth and death and its attendant horrors and agonies), Kaarpanya (being stringy and miserly, specially in the field of religious duties such as giving alms and making charities, or supporting such activities; the word would cover miserliness of thoughts in the sense that one does not give the correct knowledge to others out of jealousy), Shok (sorrows, grief and agonies), Tandra (being sleepy, indolent, lethargic, lazy, careless and showing lack of energy and alertness), Kshudha (hunger, both physical such as for food and the insatiable desire for sensual gratification, as well as emotional such as the insatiable longing for worldly things), Trisha (desires, wishes and yearnings pertaining to the world), Trishna (thirst, ambition, avarice and greed; the word is usually used in the negative sense; it pertains to a man's insatiable desire and greed for worldly things), Lajjaa (shame, dishonour, ignominy), the constant fear of Dukha and its attendant Vishaad (i.e. being constantly tormented by the fear of sufferance from sorrows and grief of all kinds and the attendant agonies and miseries, distresses and a sense of despair and hopelessness and haplessness), Harsha (to feel elated and happy, to be glad and joyous, to feel cheerful and exhilarated by certain situations which seem to be in favour, such as on receiving some good news), etc.]

2/19. The eight abilities and functions of the gross organs of the body are the eight Shaktis that the body displays on behalf of the creature. These are the following—to speak (through the mouth and tongue), to accept or take (with the hands), to go or move (with the legs), to eliminate (waste from the body through the organs of excretion), to enjoy and derive pleasure (through the genitals and other organs of perception such as the eye, nose, ear, tongue and skin), to give or eject (by the hand, the throat as in the case of cough, the genitals as in the case of sperms, the excretory as in the case of stool and urine), to be dispassionate, detached, indifferent and neutral both at the subtle level of the mind and intellect as well as the gross level of the body (2/19).

2/20. The following fourteen Naadis¹ (tubular ducts in the body; the nerves and veins) are like the fourteen Gods or Goddesses² such as Sarwa-shanksho-bhini etc.—Alumbusa, Kuhu, Vishwodar, Varuna, Hastijivha, Yashaswani, Ashwini, Gaandhaari, Pusha, Shankhini, Saraswati, Ida, Pingla, and Sushumna Naadis (2/20).

[Note—¹These Naadis and their location and functions have been elaborately described in Yoga Upanishads, viz. (i) Sam Veda's Jabal Darshan Upanishad, Canto 4, verse nos. 5-22 ½, 35-42, 46-47, Canto 5; and Yogchudamani Upanishad, verse nos. 15-21.

(ii) Shukla Yajur Veda's Trishikhi Brahmin Upanishad, Canto 2, verse nos. 67-76, 88-89, 99; Subal Upanishad, Canto 9 (which elaborately describes the relationship between Naadi, the vital winds and the sense organs).

(iii) Krishna Yajur Veda's Kshuriko, verse nos. 8-20; Varaaha Upanishad, Canto 2, verse no. 61 (consciousness moves in Naadis during sleep), Canto 5, verse nos. 22-31, 54, 67; Yog Tattva Upanishad; Dhyan Bindu Upanishad, verse nos. 50-60; Yogshikha Upanishad, Canto 5, verse nos. 17-27, Canto 6, verse nos. 4-19, 22, 41-47; Yog Kundalini Upanishad, Canto 1, verse nos. 10-18 in relation with the activation of the Kundalini (which is the spiral dynamic energy center at the base of the spine) and doing Pranayam (breath control).

(iv) Atharva Veda's Prashna Upanishad, Canto 3, verse no. 6; Mundak Upanishad, Mundak (Canto) 2, section 2, verse no. 6; Shandilya Upanishad, Canto 1, section 4, verse nos. 1, 9-11.

²The patron Gods of the different Naadis are enumerated in Jabal Darshan Upanishad, Canto 4, verse nos. 35-40.]

2/21. The ten vital winds known as Prans¹ (literally the life of all living beings, so called because the Pran injects life and consciousness in the otherwise lifeless body of the organism) having the ten Gods and Goddesses² known as Sarwa-siddhi-pradaa etc. are the following—Pran, Apaana, Udaana, Samaana, Vyaana, Naaga, Kurma, Krikar, Devdutta, and Dhananjaya³ (2/21).

[Note—¹The *ten Prans* have been described extensively in other Upanishads, viz. (a) Shukla Yajur Veda = Trishikhi Brahmin Upanishad, 1/5 and 2/77-87; Subala Upanishad, canto 9, verse no. 1-14; Paingalo-panishad, Canto 2, verse nos. 3. (b) Krishna Yajur Veda = Yogshikha Upanishad, Canto 1, verse no. 165 and Canto 5, verse no. 2; Dhyānbindu Upanishad, verse nos. 55^{1/2}-57. (c) Atharva Veda = Shandilya Upanishad, Canto 1, section 4, verse no. 12-13.

²The *patron Gods* of the Prans (the vital winds)—References: Trishikhi Brahmin Upanishad of Shukla Yajur Veda, Canto 1, verse no. 8; Prashna Upanishad of Atharva Veda, Canto 3, verse nos. 8-9.

³The *functions* of the various vital winds or Prans—Reference = (i) Shukla Yajur Veda's Trishikhi Brahmin Upanishad, Canto 1, verse no. 9; Canto 2, verse nos. 77-87. (ii) Atharva Veda's Shandilya Upanishad, Canto 1, section 4, verse no. 13.

According to the Shandilya Upanishad 1/4/13, the functions of the various vital Prans are the following—(i) The Pran wind is responsible for breath and expelling mucous in the form of cough. (ii) The Apaana wind is responsible for expelling stool and urine from the body. (iii) The Vyaana wind is responsible for accepting or giving away anything. (iv) The Udaana wind is responsible for lifting the body. (v) The Samaana wind is responsible for nourishing the body (as it takes the nutrients to all the parts of the body). (vi) The Naaga wind is responsible for belching and excreting of contaminated or polluted wind through the throat and mouth. (vii) The Kurma wind is responsible for closing and opening of the eyelids. (viii) The Krikar wind is responsible for hunger and appetite. (ix) The Devdutta wind is responsible for creating laziness, lethargy and inertia. (x) The Dhananjaya wind is responsible for creating cough and other types of mucous that help to expel infection from the body (in association with the Apaana, the Naaga and the Pran winds (13).”]

2/22. These vital winds called ‘Prans’ are grouped under five classes depending upon their role and interaction in the body of the creature, as well as their contribution in his meditative practices. Thus, we have five main categories of Prans—viz. Rechak (that which is exhaled or expelled, or helps in this process, say expelling of mucous, stool and urine), Purak (that which is inhaled or fills up the body, or helps in the process of filling up the body, say with nutrition etc.), Shoshak (that which helps in absorption, say of nutrition), Dhaahak (that which burns, keeps the internal fire ignited and helps in, say, digestion, burning waste in the body, keeping the body warm and energized), and Plaavak (that which floods or inundates; that which helps in circulation and movement) (2/22).

2/23. These vital winds serve the dual role of either concluding life by scalding it or burning it (‘Kshaarak’—to scald or corrode), or by holding the life together, nourish it like a son and take care of it like a child (‘Daar’—to hold together, to harbour; ‘Daarak’—to treat like a son or child).

Similarly, they either produce mental and emotional excitement, agitation and discomfort for the creature (‘Kshobhak’) or give him pleasure and comfort by being attractive and charming for him (‘Mohak’). [For instance, when the air accumulates inside the body, it produces a sense of great discomfort; the man feels bloated and develops a headache. On the other hand, a sweet and cool breeze is soothing for his

nerves; the breath is another example of the air's benevolent role as a sustainer of life.] (2/23).

2/24. These vital winds are absolutely necessary for all human beings; they help him to be attracted to food and helps him to digest all the four types of food—viz. that which is chewed, that which is licked, that which is sucked or sipped, and that which is drunk.

[The reason is that the vital winds regulate all the functions in the body. If the vital winds are working properly and in prime shape it translates into the body being healthy and robust, and such a body would like to eat and drink merrily as compared to a diseased body where the vital winds malfunction, resulting in the body abhorring food and drink.] (2/24).

2/25. These vital winds are a form of the fire element in as much as like the fire they are absolutely essential for life and its sustenance in this creation. In fact, both the fire and the air complement each other—as is evident from the fact that the fire needs air to remain burning, and the air which is warm is conducive to life as opposed to chilly air which freezes life instead of fostering it. Hence, the ten Prans (mentioned in 2/21) are the external form of the fire element and are deemed to be ten subtle Gods that sustain life in this creation.

[This verse highlights the paradoxical miracle of creation—the wind and the fire appear to be eternally inimical to each other, for the wind can blow out any raging fire, but, at the same time, the fire needs air to burn and keep burning. Similarly, the fire can force the wind to show movement inspite of its reluctance as is evident when air begins to blow around a lighted fire due to convection currents, and hot air can cause widespread havoc as observed during wild forest fires, but if the air lacks warmth and is freezing cold it would snuff life out of this earth and we protect ourselves against chilly winds instead of welcoming them. The vital winds inside the body help the creature only as long as the fire element present inside the body keeps the latter warm. Otherwise, the body would become cold and dead, and the same air which sustains life inside it would make it bloated.

So we see the symbiotic relationship between the air and the fire elements of creation. The air is needed by the fire to keep itself alive, and the fire is needed by the air if the latter is to foster life in this world.] (2/25).

2/26. The eight Shaktis (powers and forces of Nature) are the following—(i) winter or cold, (ii) summer or heat, (iii) happiness, comfort and pleasant circumstances, (iv) miseries, pain, agony, grief, discomfort and misfortunes, (v) Ichha (desires, wishes, aspirations, yearnings), (vi) the Sata Guna (goodness, truthfulness, auspiciousness, righteousness, nobility), (vi) the Raja Guna (the medium quality that inspires a man to be involved in the affairs of the world with a balance between the Sata Guna and the Tama Guna), and (vii) the Tama Guna (the third and meanest quality, leading to sins, perversions etc.).

These Shaktis are known as 'Vashini' etc. [Refer verse no. 2/17.] (2/26).

2/27. The subtle, sweet and soft 'arrow' of the body is like a 'flower'.

[The 'arrow' referred to here are the five sense perceptions of the body by which the creature aims at the material world and hunts for its charming sense objects that he seeks for self-gratification. They are compared to a 'flower' because they do

not hurt him, rather they are pleasant to deal with, and give the creature immense pleasure and comfort to his senses.]

This 'arrow' of the body takes the form of the following 'Tanmatras'¹ which are the five senses of perception of the body of the creature. They are the following— words and the faculty of speech which enables the creature to express himself (and is related to the mouth and tongue), the faculty of touch which enables him to feel things (and is related to the skin), the faculty of sight that enables him to see (and is related to the eyes), the faculty of taste which enables him to taste things (and is related to the tongue), and the faculty of smell which enables him to smell something (and is related to the nose).

The Mana (mind and heart)² is like the 'bow' made of bamboo. This is because it is the Mana which inspires the creature to aim his 'arrow' (senses) at the world and perceive it. The creature literally aims his sense perceptions at the world and gets hooked to its myriad charms only when the Mana wants him to do so (2/27).

[Note—¹According to the Sankhya school of Indian philosophy, the five subtle forms of matter are called Tanmatras. There are five basic elements in Nature or creation— viz. space or sky, air or wind, fire or energy, water and earth, in increasing order of grossness. These are also called the five 'Bhuts'. They have certain basic virtues which are specific to them, they are characterised by them, and they are recognised by them. These virtues are called their 'Gunas'.

The sky or space element has 'sound' as its basic quality and the relevant sense perception is 'hearing', to hear something, and its seat is the 'ear' in the body of the creature. Since sound makes sense only when one understands what he hears, 'words' or letters are regarded as the subtlest form of the five Tanmantras because sound is the subtlest form in which the supreme transcendental Brahm has revealed himself. Sound is the nearest analogue to Brahm.

The air or wind element has 'touch' as its basic quality and the relevant sense perception is 'feeling', and its seat is the 'skin' in the body of the creature. That is why we can 'feel' the touch of a cool breeze against our faces or are repulsed by a blast of hot air from an oven even though we cannot physically see the air or wind.

The fire element has 'heat, light and energy' as its basic quality. Its quality to give 'light' is manifested in the form of 'shapes and contours' seen and witnessed in this visible world, because we see anything only as long as there is light. The organ which perceives this character is the 'eye' because we see by our eyes. On the other hand, the 'energy and heat' of the fire element is depicted in the form of 'speech' and the astounding potentials it has. That is why we say 'a fiery speech'. The organ which relates to this particular aspect of fire is the throat and the mouth. That is also why the patron Goddess of speech and learning is said to reside in the mouth. Since the vocal cords are located in the throat, both the latter as well as the former (mouth) are regarded as the seats of the Tanmatra pertaining to the fire element.

The water element has 'taste' as its basic quality and the relevant sense perception called 'taste' has its seat in the 'tongue' of the creature. We taste anything only when the chemicals present in what we wish to eat or taste get dissolved in the water content of the saliva in the mouth. Had there been no fluidity in saliva, the taste buds would not have been able to taste anything.

The earth element has 'smell' as its basic quality and the relevant sense perception 'smell' has its seat in the 'nose' of the creature. That is why there is no smell in the higher reaches of the atmosphere or even in high altitudes in a mountain.

²If the Mana is not inclined to be interested in any given thing, the creature would not be interested in it either. For instance, when the mind is occupied with some thought, the body would not register some sight the eyes are focused on, no matter how pleasant it might be. Similarly, if one is hooked to a particular sight which his Mana finds attractive, then the creature would not be bothered about the presence of

other things which may give out a pleasant aroma or have a sweet taste. When one is in intense pain, nothing allures him with its sweet taste, even his favourite music would be a cause of annoyance to him, and the soft bed would not let him rest in peace as he tosses and turns continuously on it.]

2/28. To be under control is a metaphoric arrow, because it is just like the case when one's enemy is subdued when an arrow is pointed at him. [In the present context it means that when the Mana or the mind and heart are well-trained, the creature is able to control his sense organs by shooting down all temptations and worldly aspirations.]

The numerous attachments, infatuations and attractions that a creature has are like the snare that keeps him fettered, bound and trapped.

The tendency of having jealousy, malice, ill-will, enmity, spite, hatred and resentment are equivalent to a goad kept pointed at the creature that keeps him constantly on the edge, bewildered, ill-at-ease, restless, agitated and fearful. With a goad pointed at him, the creature is tormented and made perpetually miserable. [That is, no one can ever hope to find peace and happiness if he has these negative traits in him.] (2/28).

2/29. At the three cardinal points of the symbolic internal triangle are located the three qualities that are inherent to all the creatures, and they together form an integral part of his inner-self and its unique character. These three are—'Avyakta' (that which is not manifested; that which is hidden and secret; that which is not perceptible), 'Mahatattva' (the great factor that gives importance to anything), and 'Ahankar' (ego and pride).

[When a man is not enlightened about the nature of the body and the truthful 'self' known as the Atma which is pure consciousness, he has a sense of hidden and unrevealed ego and a sense of pride in the abilities of his body, the great successes attained by the body, the numerous acquisitions made by the body, and the acclaim and fame that the body has attained. This gives him a sense of importance and power, a sense of majesty, grandeur, pomp and pelf, the pride of achievement, and the attendant sense of ego, self importance, haughtiness and arrogance.]

These are symbolized in the form of three Goddesses who are invoked on the three corners of the worship instrument, known as the Yantra or Chakra, that is employed in ritualistic forms of formal worship. These three Goddesses are the following—Kaameshwari (one who fulfills all desires), Vajreshwari (one who holds the formidable weapon known as Vajra, and is as invincible as this weapon), and Bhagmalini (one who is the cosmic Mother who conceives and nourishes the entire creation in her womb). (2/29).

[Note—Put simply, this verse means that a person's hidden sense of ego and misplaced false self pride results in him becoming overly haughty and arrogant. These negative traits in his character are not visible in his physical body—the latter might look very handsome and attractive in the most haughty and arrogant a man. The charm and beauty of the body might hide a most pervert and stubborn character inside.

These negative traits motivate a man to do certain things or behave in a certain way which he wouldn't have done if these negative traits or qualities were not present in his inner-self. The negative traits or qualities present inside a creature create certain passions and desires (called 'Kaam') that are so formidable and strong (called 'Vajra') that they can't be so easily overcome.

Hence, the forces of Nature or the Shakti of Brahm which creates Kaam and makes it as strong as Vajra (which incidentally is the invincible weapon of the king of

Gods called Indra) are personified in the form of Goddesses called Kaameshwari and Vajreshwari respectively.

The mind and the heart (called the 'Mana') that harbours such things is the symbolic womb (called the 'Bhag'). In other words, the Shakti of Brahm which enables the Mana to harbour these traits is personified as a Goddess known as Bhageshwari.

The ability of the Atma (the pure consciousness and the 'self' of the concerned person) to weave a web of these negative traits around its self, inspite of the fact that the Atma is supposed to be inherently and eternally free from negativity, is a manifestation of the 'Shakti' of Brahm (the Supreme Being and the cosmic Consciousness) to generate Maya (delusions), Agyan (ignorance) and other worldly taints or blemishes (listed in 2/23, 26, 28 and 29). This is how the Tama Guna part of creation has come into being.]

2/30. There are fifteen junior Gods symbolizing the fifteen days of lunar month. These Gods represent the fact that the worshipper has constant and consistent devotion for the deity (Brahm, the Supreme Being) even while the world changes around him daily. (2/30).

[Note—This refers to the fact that during the fifteen days, the shape of the moon changes on a daily basis. But the process of worship remains the same—its time, the rituals, the hymns used, the offerings made, the Mantras and the Beej Mantras employed, the different Gods and Goddess invoked etc., all remain the same. The changing moon is likened to the changing world where nothing remains steady except the faith, belief and conviction of the devotee. Just like achieving success in formal forms of worship is independent of the shape of the moon but dependent upon the faith and devotion with which the worship is done, spiritual enlightenment and liberation should not at all be affected by the changing circumstances of the world but on one's steadfastness and commitment to his goal in life.]

2/31. Out of the various Gods and Goddesses worshipped and invoked during the worship (involving the Yantra represented by the triangle mentioned in verse no. 2/29), it is Kaameshwari who is an embodiment of eternal and profound bliss. She is a metaphor of oneness or union between the supreme Brahm which is the cosmic Consciousness, and the Atma of the individual creature which is the same Consciousness that resides in his body (2/31).

[Note—The word 'Kaameshwari' literally means the Goddess of fulfillment of wishes and desires. When one's desires are fully satisfied he is bound to be happy. In the present case, the worshipper's desire is to attain enlightenment and self-realisation as well as freedom from all fetters that shackle him to this gross body and the equally gross world. He does not wish any worldly glories and acquisitions as is evident from the reading of this full verse as well as the fact that only wise persons are expected to develop the all-inclusive view of worship and creation as consistently and persistently emphasized by all the Upanishads. They are expected to strive to bring about a union between their individual 'self' known as the Atma, which had inadvertently fallen into the trap laid by Maya and Agyan (delusions and ignorance respectively), and the principal known as the Brahm, the all-pervading cosmic Self. Both are the same 'consciousness' existing at different levels. When true realisation dawns upon the mental horizon of the worshipper, his individual 'self' becomes one with the cosmic Self. This is the aim of Yoga or meditation, for the word 'Yoga' itself means to bring about a union or to join together. The Yoga Upanishads prescribe many methods which describe in great detail how to bring about this union. When this does happen, the ascetic experiences titillation and an extreme sense of ecstasy and bliss. This experience is a sign that the union is established. Since this was the primary desire of

the aspirant, or his 'Kaam', the deity which presides over its successful culmination is known as Kaameshwari.]

3. [Like the previous verse, this verse no. 3 is also divided into sub-verses for the purpose of easy narration. The various steps in formal forms of worship have been cited as analogies to explain them in the context of the principles elucidated, espoused and affirmed by the Upanishads.]

3/1. Water in separate containers remains separate until it is mixed. Once this happens, the water becomes one single entity known as 'water' rather than be known by different names according to the container (3/1).

[Note—When water is kept in different containers, such as a cup, a tumbler, a pitcher, a bucket, a glass or a mug, it is recognized in relation to these entities. We say, the water in the cup, or the water of the bucket. But when all units of water are mixed together we simply say 'water'. The implication here in terms of what has been said in verse no.2/31 is that once a union is established between the Atma and Brahm, there is no difference between them because they are both the same 'consciousness' known by two names.

When extended to cover a wider canvas of creation this verse means that all the various Devas (Gods) and Shaktis (Goddesses) are the same Brahm, the Supreme Being, in all these forms, and one realises this Brahm when the external forms and features of the Gods and Goddesses are removed and only the 'Tattwa' or essential form remains. Similarly, all the Prans, all the Gunas, all the Jivas, and all the uncountable other forms in which this huge creation exists, both at the gross as well as the subtle level, and at the macrocosmic as well as the microcosmic level—are nothing but the same Brahm manifested in all these myriads of forms to perform different roles just as it is the same molecule of water that is present in the ocean as it is in the river, the rain, the drain and the well.]

3/2. Thus, it is one's primary duty and responsibility to focus his attention on the principles of non-duality, uniformity, universality, indivisibility and immutability of the 'Absolute Truth'. Not doing so is failing in one's duty and responsibility that one has towards one's own 'self'.

To have a firm belief, conviction and faith that everything is one, and only one, universal Truth (known as Brahm) is to have real 'Bhavana'. [It means that to have real faith and sincere belief in Brahm is to treat the Atma and Brahm as one. With this realisation all other things fall automatically into place as explained in this Upanishad. It is the culmination of the aspirant's spiritual quest.] (3/2).

[Note—The word 'Bhavana' has many shades of meaning. It means appearance, being, becoming, turning to or imagining to be, transition into, a condition or state believed to be the truth, any state of mind or body or heart, way of thinking or feeling, emotions or sentiments or feelings, opinion, disposition, conjecture, supposition, purported meaning and sense, a fundamental view about a certain thing or situation, visualization, imagery, reflection, belief, faith, conviction, an idea, thoughts.

All these meanings should be comprehensively applied when one reads this Upanishad to grasp the profundity of its teaching.]

3/3. The remedy ('Upchaar') for all spiritual confusions and misinterpretation of the profound truths of metaphysics is to constantly analyse things with wisdom, erudition, sagacity and intelligence, and in the correct perspective, to deduce what their essence is on the one hand, and what is simply the exterior and the superficial on the other

hand. In other words, one should always contemplate and research upon the ‘truth’ and tell himself ‘this *is* the truth’ (‘Asti’) and ‘this is *not* the truth’ (‘Naasti’).

This is the duty and responsibility of all sincere spiritual aspirants (3/3).

3/4. True invitation or invocation of the deity, and true form of prayer offered to it (known as ‘Aavaahan’) is the ability to analyse and see the underlying cause that is the basis or the driving force that inspires everything in this creation—both as the exterior or obvious cause of anything happening in this world, as well as the interior or subtle or hidden or underlying cause of its happening.

[One would conclude, as a result of this analysis and research, that the basis of everything in this creation is only one, and it is Brahm, the cosmic Consciousness that drives this creation, and is also its supreme inspirer. So when one invites certain God or Goddess, he is actually inviting Brahm in this form. All prayers are offered to this Brahm, and not to so many different Gods and Goddess. This wisdom and knowledge is true form of worship.] (3/4).

3/5. To be able to establish a uniformity and universality between the various sense objects of the world having different names and forms (i.e. to see non-duality in them, to see the same Brahm in all of them, and to be firmly convinced of this fact) is to give a seat to the invited deity during formal worship (a step of worship known as ‘Aasan’ or giving a seat).

[This also means that the worshipper himself is firmly seated or established in his views and convictions. He is not fickle and confused about his objective and the path that would lead to it. He is not worshipping a given deity because it is more powerful than the other, and if someone tells him that the other deity is more useful to him he would not think twice before switching sides and his allegiance.

Hence, this stanza stresses that a spiritual aspirant must be firm in his beliefs and convictions, for it is only then that he would be able to focus fully on the objective and successfully achieve it.] (3/5).

3/6. To remove distinction between the dark qualities represented by the colour of blood (‘Rakta’) and the good virtues represented by the colour white (‘Shukla’) is the symbolic washing of the feet of the invited deity (a ritual known as ‘Paadya’).

[There is another way this verse can be interpreted. The red colour stands of the bloody fluids present in the womb of the female, and the white colour stands for the male sperm. Hence, when a spiritual aspirant is able to remove distinction between a God and Goddess, and treat both of them alike as manifestations of Brahm, it is then that he actually washes the feet of the invited deity, which in this case would be Brahm, and neither a God nor a Goddess. He knows that it is Brahm who he is actually worshipping in any of the physical forms of deities to whom worship is offered.] (3/6).

3/7. To remain submerged in the eclectic thoughts of the pure and brilliant entity that is a treasury of immense bliss (i.e. to remain engrossed in the thoughts of Brahm) is equivalent to offering of oblations to the deity (3/7).

3/8. When one is internally pure, untainted and cleansed, it is equivalent to sipping of water by him as a token gesture for cleaning the mouth (a process called ‘Aachaman’) (3/8).

3/9. To feel that the pure consciousness pervades in all the organs of the body without exception, to be convinced that the gross body is not gross at all but is energized and lively with the presence of the pure consciousness that pulsates in each of its pore and tissues is the symbolic bathing of the body (a step of worship known as 'Snaan').

[Just like formal bathing removes all dirt and reinvigorates the body, to concentrate the mind on the fact that each unit of the body is full of consciousness would remove all lethargy and indolence in them; it would re-energize and invigorate the body. It would lose its grossness and become radiant with the energy of the consciousness.

This principle should also be applied to the deity worshipped.] (3/9).

3/10. The radiance and divine glow that comes with realisation of the self-illuminated Atma makes the aspirant effuse spiritual energy just like a fire that effuses light and radiance on its own. When the aspirant becomes aware that his whole body is uniformly soaked in consciousness, his body exudes a charm and pulsates with the ecstatic feeling of blissfulness and contentedness that comes naturally with self and Brahm realisation. It is equivalent to him wearing clean new clothes. [This step in formal worship is called 'Vastrum' when the worshipper dons new washed clothes.]

This notion should also be applied to the deity worshipped. It is more important to think that the deity is aglow with consciousness than to adorn it with bright clothes. [This process is called 'Vastrum' or offering of clothes to the deity.] (3/10).

3/11. The three Shaktis known as 'Ichha Shakti' (the power of desires), 'Gyan Shakti' (the power of knowledge), and 'Kriya Shakti' (the power of deeds and actions) have three sub-classes each. So, there are a total twenty-seven Shaktis or dynamic powers. These combine to form the 'Brahm Granthi'¹. [The word 'Granthi' means a knot.]

The Sushumna Naadi (which is the main nerve passing through the spinal cord) passes through this Brahm Granthi. Hence, it is like the sacred thread known as the 'Brahm Sutra'². [The sacred thread known as the Yagyopavit is called the 'Brahm Sutra' in this verse, and it used here in a metaphoric manner to describe how the Pran rises up the Sushumna Naadi to reach the top of the head to enable the ascetic practicing meditation and contemplation to experience the bliss of Brahm-realisation.] (3/11).

[Note—¹The word *Granthi* literally means node, a nodule or module or knot or a wart-like or a gland-like structure. It has various connotations depending upon the context in which the word is used. For instance, it might symbolically mean the different gates in a strong fort which must be overcome or broken before one enters the fort or overruns it as done during war times.

The numerous emotional, sentimental and spiritual hurdles that an aspirant faces are also referred to as the Granthi because they are like the hard shell of the nut which is difficult to crack. Only when this shell is cracked can one find the nut. Similarly, only when one overcomes the numerous obstacles and hurdles faced by him in his spiritual pursuit that it is possible for him to have access to the fount of eternal bliss and peace that comes with Brahm realisation which is being aware of the Absolute Truth of existence.

According to the metaphysical interpretation of the term Granthi, it is the various knots present in the heart that shackle the Atma and prevent its liberation and deliverance. These Granthis are called Hridaya Granthis because they stand in the way of a man obtaining freedom from his fetters and keep him tied to this world. Once he is able to rupture them, he finds liberation even while he is still alive in this world. This fact has been clearly emphasized in Katho-panishad, Canto 2, Valli 3,

verse no. 15 of Krishna Yajur Veda tradition. Refer also to Mundak Upanishad of Atharva Veda, Mundak (Canto) 2, section 2, verse no. 8.

From anatomical point of view, the Granthis refer to the ganglions that help to coordinate the different nerves just like major junction boxes in the network of electric wires in a building. The word Granthi also refers to the glands that control all the major functions of the body, including those of the nerves and veins. Just like a knot that helps to tie something, these Granthis of the body bind the subtle energy present inside the body and prevent it from being dissipated or going to waste; it helps to preserve energy and stops it from being released if not wanted. If we treat them as representing the ganglions then it means that by the process of Yoga in which the subtle energy of the Kundalini is released in the spinal cord, or the Sushumna Naadi to be precise, these hitherto clogged and inactive ganglions are reactivated and they begin to function in prime shape. If we consider them as glands then it would mean that the functioning of these glands is restored by the process of Yoga, and this in turn helps the body to work properly.

The Granthi symbolizes the center of power and authority because it is the nodal point from where all the authority needed for governance of the body spread out. It is also like the seat of power and authority of a king, much like the strong fortress from where he rules over the kingdom. They represent the nodal points in the body where the Trinity Gods, i.e. Brahma the creator, Vishnu the sustainer and protector, and Shiva or Rudra the concluder, have their symbolic residence, and it is from here they control the functioning of the body of the individual as well as everything that he thinks and does. If the individual is regarded as the microcosm of the entire creation, then the Atma would be the supreme Brahm, and the various patron deities of the organs would be the different Gods of creation.

The Brahm Vidya Upanishad of Krishna Yajur Veda, verse nos. 70-71 describes the three main Granthis where these three Gods have their symbolic abodes in the body of the individual creature—viz. *Brahm Granthi*, Vishnu Granthi, and Rudra Granthi. They have also been described in (i) Krishna Yajur Veda's Yogshikha Upanishad, Canto 1, verse nos. 86-89; Yog Kundalini Upanishad, Canto 1, verse nos. 67-68, 85-86. (ii) Atharva Veda's Pashupat Brahm Upanishad, Canto 1, verse no. 14 (which says that all the three Granthis are actually subtle form of the supreme Brahm as everything in existence is one or the other form of Brahm).

These Granthis can be also regarded as aphorisms for the numerous spiritual hurdles faced by a spiritual aspirant in his spiritual journey. The three Granthis are like the three forts that have to be overcome before the final victory over the citadel. If the body is considered as a metaphoric prison for the Atma of the aspirant, then rupturing of the various Granthis is like his breaking free from its walls and finally escaping to the world outside to gain freedom by rupturing the Brahm Randhra located on the top of the head in the final stages of Yoga.

The location of the Granthis is very significant in this context. Let us have a look at this aspect and see why these have been considered as formidable fortresses in this discussion.

The first Granthi, known as the *Brahm Granthi*, is located in the region of the Kundalini at the lower end of the abdomen. The very fact that Brahm in his manifestation as Brahma the creator is responsible for creating this world, the Granthi is so named after him because the sexual organs that are present in this region are responsible for creation. Overcoming this Granthi is tantamount to control over one's sexual urges which is a very formidable task under normal circumstances. Control of sexual instincts requires a lot of self-control, and once this is successfully achieved the person retains his internal energy that is otherwise wasted in sexual indulgences. The power to create new life by the sexual process makes a man equivalent to Brahma the cosmic creator and the first of the Trinity Gods.

There is another interpretation. The Brahm Granthi is the first hurdle the ascetic has to face in his endeavour of lifting up his Pran through the Sushumna Naadi and

reaching the Brahm-Randhra at the top of the head where he experiences Brahm-realisation. Its rupture is tantamount to overcoming the first big hurdle.

²The word 'Sutra' means a thread. Since the Sushumna Naadi is thread-like in appearance, it is called a Sutra. The idea is that the wearing of the sacred thread is merely a formality, and instead if one sincerely wishes to become Brahm-realised he should endeavour to activate the dormant Sushumna Naadi through which he diverts his vital winds towards the Brahm-Randhra situated on the top of the head. When this is successfully accomplished, the aspirant becomes Brahm-realised. The wearing of the sacred thread is necessary for formal forms of worship involving sacrifices and prayers. If its symbolism is understood then the worshipper would treat the activation of the Sushumna Naadi as the truthful wearing of the sacred thread. Otherwise, the physical sacred thread serves no purpose. This fact has also been emphatically stressed in the Brahm Upanishad of the Atharva Veda.

(ii) Atharva Veda = Pashupat Brahm Upanishad, Canto 1, verse nos. 14-19, 27; Par Brahm Upanishad, verse nos. 3, 5-20; Narad Parivrajak Upanishad, Canto 3, verse nos. 17, 79, 80-82, 84-85, 88-89; Canto 4, verse no. 37 (mention the Mantra dedicated to the Yagyopavit).]

3/12. Not to remember anything else except one's own true 'self' (i.e. the Atma which is pure consciousness) is the ornamentation that is offered to the worshipped deity. [This is known as 'Vibhushan', or wearing of ornaments.] (3/12).

3/13. To remember that there is nothing except Brahm which is auspicious, divine and holy is the symbolic scent or perfume that is used during formal worship. [It is known as 'Gandha'—i.e. fragrance, scent or perfume which is usually a paste of sandalwood.] (3/13).

3/14. To analyse everything in this world, to carefully and patiently look at all the objects of the senses in this world intelligently, with a cool head and a steady and balanced mind so as to arrive at the truth and reality, is equivalent to the offering of flowers to the deity during a formal worship. [This is called offering of Pushpa (flower).] (3/14).

3/15. To accept anything after analyzing it thoroughly is equivalent to offering of lighted incense sticks. [This is known as offering of 'Dhup'.] (3/15).

3/16. During Yoga (meditation), the two primary vital winds known as Pran and Apan are mixed together, and this creates friction which produces a sparkle of brilliant light in the Sushumna Naadi through which these two winds rise up. This light and its illumination represent the astounding energy of 'consciousness' that pulsates through this Naadi. This is symbolic of the lighted lamp offered during worship. [This is known as 'Deep' or a lighted lamp.] (3/16).

3/17. The state of existence when the Mana (mind and heart) stops wandering in the external sense objects of the material world, and instead remain focused in the 'true self', i.e. remain engrossed in meditation and contemplation, is equivalent to the offering of sweets and fruits along with water to the deity during formal worship. [This is called offering of 'Naivedya'.] (3/17).

3/18. To remove distinction between the three states of existence, viz. the Jagrat or waking, the Swapna or dreaming, and Sushupta or deep sleep, and treating them as

one uniform state of existence is equivalent of offering of the betel leaves (as mouth fresheners after the offering of Naivedya). [This step is called ‘Tambul’.] (3/18).

3/19. The oscillation of the Pran (life-consciousness) between the Mooladhar and the Brahm-Randhra is equivalent to the circumambulation of the altar and the deity. [This is known as ‘Pradakshinaa’.] (3/19).

[Note—The Mooldhar is the lowest part of the abdomen which support the rest of the body. The word ‘Mool’ means the root, and ‘Adhar’ means the support. It is in the form of a ‘Chakra’, a whirling subtle energy center. Yoga Upanishads explain its importance while describing how the Prans are mixed, the Kundalini activated, and the released energy made to enter the Sushumna Naadi and go upwards to reach the forehead and finally the top of the head. From here, the Pran either travels back the same route as indicated in this verse, or goes out of the body by escaping through the Brahm-Randhra.

While the Pran of the ascetic is in the region of the forehead as well as tip of the cranium he experiences extreme bliss and ecstasy. This is equivalent to the Sushupta state of existence. When the Pran travels back, the ascetic virtually comes back to the dreaming state and finally to the waking state of existence. Should the Pran remain swirling in the area of the head in the region of the forehead on a perpetual basis, the ascetic is said to be in a Turiya state of existence which is the transcendental state in the sense that the ascetic has ‘transcended’ the normal states of existence in which an ordinary creature lives.

When the Pran finally prepares to reach higher and swirl around the Brahm-Randhra preparing to make its final exit from the body, the ascetic is said to be in a Truiya-teet state which is nothing but the higher state of Turiya. When the Pran finally leaves the body by escaping out from the slit of the Brahm-Randhra, the ascetic gets Mukti or liberation and deliverance. This Mukti is called ‘Kaivalaya’ or the only one of its kind because once the Pran leaves the body it would not re-enter it. Hence, the ascetic’s Mukti is once and for all; there is no reversal.

The ‘Brahm-Randhra’ is the hair-like slit on the top of the skull where the two halves have been soldered together by the creator. It is through this slit that Brahm had entered the body of the individual creature to take up residence in his brain (mind-intellect). This fact has been expressly said in the Aiteriya Upanishad, 1/3/12, of the Rig Veda.]

3/20. To remain perpetually in the fourth state of Turiya is equivalent to bowing before the deity during formal worship. [This is called ‘Namaskaar’.] (3/20).

3/21. To treat the body as gross and the Atma (the inner-self) as the conscious entity is equivalent to the offering of true sacrifice (which is equivalent to the animal sacrifice usually done in ancient times while performing elaborate fire sacrifice rituals). [This is called ‘Bali’.] (3/21).

[Note—It is very important to note that it is the gross body that is being killed during the offering of the animal sacrifice, because the Atma or the soul is the eternal and ethereal Spirit that cannot be killed or disembodied. Hence, when the enlightened aspirant becomes wizened to the fact that the body is gross, lifeless, inane and useless as compared to the Atma, he abandons all attachments for the former and instead focuses his attention on the latter. Once this comes about he automatically develops indifference towards the world, because the latter is directly related to the body and not to the Atma.]

3/22. To be firmly convinced that the Atma is the only irrefutable Truth and remain focused on it while remaining neutral and indifferent to all deeds—whether they are a

part of one's duty and one is obliged to do them irrespective of whether one likes them or not, or they are done out of choice and with some self-interest as the causative factor—is the symbolic way of doing the fire sacrifice and offering oblations to the sacred fire. [This is known as 'Homa'.] (3/22).

3/23. To offer oneself unconditionally, with total devotion and submission at the august, divine and holy feet of the Lord, and keep one's mind and attention focused on it, is equivalent to doing meditation in a comprehensive manner. [This is known as 'Dhyan'.] (3/23).

4. In this way, an enlightened man who remains submerged in offering worship (to the Lord, the supreme transcendental Brahm, the Supreme Being) for three Muhurts (roughly for a period of 3 x 1 hour and forty-eight minutes = 4.44 hours) is able to become 'Jivan Mukta'. That is, he is deemed to be spiritually liberated and delivered ('Mukta') even while living in this world, doing his routine work, and having a gross physical body ('Jivan').

He is deemed to be one like Brahm himself; he becomes a personification of Brahm. All his desires and wishes are easily fulfilled even without his making effort to achieve his aim. [This is because he acquires great mystical powers called 'Siddhis'.]

Such an enlightened and realised spiritual aspirant is known as 'Shiva-Yogi' — i.e. an ascetic who is personification of Lord Shiva. [This epithet means that he becomes highly enlightened, wise, self-realised, dispassionate, renounced, detached, neutral, non-involved in the mundane affairs of the gross world inspite of living in it and participating in its affairs, holy, divine, immaculate, pure, and beautiful in the spirit.] (4).

Thus ends Bhavana Upanishad.

Chapter 24

Bhasma-Jabal Upanishad

As the name suggests, this Upanishad is dedicated to the theme that truthful knowledge and enlightenment is one that literally 'reduces to ashes' (Bhasma) all the spiritual delusions and misconceptions of the living being, called the Jiva, and establishes a seamless uniformity between the Jiva and Brahm, the Supreme Being.

It is in the form of a conversation between Lord Shiva, the most enlightened of the Gods and the patron Lord of all ascetics, and sage Bhusund, the disciple of the great sage Jabal. Since the disciple adopted the name of his Guru (moral preceptor) as his surname, Bhusund was known as 'Jabal'.

In Canto 1, this sage 'Jabal', alias Bhusund, requested Lord Shiva to enlighten him about the great spiritual and metaphysical importance and significance of

‘Bhasma’, the ash of the sacred fire sacrifice. The Lord not only explained the physical characteristics of this mystically empowered ash but also how to correctly wear it on the aspirant’s body along with its stupendous divine qualities which bestow the wearer with Mukti or Moksha (spiritual liberation, deliverance, emancipation and salvation). When properly worn on the body with full understanding of its significance and importance, this seemingly ordinary ash of the fire pit assumes astounding qualities and powers, enabling the wearer to become self-realised and Brahm-realised. The knowledge of Brahm and the truthful ‘self’ is like the great fire of the doomsday because it burns all sorts of delusions and ignorance that completely swamp the wisdom and intellect of the creature that has forced him to remain trapped in this world, and instead establishes oneness between his own individual ‘self’, which is a microcosm, with the cosmic ‘Self’ known as Brahm, which is the macrocosm of existence.

Canto 2 describes how the Rudraksha beads are worn on the body, as well as the detailed form of doing Dhyan, or meditation and contemplation, upon Lord Rudra or Shiva as he is the Supreme Being personified.

The Upanishad incorporates in its discussion two versions of the great *Rudra Suktas* which are hymns dedicated to Lord Shiva—the first appears in Canto 1, paragraph no. 1, and the second one appears in Canto 2, paragraph no. 3. Besides these Suktas, a number of other eclectic Mantras of Shiva, such as the single word Mantra ‘Shivam’, the six letter Mantra ‘OM Namaha Shivaaye’, and the eight letter Mantra ‘OM Namaha Mahadevaaye’ are also enumerated along with their great powers and usage. Refer Canto 2, paragraph no. 4.

This Upanishad is in the form of a long commentary divided into two Cantos. For the purposes of narration, each Canto has been divided into a series of paragraphs. Other Upanishads which are relevant in the context of this present Upanishad are Brihajjabal Upanishad of the Atharva Veda, Kalagni-rudra Upanishad of the Krishna Yajur Veda, and Rudraksha Jabal Upanishad of the Sam Veda traditions.

-----*****-----

-----Shanti Paath-----

Please see appendix no. 1 for the English of this Shanti Paath.

Canto 1

1. Salutations to Lord Hari (the Supreme Being) represented by the Mantra OM! [Or, the ethereal word OM is an embodiment of Lord Hari; it represents the Supreme Being known by the name of Hari.]¹

Once, sage Jabal Bhusund² went to the summit of Mt. Kailash, the abode of Lord Maha-Dev (literally, the ‘great Lord’; the epithet refers to Lord Shiva).

The Lord known as Maha-Dev was an embodiment of OM (the ethereal sound manifestation of the supreme Brahm also known as Pranav). He was accompanied by his divine consort named Uma (the Mother Goddess).

He had a crown of matted hairs on his head. He had three eyes represented by the sun, the moon and the fire. He was wrapped in the hide of a tiger. He held his hands like a deer (i.e. his hands were resting on his folded-in legs as he sat in meditation posture). His body was adorned (smeared) by the ‘Bhasma’ (ash of the fire sacrifice).

On his forehead were marked the three lines of the Tripund (which is a sacred mark borne by ascetics on their bodies). There was a subtle sweet and pleasant smile on his face. His countenance was cheerful and he had a pleasant demeanour (i.e. he was rested and calm; he was not agitated, fidgety or upset).

He was like a lion who was sitting in the posture known as 'Viraasan'. [This is one of the many sitting postures of Yoga, and is usually adopted by brave warriors, hence the name 'Viraasan'. The word 'Vir' means one who is brave, valiant, gallant, bold, courageous, daring and mighty.]

He is extremely enigmatic, mystical and sublime so much so that he is beyond the purview of proofs and measurements.

He is 'Anaadi and Anant'—i.e. he is without an end or beginning as he is eternal, infinite and imperishable.

He is 'Niskal'—i.e. he is the one who has no taints, faults, blemishes and imperfections that can scar his immaculacy and purity. He is immaculate and without any faults or blemishes as he is from all the corrupting influences of Maya (delusions and deceit).

He is 'Nirguna'—i.e. he has no attributes or qualities or physical forms in the true sense (as the Lord is not an ordinary God with attributes, but the Supreme Being who has no known forms, specific attributes and describable qualities).

He is 'Shaanta'—i.e. he is calm, serene, peaceful and tranquil.

He is 'Niranjan'—i.e. he is faultless, flawless, uncorrupted, untainted and without any blemishes of any kind. [A Niranjan is an entity that has no defects, faults, taints, blemishes, shortcomings and scars of any kind; one who is absolutely immaculate and pristine pure. It is an epithet applied to Lord Vishnu, the sustainer and protector of creation. one whose sublime, subtle, esoteric and mystical form is so microscopic and diffused that it cannot be seen by the naked eyes of the physical gross body, but which can only be perceived by the eye of wisdom, erudition and enlightenment.]

He is 'Niraamaye', i.e. he is healthy and without any moral or physical ailments or tainting affects that are like a disease that might afflict a person's spiritual well being. One who is free from any kind of diseases—spiritual, mental, physical, psychological, moral etc. that may taint one's character and personality.

He (Lord Maha-Dev) was pronouncing the Beej Mantra 'Hum', 'Phat' etc., and continuously repeating the holy name of the Supreme Being who is also known as 'Shiva'. That is, he was meditating upon his own pure and enlightened 'self' which is truly the Supreme Being known as Brahm manifested in the form of the Atma, the cosmic Consciousness. Hence, he was doing Japa with the Mantra 'Shiva-Shiva'.

His is a living embodiment of the virtues for which the word 'Hiranya' is an aphorism. That is, the Lord has a radiance that is like gold; his hands (limbs) have a golden radiance, his form is like gold, his countenance is golden, and he is a treasury of immaculate virtues which resemble gold in their purity. [Since gold is the most precious metal, all the Lord's virtues and characteristics are completely immaculate and of the highest quality like pure gold.]

The Lord is a personification of the grand philosophy of Advaitya, the philosophy of non-duality which says that there is only one Brahm or cosmic Truth in the form of Consciousness that is revealed in all the forms that this creation has taken, and therefore whatever that exists is nothing but one single Brahm in all these forms.

[In other words, Lord Maha-Dev is perfectly wise, enlightened and Brahm-realised in as much as he sees no difference between himself and the Supreme Being. This is the reason he is repeating the Mantra 'Shiva' while meditating upon Brahm.

Being highly enlightened, he is firmly established in the doctrine of non-duality, called the philosophy of Advaitya, which primarily states that the ultimate Truth is always one and not more than one, and that whatever that appears to be 'true' in this creation is actually one single 'Truth' that is viewed in myriad of forms from different angles. It is one, single, immutable and quintessential Truth that is a constant denominator in all that exists in all the forms that the creation takes, and it assumes all these forms for the purpose of existential contingencies.

In other words, Lord Shiva knows that his 'truthful self' is the cosmic Consciousness itself in a miniature form, and that this 'self' known as his Atma is none but the cosmic Atma known as the Parmatma, the Supreme Being, himself personified. This being the case, Lord Shiva needs not worship any other Lord than his own 'self' !]

Since he is extremely enlightened, self-realised and Brahm-realised, he stays in the fourth state of Turiya. [This is the transcendental state of existence in which the ascetic lives in a state of trance. He is so deeply submerged in meditation and contemplation that he is not even aware of his body and what it does, and therefore there is no question of his being aware of the surrounding material world and its temptations. Hence, he is free from all corruptions and delusions that mire an ordinary soul.]

This fourth state is a representative of the Supreme Being who is beyond the Trinity Gods known as Brahma the creator, Vishnu the sustainer, and Rudra the concluder. Hence, the Lord who stays in this eclectic and sublime state of Consciousness is known as 'Maha-Dev', the great Lord. [This fact has been expressly emphasized in the Pashupat Upanishad, Purva Kand, verse no. 10, which is the nineteenth Upanishad of the Atharva Veda.]

Such a divine and majestic Lord is the fulfiller of all the desires of his devotees.

Sage Jabal Bhusund politely bowed before the Lord repeatedly, worshipped him and paid his obeisance to him, offered him fruits of the Bilva tree (*Aegle marmelos*) and Bhasma (ash of the fire sacrifice), bowed his head, and asked him with folded hands as a gesture of politeness and submission—'Oh Lord! You are well-versed in the essence of the Vedas and their profound teachings. Please tell me about the rules and tenets pertaining to the 'Tripundra'³ as described and prescribed in the Vedas, and by following which one is able to attain Moksha (final liberation, deliverance, emancipation and salvation). One need not take the recourse of any other means if one fully understands this doctrine. [1]

[Note—¹*Hari*—There are other Upanishads of the Atharva Veda tradition that open with salutations to Lord Hari—e.g. the Tripura Tapini Upanishad which is Chapter 21 of our current volume, and the Bhavana Upanishad which is Chapter 23. In all these cases, the epithet Hari is used to mean the Supreme Being whose nearest analogous form is either the Viraat Purush or Lord Vishnu.

The practical relevance of using the epithet 'Hari' while addressing the Supreme Being has been explained in a note of verse no. 1 of Canto 1 of the Tripura Tapini Upanishad.

²Sage Bhusund was a disciple of sage Jabal. He assumed the name of his Guru (moral preceptor and teacher) as his surname. Hence, he was called *Jabal Bhusund*.

³*Tripund*—References: (i) Krishna Yajur Veda's Kalgnirudra Upanishad. (ii) Atharva Veda's Brihajjabal Upanishad, Brahman (Canto) 4, verse nos. 9-36, Brahman 5, verse nos. 1-19, and Brahman 7; and Naradparivrajak Upanishad, Canto 7, verse no. 3.

The word *Tripundra* has two parts—‘tri’ and ‘pundra’. Tri means three while the word Pundra refers to the three horizontal lines marked on the body (the forehead, the chest and the shoulders) by Hindus. The Pundra can be horizontal or crosswise lines, in which case it is called the ‘Tiryak Pundra’, or it can be vertical or upright lines, in which case it is called ‘Urdhva Pundra’. The Tiryak Pundra or Tripundra is worn by devotees of Lord Shiva and initiated ascetics and is marked by the paste of the ash obtained from the pit of the fire sacrifice by mixing it with water.

The three lines of the Tripundra have great symbolic significance. They stand for the entire gamut of creation having three aspects or dimensions. It is like a sign depicting a three dimensional picture of this creation. The *Brihajjabal Upanishad* of the Atharva Veda tradition, in its Brahman 4-5 describes in great detail the spiritual importance of this Tripundra and how to wear it on the body. It represents the Trinity Gods, i.e. Brahma the creator, Vishnu the sustainer and protector, and Rudra the concluder (Brahman 4, verse no.10), the three Gunas such as the Sata Guna, the Raja Guna and the Tama Guna, and the three sacred fires such as the Ahawaniya fire, the Grahapatya fire and the Dakshinagni fire (Brahman 4, verse no. 36).

The metaphysical and spiritual importance and significance of the Tripundra have been asked by sage Sanatkumar from Lord Kalagni Rudra and explained by the Lord in Kalagni Rudra Upanishad of Krishna Yajur Veda tradition.

Other references: (i) Krishna Yajur Veda’s Kagnirudra Upanishad. (ii) Atharva Veda’s Brihajjabal Upanishad, Brahman (Canto) 4, verse nos. 9-36, Brahman 5, verse nos. 1-19, and Brahman 7, verse nos. 1-7; Bhasma Jabal Upanishad, Canto 2, paragraph no. 2, 10; and Naradparivrajak Upanishad, Canto 5, verse no. 14; Canto 7, verse no. 3.]

2. What are the ingredients needed for making the Bhasma¹? Where is the Bhasma found (or where are the ingredients found)? What are the Mantras used to prepare it and said while using it? In how many organs of the body is this Bhasma worn (or which are the organs or parts of the body where the Bhasma is applied)? Who is eligible to wear the Bhasma? What are the rules to be observed for wearing the Bhasma?

Please be kind enough to tell me all these things as I am eager for attaining Moksha (liberation, deliverance, emancipation and salvation).’ [2]

[Note—¹*Bhasma*—The word ‘Bhasma’ means ash, and it refers to the sacred ash left in the pit after the fire sacrifice is completed. Besides the present Bhasma Jabal Upanishad, the concept of Bhasma has been explained in detail the *Brihajjabal* of the Atharva Veda describe the concept of Bhasma in great detail along with how to prepare it and its astounding mystical powers, metaphysical significance, spiritual authority and importance. Refer also—*Naradparivrajak Upanishad* of Atharva Veda, Canto 7, verse no. 3; *Kalagni-rudra Upanishad* of the Krishna Yajur Veda; and *Rudraksha Jabal Upanishad* of the Sam Veda.

The *Brihajjabal Upanishad* of the Atharva Veda tradition, describes in detail the true meaning and significance of the term Bhasma in metaphysical terms in Brahman 2, verse nos. 10-16, how the sacred ash known as the Bhasma is to be produced in Brahman 3, how to apply it on the body and where, along with the relevant Mantras in Brahman 4, who should wear it and the benefits derived by wearing it in Brahman 5, the five astounding mystical powers of the Bhasma in Brahman 6, and the importance of the Bhasma in Brahman 7 (verse nos. 1-7),

According to the *Brihajjabal Upanishad*, Brahman 4, verse no. 8, the sacred Bhasma is provided with the mystical power to enable a sinner to cummute his sins.]

3. Lord Parmeshwar (the supreme Ishwar, Lord Shiva) glanced cheerfully and benevolently at the Gods as well as at his attendants who are known as ‘Pramath’ as he began giving his answer to the questions asked by the sage (Jabal Bhusund).

The most compassionate Lord preached, 'In the morning when the sun rises, one should pick up some cow-dung and place it on a leaf to dry. The Mantra 'Trayambak Yjaamahe' should be said when this is done.

He should light the sacred fire according to the prescribed way for a householder, and place this dried up cow-dung in it.

The offerings to this fire should be made by mixing together sesame seeds, barley, rice and clarified butter so that they make a thick paste. This mixture should be offered to the fire either one hundred eight times or five hundred times in small amounts while saying the 'Somaye Swaha' with each offering. The spatula used for making the offering should be made of a leaf. This spatula is regarded as holy and clean (because it is a disposable and bio-decomposable spatula, for as soon as the offerings are completed it is put into the fire to burn itself out completely, leaving no dirty or polluted or soiled spatula for re-use).

The Mantra which is actually said while these offerings are being made is 'Trayambak Yjaamahe Somaye Swaha'. [It briefly means 'I offer my worship to Lord Trayambak or Lord Shiva by making this offering. He is the Lord who has three eyes and is adorned by the moon on his forehead.']

The sacred sacrifice is wound up by making the final offering called the 'Purnaa-huti'.

After this, symbolic sacrifice is offered to the presiding deities of all the eight directions¹ by saying the same Mantra. [3]

[Note—¹The eight directions and their patron Gods are (1) East (Purva)—Indra; (2) South East (Agneya)—Fire God; (3) South (Dakshin)—Yam God, the God of death and final judgment; (4) South West (Nairitya)—Nairiti; (5) West (Paschim)—Varun, the Water God; (6) North West (Vayabya)—Vayu, the Wind God; (7) North (Uttar)—Kuber, the God of treasure and wealth; (8) North East (Ishan)—Ishan, Lord Shiva.]

4. The coarse ash of the fire sacrifice is collected and shaken through a sieve to get a fine powder. While doing this, the Gayatri Mantra is said.

The filtered ash is kept either in a pot made of clay/mud, or of gold, silver or copper.

Some water is sprinkled on this dried ash by saying the Rudra Mantra². It is then kept aside at a clean spot.

After that, Brahmins should be fed.

In this way, the worshipper is himself cleansed of all his impurities and the evil affects of his sins and misdemeanors. [4]

[Note—¹The *Gayatri Mantra* is "Tatsaviturvarnyam Dhimahi Dhiyo Yo Naha Prachodayat; Paro Rajase Savadoma". There is another version of the Gayatri Mantra, and it is "OM Bhurbhuvaha Swaha, Tatsaviurvarenyam, Bhargo Devasya Dhimahi, Dhiyo Yo Nah Prachodayat". This is known as the full Brahm Gayatri as it is dedicated to OM, the word which is used as a synonym for Brahm.

The process of saying the Gayatri Mantra while cleaning the sacred Bhasma is also endorsed in the Brihajjabal Upanishad of the Atharva Veda tradition, in its Brahman 3, verse no. 6.

The Tripura Tapini Upanishad of the Atharva Veda tradition, Canto 1, paragraph no. 2-15 describes the Gayatri Mantra with four lines "Tatsaviturvarnyam Dhimahi Dhiyo Yo Naha Prachodayat; Paro Rajase Savadoma" in great detail, and goes on to invoke Lord Trayambak during the process. Lord Trayambak is Lord Shiva, so-called as he has three eyes.

References: (i) Shukla Yajur Veda = Brihad Aranyak Upanishad, Canto 5, Brahman 14. (ii) Sam Veda = Chandogya Upanishad, 3/12/1-9; Savitri Upanishad,

which is entirely dedicated to it; Maitrayanyu Upanishad, Canto 5, verse no. 7. (iii) Atharva Veda = Surya Upanishad, verse no. 2; Brihajjabal Upanishad, Brahman 3, verse no. 6; Tripura Tapini Upanishad, Canto 1, verse no. 1-15; Narsingh Purva Tapini Upanishad, Canto/Upanishad 1, verse nos. 5-9; Gayatri Upanishad; Tripadvibhut Maha Narayan Upanishad, Canto 7, paragraph no. 40.

²The *Rudra Mantra*—The eclectic Mantra is given in this Upanishad in Canto 1, paragraph no. 1 above, and in Canto 2, paragraph no. 3 below.

The divine Mantra *Rudra-Rudra* is dedicated to Lord Rudra who is one of the eleven divine forms of Lord Shiva. It is described in Rudra Hridaya Upanishad of Krishna Yajur Veda tradition, verse no. 16. It is so powerful and grand that it is said to incorporate all the Mantras of the not only the other two Gods of the Trinity, viz. Vishnu and Brahma, but all other Gods combined.

Rudra is another name of Lord Shiva. This term has been defined in Atharvashir Upanishad of Atharva Veda tradition, in its Kandika 4 as follows—“Why is he (Brahm) called ‘Rudra’? It is because the esoteric and secret form and nature of Brahm which is most enigmatic and difficult to understand is easily known by enlightened and self-realised Rishis who are exalted and wise sages, seers and ascetics; the knowledge of Brahm as Rudra is within their easy reach and grasp. On the other hand, this knowledge is very difficult for others to access. [It must be noted here that the difference between the two terms ‘Brahm’ and ‘Rudra’ lies in the degree of subtlety. While Brahm is the neutral divinity, its active and dynamic manifestation or its dynamic principle is known as Rudra. Brahm in itself does not do anything, and being a neutral entity is best addressed by the pronoun ‘it’ just as we would address light, sky, air, water, fire, earth etc. with the pronoun ‘it’. On the other hand, when this Brahm lost its neutrality and got engaged in activity of creating this world and regulating it, Rudra came into being. This Rudra is the dynamic form of Brahm. Rudra is less subtle as compared to Brahm, but otherwise they refer to the same divine Being who is supreme and transcendental in creation. Since Rudra is deemed to be ‘male’ aspect of creation—not because of any gender superiority or gender bias but because the initial ‘spark’ of life in the form of a ‘sperm’ can only be provided by a male—he is addressed as ‘he’ and not as ‘it’. Rudra is one of the names of Shiva, and this Lord is the patron God of Rishis who do meditation. Shiva is the greatest moral preacher, teacher and preceptor of spiritual knowledge⁴. Shiva is an exemplary renunciate and he himself remains eternally engrossed in meditation and contemplation. He teaches the Rishis who spend their time in meditation and contemplation about the Truth of Brahm. These Rishis repeat the Mantras of Brahm known as OM while meditating, and this brings them closer to the principal that this OM represents. They are totally immune to and free from all sorts of spiritual contaminations and hurdles that an ordinary man faces while remaining engrossed in the affairs of the material world and the temptations proffered by its sense objects which is hard to resist if not impossible. That is why the term ‘difficult’ is used for ordinary creatures when it comes to their realizing the truth of Brahm—i.e. though it is not impossible it is nevertheless hard and difficult.

Rudra is the angry form of Lord Shiva. The word means ‘the terrible one; the angry and ruthless one; one who roars and thunders; one who makes the enemy weep; one who destroys this trans-migratory world of birth and death; one who destroys ignorance and delusions; one who eliminates evil and perversions.’

Rudra is a Vedic deity and has been eulogized in three full Suktas (hymns) dedicated to him. These are Rig Veda’s 1/114/1-11; 2/33/1-15, and Yajur Veda’s 16/1-66. Besides these Suktas, Rudra is honoured as a deity at a number of places in the Vedas—viz. Rig Veda—1/43/1-4, 5/42/11, 7/46/1-4, 7/59/12; Atharva Veda—5/6/3-4, 6/55/2-3, 7/92/1, 11/2; and Yajur Veda—11/54.

Rudra is regarded as the father of Marut, the Wind God (Rig Veda, 2/33/1). Rudra assumes many forms—usually it is eleven forms (Taittiriya Sanhita, 3/4/9/7), but sometimes they are also said to be thirty-three in number (Taittiriya Sanhita,

1/4/11/1). Rudra is regarded as having a close relationship with Agni, the Fire God (Shatpath Brahman, 5/2/4/13). The Padma Puran, Swargakhanda, Chapter 8 mentions only eight Rudras. These eight, eleven or thirty-three forms of Rudra might mean as many aspects of Shiva.

However, in terms of the Upanishads, the eleven Rudras stand for the ten vital winds called Prans + one Mana or mind. The ten Prans are five chief Prans such as Pran (breath), Apaana, Samaana, Udaana and Vyana, and five subsidiary Prans such as Nag, Kurma, Krikara, Devdutta and Dhananjaya. [Refer—Trishikhi Brahmin Upanishad, Canto 2, verse nos. 77-87 of Shukla Yajur Veda tradition; Dhyana Bindu Upanishad, verse nos. 55^{1/2}-57 of Krishna Yajur Veda tradition.]

Rudra is said to have created such mythological figures as Bhuts (ghosts), Pretas (disembodied spirits), Pishacha (goblins), Khusmaandas (malignant imps).

In iconography, he has been depicted as wearing long tresses coiled on the head, has strong powerful arms, has a body decorated variously with serpents or priceless ornaments, and holds a strong and invincible bow and arrow as well as a thunderbolt. When necessary, he becomes ferocious and charges at his enemies on a chariot or on foot, while at the other times he is full of mercy and compassion. He is closely associated with forests and mountains, and is also the patron deity of herbs and medicinal plants. Hence, he is the killer of diseases and a great healer. Here, 'healing' would mean spiritual healing rather than physical ailments afflicting a creature.

He destroys sins and evil tendencies in the world, and grants the boon of liberation and happiness.

According to the epic Mahabharata, Anushasanaparva, Chapter 14, it is Shiva in the form of Rudra who destroys this creation at the end of one cycle of creation.

The *Sharav Upanishad* of the Atharva Veda, in its verse no. 6, describes Rudra as Sharav—the killer or destroyer. In this Upanishad, Lord Shiva had assumed this form to liberate Vishnu from the form of Nrisingh (a half man and half lion form) which the Lord had taken to kill the demon Hiranyakashipu who had been tormenting the devotees of Vishnu to such an extent that he did not spare even his son Prahalada. After slaying this demon, Nrisingh roamed around in the forests striking terror in other creatures. It was then that Shiva, the universal Lord who has been honoured with the epithet of 'Mahadev' as he is the greatest and supreme God, had assumed the form of Sharav, the killer, and liberated Vishnu from the body of Nrisingh. Thus liberated, Vishnu had thanked him a lot and went to his divine abode called Vaikunth. So this ferocious form of Shiva known as Sharav was also called 'Rudra', the angry and ferocious form of the Lord. One can imagine the fight that might have raged between Nrisingh and Rudra, and obviously Rudra must have been more ferocious than Nrisingh in order to subdue the latter.

There is another connotation of the word 'Sharav'. The word literally means the killer or slayer. In other words, Sharav is that form of the Supreme Being which instills fear in the heart of evil and pervert creatures, and kills or eliminates their evil tendencies. The word also refers to 'the Lord who shines in the heart of his devotees' as their Atma or pure consciousness.

The creature or the embodied soul is called 'Shar' or the form of the ethereal spirit that has assumed a gross physical body having a head. One who cuts off the head is known as 'Sharav'. The head is a metaphor for pride and ego and their accompanying traits of hypocrisy, haughtiness and arrogance. It is in the head that all evil planning is done, and it is the head that inspires the creature to indulge in all sorts of vices and inauspicious deeds. When this happens, the great God, the Parameshwar, makes it sure that the soul of such a creature is liberated from the sinful body in which it has been trapped by killing the gross body and liberating the soul.

So, while on the surface it appears to be a physical fight between two powerful creatures, one being the Shar and the other being the Sharav, here referring to Nrisingh and Rudra respectively, it is actually a system evolved by Nature whereby evil and perversions are kept under check. It is a system instituted by the Supreme

Being himself to regulate and maintain balance, order and law in his creation. Though Nrisingh was Lord Vishnu himself in that form, the latter forgot who he actually was once the Lord had assumed a physical form. This is the effect of Maya—the overwhelming power of delusions that automatically comes with having a gross body like that of ordinary creatures. This situation also highlights the reason why all the creatures are under the overpowering control of Maya—if Maya can delude Vishnu to forget about who he is and wander in the forests as some cruel creature in his form as Nrisingh then it is little wonder that ordinary creatures are held under the overpowering sway of Maya.

Now, who would liberate such primarily innocent souls trapped by Maya, and who would provide protection to other innocent creatures who are being subjected to torments by this single deluded and evil-possessed soul? Naturally it is their supreme Father who is very merciful and who is greatly pained at the predicament in which his off springs, the creatures, find themselves in. So this Father intervenes not only to free the trapped soul in the evil body, but also to provide succour and solace to other creatures who are being tormented by this single individual.

Thus, the Parameshwar assumed the form of Shrav or Rudra to liberate Vishnu from the evil body of Nrisingh.

The *Devi Upanishad* of the Atharva Veda tradition, verse no. 4 says that the Rudras are manifestations of the Mother Goddess, who actually represents the dynamism of the supreme transcendental Brahm, the Supreme Being. The Goddess is the energy, authority and powers of Brahm that are employed by the latter to create and control this creation, both at the macrocosmic level as well as the microcosmic level.

The Rudra is this dynamism of Brahm revealed at the macrocosmic level. Lord Shiva has eleven forms, and one of them is 'Rudra', which literally means anger, wrath and vehemence. The Lord is considered to be the most enlightened of the Trinity Gods, and is therefore called 'Maheshwar'. He always remains in a meditative posture, always contemplating and meditating on the supreme Soul and the Truth. But still he shows anger and mercilessness, because one of his tasks is to punish the evil and sinful ones by ruthlessly slaying them in order to protect the good and righteous souls in the creation. Further, when his meditation and peace is disturbed he also becomes angry. He remains aloof and disinterested in the world, because he is very wise and enlightened, and he stays in the form of an ascetic. Ordinary people think that he is proud, arrogant and haughty because he does not give a damn to worldly formalities and niceties of behaviour. Shiva's failure to conform to set norms of proper and sane conduct makes him look most odd God.

The word 'Rudra', which is literally used as a metaphor for anger, wrath, vehemence and cussedness, is a very misleading title for Shiva because there are a number of great Upanishads which describe Rudra as none but the Supreme Being known as the transcendental Brahm from whom the entire creation has emerged, who sustains it and in whom the creation would finally collapse. It is this Brahm in the form of Rudra who is treated at the supreme Lord God of creation, and hence is called Maheshwar. The *Rudra Hridaya Upanishad* of the Krishna Yajur Veda tradition and *Atharvashir Upanishad* of the Atharva Veda tradition are exclusively dedicated to this theme. The *Dakshin Murti Upanishad* of the Krishna Yajur Veda describes the esoteric significance of the Shiva Tattva or the essential knowledge of Shiva who is the greatest Guru or moral preceptor and teacher of the creatures.

The *Ram Uttar Tapini Upanishad* of the Atharva Veda, Canto 5, verse no. 4/33 says that the eleven Rudras are manifestations of Lord Ram who himself is the supreme transcendental Brahm. In other words, Lord Ram had assumed the form of Rudra or Shiva in order to bring this creation to conclusion.

The *Atharvashir Upanishad* of Atharva Veda is especially relevant here because it explains the various epithets used to describe the virtues and glories of the supreme

transcendental Brahm by Lord Rudra himself, and upon close reading it would be very clear that Rudra is describing Brahm when he describes himself.

The *Nrisingh Purvatapini Upanishad* of the Atharva Veda, in its Brahman 1, verse no. 3 says that the Rudras, along with the Vasus and Adityas etc., were born out of the third step of the divine Anushtup Chanda in which the Mantra of Lord Nrisingh was revealed to the creator Brahma when he did severe Tapa in order to initiate the process of creation.]

5. The Bhasma (the ash) should be accepted by saying the Mantra ‘Maanastok Sadyojaat’ etc. that is dedicated to the Panch Brahms (the five divine subtle forms of the supreme Brahm)¹.

The worshipper should pay his respects to the Bhasma and bow his head to it by saying the Mantra ‘Agniriti Bhasma; Vayuriti Bhasma; Jalmiti Bhasma; Sthalmi Bhasma; Vyomiti Bhasma; Deva Bhasma. Sarwa Ha Va Atadidum Bhasma Putam Pavanam Namaami’. [Briefly, this Mantra means that the sacred Bhasma is an embodiment of the supreme Brahm in the five subtle forms or elements of creation such as the fire, the air, the water, the earth and the sky. The Bhasma symbolizes all the divine Gods at once. It is as holy and divine as these Gods and the elements representing Brahm. The Bhasma represents the glories and divinity of all the forms of Brahm at once. I bow my head most reverentially before such a glorious and divine Bhasma’.]

This Bhasma is empowered with mystical and supernatural powers that fulfills all the desires of the worshipper and helps him to be successful in all his endeavours. [5]

[Note—¹The concept of *Panch Brahm* has been elaborately described in Krishna Yajur Veda’s *Panch Brahm Upanishad*, verse nos. 5-23; and Atharva Veda’s *Brihajjabal Upanishad*, Brahman 1.]

6. The Bhasma should be placed on the left hand, which has already been cleaned, by saying the Mantra ‘Vamdevaye Namaha’. [The word ‘Vaam’ means ‘left’, and the term ‘Vamdeo’ is one of the eleven names of Rudra. Hence, it refers to the fact that the ash which is placed on the left hand symbolizes Lord Vamdeo.]

By sprinkling water while saying the Tryambak Mantra¹, the worshipper should apply this consecrated Bhasma on the body from the toe till the head. [6]

[Note—¹The *Tripura Tapini Upanishad* of the Atharva Veda tradition, Canto 4 is entirely devoted to Lord Trayambak. It describes the meaning of this word and the Mantras dedicated to Lord Trayambak in great detail. This *Trayambak Mantra* is given in paragraph nos. 1-6, and it is ‘Trayambakam Yajamahe Sugandhim Pushtivardhan Urvaaruk-miv Bandhanaan-mrityor-mukshi-yeti Mamritaam’.

The Lord with three eyes has an unconventional form and an equally odd behaviour, because once he is an incarnation of the eclectic virtues of peace and blissful, and at another moment he becomes personified anger and wrath. Hence, he is called *Tryambak*.

The significance of the *three eyes*—References: (i) Atharva Veda = Bhasma Jabal Upanishad, Canto 2, paragraph no. 21; Sharav Upanishad, verse nos. 10, 14; Tripura Tapini Upanishad, Canto 4; (ii) Krishna Yajur Veda = Yogtattva Upanishad, verse no. 93.]

7. When the Bhasma is worn (smeared) on the body and one uses Mantras as prescribed in the Vedas, the process is known as ‘Viniyog’—literally invocation of the Mantras.

Now, the Mantras used for applying the Bhasma on different parts of the body are being enumerated.

‘Agner-bhasmaa-miti’—this Mantra is said when the Bhasma is lifted by pinching a little bit of it between the first, the second and the third fingers.

This Bhasma so lifted by the fingers should be first applied to the head by saying the Mantra ‘Murdhaanmiti’. [The word ‘Murdhaa’ refers to the cerebrum/ the head.]

Then it should be applied on the forehead by saying the Mantra dedicated to Lord Trayambak, i.e. ‘Trayambakmiti’ (as given earlier). [This Mantra refers to the fact that Lord Shiva has three eyes—two conventional eyes, and the third is the eye of wisdom and enlightenment that is located in the forehead between the two eyebrows. He is the only God who has this third eye, which metaphorically says that he is the most enlightened and wise God amongst all the Gods of creation. That is the reason he is honoured by the epithet ‘Maha-Dev’, the ‘Great God’.]

Next, the Bhasma is applied to the front of the neck while saying the Mantra ‘Neel-grivaayemiti’. [The word ‘Neel’ means blue. Hence, it refers to Lord Shiva who has a blue-tinged throat.]

The Bhasma is then applied on the right and the left sides of the neck by saying the Mantra ‘Traayushmiti’.

The Bhasma is then applied on the two cheeks by saying the Mantra ‘Kaalaayeti’.

The Bhasma is then applied on the two eyelids by saying the Mantra ‘Trilochanyaayeti’. [The word ‘Trilochan’ means one with three eyes.]

The Bhasma is then applied on the two ears by saying the Mantra ‘Srinavaamiti’. [The word ‘Srina’ refers to the organ of hearing.]

The Bhasma is then applied on the mouth (lips) by saying the Mantra ‘Prabra-vaa-miti’. [The word refers to the supreme Brahm who has revealed himself as Pranav, the cosmic sound. This name is cited because it is through the mouth that the worshipper speaks and expresses the intention of Brahm who resides in the body as the Atma.]

The Bhasma is then applied on the chest atop the region of the heart by saying the Mantra ‘Atmana’. [This is an obvious reference to the fact that the Atma resides in the subtle space of the worshipper’s heart. The Atma is the pure consciousness that resides in the worshipper’s body.]

The Bhasma is then applied on the navel by saying the Mantra ‘Nabhi-riti’. [The word ‘Nabhi’ means the navel.]

Then the Bhasma is applied on the shoulder-joint right hand by saying the Mantra ‘Bhavaayeti’.

The next spot of application of the Bhasma is in the middle of that hand (i.e. the bend of the elbow joint) by saying the Mantra ‘Rudraayeti’.

The Bhasma is then applied on the wrist of the right hand by saying the Mantra ‘Sharvaayeti’.

Then the Bhasma is applied on the back of the palm of the right hand by saying the Mantra ‘Pashupataya’.

The Bhasma is then applied on the shoulder-joint of the left hand by saying the Mantra ‘Ugraayeti’.

The Bhasma is then applied on the middle of the left hand (i.e. the bend of the elbow joint) by saying the Mantra ‘Agrevdhaayeti’.

Then the Bhasma is applied on the wrist of the left hand by saying the Mantra ‘Durevdhaayeti’.

The Bhasma is then applied on the back of the palm of the left hand by saying the Mantra 'Namo Hantra'.

Next, the Bhasma is applied on the top of the two shoulders by saying the Mantra 'Shankaraayeti'.

The above narrated sequence is to be followed by the worshipper while applying the sacred Bhasma (ash) on the various parts of his body.

After that, he should reverentially bow before Lord Shiva by saying the Mantra 'Somaayeti'.

The remaining Bhasma should be mixed in clear water and drunk by the worshipper by saying the Mantra 'Apaha Puna-ntwiti'. [7]

8. The remaining or residual part of the Bhasma is gulped down with water because one should not throw away even a tiny fraction of the consecrated Bhasma.

One should apply the Bhasma on the body in the way prescribed above even at noon and at dusk besides its application in the morning. Hence, the Bhasma is to be applied on the body three times a day without being careless or lazy about it.

If one shows laziness or carelessness or any kind of lack of interest in this matter, it proves to be his bane; it leads to his downfall and denigration.

It is prohibited to eat breakfast or other meals or having snacks prior to applying the Bhasma on the body.

If due to any reason whatsoever one does not apply the Bhasma on the body, or is unable to do so due to adverse circumstance, then he is barred from doing Japa (repetition) of the Gayatri Mantra, doing fire sacrifices, or offering oblations to the Gods and libations to the spirits of dead ancestors.

This is an ancient and traditional law of religious conduct ('Sanaatan Dharma') which is an eliminator of sins and their evil consequences, as well as a bestower of Moksha (liberation and deliverance) to the wearer.

This routine is prescribed for all people belonging to any of the four phases in the life of a man, i.e. it is applicable equally for the Brahmacharis, the Grihasthas, the Vaan-prasthas, and the Sanyasis¹.

If a Brahmin (the upper caste people) does not do so, i.e. if he forgets to apply the Bhasma or is lazy about its application, it is deemed to be an inauspicious act which casts its negative shadow on him; he is committing an error. He can get cleansed of his sins or get immunity from the evil affects of this negligence by doing Japa (repetition) of the Gayatri Mantra for one hundred eight times while standing in water (of a river or stream, for instance), as well as by fasting.

If the same error is committed by a Sanyasi, he can be absolved of the negative consequences of this negligence by fasting for one day and doing Japa with the Mantra 'OM' for twelve thousand times. Otherwise, cruel animals attack him on being inspired by Indra (the king of Gods).

[A Sanyasi is basically a wandering mendicant. So he is warned against doing anything that antagonizes the forces of Nature personified as various Gods because if they do not help him he would have to undergo unnecessary hardship. He should not annoy the Gods and keep them pleased so that they do not create hurdles in his spiritual path and make him suffer unduly. Wild and cruel animals may attack him as a token of punishment by the Gods if he does anything unreligious or unholy as a Sanyasi.] [8]

[Note—¹The life of a Hindu man is divided into four segments or sections of roughly twenty-five years each. These are called the 'Ashrams'. They are the following—(a)

Brahmacharya—this is the 1st phase of life in which a person studies the scriptures

under the tutelage of a wise teacher. This phase of life is marked by austerities, keeping of vows, observing celibacy, abstinence and continence as well as leading a regimental life style of a boarding school. (b) Grihasta—when a person has studied and prepared himself to face the world, he comes back to his house and enters the 2nd phase called Grihasta Ashram which is a householder's life. He marries, raises a family, produces wealth and helps to carry forward the cycle of creation. This is the most important and enjoyable phase as well as the most tough one because on the one hand there are the comforts and pleasure of the world to be enjoyed, and on the other hand there are the various tribulations and miseries of a family life alongside the dealings with this deceptive world with all its accompanying horrifying problems. (c) Vanprastha—this is the 3rd phase when a man hands over the responsibilities of the world to his heirs and renounces his attachments to the house as well as the world, and heads for the forest, leaving the home for his next generation. It is now that he goes on pilgrimage and prepares for the final stage of his life, and (d) Sanyas—this is the 4th and last stage of life when there is complete cutting-off of all the ties with the world, spending time in contemplation and meditation, living a life of total renunciation, and begging for food for survival while single mindedly endeavouring for emancipation and salvation. This phase of Sanyas also has many stages depending upon the spiritual elevation and accomplishments of the aspirant, viz. Kutichak, Bahudak, Hansa, Paramhans, Turiyatit and Avadhut.

In brief, the 'Brahmacharis' are celibates students who must exercise the greatest self-restraint in order to concentrate their energy on their studies. It is the first phase of life. The 'Grihasta' is the householder. After study, the student marries to raise a family and contribute to the continuation of the cycle of creation. This marks the second phase of life. The 'Vaan-prastha' is a person who hands over the responsibilities of worldly affairs to his heir and prepares to lead a retired life, literally though the word means to 'retire to the forest'. This is the third phase of life. And finally, the 'Sanyasi' is a person who has renounced the world and spends his time in meditation and contemplation. This is the fourth and the final phase of life.

These four Ashrams, their characteristic features and virtues are described in detail in an Upanishad called Ashramo-panishad belonging to the Atharva Veda tradition. Refer also to Kathrudra Upanishad of Krishna Yajur Veda, verse no. 3 in the context of one taking the vows of Sanyas, the renunciate way of life which is the fourth and the last phase in the life of a man which prepares him for his final liberation and deliverance from this world.

The Varaaha Upanishad of Krishna Yajur Veda, in its Canto 2, verse no. 6 says that true Moksha or Mukti for the creature is obtained when he rises above the limitations of these four Ashrams.]

9. In case the ingredients needed for preparing the Bhasma are not available (as prescribed in paragraph no. 2), then the worshipper can substitute them with clean clay or earth, and burn it (bake it and dry it) by offering it to the sacred fire (as prescribed in paragraph no. 2).

In this case, the Mantras and the method of application would be the same as those followed for the Bhasma made of prescribed ingredients. [9]

10. [Paragraph nos. 10-11 enumerate the benefits got by reading or reciting this Upanishad with faith and devotion.]

The reading or recitation of this Upanishad (along with the application of the sacred Bhasma) in the morning (dawn) frees the worshipper of the sins of the previous night. The sin of stealing gold (or for that matter, any kind of theft) is pardoned by such reading or recitation.

At noon time, after completing the religious duties such as saying ‘Sandhya prayers’ and observing other sacraments, as well as at dusk time, the worshipper should face the sun and read or recite this Upanishad (along with the application of the sacred Bhasma) with proper attention and devotion. This destroys or nullifies the evil effects of drinking intoxicating drinks and stealing gold (or any theft). It also provides forgiveness or pardon from the horrendous sin of killing of a Brahmin, a cow, a horse, a Guru (teacher), any of the parents (mother or father), and other horrible sins. [10]

[Note— Pardoning of sins—It would be observed that numerous Upanishads conclude by saying something to the effect that anyone who reads it would be pardoned of grave sins. But it must be understood in the correct context and with proper wisdom.

This pardoning should not be construed as a license for murder and committing other sins in the belief that mere repetition of the holy Mantras and living in Kashi would provide freedom from their horrific consequences. No, they wouldn’t. Unless the man is sincere about his repentance and regrets honestly, unless he sincerely wants to reform himself and turn a new leaf in his life, mere reading of any scripture or visiting a pilgrim site or repeating some Mantra would not serve any purpose. An honest man who has realised his mistakes and wishes to atone for his misdeeds would not shy away from accepting his misdeeds, which in itself requires a great deal of moral courage and strength of mind as accepting one’s crimes and confessing may be used against him. Such a man would also like to undo what mistakes he had done previously in his life as far as he can. Towards this end, he would willingly suffer, because this suffering is a form of ‘Tapasya’ or penance for him to wash away the soot that has clung to his pure self because of his past.

The very fact that the man is sincerely desirous of emancipation and salvation ensures that he has decided to reform himself and is very eager for repentance for his past misdeeds and sins that he might have committed out of ignorance or out of compulsions of circumstances. Every man has the right to reform himself, for to err is an ordinary part of human life. No one can claim that he has not committed any wrong any time in life. The very realisation that he has been erring, that he must redeem himself while there is still some time left, and the sincerity with which the aspirant seeks liberation from bondages that are consequent of his past evil deeds is a sign that he should be given a chance to reform himself.

The Upanishad gives the remedy and the means of his spiritual upliftment, redemption and rehabilitation. It essentially tells him that everything is not lost, and there is still a chance of finding Mukti from the evil consequences of his past deeds. The basic idea that is being stressed here is that every man or woman gets a chance for redemption in life, and it is another matter how he or she looks at it or even recognizes that opportunity. The chance is there, but that chance is not to be played fools around with; it has to be used judiciously. It should not be used to hoodwink the world and escape punishment, but for true repentance and mending of ways. A man should not revert back to his bad old habits once he is assured of pardon for his past mischief

This is essentially what the aim of this Upanishad is; this is the implied meaning when it says that even such horrible sins as murder would be excused. The subtle and implied intentions of the scriptures should be correctly interpreted to really benefit from them, and not to use them to justify reckless behaviour, as that would be tantamount to killing their spirit. That these wise principles enshrined in the scriptures would be twisted and turned on their heads by selfish men is not their fault. For instance, the Devi Upanishad of the Atharva Veda tradition, verse no. 32 says—“By reading this Upanishad in the morning, the person is able to nullify or neutralize the bad effects of the sins and misdeeds of the previous night, and when read in the evening the same good benefit is got for the sins and misdemeanors of the day time.

If it is read twice a day, at dawn and at dusk, the sinner is therefore freed from his sins and their evil consequences.

It ought to be noted here that merely ‘reading’ would not help. This blanket pardon given by this Upanishad should not be construed as a license for doing wrong in the belief that any wrong-doings of the day would be forgiven when it is read in the evening, and all evils of the night would be made null and void by reading it in the morning. Nothing would be more stupid than to think this way. The primary idea is if a man has inadvertently or under the forces of circumstances done something wrong, then he has all the right to claim pardon and find a means for redemption. He may have erred, but he has the right for Mukti from sins. So, if he reads this Upanishad sincerely and with commitment, he is bound to become wise and enlightened, he is bound to become spiritually inclined as opposed to indulgent men engrossed in self-gratifications. Such holy and pious men are indeed eligible for pardon and redemption. The unsaid condition is that the sin should not be repeated. If it is, then the purpose of reading this Upanishad is defeated and the reader is simply mouthing meaningless jumble of words in the guise of saying hymns or offering prayers. He has no fear of the Lord in him, for if he had it then he would know that the Lord resides in his own bosom, and then how can his evil deeds be hidden from the Supreme Being, or for that matter how dare he even think of committing sins when the Lord is enshrined in his own body which has now become holy and consecrated like a shrine?]

11. The immense value of reading or recitation of this Upanishad three times a day (dawn, noon and dusk) is equivalent to the reading or recitation of the Vedas.

The worshipper or devotee gets the benefit of going to all the holy pilgrim sites.

He becomes sinless, and lives a full life (i.e. he does not die pre-maturely).

He gets the reward of successfully doing the Prajaapatya Yagya (a kind of fire sacrifice).

He is rewarded with material prosperity and wealth, as well as an abundance of livestock such as cows. [In ancient times, the wealth of a person in the society, which was basically agrarian, was measured by the number of cows or other livestock that he possessed.]

This Upanishad should be regularly read and studied—this is the preaching of Lord Sada Shiva (i.e. the eternal Lord Shiva) who is accompanied by his divine consort Amba, the Mother Goddess (i.e. Parvati). [11]

[Note—It is to be noted here that this is a usual pattern adopted in ancient scriptures to emphasize the importance of the text being read by saying that it is self-sufficient and is equivalent to reading all other great scriptures taken together. The intention is not to demean the importance of any of the other scriptures but is simply done to highlight the significance of the concerned text so that the reader takes it seriously, reads it carefully, and pays due attention to its teaching instead of treating it callously.

All metaphysical and spiritual texts have their own importance, and they all lead to the same goal through different paths. A wise man is one who selects the path best suited to him in order to reach his spiritual goal with ease, and encountering the least of distraction and discomfort.]

-----*****-----

Canto 2

1. Sage Jabal Bhusund once again bowed before Lord Mahadeva (Shiva) and Amba (the Mother Goddess; the divine consort of Shiva, i.e. Parvati, also known as Uma),

and requested, ‘What are the duties of a Brahmin which he must diligently do, and failing to do which results in his falling from his exalted stature?’

Who is worthy of worship and adoration? On whom should one meditate and contemplate; who is worthy of such remembrance and meditation?

What is the proper way of doing Dhyan (meditation, contemplation, remembrance)? Where should one do Dhyan?

Please be kind to enlighten me on these subjects.’ [1]

2. Lord Mahadeva explained in brief, ‘He (Brahmin) should get up from his bed before sunrise. He should attend to the routine call of Nature and then clean himself by bathing.

He should symbolically clean his inner-self by praying, and for this purpose he should use the Rudra Sukta (or Mantra)¹. To keep his exterior clean, he should wear clothes that are clean and un-torn. He should have a firm conviction that observance of this routine helps him to get rid of his sins.

[The emphasis here is on internal as well as external cleanliness and purity. One is expected to purge all his impurities and focus his mind on Lord Rudra who is one of the divine forms of Lord Shiva. Since Rudra is the ‘concluder’ of creation, it implies that the worshipper eliminates or ‘concludes’ all his worldly taints and blemishes by invoking the Lord in his inner-self. The very fact that Rudra is invoked ensures that all his spiritual faults, shortcomings and corruptions are automatically eliminated or concluded. He thus becomes holy and pure like Lord Shiva himself. Once this happens, he becomes a personified form of Brahm, the supreme transcendental Being.

Internal cleaning is done by invoking Lord Rudra with the aid of his Mantras, because these Mantras help in harnessing the cosmic energy specific to Rudra. External cleaning is done by wearing clean clothes that are not torn. Even in modern society a man is expected to turn up properly dressed and groomed if he expects respect by others. An unkempt man is looked down by all. It shows that he is lazy and not well educated and bred.

‘Sins’ are like dirt that clings to the inner-self of the spiritual aspirant so much so that they taint his Atma, the truthful ‘self’ which is otherwise pure, holy and immaculate. So, invocation of the Rudra Sukta helps the spiritual aspirant to clean his inner-self by getting rid of the sins and their accumulated thick layer of negativity.]

Facing the rising sun and meditating upon its splendorous form (as a personification of the Supreme Being), he should make the three lines of the Tripund at the appropriate spot on the body (which is the forehead) by using white Bhasma (ash of the fire sacrifice as prepared according to the prescribed way described in Canto 1 of this Upanishad).

After that, he should wear white Rudraksha beads² on various parts of the body as follows:—Forty such beads should be worn on the head in the form of a girdle. On the Shikha (the tuft of hair on the top of the skull), there should be one or three beads tied around it. Twelve beads are wrapped around the ears in the form a ring. Thirty-two beads are worn around the neck as a necklace. Sixteen beads are worn on the upper part (biceps) of each hand as arm-bands. Similarly, twelve beads are worn on each wrist as wrist-bands. Six beads are worn on the thumbs as rings. [2]

[Note—¹*Rudra Sukta or Mantra*—refer paragraph no. 4 of Canto 1 of this Upanishad.

²*Rudraksha bead*—The Rudraksha beads are the seeds of the tree *Eleocarpus ganitrus*. The beads with five faces or surfaces used in rosaries and necklaces are also

called Kalagni-rudra beads because these are very much liked by Lord Shiva. The reason is that Shiva, in his most ancient primary form, had five faces.

It is called Rudraksha because it emerged from the eyes of Rudra. Refer—*Brihajjabal Upanishad*, Brahman 7, verse no. 8.

The great spiritual importance and metaphysical significance of the Rudraksha beads have been explained in the *Rudraksha Jabal Upanishad* of the Sam Veda tradition, the *Kalagni Rudra Upanishad* of Krishna Yajur Veda tradition, and the *Brihajjabal Upanishad*, Brahman 7, verse no. 8 of the Atharva Veda tradition.

Origin of Rudraksha—There are two versions regarding the origin of Rudraksha seeds. According to the *Rudraksha Jabal Upanishad* of Sam Veda, verse no. 2, they were produced as tear drops when Lord Rudra had closed his eyes to meditate before slaying the demon Tripurasur. According to another version given in the *Brihajjabal Upanishad* of Atharva Veda, Brahman 7, verse no. 8, at the time of doomsday, Lord Rudra had closed his eyes after having annihilated this creation. This is also why it is called ‘Rudraksha’—something that makes one weep, something that has been born from the eyes of Rudra who had mercilessly concluded this creation. Perhaps he had closed his eyes to cool them down, or perhaps he was overwhelmed by the destruction and ruin that unfolded before his eyes that made him wince with regret. Tears must have rolled down from these eyes, and these formed the seeds called the Rudraksha beads. Shiva is an eternally merciful Lord so he must have invariably felt immense regret at having had to carry out this nasty job of burning down everything during the doomsday. But the Lord was duty-bound to do so as a part of the cosmic cycle of destruction and construction mandated by none other than the Supreme Being himself, and Shiva is none other than the latter. In other words, it is Shiva himself who had laid down the laws of creation and conclusion, and so he must adhere to these cosmic laws in order to maintain their sanctity. When the evil and vices in this world go beyond limits, the Lord assumes the ferocious form of Rudra to clean the slate and begin afresh so that those noble and auspicious souls who were about to be crushed by the ascendant evil could be given a chance for living a new life free from fear.

How to wear Rudraksha—This has been described in *Rudraksha Jabal Upanishad* of Sam Veda, in its verse nos. 17-23, and in *Brihajjabal Upanishad* of Atharva Veda, Brahman 7, verse no. 8.]

3. The oblations that are made during worship that is done three times a day should be done with the help of blades of the Kush grass which act as a small spoon or a spatula. [Kush grass is also known as Darbha or Durba. Its botanical name is *poa cynosuroides*, and it is a dark green reed used during religious ceremonies and observances.]

Offerings to the sacred fire are done by saying the Mantra ‘Agni-jyotiriti’ etc.

Lord Shiva’s symbol called the Shiva Lingam is formally worshipped three times a day (morning, noon and evening).

The worshipper should sit on a mat made of Kush grass and meditate upon Lord Shiva accompanied by the Amba, the Mother Goddess (i.e. Parvati or Uma) by employing the ‘Rudra Shukta’ as follows—‘The Lord is sitting on the Nandi (the bull). His arms are of a golden hue; his general countenance also has a golden hue; and his form appears to be cast in gold.

The Lord is the eliminator or destroyer of the snare represented by the continuous cycle of birth and death that has shackled all the living beings in its vicious grip. [That is, the Lord grants the boon of Mukti, or liberation and deliverance, to all the creatures.]

He is the primordial Purush personified. [That is, Lord Shiva is a personified form of the cosmic Viraat Purush, the macrocosmic all-pervading and all-

encompassing gross but invisible form of the supreme transcendental Brahm, the Supreme Being.]

His neck is coloured dark with a tinge of yellow¹.

He is highly self-realised, enlightened and wise. He always thinks of higher things of life instead of worldly and lowly things. His inclinations are always holy, noble and auspicious; they have a spiritually elevating dimension in them. His mind and thoughts are set on higher goals in life, and he never allows himself to ever do or think of anything that may lead to his denigration or downfall from the exalted stature or position he holds. (That is, he is 'Urdhva-reta'.)

He has three eyes ('Trilochan'). [The Lord has two conventional eyes, and one eye on the middle of the forehead signifying the mystical powers of insight that comes with the highest form of wisdom, enlightenment, knowledge and self-realisation. He is also called Triyambak and Trinetra because of these three eyes.]

He has taken the form of this whole world ('Vishwa-roop'). This is because the entire creation is a revelation of Brahm, the Supreme Being, and Shiva is a personified form of Brahm².

That is why he is said to have thousands of eyes ('Sahastraaksham')³ symbolizing countless creatures and all forms of life in this creation. This is also a metaphor for the fact that nothing is hidden from the Lord, for he 'sees' everything everywhere, even the most secret and the esoteric is known to him.

Similarly, he has thousands of heads ('Sahastra-shirsha'), and thousands of legs ('Sahastra-charan'). In fact, the entire creation (world) is embraced in his arms; this whole creation represents his arms. [If he has 'thousands of eyes', then it is natural that he would also have equal number of heads. It also means that the Lord has equal number of mouths, tongues, ears, noses etc. Again, if he has thousands of legs it also implies that he must have equal number of hands. All this simply indicate that the entire creation is a majestic, a grand and a magnificent revelation of one single Divinity known as Shiva who exists in multifarious forms in which this creation is known to exist. All the forms are nothing but Shiva, the truthful One.]

Hence, Lord Shiva represents the Atma (soul) of the whole creation.

[This reflects upon the metaphysical doctrine that the word 'Atma' refers to the pure consciousness that resides inside the body of an individual creature as his 'true self', as his 'soul'. This Atma of the individual is the microcosmic counterpart of the macrocosmic Consciousness that is universal, and which uniformly pervades throughout this creation. This universal Atma at the macrocosmic level of creation is known as Brahm. This Brahm therefore is the subtlest and most sublime entity in existence. When this Brahm revealed itself in the form of this creation, it went through subtle steps in its transition from the subtlest to the grossest forms. The first step was the Viraat Purush, the all-pervading, all-encompassing, all-inclusive invisible macrocosmic form of Brahm which was the latter's first gross form.]

The word 'gross' when applied to the Viraat Purush is only in terms of relativity, for both Brahm and Viraat are extremely sublime and subtle when compared to the rest of the creation for which the word 'gross' is applied. It is easy to understand this phenomenon. We have 'air' all around us, but do we ever feel it if it shows no movement? No, we can't know the presence of 'air' because we can't see it, hear it, touch it, taste it or smell it. But when the same air begins to move, as breeze or a storm, we can easily make out its presence when it rubs against our faces or skin of the hand.

Air is a subtle element whose existence cannot be denied because we can't see it. Similarly, the existence of Brahm cannot be denied because we can't see it. But

even as it is impossible to imagine life sans the air, it is also impossible to imagine existence and life without Brahm. Life means ‘consciousness’, and hence Brahm and consciousness are regarded as being synonyms of each other.

Again, as the atom is the basic and fundamental building block of all elements in existence though we can’t see it, the Atma (the soul) is also the quintessential basis unit of life without which the latter is not feasible.

In spite of being primarily subtle, the ‘air element’ begins to show varying degrees of grossness depending upon the level or plane in which it exists—e.g. the air near the surface of the earth is denser and grosser as compared to the air in the higher reaches of the atmosphere where it becomes lighter and less denser. The same air gently massages our faces when it blows as a soft breeze, and the same air causes havoc when it rages as a vicious storm.

The air lives inside the body as the ‘Pran’, the life-factor of the body. It has been said in the Upanishads that this Pran, also known as the ‘vital wind’ because without it no body would survive, has many forms, such as Pran (breath), Apaana, Samaana, Vyaana and Udaana etc. Each has a special function. But no man can feel them inside the body because they are extremely subtle. But not feeling them does not mean that one can deny their existence in the body for the simple reason that if the vital winds cease to exist or function, the body would stop functioning and fall dead. Similarly, no one has seen the Atma, the pure consciousness that resides inside the body, but it is undeniable that without the Atma the body would not ‘live’. We know of the presence of the Pran and the Atma in the body by deduction—for if the body is alive and active, these entities are deemed to be present in it.

Briefly, the idea is that though Brahm, the cosmic Consciousness, is itself an extremely subtle and sublime entity, but when it assumes the form of this creation it becomes gross in a relative term. The ‘grossness’ is relative to its primary subtle form which is ‘pure consciousness’ without a form, body and attributes. Since the creation has a definite form with certain attributes it is relatively gross as compared to its quintessential form known as Brahm that neither has a form nor any kind of attribute.

In other words, Brahm, when it is understood from the cosmic perspective, is subtle and sublime Consciousness that has no particular form and shape, and that is eternal, infinite and imperishable, but when the same Brahm is understood from the angle of this visible creation and its inhabitant individual creatures who are also manifestations of Brahm, the latter appears to be gross and least sublime because the creation and the creatures have a gross body and gross existence that is finite, is perishable and has a definite form.

The ‘Consciousness’ existing at the cosmic level is Brahm, and the same ‘Consciousness’ existing at the level of the individual creature is the Atma. The ‘Consciousness’, therefore, is the common denominator; it is the ‘Consciousness’ that pervades throughout the creation, as the Atma at the micro level, and as the Parmatma at the macro level. It is just like the ‘atom’ that is the basic and fundamental unit of all elements in the Periodic Table—right from the lightest element to the heaviest one.

Now, coming back to the example of the ‘air’ we see that when the same air has pollutants in it, like smoke or coloured gases, we can actually ‘see’ the air. The same thing applies to Brahm, the cosmic Consciousness.

In its primary form, Brahm is extremely subtle and sublime, but when it got involved in the process of creation which evolved in a step-by-step manner, each successive form of Brahm got one notch grosser than its previous form. That is, the very first form of Brahm as the Viraat Purush was less subtle than Brahm. The next form as Vishnu was less subtle than the Viraat Purush, and the progression went on

increasing in grossness and decreasing in subtlety. The grossest form of Brahm is this visible world, and the subtlest form is the Viraat Purush, and everything lies in between.]

Since Lord Shiva is Brahm personified, it is natural that all the honours, glories and epithets applied to Brahm would also apply to Shiva.

Hence, Shiva is 'Advaitya'—i.e. he is non-dual.

He is 'Nishkal'—i.e. he has no Kalaas, i.e. no separate or distinct attributes, forms, parts, divisions, variations and fractions as he is one immutable whole; one who has no taints, faults, blemishes and imperfections that can scar his immaculacy and purity; one who is immaculate and without any faults or blemishes as he is free from all the corrupting influences of Maya representing delusions, conceit and deceit).

He is 'Nishkriya'—i.e. he is not involved in any of the affairs of the world, as he is totally neutral, detached and dispassionate, has renounced everything, and being self-realised he knows that the deeds are done by the gross body and not by the Atma which is merely a neutral witness of what the body does.

He is absolutely 'Shaanta'—i.e. he is calm, peaceful, serene, rested, tranquil, having no restlessness or agitations.

He is 'Shiva'—i.e. he is an embodiment of the virtues of auspiciousness, righteousness, truthfulness, divinity and holiness.

He is 'Akshar'—i.e. he is imperishable and one who is represented by the divine word OM.

He is 'Avyaya'—i.e. he is not diminished; he is infinite; he is eternal, unchanging and imperishable; he is not subject to degradation.

He is the eternal Lord (the Supreme Being; Brahm) from whom Hari (Vishnu the sustainer), Har (Rudra the concluder) and Hiranyagarbha (Brahma the creator) have come into being.

This supreme Creator and Lord of creation cannot be known or verified or judged by proofs, evidences and logics.

The Lord has no beginning or end.'

After having honoured the Lord with the Rudra Sukta (hymn) as described above, the worshipper should offer him white Bhasma, the fruits of the Bel tree (the wood-apple tree; *Aegla marmelos*), and leaves of the Bilva tree (*Aegle marmelos*)⁴.

The leaves of the Bilva tree should be green (i.e. freshly plucked) and three in number. If green leaves are not available, then dry leaves can also be offered. [3]

[Note—¹Lord Shiva's throat is dark blue or purple in colour. Since the glow and radiance of the whole body of the Lord is golden as mentioned in this paragraph above, but the throat had turned black because he had kept the horrible poison he had drunk in his throat instead of allowing it to enter the stomach. When it is said that his neck has a yellow hue it is intended to mean that primarily the colour of his skin was like pure gold, though of course it had turned dark later on. The corroding poison which darkened Shiva's neck had emerged from the ocean when it was churned by the Gods and Demons in search of Amrit, the elixir of eternity. The Lord had accepted to drink it to protect the rest of the creation from getting scorched by its heat and toxins. Since this creation is lodged in the Lord's own self, in his abdomen, he had kept this poison in the throat and did not allow it to enter his stomach. This resulted in the throat getting permanently burnt. The dark blue or purple colour of the Lord's throat is the result of this single event and shows the Lord's willingness to go to any length to grant his unilateral protection to this creation.

It is very interesting to note that while on the one hand Lord Shiva is depicted as being the concluder of creation—and this is his assigned role amongst the Trinity of Gods consisting of Brahma, whose role is to create, Vishnu, whose role is to sustain, nourish and protect the creation, and Rudra (a form of Shiva), whose designated role

is to bring about the conclusion of this creation—but on the other hand he had allowed himself to be permanently dis-coloured and take the risk of keeping the most horrible poison in existence lodged inside his body because otherwise this poison would kill the creation and scald everything in it to ashes. This is the reason why only Shiva is honoured as being the ‘Maha-Deva’, the ‘great’ God. Though Vishnu shoulders the formidable, most daunting and arduous task of taking care of the whole creation—and this is not a cake-walk and a joke considering what a man experiences in life taking care of his single family, what to talk of the whole society—this honour of being a Maha-Deva was not bestowed upon him. The same thing applies to the grand old patriarch of creation called Brahma who had not only created this gross world but even the sources of highest wisdom in the form of the venerable scriptures, but was not honoured with this title.

Hence, Shiva is truly the Supreme Being personified. One of his functions is to conclude this creation, and in this role he is known as Rudra, the angry form of the Supreme Being. But even as the same Brahm is known to have revealed himself in the form of each and every unit of creation, which in itself is extremely diverse and multifarious, the same Shiva has taken many names and assumed many roles, one of which is Rudra whose role is to bring about the ‘conclusion’ of existence.

The question arises—why did Lord Shiva who is known to be calmness and tranquility personified became so angry and vehement as to assume the ferocious form known as Rudra? Well the answer is simple—when the Supreme Being watched his own creation going out of control, when he observed that his off springs were getting nastily pervert and sinful, and inspite of the Lord being so gracious that he had given them a lot of leverage and had shown a lot of leniency they went from bad to worst, the Lord lost his patience and decided that enough is enough. He became angry at himself at having made the mistake of allowing himself to be engulfed in the veil of Maya (delusions) which is his own creation, and which had resulted in the creation of this world-like Frankenstein Monster that snatched his peace from him. It is much like a parent slapping a naughty child when he becomes extremely annoyed and feels disturbed by the latter’s mischief.

²The uniformity and non-duality between *Shiva and Brahm* has been expounded in— (i) Krishna Yajur Veda’s Dakshin Murti or Dakshin Mukhi Upanishad, Pancha Brahm Upanishad, verse no. 30, Skanda Upanishad, verse nos. 9, 13, and Varaaha Upanishad, Canto 4, verse no. 32. (ii) Atharva Veda’s Shandilya Upanishad, Canto 3, section 2, verse nos. 11-15; Pashupat Brahm Upanishad, Canto 1, verse nos. 11, 32; Bhasma Jabal Upanishad, Canto 2, paragraph nos. 3-8 and 15.

³The fact that Brahm has *symbolic thousands of eyes and limbs* has been reiterated in other Upanishads as well—for example (i) Krishna Yajur Veda’s Shewtashwatar Upanishad, Canto 3, verse no. 3, 11, 14, 16. (ii) Atharva Veda’s Tripadvibhut Maha Narayan Upanishad, Canto 2, paragraph no. 11, and Canto 6, paragraph no. 11.

⁴Refer Canto 1, paragraph no. 1 of this Upanishad.]

4. After this, worship items, along with sweets, fruits and water, are offered to the Lord.

Then, the worshipper should repeat the Rudra Sukta eleven times, though the one incantation of this Rudra Sukta that was done earlier while invoking the Lord (as described in paragraph no. 3 above) is sufficient to bestow countless fruits (rewards) upon the worshipper.

He must do Japa (repetition) with Shiva’s Mantra having six or eight letters. Otherwise, the one-word Mantra of ‘Shiva’ is sufficient. [This one word Mantra is simply ‘Shiva’ or ‘Shivam’.]

[There is another way in which these stanzas can be interpreted. ‘Then, the worshipper should do Japa of Lord Rudra who has taken eleven forms due to differing

Gunas (virtues, qualities, characteristics) exhibited by them, though the Lord has no specific form or attributes as he is beyond such limitations and perceptions because the Lord is eternal and infinite. However, for the purpose of his worship and to pay one's obeisance to him, the worshipper should use the Mantra of Rudra having six or eight letters. If this is not possible, then the single letter Mantra 'Shiva' is sufficient.']

The six-letter Mantra consists of three words as follows—the first word is 'OM' (referring to the supreme transcendental Brahm and used for salutation), the second is 'Namaha' (meaning that the worshipper is bowing before the Lord), and the third is 'Shivaaye' (referring to Lord Shiva). Hence, the full six-letter Mantra is 'OM Namaha Shivaaye'. [OM + Na + Maha + Shi + Vaa + OM = 6.]¹

The eight-letter Mantra consists also of three words as follows—'OM Namaha Maha-Devaaye'. [Here, the word Maha-Devaaye means the Great God or Lord. [OM + Ma + Haa + De + Vaa + Ye + Na + Maha = 8.]

The eight-letter Mantra of Shiva is known as the Tarak Mantra², the one which provides liberation and deliverance to the spiritual seeker; it ensures his emancipation and salvation. This Mantra provides liberation and deliverance to the devotees of Lord Shiva who is said to live in this terrestrial world at a pilgrim place known as the city of Kashi (i.e. the modern-day city of Varanasi in India).

Preaching this Tarak Mantra of Lord Shiva is equivalent to the preaching of the Mantras of the Vedas. [In other words, this is the Veda Mantra.] [4].

[Note—¹The *six-letter Mantra* of Shiva or Rudra is 'OM Namaha Shiva OM' according to Tripura Tapini Upanishad of the Atharva Veda tradition, Canto 4, paragraph no. 8. Refer also to Brihajjabal Upanishad, Brahman 3, verse no. 12-13. [OM + Na + Maha + Shi + Vaa + OM = 6.]

But according to our present Upanishad, it is 'OM Namaha Shivaaye'. [OM + Na + Maha + Shi + Vaa + Ye = 6.]

Refer paragraph no. 18 of the present Canto 2 of this Upanishad below.

²Some of the other important Upanishads that are dedicated to the *Tarak Mantra* are the following—Tarak/Tarsar Upanishad; Ram Uttar Tapini Upanishad, Canto 2 (full); the Atharva-shikhar, 2/1; Atharvashir, Kandika (Canto) 4; Advaitarak, verse nos. 3, 7-11; Nrisingh Purvatapini Upanishad, Canto 1, verse nos. 15-16; Naradparivrajak Upanishad of Atharva Veda, Canto 8 which is fully devoted to this theme.

Tarak Mantra is a group of esoteric, ethereal and holy syllables, words or phrases having mystical powers and divine potentials that can achieve miraculous results for the adherent as they have the authority to bestow special spiritual abilities on the creature and help in his liberation and deliverance, his emancipation and salvation. The word 'Tarak' means an instrument that provides spiritual liberation and deliverance, one that gives emancipation and salvation to the creature's soul, a vehicle that can take a creature across the ocean of endless miseries and pain from which he is suffering in this world. The Mantra that has this potential is called the Tarak Mantra. Hence, the Tarak Mantra is one which provides liberation and deliverance to the spiritual seeker; it ensures his emancipation and salvation.

The Atharva Veda's Atharvashir Upanishad, Kandika 4; Naradparivrajak Upanishad, Canto 8 describes that OM is the Tarak Mantra.

The Tarsar Upanishad of the Shukla Yajur Veda, Canto 1, verse no. 2 says that 'OM Namaha Narayanaaye' is the Tarak Mantra.

The Tarak Mantra of Lord Ram is elaborately described in Ramottartaponishad of the Atharva Veda tradition which is exclusively dedicated to Lord Ram, as well as in Tarak Upanishad of the Shukla Yajur Veda tradition which is dedicated to the subject of emancipation and salvation. This Tarak Mantra is preached by Lord Shiva for the benefit of a dying man in Kashi, the pilgrim city which is Shiva's terrestrial abode.

It gives freedom from miseries, fears, torments and other misfortunes that devour a creature. It liberates a creature from the cycle of birth and death, the miseries and fears associated with this world, with old age, death and their accompanying horrors etc. (Atharva-shikhar Upanishad, 2/1; Advai-tarak Upanishad, 3; and Jabal Upanishad, canto 1. The ascetic/Yogi achieves liberation and deliverance by concentrating his internal thoughts at a point between the eyebrows where he realises the supreme, transcendental existence of Brahm, and he mentally one with Brahm after this realisation (Advai-tarak, 2-3).

The word *Tarak* means to cause or enable to pass or cross over, to carry over, one that rescues, provides relief and succour, one that can provide liberation and deliverance to the creature from any bondage. Further, the word *Tarak* also refers to the 'eye of wisdom that liberates one from the darkness of ignorance and delusions', and it has relevance here because meditation leads to the opening of the inner 'eye' of insight that leads to self realisation and enlightenment. 'Tarak' also means a meter of 4 x 13 syllables; hence it refers also to the various Mantras used for the purpose of meditation.

There are various Upanishads dealing with this aspect of meditation and spiritual deliverance—such as Advai Tarak Upanishad and Tarak/Tarsar Upanishad of the Shukla Yajur Veda tradition. These Upanishads describe the 'Tarak Brahm' in all its finer connotations.

According to Tarsar Upanishad of Shukla Yajur Veda tradition, Canto 1, verse nos. 2, it is the following 'OM Namoha Narayanaye'.

The Ram Uttar Tapini Upanishad of the Atharva Veda tradition describes the Tarak Mantra as OM in its Canto 2, verse no. 2.]

5. Now, I (Shiva) will preach you (sage Jabal Bhusund) about the eclectic but most enigmatic concept of 'Brahm'.

I am that Brahm (the Supreme Being; the cosmic Consciousness) that has made the Soma (the celestial Moon); the Moon is my revelation.

Likewise, the Pawan (wind or air) is made by me, and it is my manifestation.

Similarly, the Soma (here literally meaning the juice of the Soma plant, but a metaphor for the elixir of life, bliss and eternity) is made by me; the Soma is rather my manifestation.

I am the one who created the Mati (or Buddhi; intellect and mind); the Mati is rather my manifestation.

The Prithivi (earth) is made by me; the Prithivi is my manifestation.

I have made the Agni (fire); the Agni is my manifestation.

I have created Vishnu (the sustainer and protector of creation); it is me who has been revealed in the form of Vishnu.

I have created Indra (the king of Gods) as well as all the other Gods; it is me who has been revealed in their forms.

It is me who has created the three worlds represented by the three primary words Bhu meaning the terrestrial world, Bhuvaha meaning the world above the surface of the earth, and Swaha meaning the heavens.

In fact, the entire creation and each single unit of it, all living beings, all the Bhuvans (levels of creation or different worlds)—all the multifarious aspects of creation, its myriad colours, shapes and forms that had existed in the past, exists in the present and would exist in the future—are all created by me; they are all my revelations. Their 'Soma' (i.e. their essence and fundamental basis, their life and soul) is me alone.

Lord Rudra who is the most potent and powerful of the Gods, Hiranyagarbha (Brahma who is the creator of the visible world), as well as the greatest of sages,

seers, ascetics and hermits etc. are none but my own manifestation; they are born of me. [5]

6. The essence known as Rudra (i.e. my sublime and subtle form as the life-infusing consciousness) is present in the fire element, the water element and the medicinal herbs. It is Rudra that gives them their worth and importance¹.

It is the same Rudra that is present in all the living beings of this creation (as their Atma, the pure consciousness that infuses 'life' in the otherwise lifeless gross body).

Indeed, it is none but me in the many forms that I have taken. These forms are known as the 'Atma', that is also known as the Antaraatma (the individual soul, the consciousness that resides in the creature's body and forms his inner-self), as the 'Brahm' (the cosmic Soul; the cosmic Consciousness that pervades throughout this creation), and as the 'Jyoti' or light and illumination (representing knowledge, wisdom, skills, expertise and enlightenment, the factor that helps the creation emerge from behind the veil of darkness, as well as the factor that removes darkness and shows the path ahead to the creatures of this creation once the latter has come into existence).

There is nothing better, more exalted and superior than me in the entire creation. In fact, it is me (Shiva in his cosmic form as Brahm, the Supreme Being) who is supreme and transcendental in this creation (or world).

He who understands my essential and fundamental form, and then accepts me and worships or adores me with this enlightened knowledge, is able to attain the chief goal of life (which is to break free from the fetters of ignorance and delusions, and instead attain spiritual purity that leads to one's emancipation and salvation, known as obtaining Moksha).

By knowing me, i.e. by becoming enlightened and realised about the esoteric secrets of creation, about the cosmic form of Consciousness known as Brahm as well as its microcosmic form as the Atma, a creature is freed from the spiritual disease known as the cycle of birth and death. He obtains the Amrit or the elixir of eternity and bliss. He crosses over or overcomes all forms of spiritual torments and miseries.

I am the ultimate destination of everything in existence. All forms in which this creation exists are mine.

I am the one from whom all the creatures take birth, I am the one whose form they all represent (or, it is me who reveals myself in their forms), and it is in my cosmic form that they all collapse and merge at the end of their tenure.

One must worship and adore me with this wisdom and knowledge. [6]

[Note—¹That is, the most esoteric and intriguing factor that renders these three things—fire, water and medicinal herbs—indispensable for creation, that gives them their inherent characteristic qualities and virtues that make them so unique, so worthy and so important for creation and its life, is known as Brahm. The latter is in the form of the vital life-sustaining and protecting qualities that are present in each of these three things.

This is why the ferocious 'fire' that knows nothing but to burn to ashes anything with which it comes in contact with is also the provider of heat and warmth without which no life is tenable or imaginable in this creation. It is the fire element that keeps the body warm, helps in creation of rain, crop, cooking and digestion of food, etc.

Similarly, the 'water' is so unforgiving that when it so decides it can simply wipe off life from the surface of earth as is evident during the doomsday deluge or great floods and high tides; the ocean can devour huge ships and a river in spate wipes off large villages in a fit of rage. But this same water is the first requirement for life

anywhere; scientists search for water as signs of life even in far off planets and stars. It is the water that provides nourishment to the creature, because all the nutrients of food are dissolved in it before they can be made available to the creature. Water is necessary to cool down the scorch of the fire on earth. Without water, no life is imaginable.

In the same vein, medicinal herbs are important to keep the creatures healthy and fit to work. The medicinal herbs are nothing but plants with special healing and purifying properties. They have chemicals that clean the body of the creature as well as the environment of all toxins that threaten life. This ability distinguishes the 'medicinal herbs' from other plants. The factor that makes them stand out is Brahm personified in this form. That is, the hidden stupendous ability and mystical power of the ordinary humble plant, which apparently seems lifeless, gross, worthless and useless, to clean the complex structure of the creature's body and the vast environment of the earth of life-threatening toxins and pollutants is the cosmic Brahm revealed in their (plants') gross exterior forms just like this same Brahm has revealed himself as the creature who performs most formidable and daunting tasks with his humble gross body having limited means and reach.

If we closely examine this verse we will understand the difference between the two terms 'Shiva' and 'Rudra' on the one hand, and between 'Brahm' and 'Shakti' on the other hand. Lord Shiva is extremely calm, serene, self-contented, self-realised and blissful like Brahm, and is therefore regarded as a personification of the latter (i.e. of Brahm). He remains perpetually involved in doing mediation and contemplation, remaining happy and submerged in the thoughts of the transcendental Truth. Hence, he is regarded as the patron deity of ascetics who themselves are regarded as personified forms of Brahm because they have become extremely self-realised, i.e. they have experienced the truth about themselves as being the Atma which is pure consciousness. This Atma is a microcosmic form of the cosmic Consciousness and the Absolute Truth of creation known as Brahm.

When the same Shiva assumes an angry form of Rudra at the time of conclusion of creation, he shows an astonishing and an astounding level of dynamism, energy, power, strength and vigour that are synonyms of the cosmic Shakti of Brahm. It is like the case of lightening that is present in the dark rain-bearing clouds in the sky. This lightening appears suddenly, streaks across the sky and causes a huge blast of light and thunder, and if it happens to strike the earth leaves behind scorched trees and ruined buildings, only to vanish without trace in another moment in the sky, withdrawing itself into the thick bank of cloud from which it made its appearance.

This analogy of the lightening appearing from and disappearing into the clouds in the sky would explain the phenomenon of Rudra vis-à-vis Shiva, and Shakti vis-à-vis Brahm. Rudra appears momentarily from Shiva, accomplishes the task for which Shiva had to assume this ferocious and ruthless form of anger, wrath and vehemence personified, only to vanish into the calm and tranquil form of Shiva. Similarly Shakti appears from the neutral cosmic entity known as the divine Brahm, accomplishes what is expected of it, and then disappears into Brahm without trace.

Since everything in creation is a manifestation of Brahm, this unique character of Brahm and its relationship with its dynamism revealed as Shakti is also revealed in all the five primary elements of creation such as sky, air, water, fire and earth. Let us take one example of earth to understand how it works out.

The earth is the grossest of the five elements, being heaviest and most dense. It is inert and lifeless on the outside like any other celestial body of the fathomless heaven, but still it conceives and harbours all imaginable forms of life, takes proper care of them and provides endlessly for their necessities of existence. The earth is self-sufficient in this respect, and it does not need any other help to sustain life, or even to replenish its reserves which never deplete inspite of constant exploitation. So in this sense the 'earth' is Brahm personified. But when the 'mother earth' becomes angry, she vents her anger as earthquakes, landslides, floods, tsunamis, famines and

draughts, leading to large scale destruction and havoc. This is the Shakti form of earth.

Then again, the earth is a solid piece of cosmic body which is lifeless, neutral and barren at one place as evidenced by the endless stretches of rocks and sand seen at some place on its surface, but at the same time it constitutes of charming and vibrant forms of endless variety of fauna and flora symbolizing life in all its splendour and grandeur at the other place. Even when the earth seems to be neutral, lifeless and inane, it still has its inherent dynamism and energy as shown by its magnetic field and its movement not only around its own self but also around the sun. This means that 'earth' stands for Brahm as well as for Brahm's Shakti simultaneously.

Likewise, if we take the example of the fire and the water, we find that on the one hand they are harbingers of life, growth and development on the one hand, and when annoyed become the cause of widespread destruction and havoc on the other hand. For instance, fire is an essential component of life because without the fire there will be no warmth and light, and the resultant chill and darkness would snuff life out of this creation. But the same fire can scorch everything to ashes if it becomes annoyed and decides to punish the world it had so benevolently nurtured.

The water also behaves in a similar fashion. While water is called the benevolent 'elixir of life' as it is the only element which actually cradles life in its merciful arms by providing it with readymade nourishment and acts as a buffer, a coolant and a soft lubricant that helps this creation to overcome the harsh and abrasive conditions on earth, which is nothing but a solid and rugged ball of thick and hardened rock that would have caused severe injury to the creation if it was not protected by the water, the same water can wipe out life if it turns malevolent as is evident during floods, high ocean tides and huge waves, tsunamis etc., or as observed during draughts when the water decides to withdraw itself and let the life parch itself out by thirst.

Air also exhibits similar characteristics. On the one hand the air is absolutely essential for life to exist in this world, because without air the life would suffocate to death, but the same air can cause ruin when it becomes angry, as is proved during fierce storms and cyclones.

The sky is the cosmic bowl which harbours everything that exists in this universe, from the smallest piece of cosmic debris to the huge galaxies and planetary systems. It is in the sky that our earth lives, and it is in the sky that the air we breathe is contained. But it is the same sky in from which devastating meteors and asteroids might strike upon the earth to wipe out entire generations of creatures. [It is one such event that had wiped out the ancient dinosaurs from the surface of earth, and more recently one such meteorite had blasted its way down to earth across the skies in the Ural Mountains of northern Russia which injured thousands of people and cause material damage to buildings and factories.] During severe thunderstorms, hurricanes and cyclones, it is the sky that is said to 'open up' and pour rain on the earth which cause deluge, or blow fierce winds that strike out viciously any thing standing up in its path much like the swing of the Vajra of Indra, the king of Gods. It is one such deluge pouring down from the sky or heaven that is expected to wipe out the present generation at the time of doomsday. Then again, during wars, it is from the sky that rockets, missiles and arrows shower down upon armies to kill and slay mercilessly.

So we conclude that while all the elements and all the units of creation are indeed manifestations of Shiva or Brahm, the latter's life-fostering and benevolent nature is displayed in these units when they act as aids to development of life and its growth, while their destructive aspect is a representative of Rudra. The dynamism, energy, vigour, strength and abilities displayed by all the units of creation are, however, a manifestation of the Shakti in its many myriad forms.]

7. All the creatures and the Gods offer their prayers to me; they adore and worship me. [Here, the pronoun 'me' refers to the truthful form of Shiva, which is Brahm, the cosmic Consciousness revealed as the Supreme Being.]

The wind blows, the sun rises, the fire burns and gives heat, and Indra (the king of Gods) rules over this creation on my commands and according to the laws established by me, because they all fear me and are afraid of violating my orders and regulations.

I am a personified form of Soma (the sanctified essence or juice of the Soma plant that is used as a metaphor for eternity, auspiciousness, life and bliss) because it is me that is the inherent curative property that is present in all medicinal herbs, as well as the fact that it is me who is the sustainer and protector of this creation.

It is me who has revealed himself as the earth, the water, the fire and the wind. It is me who has manifested himself as the Kaal (death; time), and the Disha (various directions and their patron Gods).

It is me who is present as the Atma (soul; pure consciousness; the essence and the soul) of all living beings.

Everything and everyone is established in me; I am the one who bears them all; I am the one who forms their foundation, support and basis.

It is me who is established in all forms in this creation.

Those who are Brahm-realised and highly enlightened and erudite attain me who am the Supreme Being and the ultimate destination searched by them.

Brahma the creator and Shiva the concluder are none but my eternal form that is steady, unchanging, immutable, infinitely divine, supreme and transcendental. [7]

8. Though I have no physical eyes, but it is deemed that I have countless eyes everywhere in the sense I can see everything; nothing is hidden from my views.

Similarly, I have no physical ears, but still it is deemed that I have countless ears everywhere in the sense I can hear everything; nothing is hidden from my knowledge; there is no sound that I do not hear; nothing is said that I do not know.

I have no physical legs, but still it is deemed that I have countless legs everywhere in the sense that I can go everywhere I wish, and that nothing is beyond my reach.

I have no physical hands, but still it is deemed that I have countless hands everywhere in the sense that I can accept everything I wish and do everything I want; everything that is done in this world is done by me; everything that is accepted in this world is accepted by me; everything that is given in this world is given by me.

I have no physical heads, but still it is deemed that I have countless heads everywhere in the sense that all the functions carried out by the head of all the creatures in this world are deemed to be carried out by me alone.

I am the object and aim of all Vidyas (knowledge, skills, learning) as well as the Mantras (spiritual formulas).

In fact, Vidya is my personified subtle form; I am Vidya personified.

I am the Lord of the universe.

I do not decay or perish.

Anyone who knows and understands these eclectic virtues of my divine cosmic form (as Brahm, the Supreme Being) is freed from the fetters that shackle him to this material world like an animal held in captivity.

That is why I am known as 'Pashupaat'¹—one who liberates animals from their shackles; it also means freeing a living being from his animal-like lowly instincts that demean the exalted nature of his Atma. [Here, the 'animal' refers to the Jiva, the

living being or the creature, and the ‘shackle’ to (i) the never ending cycle of birth and death, (ii) to the numerous temptations of this mundane artificial and deluding material world of sense objects, and (iii) to the evil and lowly natural instincts that may exist in the Jiva that would undermine the holiness and divinity of his Atma. The Lord ensures that such lowly traits in his character are eliminated for good so that the creature can find liberation and deliverance, or emancipation and salvation.] [8]

[Note—¹Refer: References: (i) Atharva Veda = Bhasma Jabal Upanishad, Canto 2, paragraph no. 8, 18; Sharav Upanishad, verse no. 14; Pashupat Brahm Upanishad, Purva Kanda/Canto 1, verse nos. 11, 32; Uttar Kand/Canto 2, verse no. 7. (ii) Sam Veda = Jabalu-panishad, verse nos. 11-18.

Ahankar, or pride and ego, makes a man no less than an animal. This is stressed in Jabalu-panishad of Sam Veda tradition, verse nos. 11-18, and Sharav Upanishad of Atharva Veda, verse no. 14 which stresses that ‘Isha’, or the Lord Shiva who is regarded as the supreme Lord of creation, had to become a ‘Pashupati’, Lord of animals, just because he is the undisputed Lord of all the creatures, and those creatures who have lost wisdom and a sense of righteousness, those who are overcome with Ahankar, are no better than animals.

When the ‘Ahankar’ is eliminated or symbolically reduced to ashes, the creature becomes an ‘Ish’ from a ‘Pashupati’; in other words he has become a purified creature in the place of an animal-like creature. This transformation or metamorphosis—from an animal to a non-animal or from an animal-like creature to a wise and erudite person—is tantamount to acquiring truthful knowledge and become spiritually wise and enlightened.

The Lord is especially honoured by the epithet of ‘Pashupati’ because an enlightened worshipper targets all his spiritual endeavours towards attaining high levels of purity and holiness that entails that he first controls his basic animal-like natural instincts; he is expected to have completely exercised total self-restraint on his sense organs. Brahm is not sitting somewhere in the sky, but the Lord resides inside one’s own inner-self as his Atma. This Atma is the Lord of the creature. So when a worshipper pays his obeisance to ‘Pashupati Parmatma’ he is actually honouring the Atma which has learnt to practice exemplary self-control over animal-like instincts, characters, qualities and behaviour.

An entire Upanishad is named after this philosophy, and it is called the Pashupat Brahm Upanishad. This Upanishad is Chapter 19 of this volume as it happens to be the 19th Upanishad belonging to the Atharva Veda.]

9. The human beings who observe the tenets of Yoga and live in the middle world (that lies between the heaven and the hell, i.e. the earth, the terrestrial world) make efforts to attain me.

When they do attain me, they do not have to take a birth again.

The holy pilgrim city of Kashi (Varanasi) is established on the tip of my trident. All those who live there and die there are certain to reach me and become one with me (i.e. they find final liberation and deliverance for their souls in the sense that they do not have to come back to the world again).

Just like the offerings that are made to the raging fire during the fire sacrifice do not come back to the worshipper or cannot be retrieved by him no matter how hard he tries, those who leave their gross bodies (at the time of death) do not come back into this world and take a birth again. This is the tenet, the maxim, the axiom and the preaching of the scriptures. This is the auspicious duty of all spiritual aspirants¹. [9]

[Note—¹This observation is an excellent one and strikes-off in one masterful stroke all misconceptions about the fallacious notion of having to take a birth again. The body is cremated or buried after death, and it is either reduced to ashes when cremated or decays and gets decomposed into the elements if buried. So where is the

question of 'rebirth'? 'Death' in this context is restricted to the gross body, and not the soul or the Atma which is a Spirit that escapes from the body and flies off imperceptibly into the vast realm of the sky. Hence, if a dying man has no worldly desires left in him, this Spirit would simply not look down and seek a vacant slot to come back in the form of a newly born creature; it will be going on and on like a gas filled balloon. On the other hand, if the dying man has unrequited desires left in him, his Spirit would turn back and get a new birth as a newly born creature.

So in effect, the real liberation and deliverance is not merely leaving the gross body, but leaving it for good. And this can be achieved only by being truly wise, enlightened and knowledgeable about one's real spiritual goal in life. This can happen only when one becomes self and Brahm realised, because then he would find the world artificial and all its objects equally illusory. Who in his right senses would pursue a thing that has no substance or value, a thing that is as illusory as the mirage seen in a desert, instead of spending his time and energy to obtain something that is real and of real worth? That is, a wise man is one who spends his precious time and energy to find ways and means to attain self-realisation and Brahm-realisation which however should be his ultimate spiritual goal as his Mukti, or liberation and deliverance, is directly dependent upon success in attaining this goal.

A wise man should aim for the 'real Truth' instead of the 'virtual truth'. It is like picking up a real and rare piece of diamond instead of getting tempted to accept a cheaper version of diamond having the same glitter but lacking in value, or being distracted and waylaid by the temptations of accepting a worthless piece of glass having a glitter and shine resembling that of the original thing, but still remaining glass. These only deceive the beholder if he is not wise and discerning enough to judge what is good for him and what is not.]

10. Wearing the sacred Bhasma (ash) on the body (as prescribed in Canto 1, paragraph nos. 5-7) and marking the Tripund (the three-line mark on the forehead as mentioned in Canto 2, paragraph no. 2) is ordained by ancient religious tradition. Hence, one should not be careless about them.

Similarly, one should not show carelessness or laziness in wearing the Rudraksha beads (as described in Canto 2, paragraph no. 2) as well as worshipping me (Shiva) by the Rudra Mantras (as narrated in Canto 1, paragraph no. 1; Canto 2, paragraph nos. 3-8).

One should be especially vigilant about not doing anything inside a temple (or any other shrine) that is considered impure, inauspicious, unrighteous, unholy, corrupt and ignoble, and which may be against the decorum and sanctity of the holy place¹.

One must not show indolence or carelessness in observing religious vows, duties and sacraments. [10]

[Note—¹One must be exceptionally careful so as not to do anything that would defile a holy place such a shrine of Lord Shiva. From the metaphysical point of view it is to be noted here that even the body of the creature is an abode of Shiva, and therefore a wise and enlightened man must take proper care of what he does using his body, because even one wrong deed done or action taken by his body would be tantamount to defiling the holy abode of the Lord, which in this case is his own body.

The fact that the body is an abode of Lord Shiva has been reiterated in a number of Upanishads. References: As an *abode of Lord Shiva*—(i) The Krishna Yajur Veda's Yogshikha Upanishad, Canto 1, verse nos. 72, 165-168, Canto 2, verse nos. 6-10, 20, Canto 3, verse nos. 1-15, Canto 5, verse nos. 2-5, 13-16, and Canto 6, verse nos. 32-33, 47; Varaaha Upanishad, Canto 5, verse nos. 50 and 53; and Skand Upanishad, verse nos. 10-11. (ii) Sam Veda's Jabal Darshan Upanishad, Canto 4, verse nos. 48-59. (iii) Atharva Veda's Brihajjabal Upanishad, Brahman 7, verse no. 4.

Body as an abode of Shakti (the dynamic manifestation of Shiva and revealed as a divine Goddess) and 4 *Peeths*—Krishna Yajur Veda's Yogshikha Upanishad, Canto 5, verse nos. 6-12.

Body as an abode of Shiva and Shakti—(i) Krishna Yajur Veda's Yog Kundali Upanishad, Canto 1, verse no. 75; Yogshikha Upanishad, Canto 5, verse no. 4. (ii) Atharva Veda's Brihajjabal Upanishad, Brahman 2, verse no. 8-9.]

11. [This paragraph describes the glories of the terrestrial abode of Lord Shiva known as Kashi.]

For those desirous of Mukti (liberation and deliverance), residing in the pilgrim city of Kashi (the terrestrial abode of Lord Shiva) is equivalent to doing Tapa¹ (penances, austerities and other holy deeds requiring commitment, sufferance, hardships and steadfastness). It is known as the Avimukta Kshetra². I provide liberation, deliverance, emancipation and salvation to all those who live there.

Hence, those desiring such spiritual benefits should not abandon Kashi. There is no better place for spiritual welfare other than Kashi known as the Avimukta Kshetra.

Kashi has four important places at four corners. Inside this periphery is the central area, known as the 'Anthaa Griha'. Inside this central area there are five important places. Amongst them, the shrine of Lord Shiva is the best and most holy.

To the east of this shrine is the symbolic abode of 'Aishwarya' (the glorious virtues of fame, majesty, glory, greatness, divine faculties, super-human powers, opulence, wealth, fortunes, grandeur etc.)

To the south of this shrine is the symbolic abode of 'Vichaalan' (factors that induce confusions, doubts, restlessness, agitation, flux, delusions, illusions, passions, attractions, attachments etc.).

To the west of this shrine is the symbolic abode of 'Vairagya' (renunciation, detachment, dispassion, neutrality, non-involvement etc.).

To the north of this shrine is the symbolic abode of 'Gyan' (truthful knowledge, enlightenment, realisation, erudition, wisdom etc.).

My (Shiva's) symbol or image known as 'Shiva Lingam' is established in this shrine. It has mystical qualities and eclectic virtues that reflect my glories, divinity and holiness. These qualities and virtues are as follows—

It is 'Anant' (has no beginning or end, is infinite); it is Nirlipta (is not attached or attracted to anything or anyone); it is 'Avyaya' (eternal, unchanging and imperishable; not to get diminished or degraded); it is 'Anaadi-Anant' (has no beginning or end; is eternal and infinite); it is 'Ashesha' (it leaves no remainder or residue; this is because it does not end, and is eternal and infinite); it worthy of knowing and researching by the medium of the scriptures such as the Vedas and the Upanishads (Vedanta); is indescribable and incomprehensible; is immune to being degraded, denigrated or demeaned; is much sought after by my devotees and fulfills their desires; and is 'Advitya' (non-dual, unique and one of its only kind).

Besides this, it is the 'Aadhar' or support, foundation and basis of all that exists; is self-supporting and does not need for its self any foundation to rest upon; it is esoteric and mystical in as much as what it appears on the surface is not its true form (it appears to be a stone image, but actually it represents me who am invisible and ethereal); and is always honoured and worshipped by the various Gods such as Brahma, Vishnu, Indra etc.

This symbol of mine is an image of illumination and light. That is why it is known as 'Jyotirlingam'—the Lingam or symbol of Shiva that resembles a male phallus, and is self-illuminated and glowing with the light of divinity and holiness that

effuses naturally from it. [It is like an electric bulb or a lighted lantern which gives out light that illuminates the surrounding area. The Lingam of Shiva is a symbol of the Lord, and it is called 'Jyotir-lingam' because it is radiant and splendid, emanating illumination and radiance ('Jyoti') as it is a symbolic form of the cosmic Consciousness known as Brahm that is revealed in the form of Shiva.]

One should worship, pay obeisance to and honour me as well as my symbol known as this Jyotirlingam. [11]

[Note—¹The concept of Tapa—The word *Tapa* refers to doing severe penances, observing of austerities, enduring hardships and undergoing sufferance for a noble, auspicious and righteous cause. It requires dedication, commitment, sufferance and steadfastness of purpose. This Tapa helps by burning one's natural impurities, shortcomings and blemishes that have been inherited by the creature as a result of his past deeds and their consequences. In the context of Brahm realisation, Tapa also refers to meditation and contemplation because the mystical and most enigmatic Brahm can be realised only by turning inwards as opposed to attempting to find and search it out externally in this world. This means that an attempt should be made by the spiritual aspirant to know the nature of the 'true self', instead of the 'illusionary self', as this search would lead to realisation of the Truth. Concentration of the mind and focusing of its intellectual and discriminatory faculties on searching out the 'truth' from the stack of falsehoods appears to be a Herculean task, but with painstaking diligence and accompanying sincerity, with commitment and ardent devotion, the task is not difficult even as searching a piece of Gold in a hay stack seem very daunting on the face of it but once the Gold is retrieved, the entire effort is amply rewarded. While we are at this analogy of the hay stack and the Gold, the easiest and quickest way to retrieve the priceless necklace of gold is to burn the stack of worthless hay. Likewise, the easiest way to realise the Truth is to burn the surrounding shell of worldly delusions and falsehoods. Once the muck and filth is washed off from the mind and heart, their brilliant shine breaks through, and this light of enlightenment show where the 'gold', or Brahm, is hidden. Verily, that Brahm is not outside but inside one's own bosom. Brahm realisation is marked by the extreme exhilaration and ecstasy that comes to someone who has found his golden necklace amidst the stack of hay!

Even the Viraat Purush, the Lord from whom this creation has come into being, had done Tapa when he had decided to initiate the process of creation. The mystical powers of Tapa can be gauged from the fact that he was able to create the dazzlingly magnificent creation literally from nothing, as if by magic! Basically Tapa involves coordination of the energies of the mind and body, and focusing the combined force to achieve astounding results much like the use of razor-sharp laser rays to achieve penetrating powers and obtain very precise results.

The Niralambo-panishad of Shukla Yajur Veda, in its verse nos. 34-35 describes the two types of Tapa, viz. the 'Asura Tapa' and the 'True and auspicious Tapa'.

The Taittiriya Upanishad of the Krishna Yajur Veda tradition, in its Valli 3, Anuvak 2-6 asserts that the eclectic glories of the supreme transcendental Brahm and the accompanying sense of ecstasy and bliss called Anand are realised by a spiritual aspirant by doing Tapa. This fact has been preached by Varun, the Water God, to sage Bhrigu, his son.

²Avimukta Kshetra—The word *Avimukta* literally means 'that which is not free; that which is bound or shackled'. Here the word means that place or that entity that has the potential to set free those who are shackled by providing them liberation and deliverance from their bondage. It has many connotations such as—(a) The holy pilgrimage site of Kashi or Varanasi, a city of northern India where Lord Shiva is said to reside eternally on this earth and provide this liberation and deliverance to the soul of a dying man by uttering the Tarak Mantra in his ears. This site is referred to in the Atharva Veda's Ram Uttar Tapini Upanishad, Canto 1. (b) Another site is Kurushetra

where the legendary Mahabharat war was fought. (c) According to Yoga philosophy, this site is located at two places corresponding to the holy sites mentioned above—one is the area around the ears, and the other is central point between the two eyebrows. (d) The Brahm-randhra which is the top central point of the head is also said to be the abode of Brahm. It is the Avimukta area because when the ascetic is able to concentrate his attention on this citadel, he achieves supreme bliss and peace. According to Yoga, when the vital energy of Kundalini is aroused, it snakes up the spine and enters this area, thereby immense bliss to the aspirant.

The word Avimukta literally means ‘that which is not free; that which is bound or shackled’. Here the word means that place or that entity that has the potential to set free those who are shackled by providing them liberation and deliverance from their bondage.

This is the place where all those whose Atma (soul) are shackled come searching to find a way to break free from their worldly bondage. It is like a spiritual reformatory where people needing reformation are allowed to live. All of them desire salvation and emancipation, all are shackled and tormented by the world and its endless agonies, all have sinned in one way or the other. The Avimukta Kshetra has the necessary wherewithal to provide the spiritual seeker with liberation and deliverance, such as the eternal presence of Lord Shiva, the most wise God who constantly preaches the dying man about the great Mantra for salvation, but the person seeking such freedom has to have the will and the motivation himself, just like the case where a reformation prison can help only those who wish to repent and relent on their past misdeeds, but it cannot improve stubborn characters. Mere presence in such a place would not be of much value if there is no sincere desire and will on the part of the creature to seek emancipation and salvation for his soul. The environment is conducive for such enlightenment because he hears the tale of woes of many others like him who have suffered immensely for their misdeeds, thereby igniting a sense of detachment for and repugnance towards this world in the creature. He realises that this world is full of sorrows and pains, and therefore he should endeavour not to do anything that would force his soul to revert to this horror once again. But at the same time if he is not vigilant and self-thinking, this same Avimukta Kshetra can prove to be counter-productive because he would learn dirtier tricks from other inmates of this spiritual prison.

This concept has been elaborately described in the following Upanishads—(i) Shukla Yajur Veda’s Advai Tarak Upanishad, verse no. 3; Tarsar Upanishad, Canto 1, verse no. 1. (ii) Atharva Veda’s Ram Uttar Tapini Upanishad, Canto 1, verse no. 1; Canto 4, verse nos. 1-16.

The *reason* why *Kashi (Varanasi)* is called the ‘Avimukta Kshetra’ has been elaborately explained in the *Ram Uttar Tapini Upanishad*, Canto 4, verse nos. 1-16 (i.e. in the full Canto).]

12. Even the Sun God, the Moon God, the Fire God and the Wind God (i.e. the primary Gods) are unaware of the mysteries and enigmatic glories of this Shiva-Lingam¹.

The self-illuminated and self-emerged or self-created Lingam extends as far as the pit of the earth known as Paataal.

This Shiva-Lingam is an image of me who am the Lord of the world. Hence, it is known as ‘Vishwanaath’ Lingam.

Worshipping it and paying obeisance to it is directly worshipping and paying obeisance to me.

A worshipper who offers his worship and obeisance to me, who serves me and honours me with full devotion, sincerity and faith, by offering three leaves of the Bilva tree, and then offers the auspicious rewards of such exemplary worship to me

(rather than expecting any gain for himself in return for such worship or service), who wears the Bhasma (sacred ash) and the Rudraksha beads as prescribed, who has sought my shelter and has taken refuge in my holy feet, and who is an unquestioned and most committed devotee of mine—verily I say that I accept his worship and free him from the fetter represented by the endless cycle of birth and death.

Even a great sin and its evil consequences are neutralized by offering daily worship to my Shiva-Lingam, by offering libations to me (a process known as 'Abhishek') and praying to me by reading or reciting the hymns of the Rudra Skuta daily with the greatest of devotion and faith, and then drinking the water left over after the completion of worship and offering of libations to my Lingam.

Such a devotee is free from all sorrows, grief, miseries and torments. He is freed from the shackling effect of this mundane and entrapping world. [12]

[Note—¹The *Shiva Lingam* is a gross manifestation of Shiva who is a divine, subtle and sublime Being. The Shiva's Lingam is like an icon that is normally used to stand as a unique symbol for a particular deity or God. It is an emblem of Shiva. If we look at the Lingam closely we observe that it is a cylindrical structure passing through the center of a circular girdle or ring. This structure reminds one of a wheel with the central axle. This imagery is used to indicate the fact that Shiva is the supreme transcendental Brahm around whom the whole of the creation rotates. 'Rotates' is a metaphoric way of saying that the entire creation depends upon Brahm; it is centered around Brahm; Brahm is the pivot that supports the entire edifice of creation. Just like the wheel cannot move if the axle is removed, this creation cannot survive if Brahm, the Consciousness and the Truth of creation, is removed from it. The fact that this creation is like a wheel rotating around the central axle called Brahm is endorsed in a number of Upanishads, e.g. (a) Atharva Veda = Prashna Upanishad, Canto 1, verse no. 11; Canto 6, verse no. 6; Mundak Upanishad, Mundak (Canto) 2, section 2, verse no. 6; Nrisingh Purvatapini Upanishad, Canto 5, verse nos. 2-7; Naradparivrajak Upanishad, Canto 9, verse nos. 4, 6; Tripdvibhut Maha-Narayan Upanishad, Canto 7, paragraph 3-14 (which describes the 'Sudarshan Chakra' of Vishnu); Shandilya Upanishad, Canto 1, section 4, verse no. 6-7 (which describes the wheel or Chakra that is present in the navel and how it keeps the creature trapped in it); Tripura Tapini Upanishad, Canto 2 (which describes the Sri Chakra dedicated to Goddess Tripura who is regarded as the Mother Goddess; Surya Upanishad, verse no. 1 (describes the Sun God as the one who keeps the wheel of life and death, known as the Kaal Chakra, rotating). (b) Krishna Yajur Veda = Shwetashwatar Upanishad, Canto 1, verse no. 4, 6; Canto 5, verse no. 12; Canto 6, verse nos. 1-3. (c) Shukla Yajur Veda = Paingalo-panishad, Canto 4, verse nos. 3-4.

Besides this eclectic viewpoint we also observe that a cylinder is a smooth surface that is round from all sides. It appears the same from whichever side one sees it. This signifies the fact that Brahm is uniform and even in all respects, and neither does it have any specific form and feature. Like the Lingam passing through the circular girdle around it, the entire creation too forms a ring that moves around Brahm which holds the creation together and passes through its center. Now, this 'center' also means a core, and hence this refers to the Atma, the soul, that is the pivot or the core around which life revolves in this world.

If we look further ahead and observe a potter's wheel and how the potter moulds his pots and pans on it we find that it has a striking resemblance to the Shiva Lingam. As the wheel turns the potter expertly raises the shape of his wares at its center, and the rotating potter's wheel can be treated as an apt metaphor for the way the Shiva Lingam represents the phenomenon of creation moulded from the dynamic energy of Brahm revealed as the Shakti that continuously revolves around the principal known as Brahm.

Iconographically, the Shiva Lingam has three distinct parts—the lower part fixed to the ground stands for Brahma the creator; the middle part of the wheel stand for

Vishnu the sustainer and protector of creation; and the upper part of the cylinder represents Rudra the concluder. These three Trinity Gods stand for the three basic and fundamental aspects of creation—birth, development and growth, and finally the end. They thus represent Brahm in its entirety.

The Shiva Lingam is called *Jyotirlingam* because it is mentioned in the Linga Puran, Chapters 17-20 that the Shiva Lingam appeared as an endless shaft of fire. And 'fire' is characterized by the virtues of light and illumination. It came to be known as the 'Linga' because all the creatures of this creation have a gross body in which their soul or their Atma lived, called the 'Linga Deha', and they reproduced themselves with the help of the genitals, called the 'Linga'. Since only the Supreme Being has this capacity to create and then sustain his creation, the grosser form of the Lord in the form of this creation and its self-replicating creatures was symbolized in the grosser symbol of the Linga. In other word, the Lingam represents the whole creation in a miniature gross form. This icon of Brahm is called 'Shiva' Lingam because Shiva is a personified form of Brahm.

It is also believed that it is called 'Lingam' because the entire creation would collapse at the end in Brahm, the ethereal cosmic Consciousness. The phrase 'Linga Deha' literally refers to the ethereal form of the corporal body of a creature. So when the creature sheds the body, his Atma would merge with the cosmic Atma known as Parmatma. Since Lord Shiva is the Parmatma—the Supreme Being—of this creation, it is natural that his symbol would be called a Lingam. It is to emphasize the fact that one should not be misled by its outer gross structure of being merely a cylindrical structure made of stone or rock but a divine symbol of the cosmic Atma that cannot be visualized by the naked eyes.

The physical Lingam is the visible form of the invisible Linga Deha of Shiva which is the Lord's ethereal and cosmic form.

Other references—(i) Krishna Yajur Veda = Yogshikha Upanishad, Canto 1, verse nos. 131, 168, Canto 2, verse nos. 5-11; Rudra Hridaya Upanishad, verse no. 23.]

13. Anything that is eaten without first offering the above worship or service to me is considered polluted and unholy. Even water that is drunk without first offering worship or service to me is considered unholy and polluted. [In other words, one must thank the Lord for everything he accepts. It is a matter of courtesy, civility and good manners in modern society that one thanks others for even routine things. So is it not proper to thank the Lord who has provided us with the essential things of life even without our asking for them?]

If inadvertently by chance of error, or due to unavoidable circumstances, the above edict is violated, i.e. the devotee does not or cannot perform the worship and service of the Lord before eating or drinking anything himself, or giving something to eat or drink to others, then he must atone for his sin and seek forgiveness and redemption by first shaving off his head and applying the 'Panch-gabya' (the five products of the cow used for purification, viz. a mixture of cow's dung, urine, milk, curd and clarified butter) on it, followed by a purification bath with clean water while uttering the hymns of the Rudra Sukta. He should fast (abstain from eating and drinking) that day, do repentance for his sins and clean his tainted self by offering worship to the Lord by reading or reciting the Mantras of Rudra while looking up at the sun (as a gesture of inviting the positive energy, dynamism and glories of Brahm of whom the sun is said to be the most splendid, radiant and evident manifestation, to replenish the energy of one's own inner-self which might have been depleted due to one's involvement in the mundane affairs of this gross material world) and then feed Brahmins (as an auspicious gesture of charity and sharing with all).

By following the above procedure he is cleaned or exonerated from the evil of the sin. Otherwise he is subjected to grave troubles and tribulations till the time he dies, and is subjected to the horrors of hell even after death.

That is why it is advisable to eat and drink after offering worship and service to the Lord with flowers, leaves and water according to one's abilities and circumstances. [13]

14. By offering libations to my Lingam, which is my image, with the milk drawn from a Kapila cow (i.e. a cow with reddish-brown, white, or white-spotted skin) while reciting the hymns of the Rudra Sukta, a devotee can obtain purification (pardon) from the horrendous sin of killing a Brahmin.

Offering of libations with the curd made from the milk of the Kapila cow helps one to eliminate or clean the great sin caused by drinking intoxicating liquids.

Offering of libations with clarified butter made from the milk of the Kapila cow helps one to overcome the grave sin caused by stealing gold (or theft of any kind).

Offering of libations with honey helps one to overcome the horrible ignominy and sin caused by being amorous towards the wife of one's Guru (teacher and moral preceptor).

Offering of libations with white sugar helps one to overcome the sin of being cruel to others.

Offering of libations with milk and other products (as prescribed above) helps the devotee fulfill all his aspirations, desires and wishes.

By offering libations one hundred times with quantity of materials that are one hundred times more than that used for one standard routine offering (i.e. roughly 100 kilograms or 1 quintal by weight) helps the aspirant to free himself from the fetters that shackle him to this world. [14]

15. My (Shiva's) image in the form of the Shiva-Lingam should be offered worship during the time of the Aadra Nakshatra (an asterism known as Aadra), on the full moon day, on the new moon day, the Vyatipaata Yoga (the seventeenth astrological union of stars), on the occasion of eclipses (solar and lunar), and on the day of the Sakranti (the summer and winter solstice).

During these days, worship should be done by first offering libations followed by oblations. For this, the following items are to be used—sesame seeds, rice, barley, three leaves of the Bilva tree, clarified butter made from the milk of the Kapila cow, scents and fragrances, incense sticks, lighted lamp, sweets, fruit etc. Then flowers and water in cupped palms of the hands should be offered most respectfully at the end of the worship.

By offering worship and service to me with devotion and faith, the devotee obtains Sayujya Mukti (i.e. he becomes one with me).

If the worship is done with rice of quantity that is one hundred times that used for standard routine worship (i.e. roughly 100 kilograms or 1 quintal), the worshipper obtains the abode of the Moon God known as Chandra-loka.

If equal quantity of sesame seeds (i.e. roughly 100 kilograms or 1 quintal) is used for worship, the worshipper obtains the abode of the Vayu God (the Wind God).

If equal quantity of horse beans (i.e. roughly 100 kilograms or 1 quintal) is used for worship, the worshipper obtains the abode of the Varun God (the Water God).

If equal quantity of barley (i.e. roughly 100 kilograms or 1 quintal) is used for worship, the worshipper obtains the abode of the Surya God (the Sun God).

If twice the above amount of items are used for worship (i.e. if roughly 200 kilograms or 2 quintals are used), the worshipper obtains the higher heaven known as the Swarga-loka.

If four times the above quantity of items are used for offering worship to me (i.e. if roughly 400 kilograms or 4 quintals are used), the worshipper obtains the abode known as Brahma-loka, or the abode of Brahma the creator.

If worship is offered to me or my Lingam by using the items needed for such worship measuring one hundred times than the standard offerings (i.e. if roughly $100 \times 100 = 10,000$ kilograms or 100 quintals are used), the worshipper is freed from the jurisdiction of death, or clutches of death, as far as the Brahm-Kosha. [That is, he is freed from the fear of death till the time the creator would be born again. The word 'Kosh' means the source from which Brahma the creator was born, the point of time when Brahma was born. Refer paragraph no. 20 of this Canto 2 below.]

Since he is my devotee, he crosses over from the abode of Brahma and reaches my abode known as the Shiva-Loka that is beyond it. There is no abode or heaven better than it. He becomes free from all miseries and sorrows upon attaining it. He is freed from all fetters and encumbrances that had kept him shackled.

By worshipping me in my form as the Lingam, ascetics have attained great mystical powers. Those who do fire sacrifices (i.e. the worshippers of the sacred fire) are actually offering their obeisance to me when they offer their oblations to the sacred fire. It is me whose magnificence, holiness, eclectic glories and divine virtues are sung and lauded by the Vedas in their hymns.

It is proved beyond doubt by the great scriptures such as the Vedangas (branches of Vedas), the Upanishads, and the Itihaasas (ancient mythological histories) that there is nothing besides me in this creation. Everything is me; everything is established in me; I am the foundation and basis of everything. [This is because Lord Shiva is the supreme transcendental Brahm personified. Nothing exists in this creation that is not Brahm; it is Brahm who has manifested or revealed in every single unit of creation.] [15]

16. Hence, spiritual aspirants should worship me and serve me, diligently and with sincerity, in the holy pilgrim city of Kashi.

In this place, my attendants live in many forms. They have fearful countenance, wear numerous varieties of arms and armaments, and have numerous signs and identities.

Adorned by the sacred Bhasma and wearing the Rudraksha beads, all of them are involved in offering their service, obeisance and worship to me. They give oblations to me, and offer libations to me. [16]

17. The creator Brahma offers me his worship, pays his obeisance to me, and meditates upon me night and day in the eastern direction of this city of Kashi.

The sustainer and protector Vishnu raises his hands and holds his palms together on his head while he offers his worship and pays his obeisance to me in the southern direction of this city of Kashi.

The king of Gods known as Indra offers his worship and pays his obeisance to me most politely and with due humility in the western direction of this city of Kashi.

In the northern direction, Goddess Bhagwati (the Mother Goddess; Parvati; Uma) constantly meditates and contemplates upon me. She is radiant and splendid

as a personification of the fire as well as of light; her incandescent form resembles that of the glowing fire that is radiating brilliant light. She is devoted to me, wears ornaments made of gold, and clothes embroidered with gold.

The Vedas offer their worship, pay their obeisance, meditate and contemplate upon me in four forms. [This refers to the fact that the Vedas primarily were in the form of an un-divided text. They have been divided into four divisions later on to serve specific purposes. These four divisions are known as the Rig/Rik, Sam, Yajur and Atharava.] [17].

18. In the south Kashi is the place which grants the boon of Mukti (liberation and deliverance). It is called the 'Mukti Mandap', literally a pavilion or arena where Mukti is obtainable.

It is here that many of my attendants who are the caretakers and protectors of creation have their abode or camp. They are armed with weapons and are the destroyers of sins and their evil consequences. [Refer paragraph no. 17. This stanza refers to Lord Vishnu who is one of the many forms of the Supreme Being that Lord Shiva is. The many attendants mentioned here are the attendants of Lord Vishnu. The weapon referred here is the formidable 'Sudarshan Chakra', the famed serrated discus of Vishnu, and the mace that he holds.]

There, great sages and ascetics who are ardent devotees of Lord Shambhu (Shiva), who is also known as Pashupaat and Maha-Shiva, reside and cheerfully do Japa (repetition) of the eclectic Mantra of the Lord that is like an ornament (adornment; the glory and essence) of the Vedas.

This Mantra is the five-letter Mantra 'Namaha Shivaaye' prefixed with the ethereal monosyllabic word OM standing for Brahm or Pranav. Hence, the five-letter Mantra becomes 'OM Namaha Shivaaye'. It is actually a six-lettered Mantra. [OM + Na + Maha + Shi + Vaa + Ye = 6. The 'OM' stands for salutations to the Supreme Being.]

This is known as the 'Tarak Mantra'—i.e. the spiritual formula which can provide spiritual liberation, deliverance, emancipation and salvation to the soul of the creature. [Refer Canto 2, paragraph no. 4 of this Upanishad.]

At that place, i.e. in the 'Mukti Mandap', there is gem-studded altar. It is here that I sit down and give rest on my laps all those devotees of mine who have died in Kashi.

I touch their Bhasma and Rudraksha beads to sanctify and empower them. I also preach them the Tarak Mantra so that they do not have to take a birth again. They find liberation and deliverance from their gross body, and enter my form in their essential 'spirit' form. [That is, their spirit emerges from their dead gross body and enters me to merge in my cosmic Spirit. In other words, their individual Atma merges with the cosmic Atma known as Shiva so as to become one with the latter.]

I preach them the five-letter Shiva Mantra for the purpose of their Mukti so that they do not have to come back into this world under its powerful liberating effects just like the offerings made to a raging fire cannot be retrieved at any cost. [The five-letter Mantra has two versions, viz. 'Namaha Shivaaye'—Na + Maha + Shi + Vaa + Ye = 5; or 'OM Namah/Namaha Shiva—OM + Na + Mo/Maha + Shi + Vaa = 5. Both the Mantras are the same, except that the second one with the monosyllabic Mantra OM prefixed to it is regarded as more effective and powerful as it salutes the Supreme Being known as Brahm before actually bowing to the Lord. This is why it is the 'Tarak Mantra' instead of the simple five-letter Mantra sans this OM.]

This place is the spot where Mukti is obtained in this terrestrial world. [18]

19. The devotee is liberated and delivered from his gross body in the ethereal form of OM.

[OM refers to Pranav, the cosmic sound that represents Brahm. Since the cosmic sound of OM and the air or wind element are the two sides of the same coin and synonymous with each other—because the cosmic sound represented by OM was produced due to friction in the waves in ether, and it needed air to be propagated for the simple reason that sound cannot travel in vacuum—it follows that when the devotee dies, his Pran, which is another synonym of the air or wind element representing the vital spark of life present inside his body, escapes into the outer space to merge with the cosmic Pran, i.e. the air or wind element present in the vast and fathomless space of the sky outside the body.

In simple terms it means that the individual's Pran which inspires the inane gross body to make a sound as evident from the fact that all living beings make a sound or speak as long as they are alive, or have Pran in their bodies, assumes the form of the cosmic Pran represented by the ethereal word OM when the Pran leaves the confines of the gross body when the latter dies, to escape into the vast open space of the sky. The previously trapped or incarcerated air element manifested as the 'Pran' or the life of a living being has now been 'freed' from the confines of a gross body and restored to its primary cosmic form as the all-pervading and infinite air element that fills the space of the sky outside the limits of the gross body of any individual creature. This is synonymous with the creature obtaining his Mukti—because the 'Pran' and the 'Atma' are regarded as being synonymous with each other.

Further, it has been described in Yoga Upanishads how the Pran escapes from the body through the Brahm-Randhra, the hair-like slit on the top of the head, at the climax of Pranayam, and as it escapes it takes the Atma, the life-consciousness present inside the body, along with it. This is described as the Kaivalya Mukti in terms of metaphysics, and it is the sort of Mukti aspired for by ascetics.]

Those devotees who offer all their deeds (and their fruits or rewards) to me, are devoted to me, and keep their attention on me, well, they are liberated and become one with me; they assume my true form upon leaving their gross bodies.

This is known as 'Brahm-Vidya' (i.e. knowledge pertaining to Brahm, the transcendental Supreme Being)¹. It is meant for those who are my sincere devotees, and not for others.

[This is because such people see no difference between Shiva and Brahm. When they worship Shiva, they are actually worshipping Brahm. Those who are not so enlightened and spiritually wise would treat Shiva as one of the Trinity Gods and only recognize him as the concluder of creation. They would not know that Shiva is not an ordinary God but a 'Maha-Deva', the 'Great God', an epithet not even shared by Brahma the creator or Vishnu the sustainer.]

Those who reside in the holy pilgrim city of Kashi with the desire of attaining Mukti are empowered by mystical powers and blessed with spiritual insights and knowledge, making then enlightened and self-realised. [19]

[Note—¹*Brahm Vidya*—The main Vidya as far as a spiritual aspirant is concerned is the one which pertains to the supreme transcendental Truth of creation known as Consciousness or Brahm. It is called *Brahm Vidya*. Basically it means the most eclectic, the most esoteric and the profoundest of knowledge pertaining to supreme transcendental Divinity known as Brahm.

The concept of Brahm Vidya has been the chief subject of discussion of a number of Upanishads, especially the following:--

(a) Krishna Yajur Veda's = Kaivalya Upanishad, Brahm Upanishad, Panch Brahm Upanishad, Akchyu Upanishad, Tejobindu Upanishad, Varaaha Upanishad, Cantos 1-5, and Brahm Vidya Upanishad.

(b) Atharva Veda's = Mundak Upanishad, Mundak (Canto) 1, section 1; Mundak (Canto) 2, section 1; Mundak (Canto) 3, section 1-2; Shandilya Upanishad, Cantos 2-3; Atma Upanishad; Tripadvibhut Maha Narayan Upanishad, Canto 1, paragraph no. 4; Canto 4, paragraph no. 1; Annapurna Upanishad, Canto 1, verse no. 17-57; Canto 2, verse no. 37.

(c) Sam Veda's = Chandogya Upanishad, Canto 7-8; Keno-panishad; Avyakta Upanishad.

(d) Shukla Yajur Veda's = Brihad Aranyak Upanishad; Isha Vasya Upanishad, Adhyatma Upanishad. (e) Rig Veda's Mudgal Upanishad; Atma Prabodh Upanishad.]

20. The Brahm-Kosh is a treasury of Vigyan; it is Vigyan manifested in this form.

[That is, the essence of Brahm, the true knowledge of the supreme transcendental Consciousness, is obtained when one attains high level of wisdom, enlightenment, self-realisation and erudition. It is a knowledge that is not easily available, and comes with sincerity, commitment, faith, devotion, steadfastness, diligence and effort. If one does not possess relevant skills and knowledge, one is unable to do even any mundane thing in this world, so how can he know the most esoteric and enigmatic entity known as 'Brahm' if he does not have the requisite knowledge and skills needed for the purpose?]

The Brahm-Kosh has four nets or meshes that surround it like a ring or cover it like a sheath.

[The word 'Kosh' refers to the 'cell' where Brahm, the cosmic Consciousness, lives inside the body of the creature. This 'Consciousness' is known as the Atma when it resides inside the individual's body. The Atma representing Brahm is surrounded by four rings which are like 'nets or meshes' surrounding some protected entity.

These four nets or meshes are the following four components of the creature's body—(i) the Pran Maye kosh or the subtle vital winds that give the spark of life to the body; (ii) the Mana Maye Kosh which is the subtle mind-intellect-heart complex of the body that controls all thoughts, emotions, sentiments, decisions, power to understand, analyse and deduce, etc.; (iii) the Anna Maye Kosh of the aspect of the body that survives on the food eaten by the creature; and (iv) the Anand Maye Kosh or the component of the body that gives the creature the sensation of bliss, happiness, pleasure and comfort.]

This Brahm-Kosh is not visible to Death; the latter does not cast its glance upon it. [Here, 'death' has been personified.]

[This is a metaphoric way of saying that the Atma is untouched by death; it cannot die or does not die. This is obviously because the Atma is an ethereal entity that is eternal, infinite and imperishable; the Atma is the cosmic Consciousness that is the quintessence of this creation. It is this Atma that lives inside the body of a living being as his 'true self' and as such it represents the cosmic Atma known as Brahm in its microcosmic form. Therefore, the cosmic counterpart of the Atma is Brahm, and like the Atma it is also eternal, infinite, without end or beginning, indestructible and imperishable—i.e. it is untouched by death. In this context, refer paragraph no. 15 above of this Canto 2.]

It cannot either be seen or visualized by any of the Gods such as Brahma (creator of the visible world), Vishnu (sustainer of the visible world), Indra (the king

of Gods who presides over the various functions of the visible world), Agni (Fire God), or Varun (Water God).

[These Gods have limited spiritual vision. They are neck-deep involved in the upkeep of the creation and carrying out their designated duties assigned to them by Brahm so much so that they do not have the time and inclination to meditate and contemplate upon Brahm. This is because Brahm had created 'Maya', the power to create delusions, at the very outset of the process of creation. No one was exempt from its influences, not even the Gods. This was a powerful and most potent weapon in the hands of the Supreme Being to keep all his assistants, in this case the various Gods named here, busy in their duties. Otherwise, once they actually realised that this world is an illusionary creation of Brahm, they would shun getting involved in looking after something that is merely a smoke-screen of imagination, without any pith and substance. So, it was necessary for Brahm to create Maya to ensure that his attendants keep on running the treadmill without realizing that they are running in futility and pursuing a target that they can never reach. This illusion was an absolute existential necessity and the need of the hour in practical terms for Brahm if he wished to ensure that the wheel of creation and destruction he has set in motion continued to rotate unhindered.

In other words and put simply, the Gods were happy and contented to be Gods and get praise by the lower creatures and humans who offered their oblations, libations and worship to them. They were proud that they were shown so much respect and honour by millions and millions of humble creatures. So where and what was the need for them to search for Brahm when they rolled in the luxury of praise and honour showered upon them by lesser creatures, or when they were fed by the choicest of things when people offered them oblations during fire sacrifices?

Hence, all the Gods remained just what they were, as 'Gods'. They did not achieve immortality and oneness with Brahm; they did not become Brahm-realised. They were just like high-profile ministers of an emperor who relish the privileges, enjoyments, pleasures and comforts that attend high office without realizing that these are transient and at the mercy of the emperor. Once the emperor decides to snatch these privileges from them, they would be like the man on the street, rather worse-off because they have become accustomed to a pampered life-style. The same is the case with these Gods. They are at the mercy of Brahm; they all would perish when the creation comes to an end. In fact, the seemingly senior Gods such as Brahm and Vishnu have a fixed life-span, and this is specifically measured in years, albeit this measurement is in astronomical terms as compared to human years. The specifics have been narrated in detail in Tripadvibhuta Maha-Narayan Upanishad of the Atharva Veda, in its Canto 2, paragraph no. 8-16.

On the other hand, self-realised, wise and enlightened sages, seers, hermits and ascetics, who were born as ordinary mortal humans with all the limitations that a human body imposed on them, had attained Brahm-hood even in a small span of time that a human being possesses.] [20]

21. It is in that Brahm-Kosh (i.e. the causal body where the Atma resides) where I—who am an embodiment of 'Tej' (represented by the self-radiant and splendid Atma, the pure cosmic Consciousness personified as the glorious and splendid self-illuminated 'Fire element')—sit.

[In other words, the Atma that lives inside the Brahm-Kosh is an image of Lord Maha-Deva, or Lord Shiva, the great and enlightened Lord God who is

personification of Brahm. This Atma is self-illuminated because it is an embodiment of the 'Fire element'; it is an embodiment of the 'fire-like virtues' of Brahm.]

I sit close to the daughter of the king of the snow-covered mountains. She has a golden countenance.

[This 'daughter' is the divine consort of Lord Shiva known as Parvati who, according to the Purans, is a daughter of the king of snow-covered Himalaya Mountains.]

My countenance glows with the light that is equivalent to countless moons. I wear the moon like a crown on my head. My three eyes are represented by the sun, the moon and the fire¹.

My divine form is adorned with the sacred Bhasma (ash of the fire sacrifice which is smeared all over his body).

Those devotees who remain concentrated on my divine and holy form, those who meditate and contemplate upon me, become free from sins. They not only find liberation and deliverance from these sins and their horrible consequences, but also find freedom from this entrapping world and its numerous stubborn entanglements. As a reward, they become one with me; they merge in me to become inseparable and indistinguishable from me. [That is, they attain Mukti which is spiritual liberation and deliverance.] [21]

[Note—¹The three eyes of Lord Shiva— From the metaphysical perspective, his two eyes are the conventional eyes, and his third symbolises his deep insight and great wisdom and enlightenment. Shiva personifies the fire element which also has a symbolic significance. The fire is known to burn all impurities present in gold when it is put into it, thereby purifying the metal. Similarly, fire is used in blast furnaces to extract iron from its ore. Fire has the inherent ability to reduce to ashes all filth and garbage, which is a metaphoric way of saying that a person who has worshipped this element in the form of Shiva is supposed to have burnt all his faults, blemishes and shortcomings that taint his character and soul, thereby purifying his inner self. The ash is indicative of total renunciation and detachment from the world of materialism, because it is indicative of a renunciate way of life and symbolically stands for burning of everything into the fire pit. That is why Lord Shiva has been called the patron God of ascetics, hermits and Sanyasis who worship the fire element only.

Besides these points, Shiva is the God assigned the task of concluding the world which necessitates his being closely associated with the 'fire element' in the sense that he must be as unrelenting, merciless, powerful and ferocious as the latter in order to conclude this creation inspite of all the odds. He must reduce everything to ashes just like the fire does. And it is from this ash that the new creation would emerge in due course. Herein lie the magic of creation and its chief Lord, Brahm, the Supreme Being—the fact that a new creation rises from ashes!

To quote *Yogtattva Upanishad*, verse no. 93—"This (i.e. the fire element is the symbolic abode of Lord Rudra or Shiva. [That is, he symbolizes the fire element.] One should meditate upon this Lord who has three eyes, who is the one renowned for granting boons (to his followers and devotees, and in the presence case to the ascetic), who is as splendid, illuminated and radiant as a sun which has just risen, and who has the ash of the fire sacrifice smeared all over his body (just like an ascetic, indicating that he is their great icon and patron deity of ascetics) (93)."

The *Mahopanishad* of Sam Veda tradition, in its Canto 1, verse no. 7 describes that Shiva was born from the forehead of the Viraat Purush, the macrocosmic, invisible and all-inclusive gross body of Brahm, the Supreme Being.

The *Panch Brahm Upanishad* of Krishna Yajur Veda, verse no. 41 espouses that Shiva lives in the heart of the creature as an embodiment of 'Sat-Chit-Anand', i.e. as his Atma—"Shiva, as Sat-Chit-Anand personified, always lives in the heart. He is a constant witness of all that is happening. That is why the heart is regarded as the

doorway to liberation and deliverance from the traps that have been laid out by this delusory and cunning world of artificiality to ensnare the creature in its tentacles.”]

22. Those who live in Kashi and only discard waste from the body in the form of stool and urine (i.e. eat and sleep, without worrying for their spiritual welfare, or doing any worthwhile work and spend their time idling around), those who spend their time and life here seeking alms and donations, those who do not wear the sacred Bhasma or the Rudraksha beads, those who do not fast on Mondays, those who do not worship the various stars and my image in the form of Lord Vishwanath Shiva (literally the Lord of the world), those who do not do fire sacrifices and offer oblations to the sacred fire, those who do not do Japa of the five-letter Mantra of Shiva (Namaha Shivaaye), and those who do not offer their obeisance to the God known as Bhairav (one of the names of Shiva)—such people undergo immense sufferings that is equivalent to the one undergone in the most horrible of hells. This suffering is caused by my female attendants known as Bhairavis, as it is meant to give such sinful people punishment for their sins and misdemeanors as they have violated the sanctity of my edicts. This is also done by them to ensure that all the misdeeds done by such unscrupulous people are neutralized because they undergo punishment for them in the form of physical sufferings while they are alive.

By the time they die, I ensure that they are thus cleansed of all their spiritual faults, impurities and taints. As a result, instead of being condemned to hell they are provided with Mukti (liberation and deliverance) from their torments; they find my abode; they attain me. [When a creature has already undergone punishment while alive by being tormented by Lord Shiva’s attendants as narrated above, sinful people do not have to suffer any longer in hell because they have already suffered on earth. There can not be two punishments for any given crime. So, in this way the Lord ensures that his devotees do not have to suffer in hell for their sins and misdemeanors, but find salvation and emancipation.]

If someone discharges sperms or passes urine and stool inside the sanctum of a shrine, the spirits of his dead ancestors are made to partake of it. [That is, it is a most horrible, obnoxious and offensive act to indulge in sex or passing excreta in a temple. If one does this, his ancestors are made to eat it, instead of the offering of food that is usually done by a descendant for his ancestors.]

When such sinful people die, the Bhairavs (the ferocious attendants of Shiva), who have dark and reddish countenance (i.e. who are ferocious and fearful), make his body fall on their spears, throw it in a blazing fire pit, and inflict many other types of torments to it. [That is, the body of such a sinful man is impaled by Bhairavs as a punishment. The body is scorched and made to undergo immense pain and agony equivalent to being burnt in fire, which in practical terms means that such a man suffers from high fever, some grave skin disease, or burning sensation in his external and internal organs. He is subjected to great sufferings that are like the one suffered in hell.]

Hence, one must be extremely careful while they live in this holy place known as Kashi, and abstain from unscrupulous deeds and unrighteous actions because the entire place is deemed to be my holy abode in a symbolic form. No sins are forgiven here.

This is the great Upanishad which describes my form as the Lingam—the symbolic representation of my divine cosmic form. Amen! [22].

Chapter 25

Ganpati Upanishad/Ganpatu-panishad

This Upanishad is dedicated to Lord Ganpati (also known as Lord Ganesh), the God who is offered worship first in any religious ceremony as he ensures its successful completion and obtaining of desired fruits by the worshipper.

It is propounded herein that Lord Ganpati resides in the inner-self of all living beings as their Atma, the soul and the pure consciousness. It then goes on to explain the meaning of the word Ganapati, how to meditate upon the Lord, the Mala-Mantras dedicated to him which are used to turn the beads of the rosary while doing Japa (repetition of the holy Mantras), the spiritual rewards of such meditation and contemplation, some special Mantras of the Lord which help the worshipper to fulfill his desires and attain fruits of his efforts, the benefits of reading this eclectic Upanishad, and the rules to be followed while doing so as well as for preaching this Upanishad to others.

The visible form of Lord Ganpati has also been described in this Upanishad (verse no. 11-14).

-----*****-----

----Shanti Paath---

1. OM Salutations! I bow most reverentially to Lord Ganapati¹.

[Note—¹Lord *Ganapati* is also known as *Vinaayak*. Other names are the following:— Lord Ganesh (refer verse no. 8); Ekdanta or the Lord with one tusk, Vakratunda or the Lord with a bent trunk (refer verse no. 10); Vraatpati or the one who is the chief amongst the Gods, Ganapati or the chief of the attendants of Lord Shiva, Pramathapati or the chief of a special category of attendants of Lord Shiva, known as Pramaths, who give immense misery to those who are sinful, Lambodar or the one with a big abdomen; pot-bellied, Vighna-Vinaayak or the one who destroys all hurdles and misfortunes, Sri Varadmuti or the one who is an embodiment of blessings and grants whatever boons one desires, and Shiva-sut or the son of Lord Shiva (refer verse no. 15).

The Lord derives his name Gajaan or Gajpati or Gajamukh from the root word 'Gaj' meaning an elephant, and 'Ja' meaning an origin or birth. Hence, these names indicate that the Lord has taken birth in a form that has the head and body like that of an elephant. The elephant head stands for the macrocosm, while the rest of the body which resembles that of a human stands for the microcosm. These two aspects of this creation are not separate from one another but form a composite unit just like the head and the body of Lord Ganesh are not separate from one another but form one composite body of the Lord, though the head represents an animal (an elephant) and the rest of the body represents a human being.

In other words, one is regarded as learned, wise and enlightened only if he is able to see the Supreme Being even in the oddest and the most unconventional form of life in this creation. One must see the Lord in a healthy man as much as in a deformed

and a handicapped individual; one must see the Lord in an animal as much as in a human form.

Another connotation is the following—the word ‘ga’ implies ‘gati’ or fate and destination of creation, and ‘ja’ means birth or origin. Hence, the word ‘Gajpati’ means the Lord from whom the rest of the creation has taken birth, and in whom the creation would finally collapse and merge at the end.

One of the sub-Purans or Up-purans, known as ‘Mudgal-puran’ which is named after sage Mudgal is dedicated chiefly to the narration of the nine main incarnations of Lord Ganapati, or Lord Ganesh who is the son of Lord Shiva and Parvati, and is the chief deity who is worshipped first during any religious ceremony or auspicious activity. This Up-puran was probably written between 900-1100 A.D. The nine incarnations of Ganapati mentioned in this sub-Puran are the following—Vakradanta, Ekdanta, Mahodar, Gajaanana, Lambodar, Vikat, Vighna-raja, Dhumra-varna, and Yoga. Besides these nine incarnations, it also lists 23 more forms of Lord Ganesh.

He is said to be the wisest and most honoured of the Hindu Gods and is always worshipped in the beginning of any endeavour or enterprise, whether it pertains to the mundane worldly affairs or to the spiritual realm. This is done to invoke his blessings which preempt any evil forces from throwing a spanner in the wheel of the successful completion of the exercise.

The two wives of Lord Ganapati are said to be Buddhi and Shiddhi who are personifications of the virtues of intellect and the glories that come with achievements. The *Tripura Tapini Upanishad* of the Atharva Veda tradition, Canto 3, verse no. 15, describes the Mantra of Lord Ganesh, while Canto 4, paragraph no. 12 describes its importance for the worshipper.

The Mantra is “Ganaanam Twa Ganpatim Havaamahe Kavim Kavinaamupasra-vastabham; Jyestha Rajam Brahanam Brahmanaspata Aa Naha Srinva-annutubhiha Seed Saadanam”. [Briefly it means—‘I pay my obeisance and respect to Lord Ganesh who is the most senior amongst all the attendants of the Lord and even the Gods. He is most exalted, wise and learned. He is like the biggest king or emperor amongst those who are enlightened about Brahm, and is Brahm himself personified. There is no one better or senior than you. Be gracious upon me; be pleased with me. I bow before you most humbly and submit myself before you.’]

When this hymn is being said, the worshipper should prefix and suffix it with the Beej Mantra of Ganesh, which is the Sanskrit letter ‘Ga’ (as in gum) with a Bindu (dot) on top, and pronounced as ‘Gam/Gan(g)’ (pronounced as *gum* or *gun(g)*).]

Now let us understand the symbolism of the various parts of this God. His *large ears* imply that the Lord hears everything, from every corner, and from everyone; the Lord is extremely receptive and gathers information and knowledge from all available sources. He is a good listener, a virtue that makes him a good teacher, because one has to learn first and it is only then that he can teach others. The large size of the ear that resemble a winnow-basket or a hand-held fan indicate that the Lord is able to blow away useless pieces of information and accept only the useful ones like the case of the winnowing basket or the hand-fan that is used to blow away chaff and retain the grain.

His *large head* stands for great intellect and mind.

He has *two tusks*—one that is full stands for the Truth that is perfect, complete, priceless and beautiful. The other tusk that is broken indicates an imperfect world that is incomplete, worthless, and not as good as it seems to be. Since the two tusks are part of Lord Ganesh’s body, the implication is that both the Absolute Truth as well as the not-so-absolute truth is a part of the universal whole known as Brahm. In other words, the perfect world of spiritual truth represented by the full tusk, and the imperfect world of material sense objects represented by the broken tusk are part of the same universal Truth known as Brahm. The fact that the intellect helps one to discriminate between the right and the wrong only when there is a choice is indicated

by the two tusks—one that is full indicates the correct and the straight path, and the one that is broken implies the crooked and the wrong path.

The *bent and long trunk* has the following connotations—(i) it stands for OM, the cosmic sound that reverberates ('trumpets') in the ether that fills the space of the sky where the entire creation is harboured; (ii) since the trunk emerges from the head of the elephant and it can uproot big trees and clear the path ahead for the elephant, the implied meaning is that the Lord employs his mind and intellect to get rid of the greatest of delusions and ignorance and other spiritual obstacles or hurdles, no matter how crooked they may be, that come in the way of seekers of Truth.

His *wide mouth* indicates a good appetite, and this stands for his ability to accept a wide range of knowledge. It also means that the Lord can speak on a wide range of topics with the greatest of ease and with the highest level of erudition and expertise at oratory.

His *big belly* stands for his endless appetite for knowledge and wisdom which he assimilates with ease. Being a personified form of Brahm, the Supreme Being, it also means that the Lord harbours the entire creation inside his own self. His big belly stands for the immense size of the universe.

Ganesh has *four arms* indicating the four components of the Anthakaran, called the inner-self. These are Mana (mind), Buddhi (intellect), Chitta (sub-conscious) and Ahankaar (ego, false pride etc.)

One of his hands holds a *Paasha (snare; rope)* which stands for worldly attachments and entanglements that the Lord is able to control. The second hand holds an *Ankush (goad)* which stands for the ability to exercise control over the sense organs and natural urges. The third hand holds a *Modak* (a ball of sweetmeat) which stands for the spiritual rewards. And the fourth hand is held in the *Var Mudra* which is used to bless his devotees and give them fearlessness.

His mount is a *small mouse*. The mouse is notorious for stealing grain and ruining the store. Hence it is a metaphor for all the evil and negative qualities in a creature that are demeaning for his soul and lead to his ruin, and the fact that the Lord sits on the mouse shows that the Lord helps one to overcome them; or the fact that the Lord is able to overcome and subdue all the negativities of creation. The 'small' size of the mouse indicates that even a small negative trait in us can rob us of all the other good we have like the small rat can ruin the greatest of harvest or a huge granary.

The mouse is fond of sweets and grains. This indicates that the Lord is fond of good virtues and qualities of creation, and he searches them out from all the corners of creation like the mouse that goes on rummaging for grain and sweetmeats throughout his life.]

2. You are an evident embodiment of the eclectic virtues that are collectively known as 'Tattwa', the essence and the basis of everything that is known as the 'Truth'. [This observation refers to the fact that Lord Ganesh is a personified form of the supreme transcendental Brahm. Brahm is the only ultimate and absolute Truth of creation. See below.]

You are the only one who is the 'Kartaa' or doer or creator of everything. You are the only one who is the 'Dhartaa' or sustainer and protector of everything. You are the only one who is the 'Hartaa' or the eliminator and the concluder of everything. [That is, you are a personified form of the Trinity Gods represented by Brahma the creator, Vishnu the sustainer, and Shiva the concluder. In this respect you are a personified form of the Supreme Being whose manifestation these three Gods are.]

Indeed it is you who are a personified form of the supreme transcendental Brahm in all these forms.

It is you who is manifested in the form of the Atma, the pure conscious 'self', the 'soul', of the entire creation.

[The word Atma and Tattwa refer to and indicate the same thing, and it the 'Truth' of creation. The 'Atma' is the soul of anything in existence, and the 'Tattwa' refers to the essence, the fundamental basis and the reality of anything in existence. They both mean the same as far as the 'Truth' is concerned. The 'Tattwa' of this creation is the pure consciousness without which neither would this creation exist nor would it have any life, meaning and relevance. The pure consciousness is the truthful 'self' of any living being, and it is known as the 'Atma', the soul. Bereft of the Atma or the soul this world would be like a dead body with no life in it.

Therefore, the Atma is the Tattwa of this world and life in it, and the Tattwa is that essence without which the rest of the edifice of creation would be mere falsehood and an illusionary imagination of the mind.] (2).

3. I always speak the truth, and nothing but the truth. I always take the side of truth, and always endorse what is the truth. [In other words, whatever is said in this Upanishad is the truth, and nothing but the truth.] (3).

4. Give your (Ganpati's) protection to me. Give your protection to the 'Vaktaa' (the preacher or teacher). Give your protection to the 'Srotaa' (the audience and those who listen to discourse of the teacher). Give your protection to the 'Daataa' (the giver of knowledge, true advise, spiritual guidance and help). Give your protection to 'Dhaataa' (the one who creates, protects, sustains and preserves). Give your protection to the 'Anuvaachaan Sishya' (i.e. those disciples who give shape to the knowledge gained by listening to the teacher; those who put into practice or give effect to the knowledge so gained).

Give your protection to me from all directions—from the front, the rear, the north, the south, the top and the bottom. I most humbly beg you to give your constant protection to me from all the directions (4).

5. You are revealed in the form of letters and words that are the basis of eloquent speech and the finest of literature. You are enlightened and wise.

You are blissful and cheerful. You are Brahm personified.

You are Sat-chida-anand (Sat = truthful; Chit = consciousness; Anand = blissful). You are Advaitya (non-dual, unique, one of your only kind).

You are irrefutably the supreme transcendental Brahm personified; there is no doubt about it; it is a self-evident truth.

You are an embodiment of Gyan as well as Vigyan. [That is, you are erudite, sagacious, skilled and expert besides being enlightened, wise and self-realised.] (5).

6. This whole world has come into being from you. It is established in you; you are its foundation, basis and support. It finally collapses and merges in you.

The whole world is your reflection; it is you who is being seen in this world. [The world is your image; it is you who has manifested yourself as the world. This is obviously because you are Brahm personified.]

You have taken the form of the earth, the water, fire, the air and the sky (which are the basic five elements of creation).

The four types of speech known as the Paraa, Pashyanti, Madhyamaa and Vaikhari¹, are your manifestations.

You are beyond the definition of the three Gunas². [The three Gunas are Sata, Raja and Tama.]

You transcend all dimensions and planes of time and space, such as the past, the present and the future.

You have a divine and mystical form which is beyond the definitions that apply to the three types of bodies of all living beings in creation, i.e. the gross body, the subtle body and the causal body³.

You are established in the Mooladhar Chakra⁴; you form the basis that supports the body and provide the energy that sustains it.

The three forms of Shaktis, divine powers and dynamism of creation, known as the Icchaa Shakti, the Kriya Shakti, and the Gyan Shakti⁵, are nothing but your own manifestations.

Ascetics always meditate and contemplate upon you.

It is you who are manifested as Brahma (the creator), Vishnu (the sustainer), Rudra (the concluder), Indra (the king of Gods), Agni (Fire God), Vayu (Wind God), Surya (Sun God), Chandra (Moon God), Brahm (the Supreme Being), Bhu (earth), Bhurvaha (the sky), Swaha (the heaven), and OM (the ethereal word representing Pranav and cosmic Consciousness). [This represents the all-encompassing cosmic form of Lord Ganapati, a form which is that of the transcendental Supreme Being.] (6).

[Note—¹(i) *Paraa*—the first type of speech which deals with the knowledge of that entity which is beyond perception and which cannot be seen; to speak about things which are beyond normal sight and knowledge; to speak about paranormal things that are beyond comprehension and range of perception. The knowledge enshrined in the Upanishads and Vedas dealing with the knowledge of the supreme, transcendental, eternal, imperishable and infinite Brahma, knowledge which can be known only by rising above the mundane plane of existence and acquiring spiritual powers which are collectively called ‘Paraa Gyan’. (ii) *Pashyanti*—the second form of speech refers to speaking about things that are visible, perceived and understandable. For example, seeing Brahm in the form of the physical world and narrating about this form of knowledge that is visible, tangible, accessible and verifiable. (iii) *Madhyama*—literally means ‘medium, median’. This refers to speaking softly and mildly, to speak pleasantly and sweetly, to speak inarticulately and in a low voice that is difficult to easily comprehend. It also refers to a speech that follows a medium, central path, not too extreme to the right or to the left. It can veer on either side according to circumstances, e.g. using words which have double-edged meaning. These words, for an example, can show vehement anger as well as can be used just to show mild reprimand or reproach. Similarly, they can show love and endearment which may have deeper and sincere meaning, or may be simply superficial. In the context of the Upanishad, it refers to the ‘median path to Brahma’, a path well-balanced and judicious, empirical and rationale. (iv) *Vaikhari*—that voice and sound which is loud, clear, robust and vigorous, symbolizing clarity of thought, firmness of conviction, exemplary confidence, energy and vitality. It is an epithet for Goddess of speech, Saraswati.

These four types of speech have been described in Saraswati Rahasya Upanishad of Krishna Yajur Veda tradition, verse no. 23. To quote—“The faculty of speech is divided by experts into four types or aspects—(1) *Paraa* (which refers to speaking about things which are beyond normal sight and knowledge, to speak about paranormal things that are beyond comprehension and range of perception); (2) *Pashyanti* (which refers to speaking about things that are visible, perceived and understandable); (3) *Madhyama* (to speak softly and mildly, to speak pleasantly and sweetly, to speak inarticulately and in a low voice that is difficult to easily comprehend); and (4) *Vaikhari* (to speak in a clear, loud and articulate way symbolising clarity of thought, firmness of conviction, exemplary confidence, energy and vitality).

Those who are experts and wise know all these aspects of speech. Out of these, the first three, viz. the Paraa, Pashyanti and Madhyamaa, are established in the cave-like heart. [This is to indicate that unless one is articulate in his speech, unless one speaks out loud and clear what he wants to say, and unless he is honest in whatever he speaks all his knowledge would remain confined to the deep cave of his heart, and the rest of the world would not be able to see what is hidden in this dark cave. No one would be able to know what is concealed in one's heart if he is not honest and forthright in what he says.] They are not revealed.

Compared to them, the Vaikhari speech is loud and clear; it helps one to articulately say what is in his mind and heart. It is this fourth form of speech that is employed by a man to express himself (23)."

²The *three Gunas*—The three Gunas are called Sata Guna, Raja Guna and Tama Guna. They have been described briefly in the following Upanishads of this volume:—(i) Chapter no. 6 titled the Brihjjabal Upanishad, Brahman 3, verse no. 1, note no. 2; (ii) Chapter no. 13 titled the Ram Purva Tapini Upanishad, Canto 4, verse no. 64, note no. 1; and (iii) Chapter no. 22 titled the Devi Upanishad, note of verse no. 4.

³The *three types of bodies* of a living being are the following—the gross body consisting of the sense organs of perception and action, the subtle body consisting of the mind and the intellect, and the causal body consisting of the pure consciousness known as the Atma or the pure self of the creature.

They have been described in detail in a separate

⁴The *Mooladhar Chakra* is the subtle energy center at the lowest part of the abdomen, and it is said to support all the organs in the body, forming the virtual foundation of the body. It has been elaborately described in the Upanishads dealing with the philosophy of the 'Yoga'

The 'Mooladhar Chakra' is located between genitals and anus in the area called the perineum. It is the site of the symbolic Shiva Lingam (Yogshikha Upanishad, Canto 1, verse no. 168; Canto 2, verse nos. 9-11; Varaaha Upanishad, Canto 5, verse no. 50) and the route through which the Apaana wind finds its entrance in the Kundalini (Yogshikha Upanishad, Canto 2, verse no. 13). It is also here that the ascetic hears the Naad. It is said to be a symbol of Shakti or the dynamic powers of Shiva principle (Yogshikha Upanishad, Canto 2, verse no. 8, 11-12 and Canto 3, verse no. 2; Varaaha Upanishad, Canto 5, verse no. 50).

⁵The word *Shakti* broadly means strength, powers and potentials that a person possesses. The concept of Shakti in the context of metaphysics refers to the one dynamic cosmic force of Truth known as Brahm expressing itself in three different ways because of the different equipments used for such expressions—viz. the body, the mind and the intellect. The three Shaktis are not actually different from one another but compliment each other because they have one origin and springs forth as the dynamism of the transcendental Truth and the absolute Reality known as Brahm. Knowledge possessed by Brahm is expressed through the equipment of the intellect, the desire to use this knowledge and put it into effect is done by the mind, and the actual action to give effect to the desires is taken by the body. If one component is removed, the entire setup wouldn't function just like it is necessary to have the full system in order to make the computer work.

These cosmic dynamic forces or powers of the supreme transcendental Truth are expressed in many forms, such as the powers of the mind and intellect, collectively called the 'Chitta Shakti', which is very powerful but not visible par se, and the cosmic powers that have unleashed the creation which are visible and manifested forms of those powers of the mind because the world itself is a creation of the mind of Brahma, the creator. The divine powers of the supreme transcendental Being called the enigmatic Brahm have been revealed, from time to time, as the various Goddesses, who are also called Shaktis for the simple reason that they represent these magnificent and unique virtues and powers of the supreme Being.

Let us analyse them one by one:—

(i) *Chitta Shakti*—The word *Chitta* refers to the faculty of reasoning and thought of the mind-intellect complex; the ability to pay attention and fix concentration upon a chosen subject which leads to understanding and a sharp memory; the conscious intellect as well as the sub-conscious mind; the powers of discrimination, understanding, paying attention, memorizing, and the ability to recollect and store information that are characteristics of the conscious powers exhibited by the mind and intellect apparatus; the sub-conscious and memory, along with its power to remember anything as depicted when the man involuntarily reacts to any given situation depending upon his memory-bank; the ability to concentrate and focus the mind on anything. (The concept has been elaborately described in Chandogya Upanishad, canto 7, section 5; Sanayso-panishad, canto 2, verse no.42-46).

The word *Shakti* means power and authority, potentials and energy that any entity possesses. Therefore, the combined stupendous powers exhibited by 'Chitta' are called Chitta Shakti.

Chitta is an integral *component of the Antahakaran* or the 'inner self' of a living being. This has been described in—(a) Krishna Yajur Veda's Shaarirako Upanishad of, verse no. 4; Tejobindu Upanishad, Canto 5, verse nos. 101-102; (b) Shukla Yajur Veda's Paingal Upanishad, Canto 1, verse no. 9, Canto 2, verse no. 3; Trishikhi Brahmin Upanishad, Canto 1, verse no. 6; Subalo-panishad, Canto 9, verse no. 14.

(ii) *Kriya Shakti* which refers to the power of the gross physical body to act as per wishes of the mind and intellect. It is the Kriya Shakti which enables the supreme Authority to carry out its wishes through the organs of the body by taking various actions and doing different deeds. It is the ability of the body to actually do the deeds or take the actions and bring them to fruition. It also represents the ability to enjoy the results of doing such deeds and actions taken by the creature. The word also refers to being active and enterprising and the opposite of being lethargic and indolent. It is the actual ability to carryout his plans to their successful completion, i.e. to do deeds, to take actions and enter into enterprise, because simply sitting and procrastinating endlessly wouldn't give success unless there is assiduous activity and diligent effort, no matter how wise a man is and how determined he might be. The body is prompted into taking action by the desires and aspirations originating in the mind and intellect complex. If these desires are world-centric, then our actions and deeds would be also world-centric and so would be the result. This is because every activity gathers its quality from the texture of the desire that has prompted a particular action or deed. So, when the desire is to enjoy the outside world and its sense objects, the deeds and actions become entrapping and the cause of all world related miseries. On the other hand, if the desires are auspicious and noble, the same deed and action would become an instrument for spiritual upliftment as well as liberation and deliverance. In this context, the term *Karma Yoga* would be to coordinate the effort of the body and the mind not towards fulfilling worldly aspirations that would be ensnaring and enslaving in the long run but to divert them towards the divine goal of spiritual liberation and deliverance. And the tool in this endeavour would be to have auspicious, noble and righteous desires, aspirations and wishes, collectively called the different Vasanas or Ichaas inherent in a man, instead of the worldly ones. Once the desires are purified and chastened, the activities and deeds to fulfill or accomplish those Vasanas or Ichaas are purified and chastened proportionately. At its height, the total renunciation of desires for enjoying anything related to the external world of sense organs and their respective objects is called 'Vairagya'. This Kriya Shakti is more developed in those people who have a predominance of the Raja Guna or the second category of three basic qualities that decide the habits, temperaments and nature of any man. The Raja Guna makes a man more inclined towards enjoying the sense objects of the world and remain engrossed in the activities related to the gross world.

(iii) The *Ichha Shakti* relates to the power of the mind to have or make wishes, desires, aspirations and the determination to fulfill them. It is longing for anything, wanting to possess it any cost, and then endeavouring to acquire it. It is a precursor to

Karma Shakti. It is only when one wishes to do anything and has the determination to do it that he actually goes about doing anything at all, strives hard to get success in it, and then would like to enjoy the fruits of his labour. It is closely related to *Bhakti Yoga* inasmuch as when the Ichhas (desires) are turned away from the world and hooked onto the search for the Truth and Reality with devotion and sincerity of purpose, it helps the man to turn away from the entrapping world of delusions and artificial comforts towards the world of truth and reality, i.e. towards his true 'self', the pure consciousness. The word 'Bhakti' means to be sincerely committed and devoted to anything, any cause, any principle, any doctrine or any entity. In this case, the devotion is towards the supreme transcendental Truth and the absolute Reality, whether known as Brahm or as the Atma. Bhakti Yoga therefore means a devoted and committed approach that coordinates the desires and actions in such a way that they are diverted to realisation of the supreme Truth known as Brahm instead of the mortal and perishable world of delusions and entrapments.

(iv) The *Gyan Shakti* is related to the stupendous powers and authority possessed by 'knowledge, wisdom, erudition, sagacity and enlightenment', and the instrument that implements this authority and power is the intellect. Gyan is empowerment, because without knowledge the mind and body would work like those of animals. Therefore, Gyan Shakti is the powers, potentials, authority, strength, respect and empowerment obtained as a result of acquisition of knowledge, wisdom, erudition, enlightenment, sagacity, scholarship and expertise in any subject. This Shakti represents the dynamic powers and potentials that are a natural accompaniment of these grand qualities. This is called Gyan Shakti simply because merely wish and determination wouldn't suffice if a person does not have the required knowledge and skill, the necessary expertise and level of wisdom required to accomplish his objectives successfully. In this context, *Gyan Yoga* would be to divert the diligence with which a man applies this knowledge, wisdom, erudition and skills to acquire the objects of this material world and get acclaim and applause for his expertise, knowledge and wisdom to achieving success in uplifting himself and realising the ultimate goal and truth of this life and existence, and freeing himself from the clutches of delusions which have tied him down through numerous lives to find final liberation and deliverance for his soul. Gyan Yoga endeavours to channelise one's knowledge into auspicious avenues and inspire the creature to make efforts relying upon the knowledge and wisdom he possesses to bring about a union between the individual creature's soul and the cosmic Soul and Consciousness known as Brahm so that ultimate emancipation and salvation is obtained and the cycle of delusions, birth and death and their endless horrors are got rid of. Therefore, Gyan Yoga entails diligent study and pursuance of the Truth, turning inwards and upwards instead of outwards and downwards, to separate the non-truth from the truth like separating the grain from the chaff, and finally coming to grasp with the eclectic concept of 'truth and absolute reality' of the 'self and the Atma', of 'Brahm and Moksha (final and ultimate liberation, deliverance, emancipation and salvation)'.

According to ancient texts, the divine Shakti or cosmic dynamic powers of the supreme Brahm has assumed three forms called the 'three Divine Shaktis. These three forms of the cosmic energy refer to the three forms that the supreme Brahm had taken for the purpose of creation. 'Brahmi' is the energy with which Brahma creates, and its relevant subtle counterpart here is the power to wish and aspire for and expect something. 'Rudrani' is the cosmic energy by which Shiva/Rudra ends this creation, or brings to a conclusion the creation which Brahma had made possible. 'Vaishnavi' is the cosmic energy by which Vishnu sustains and nourishes the creation, and its subtle counterpart is taking actions and doing deeds because without actions and deeds, the creation cannot be sustained. For all these activities—creation, sustenance and conclusion, knowledge, wisdom and intelligence are needed because success in any of these requires the requisite expertise and the ability to use and apply it judiciously.

In other words, Brahma makes this creation possible by wishing to do so in his mind. If the creation is righteous and virtuous, it is sustained and nourished by Vishnu, but if it goes wayward and starts committing evil and sins, Rudra takes charge and uses his energy called 'Rudrani' to destroy that evil part of the creation. Extending this logic further, we deduce that when the evil tendencies in the world will almost eclipse or outweigh the good qualities, Rudra would completely annihilate the creation, but the remnants of good elements left behind will help Brahma to re-start the cycle of creation once again.

The triad of powers and strengths called the *Trishaktis* that a man possesses as an expression of the dynamic forces of Nature are the following—his Kriya Shakti or the power to act and perform deeds, Iccha Shakti or the power to make desires and fulfill them, and Chitta Shakti or the power of the sub-conscious mind. All these Shaktis depend upon the Gyan Shakti or the power of knowledge because without knowledge nothing can be achieved in this world.

Besides these three, the following are also called Trishakti or the potential powers present in a man—(i) to have influence, impact, affect and sway upon others, (ii) to have enthusiasm, zeal, flourish, drive and courage, and (iii) to have a good advise in this world as well as the support of divine intercession or intervention of Gods who should be benign and favorably inclined towards him. Further, the three Goddesses—Kali (the black complexioned goddess of war), Tara, and Tripura also known as Tripur Sundari, are also called the Trishaktis, or the divine cosmic energy which has revealed itself in the form of these three divine Goddesses. These Goddesses are the various manifestation of Parvati, the divine consort of Lord Shiva. Parvati is usually referred to by one single epithet—Shakti—which literally means energy, vitality, strength and powers.]

7. [The Mantra associated with Lord Ganapati will be narrated now.]

First, one should pronounce the letter 'Ga' (as in gum) which is the first letter of the Lord's holy name. To this sound is appended the sound of the first vowel of the Sanskrit language, i.e. the letter 'A' (pronounced as in son; a pen). The next sound is that of the 'Anuswar', the dot put on the letter in Sanskrit to give it the sound that is equivalent to 'um' or 'un(g)' (as in *sum* or *sung* with a silent g).

The resultant Beej Mantra of Lord Ganapati resembles that of the supreme Brahm, which is the monosyllabic Mantra OM. The sign of this Mantra has a dot placed on the top of a half moon or a crescent moon.

Hence, the basic letter representing Lord Ganapati becomes 'Gam' (as in *gum*) or 'Gan(g)' (as in *gun(g)*-ho). It is the Beej Mantra (the seed or root Mantra) for Ganapati. When it is prefixed with OM, the salutary word for Brahm, the Supreme Being, the Mantra for Ganapati becomes 'OM Gam/Gan(g)'.

This Mantra is the Tarak Mantra of Lord Ganapati—i.e. it provides the worshipper with liberation and deliverance. It represents your divine form (just like OM represents the divine form of Brahm) (7).

8. The first aspect of this Beej Mantra 'Gam or Gan(g)' is the consonant letter 'Ga', the middle aspect is the vowel sound of 'A', the final sound is represented by the 'Anuswar' or dot placed on its top, and the conclusion or end of the pronunciation is represented by the Bindu, literally the 'dot' but here represented by the ethereal sound of OM. [OM Gam or OM Gan(g).]

In other words, the Beej Mantra 'Gam' or 'Gan(g)' is invoked by the spiritual seeker who wishes to research about the cosmic Consciousness through the medium of the ethereal word 'OM' that encapsulates the dynamism of the cosmic sound called

Naad that is generated in the ether by the vibrations caused by the cosmic Consciousness.

The ‘Sanhitas’ (a collection of hymns of a single Veda, in this case the Atharva Veda, which have been culled and presented here in the form of the Upanishad) are said to be the medium which help to bring together or establish a union between the seeker and the object sought.

[That is, the scriptures act as selfless and expert guides, facilitators and motivators to help the spiritual aspirant to reach his spiritual goal successfully by not only showing him the correct path but also pointing out to him the various pitfalls to be avoided and precautions to be taken on the way to his destination. They help him also by showing him the available alternative paths so that he can make a wise choice depending upon his mental temperament and natural inclinations, and thus make the spiritual journey all the more easy and convenient for him. In the present case, those who are devotees of Lord Ganapati are provided the best and well-researched path to attain the supreme transcendental Brahm through the medium of worshipping their patron deity, i.e. Lord Ganapati in this case. They will not have to make any especial or separate efforts to seek and attain the Supreme Being known as Brahm, or to seek and attain their spiritual liberation and deliverance elsewhere. They can get both at the same time as they worship Lord Ganapati, but this worship should be done with proper knowledge, erudition, wisdom and enlightenment. They must understand that they are not worshipping any other God but the Supreme Being himself in this form of Lord Ganapati.

Hence, this ‘Sanhita’ of Lord Ganapati helps to establish a union between the individual seeker or worshipper and the Supreme Being in the form of Ganapati whom he worships. This Sanhita brings together the individual soul and the supreme Soul of creation. It helps the individual to attain self-realisation and Brahm-realisation as well as Mukti or Moksha (liberation, deliverance, emancipation and salvation) while worshipping Lord Ganapati who is his patron deity.

The word ‘Sanhita’ has two parts—‘Sangha’ means to be together, and ‘Hita’ means that which provides for good, welfare and well-being. Hence the Sanhita is that scripture which collects and collates all relevant matters that is of spiritual worth for the aspirant but is scattered in the vast repository of knowledge, and present them to him in a coherent and a brief manner so that his path towards his spiritual goal is made easy and convenient, without distortions, schisms and confusions that may arise out of wrong interpretation of the original sources if not judiciously and intelligently understood.]

This is what the Vidya, i.e. the truthful knowledge and wisdom pertaining to Lord Ganesh says (8).

9. The Rishi (the sage who had first formulated this Mantra) is sage Ganak. Its composition pattern, known as the Chanda, is ‘Nichrid-Gayatri’. And its Devta (patron deity to whom this Mantra is offered or who is worshipped through it) is Lord Maha-Ganapati.

This great Mantra is ‘OM Gam’ or ‘OM Gan(g)’. [The full Mantra is ‘OM Gam Ganapataye Namaha’. It briefly means—OM Salutations! I bow most reverentially to Lord Ganapati’.] (9).

10. ‘I know and recognize the essence and the truthful form of the Lord with one tooth (tusk), i.e. the Lord known as Ekdanta. [That is, we know the real truth about the Lord called Ekdanta that he is no ordinary God or some mysterious deity who has

an unconventional and odd form with the head of an elephant having only one tooth instead of two. We know by the study of the scriptures and the wisdom derived by their study that he is none else but Brahm in this form. In this context, refer to the observations made in verse no. 8 above which says that the Sanhitas bring about a union between the individual seeking Brahm and the Lord himself.]

I meditate and contemplate upon the Lord known as 'Vakratunda' (literally one with a curved or bent trunk).

Let this Lord with the tusk show us and inspire us to follow the auspicious and righteous path.'¹ (10).

[Note—¹This Mantra is known as 'Ganesh Gayatri'.]

11. [Verse nos. 11-12 describe the physical form or the image in which Lord Ganapati is worshipped.]

The Lord (Ganapati) has one tusk and four arms. He holds a 'Paash' (a snare) and an 'Ankush' (a goad) in two of his arms, while the third is held in the 'Abhaya Mudra' (the posture that grants perpetual fearlessness to his devotees) and the fourth in the 'Var Mudra' (the posture that grants boon of wish fulfillment to his devotees). He holds a flag with the insignia of a rat/mouse (11).

12. His countenance is red like blood. His abdomen is large (big and pot-bellied). His ears are also large like the hand-held winnowing fan. He is covered in clothes of red colour.

His body is covered by a paste of red-coloured perfume. He is duly worshipped with red coloured flowers (12).

13. [This verse establishes that Ganapati is Brahm, the Supreme Being, personified.]

He is the Lord (Deva) who is always extremely benevolent, merciful and gracious towards his devotees. He is the cause of origin of this world (in his form as Brahm, the Supreme Being). He is imperishable and ever exalted, being immune to demotion, degradation or denigration.

He had revealed himself prior to the beginning of creation. Hence, he transcends Prakriti (Nature) and Purush (the Viraat Purush) alike.

[This is because Lord Ganapati is Brahm personified. Brahm is nothing but the cosmic Consciousness that existed prior to anything coming into being. When this 'Consciousness' decided to initiate the process of creation, its first sign was in the form of Naad or the cosmic vibrations that produced sound. The reference here is to the cosmic Naad which is the closest analogue to Brahm, and which pre-dated the coming into being of the Viraat Purush. It stood for the dynamism of Brahm that was revealed in the form of the cosmic energy of sound.

The Viraat Purush is a revelation of Brahm, and not the other way round. It was from the Viraat Purush that Prakriti or Nature came into being. Thus, Lord Ganapati, as Brahm, goes far beyond the beginning of not only the creation, but even the primary Viraat Purush who is the first macrocosmic, all-encompassing, all-pervading and all-inclusive relatively gross manifestation of Brahm. 'Relatively gross' in the sense that the primary form of Brahm is extremely subtle and sublime, having no forms and attributes, but when creation was to be initiated, this same Brahm transformed into a slightly grosser form known as the Viraat. It is only in relative term that Viraat is called 'gross' in comparison to the supreme transcendental Brahm, for the Viraat Purush in himself is the subtlest form in the creation that was about to be created and unfolded.] (13).

14. The ascetic and spiritual seeker who worships Lord Ganapati with this wisdom, knowledge and erudition is indeed the best and the wisest amongst all the ascetics and seekers of Truth (14).

15. I bow most reverentially to Lord Vraat-pati, the Lord who is the chief amongst all the Gods; he is the chief God in the community of Gods.

I bow most reverentially to Lord Ganapati, the Lord who is the chief amongst all the Ganas (attendants of Lord Shiva).

I bow most reverentially to Lord Pramath-pati, the Lord who is the chief amongst all the Pramaths (special type of attendants of Lord Shiva who are ferocious and inflict severe punishment to sinners).

I repeatedly bow most reverentially before Lord Lambodar (the Lord with a large abdomen), Lord Ekdanta (the Lord with one tooth or tusk), Lord Vighna-Vinaashak (the Lord who removes misfortunes and hurdles in one's path to success), Lord Shiva-sut (the Lord who is the son of Lord Shiva), and Lord Sri-Varad-Murte (the Lord who is an image of boons; the Lord who is a personified form of all prosperity and good fortunes; the Lord who bestows upon his devotees and seekers all material wealth and prosperity as well as good fortunes, majesty, grandeur and fame). (15).

16. This Upanishad belongs to the Atharva Veda tradition. A person who studies this Upanishad becomes eligible to attain Brahm-hood or Brahm-realisation.

None of the hurdles and obstacles can ever create any kind of hindrance for him. He obtains all round enhancements in comfort, happiness, joys, peace and contentedness pertaining to this world as well to his spiritual well-being.

He is freed from the horrible effects of five types of grave sins¹, their spin-offs and attendant consequences.

Reading of this Upanishad in the evening exonerates the devotee of the sins he has committed inadvertently during the daytime, and reading it in the morning does so with the sins of the previous night. Therefore, a person who studies, and reads or recites and studies this Upanishad twice a day is freed from the evil effects of all sins.

He gains the four types of great rewards obtained by a righteous man, such as Artha (financial well being), Dharma (the glory that accompanies propriety, probity, auspiciousness and righteousness), Kaam (fulfillment of all desires) and Moksha (liberation, deliverance, emancipation and salvation). (16).

[Note—¹The five great sins are killing of a Brahmin, drinking wine, theft, having sex with the wife of one's teacher, having lustful feelings for one's daughter, and to keep company of those who indulge in any of these sins.]

17. [Verse nos. 17-19 outline the rewards that come with studying as well as reading or reciting this Upanishad.]

This Upanishad belonging to the Atharva Veda should only be preached to the eligible disciple only, and to no one else. If someone does so, i.e. he preaches it to an incompetent or ineligible candidate out of Moha etc. (i.e. out of attachment for someone, to oblige someone, filial obligations, monetary and other pecuniary benefits, or some kind of social pressure etc.), then such a person falls from grace and is regarded as sinful (17).

18. He who studies, and reads or recites this Upanishad a thousand times is able to fulfill all his aspirations and desires.

A person who gives a ritualistic bath to Lord Ganapati while repeating this Upanishad, he becomes an expert orator.

A person who observes fast on the fourth day of the lunar cycle (called the 'Chaturthi') and does Japa (repetition) of this Upanishad, he becomes extremely Gyani (wise, knowledgeable, expert and enlightened).

This is the sacrosanct edict of the sage called Atharvan (who is regarded as the forefather of the Atharva Veda).

A Brahmin (or any other person) who knows how to do offering of worship to the Lord known as Brahm, the Supreme Being, by the medium of this Upanishad, he never faces any fear; he is never afraid of anything.

He who offers his worship and oblations to the Lord (Ganapati) by using fresh blades of the Durba grass (a dark-green reed named *Agrostis linearis* used for purification and ritualistic purposes)—such a man becomes equivalent to Kuber, the treasurer of the Gods. [That is, he is blessed with wealth and prosperity.]

He who does the fire sacrifice to worship Lord Ganapati by using the chaff obtained from rice grains as offerings to the sacred fire—such a man attains great 'Yash' (majesty, fame, good name and acclaim) as well as great 'Medha' (intelligence, prudence, understanding and wit).

He who does the fire sacrifice to worship the Lord by offering one thousand 'Modak' (sweets that are shaped like small balls, the size of a tennis or cricket ball)—such a man gets all his desires fulfilled; all his wishes and aspirations are realised.

He who does the fire sacrifice to worship the Lord by offering oblations mixed with Ghee (clarified butter)—such a man is able to get everything; nothing remains inaccessible to him. All his aspirations, expectations and hopes are fulfilled; he accomplishes everything in life.

He who initiates eight Brahmins into this eclectic knowledge and makes them an expert in this Upanishad (i.e. who helps in the propagation of this Upanishad and its eclectic philosophy)—such a man becomes as majestic, famed, glorious and radiant as the Sun.

If this Upanishad is repeated (with faith and devotion) on the banks of a great river or in the front of an image (of Lord Ganapati) at the time of the solar eclipse, the worshipper is able not only to harness the energy and the mystical powers of a particular Mantra that he prefers to use but also becomes an expert master in its practical usage for his spiritual welfare. That is, he is able to become an expert in the usage of the Mantra, and is also able to empower himself with the stupendous mystical powers that are associated with the particular Mantra.

He is freed from the greatest of hurdles and obstructions that he might be facing in his life. He is freed from the greatest of sins and their evil consequences. He finds liberation from the greatest of snares that these sins otherwise create for him; he is freed from the terrible consequences of sins committed by him, advertently or inadvertently (18).

19. A person who knows the astounding value, importance and significance, both metaphysical and spiritual, of this great Upanishad, and is aware of its immense mystical powers as outlined herein above is able to know everything; he becomes omniscient. There is nothing that he does not know, or needs to know more.

He acquires such great hindsight, insight and foresight that nothing is hidden from him. Indeed, these are the rewards of studying and teaching this great Upanishad. Indeed, this is what this great Upanishad says. Amen! (19).

-----*****-----*****-----

Chapter 26

Mahavakya Upanishad/ Mahavakyo-panishad

This Upanishad is a short one, having only twelve Mantras or verses. It was revealed to the Gods by Brahma, the creator. It primarily deals with the esoteric knowledge of the divine and the sublime entity known as the Atma, the pure consciousness which is the ultimate Truth and absolute Reality of creation. The Atma, which is inherently immaculate and enlightened, however appears to be veiled in a shroud of ignorance and its attendant delusions, thereby robbing it of its immaculacy, its majesty, its magnificence, its primacy, its pristine purity, its glorious virtues, and its divine character. When one becomes aware of the reality of the Atma, he discovers it to be as splendorous and radiant as the sun which is self-illuminated; the Atma is brilliant like the sun. This Atma is the supreme Shiva principle—i.e. it is the ultimate truth, most eclectic, sublime and holy, and a fount of bliss and beatitude.

The Atma is a personification of the supreme cosmic Consciousness that is also known as Brahm, and therefore it is the Absolute Truth of existence. The Atma is the truthful ‘self’ of all living beings. This ‘truthful self’ as well as Brahm are also known as the Hans, the divine Swan which is employed in the scriptures for an entity that is truthful, pure, holy and immaculate. Therefore, when a man becomes self-realised, he becomes Brahm-realised as well as a personification of Brahm. He then honestly proclaims ‘I am Hans’—i.e. I am a personification of Hans which is a divine bird symbolizing the eclectic virtues that are associated with Brahm as well as the Atma.

This realisation overwhelms the spiritual aspirant as he submerges himself in a high tide of ecstasy and bliss. The Upanishad concludes by highlighting the glories of it, and the immense spiritual benefits derived by reading and understanding it meaningfully.

The Upanishad derives its name ‘Maha Vakya’ from the fact that it preaches the Great Truth of existence, the ‘truth’ of the Atma and Brahm. The word ‘Maha’ means great, and ‘Vakya’ means a saying, an edict, an axiom, or an axiomatic maxim. It teaches and espouses the philosophy of Advaita Vedanta which essentially says that the ‘Truth’ is always one and not more than one, that this ‘Truth’ vis-à-vis this existence is known as the Consciousness, that the Consciousness is an immutable, eternal, constant, universal and uniform divine entity, and that it is known as the Atma at the microcosmic level of creation and as Brahm at the macrocosmic level. Knowledge of this eclectic and quintessential truth is a liberating factor for the creature who is tied in the fetters of ignorance and its attendant delusions. The Atma,

therefore, is the ‘Tattwa’ or the fundamental principle and essence of creation; it is principal aim of all spiritual aspirants; it is the real target that ought to be pursued by all seekers of Truth.

-----*****-----

----Shanti Paath----

Please see appendix no. 1 for the meaning of this Shanti Paath.

1. Once upon a time, the creator Lord Brahma said to the Gods—‘I shall preach to you that truthful knowledge (Upanishad) which is extremely mysterious, esoteric and secret, but at the same time it is extremely divine and spiritually elevating, liberating and enlightening. It involves the knowledge of something so enigmatic, subtle and sublime that it is beyond the reach and comprehension of the mind and intellect, as well as is imperceptible by all other sense organs of the body.

[That is, the divine entity that will be dealt with in this Upanishad is beyond the reach and outside the purview of any of the organs of perception—it cannot be seen by the eyes, it cannot be heard by the ears, it cannot be tasted or described by the tongue, it cannot be smelt by the nose, and it cannot be touched and felt by the skin. Similarly, it is beyond the scope of the mind and the intellect to understand it, imagine it, describe it in words, analyse it.]

The entity that is the subject matter of this Upanishad (known as the ‘knowledge of the truth’) can surely be experienced and witnessed first hand, but it cannot be expressed, defined and taught in words and understood the way one understands things of this material world and its gross objects.

[That is, I will tell you about the mysterious entity known as the Atma which is pure cosmic Consciousness revealed as the ‘self’ of all living beings. The individual’s Atma is a microcosmic form or aspect of the cosmic Atma known as the Parmatma, the Supreme Being and the transcendental Brahm. This knowledge of the divine and the most enigmatic entity known as the Atma is spiritually enlightening and liberating in as much as it frees the creature from the bondages of ignorance, delusions, and their attendant perplexities and entanglements.

But this ‘knowledge’ is not at all like the knowledge that relates to any of the material objects of this physical gross world. It is the ‘knowledge’ that is ethereal and divine in its dimension, and that cannot be taught and learnt like the way one teaches and learns about material sciences, the science of matter that pertains to the things of this world. It is a ‘knowledge’ that provides an intense degree of ecstasy, contentedness and bliss to the knower, a knowledge that leads one to his eternal freedom from all sorts of shackles that had tied him down to the gross body and the equally gross world from time immemorial and from generation to generation.

This ‘knowledge’ is outside the purview of the sense organs of perception of the gross body, as well as of the instruments of the subtle body that are known as the mind and intellect with their magnificent and stupendous abilities that go far beyond the abilities of the gross body.

It is the ‘knowledge’ of the ethereal Atma that is pure cosmic Consciousness, and it cannot be condensed into words and languages. The Atma is to be experienced and witnessed first hand like one experiences the sweet taste of a sweet dish to know what ‘sweetness’ means. Like this instance when one cannot know how sweet a

particular dish is till he tastes it, and even then he is unable to narrate its sweetness or define the term 'sweet' no matter how hard he tries, the knowledge of the Atma is extremely subtle and enigmatic so much so that it is impossible to limit it in words or confine it to definitions and criterions.

The Atma is not a gross material thing like, for instance, a piece of glass that can be held up by a teacher for his students to tell them what 'glass' is. It is also not like wind or air that can be felt when it rubs against the skin. It is also not like the smell of some flower that can be smelt, or the sweet or sour taste that can be tasted, or a sound that can be heard. It is also beyond the reach of the astounding intellectual abilities of the mind. The only way to know the Atma is to experience it and witness its presence not only in one's own self but everywhere else in this existence.] (1).

2. This most profound but enigmatic Upanishad (knowledge) should not ordinarily be disclosed to a layman who is not interested in such knowledge or who is not competent enough to grasp its profundity, depth and extent.

It should be preached or disclosed on the other hand to those who are well-endowed with righteous qualities and possess auspicious virtues, who are introspective and contemplative by nature, and who remain sincere in the service of their elders and teachers (2).

3. A wise man should become absolutely neutral by shutting off the external world by closing both the eyes in a symbolic manner. One of the eyes stand for Vidya, and the other eye stands for Avidya. It is then that he is able to witness the 'self' known as the Atma when all distractions arising from the external world are dispensed with.

[A man sees this physical gross world with his physical gross organ of sight known as the eye. The same thing is seen by two persons, and they interpret it differently. When asked to narrate what they have seen, both would describe the scene in two different ways. The eye sees water in a desert mirage, but everyone knows that it is an illusion. The eye sees the sky as being blue, but the fact is that the sky has no colour. That is, one cannot rely upon even what the eye sees. The eye of one man sees a length of rope as a harmless thing, while the eye of another man sees the same rope as being a snake and makes him terrified. The eye sees that the disc of the moon changes every night, waxing and waning over a period of a month, but the fact is that the disc of the moon remains steady; it neither diminishes nor enhances in size and contour.

So, the same eye can give either a correct knowledge that is known as 'Vidya', or an incorrect knowledge known as 'Avidya'. This is the great paradox of this world.

If a thing is to be really 'true', than it cannot have two meanings or two existences. Therefore, that which is seen by the physical organ of sight known as the eye is misleading and not the truth simply because it changes from man to man.

The 'Absolute Truth' is however different, for it cannot be seen by the two physical eyes that enable a creature to acquire knowledge of the things of the material world—i.e. provide him with 'Vidya', or even mislead him by the smokescreen of delusions and ignorance that makes him believe in things that have no existence—i.e. provide him with false knowledge called 'Avidya'.

The knowledge of the eternal and universal 'Absolute Truth' is known as 'Gyan', which means wisdom and enlightenment. This pertains to the spiritual world that is beyond the purview of the physical world. It comes with experiencing the Atma by self-realisation. It translates into spiritual bliss and ecstasy on the one hand, and spiritual liberation and deliverance on the other hand. This insight comes with the

third eye of Gyan, the eye of enlightenment and wisdom that makes a man 'see' the eclectic truth of the Atma which is nothing but pure cosmic Consciousness and the absolute spiritual Truth of creation.

There is another way of understanding the terms 'Vidya' and 'Avidya' in the field of metaphysics. Since Vidya means knowledge that can be verified and proved, it relates to the Jagrat state or the waking state of consciousness when a creature is wide awake and actually sees and witnesses the physical world. All his organs of perception, i.e. the eye, the nose, the tongue, the ear and the skin, see, smell, taste, hear and feel the existence of the world in practical terms that cannot be denied. For all practical purposes, this knowledge is Vidya because it is for real and not imaginary.

When the same creature goes to sleep and begins to dream, he sees another world which seems to be as real as the physical world of the waking state, but in actuality it is imaginary, and therefore illusionary. This world is seen and witnessed by the creature in the state of existence of consciousness known as Swapna or the dreaming state, and the knowledge acquired now would be 'Avidya' because it is not the real thing.

Beyond these two states is the third state of existence, and it is called Sushupta or the deep sleep state. Here, the Atma takes over. The knowledge that is acquired now pertains to the world of the Atma which is pure cosmic Consciousness. Whereas the characteristics and virtues of the two previous worlds of the waking state and the dreaming state are subjected to constant change, those of the world of the Atma remain constant and steady. Anything that changes cannot be 'absolute and true', and therefore it follows that the knowledge of existence that comes when one knows about the Atma is the real knowledge which is called 'Gyan' (true wisdom and enlightenment).

This knowledge of the Atma comes with the third eye of Gyan which supersedes the two eyes of the body which metaphorically stand for the physical knowledge of the gross world, called Vidya, and the imaginary knowledge caused by delusions, called Avidya.]

When an enlightened and wise One (a man; a living being; a creature) shuts off the world by closing his eyes in a symbolic manner—i.e. when he stops paying any attention to the delusory world marked by a predominance of the Tama Guna (which the meanest of the three Gunas or qualities in creation) and its entangling temptations and negative effects—he is deemed to have freed himself from the deluding sights that arise out of the dominance of such Tama Guna, accompanied by their negative effects, in this world. Hence, he becomes eligible to see the 'truth' in an untainted and undistorted form; he sees the 'reality' without the interference of Tama Guna which would have otherwise distorted the sight of the reality and truth.

[Just like the case of a man finding immense peace of mind and stability of thoughts by shutting his eyes so that he is not distracted by the myriad problems and miseries that have their origin in the material world around him, or is torn between many choices and temptations which create havoc with the calmness of his mind and composure, a wise man who shuts off the external transient world by turning his mind and sub-conscious away from it, and rather focuses his attention inwards on the steady world of the pure conscious 'self', prevents himself from being sucked in the vortex of doubts and confusions as to what is true and what is not, what is liberation and what is entanglement, what cause comfort and happiness on the one hand, and discomfort and misery on the other hand. Such a wise, erudite and enlightened man is the one who finds real peace and bliss. He remains submerged in meditation and

contemplation; he remains engrossed in the thoughts of the pure conscious Atma to the exclusion of all other thoughts. He is neither perturbed by the delusions created by the world, nor is he too obsessed about finding liberation and deliverance. The reason is that he knows that the world has no pith and meaning in it, and therefore it is futile running around pursuing it. He also knows that the Atma is eternally liberated, and therefore there is no question of finding 'liberation' or Moksha for the Atma. He discovers the stellar qualities and divine virtues of the Atma that is marked by eternal peace and tranquility, the Atma which is eternal, imperishable, infinite, sublime, ethereal, holy, immutable, all-pervading, all-inclusive, omnipresent and omniscient.

The Atma is the pure consciousness that resides in the gross body as the 'truthful self' and the real identity of all the creatures (living beings). This Atma is eternally free and unbound, and therefore the question of the creature finding liberation does not arise. The natural corollary is that the notion that the creature needs Mukti is itself erroneous and misplaced. Therefore all the worries and consternations that the creature had about his fate and liberation prospects are automatically eliminated. So, when a creature becomes knowledgeable about the Atma and what constitutes his 'self', he becomes instantaneously liberated and delivered from the fetters of ignorance and delusions; he finds emancipation and salvation even without making any other effort to achieve this spiritual goal. The reward comes in the form of bliss and ecstasy which are natural accompaniments of self-realisation, or of acquisition of Gyan.

Since the Atma is the ultimate Truth of existence, it is also the 'Tattwa' or the quintessence of creation. Just like nothing can exist in this material without the basic unit known as the Atom, no life is possible in this existence without the Atma. Therefore, a man who has known the Atma has also known the Tattwa, and thus becomes a 'Tattwa-Gyani'—one who is well-versed in the essence and the fundamental truth of creation.] (3).

4. The Atma principle is enveloped or shrouded in a dark veil of ignorance. This veil prevents the truth of the Atma from being known; it prevents its shine and glory from coming to the fore. Thus, lack of correct and truthful knowledge of the Atma is known as 'Avidya'—or lack of Vidya. This basic ignorance is the cause of the existence of the entire creation in its gross form, extending from the mortal world consisting of mobile and immobile entities right up to the immortal entity known as Brahm, the Supreme Being.

[Basically, this paragraph means that the notion of 'duality'—known as Dwaitya—is wrong, as the cosmic Consciousness, which is the actual reality in creation, has no name and form, it is uniform and universal. It is the same Consciousness that is, on the one hand, known as Brahm at the macrocosmic level of creation, and as the Atma residing in the creature's body at the microcosmic level of creation on the other hand. Lack of this knowledge is known as 'Avidya'.]

It is due to the darkness or delusions created by ignorance that one is led to erroneously believe that there exists a difference or separation between Brahm and the rest of the things in this creation.

All the Vedic rituals and their associated activities are done with some fruit or reward in mind. They are done in the physical world and involve material things. They presume the presence of so many Vedic deities to whom offerings and oblations are made during sacrifices and other obligatory religious duties. All these presume that there is a performer of rituals, a deity who is worshipped, and there is a set pattern and prescribed manner by which the former can access the latter. This

triumvirate is based on 'Avidya' or lack of truthful knowledge of the reality in creation that stresses on the eclectic principle of 'non-duality'—that there is only one uniform Consciousness in this creation, that it is the same non-dual Brahm which exists in all the forms that exist in this creation, that it is actually Brahm that is being worshipped in so many forms of deities, that this Brahm is nothing but the cosmic Consciousness that also resides inside the worshipper's own bosom as his Atma, and that no external forms of worship is needed to access this Consciousness because it is to be found inside one's own self and no where outside. All forms of physical rituals as prescribed by the Vedas are therefore merely routine mechanical activities of the mundane world, having no bearing on a person's spiritual welfare (4).

5. Till the time one is not fully enlightened as well as firmly and entirely convinced that the Atma, the pure conscious 'self', is not something inane, gross and shrouded in the darkness of ignorance and delusions, but is an entity that is most sublime, subtle, immanent, pristine pure, holy, immaculate, divine, self-illuminated and radiant because it has its origin in the equally glorious Brahm, the supreme transcendental Divinity, he should continue to pursue the path and practice those principles that would lead him to the acquisition of knowledge of the ultimate spiritual Truth. That is, he must relentlessly continue his quest for the 'Truth' known as the Atma.

'Vidya' (truthful knowledge) is different from and entirely opposite of 'Avidya' (lack of knowledge). 'Vidya' is eternally radiant and splendid like the sun; it is self-illuminated and brilliant like the sun. Everything related to the Vidya has a shine in it; it is accompanied by a halo of brightness and incandescent with divine energy like the sky around the sun that is brilliantly illuminated by the latter. Any body of knowledge that removes the darkness of ignorance and its accompanying delusions from the spiritual horizon of the aspirant is known as 'Vidya', and it is worth pursuing, worth accepting and worth implementing.

Such knowledge would enlighten the aspirant about the supreme Truth and the absolute Reality of creation, and it would always and invariably point to Brahm because there is no other Truth and Reality in this creation other than Brahm, the transcendental Supreme Being. When this knowledge (Vidya) is acquired, the seeker is said to have attained 'Gyan' which is true wisdom and enlightenment of the ultimate Truth (5).

6. The supreme transcendental Brahm (the cosmic Consciousness), which is as life-giving, as splendid and as self-illuminated as the celestial sun, resides in the gross body of every living-being who breathes in the form of the latter's Atma (soul; the 'self'). This Brahm (that resides in the creature's physical gross body as his Atma) is known as the 'Hans' (literally a divine Swan).

This 'Hans' also refers to the breath that comes in and moves out of the creature's body while making a subtle hissing sound while doing so.

['Ha' sound is made when one inhales, and 'Sa' sound is made when one exhales. This is a continuous process. In Yoga Upanishads it is referred to as the silent, steady and continuous involuntary repetition of the 'Hans Mantra' which pertains to the supreme transcendental Brahm. This is sort of involuntary meditation and contemplation done when a spiritual aspirant has accomplished certain level of enlightenment and spiritual achievement. Such an aspirant is not required to specially sit for Yoga at a fixed time or for certain duration of time, as his entire life is spent in meditation and contemplation. He is meditating upon Brahm and the Atma all the time, even when he is asleep or going about his mundane duties in this world. The

reason is that each of his breath is a repetition of the ‘Hans Mantra’ related to Brahm; he is always focused on Brahm. In this context, refer to (a) Krishna Yajur Veda—Shwetashwatar Upanishad, Canto 2, verse no. 6; Canto 6, verse no. 15; Tejobindu Upanishad, Canto 1, verse no. 3-4; Dhyani Bindu Upanishad, verse nos. 24, 61-65; Brahm Vidya Upanishad, verse nos. 16, 20-28, 34, 60-64, 78-79; Yogshikha Upanishad, Canto 1, verse nos. 131-132, Canto 2, verse nos. 9-11, Canto 6, verse no. 20, 35-36, 53-54; Yogtattva Upanishad, verse no. 99. (b) Shukla Yajur Veda—Hansopanishad is exclusively dedicated to explain the concept of the pure conscious Atma by way of using the metaphor of a Hans. (c) Sam Veda—Yogchudamani Upanishad, verse no. 31-35, 82-83, 93. (d) Atharva Veda—Naradparivrajak Upanishad, Canto 5, verse no. 4; Pashupata Brahm Upanishad, Canto 1, verse nos. 4, 12-22, 26-27; Canto 2, verse nos. 1-3.]

When the spiritual aspirant becomes enlightened and self-realised he becomes firmly convinced that his true identity is the ‘Hans’ that is an acronym for Brahm, the supreme transcendental cosmic Consciousness that is the Absolute Truth of creation. That is, he becomes convinced that the ‘Hans’ is none but his ‘true self’; or that ‘he is the Hans (Brahm) personified himself’. [‘Hans So-a-Ham’.]

Meditating upon this Hans makes him enlightened about the vital winds known as Pran and Apaana (which are the two primary winds in his body, the former moving upwards, and the latter moving downwards in the body). This also enlightens him about the importance of breath and its control.

[This is because only when he concentrates his mind during meditation that he is able to hear the subtle sound of ‘Ha’ and ‘Sa’ being made by the vital winds as they come in and go out of the body in the form of breath. This leads him to discover that his Atma, the pure consciousness residing in his gross body as his true ‘self’, and the Pran, the vital wind that makes the sound of Hans, are synonymous with each other. One can’t exist without the other. If there is no ‘consciousness’ or life-awareness inside the body, the latter would not breathe, and if the breath is stopped the body would die automatically, thereby snuffing out consciousness from it.]

Hence, by constant and persistent practice of this eclectic Vidya (spiritual knowledge that is obtained by steady meditation and contemplation) for a long time does one become aware of the presence of the supreme transcendental Atma known as the ‘Parmatma’, the Supreme Being, that is honoured and eulogized by the epithet ‘Satchidaanand’—one that is ‘Sat’ or truthful, one that is ‘Chit’ or consciousness, and one that is ‘Anand’ or blissful.

In other words, when the spiritual aspirant becomes self-realised, he also becomes Brahm-realised. This results in his experiencing the presence of the truthful, the conscious and the blissful Atma in his own inner-being. He becomes enlightened, and this enlightenment means he has attained knowledge of the Absolute Truth. That is, he has attained true Gyan (6).

7. When one becomes self-realised and attains the highest echelons of enlightenment (i.e. he becomes a Gyani), he attains a stature of spiritualism that is as radiant and splendid as thousands of suns shining simultaneously; he becomes fulfilled and an ocean of tranquility, bliss and peacefulness like a huge and fathomless ocean whose water is absolutely calm; and he is fully soaked and completely submerged in the eclectic thoughts of the supreme transcendental Brahm with its accompanying bliss, beatitude and felicity.

This eclectic state of being is not Samadhi (the trance-like state); it is not the sign of attaining success in Yoga either. It is not the dissolution of the mind also.

Rather, it is a sign of establishment of oneness between the individual 'self' known as the Atma with the universal 'Self' known as Brahm. In other words, it is the establishment of oneness between the Jiva, the creature, and the Supreme Being. It is the union of the Atma with the Parmatma, the Supreme Being, that is the final aim of doing Yoga and attaining Samadhi. It is the endorsement and a first hand experience of the authenticity of the great metaphysical quintessential truth of the philosophy of Advaitya Vedanta that deals with the non-dual nature of the Atma and the absolute reality of creation. (7).

8. This state of existence when one has become self and Brahm realised is beyond the reach and purview of Agyan (ignorance in all its connotations) as well as Tama (darkness in all its connotations). It is, on the contrary, self-illuminated, radiant and splendorous as the Aditya (sun).

Those who are steady and consistent in their spiritual pursuit analyse everything having a name and form, patiently and with due diligence, in order to peer behind the external façade and see the sublime and subtle 'truth and reality' that is hidden behind it. It is then that they are able to experience and witness the supreme transcendental Consciousness that is the absolute Truth of creation known as Brahm. It is then that they realise that their own 'self' is the same 'consciousness' that is known as the Atma at the microcosmic level of existence, and the Parmatma at the macrocosmic level. This leads them to be convinced that there is indeed no difference between Brahm and their individual 'self'. In other words, they become one like the Brahm; they are fully convinced of the veracity of the statement 'Hans So-a-Ham', where the term 'Hans' indicates 'Brahm', and 'Ham' indicates their truthful 'self'.

[The self-realised man becomes convinced about the truth and the veracity of the doctrine of Advaitya Vedanta, the philosophy of non-duality. It basically states that 'Truth' is always one, and it is this single Truth that is revealed in all its myriad forms in this creation. To see the world as distinct from this Truth is Avidya, while interpreting it in the context of the Truth is Vidya. Knowledge of this Truth is Gyan.] (8).

9. This eclectic state of existence has been endorsed by the creator Brahma as well as the king of Gods known as Indra who is most powerful and the best amongst the Gods.

A wise, enlightened and self-realised person who knows the eclectic, sublime and divine form of Brahm, and who is fully convinced of Brahm's all-pervading existence and irrefutable truthfulness, is able to attain not only Brahm-hood but also access the Amrit, the elixir of eternity, blissfulness, beatitude and felicity, which accompanies such Brahm-realisation.

This blessed state of spiritual existence is the truthful and correct path leading to one's spiritual liberation, deliverance, emancipation and salvation, and there is no alternative to it (9).

10. In ancient times, the auspicious and righteous Gods had worshipped the eternal and infinite Lord (Brahm) by a symbolic sacrifice that represented the eclectic knowledge of the latter that was gained by the former.

[Knowledge of Brahm is a painstaking exercise requiring intense meditation and contemplation. It is equivalent to doing stern Tapa or penance and austerity, as well as a Yagya or a fire sacrifice involving immense devotion, commitment, spiritual energy and effort. Since the Gods had attained the knowledge of Brahm, they had

attained a superior status in the hierarchy of creation; they had become immortal and exalted as opposed to ordinary mortal creatures.]

This was the first outline or step of the concept of Dharma (the principles of auspiciousness and righteousness) established by the Gods. That is, to seek and realise the ‘truth’ and eliminate all that is deluding and falsehood is the first and foremost requirement in Dharma. This ancient tradition has been followed by great sages and seers.

It is the divine eclectic Brahm whose glories and majesty are being eulogized by ancient Gods and saints; it is Brahm who is held in high esteem by them. It is this Brahm who is pursued and worshipped by them. It is this Brahm who is the ultimate ‘Deva’ or the exalted Lord God known as the Supreme Being (10).

11. ‘I am that eternal essence known as the ‘Arka’ (literally the juice, the essence, the fundamental) that is the basis of everything in creation. [That is, I am Brahm and the cosmic Consciousness personified.]

I am a personified form and the essence that represents the supreme ‘Jyoti’ (literally the ‘light’ representing consciousness and its eclectic knowledge, energy, divinity, sublimity, truthfulness etc.). [In other words, I am the cosmic Consciousness personified. I am fully enlightened and wise. I am truthful and divine.]

I am Shiva personified (i.e. I am most auspicious, beautiful, divine, holy, immaculate, and detached from this deluding creation—the virtues that are encapsulated in the term ‘Shiva’).

I am the Atma which is brilliant and self-illuminated like the sun.

It is me indeed who is the ‘Sukra’ (literally the sperm but here meaning the all-pervading light of consciousness) that infuses life and consciousness in all the creatures of creation.

I am the supreme ‘Jyoti’ (light; consciousness; truth) that illuminates everything in this creation. [That is, I have understood that my truthful form is the Atma which is the pure consciousness that is a universal entity which infuses life in all the living beings in this creation.

I know everything in this world, which is a metaphoric way of saying that the Atma is eternally enlightened and wise, and therefore nothing is hidden from it.]

I am never separate from that supreme Authority characterized by the above virtues; in fact I am that Authority.’ (11).

[Note—Refer also to Krishna Yajur Veda tradition’s Tejobindu Upanishad, Canto 6, verse no. 62. (ii) Atharva Veda tradition’s Atma Upanishad, verse nos. 2, 8, 10-13, 19-22; Pashupata Brahm Upanishad, Canto 2, verse nos. 13-16, 21-25, 31-46.]

12. By reading and studying this Upanishad in the morning (and contemplating upon its great teachings), one is exonerated from the sins committed by him (inadvertently) during the previous night. Similarly, by reading and studying this Upanishad in the evening (and contemplating upon its great teachings), one is exonerated from the sins committed by him (inadvertently) during the daytime.

Thus, by reading and studying this Upanishad (and contemplating upon its great teachings) twice a day, in the morning and in the evening, one is exonerated from the greatest of sins committed (inadvertently) by him at any time¹.

A person who reads or recites this Upanishad during noon time in the presence of the sun is freed from the five great sins² as well as numerous other sins committed (inadvertently) by him.

A person who reads and studies this Upanishad is able to gain the great spiritual reward obtained by reading and studying the four Vedas (because this Upanishad enlightens him of the quintessential truth and the eclectic principles that the Vedas enunciate and espouse).

Such a person is able to obtain the abode of Lord Vishnu, the Supreme Being (12).

[Note—¹In this context, refer to the following Upanishads of the Atharva Veda also— Ganapati Upanishad, verse no. 17; Bhasma Jabal Upanishad, Canto 1, paragraph no. 10; Devi Upanishad, verse no. 32.

²The five great sins are the following—killing of a Brahmin, drinking wine, theft, having sex with the wife of one's teacher, having lustful feelings for one's daughter, and to keep company of those who indulge in any of these sins.

According to some versions, the five great sins are the following—killing of a Brahmin or murder of any kind, drinking wine or any other intoxicating drink, gambling, infidelity, and eating meat because it involves violence.]

-----Shanti Paath-----

-----*****-----*****-----

Chapter 27

Gopal Tapini Upanishad

This Upanishad is dedicated to Lord Krishna whose other name is 'Gopal' (which literally means the Lord who takes care of cowherds, but implies in its ambit all the creatures of this creation). The Upanishad is in two parts—the Purva or previous section called the 'Gopal Purva Tapini Upanishad', and the Uttar or subsequent section called the 'Gopal Uttar Tapini Upanishad'. Therefore, we shall divide this Chapter into two sections—viz. section 1 dealing with the first Upanishad, and section 2 dealing with the second Upanishad.

The 'Gopal Purva Tapini Upanishad' essentially deals with the divine form of Lord Krishna as it describes that the Lord is none but the Supreme Being himself personified in his form. It goes on to describe the divine form of Lord Krishna which should be meditated upon, along with the eighteen-letter Mantra of the Lord and its spiritual importance. It then narrates the worship Yantra, the instrument that is used to offer worship to the Lord in formal forms of worship. This Upanishad was revealed by the creator Brahma when he answered the Gods who asked him as to who was the greatest God and Lord in creation.

The 'Gopal Uttar Tapini Upanishad' was however revealed by sage Durvasa for the benefit of the Gopis (milkmaids and cowherds' wives) led by Radha when they enquired from the sage about the truthful nature and form of Lord Krishna. This is because they were confused about the reality of the Lord and his divine nature as his worldly activities seemed to be quite the contrary to the established principles regarding divinity, immaculacy and code of decent and ethical conduct. But the truth of the matter is that the Lord was absolutely immaculate and uncorrupt internally as well as externally. When the ladies had their doubts about this fact regarding Lord Krishna, sage Durvasa preached them the truth of Lord Krishna's divine form and

nature. Incorporated in his teachings are the various metaphysical, theological and spiritual concepts.

The sage cites the conversation between Lord Narayan, the Supreme Being, and Brahma, the creator, wherein the former preaches the latter about the various aspects of the greatest of the different incarnations of the Lord as Krishna. Great metaphysical and spiritual truths are revealed in this discourse. The concluding part of the Upanishad lists sixteen great Mantras of Lord Krishna that were revealed to Brahm by Lord Narayan. They are on the same pattern as the ones revealed for Lord Ram in the Ram Uttar Tapini Upanishad.

The Krishna Upanishad of the Atharva Veda tradition is another great Upanishad exclusively dedicated to the theme of Lord Krishna. It is Chapter 28 of this volume. It is a perfect companion of the present Gopal Tapini Upanishad, and must be read alongside it to get a comprehensive idea of the divine nature of Lord Krishna.

There is a worship instrument called the ‘Gopal Yantra’ which is used in the Tantra form of formal ritualistic worship of Lord Gopal Krishna. Its diagrammatic depiction is included at the end of this Chapter.

----Shanti Paath----

Please see appendix no. 1 for the English of this Shanti Paath.

Section 1

Gopal Purva Tapini Upanishad

[This Upanishad describes the supreme divine nature of Lord Krishna, his sublime form that is worthy of meditation by spiritual aspirants, and his eighteen-letter Mantra. The main thrust or theme of this Upanishad is to espouse and establish the divine nature and virtues of the Krishna principle or the Krishna Consciousness, and to affirm that the physical form of the Lord is actually this principle or Consciousness in a personified form.]

1. The Gopal Tapini Upanishad pertaining to Lord Krishna is well known to sages Yagyawalkya, Lord Varaaha, sage Shatyayani, Lord Hayagriva, Lord Dattatreya and Lord Garud (1).

2. OM Salutations! I/we bow most reverentially before Lord Krishna who is a personification of the glorious virtues known as ‘Sachidaanad’. That is, he is ‘Sat’ or truthful; he is ‘Chid’ or enlightened and eternal consciousness; and he is ‘Anand’ or blissful.

He is able to do everything even without making an effort, i.e. he does everything by merely wishing to do it. [This is because he is almighty and all-powerful Lord of creation.]

He is worthy of knowing and the subject of research by the means of the Vedas. He is the universal Guru, or a teacher, guide and moral preceptor for all.

He is the witness of the Buddhi (intellect and thoughts) of all living beings, i.e. he knows what goes on in the mind and what are the inner thoughts of all the creatures; nothing can be hidden from him (2).

3. Hari OM Salutations! Once upon a time, the great sages and seers approached the great God Lord Brahma (the creator) and asked him—‘Oh Lord! Who is the most exalted and the best amongst the Gods? Who is the Lord by whom even the ‘Death’ is afraid? Who is the one by knowing the reality and truth or essence of whom everything worth knowing is known? Which is the entity that inspires and impels the world to remain engrossed or involved in the endless cycle of arrival and departure (i.e. trapped in the cycle of birth and death)?’ (3).

4. Brahma replied—‘Without doubt it is Lord Krishna who is the greatest of all the Gods. It is from ‘Govind’ (Krishna) that the Death is afraid. By knowing the Tattva or the essential form, the truth and the reality of ‘Gopijan-Vallabh’ (the Lord who is very dear to the cowherds), whatever is worthy to be known in this world becomes known.

It is the force of ‘Swaha’ that inspires the world to go around in a circle of birth and death.’

[The word ‘Swaha’ is pronounced when an offering is made to the sacred fire during fire sacrifices. It is believed that the Swaha is the mouth of the Fire God, and through it the offering is accepted by the deity to whom the offering is made, i.e. the Supreme Being. In the present context it means that it is the Shakti, or the cosmic energy and driving force of the supreme Lord that keeps the wheel of creation rotating endlessly. For this, the Lord employs his Maya Shakti, or the power to create delusions, that impels the creatures to remain entangled in the never-ending cycle of birth and death.] (4).

5. The Gods asked once again, ‘Who is Lord Krishna? Who is Govind? Who is Gopijan Vallabh? Who is Swaha?’ (5).

6. Brahma replied, ‘He who steals or forcefully takes away (i.e. banishes or vanquishes or reduces or eliminates completely) sins and their evil effects is known as Krishna. [In other words, Lord Krishna is the merciful and benevolent Lord who ensures that his devotees and followers find liberation and deliverance from all evil effects of sins and misdemeanors committed by them, advertently or inadvertently.

He who is the well-wisher and caretaker of cows (symbolizing humble creatures) as well as the earth and all its inhabitants is known as Govind. He is famed in the Vedas with this name and these glorious virtues.

He who removes the darkness of ignorance (known as ‘Avidya’) in all the cowherds who lived with him (symbolizing all the creatures who are devoted to the Lord and worship him faithfully), and instead inspires them towards the light of knowledge, wisdom, enlightenment and realisation (known as ‘Vidya’), and is therefore most dear to them and beloved of them, is known as Gopijan-Vallabh.

The Maya Shakti of this Lord (i.e. the Lord’s dynamic power to create delusions) is known as Swaha.

[Since ‘Swaha’ refers to making offerings to the fire during sacrifices, it means here that everything that comes into being is thrown into a tailspin of delusions by the Lord’s dynamic power to create delusions. The creature loses his bearings and is unable to see the truth and grasp the reality even though he reads the scriptures and is taught by a wise teacher; he continues to remain trapped in the web-like world. It is

the Maya Shakti of the Lord that is therefore instrumental in keeping the wheel of creation consisting of birth and death rotating perpetually. For had everyone become self-realised and enlightened, should everyone renounce this delusory world and remain submerged in meditation and contemplation, the world would become a barren place because all those who are born would find emancipation and salvation, no new creature would be born because all of them would have found final Mukti or emancipation and salvation, and the cycle of birth and death which is so characteristic of this creation would come to a grinding halt.]

In this way, those who remain submerged in the thoughts of the supreme Brahm in the form of Lord Krishna, those who do Japa (repetition) of the divine name of the Lord in the form of the various Mantras dedicated to Lord Krishna, thereby tasting the nectar-like elixir that these Mantras represent when they are repeated by the tongue, and those who remain devoted to the Lord and worship him continuously—they indeed become a personified form of the Amrit, or the elixir of eternity and blissfulness that the Lord and his Mantras represent (6).

[Note—It is well-established principle of psychology that if one continuously thinks of anything, or keeps some kind of company for a prolonged time, he is bound to be affected by it. So, when a person thinks of the Lord continuously, he is bound to be influenced by the Lord's virtuousness and divine characters. Even the most hardened criminal is changed in good company, so therefore even the greatest of sinner would be rendered sinless should he become aware of the Lord's divine presence everywhere, a thought which is in it's self most auspicious and holy. The Lord's divine aura would neutralize all traces of negativity from his life.

By remaining submerged or engrossed in the thoughts of the Lord, the devotee becomes one like him, and for all practical purposes he has withdrawn himself from this deluding and entrapping world and instead brought himself so much the nearer to the Lord. The devotee or the spiritual aspirant soaks in the divinity and holiness associated with Lord Krishna and Krishna Consciousness so much so that he himself begins to glow in it's radiance and begins to radiate the same divinity and holiness that is associated with the Lord and Krishna Consciousness.

It must be noted here clearly that this term 'Krishna Consciousness' refers to no other entity but the cosmic Consciousness that is known as the Parmatma or the Supreme Being. This term also means the supreme Atma or the supreme Soul of creation, and the Upanishads prefer to call it 'Brahm'. Knowledge of this fact is akin to acquiring of Gyan, and acquisition of Gyan leads to enlightenment and freedom from the fetters of ignorance and its attendant delusions. When one knows the 'Truth' one is freed from the bondage of falsehood. He understands that he has not to seek God somewhere high up in the sky, a place that is called Heaven, but in his own self as his Atma which is pure consciousness. The Atma or the pure consciousness is the spiritual aspirant's 'true self' just like the Krishna Consciousness that is the truthful form of the Lord known by the name of Krishna. This eclectic, sublime and divine knowledge makes him an image of Krishna himself.]

7. The sages asked once again, 'What is the form of Lord Krishna which is worthy of meditation? What is the taste of the elixir or nectar (Amrit) that is represented by constant repetition of his name? How is he worshipped? We wish to know the answer of all these questions, so please enlighten us about them.' (7).

[Note—Refer Section 2, Gopal Uttar Tapini Upanishad of this Chapter, verse no. 9 and its subsequent verses.]

8. Then Hiranyagarbha (one of the names of Brahma, the creator) answered as follows—'The form of Krishna—who looks like a cowherd boy and sits under the

divine Kalpa tree—that is worthy of adoration, worship and meditation is described in a Shloka (hymn) as follows:--

The Lord's eyes are as beautiful as a white lotus flower; the complexion of his divine body is dark like the rain-bearing cloud; he wears a glistening yellow Pitambar (which is a body-wrapping over-garment made of silk) that dazzles and shines like lightning; he has two arms; he sits in the posture known as 'Gyan Mudra' (a posture adopted by a learned teacher while preaching his disciples); he is adorned by a long garland known as the Vanmala¹ that extends from around his neck to his legs; he is the Ishwar (Lord) of creation; he is surrounded on all the sides by cowherd men and boys as well as milkmaids; he is present under the Kalpa tree² (which is the evergreen tree of the Gods and a fulfiller of all wishes); his divine body is adorned with magnificent ornaments; and he sits on a gem-studded throne in the center of a gem-studded lotus.

A soft, cool and sweet-scented breeze that blows across the Kalindi river, kissing the surface of its lively and energetic pristine waters, wafts in soothingly and comfortingly to serve the Lord.

A devotee who worships and adores Lord Krishna in the aforesaid form is freed from the shackles that tie him down to this mortal and delusory world. That is, he is able to obtain Mukti, or liberation and deliverance (8).

[Note—¹The *Vanmala*—This is a garland (mala) worn by Vishnu and is made of flowers of the forest/wild (Van). Refer for details in section 2 of this Chapter named Gopal Uttar Tapini Upanishad, verse no. 31, note no. 5.

²The *Kalpa Tree*— It is the evergreen tree of the Gods. It is said to possess mystical powers and can bestow all that is desired by an aspirant or seeker. The Botanical name of the Kalpa Tree is *Adansonis Digitta*; it is also called 'Parijaat' meaning 'descended from the sea', and 'Harsingar' meaning 'the decoration of the Gods, especially Lord Hari'. The English name of it is Coral Jasmine; in Latin it is called *Nyctanthes Arbor Tristis* (nyctanthes means the night flower, while arbor tristis means the sad tree). Its flower is said to be worn by the Gods. The orange colour of the flower is used for dying silk and cotton, a practice originating with Buddhist monks. According to legends, it was produced during the churning of the ocean for the search of Amrit, or the ambrosia of eternity and bliss, by the Demons and the Gods. The king of the Gods, Indra, took it away and planted it in his capital at Amravati. According to another legend (in Vishnu Puran), a princess named Parijaat fell in love with the Sun God and followed him throughout the day. As night approached, the Sun became disenchanted with her and did not like her overtures any longer. Disillusioned and despaired, she died, and a tree grew up from the ashes at the site of her funeral pyre. The flower of this tree could not bear the sight of the Sun, and therefore it blooms during the night, and with the crack of dawn, it falls and dies.]

9. Now, the form and nature of the taste of the elixir of the Lord's divine name and how to do Japa (repetition) with his Mantra is being described.

The Sanskrit letter 'Ka' (pronounced as in *come*), which is the Beej (seed) letter representing water, followed by the letter 'La' (pronounced as in *luck*), which is the Beej letter for earth, the long vowel sound of 'Ee' (pronounced as in *eel*), and crowned by the mark of the moon called the Anuswar (the 'dot')—when these are combined together, they form the Beej (seed; root) Mantra for Kaam (fulfillment of desires), which is 'Klim/Klin(g)'.

This is used as a prefix for the name of the Lord, i.e. Krishna. Hence, the first Paad or step of the divine Mantra of Lord Krishna is 'Klim/Klin(g) Krishnaaye'.

The word 'Govindaaye' is the second Paad or step, followed by 'Gopijan' which is the third Paad, 'Vallabhaaye' which is the fourth Paad, and 'Swaha' which is the fifth and last Paad of the Mantra.

Hence, the full Mantra consisting of five Paads or steps is 'Klim/Klin(g) Krishnaaye Govindaaye Gopijan Vallabhaaye Swaha'¹. This Mantra is known as 'Panch-padi', i.e. one that has five steps. [Briefly it means 'I offer my oblations to Lord Krishna who is the fulfiller of all wishes, is known as Govind because he is the protector of cows and other humble creatures, and is very dear to the cowherds because he manifested himself or was born amongst them.']

Since it embodies in its self or represents the five manifested aspects of creation, viz. the sky, the earth, the sun, the moon and the fire, this Mantra is said to have five limbs or aspects.

A spiritual aspirant who worships the Lord by doing Japa with this Mantra of five Paads or steps is able to attain the supreme transcendental Brahm, because Lord Krishna is no one else but Brahm personified (9).

[Note—¹Refer verse no. 16 also.]

10. In this context there is Shloka (hymn) that endorses the above view. It says that a worshipper who utters or pronounces the great Mantra of the Lord by saying the following words in the prescribed sequence—i.e. first saying 'Klim/Klin(g)', then 'Krishnaaye', then 'Govindaaye', then 'Gopijan', then 'Vallabhaaye', and finally 'Swaha'—he is able to meet the Lord soon and attain the highest stature of exalted existence.

Having steady and firm devotion for Lord Krishna is equivalent to worshipping him. It takes the following form—One should surrender himself to the Lord and abandon all sorts of desires and passions regarding this mortal world where he lives as well as the world that would be obtained upon death. That is, one should have no desires whatsoever, and devote all his energy and time in meditating and contemplating upon the Lord. Whatever deeds are done by him by the virtue of his existential constraints should be offered to the Lord, without any conditions attached. The surrender must be complete, involving all the organs of the body, both the physical gross organs of the body such as the organs of perception (eye, ear, nose, tongue and skin) and the organs of action (hand, leg, mouth, excretory and reproductive), as well as the subtle organs such as the mind-intellect complex.

This is also the true way of renunciation; this is the actual meaning of non-involvement in deeds, or doing deeds dispassionately.

Those who are expert in the Vedas worship and offer obeisance to Lord Krishna in a number of ways. Saints and sages worship the Lord known by the name of Govind by various means.

Lord Gopijan-Vallabh (i.e. the Lord who is most dear to the cowherd community in which he had manifested, and by extension to all human kind because the Lord incarnated as a human being) is the protector, sustainer and caretaker of the entire world.

It is this almighty and all-capable Lord who had employed his dynamic powers represented by Swaha to first create this world, and then nourish and sustain it.

Just like the single air or wind element, that is basically immutable, uniform, universal, constant and infinite by nature, assumes five different names and forms such as Pran etc.¹ by the virtue of the different functions that it performs in the body, Lord Krishna too appears to have different names and is revealed in different forms as

indicated by the five steps of the above Mantra. Actually, all the various names such as Krishna, Gopijan-Vallabh, Govind etc. pertain to one Lord; they all refer to one single Lord (10).

[Note—¹The *five vital winds* present in the body are the Pran, the Apaana, the Samaana, the Vyaana and the Udaana. They all refer to the same air or wind element, but are assigned different names according to the different functions they perform in the body of the living being.

(1) Pran—this is the main vital wind and usually refers to the breath without which life is not possible; it is the vital wind located in the upper part of the body. It is the wind that is exhaled as well as inhaled, and which is responsible for infusing and sustaining life in the body; it is considered the chief wind in the whole setup because without this wind infusing life in the body no other wind would be of any significance to the creature. It is present in the mouth, nose, heart, navel, big toe of the leg. (2) Apaana—this is the wind that passes down the intestines, and is responsible for ingestion of food, its digestion in the intestines and the final excretion of the waste product from the body—its grosser content through the anus and its fluid contents through the urinary system of the kidneys. This is the wind that moves down in the body and is chiefly located in the lower part of the body—in the intestines and anus, lower abdomen, thighs, knees. (3) Samaana—it is uniformly present throughout the body and as the name itself suggests it is responsible for uniform pressure and balance in the body besides equal distribution of nourishment throughout the body by maintaining proper circulation of blood. Therefore its functions somewhat resembles that of Vyaana wind. It is said to be especially present in the ears which are said to be the specialized playing field for the Samaana wind as it helps maintain balance in the body through the semi-circular canals in the ears. It also helps to coordinate the ears and the intellect because the latter would base its decisions on what it hears with the aid of the ears. (4) Udaana—this is the wind that helps the body to rise and move about, it also helps the body to expel toxic waste gases through the nostrils and mouth in the form of exhalation and cough. It is predominantly present in the hands, legs and the various joints of the body. (5) Vyaana—this wind helps in maintaining equilibrium and pressure within the body as well as to ensure equal distribution of nutrients in the body by maintaining circulation. Hence, it works in close coordination with the Samaana wind. It also helps to control the functioning of the other winds. It is located in the ears, thighs, waist region, heels, shoulders and throat. Refer Prashna Upanishad of Atharva Veda, Canto 3, verse nos. 5-7.

There are numerous Upanishads that deal with the Pran and other vital winds. Refer—(i) Sam Veda—(a) Chandogya Upanishad in its Canto 3, sections 13; Canto 5, section 1, verse nos. 1-15; Canto 5, sections 19-23 (describes how the five winds are satisfied; it also enumerates the Mantras pertaining to the five Prans); and Canto 7, section 15, verse no. 1; (b) Jabal Darshan panishad, Canto 4, verse no. 23-24; (c) Maitrayanu Upanishad, Canto 2, verse no. 6-7 (which describes the functions of these winds).

(ii) Shukla Yajur Veda—(a) Subala Upanishad, Canto 9, verse no. 1-14; (b) Paingalo-panishad, canto 2, verse no. 3; (c) Trishikhi Brahmin Upanishad, Canto 1, verse no. 5, 8-9; Canto 2, verse nos. 54, 77-87; (d) Brihad Aranyaka Upanishad, Canto 3, Brahman 9, verse no. 26; Canto 4, Brahman 2, verse no. 4; Canto 4, Brahman 1, verse no. 3; Canto 5, Brahman 13; Canto 6, Brahman 1.

(iii) Krishna Yajur Veda—(a) Dhyana Bindu Upanishad, verse nos. 55^{1/2}-60, 95-100; (b) Varaha Upanishad, Canto 5, verse no. 28; (c) Yogshikha Upanishad, Canto 1, verse no. 166; (d) Amritnada-panishad, verse no. 33-38; (e) Brahm Vidya Upanishad, verse no. 17-19; (f) Yogshikha Upanishad, Canto 1, verse no. 165 and Canto 5, verse no. 2; (g) Taittiriya Upanishad, Valli 3, Anuvak 3, 7; (h) Katho-panishad, Canto 2, Valli 2, verse no. 10; (i) Yog Kundalini Upanishad, Canto 1, verse no. 2 (especially describes the three methods to

control the Prans); (j) Pran Agnihotra Upanishad, verse nos. 11-12, 14-18 (which describe the fingers that are directly related to the five principal winds and the Mantras of these winds).

(iv) Atharva Veda—Annapurna Upanishad, Canto 3, verse no. 10 (that says that Pran controls all the activities of the body); Canto 4, verse nos. 42 (that says that the Chitta Vrittis inspire the Prans to become active), 85-89 (that say that control of Pran is equivalent to control of Vasanas, and briefly outline the methods by which Pran can be controlled); Canto 5, verse nos. 25-32, 50-53 (its verse nos. 52-53 aver that for a self-realised ascetic, the terms Pran and consciousness are the same); Prashna Upanishad, Canto 2-3; Mundak Upanishad, Canto 3, section 1, verse no. 4; Shandilya Upanishad, Canto 1, section 4, verse no. 12-13; Atma Upanishad, verse no. 18 (says that the body is kept active by the vital winds); Par Brahm Upanishad, verse no. 2 (the 4 aspects of Pran; that Pran moves through four Naadis); Bhavana Upanishad, verse no. 2/21-22.

(v) These vital winds have also been elucidated upon in sage Veda Vyas' Adhyatma Ramayan, Aranya Kand, Canto 4, verse no. 38-39.]

11. The sages asked once again, 'What is the way of offering formal forms of worship to Lord Govind who is the Parmatma (the Supreme Being) and the one who supports the entire creation? Please preach us about it.'

Brahma replied to them by describing the worship instrument through which one can offer formal forms of worship to the Lord. This is known as the 'Peeth' or the altar where worship is offered. It takes the form of a Yantra, literally an instrument of worship designed in the pattern of a geometrical figure.

[This figure is known as the 'Gopal Yantra' and its sketch is given at the end of this Chapter.]

Brahma described it in the following way—'One should make a golden eight-petal lotus on the altar or Peeth. These petals surround a central space where two equilateral triangles are drawn so that one is an inverted image of the other and placed one on the top of the other. This results in the formation of a star-like structure with six apexes or tips. [A circle is drawn around these apex points of the two triangles, and the petals of the lotus drawn earlier rest upon this circle in a ring formation.]

In the core or center of the two triangles shaped like six-pointed star is written the Beej Mantra of Kaam, i.e. Klim/Klin(g). This Beej is the medium by which all desires and wishes of the worshipper are fulfilled. Around it is written the full Mantra of Lord Krishna in a ring. This Mantra is 'Krishnaaye Govindaaye Gopi-Vallabhaaye Swaha'.

Then, in the six directions inside the enclosing circle that surrounds the two triangles that form the six-cornered star are written the six letters of the Mantra of Lord Krishna. This Mantra is 'Klim/Klin(g) Krishnaaye Namaha', and its six letters are Klim/Klin(g) + Kri + Shna + Ye + Na + Maha = 6.

They are written in a sequential manner in a clockwise pattern, starting from the north-west direction. Hence, in the north-west direction the Beej Klim/Klin(g) is written, followed by other letters as follows—in the north-east direction is written the letter 'Kri', in the east direction is written the letter 'Shna', in the south-east direction is written the letter 'Ye', in the south-west direction is written the letter 'Na', and in the west direction is written the letter 'Maha'.

However, in the space inside the six smaller triangles formed as a result of inverting the two larger triangles are written the Beej Mantras 'Srim/Srin(g)' and 'Hrim/Hrin(g)' standing for Maya Shakti of the Lord alternatively. That is, the Beej

‘Srim/Srin(g)’ is written in the first, the third and the fifth small triangles, while the Beej ‘Hrim/Hrin(g)’ is written in the second, the fourth and the sixth small triangle.

The letters of the Gopal Vidya and the Kaam Gayatri Mantra are written in a prescribed manner in the surrounding petals of the instrument.

The eight outer corners of the worship instrument are marked by the sign of the Vajra (the strong weapon of Indra; the goad and the thunderbolt). These eight corners are the north, the north-east, the east, the south-east, the south, the south-west, the west and the north-west. This outer periphery upon being completed forms the ‘Bhupur Yantra’.

For the purpose of worshipping Lord Krishna with this instrument, the Lord’s Mantra is first used for doing Anga-Nyas¹ along with the Mantras of Vasudeo (one of the names of Krishna), Rukmini (Krishna’s divine consort), Swaha Shakti (the Lord Maya Shakti; the Fire God), Indra (the king of Gods), the eight Vasus (the deities of the primary assets of creation), Partha (an epithet used for Arjun) and the various Nidhis (spiritual assets; in Tantra philosophy it refers to the various aspects of the divine Goddess) which are used for the purpose of providing ‘Avaran’ of the instrument².

The worshipper should meditate upon and worship Lord Krishna three times a day, i.e. at dawn, at noon and at dusk, by invoking the above Mantras of the Lord. The Lord should be offered worship in detail involving sixteen formal steps of worship³. This entitles the worshipper to obtain the four great fruits known as Artha (financial well-being), Dharma (auspiciousness and righteousness), Kaam (fulfillment of desires) and Moksha (liberation and deliverance). Indeed, he gets what he wants (11).

[Note—¹*Anga Nyas* is the process of ritual worship by which certain fixed points in the body are designated where the chosen deity is mentally invoked through the specific Mantra. This envisions that the mystical divine powers of the patron God or deity being worshipped by the Mantra are mentally invested in these fixed cardinal points of the body, thereby empowering the aspirant with their stupendous potentials as well as symbolically assigning the body to the tutelary God or deity to whom the particular Mantra belongs for his protection and blessing. Usually these six cardinal points are the following—the two legs, two hands, one head and one waist region. But according to this verse, they are the thumb, the tip of the fingers, the heart, the shoulders, the tuft on the top of the head, and the palm of the hand. There are prescribed ways of invoking the Mantras, and when done in a proper way it empowers the ordinary body of the worshipper with extraordinary divine and mystical powers.

Therefore, process of doing Anga Nyas is to symbolically establish the Mantra’s divine mystical powers in the worshipper’s own body and make it holy, auspicious, sanctified and empowered. The deity being worshipped is symbolically requested to come and take his seat in the body, thereby ensuring that the worshipper is getting constant protection from this godhead. In the present context, since the Maha Vakyas speak of the supreme transcendental Brahm, the latter’s invocation and seating in the worshipper’s body would ensure that he becomes a versatile personification of Brahm. He is literally transformed from being an ordinary human being to an exalted being who is as revered and honourable as Brahm as well as a living embodiment of Brahm. Herein lies the importance of having firm faith in these Maha Vakyas because assuming the mantle of Brahm is not an easy task. The worshipper is expected to live up to his responsibilities as Brahm personified!

²The word *Avaran* means a protective ring, a covering, a screen, a shield, an encircling wall or ring, an obstruction. Here in ritualistic forms of worship this term applies to the worship of different Gods whose Beej Mantras are used to construct the instrument and whose divine intercession is sought by the aspirant for his protection and successful completion of his desires.

³The sixteen steps in formal forms of worship are the following—(1) Aavaahan (invoking or inviting the deity to be worshipped), (2) Aasan (giving of seat to the invited deity), (3) Paadya (offering water to wash the feet), (4) Arghya (offering water to wash the hands), (5) Aachaman (offering water to rinse or clean the mouth; a sip of water to clear the throat), (6) Snaan (giving a ritualistic bath), (7) Vastra (offering of new or freshly cleaned clothes to the deity) and Upavita (offering of the sacred thread), (8) Gandha (literally meaning a fragrance, and implying the offering of fresh sandalwood paste), (9) Pushpa (offering of flowers), (10) Dhupa (offering of lighted incense sticks), (11) Dipa (offering of lighted lamps), (12) Naivedya (offering of sweets and fruits along with water), (13) Tambul (offering of betel leaves as mouth-freshener), (14) reciting hymns in the deity's honour—called Mantra Pushpa (offering of flowers in the form of Mantras), (15) Pradakshina (circumambulation), and (16) Namaskaar (offering obeisance by bowing in front).]

12. In this context, there are certain Shlokas (hymns) which are narrated below.

‘Lord Krishna—who is all-pervading and omnipresent and the only one who keeps everyone under his control—is indeed the one who is worthy of praise, reverence, adoration, honour and worship. Though he is primarily one and non-dual, he still reveals himself in myriad of forms in this world. [That is, one must not be misled by the numerous forms and names of the Lord as to think that they are different from one another. The fact of the matter is that whatever that exists in this creation is nothing but a revelation of the same Lord. This Lord known as Krishna is actually the Supreme Being eulogized and honoured in the Upanishads as Brahm.]

Those devotees who faithfully and devoutly worship and offer their sincere obeisance daily to the Lord—who is honorably established on the worship altar described above (verse no. 11)—are the ones who obtain eternal peace, bliss and happiness, and no one else (12).

13. The Lord who is absolutely eternal, unchanging and uniform, who is an epitome of holiness, divinity and sublimity, who is a personified form of the cosmic Consciousness, and who is the only one who fulfills all the desires of all the creatures—those persons who faithfully and devoutly worship and offer their sincere obeisance daily to such a Lord—who is honorably established on the worship altar described above (verse no. 11)—are the ones who obtain eternal peace, bliss and happiness, and no one else (13).

14. Those who are very enthusiastic about faithfully and diligently offering their worship and paying their sincere obeisance daily to Lord Vishnu (who had incarnated as Krishna and who is deemed to be the Supreme Being) through the medium of the worship altar and Mantras mentioned above (in verse nos. 9-11), and who desire nothing else but having devotion for the Lord and attaining nearness with him—such persons are the fortunate ones before whom the Lord voluntarily and quickly reveals his divine form as Gopal (Krishna), besides providing them with quick and easy access to his divine abode (i.e. providing them with Mukti) (14).

15. The Lord (here referring to the Viraat Purush, the primal form of Vishnu) who creates even the creator of this visible world, i.e. Brahma the creator, and then not only teaches him the Vedas but also inspires him to sing, chant or narrate them on his behalf (for the benefit of this creation), the Lord who is the illuminator or inspirer or motivator of the mind and intellect of all the creatures (i.e. the Lord who empowers the creature to think, analyse, deduce, and generally be intelligent, wise, enlightened

and discriminating)—verily, those who seek liberation, deliverance, emancipation and salvation of their souls are advised to take the shelter and refuge in the holy feet of such a great and divine Lord (because he is indeed the Supreme Being, and there is no one greater than him) (15).

16. Those devotees who do Japa (repetition) with the holy Mantra of the Lord having five steps and eighteen letters by prefixing them with the ethereal salutary word 'OM' standing for the supreme transcendental Brahm, the cosmic Consciousness¹, are the ones to whom the Lord voluntarily reveals his true divine and holy form in the form of the cosmic Consciousness known as the Atma. That is, such persons become self-realised and enlightened. This is also tantamount to Brahm-realisation.

Hence, those who are desirous of finding liberation and deliverance from the fetters that shackle them to this delusory, mortal and entrapping world are advised to do Japa with this holy Mantra.' (16).

[Note—¹The complete Mantra is 'OM Klim/Klin(g) Krishnaaye Govindaaye Gopijan Vallabhaaye Swaha'. Refer verse no. 9 also. The eighteen letters following the prefix OM are as follows—Klim/Klin(g) + Kri + Shnaa + Ye + Go + Vi + Nndaa + Ye + Go + Pi + Ja + Na + Va + Lla + Bhaa + Ye + Swa + Ha = 18. If one includes the monosyllabic word 'OM', the Mantra has nineteen letters.]

17. It is from the basic Mantra having five steps (as narrated in verse no. 9) that is dedicated to Lord Govind that a number of other Mantras, for instance those having ten letters etc., have come into being. All of them provide welfare to the Jiva (the living being) who worships the Lord with them. These Mantras are invoked by Indra (the king of Gods) along with other Gods for the fulfillment of their desires and accomplishing success in obtaining majesty, power, authority, opulence, grandeur and fame in this world (17).

18. [This verse describes the genesis of creation.]

The sages said to Brahma, 'If this is the case, then please explain the meaning and importance of this Mantra to us.'

Brahma replied, 'During my lifetime in the previous life, I had been constantly meditating and contemplating upon the Parmeshwar, the Supreme Being, and had offered worship and obeisance to him. When half of my life had been spent in such devotion, the Lord's attention fell upon me. The Viraat Purush (Lord Vishnu, the Supreme Being) was pleased with me and appeared before me as Gopal (the dark complexioned Lord known as Krishna who is a benevolent and most gracious caretaker of those who are dependent upon him or are his subjects in the kingdom known as this world).

I bowed most reverentially before him and prostrated at his holy feet. Being extremely pleased with me, and being of a gracious nature and of a kind heart he preached me the great Mantra having eighteen letters (verse no. 9, 16) to empower me to start the process of creation. Having done so, the Lord vanished from sight. This Mantra was an image of the Lord himself; it was a personified or revealed form of the Lord; it had all the dynamism, vitality, virility, strength, authority, power and energy of the Lord encapsulated in its words.

In due course of time when I desired to initiate the process of creation, the Lord inspired and enabled me to visualize the forthcoming world in its myriad forms and countless variations of all imaginable hues, formats and connotations in each of the letters of this Mantra. In other words, this time round the Lord revealed himself to

me not in his physical form as Gopal but personified as the letters of this Mantra. Since the world was encapsulated in this Mantra, and this Mantra was a personified form of the Lord, it follows that whatever that exists in this world (creation) is a manifested form of the Lord himself, and nothing else.

Now, I employed the first Paad or step of the Mantra (i.e. 'Klim/Klin(g)') to create the water element from its letter 'Ka' ('Klim/Klin(g)'), the earth from the letter 'La' ('Klim/Klin(g)'), the fire element from the letter 'Ee' ('Klim/Klin(g)'), the moon from the Anuswar (Klim/Klin(g)), and a combination of these letters to create the sun represented by the full Beej Mantra 'Klim/Klin(g)'.

From the second Paad or step of the Mantra, i.e. 'Krishnaaye', I created the sky and the air that filled it.

From the third Paad or step of the Mantra, i.e. 'Govindaaye', I created the Kamdhenu cow (the all wish-fulfilling cow of the gods) along with the Vedas and other bodies of knowledge.

From the fourth Paad or step of the Mantra, i.e. 'Gopijan-Vallabhaaye', I created the males and the females who would inhabit the forthcoming creation.

And finally, from the fifth Paad or step of the Mantra, i.e. 'Swaha', I created the rest of the mobile and immobile creation (18).

19. It was by worshipping Lord Krishna and doing Japa with his eighteen-letter Mantra prefixed with OM that the ancient king Chandradwaj, who was a saintly, pious and a wise king, attained the knowledge of the Atma, i.e. he became self-realised, developed profound renunciation towards this world, and attained freedom from the shackles of this gross body.

Those who are wise and enlightened always focus their attention on the divine abode of Lord Vishnu which is as splendourous and brilliant as the sun that shines majestically in the sky above, and is as vast and fathomless as the infinite sky in which this sun is located¹.

This divine abode is obtainable by having devotion for and doing Japa with the eighteen-letter Mantra of Lord Krishna mentioned herein above. Hence, wise ones always adopt this means to attain emancipation and salvation (19).

[Note—¹The divine abode of Lord Vishnu has been graphically described in the Tripadvibhuta Maha Narayan Upanishad of the Atharva Veda tradition. It is Chapter no. 11 of this volume.]

20. Some sages have a different take on the eighteen-letter Mantra (mentioned in verse no. 9). They assert that the earth element was formed out of the first Paad or step (i.e. 'Klim/Klin(g)'). The water element was formed out of the second Paad or step (which is Krishnaaye). The Tej or fire element was formed out of the third Paad or step (which is Govindaaye). The air or wind element was formed out of the fourth Paad or step (which is Gopijan-Vallabhaaye). And the sky element was formed out of the fifth Paad or step (which is Swaha).

This eighteen-letter Mantra of Lord Krishna is worshipped by the devotees and followers of Vishnu. It relates to the revelation of Lord Krishna's cosmic, omnipresent, omnipotent, all-pervading and all-encompassing form in creation in the form of the five primary elements known as Vyahritis from which the rest of creation was moulded.

One should always do Japa with this Mantra in order to overcome the darkness of ignorance and delusions and obtain freedom from their frightening effects (20).

[Note—Refer Section 2, Gopal Uttar Tapini Upanishad, verse no. 24 for a different take of this version of creation.]

21. In this connection, the following episode is famous. The magnificent Mantra from the first step of which the earth was created, from the second step of which the water was created, from the third step of which the Tej (dynamic energy, fire) was created, from the fourth step of which the air/wind was created, and from the fifth step of which the sky was created—it is the same Mantra that was invoked by the great ancient king Chandradwaj to reach the divine abode of Lord Vishnu, the abode known as Param Pad or the supreme stature of existence (21).

22. The supreme abode of the Lord (Vishnu in his form as Krishna, the Supreme Being) is embodied in the Mantra mentioned above. This abode, and therefore the Mantra, is characterized by the glorious virtues of being absolutely pure, holy, divine and immaculate, having no trace of miseries, grief, torments, misfortunes and pains of any kind. It is free from the negativity associated with greed, rapacity and other such demeaning qualities, and is out of bounds for worldly passions, yearnings and other such desires as well as attachments and infatuations for the material things of this world that have an altogether gross dimension.

In fact, this Mantra is a word manifestation of Lord Vasudeo (Krishna) himself, the Lord excluding whom nothing exists in this creation. The Lord is manifested in the form of the five Paads or steps of this Mantra as well as the five elements of creation (viz. earth, water, fire, air and sky which themselves are revelations of the five steps of the Mantra as narrated in verse nos. 20-21 above). (22).

23. The divine form of the Lord is characterized by the virtues known as ‘Sat-Chid-Anand’—i.e. it is truthful, it is consciousness, and it is bliss and happiness personified. [Refer verse no. 46 of the Gopal Uttar Tapini Upanishad which is section 2 of this Chapter.]

He is always present in the city of Vrindavan (located in Northern India) where the Lord symbolically sits eternally on a gem-studded throne under the Kalpa tree (which is the evergreen tree of the Gods).

I (Brahma) accompany the Marut Gods (the various forms of the Wind God) to say my prayers and pay obeisance to the Lord as follows—(23).

24/1. [In the context of the following prayers said in verse nos. 24/1 to 24/12, the reader is advised to see section 2, Gopal Uttar Tapini Upanishad, verse nos. 47/1 to 47/17 of this Chapter.]

‘OM Salutations! I repeatedly bow and pay my sincere obeisance to Lord Govind (Krishna) whose revealed form is represented by this visible world with all its diversity and variations, who is the only one who creates and sustains the entire creation (world), who is the one who, on the one hand, has revealed himself as this world, and on the other hand, is its only and supreme Lord who takes care of it and regulates it (24/1).

24/2. I repeatedly bow and pay my sincere obeisance to Lord Govind (Krishna) who is an embodiment of Vigyan (highest level of knowledge) and an image of supreme bliss, beatitude and felicity, who is so kind, gracious, benevolent, munificent, compassionate and loving that he attracts all creatures towards himself, and who is most dear to the heart of the milkmaids (24/2).

24/3. I bow and pay my sincere obeisance to the Lord who has lotus like eyes. I bow and pay my sincere obeisance to the Lord who wears a garland made of lotus flowers. I bow and pay my sincere obeisance to the Lord from whose navel the divine Lotus emerged (atop which the creator Brahma was born). I bow and pay my sincere obeisance to the Lord who is dear to Kamala (Goddess Laxmi, the patron goddess of wealth and prosperity)¹. (24/3).

[Note—¹This stanza alludes to the fact that Lord Krishna is an incarnation of Lord Vishnu whose divine consort is known as Laxmi whose other name is Kamla. The word 'Kamla' refers to the fact that she is as beautiful as the lotus flower as well as the fact that she holds a lotus flower in her hands.]

24/4. I repeatedly bow and pay my sincere obeisance to Lord Govind (Krishna) who looks most beautiful and enchanting with a peacock feather adorning the lock of hairs on his head, whose mind and sub-conscious is never dulled and made senile (i.e. who is ever-intelligent, eternally wise and enlightened), and who lives majestically in the heart of Rama (Laxmi, the divine consort of Vishnu, as well as her manifestation as Rukmini, the divine consort of Krishna) like a magnificent Swan (Hans) floating in the pristine pure waters of the Mansarovar lake (located in the upper reaches of the Himalayan Mountain range). (24/4).

24/5. I bow and pay my sincere obeisance to the Lord who is the destroyer or vanquisher of the clan of the demon Kansa, as well as is the slayer of Keshi and Chananur, who is worshipped and adored even by Lord Shiva (the third of the Trinity Gods who is responsible for conclusion of creation and is regarded as 'Maha-Deva', the great God as he is most enlightened and wise amongst all the Gods in creation), and who had accepted to become a charioteer for Arjun (during the epic Mahabharata war). (24/5).

24/6. The Lord has a natural habit of keeping the flute on his lips and playing it. He is the sustainer and protector of cowherds. He is the one who had trounced the arrogance and haughtiness of the most venomous and ferocious serpent known as Kaaliyaa Naag. The Lord had danced on the hood of the serpent floating on the swift currents of the Kalindi river. The ear-rings dangling from his ears dazzle and sparkle when they move from side to side as he turns his head (24/6).

24/7. The garland of lotus flowers on his chest is a symbolic representation of the numerous eyes of the beautiful milkmaids or wives of cowherds who fix their sights on the divine body of the Lord. The Lord looks most enchanting and bewitching as he engages himself in dancing and frolicking around.

I repeatedly bow and pay my sincere obeisance to Lord Krishna who is the provider of refuge and shelter to those who seek such solace and succour in his lotus-like august feet (24/7).

24/8. I bow and pay my sincere obeisance to the Lord who is the crusher and eliminator of sins and sinful demons, who had borne the Govardhan hill on his hands to protect the community of cowherds (from being drowned in the continuous rain by holding the hill like an umbrella over them), and who had killed the demoness Putna and the demon Trinavrat (24/8).

24/9. I repeatedly bow and pay my sincere obeisance to Lord Krishna who is immaculate and uncorrupt as well as steady and uniform, who has no trace of Moha (worldly attachments, infatuations, attractions etc.) in him, who is pristine pure and incorruptible by his inherent nature, who is an enemy of those who are unrighteous, unscrupulous and corrupt, who is so unique in his majesty, greatness, divinity, sublimity and holiness as well as in the possession of eclectic and glorious virtues that there is no one like him or comparable to him in this world (creation), and who is a great and the most glorious Lord ever known (24/9).

24/10. Oh Lord who is supremely blissful! Be pleased with me. Oh Lord who is the supreme One in this creation! Be graceful towards me. I have been made miserable by being bitten by serpents representing numerous troubles and tribulations that afflict my body and mind. Please give solace and succour to me; be kind to extricate me from my horrible condition in this world where I find myself surrounded by interminable miseries and agonies of countless kinds (24/10).

24/11. Oh Krishna! Oh the Lord who is dear to Rukmini (the divine consort of Krishna)! Oh the Lord who enchants the mind of cowherds and milkmaids (of Vrindavan where the Lord was born)! You are the revered and honourable Guru (moral preceptor, teacher and guide) for the whole creation (world). I am sinking or am trapped in this huge ocean represented by the mortal world characterized by delusions, ignorance and numerous entrapments. Please save me; please take me out of this quagmire, and redeem me (24/11).

24/12. Oh Lord Keshav! You are Lord Narayan (Lord Vishnu, the Supreme Being) who eliminates all the miseries and agonies (of his devotees). You are known as Janardan (because you are most benevolent and munificent towards the humble and the meek; you take care of them and provide them solace and succour). You are known as Govind (as you take good care of the cows representing humble and helpless creatures, and are therefore very dear to them). You are an embodiment of extreme blissfulness, beatitude and felicity. You are also known as Maadhav (an epithet for Lord Vishnu). Please provide me with liberation and deliverance; please provide me with emancipation and salvation.' (24/12).

25. Oh great sages! The way I (Brahma) regularly offer my prayers and obeisance to the Lord by the medium of the above hymns (verse nos. 24/1-24/12) as well as by doing Japa of the Lord's Mantra having five steps (as narrated in verse nos. 9 and 16), you should also offer your worship by praying to Lord Krishna and paying obeisance to him in the same way. This would help you to cross over this ocean-like formidable world effortlessly and easily.'

This is how the creator Brahma preached the assembled sages and seers (25).

26. A person who repeats the divine Mantra of the Lord having five Paads or steps is able to easily and effortlessly attain the supreme abode of the Lord which is unique, divine, exalted, and one of its only kind. The divine abode of the Lord, or the state of existence whereby the devotees attains oneness with the Lord, is most mysterious and unique by nature. It is unchanging, unmoving and steady because it is eternal, uniform, infinite and imperishable. But the mystery of this exalted state is that inspite of it being steady, uniform and unmoving it is however very illusive, most enigmatic,

highly esoteric and extremely mysterious by nature. [In other words, it is very difficult to attain it, and only the Lord's grace can enable a person to reach it.]

None of the Gods representing the various sense organs of the body can ever have any access to it despite the fact that the Lord is present everywhere because he is all-pervading, all-encompassing and omnipresent.

One should steadily and faithfully devote one's self in mediating and contemplating upon Lord Krishna (i.e. on Krishna Consciousness) who is the Supreme Being (the cosmic Consciousness) personified. One should taste the nectar-like elixir of his divine name by doing Japa with it regularly. One should offer regular worship to him, meditate upon him, and offer prayers and obeisance to him.

This is what this Upanishad proclaims and teaches. Amen! (26).

-----*****-----

Section 2

Gopal Uttar Tapini Upanishad

[In this Upanishad, sage Durvasa has explained the divine and the most holy form of Lord Krishna that is known as 'Krishna Consciousness' to the Gopis, the milkmaids of Vrindavan, who doubted the divinity of Krishna and were confused about the reality and true form as well as the sublime and divine nature of the Lord. Weaved into the text is a conversation between Brahma, the creator, and Lord Narayan (Vishnu) wherein the latter explained great metaphysical, theological and spiritual doctrines to the former. The Upanishad incorporates the divine Mantras of Lord Krishna which are sixteen in number and which entitle the worshipper to obtain great spiritual reward of liberation, deliverance, emancipation and salvation.]

1. OM Salutations! Once upon a time, the milkmaids of Vrindavan, who were always eager to spend time with Krishna, had spent a night in his company. At dawn, they said to Gopal Krishna, the supreme Lord, 'Oh Lord! Tell us which Brahmin should we feed now (or honour now) so that our wishes can be fulfilled.'

Hearing this, Lord Krishna replied, 'It is advisable to feed sage Durvasa for the fulfillment of your wishes.'

The Gopis (milkmaids) asked, 'Sage Durvasa's hermitage is on the other side of river Yamuna which is now in spate and surging with rapidly flowing currents of water. Say, how can we cross it to reach the other side?'

Krishna replied, 'All of you go to the bank of the river and say—'Our beloved Krishna is indeed absolutely incorrupt, immaculate, chaste, pristine pure, and an eternal celibate.' When you make this statement, the river would give you a path to cross over to the other side (because what you would say about me on its bank is the absolute truth).

I am the one who helps others to grow and develop. I am the one by remembering whom even the fathomless and infinite can be measured. I am the one by remembering whom even the most corrupt, unclean and unholy becomes untainted, immaculate, pure, clean and holy. I am the one by remembering whom even a person who has broken his vows and been unrighteous becomes like a person who is true to his words, is honest and truthful. I am the one by remembering whom even the most dispassionate and detached man becomes full of affection and love. And I am the one

by remembering whom even the most stupid of persons becomes well-versed in the Vedas and their knowledge.’ (1).

2. It is said that hearing this advice, the milkmaids went in search of sage Durvasa¹ who was an incarnation of Lord Rudra (i.e. Lord Shiva, because the sage was incarnate anger and wrathfulness). When they reached the river Yamuna, which is said to be a daughter of the Sun God, they repeated what Krishna had told them. The river gave them a path, and upon crossing it they arrived at the holy hermitage of sage Durvasa.

[This proved beyond a trace of doubt that whatever Krishna had said about himself as being incorrupt, chaste and immaculate inspite of having spent the whole night with women not legally married to him, frolicking with them and satisfying their desires, is indeed the ‘absolute truth’. This is a major reason why Lord Krishna is known as a ‘Maha Yogi’, the great ascetic who remains perpetually in a state of Samadhi (a state of trance that comes in the higher reaches of super-consciousness) and is unaware of what his physical gross body does. When we talk of Krishna being immaculate we mean not his physical body but the ‘consciousness’ that lives inside this body—the consciousness that is the ‘true self’ of the Lord and is known as the Atma. The difference between an ordinary man and the one who has become enlightened is that the former recognizes Lord Krishna with his physical body, while the latter sees deeper and becomes aware of the Krishna Consciousness that resides in this body.]

The Gopis bowed before sage Durvasa who was an incarnation of Rudra (the angry form of Shiva), and they pleased him by offering delicious sweets made of milk and clarified butter which they had brought especially for him.

The sage ate the offered food, dispensed with the leftovers in a proper way, and felt contented. He then asked the milkmaids to return home.

The milkmaids asked him, ‘How are we to cross the river Yamuna which is swelling and is in spate?’

The sage replied, ‘I eat only green grass. When you remember this statement on the banks of the river, the latter would provide you a path (because this is the truth).’ (2).

[Note—¹Sage *Durvasa*—The word ‘Druvasa’ literally means one who is difficult to live with or cope with. He had a great propensity for cursing at the least annoyance, and was an embodiment of anger and wrath. On the other hand, when he was pleased, he could bestow the greatest of boons.

He is said to be one of the twenty four Rishis of the famous Gayatri Mantra.

According to Gopal Uttar Tapini Upanishad, verse no. 2, sage Durvasa is regarded as an incarnation of Lord Rudra, the angry form of Lord Shiva. In spite of this one blight on his character as being ruthlessly short-tempered, he was nevertheless a highly enlightened, erudite, self-and-Brahm-realised sage of the highest and the greatest order. In fact, he is credited with expounding the profound metaphysical concepts that form the backbone of the teachings of the Upanishads in the form of his discourse given to the Gopis, or the milkmaids who accompanied Lord Krishna during his childhood days in Vrindavan, in the Gopal Uttar Tapini Upanishad which is the 27th Upanishad of the Atharva Veda tradition.

The Brihajjabal Upanishad of the Atharva Veda tradition, in its Brahman 7, verse no. 3 asserts that he was one of the great ascetics who were honoured by the title of being ‘Paramhans’—i.e. an ascetic who was highly self-realised, enlightened and wise as well as one who was totally detached from all things concerning this mundane world and life.

He was the third son of sage Atri and his devout wife Anusuiya, born as a fraction or part incarnation of Rudra, the angry form of Lord Shiva. This was the probable reason of his inheriting the genes of vehement anger. He is regarded as a human incarnation of Shiva's arrow by which he had destroyed the three cities called the Tripuras which belonged to the demon sons of Taarakaasur.

Some of the well known incidents related to him are briefly the following—(i) He was so pleased with Kunti, the daughter of king Kuntibhoja, for her devoted service that he gave a most powerful and potent Mantra or a secret formula by which she could invite any God she wished and get a son from him. It is believed that the five Pandavas and the hundred Kaurvas around whom the great epic story of Mahabharat is built were begotten by her as a result of this boon she had got. (ii) On the advice of sage Durvasa, Lord Krishna had smeared his own body, except the feet, with the left-over of the sweet pudding eaten by the sage. As a result of this, Krishna's entire body, except the feet, had become impenetrable by any weapon, and this proved to be a great boon during the epic war of Mahabharat. (iii) He completed the half done sacrifice of king Shvetaki and enabled him to ascend to heaven. (iv) Being of a legendary short temper, once he had shown unwarranted anger against king Ambarisha which back-fired on him and he had to run for cover when the Sudershan Chakra, the discus weapon of Lord Vishnu, pursued him in retribution. Ultimately, it was the generous king who himself had to rescue him from this curse. (v) According to the legendary story of the epic Ramayan, sage Durvasa was responsible for Lord Ram abandoning his brother Laxman and the latter's ultimate demise which resulted in the final curtains being drawn on the story of Ramayana when Lord Ram, unable to bear the pain of his separation from his beloved brother who was so devoted, obedient and faithful to him, left this world by taking Maha-samadhi on the banks of the river Saryu. He was followed by the rest of his family members and the subject of the kingdom of Ayodhya who decided to accompany the Lord as it was too much an ordeal for them all to live in this mortal world in the absence of their beloved Lord Sri Ram. Hence, Durvasa got the infamous reputation of being the cause of unnecessary agony and pain to so many innocent souls in this world.]

3. Amongst the milkmaids was one named Gandhavi or Radha. The milkmaids were perplexed and dumbfounded. They were extremely surprised and confused by the two instances, one related to Krishna and the other related to Durvasa, because externally they appeared to be just the opposite of what they said.

[In the case of Durvasa they have seen first hand that he ate all the delicious sweets they brought for him, and now he says that he has never eaten anything but grass; how incredulous it is! In the case of Krishna they had spent the whole night enjoying his company and frolicking around, and then incredulously he says that he is chaste and never seen a woman in his life or has ever touched one! These two incidents seemed to contradict what their perpetrators said—it appeared incongruous to believe that Durvasa did not eat the sweets, and it was equally ridiculous to say that Krishna was chaste and had never touched a woman when he had spent the night in the company of so many women. But the fact of the matter is that the river gave them the right of way when they said at its bank that Krishna was immaculate, incorrupt and chaste, which proved that it was correct. Surely there must be some great mystery behind all this, and this aroused curiosity in the Gopis to find out the truth. It appeared to them as if they were witnessing some magic.]

So they discussed the matter amongst themselves and decided to seek clarification from the sage. Since Radha was the wisest in the group, she became their spokesperson, and asked the sage, 'Lord, how is it ever possible that Krishna can be eternally celibate and dispassionate even though he regularly plays with us and keeps our constant company? Similarly, how is it ever possible that sage Durvasa eats only

grass when he has eaten such delicacies and so many sweet dishes before us right now? [We are indeed confounded. It's extremely incredible and absolutely unbelievable. So please tell us the truth and explain this phenomenon for us.] (3).

4. All the milkmaids had made Radha their chief spokesperson, and they stood silently behind her. [What has been said in this verse finds a resonance in the Brihad Aranyaka Upanishad of the Shukla Yajur Veda, Canto 2, Brahman 1, verse nos. 4-8, and Canto 3, Brahman 7, verse nos. 2-23.]

Sage Durvasa explained, 'The sky has certain attributes (such as it being infinite, fathomless, vast etc.) as well as some degree of grossness, though this grossness is infinitesimally small and negligible. On the other hand, the Parmatma or the supreme Atma, which is cosmic Consciousness, has no attributes or defining qualities, besides being absolutely sublime and subtle. This Parmatma has revealed himself as the sky element and pervades throughout it uniformly in a subtle manner as he is omnipresent, all-pervading and all-encompassing. But inspite of this fact that the Parmatma permeates in the entire space of the sky (just like air or ether fills the entire space of the sky), the Parmatma does not acquire any of the attributes and qualities or the elementary traces of grossness which the sky may have. The Parmatma remains separate and distinct from the sky inspite of being uniformly present everywhere in it. The sky element is a revelation of some of the eclectic virtues of the Parmatma as it is a manifestation of the latter, but the Parmatma is much superior to the sky element. It is not possible to equate the Parmatma with the sky element as the former is but a fraction of what the Parmatma is. In other words, the sky element has certain limitations whereas the Parmatma is limitless. The Parmatma has all the subtle qualities of the sky element, but the sky does not have all the divine and sublime qualities of the Parmatma.

This is metaphorically depicted when it is that the sky is unable to know who lives inside it; the sky is unable to see the Parmatma residing in its own self because for all practical purposes the Parmatma has completely merged his 'Self' with the sky, becoming one like the sky itself, so much so that there appears to be no perceptible difference between the sky and the Parmatma—though there is a vast difference between the two entities.

[It is like an empty pitcher being immersed in sea water. The water fills the empty pitcher instantly, and assumes the size and the shape of the pitcher. It is also now called the water of the pitcher instead of being called the water of the sea. But everyone knows that this is misleading—the water is the same, and it has no shape of its own for it assumes the shape of the vessel in which it is present.

So, when the cosmic Consciousness known as the Parmatma assumes the form of the gross body of a Jiva, the living being, the former appears to be the latter. But that is not the correct picture, for the Parmatma has no physical form whereas the Jiva has a definite form and character; the Parmatma is immortal while the Jiva is mortal. So, if one assigns certain attributes to the basically attribute-less Parmatma simply because the viewer is not wise and enlightened enough to know about the Truth of the matter, it does not mean that the Parmatma would become tainted. The confusion arises because the ignorant man treats the physical gross body of the Jiva as the latter's true self, instead of realizing that the truth is quite the contrary. The 'truthful self' of the Jiva is his Atma which is the 'Parmatma' that is being referred to in this instance because are the same 'consciousness' existing at two different levels of creation. The Parmatma is the 'cosmic Consciousness', while the Jiva is the same cosmic Consciousness but at the microcosmic level of existence.]

It is this Parmatma that resides in my body as my Atma, my 'truthful self'. In the likewise manner of the instance cited above, this Atma of mine, which is my 'true self', seems indistinguishable from my body in which it lives just like the Parmatma living in the sky seems erroneously to be inseparable or indistinguishable from the latter. [In other words, my 'true self' is not the body, but it is the Atma living inside the body. They are so closely related to each other that the one seems identical with the other. Or, there seems to be no difference between my true self and the body. But this deduction is erroneous and fallacious, because the 'self' and the 'body' are two independent entities. The body is perishable but the Atma is imperishable; the body is gross and visible while the Atma is subtle and invisible, and so on and so forth.]

The food was eaten by my body and not by the Atma, though externally it is difficult and impossible to differentiate between the two entities. Hence, though it appears that 'I' have eaten all the delicious things brought by you, the fact is quite the contrary. 'I', i.e. my 'truthful self' known as the Atma, has not eaten anything at all.

[The above logic and argument is being applied to all the five elements of creation now to prove that the supreme Atma, the cosmic Consciousness, which is the truthful identity of the creature, has nothing to do with what his gross body does, or how it feels.]

Similarly, the Parmatma has revealed himself as the air element; the air element depicts certain of the many life-sustaining virtues of the Parmatma. Therefore, the air element possesses or depicts some dynamic virtues exclusive to the Parmatma, but it would be absolutely erroneous to say that the air element is Parmatma himself, for the Parmatma is much superior to the air element and the latter is only one of the many manifestations of the former. In other words, the air element has certain characteristics and qualities possessed by the Parmatma, but the air element is not the Parmatma. The Parmatma pervades throughout the air element, and it is this Parmatma that gives the air element its characteristic qualities, its dynamism, energy and strength that enables it to inject life in the gross body of the creature. It is the Parmatma who has revealed himself as the air element in order to inject the spark of life in this creation in the form of the 'Pran' (breath and life). That is why the air element is known as the Pran, literally meaning life-factor. No life is imaginable without the air element. One shouldn't surmise that the Parmatma is air though air is one of the forms of the Parmatma. The air element is unable to know about the entity that resides subtly inside it, and which has rendered it with its characteristic powers and strength because for all practical purposes the Parmatma has assumed the form of the air element in his role as the provider of Pran to this creation. The air element inspires the perception of touch in all the creatures, but the irony and mystery is that it does not feel the presence of the Parmatma inside it.

This Parmatma resides in me (i.e. inside my body) as my Atma (i.e. my pure conscious soul which is my truthful 'self'), so how can I (i.e. my Atma which is my truthful 'self') ever be the enjoyer of what is being felt by the gross external body as the latter is distinct and separate from me? 'I' am not the body that enjoys physical senses or suffers from pain and miseries. 'I' am the Atma that enjoys or suffers from nothing.

The same logic is applied to the 'Tej' or the 'fire element'. It has certain characteristic qualities and glorious virtues that are revelations of the powers and dynamism of the Parmatma, but it would be totally naïve to call the fire element Parmatma, or the Parmatma as the fire element. The fire element represents the dynamic virtues of Parmatma that help to sustain life in this creation, provide the latter with the required energy, heat and light. The fire element has been empowered

by the Parmatma to sustain life, and as such it is a revelation of the Parmatma. But the fire element cannot claim to be Parmatma himself. This is metaphorically and aphoristically depicted by saying that though the Parmatma lives in the form of the fire element in creation, the latter is unable to know the former. In fact, the fire element thinks that it has an independent existence and possesses certain independent qualities, though the truth is that it is the Parmatma revealed in its form. [In other words, what one sees as the glorious virtues of the fire element are actually the magnificent virtues of the Parmatma that have assumed the specific form of the fire. In this sense it can be said that the physical form of the 'fire' which gives light and heat to this creation is actually a visible gross form of these virtues present in Parmatma. The heat, light and energy that the 'fire element' provides this creation is, in reality, being provided by the Parmatma himself in his manifestation as the 'fire'.

Since my true form is not the physical gross body but the eclectic Atma that is a microcosmic revelation of the Parmatma, the supreme Atma, the cosmic Consciousness, so when my gross body eats something how can 'I' be said to do so? The basic purpose of eating is to derive nourishment from the food eaten so that the body in which the Atma lives can be sustained. The body benefits not from the taste, the smell, the feeling or the colour of the food eaten but from the vital nutritional ingredients it contains (such as carbohydrates, proteins, fats, minerals, vitamins, trace elements, etc.). The grass serves the same purpose in this respect if the body can extract its needed nutrients from it as much as a delicious dish served on a platter. This is proved by the cow and other herbivorous animals who live a perfectly healthy life grazing on grass.

[Compared to the animals, the man—who ironically considers himself very intelligent, choosy, knowledgeable, highly evolved and well-placed in the hierarchy of creation—always remains suffering from one disease or the other though he has a wide variety of food to choose from, eats well-cooked food, and pays a great deal of attention on counting calories and the amount of vitamins, protein and carbohydrate that are present in a particular food item.]

So the crux of the matter is that the perceptions of taste, smell, texture, colour etc. that are present in the food eaten do not matter to the sublime entity known as the Atma, but are limited to the gross body and its organs of perception which are equally gross. The Atma does not need any sort of tasty food to meet its basic requirement of nutrition to sustain a healthy body in which it (the Atma) lives. The Atma is not at all enamoured with any sort of taste or colour or smell or texture of the food that the body needs for its sustenance. Therefore, when one is enlightened about the true nature of his 'self' (i.e. when he knows that his 'self' is the Atma and not the physical gross body), it does not matter to him what he eats as long as it can be easily digested and assimilated by the body without any inconvenience or distress.

[Since the human body is so made that it cannot digest raw grass and would suffer if it is fed on it, the man is compelled to eat something else other than grass. An ignorant and an uninitiated worldly man thinks that he has eaten a delicious meal because of the erroneous perception that the body is his true identity and his truthful 'self', because the perception of taste is limited to the gross body and it is the latter that enjoys taste of what is eaten. The Atma is unaffected by the 'taste' of what is eaten; the Atma is concerned only with the fact that the food keeps the body healthy, energized, strong and active.]

Therefore, I am correct when I say that I have eaten grass and nothing more, because for me the taste, colour, texture and smell of the food eaten is irrelevant and immaterial, and what is relevant is the nutrition that my body derived from what I had

eaten. It is the nutrients present in the food that helps my Atma to extract sufficient energy and strength that sustains the body in which it lives. Hence, for me everything is the same as far as it provides the body its required supply of energy, vigour and strength.

[Therefore, eating delicious food, which silently harms the body and requires so much extra effort and time to prepare it, just to meet the basic requirements of the body is an extravaganza for me when such nutrients can be easily obtained from simple staple food which does no harm to the body and does not involve any hassles. The time and effort spent on acquiring delicious food to just feed the despicable body, which is a bag of stool and urine, can be saved for achieving higher and nobler goals in life]

The 'water element' is unique in the fact that it is the liquid elixir of life; it harbours life and provides it with nourishment, lubrication and smoothness. The water element is a revelation of the Parmatma for the purpose of sustaining life in this creation.

[All the nutrients in the food eaten are first dissolved in water before they can be absorbed by the tissues of the body and be of any benefit for the creature. Water is required to produce food in the first place. Without water, this earth would be a barren stretch of hard, lifeless and merciless rock. It is unimaginable to have life even in a rudimentary form if the harshness and the scorch of the sun's heat were not neutralized by the soothing and cooling effect of the water element. The earth would have burnt like hell had there been no rivers, oceans or lakes, or if there was no rainfall. Even food needs water to be cooked and digested in the body. The blood in the body consists predominantly of water. The sperm reaches the egg to fertilize it and sustain the wheel of creation only because it can 'swim' in the genital fluids which have water as their basic ingredient. Thus, the 'water element' is the quintessential, the fundamental and the basic requirement of life. These are some of the ways in which the water takes the role of the benevolent Parmatma to help sustain life in this creation. So it can be correctly said that water is one of the many forms that the Supreme Being has taken to play specific roles in the complicated process of creation, its sustenance, and its development and growth.]

The Parmatma is invisibly present in the water element and gives the latter its vital life-sustaining virtues, its glories, its importance, its significance, and its magnificence. The irony of the situation is that though the water element, like all its predecessors, is a revelation of the Parmatma, the cosmic Atma, it is unaware of its true identity. That is, the water element, like the sky, the air and the fire elements, does not know or does not realise that it owes all its eclectic virtues, all its glorious importance, all its magnificent life-sustaining abilities and its unique honour as being the quintessential 'nectar or elixir of life' to the inherent presence of the Parmatma in its bosom. It does not realise that it is actually the divine Parmatma in its form. Had it not been for the Parmatma who is hidden subtly in the water element, the latter would not have occupied such an important and exalted place in this creation.

[That is, the 'water' is the gross visible form that the invisible Parmatma has taken to act as the quintessential lubricant, nectar or elixir of life.]

It is the same Parmatma that resides in my gross body as my true 'self'. If the water element, like the other elements, is unable to know the Parmatma residing in its self, how can my body know this Parmatma as it is also made up of the elements mentioned herein above?

[The gross body is made up of the five elements mentioned in this verse—viz. the sky element, the air element, the fire element, the water element and the earth

element. If the basic ingredients that go into making some given product lack some basic quality, how can one expect this quality from the finished product? So, if these elements do not the importance of the Parmatma, how can one expect the gross body that is made up of them to know the Parmatma? Just like each of these elements thinking erroneously that they have an independent existence and have independent powers and authority that they can exercise at their free will, the body—which is constituted of them—also thinks that it has its own powers and abilities. The fact is quite the opposite. It is the Parmatma living inside each of these elements that gives them their importance and significance, and their abilities and powers. It is the same Parmatma living inside the body as the Atma that enables the body to be of so great an importance for the creature, for as soon as the Atma abandons the body the latter becomes useless and easily decayable.]

The Atma residing in my gross body derives the same nutrition from the grass as it does from the delicious food given by you (i.e. the Gopis). All the elements play their individual role in the task of providing nutrition to the body so that my Atma does not suffer inconvenience as long as it lives inside the body. [For instance, the air element known as the Apan wind helps the movement of food in the intestines and aids digestion. The Saman wind ensures that the nutrients are evenly distributed to all parts of the body. The fire element ensures that the food is cooked properly before it is ingested by the body, and then takes care of its proper digestion once it is inside the body by keeping the body warm and providing the necessary energy, heat and stamina to help in the process of digestion and assimilation. The water element plays its crucial role by providing the liquid medium needed in the process of digestion, such as softening of the food, making it react with the various enzymes and other digestive juices, acting as the solvent that dissolves the nutrients so extracted during the process of digestion so that they can be taken through the medium of the blood to all the corners of the body, and so on and so forth.]

The basic requirement of nutrition is provided by eating grass, so it does not matter whether I have eaten delicacies or not as far as the Atma is concerned, and as far as the Atma can be sustained inside the body without causing it any inconvenience. If the water element can help to provide the body with nutrition extracted from grass, then it does not matter if I eat grass or some kind of delicacy that you might have brought for me. If this basic purpose is not served, then again it does not matter whether I eat these delicacies or not. So obviously, the criterion to decide what matters to 'me', i.e. my 'true self', is not the sort of food that my body eats but the benefit it derives from such food eaten. Therefore, if the grass serves the purpose of providing the body with healthy nutrients than it is equivalent to eating the tastiest of food.

The 'enjoyment of taste' of delicious food is done by the gross body when the taste buds are tickled by the chemicals present in the food eaten when they get dissolved in the saliva, which again is basically water-based. But the sense of taste (and for that matter all the other senses such as sight, smell, sound and touch) are related to the gross body which is not my 'true self'. So how can I be said to have tasted any food?

The basic necessity of getting nutrition is met by eating grass or plants in any form as much as by eating the choicest of foods prepared with the greatest of investment of time, money and effort. That is why I am honest and truthful when I say that 'I always eat grass'.

Finally, the 'earth element' forms the foundation of creation. It gives support and rest to the entire living world. It is especially related to the perception of smell. It

is actually the Parmatma in this form and role. That is, the Parmatma performs the function of smelling and giving rest to the world in his form as the earth. The earth is the grossest of the five elements, but the miracle of the situation is that without the earth no element would have any relevance and bearing because all of them need some base for their own existence. It is the earth that is an eternal treasury of all essential elements required for life in this creation. Though grossest of the five elements, it is the earth that acts as the foundation of creation. It is the earth that gives shelter to the other four elements—it is on earth that fire, water, air and sky that harbour life are present. The same elements may be present anywhere in the vast recesses of the universe, but they do not support life without the presence of the 'earth'. It is on earth that vibrant life thrives.

[It is on earth that the air supports life in the form of oxygen and refreshing wind; it is near earth that the sky harbours birds and other winged creatures; it is on earth that water flows as rivers and streams, and supports vibrant and colourful aquatic life; it is on earth that one can observe the fire actually burning with all its brightness and splendour, and actually helping to cook food, keep the world lighted and the creatures warm and comfortable. If the 'earth' is removed from the picture of creation, the entire habitable world would simply cease to exist. What we would have is a vast, barren and an unoccupied bowl of the empty cosmos, a creation sans 'life'. There is no air, fire or water in the deep recesses of the cosmos far away from the earth. Even the sky which is near the earth's surface harbours life, and the same sky far away from the earth is a vacant space which sucks life rather than fostering it.]

That is, the Parmatma revealed himself as the earth element in order to carry out all the various functions that the earth performs in the scheme of things in this creation. Though the fact is that the earth is a revelation of the Parmatma who has wished to take up this role of providing this creation with a foundation as well as all the necessary wherewithal for its sustenance, it would be highly absurd to say that the earth is Parmatma, or vice versa. One of the obvious reasons for this is that the earth is gross and visible while the Parmatma is most subtle and sublime as well as invisible.

My gross body is constituted primarily of the earth element (which makes up its skin, bones, internal and external organs etc.). So how can it be the Parmatma? In the same vein, as has already been pointed out by me, my true self is the Parmatma living in the gross body as the Atma. Therefore, what the body eats is irrelevant for the Atma. How can I be said to have eaten something that is eaten by the gross body?

The Mana (mind) is the entity that imagines things, enters into debates, and has doubts about anything. It is the Mana that thinks about the sky and other elements. When everything in existence is nothing but the Atma in the sense that they are all revelations of the same cosmic non-dual Consciousness known as the Parmatma (also known as Brahm in the Upanishads), where is the question of a sky or any other element having its independent existence and identity?

When there is complete non-duality, when only one single spiritual Truth known as the ethereal Atma (which is the cosmic Consciousness) prevails in this creation after having eliminated all the various external forms that it takes, such as the sky, the air, the fire, the water and the earth, or their combination known as the body, the Mana would be left with no scope of jumping from subject to subject; it would have nothing to doubt and debate about. Say then, when everything else other than the Atma is eliminated, where is the scope of confusions and doubts?

I am indeed that ethereal and divine Atma that is most sublime and subtle in creation, so how can I be involved in enjoying the taste of food that has its origin in a

gross world, is prepared from gross ingredients, and is eaten, tasted and digested by the gross body? (4).

[Note—When Brahm, the Supreme Being, decided to create the universe or this mortal world, which was not only an awesome and formidable task but also highly complex and technical, he first created the five elements as the fundamental building blocks. These were the earth, the water, the fire, the air and the sky. These elements left to themselves were as inane and lifeless as the world with life in it—for instance, the earth was a hard and gross composite of rocks and soil, the fire knew only to burn whatever was put into it, the water understood nothing but drowning and flooding, the air just blew like a storm, uprooting trees and causing havoc all around, and the sky simply was a dark fathomless void full of cosmic dust and exploding stars and toxic gases. But the miracle of creation is that Brahm injected these same elements with the powers to foster life—for instance, the earth produced crops and food for the forthcoming creatures who would inhabit its surface, provided them with a residence and took care of their existential necessities by producing wealth and energy sources such as oil and coal. The water acted as the life-bearing elixir, a soothing balm, a lubricant and a solvent; no life could have been imagined without water. The fire provided the world with energy, warmth, light and heat. The air was so essential that it was honoured with the epithet of ‘Pran’ which literally means life as it was the air that injected movement and dynamism into the rest of the element as well as the creation. Finally, the entire edifice needed a place to live, and the sky was the cosmic city of Brahm where whatever he created found a habitat. The sky kept everything in place; is it not a fantastic miracle that inspite of the cosmic space being absolutely void everything floating in it or living in it follows a certain path and obeys fixed laws? For instance, the units of the solar system hang in complete void, with nothing to support them, but still they never dash into one another but follow a pre-set path over millions and millions of years.

This aspect of creation whereby the otherwise lifeless units are enabled to show all the signs of life and vitality are because Brahm has empowered them and vested them with these virtues much like an ordinary assembly of metals and plastic assume the name of a computer and performs stupendous tasks once this assembly is empowered and authorized to do so by the man. The functions carried out by the five elements are actually delegated to them by Brahm; it is the earliest example of the doctrine of ‘delegation of authority’. Brahm, however, kept to himself the supervisor and controlling authority, and all the elements were under his sole jurisdiction. They performed the functions of life only as long as Brahm wished them to do so. This fact is easily understandable by a simple proof—the earth harbours life, it is warm, welcoming and habitable, it produces crops and vegetations to give food to the creature, it produces minerals and wealth for the latter’s existential necessity and well-being, but the same earth could be merciless and cruel and wipe out life should Brahm wish to do so as happens during earthquakes, tsunamis, droughts and famines.

Each of these five elements represent Brahm or are an image of Brahm to the extent of the specific functions they carry out independently and the relevant authority that is delegated to them for this purpose, but they are not the superseding Authority and Power, they are not Brahm parse because their powers and authority are limited and reflect only a fraction of what Brahm is. Thus, it is clear that though these elements are true representatives of Brahm, they are not Brahm himself.

Just like an emperor who builds a city for himself, Brahm took up residence in the cosmic city known as the ‘creation’ that he created, and this is the reason why he is also known as the Viraat Purush. The word ‘Viraat’ means vast and colossus, and ‘Purush’ means one who lives in a city or a ‘Pur’. [Refer Brihad Aranyaka Upanishad, Canto 2, Brahman 5, verse no. 18.] Since this creation was extremely colossus and extended as far as the sky stretched, the whole of it became the realm of

Brahm. Just like the authority and mandate of an emperor covers the entire empire, the entire universe fell under the jurisdiction of Brahm.

The physical form of the vast creation was made up of the five elements created by Brahm, i.e. the earth, the water, the fire, the air and the sky. This is the picture at the cosmic level. At the microcosmic level, when the individual creature was made by Brahm, the body of this individual was a microcosm of this vast creation. It was thus made up of the same building blocks that were used for the creation of the universe, viz. earth, water, fire, air and sky.

Now, these five elements had two aspects each—one was the gross physical aspect, and the other was the subtle aspect. The gross aspect was used to mould the physical gross body, while the subtle aspect is what makes a creature a ‘living being’. It is this subtle aspect of each element that represents Brahm in as much as they are the life-giving and sustaining aspects of these individual elements.

As long as the creature is alive, all the elements function in a set pattern so as to keep his body alive. The body is a composite of these elements and it is a residence of Brahm at the micro level of creation just like the vast universe is the residence of Brahm at the macro level. Brahm resides in this body as the creature’s Atma or consciousness. Now, when this Brahm decides to quit the body, none of the elements is able to keep it alive. Had these elements been independent life-giving and empowering Authorities who could decide when the body would die or live, they could have kept the body alive even after the consciousness has left the body. But this does not happen. So again we see that the elements are not independent authorities but subservient to some supreme Authority known as Brahm.

In the present verse, sage Durvasa means that whatever is eaten by him is a thing done by the body consisting of these five elements. The earth element of the body smells the food because smelling is the function related to the earth, the water element tastes the food because the chemicals that produce the sense of taste are dissolved by the water present in the saliva to give taste of what is being eaten, the fire element of the body digests food and produces stool and energy that keeps the gross body alive and warm, the air in the form of the Apaan wind helps the downward movement of the food and its excretion from the body, and the sky gives the necessary space to lodge the food in the intestines. But all these are evidently relatively gross by nature, and none of them is the sage’s true self. Can any person call himself earth or smell, water or taste, fire or energy, air or Pran, and sky or space? It is ridiculous and absolutely absurd.

Hence, ‘he’—i.e. the ‘true self’ of sage Durvasa which is not the physical gross body but the ethereal entity known as the Atma—has indeed not eaten the delicacies brought in by the milkmaids. In fact, this Atma benefited from the food only to the extent that it provided the necessary energy and nutrition to the body so that the latter could harbour the Atma as long as the latter wished to remain inside it. Should the Atma decide to leave the body, it would not be bothered by what the body eats. This basic function of food to provide energy and nutrition is sufficed by green grass or any other edible plant as is proved by the fact that herbivorous animals live a perfectly healthy life even without eating sweet delicacies made of butter and wheat flour. So, the sage was truthful when he said that he eats only grass. This is also a metaphoric and aphoristic way of saying that the sage was least bothered by what he ate as long as it sustained his body.]

5. Lord Krishna, who is so dear to you all (i.e. the Gopis), is the cause of all things that exist in creation, both at the individual level as well as the composite level, and at the gross level as well as the subtle level. Like two birds living together, the individual Atma and the all-inclusive Parmatma have a correlation with each other¹. Out of the two aspects of the same Atma, viz. the grosser aspect known as the mortal creature and the subtler aspect known as the immortal Being, it is the former grosser

aspect that is the ‘Bhokta’ or the enjoyer as well as the sufferer in this world, while the subtler aspect is merely a ‘Sakshi’ or a neutral witness and observer of everything around it.

That is, the aspect of the Atma that enjoys or suffers is known as the Jiva or the living being, while the aspect of the Atma that is neutral is known as the Parmatma.

Both of them live in the body that is comparable to a tree where two birds live together. One of them is the ‘Bhokta’ and the other is the ‘non-Bhokta’ or a neutral observer. As has been explained above, the Jiva is the Bhokta as it suffers or enjoys in this world, while the Parmatma (Brahm) is the ‘non-Bhokta’ as it is neutral, dispassionate and immune to temptations of all kinds.

This latter aspect of the Atma, i.e. the aspect that is ‘non-Bhokta’, is represented by Krishna. How can that Lord (Krishna)—who is absolutely neutral, detached, dispassionate and unattached to anything or any body, in whom there is no trace of ignorance and its accompanying delusions that may create a situation whereby one has to consider whether he is free from all worldly fetters or is tied down by worldly attachments and temptations, and who is beyond the definitions and purview of the concept of either Vidya or Avidya (knowledge or ignorance respectively)—be ever regarded as being promiscuous, lustful and passionate? (5).

[Note—¹Refer (a) Krishna Yajur Veda’s Rudra Hridaya Upanishad, verse no. 41; Shwetashwatar Upanishad, Canto 4, verse no. 6-7. (b) Atharva Veda’s Mundak Upanishad, Mundak (Canto) 3, section 1, verse no. 1-2; Annapurna Upanishad, Canto 4, verse no. 32. (c) Shukla Yajur Veda’s Paingal Upanishad, Canto 2, verse no. 13.]

6. A person who harbours willful hidden desires, passions and yearnings for the various temptations of this material world of sense objects, who willfully wishes to enjoy them and derive pleasure and comfort from them or their company, whose mind and heart willfully long for this world and its material charms and sensual objects, who allows his mind and heart to willfully harbour and dwell on such thoughts and be obsessed by them, who is literally possessed by such overwhelming thoughts and allows himself willfully to be so possessed, enjoying such thoughts and making no attempts whatsoever to get over them or rid himself of them—such a man is known as ‘Kaami’, a person who has ‘Kaam’ in him (i.e. a person who has various worldly desires, passions and lust inside him).

On the other hand, a person who accepts anything dispassionately just to please or oblige the other person who offers the thing to him lest he would be offended if the thing is refused, is not being lustful and willfully attached to the thing; he pays no attention to the thing, gives no thoughts to it, and does not even remember whether any such thing was ever given or offered to him, and whether or not he had accepted it or rejected it. He is internally a renunciate incarnate; he exemplifies the glorious spiritual virtue of detachment, dispassion, non-involvement and neutrality of the highest order. Say, how can such a person be called ‘Kaami’? This principle applies to Lord Krishna; he does what he does to please you while remaining completely dispassionate towards everything, being totally uninvolved in any thing pertaining to this gross body and the equally gross world, and therefore being able to maintain his internal immaculacy, purity, divinity and holiness.

Lord Krishna is independent from the body and its characteristic tendencies of taking a birth and getting old and infirm.

[This is because Krishna is highly enlightened and self-realised and understands that his ‘true self’ is the Atma, the pure consciousness, and not the body.]

Therefore, he has the characteristics of the Atma and not of the body. Lord Krishna is to be identified with his ethereal Atma that has the eclectic virtues of eternal and unmatched immaculacy, purity, divinity, holiness, sublimity and subtlety, as well as the grand virtues of immortality, imperishability and steadiness, rather than with his gross physical body which had taken a birth, which did so many worldly deeds, which either appeared to suffer from these deeds or even enjoyed them, and which has a limited time-span after which it had to leave this world like any other living being when the time is up.

In other words, like the Atma, Lord Krishna too is eternal, constant, infinite, imperishable, immutable and universal. Hence, Krishna never takes a birth, never becomes old or infirm and never dies because these are the characteristics of the gross body and not of the Atma.]

He is firmly established, steady, uniform, universal, eternal, infinite, immutable and imperishable. He is the essence known as the Parmatma, the supreme Consciousness, who lives in the sun to give it its light and energy, who lives as the Atma of the cows to make them bear life and be holy, who protects these cows to indicate that he protects all the creatures of this creation who are humble, docile and helpless, and who not only resides in all the ordinary and mortal cowherds as their 'self' or their Atma but also in the immortal and exalted Gods as their divine 'self'. The Vedas sing his divine glories in the form of hymns. He is not only the creator of all the Bhuts (elements) but also lives inside them to empower them and give them their individual characteristics and qualities.

The Krishna who is worthy of adoration, respect, worship, reverence and paying obeisance to is not the man known as Lord Krishna but the divinity known as the 'Krishna Consciousness'. This entity is as holy and divine as the cosmic Consciousness known as 'Brahm'. It is the only and the absolute spiritual Truth of creation; it is the Tattwa (essence) espoused and eulogized in the Upanishads. Therefore, my dear Gopis, this Krishna is not the one who had stayed with you the whole night, and about whom you have doubts as to his divinity, immaculacy and holiness (because you had erroneously thought that the person with the physical body given the name of Krishna by his parents is the only person known as Krishna, and out of your ignorance you had been deluded to think that the cowherd who played around with you is an ordinary human being who is haughtily boasting that he is the Parmatma, the Supreme Being).

Well, now do you see who the real Krishna, the Parmatma, is? It is this Krishna who is your beloved and Lord. [Therefore, how and why do you doubt his statement that he is an eternal celibate and absolutely dispassionate inspite of frolicking around with you and having spent a night in your company? Surely, you have not recognized or known his true form!]' (6).

7. Hearing this, Gandharvi (Radha) asked the sage, 'Oh great sage! How did this most mysterious, supreme and divine Lord Krishna come to live amongst us like an ordinary person? Say, how did you come to know the secret of the Lord? What is the great Mantra (divine formula) by which one can attain the supreme Lord? Where does this great and supreme Lord live? In what form and how did he take birth from the womb of Devki (Krishna's worldly mother)? Who is his elder brother Balraam? How is Gopal (Krishna) worshipped? Why and how did the eternal and immortal Supreme Being who transcends Prakriti (the all-encompassing and invisible cosmic Nature) and is beyond comprehension take birth in a gross form on this mortal earth? Please be kind to tell us all this clearly in detail.' (7).

8. Sage Durvasa replied, ‘It is a well established fact that prior to the beginning of creation there was only one divine entity known as Adi-Narayan. The entire creation remained dissolved in him, and it is from him that it emerged at the time of creation.

When he made a mental resolve to initiate the process of creation, a divine lotus emerged from his navel, and from it was born the creator Brahma. Lord Narayan advised Brahma to do Tapa (austerity and penance), and rewarded him with a boon.

Pleased by Brahma’s Tapa, Narayan asked him to seek a boon and be rewarded with whatever he wished (8).

9. Brahma asked, ‘Lord, which is the best amongst all the incarnations of the Supreme Being, the incarnation which provided contentment and fulfillment to all the Gods as well as to the rest of the creation, and which provided liberation and deliverance to all the living beings who remembered it and offered worship to it? How is the supremacy of this incarnation established, and how is it proved that this incarnation is indeed a revelation of the supreme transcendental Brahm?’ (9).

[Note—Refer to verse no. 7 and its subsequent verses of section 1 of this Chapter which is called Gopa Purva Tapini Upanishad in this context.]

10. Hearing this query from Brahma, the great Lord Narayan explained, ‘Oh son (refer verse no. 8)! Just like there being seven divine abodes in the heavenly mountain known as Meru where the Gods live and which are obtained by those devotees who worship these Gods devotedly, there are similarly seven holy abodes (cities) in this mortal world on the earth where those who seek spiritual liberation and deliverance by either following the Sakaam philosophy of worship or Nishkaam philosophy live.

[These seven cities are Ayodhya, Mathura, Haridwar or Mayapuri, Kashi or Varanasi, Kanchi, Ujjain or Awanti, and Dwarka. The ‘Sakaam philosophy’ is to worship the Lord with some desire or set objective in mind, while the ‘Nishkaam philosophy’ envisages doing worship without expectation of any reward.]

The best amongst these seven holy cities is the city where the supreme Brahm had manifested himself as Gopal, hence it is known as Gopal-puri. [This is the present city of Mathura in India where Lord Krishna had spent his days.]

This city fulfills the wishes of both types of devotees, the ones who worship the Lord with some desire in their heart, as well as those who have no desires. It is equally rewarding for both the Gods as well as the ordinary creatures who offer worship to the Lord here (10).

11. Just like a lotus lives in a pond, this holy city exists on earth. [That is, just like the lotus remains clean inspite of living in a pond of dirty water, this city remains holy and divine inspite of being present in the world surrounded by corruptions and unholiness.]

It is known as Mathura and is protected by the Lord’s discus.

This city has twelve gardens or groves as follows—the vast forest-like garden known as Vrihad-van, the Madhu-van which is named after the famous demon Madhu, the Taal-van famed for its palm or toddy trees, the Kamya-van which is the playground for Lord Krishna, the Bahulaa-van named after one of the great devotees of Lord Krishna named Bahulaa, the Kumud-van which is full of lotus and lily flowers, the Khadir-van which is rich in Khadir trees (*Mimosa catechu*), the Bhadravan where Balbhadra (the elder brother of Krishna) used to move around, the Bhandir-van where only Bhandir trees (a kind of small plant, perhaps referring to

Cannabis Indica) are seen, the Sri-van believed to be the abode of Laxmi (the divine consort of Vishnu), the Loha-van where Loha did severe Tapa, the Vrinda-van named after the devotee of Krishna known as Vrindaa.

[These twelve gardens or groves are like the twelve petals of the lotus flower representing the city of Mathura or Gopal-puri.] (11).

12. Within the city of Mathura, the different Gods, humans, Gandharvas (celestial musicians), Naags (serpents representing inhabitants of the nether world) and Kinnars (celestial dancers) sing and dance in these twelve gardens or groves.

The twelve Adityas (Sun Gods)¹, eleven Rudras (forms of Shiva)², the eight Vasus (personified form of primary assets of creation)³, the seven Rishis (ancient sages)⁴, Brahma (the creator), Narad (the celestial sage who is one of the greatest devotees of Lord Vishnu of whom Krishna is one of the many incarnations), Lord Ganesh (the chief amongst the Gods), and the twenty Shiva-Lingams (symbols of Lord Shiva) known as Vireshwar, Rudreshwar, Ambikeshwar, Ganeshwar, Neelkanth, Gopaleshwar, Bhadreshwar etc. are all established in these twelve gardens or groves.

Amongst the twelve gardens or groves known as 'Vans', there are two main ones—viz. Krishna-van and Bhadra-van. All of them are very holy and auspicious. Gods live in them. Great mystics do Tapa (austerity and penance) there to acquire mystical powers (12).

[Note—¹The *twelve Adityas*—According to Vishnu Puran, the twelve Adityas are the following—Dhata, Arayma, Mitra, Varun, Anshu, Bhug, Indra, Vivaswan, Pusha, Parjanya, Twashta and Vishnu.

The Sun God is worshipped by twelve names during the twelve months of a year. These names and the months are as follows—(1) as *Dhata* during the first Hindu month of Chaitra also known as Madhu (roughly corresponding to mid-March and mid-April); (2) as *Aryama* during the second Hindu month of Vaishakha also known as Madhav (roughly corresponding to mid-April to mid-May); (3) as *Mitra* during the third Hindu month of Jyestha also known as Shukra (roughly corresponding to mid-May and mid-June); (4) as *Varun* during the fourth Hindu month of Ashad also known as Shuchi (roughly corresponding to mid-June and mid-July); (5) as *Indra* during the fifth Hindu month of Sravan also known as Nabha (roughly corresponding to mid-July and mid-August); (6) as *Vivaswan* during the sixth Hindu month of Bhadrapad also known as Nabhasya (roughly corresponding to mid-August and mid-September); (7) as *Pusha* during the seventh Hindu month of Aashwani also known as Tapa (roughly corresponding to mid-September and mid-October); (8) as *Kratu* during the eighth Hindu month of Kartik also known as Tapasya (roughly corresponding to mid-October and mid-November); (9) as *Anshu* during the ninth Hindu month of Marga Shirsha also known as Saha (roughly corresponding to mid-November and mid-December); (10) as *Bhag* during the tenth Hindu month of Pausa also known as Pushya (roughly corresponding to mid-December and mid-January); (11) as *Twasta* during the eleventh Hindu month of Magh also known as Esh or Ish (roughly corresponding to mid-January and mid-February); and (12) as *Vishnu* during the twelfth Hindu month of Phalgun also known as Urj (roughly corresponding to mid-February and mid-March).

These twelve Adityas appear first in the Rig Veda 1/41/4-6 and 2/27. They are the sons of Aditi, the mother of Gods (Atharva Veda, 8/9/21). They are the following—the eight Vasus + Indra + Sun + Vishnu + Shiva = twelve in number.

²The *eleven Rudras* are actually eleven subtle forms of Lord Shiva. They are in the forms of Gods as follows—(i) Mannu, (ii) Manu, (iii) Mahinas, (iv) Mahaan, (v) Shiva, (vi) Ritdwaj, (vii) Ugrareta, (viii) Bhav, (ix) Kaal, (x) Vamdeo, and (xi) Dhritvrat. The eleven Rudras appear in Rig Veda 1/43/1, and Taittiriya Brahman 3/4/9/7. They are regarded as the father of the Wind God or the Maruts (Rig Veda,

2/33/1). The word Rudra literally means one who is angry, terrible and wrathful. Amongst the Rudras, Lord Shiva is regarded as the most senior and enlightened.

The eleven Rudras according to Vishnu Puran (1/1/15) are the following—Har, Bahuroop, Trayambak, Aparajaet, Shambhu, Vrishakapi, Kapardi, Raivat, Mrigvyadh, Sharva, and Kapaali.

³The *eight Vasus*— The eight Vasus are the patron Gods who provide succour and a dwelling place for the whole creation. They symbolise those primary necessities of life without which existence is not possible. They are— (i) Kuber (the God of wealth and prosperity), (ii) the Sun God (who provides energy and food) and his rays and radiance (i.e. sunlight and the energy that it provides), (iii) Shiva (the concluder or annihilator of the creation), (iv) Vishnu (the sustainer), (v) the Water God (called Varun), (vi) the Fire God (called Agni), (vii) any body of water such as a pond, a river etc., and (viii) holy and pious people (who give advice and guidance to the creatures of the creation). According to Brihad Aranyak Upanishad 3/9/3, the Vasus are the following—Fire, Earth, Air, Antariksha (the space of the solar system), Aditya (Sun), Duloka (heavens), the Moon, and the Nakshatras (the stars and the planets).

According to Purans, the eight Vasus are the following—Dhruv (ध्रुव), Dhar (धर), Som/Soma (the sap of an elixir-providing plant called Som/Soma which is used during religious ceremonies as sanctified liquid offered to the Gods; it is white in colour and is said to be stored in the moon), Aapha (water), Anil (wind), Anal (fire), Pratush and Prabhaas.

These eight Vasus are the semi-Gods who symbolize the various types of assets needed to sustain this world. They therefore represent such assets as jewels, precious stones and gems, gold and other forms of wealth and property. Vasus also refers to the fire and water elements as well as their grosser forms as the terrestrial fire and water bodies such as ponds and lakes; to the virtue of radiance, splendour and glory; to the ray of light; to Kuber (the treasurer of Gods), Shiva, Sun, Vishnu, and a simple and pious gentleman.

The Ekakchar Upanishad of Krishna Yajur Veda, in its verse no. 7, says that these Vasus are manifestations of Brahm in order to provide the creation with the necessities of life.

The Atharva-shikha Upanishad of the Atharva Veda, in its Kandika (Canto) 1 says that the Vasus were created in the beginning of creation from the first Matra 'A' of OM representing the first leg of the supreme Brahm along with Brahma the creator, the Rig Veda, the Gayatri Chand and the Grahapatya Agni.

The Brihajjabal Upanishad of the Atharva Veda, Brahman 4, verse no. 16 lists the eight Vasus as follows—Ghar, Dhruv, Soma, Kripa, Anil, Anal, Pratyush and Prabhash.

The Nrisingh Purvatapini Upanishad of the Atharva Veda, in its Brahman 1, verse no. 3 says that the Vasus, along with the Rudras and Adityas etc., were born out of the third step of the divine Anushtup Chanda in which the Mantra of Lord Nrisingh was revealed to the creator Brahma when he did severe Tapa in order to initiate the process of creation.

The Devi Upanishad of the Atharva Veda tradition, verse no. 4 says that the Vasus are manifestations of the Mother Goddess, who actually represents the dynamism of the supreme transcendental Brahm, the Supreme Being. The Goddess is the energy, authority and powers of Brahm that are employed by the latter to create and control this creation, both at the macrocosmic level as well as the microcosmic level.

The Vasu is this dynamism of Brahm revealed at the macrocosmic level.

⁴The *seven Rishis*—The seven great ancient sages according to the Shatpath Brahman are the following—Gautam, Bharadwaj, Vishwamitra, Jamdagni, Vashishtha, Kashyap and Atri. They belonged to the early Vedic period called the Vaivastava Manu Manvantar (the period of ancient history during the time of Vaivastava Manu)

According to the epic Mahabharata, they are however the following—Marichi, Atri, Angira, Pulaha, Kratu, Pulastya and Vashishtha. They belonged to the era known as the Swayambhu Manu Manvantara

According to astrology, these seven Rishis form the seven stars of the Polar Bear or the Great Bear, the group of seven stars seen in the night sky that point towards the Polar Star, the North Star.]

13. Images of Balraam, Pradumna, Aniruddha and Krishna are also established there. In these twelve divine forests (gardens/groves) of Mathura are established twelve consecrated images of the Lord.

The first image is worshipped by the Rudras. The second image is worshipped by Brahma, the creator. The third image is worshipped by the sages known as Sankaadi who are sons of Brahma. The fourth image is worshipped by the Maruts (the various forms of the Wind God). The fifth image is worshipped by Vinayak (Lord Ganesh and his attendants). The sixth image is worshipped by the eight Vasus. The seventh image is worshipped by the various sages and seers. The eighth image is worshipped by the Gandharvas (celestial musicians). The ninth image is worshipped by the Apsaras (celestial female dancers). The tenth image is secretly established in the sky and worshipped by the holy Spirits and those who live in the sky (such as the winged creatures like the birds). The eleventh image is secretly established in the Antariksha (the outer space or deep recesses of the sky beyond the atmosphere of the earth). And the twelfth image is established in the Bhugavha (the deep bosom of the earth; the nether world).

Those who duly worship these images in a proper way find freedom from death (i.e. they do not have to suffer the horrors of death); they obtain Mukti (or liberation and deliverance from this world); they cross over or overcome the miseries and torments associated with having to live in a mother's womb, taking birth, attaining old age and finally facing death, as well as the horrors of the three legendary torments known as the 'Trai-taaps'¹ that are associated with life in this world (13).

[Note—¹The three *Trai-Taaps* are the following—(i) Adhyaatmik—the problems associated with one's spiritual welfare, (ii) Adhibhautik—problems associated with the physical body such as old age infirmity, disease etc. as well as from other creatures such as wild animals, enemies and rulers of the earth who are repressive and cruel; and (iii) Adhidaivaik—problems related to unfavourable Gods and malignant stars.]

14. In this connection, there is a hymn which says as follows—'The city (of Mathura or Gopal-puri) is served served by Brahma (the creator of this physical world) and other Gods; it is always protected by the conch, the discus, the mace and the bow known as Sharnga (all of which are held by Lord Vishnu, the protector of creation, and deemed to be the Supreme Being); and which is also given protection by the rammer or the pounder of Balbhadra (the elder brother of Krishna). This city is very enchanting and most beautiful (for the purposes of spiritual pursuits).

Lord Krishna, the Supreme Being known as the Parmatma, always lives here in a symbolic form* along with his other forms known as Balraam, Pradumna and Aniruddha. He is always accompanied by his divine consort called Rukmini who represents his dynamic Shakti (the cosmic energy and mystical powers) that is inseparable from him.

[*The Supreme Being known as the Parmatma lives in Mathura or Gopal-puri in two forms—one is his physical form known as Krishna or Gopal, and the other is his cosmic, all-encompassing, all-pervading and omnipresent ethereal form known as

Krishna Consciousness. The latter form lives subtly as the Atma, the pure conscious soul and the truthful self of all living beings, while the former form lived in a physical form during the specific time known as the era of Dwapar according to the Hindu calculation of the cycle of birth and death. Since a physical form has a limited span, the Lord for his heavenly abode at the end of Dwapar, and his image or idol is honoured now in the present era known as Kali-yug to represent the same Lord.

The same principle applies to the other three forms of the Lord, i.e. to Balraam, Pradumna and Aniruddha, as well as to Rukmini.]

In spite of the fact that Lord Krishna is himself the only complete revelation of the Supreme Being known as the Parmatma, yet he is famous with four names (of Gopal, Balraam, Pradumna and Aniruddha) just like the instance of the Mantra known as 'OM' which is said to have four sounds corresponding to the letters A, U, M and the Ardha Matra or the half-syllable but is actually a monosyllabic sound that is ethereal and one which cannot be artificially fragmented or divided into different alphabets having separate notes of sound.

[Now, the correlation of the four forms of Krishna and the four subtle sound of OM is being described—]

Balraam stands for the 'A' sound or aspect of OM, Pradumna represents the second letter of OM, i.e. 'U' that stands for Taijas (energy), Aniruddha stands for the third aspect 'M' of OM, and the fourth Ardha Matra of OM stands for Rukmini, the divine energy of the Lord personified. The composite word 'OM' therefore stands for Lord Vibhu (the almighty and supreme Lord of creation, which here means Lord Krishna) himself (14).

15. A wise, enlightened and self-realised spiritual aspirant should worship Lord Krishna in his own Atma with the firm conviction that the Lord who is beyond the creation consisting of the three Gunas such as Raja Guna (as well as the Sata Guna and the Tama Guna), i.e. the Lord who is untainted and absolutely neutral as he transcends all characteristics and attributes that define this creation, is none but his (the spiritual aspirant's) truthful 'self'.

Thus, the worshipper must be convinced that he (the worshipper) is no one else but the Parmatma known as Krishna himself revealed in his truthful form as the Atma, the pure conscious 'self'. This Atma lives inside the physical gross body of the worshipper just like the Krishna Consciousness had lived inside the physical gross body of the Lord whom the Gopis had played with, the Lord who was known by the worldly name of Krishna by them.

He who thinks this way and is firmly convinced of the truth of this state of existence does indeed enjoy the bliss that comes with liberation and deliverance (from ignorance and delusions). He indeed becomes Brahm-realised and self-realised. He indeed becomes an expert in the knowledge of Brahm.

The eternal and all-pervading supreme Lord who dearly accepts and eagerly protects the entire creation inhabited by the humble Gopas (or cowherds representing the most humble of creatures), from the beginning of creation right up to its conclusion, as if these Gopas were the very own 'self' of the Lord, is the one who is known as Gopal (because he protects and gives shelter and succour to the Gopas).

Hence, 'Gopal' is a term that is applied to the Supreme Being known as Pranav or Brahm whose representative word is the ethereal Mantra known as OM, and who takes special care of this creation with great kindness, grace, magnanimity and benevolence. [As we must understand by now, the word 'Gopal' has two parts—(i) 'Gopa' means the humble and the docile subjects of the vast kingdom of the Supreme

Being that has been given the name ‘world’, and (ii) ‘Paal’ means one who takes care of his dependants. Therefore clearly, ‘Gopal’ is the Lord who takes care of even the humblest of his subjects.]

A wise aspirant should establish oneness between himself and the Lord by meditating upon him and thinking as follows—‘Lord Krishna—who is the essence of creation, who is the Absolute Truth of creation, who is the supreme transcendental Brahm, who is known by the name of Gopal, and who is an embodiment of eternal bliss, beatitude and felicity—is indeed the Lord who resides in my inner-self as my Atma, the pure conscious ‘self’. Therefore, I am none but Gopal.

[Obviously, I need not search Krishna or Gopal anywhere outside, for he lives inside my own body as my ‘truthful self’. What I need to actually do is to meditate and contemplate upon the Lord within my own self. Since I have realised that my ‘true self’ is the pure consciousness that is a microcosmic form of the super cosmic Consciousness known as Brahm, my body naturally becomes an image of Brahm. Such a man who has sincerely understood the absolute truth of this metaphysical principle is known as a ‘Gyani’, the one who is wise and enlightened, the one who has come to know the ‘Truth’ of creation. The only difference between two men is that while one is known as a Gyani the other is known as an ‘A-Gyani’ because he does not have this knowledge. But this lack of knowledge does not alter the fact that the Atma lives in the body of both of them equally.

Therefore, if the Gyani says that ‘I am Brahm’ he is saying the absolute truth, while when the A-Gyani says the same thing he is being boastful and deceitful.]

OM Salutations! Indeed, Gopal—who transcends the limitations of time (such as the past, the present and the future)—is the ultimate and absolute Truth (because ‘Truth’ is steady and constant and not affected by the passage of time).

I am indeed that Gopal. I am indeed Lord Gopal (Krishna) who is truthful, unbound, limitless, eternal, infinite, constant, invisible and indefinable. [That is, I have realised my truthful form knows and the Atma which is the same as the Krishna Consciousness.]’ (15).

16. Lord Krishna assures Brahma as follows—‘Oh Brahma! I always live in the city of Mathura. I will always live there adorned by my conch, discus, mace, lotus and a garland known as Vanmala¹ (16).

[Note—¹The *Vanmala*—refer (i) section 1, Gopal Purva Tapini Upanishad, verse no. 8; (ii) section 2, Gopal Uttar Tapini Upanishad, verse no. 31.]

17. My form is of cosmic dimensions as I am all-pervading and all-encompassing in this creation. My divine form is eternally enlightened and illuminated. It has no physical attributes and grossness of any kind. I live in a sublime and subtle form in the city of Mathura located in the continent known as Jambu-dwip (which is the present-day India) (17).

18. In this way, he who meditates upon me and remembers my divine sublime form which is ‘consciousness personified’ is surely most dear to me and is able to attain my divine abode.

I am always present in my divine form as Lord Krishna in the city of Mathura where the devotee should worship me in my divine form as narrated above.

[There is another way we can read this verse—‘I (Krishna) am always present in my divine form as the cosmic supreme Lord known as Krishna in the city of

Mathura where the devotee should worship me and remember me. Those who do so are very dear to me, and they obtain my abode.’] (18).

19. My wise and learned devotees worship me in four different forms according to the prevalent tradition in the four Yugs or the four divisions into which one cycle of creation is divided (19).

20. These four forms are that of Pradumna, Aniruddha, Gopal Krishna and Balraam. [Refer verse no. 13 above and verse no. 25 below.]

They also worship Lord Vasudeo along with his divine consort Rukmini.

[In the first Yug called Sata-yug, the fair-complexioned Balraam is worshipped; in the second Yug called Treta-yug, the blood-complexioned Pradumna is worshipped; in the third Yug called Dwapar-yug, the yellow-complexioned Aniruddha is worshipped; and in the fourth Yug called Kali-yug, the dark-complexioned Krishna is worshipped. In fact, the word ‘Krishna’ itself means ‘dark’.]

A wise man must worship me with the firm conviction that ‘I (i.e. his Atma, his true self) am the Lord known as Gopal who has no birth, as I am eternal and without an end; I am the ancient and truthful Pradumna; I am Balraam; and I am Aniruddha.’ (20).

21. Thus, a wise worshipper should honour me in his own Atma; he must worship me in the form of his Atma that is the pure consciousness and his truthful self.

I should be worshipped selflessly or without any worldly desires by following the principles of proper, righteous and auspicious conduct that I have established in the form of Dharma in the scriptures. [That is, one must lead a life of probity, propriety, righteousness and auspiciousness according to well-established doctrines laid down in the scriptures.] (21).

22. Those who worship my form should live near the Bhadra-van and Krishna-van. [Refer verse no. 12 above.]

Those who cannot find the desired auspicious reward or attain their spiritual objective due to any cause whatsoever inspite of religiously and faithfully following the laws of Dharma (auspiciousness, righteousness, probity and propriety), or those who are trapped in the snare of Kali-yug from which they find hard to extricate themselves, if such people live in these two places (i.e. Bhadra-van and Krishna-van in the holy city of Mathura), then they reap the same benefits as those who are fortunate to worship me there.

[That is, it is easy to attain spiritual success if one worships me in Mathura or even simply lives there. The reason is that the atmosphere of the place is rich in devotional quotient and one can see and hear others worshipping the Lord. This creates in him a natural urge to do so himself as it is the natural wont of a man to emulate others to show that he is one step ahead of them. The atmosphere of a religious place is full of religiosity and holiness, though more often than not it is artificial and for show-off, but the pill would have its positive affects even if it is taken inadvertently and under peer pressure.]

Oh Brahma! Just like you have an affectionate relationship with your sons Sanak and Sanakaadi sages, just like Lord Shiva is affectionate towards his special attendants known as Pramaths, and just like I (Vishnu) am affectionate towards Laxmi (my divine cosmic consort), my devotees are similarly very dear to me; I am very affectionate and benevolent towards them.’ (22).

23. Brahma asked, ‘Oh Lord! Please tell me how did you become four in form though you are always one and non-dual?’

Similarly, how did the monosyllabic word OM got divided into four parts—A, U, M and the Ardha Matra?’ [Refer verse no. 14 above.] (23).

24. [This verse describes the genesis of creation.]¹

Lord Narayan replied, ‘Prior to the coming into being of this creation, there was only one Brahm who prevailed everywhere. In the primary stages of creation, the primary Nature known as Mool Prakriti came into existence from this Brahm. This Prakriti was ‘Abyakta’, i.e. it was invisible and indefinable. Since this Prakriti emerged from the Akshar (imperishable, that which does not decay) Brahm, it too had the same characteristic feature of being Akshar.

From this Avyakta Prakriti was created Mahattatva (the Great Tattva or the primary element).

From the Mahatattva was created the Ahankar (pride and ego) which was a combination of the three Gunas known as Sata (the best quality), Raja (the medium quality) and Tama (the lowest and meanest quality).

From Ahankar (dominated by the Tamas Guna) were created the five Tanmatras or senses of perception (such as smelling, tasting, hearing, feeling and seeing).

From these were produced the five Maha-Bhuts or the five elements which would act as the building blocks of the rest of the creation.

[These five Maha-Bhuts were the ‘sky’ which was produced from the perception of hearing because sound needed space to travel and heard at a distance, the ‘air’ which was produced from the perception of feeling as is evident from the fact that we can ‘feel’ the breeze blowing against our faces inspite of it being invisible, the ‘fire’ which was produced from the perception of seeing because fire gave light that enabled to the creature to see, the ‘water’ which was produced from the perception of taste as is evident from the fact that we can taste anything only when its chemicals are dissolved in the water content of the saliva in the mouth, and the ‘earth’ which was produced from the perception of smell as is proved by the fact that one smells anything on the surface of the earth, and there is no smell in outer space. Refer section 1, Gopal Purva Tapini Upanishad, verse no. 20 for a different take on this stanza.]

{Though not mentioned here expressly but it would be however relevant to point out that out of the Ahankar that was dominated by the Sata Guna was created the patron Gods of the five physical organs of perception, and from the Ahankar dominated by the Raja Guna was created the five organs of perception in the body, such as the ear that hears, the skin that feels, the eye that sees, the tongue that tastes, and the nose that smells.

As has been stated above, the actual senses of perception, such as sight, smell, hearing, taste and touch, relate to the gross world of material objects, and are created by and related to the Tama Guna. This is because this Tama Guna has the propensity to tie the creature to delusions and lowly things of the world, things that lack the sublimity and subtlety of the Atma. When the Atma is overwhelmed by the Tama Guna it begins to seek the world through these perceptions. The Atma sees beautiful sights and gets enamoured by them, it hears pleasant sounds and wants to hear them again and again, it tastes delicious things and wishes to roll it in the tongue to derive more physical pleasure from them, it smells pleasant smells and wishes to repeat the pleasant experience, and it feels things that arouse passions in it and then begins to

long for their proximity. And when the all-powerful Atma manages to use the body to achieve success in these endeavours it becomes filled with 'Ahankar', i.e. it feels pride at its acquisition and becomes haughty and arrogant. The Atma thus gets entangled in the web of Maya or ignorance and delusions. It loses its primary form of being unattached and neutral, and rather becomes excessively possessive and obsessive. This state of affairs corresponds to the Jagrat or the waking state of existence of consciousness.

But when the Atma is tired of its wanderings and finds that it is never satisfied, it retires to sleep which is called the Swapna or the dreaming state of existence of consciousness. This means that the Atma withdraws its self from the external world reached and perceived by the five organs of perception, and goes to a world which is subtle and not as gross as the physical world. This is the world of dreams, and here the only part of the body that plays an active role is the subtle body known as the mind-intellect complex and its sub-conscious part. The latter helps the Atma to imagine things that were experienced during the waking state but were beyond the reach of the physical limitations of the body.

For instance, if a poor man yearns for the comfort of a palace he can't do so while awake, but surely his mind would allow him to live in a palace when he dreams. When his wishes are fulfilled, the creature feels contented and happy. But the unfortunate aspect of this whole scenario is that the creature has to finally wake up from his dreams to face the harsh realities of the world. So the Atma keeps on oscillating between the Jagrat and the Swapna states.

A time comes when the Atma discovers to its amazement that there is a state when eternal peace can be found, the state where even the tussle between the acceptable and the unacceptable does not exist. This is the Sushupta state of deep sleep. The Atma finds real peace and bliss here. But again, for an ordinary man, this state is also transient as the Atma reverses its states to the earlier two states.

Then it begins to search for a state where peace and tranquility can be made perpetual—and it is then that the creature discovers the fourth state known as Turiya or the post-Sushupta state. When this state is further transcended, one reaches the higher echelons of super-consciousness that is called Turiya-teet.

In brief we deduce that a wise and enlightened man is one who knows what true peace is, and what the spiritual Truth of the Atma is that is absolute and irrefutable.}

In this way, the supreme Brahm, which is primarily Akshar (imperishable and eternal) and Avyakta (invisible and attribute-less) becomes covered or surrounded by so many layers of qualities, attributes, features and characters that it appears to be quite the opposite of what it is supposed to be.

[Brahm has not only created everything but also pervades each pore of each unit of this creation; there is nothing in this creation that is not Brahm. Hence, since even the gross and perishable aspects of this creation where the grosser of the five elements dominate, for instance the body of the creature, is a manifestation of Brahm, it gives the illusion that Brahm is gross and perishable. Another instance is of the negative dimensions of creation such as the quality of Ahankar (ego and pride) dominated by the Tama Guna. Brahm is said to be without any of the attributes associated with this creation; Brahm is an immaculate entity. So to say that Brahm has Ahankar, which is a negative quality, would be an absurd proposition when applied for Brahm, but the fact remains that Ahankar is as much a part and parcel of creation as the other positive qualities. Since this creation is a composite manifestation of Brahm, it follows that if this creation has positive virtues as well as negative virtues,

then Brahm must also have them. This is because the product cannot have any quality that is not present in the ingredients that are used to create or make it.

In brief, it must be remembered that this creation is a composite of the good and the bad, and this was done by the supreme Creator to maintain a fine balance of power and qualities. He allowed the creation to take its own course with the help of the creative and the substance ability of the Raja Guna, and ensured that it followed a right path with the powers of the Sata Guna. But as the creation went on rolling forward, decadence and wear and tear set in. What was initially immaculate clean and divine began to beset with problems (just like any modern machinery that works absolutely fine for a few years than creates a headache for the owner). It was then the Lord employed the Tama Guna to wind up the canvas so that he can clean up the slate and start afresh. If he had not stepped in, the negative qualities would have suffocated the life out of goodness in this creation, a proposition that the Lord did not like because he had a moral responsibility to uphold the good qualities. Even as any father would not wish his son to go out of hand to give the family a bad name, the Supreme Being stepped in and brought to conclusion the corrupt creation when it began to become a Frankenstein Monster. Therefore, any further growth of the negative qualities brings about an implosion of the creation and its automatic end.

The result is that the true form of the supreme transcendental Brahm remains hidden from view. It can be sighted or realised only when a person becomes enlightened and understands that the Atma that drives this creation while remaining hidden from view is the truthful form of Brahm as it possesses all the eclectic qualities known to be characteristics of Brahm, while the rest of the world is the creation that is simply a grosser manifestation of this Atma.

And this understanding can come with inculcating noble virtues that pave the ground for acquisition of eclectic wisdom and knowledge of the 'Truth'. This is because if the moral and spiritual ground is not conducive to let the seed of Truth sprout then it would die an untimely death.

It is here that the different scriptures come in handy as they not only show the correct path but also advise the aspirant what to do to reach his goal. They act as teachers and guides. So, if one follows the line shown by the scriptures without questioning their integrity and authenticity, it is sure that he would easily reach his spiritual goal of finding Mukti or Moksha—which means liberation, deliverance, emancipation and salvation.] (24).

[Note—¹The following Upanishads describe the *Genesis of Creation* in a very fascinating way—(a) Rig Veda tradition—Aiteriyo-panishad; Mudgalo-pansishad, Canto 2-4.

(b) Sam Veda tradition—Chandogyo-pansishad, Canto 3, Section 19; Canto 4, Section 17, verse nos. 1-3; Canto 6, Section 2-10; Maho-panishad, Canto 1, verse nos. 1-14; Canto 2; Canto 5, verse nos. 135-163.

(c) Shukla Yajur Veda tradition—Trishikhi Brahmin, Canto 1; Painglo-pansishad, in its Canto 1 and Canto 2; Subalo-pansishad, Canto 1-8; Brihad Aranyak Upanishad, Canto 1, Brahman 1-2, 4-5; Canto 6, Brahman 4.

(d) Krishna Yajur Veda tradition—Varaaha Upanishad, Canto 1; Canto 2, verse no. 54; Canto 5, verse nos. 71-72; Panch Brahm Upanishad; Kath-rudra Upanishad, verse nos. 17-26; Shwetashwetar Upanishad, Canto 4; Canto 5, verse no. 5; Canto 6, verse no. 1-3; Taittiriyo-panishad, Valli 1, Anuvak 7; Valli 2, Anuvak 1-2 and 7; Yogtattva Upanishad, verse no. 10-11; Yogshikha Upanishad, Canto 1, verse no. 8-12; Shaarirko-panishad, verse nos. 1-6, 16-20; Yog Kundalini Upanishad, Canto 3, verse nos. 20-23; Narayan Upanishad in all its paragraphs give a graphic account of how the creation came into being from Narayan or Lord Vishnu as the Viraat Purush;

Saraswati Rahasya Upanishad, verse no. 47 describes the genesis of Prakriti (nature of a creature), and verse nos. 58-59 narrates the five components of creation.

(e) Atharva Veda—Narsingh Tapini Upanishad, verse no. 1-4, 8; Prashna Upanishad, Canto 1, verse no. 4, Canto 2, verse no. 2-3, Canto 6, verse no. 4; Mundak Upanishad of Atharva Veda, Mundak (Canto) 1, section 1, verse no. 1, 7, 9; Mundak 2, section 1, verse nos. 1-10; Atharvashikha Upanishad, Kandika 1; Tripadvibhuta Maha Narayan Upanishad, Canto 2, paragraphs 9-12; Gopal Purva Tapini Upanishad, verse/paragraph no. 18, 20-21.

(f) *Vishnu Puran*, Chapter 1, Canto 2, verse nos. 33-51; Chapter 3, Cantos 1-3.]

25. So, a wise, enlightened and self-realised person should think that I am Akshar, I am OM (the ethereal word used as a synonym for Brahm, the Parmatma, the supreme Atma) personified, I am Ajar and Amar (I do not become old and infirm, and neither do I die, as I am eternal, constant and imperishable), I am Abhaya (fearless), I am a personified form of Amrit (the elixir of bliss and happiness).

I am indeed Brahm who is fearless. I am indeed Mukta (liberated, delivered and eternally free) as well as Akshar (imperishable, steady and eternal; not subject to decay and depletion).

[In this stanza, the pronoun 'I' has two connotations—it stands for Lord Krishna who is preaching Brahma this Upanishad (refer verse nos. 23-24), as well as for the declaration made by a self-realised and enlightened spiritual seeker who has understood the truth and reality of the Atma as being his truthful identity. Once thus enlightened, when a self-realised man makes this declaration he is not being boastful or a hypocrite, but he is simply affirming the truth about himself. He knows that the pronoun 'I' stands not for the gross physical body but for the pure conscious Atma which is his 'true self' and which is the same as the supreme Atma known as the Parmatma. Another name for this Parmatma is Brahm, the Supreme Being.]

He whose eclectic form is eternal and whose authority is well established, he who has revealed himself as the whole creation which is nothing but his own form, he who is self-illuminated and revealed in the form of light, he who is uniformly all-pervading, all-encompassing, universal and omnipresent—it is this unique and non-dual supreme and transcendental Brahm who has revealed himself in four forms by employing his cosmic power to create illusions, known as the 'Maya Shakti'. This Shakti enables Brahm to conjure up a magical world of miraculous finery and clarity that is so life-like and a virtual reality that one is unable to distinguish between its illusionary form and the actual reality that it hides. This is why the four forms of the same Divinity known as Brahm are given four different names. Actually, they are the same Brahm appearing in all these four forms.

[It is like the same 'sky' being assigned different names depending upon its location—viz. the sky in an empty pitcher is called a 'Ghata-kash' ('Ghat' = pitcher; 'Akash' = sky), that within the walls of a monastery is called 'Matha-kash' ('Matha' = a monastery), that above the earth as the 'Akash', that beyond the gravitational pull of the earth as the 'Maha-kash', etc. But these are artificial boundaries created for the sky element which is otherwise an immutable, an indivisible, a uniform and a universal entity.

Another example can be cited of water contained in different containers or vessels being assigned different names—for instance we say 'the water in the cup', the 'water of the jug', the 'water of the river or the ocean' etc. Primarily, all samples of water are the same, and these different names do not change its basic nature or quality.

These four forms of Krishna are Gopal, Pradumna, Balraam and Aniruddha. See verse nos. 13, 20 and 25. There is no wonder in it. If Brahm can create this magnificent and fantastic world of stupendous variety and diverse aspects, shapes, colours and forms that continue to evolve endlessly and defy all imagination, it is a only child's play, so to say, for him to replicate himself in merely four forms when he can replicate himself in millions and countless more million forms in this vast and endless creation.] (25).

26. Balraam, the elder brother of Krishna and the son of Rohini, represents the letter 'A' of the ethereal word OM representing Brahm. He corresponds to the Jagrat (waking) state of consciousness, and is therefore known as the Vishwa.

Pradumna corresponds to the Swapna (dreaming) state of consciousness, and is therefore known as the Taijas. He symbolizes the letter 'U' of the ethereal word OM representing Brahm.

Anriuddha corresponds to the Sushupta (deep sleep) state of consciousness, and is therefore known as the Pragma. He symbolizes the letter 'M' of the ethereal word OM representing Brahm.

And finally, Krishna, in whom the entire creation has its foundation and origin, corresponds to the Turiya (transcendental) state of consciousness, and is therefore known as the Pranav. He symbolizes the Ardha Matra of the ethereal word OM representing Brahm. He represents the cosmic Naad (sound) that represents the presence of the cosmic Consciousness in this creation.

The other three forms are deemed to be included in this fourth form. Rukmini, who represents the dynamism of Brahm revealed in her form, is therefore an inseparable part of Krishna just as the Mool Prakriti from which the rest of creation has come into being is an inseparable part of Brahm (26).

[Note—The genesis of creation in relation to the four syllables of OM has been explained in the Atharva Veda's Atharva-shikha Upanishad, Kandika 1 in detail. The Ram Purva Tapini Upanishad, Cantos 2-3, and Ram Uttar Tapini Upanishad, Canto 2, verse no. 2; Canto 3, verse nos. 1-4 describe the same concept as has been outlined in the present verse of our current Gopal Uttar Tapini Upanishad but in the context of Lord Ram who was another incarnation of Lord Vishnu.]

27. The ladies of Braj (i.e. the milkmaids of Vrindavan) represent the numerous Mantras (hymns) of the Vedas that sing the glories of Brahm in their own way, but they do so from a distance and have myriad forms¹.

[This explains why there are so many Gopis surrounding one Lord Krishna. This also answers the basic misconception in the modern world regarding the relationship between the Gopis and the Lord. Neither were the Gopis lustful women nor was Lord Krishna a promiscuous man. The Gopis were personified forms of the hymns of the Vedas and they were praising their Brahm in the physical personified form of Lord Krishna. The Vedas had to assume this form in order to show by example how one should be focused on the Lord at all times of the day and the night, not bothering about what the people of the world say.

The mental state of the Gopis was like a man in Samadhi, the trance-like state of super-consciousness when he is unaware of the physical world and the physical body. Such a man is focused on his Atma and is unconcerned about everything else.

The question now arises that this being so, why then were the Gopis so doubtful about the truthful form of Krishna which is the basic reason for this Upanishad being taught? Well the answer is easy to understand—the Vedas wished to tell the world that the forces of Maya (delusions) are so great and overwhelming that

they managed even to delude the Vedas themselves, so there is no wonder if the same Maya would trap an ordinary man in its snare. The trick to get out of this entanglement is to seek guidance from the scriptures and endeavour to peer behind the external façade which is more often than not very misleading and not what it appears to be. A wise man is one who sees the 'hidden truth' and is not misled by the exterior appearances.]

On the other hand, the cosmic sound called Pranav represented by the ethereal Mantra OM is a universal and uniform Mantra that never changes and sings the glories of the same Brahm in one universal language.

[While the hymns of the Vedas are numerous in number and diverse in their contents and composition style, the Mantra 'OM' is only one. All of them sing the glories of the same Divinity. While OM is regarded as a monosyllable, the other Mantras of the Vedas have countless numbers of letters in them.

In the present context of the Gopis it means that each praises and shows reverence to the Lord in his own way like the different hymns of the Vedas using different styles of poetry and different words to sing the glories of the same Lord. The monosyllabic Mantra 'OM' would then represent the enlightened man who worships the Lord in a single form and place. He sees Brahm in the form of the Atma that is a universal and uniform entity. And the Mantra that he uses to offer his obeisance to the Lord is OM. He does not call Brahm by different names such as Gopal, Krishna, Vishnu etc., but as Brahm.]

While the Mantras of the Vedas represented by the milkmaids of Vrindavan offer their worship to Brahm from a distance, the monosyllabic Mantra OM represented by the four aspects of Krishna along with Rukmini offer worship to Brahm from a close quarter.

[The Gopis were personified forms of the hymns of the Vedas. It was not practical for them to stay with the Lord at all times of the day, and throughout their lives. Separation was a natural because they had a physical body that could not be present everywhere always. On the other hand, OM is a Mantra that one can use to remain in the close proximity of the Lord at all times of the day and night just as one breathes day and night.

Hymns of the Vedas representing formal forms of worship are limited in their time and scope—one cannot constantly and continuously repeat the hymns every second of his existence, but one continues to breathe every second of his life. Therefore, when one has become wise and enlightened enough to know that each breath of his is a sort of prayer offered to the Lord, and that the subtle humming sound made by the air coming in and going out of the body is actually the sound of OM resonating in the body, he worships the Lord at close quarters in a symbolic manner because breath is extremely close to the body as compared to the reading of the scriptures and saying aloud their verses.

Now, though OM is a monosyllabic sound, learned sages and seers have divided it into four parts for the purpose of analysis and understanding of the phenomenon of creation. Thus, OM is said to consist of four subtle parts—the letter 'A' which stands for initiation of creation, the letter 'U' which stands for development and expansion of creation, and the letter 'M' which stands for the conclusion of creation. The 'Ardha Matra' stands for the Shakti that enables this to happen.]

Just like the cosmic sound known as Pranav and its word representative known as OM are synonymous with Brahm (the cosmic Consciousness), Rukmini (the divine consort of Krishna) representing the primary Nature known as Mool Prakriti is also closely related to Brahm.

[That is, OM represents Brahm who is manifested as Krishna, while Rukmini represents the Mool Prakriti revealed in her form. This observation is an extension of what has been said in the opening lines of this verse that the Gopis represent the hymns of the Vedas in a personified form.]

This is what those who are expert in the knowledge and philosophy of Brahm affirm (27).

[Note—¹The fact that the Gopis were the hymns of the Vedas personified has been reiterated in the Krishna Upanishad of the Atharva Veda in its verse nos. 8 and 13, while verse nos. 1-3 asserts that they were manifestations of different Gods, sages and seers who had prayed to Lord Vishnu to allow them to be very near to him and enjoy the Lord's company which they were denied during Vishnu's incarnation as Lord Ram. This Krishna Upanishad appears as Chapter no. 28 of the present volume.]

28. Lord Gopal (Krishna), who is the foundation of the entire creation and the primary cause of its coming into being, is established in this creation in the form of Pranav or OM. Gopal and OM are synonymous with each other just like Brahm, Pranav and OM are also synonymous with each other.

Since the Maya Shakti (the dynamic power of Brahm to create delusions) is an inalienable part of Brahm, its representative word known as its Beej Mantra, i.e. the word 'Klim/Klin(g)', is also an inseparable part or aspect of OM.

[OM is a word Mantra for Brahm, while Klim/Klin(g) is the word Mantra for the Shakti of Brahm. Since Shakti cannot be separated from Brahm, this fact is depicted here by saying that 'Klim/Klin(g)' is an inseparable part or aspect of OM. Just like Brahm deriving his cosmic powers from the Shakti, OM derives its powers from the Beej Mantra Klim/Klin(g). Both complement and supplement each other just as vowels and consonants compositely form a language.

Whereas OM represents Brahm in its manifestation as Krishna, the Beej Mantra for Shakti, i.e. Klim/Klin(g) is represented by Rukmini. Just like Brahm and Shakti stay together, Krishna and Rukmini too stay together.] (28).

29. Those who worship my four forms in the holy city of Mathura are actually worshipping me (the Supreme Being known as Narayan or Vishnu) in these forms. In other words, they are worshipping Brahm. They obtain the bliss and contentedness that comes with finding freedom from ignorance and delusions.

The heart of the devotee is like a lotus with eight petals in which the Lord is enshrined for worship (29).

30. [The divine form of Lord Vishnu that is worthy of adoration and worship is being narrated now.]

The soles of the holy feet of the Lord (here meaning Lord Krishna) bear the mark of the signs that are closely associated with Lord Vishnu (because Krishna is an incarnation of Vishnu)—viz. the sign of the divine conch called the Shankha¹, the sign of the flag of the Lord known as the Dhvaj (which is his emblem as the Supreme Lord of creation; it has the Garud, the mount of Vishnu, embroidered on it), and the sign of the divine ceremonial umbrella known as the Chhatra that is over the head of the Lord as the Emperor of creation.

Besides these signs on his feet, the other signs are the following—the sign of the Srivatsa² that adorns his chest, as well as the gem called Kaustav Mani³ that dazzles brilliantly and enchantingly on his chest (30).

[Note—¹*Shankha*—Lord Vishnu's *Shankha* (conch) stands for the sky as well as the wind element because the conch is hollow and it makes a resounding sound when air

is blown into it. This sound represents the cosmic Naad, the background sound in ether from which, it is visualized by ancient sages and seers, that the entire creation emerged and derived its primary energy and dynamism. It is this Naad from which all forms of the languages are created, and the sound of the conch is so loud that it is heard for long distances. Hence, the sound of the conch stands for the generation and the propagation of life as well as of knowledge.

It is known as the *Panchjanya Shankha*. There is a legend associated with this Panchjanya Shankha (conch). There was a demon named Panchajanya. He lived in a miniscule form inside a conch at the bottom of the ocean. Once he ate the son of sage Saandipani. Lord Krishna had killed this demon, and retrieved the sage's son from the Yamloka, the abode of the God of death known as Yama. Krishna had taken this Shankha then, and it is called 'Panchanjanya' after the demon who lived in it.

The Shankha has a great symbolism when used by Lord Vishnu. It proclaims the presence of the Lord when he blows it. The sound of the conch is heard far and wide. According to some accounts, the conch alone stands for all the five elements of creation—viz. the sky, the air, the water, the fire and the earth. Now, let us analyse how the Shankha or conch stands for the five elements as observed here. The conch is hollow from the inside, indicating the sky or space element. It produces sound when air is blown into it, indicating the presence of the air element. The snail had this as its dwelling, and this snail lives in water. Thus, the conch indicates the fire element because it is this fire that helps a creature to survive even in water. The conch is formed in water and not on dry land like trees and terrestrial animals—indicating its origin in the water element. The body of the conch is hard calcium like the rocks and solid surface of the earth, indicating the presence of earth element as its integral part.

According to the Krishna Upanishad of the Atharva Veda tradition, verse no. 16-17, the Shankha was born alongside Goddess Laxmi from the Kshir Sagar during the churning of the ocean, and therefore is regarded as the brother of the Goddess.

²*Srivatsa*—This is the mark of the foot of sage Bhrigu which he had cast on the chest of Vishnu ones when he got annoyed upon the Lord. The Lord is so enamoured of his devotees that instead of taking umbrage at this disrespect shown by the sage and punishing him for his misdemeanor, he had blessed the sage that his footprint would always remain on his chest as one of the jewels worn by Lord Vishnu. However, Laxmi was so angry at the temerity of sage Brighu that she cursed that henceforth she, in the form of wealth and material abundance, would always shun a Brahmin; it is believed that this is the reason why Brahmins, who are otherwise of a high birth, are always serving others in the society who are junior to them by birth for their monetary needs.

³*Kaustav Mani*—This is a glittering gem worn by Lord Vishnu, and it covers the sign of the Srivatsa. It was obtained at the time of the legendary churning of the ocean and automatically got lodged on the Lord's chest. {Mahabharat, Adiparva, 18.}

31. The Lord has four hands in which he holds a conch (Shankha), a discus (Chakra)¹, a lotus (Padma)² and a mace (Gadaa)³. The bow known as Shaaranga⁴ is slung across his shoulders.

His arms are adorned by magnificent armlets. The garland known as Vanmala⁵ that is placed around his neck enhances his bewitching beauty. The tiara shines magnificently on the crown on his head, while the wrist band or the bangle dazzles brilliantly on his wrists. The earrings dangling from his ears are carved (designed, shaped) like a crocodile or an alligator; they dazzle with a brilliant light when the Lord moves his head.

The Lord's divine and auspicious body is adorned by the Pitambar (which is a golden (yellow) coloured piece of seamless cloth that wraps around the body of Lord

Vishnu). The Lord's divine, reassuring and lovable form instills confidence and fearlessness in his devotees (31).

[Note—¹*Chakra*— The *Chakra* (discus) is a weapon of Vishnu that is designed like a serrated wheel and is depicted as being brilliantly illuminated and glowing hot like the fire. It is also ruthless like the fire and destroys everything falling in its path. Hence, it stands for the fire element as well as the power of the Lord to destroy all obstacles. It also signifies that Vishnu is able to reduce to ashes all the corruptions and evil forces of creation. The Chakra also stands for the cosmic mind, because like the restlessness and the tendency of the mind to continuously fly from one subject to another without pause, the Chakra too keeps on revolving and flying off to pursue its targets relentlessly on the instructions of Vishnu. Further, the Chakra also is used as a metaphor for this creation which has been visualized in the form of a cosmic wheel.

This Chakra is called *Sudarshan Chakra*. The word 'Sudarshan' means 'one that is auspicious, pleasing and comforting in appearance or to behold'. The 'Chakra' means 'a circle or ring' and it refers to a circular weapon which is like a round iron saw with hardened and sharp teeth. It is this invincible weapon that Vishnu uses more often than the rest to overcome the evil forces of creation.

According to legend, it was gifted to Vishnu by Lord Shiva when the latter was pleased by the former's offering of worship to him at Kashi (Varanasi).

According to the Krishna Upanishad of the Atharva Veda tradition, verse no. 19, the Chakra was the personification of the Maha-Kaal, the Great God of Death, as well as of Shiva because the latter is regarded as the God of Trinity who is responsible for the conclusion of this creation, or cause death.

A great chunk of the first half of Canto 7 of the Tripadvibhut Maha Narayan Upanishad of the Atharva Veda is dedicated to this discus.

²*Padma*— His *Padma* (the Lotus flower) stands for the water element as this flower grows in water and cannot survive without it.

The Padma or Lotus is a symbol of purity and cleanliness amongst the surrounding filth because the dirty water of the pond where the lotus grows does not stick to the petals of the lotus flower. It also signifies the fact that the Lord accepts only the best and the auspicious from amongst all in this creation because the lotus flower grows in dirty water of the pond but is untouched by its filth. So these divine virtues of purity and cleanliness are one of the many glorious virtues of Lord Vishnu.

The word 'Padma' also refers to the origin of creation because the creator Brahma was born atop the lotus that emerged from the navel of the Viraat Purush at the time of creation, as well as the fact that the opening of the bud of the flower is an imaginative way of depicting the unfolding or the emergence of creation from the primeval water. It symbolizes the continuously evolving world because lotus springs forth from water, and this world also springs forth from the causal waters of the cosmos and then grows in the vast ethereal space of the sky.

It also regarded as being closely related to the Sun and that is why it opens up when the Sun rises, and closes at sunset. Since the light of the Sun is a metaphor for wisdom, knowledge, enlightenment and purity of thoughts and actions, the Lotus in the hands of Vishnu indicates the presence of these eclectic virtues in the Lord, or that the Lord symbolizes these auspicious and divine virtues and qualities of creation.

The Padma is also a symbol of Goddess Laxmi, the patron deity of good fortunes and wealth. Laxmi is depicted in iconography as being seated on a divine lotus in full bloom.

³*Gadaa*— His *Musal* or *Gadaa* (mace, rammer, hammer, battle-ram, dumbbell) stands for the earth element because it is as heavy and gross as the latter. This Gadaa also stands for the cosmic intellect because the intellect is used to keep a strict control over one's wayward mind and its inherent fickleness, over one's sense organs and their inherent restlessness etc. This signifies the ability of the Lord to be able to

exercise infallible control over all aspects of creation. Being a metaphor for the intellect, the Gadaa also symbolizes the Lord's ability to separate the auspicious and the righteous from the evil and the pervert, or to forcefully subdue the evil, pervert and corrupting forces of creation symbolized by the wayward and restless mind as well as the indulgent organs of the body.

The Gadaa is known as the *Kaumodki Gadaa*. It has the following connotation. The word 'Kaumodki' consists of two parts—viz. 'Ku' meaning 'earth', and 'moda' meaning 'happiness. Hence, the mace of Lord Vishnu gives happiness to all the righteous creatures on earth by protecting them against the evil forces represented by demons.

It is called a 'Gadaa' because it was moulded from the strong bones of a demon named 'Gadaa', and hence bears his name. The demon gave up his bones to respect the wishes of the creator Brahma, who then got a mace crafted out of it at the hand of Vishwakarma, the God's engineer, and kept it with Varun, the Water God. It was given to Lord Krishna at the request of Agni, the Fire God, when the former had got the Khaandava forest consumed by fire.

There is only a slight difference between the Gadaa and the Musal, perhaps in their shape and size, but primarily their usage in practical terms is the same.

⁴*Shaaranga bow*— This symbolizes the cosmic senses of the Viraat Purush. This bow of Lord Vishnu is also known as the *Shaankhya Dhanush* (bow). It was made from the bones of demon named Shaankhya-chuda after he was killed by Lord Shiva.

⁵The *Vanmala*—Refer verse no. 16 of the present Gopal Uttar Tapini Upanishad, as well as verse no. 8 of Gopal Purva Tapini Upanishad which is section 1 of this Chapter. Briefly, it is a garland (mala) worn by Vishnu, and it is made of flowers of the forest/wild (Van). The flowers are of a wide variety with those of the Kadamba tree (*Nauclea cadamba*) being in the center or the dominant ones. Sometimes, marigold, daisy or xanthium flowers are shown as being used in this garland.]

32. The devotee should constantly and consistently remember and meditate upon my beautiful form with four arms as narrated above, or my form with two arms that holds a flute and is adorned by the peacock feather tucked in the lock of hairs on the head.

[The form with *four arms* refers to Lord Vishnu who is the macrocosmic form of the Supreme Being, while the form with *two arms* refers to Lord Krishna who is an incarnation of the same Supreme Being on earth. Even as Vishnu has countless names, Lord Krishna too has many names, one of them being Gopal. Refer also to section 1, Gopal Purva Tapini Upanishad, verse no. 10, last stanza.]

Both the forms are equally auspicious, holy and divine; they are equally worthy of worship, adoration and reverence.

The truthful knowledge of Brahm helps one to churn the entire world and arrive at the Truth. [That is, if one has become truly 'self' and 'Brahm' realised, if he has acquired true enlightenment and knowledge, he would not be deluded by the numerous versions of my form that are visible and described in the scriptures such as the various Purans (mythological histories), but would concentrate his attention on the quintessential 'truth' behind all these external forms.] (32).

33. The truthful form of Brahm that remains after having eliminated all forms of delusions in this world is the one that is found in the holy city of Mathura.

[That is, one should worship Krishna with an enlightened view. Krishna is to be worshipped as a personification of the grand virtues of Brahm that are at once subtle, divine, holy and sublime. The Krishna who is to be worshipped is not the physical form of the Lord that is found in images but the Krishna Consciousness that is an all-pervading divinity. This Krishna Consciousness is the same as the cosmic

Consciousness known as Brahm that is revealed in the form of the Atma, the ‘pure self’, of the worshipper. When one worships Lord Krishna with this wisdom and erudition, he is sure to find liberation and deliverance from the fetters of ignorance and delusions. Such a man is the one who is worshipping Krishna in the real sense; others are merely doing rituals and formalities which lead them to nowhere.]

This city of mine is like a lotus flower having eight petals. It represents the whole world in a miniature form. These petals are represented by the eight Digpals¹ who support this world from the eight corners. [Refer also to section 1 of this Chapter, verse no. 11 of Gopal Purva Tapini Upanishad.] (33).

[Note—¹The *eight Digpals* are the following— Indra who is the king of Gods and who has a thousand eyes on his body, and is therefore called ‘Sahastraaksha’, Agni or the Fire God, Yam or the God of Dharma (i.e. the God responsible to ensure that the great tenets of righteousness and proper conduct are observed by the creatures, and to punish those who violate these laws), Niritiya (also known as Nairitya), Varun or the Water God, Anil or the Wind God, Indu or the Moon God (often replaced by Kuber who is the treasurer of Gods), Ishan or Lord Shiva, Brahma the creator, and Anant who is Lord Vishnu, the sustainer and protector of creation (or Lord Seshnath, the legendary serpent who holds the earth on its hoods in a symbolic gesture to indicate that Lord Vishnu is responsible for taking care of this creation).

The eight Digpals are the divine forces of creation in a personified form of various Gods who are assigned the task of taking care of the entire creation. They are the following—(i) Indra who is the king of Gods and responsible for production of rain as well as to control all other Gods who are said to be represented by the various independent forces of Nature; (ii) Agni is the personified form of the fire element responsible for providing heat, energy, light, vitality, strength, vigour and vibrancy to creation; (iii) Yam is the personified form of death as well as assigned the duty to uphold the laws of Dharma (or the auspicious virtues of righteousness, nobility, propriety, probity etc.), and to punish those who violate it; (iv) Niriti or Nairitya who is the God responsible for the actual death and punishment of the sinful and unholy creatures in creation; (v) Varun is the personified form of the most essential ambrosia of life known as the water element that provides nourishment and lubrication to this creation, and is regarded as the basic element that harbours life in all its forms in its bosom; (vi) Anil is the personified form of the life-giving air or wind element which is also called Pran—literally meaning ‘life’ which is a proof of its importance and significance vis-à-vis this creation; (vii) Kuber is the treasurer of Gods and responsible to provide all the necessities of life to the inhabitants of this world; the Moon God is the custodian of the Amrit, the ambrosia of life and eternity which is a priceless asset for the creation; (viii) Ishan is Lord Shiva who is also known as Mahadev, the Great Lord, as well as the one who is responsible for maintain balance in this creation by controlling death, and hence is called the ‘concluder’; (ix) Brahma is the creator of the physical world as well as the body of knowledge known as the Vedas, and therefore assumes the role of a grand old patriarch of the family known as the world; and (x) Anant or Lord Vishnu who is so-called because he is eternal, infinite and endless, has infinite responsibilities, and is assigned the multi-prong duty of taking good care of the world in all respects. He is also called Anant as he is none but the eternal Brahm himself in the form of the Viraat Purush, the all-pervading, all-encompassing and almighty Lord of creation. In fact, even Brahma and Shiva are said to be born from this Viraat Purush.

Refer Ram Purva Tapini Upanishad, Canto 4, verse no. 38.]

34. This lotus (symbolically representing the holy city of Mathura) has come into being from the vast ocean represented by this mundane and mortal world, and is a part of the world just like a lotus is a part of the pond where it lives.

[Though the city of Mathura is like other terrestrial cities on earth, it is however different from them because of the divine and holy aura rendered to it by the virtue of the fact that Lord Vishnu had spent the better part of his earthly sojourn in the form of Lord Krishna here. It is compared to a lotus which grows in a pond whose water may be dirty, but its petals always remain clean because the surrounding water does not stick to them. Similarly, the corruptions of the surrounding ordinary world do not alter the subtle level of divine aura present in Mathura. The metaphor of the lotus is employed to highlight the purity and holiness of the city of Mathura.]

Those whose heart and mind are immaculate and uncorrupt, i.e. those who are free from such taints as Raag and Dwesh (which means having attachments with anything or anyone on the one hand, or keeping jealousy, malice, enmity and ill-will with others on the other hand), those who are absolutely neutral and uniform in their views, and those who are equanimous and equitable by nature—they are the ones who are able to enjoy the proximity of this ‘lotus’ (symbolically representing the divinity, holiness and purity inherent in Mathura) like a swan does vis-à-vis the lotus of a pond where it swims.

The rays of the sun and the moon are like the fluttering flags of this divine city. The golden mountain known as Meru¹ is my flag-staff (34).

[Note—1Mt. Meru—This is the celestial mountain where the holy Gods are said to have their abodes. The Meru mountain is also called ‘Sumeru’—the ‘golden one’. The word ‘Meru’ literally means one that reflects light like a mirror or crystal. It is described in the Purans as the fabulous mythological mountain that forms the axis of the whole world. It is much like mount Olympus of Hindu mythology. All the planets revolve around it. It is compared to the cup or the seed-vessel of the lotus, the leaves of which symbolize the different Dvipas or continents and islands. The holy river Ganges from the heaven on its summit, and from there it divides into four streams and flows down to the rest of the world. The four Lokpals or the custodians of the four directions of the celestial compass occupy the corresponding face of this mountain which is said to be made of gold and glittering gems.

Its height is said to be one lakh Yojans which is equivalent to roughly 8 lakh miles. [1 lakh = 1,00,000 units; 1 Yojan = approx. 8 miles.]

Out of this huge size, 16,000 Yojans (8 x 16,000 miles) is under the ground, and 84,000 Yojans (8 x 84,000 miles) above the ground. On its top there is a flat plateau of approx. 32,000 Yojans (8 x 32,000 miles). It is here that Brahma the creator and his mind-born sons such as Daksha and the Saptarishis live. [refer Mahabharat, Vanaparva, 162; Bhagvata, 5/16.]

It is situated in the mystical Jambudvipa (the huge island by the name of ‘Jambu’), and Bharatvarsha (India) is said to be to its south. The abode of Lord Shiva known as Mt. Kailash, which is presently located in the northern reaches of the Himalayan mountain range, is said to be the same Mt. Meru.

The creator Brahma resides on its summit, and it is the meeting place of Gods, semi-Gods such as Gandharvas, and exalted sages and seers who have attained Brahm-hood.

Other connotation of the word ‘Meru’ is the central and prominent bead of the prayer rosary from where the rosary is turned.]

35. Brahma-loka (the abode of Brahma; the heaven) is like the ceremonial umbrella or the parasol held over or stretched over this city (i.e. the Brahma-loka represents Krishna’s head), and the seven nether worlds known as the Patal-lokas etc.¹ are my feet.

The spot of the Srivatsa² (footprint of sage Bhrigu) on my (Vishnu's) chest is a sort of my own footprint, because though it is a sort of a stigma it stills shows that Brahmins (here represented by sage Bhrigu) are my own forms (35).

[Note—¹The seven lower worlds according to the Padma Puran are the following—(i) Atal, (ii) Vital, (iii) Satal, (iv) Rasaatal, (v) Talaatal, (vi) Mahaatal, and (vii) Paataal.

²Srivasta—refer verse no. 30 above.]

36. Those who are expert in the knowledge of Brahm, those who are Brahm-realised do not see this Srivasta as a stigma cast upon me but a sign of my love and benevolence towards all, even those who are angry at me.

The Kaustava Mani represents the eternal light that makes the sun, the moon and the fire to be illuminated and show light to the world. It also represents the power of the faculty of speech to illuminate the world with the knowledge of the supreme transcendental Brahm.

Sata Guna, Raja Guna, Tama Guna¹ and Ahankar (ego and pride)² represent my four arms (because I, in my primary form as Lord Vishnu, rule over and control the all the qualities, attributes, characteristics and behavioral patterns in this world with the help of these four entities that help to define all the positive as well as the negative qualities of creation). (36).

[Note—¹(a) The *Sata Guna* is the best of the three qualities present in any creature. It is a positive quality and is marked by a propensity for following the path of nobility, auspiciousness, probity, propriety, virtuousness, holiness and righteousness. Creatures that have a predominance of Sata Guna are inclined to do selfless service, be benevolent, merciful, kind and gracious, have coolness of head and a rationale and balanced mind, be contented, have humility and piety etc. Such creatures are devoted to good values in life and have a desire to acquire knowledge that would help them reach higher spiritual goals in life.

This Sata Guna is marked by high standards of ethical and moral existence that makes the bearer of such qualities highly respected in society. Such people have a spiritual dimension to their personality. This quality is spiritually uplifting and gives a divine halo to those who possess it and practice it.

The Vasanas that have the Sata Guna or quality dominant in them are like a veil covering the lamp or like a smoke covering the fire. A slight breeze will remove this smoke. Similarly a little bit of prayer and meditation will remove the Satwic desires; its removal requires the least effort.

(b) The second quality is the *Raja Guna* and it makes a man more attracted to this material world and its charms, and less spiritually inclined. The Raja Guna is the medium quality marked by a greater percentage of worldly passions, desires and attachments and their natural offshoots in a creature. It makes a creature inclined towards the material things of the gross world and their enjoyments, towards creation of wealth, its enhancement and protection, and generally having a desire for growth, development and expansion etc. It covers such qualities as worldly yearnings, passions, a stormy nature, agitated behaviour, ambitions, selfishness, expansionist tendencies, a desire to acquire, retain and develop such acquisitions even to the detriment of one's long term spiritual welfare and even if such actions cause pain to others. All these pertain to this materialistic world. Such qualities give worldly fame and prosperity. If these qualities are judiciously mixed with the Satwic qualities, then they provide the person the better of the two worlds, both in terms of worldly fame as well as spiritual well being.

The Vasanas that have the Rajsic Guna or quality dominant in them can be compared to dust on a mirror. In this case some dusting and rubbing is needed to

clean the mirror; a greater effort is needed as compared to the case with Satwic quality.

(c) The third quality is called the *Tama Guna* and is the meanest and the basest of the three Gunas. It is a demeaning quality in a creature that leads to his downfall and perpetual entanglement with things that are considered improper and unethical. It creates an inclination for committing all sorts of sins, misdeeds and demeanours. It leads the creature towards negativity and inspires him to acquire negative qualities such as various vices, evils, sins, perversions etc. It makes him inclined to be greedy, rapacious, haughty, arrogant, lustful, intoxicated, vile and wild to the extreme. Such a creature with a predominance of Tama Guna has utter disregard for propriety, noble virtues and ethics, for righteousness and morality.

In brief, it is the most degrading, denigrating and contemptible of the three characteristics in a person, and leads to such behaviour which is utterly immoral, denigrating and depraved, marked by grossness, crassness and recklessness. It therefore leads to his downfall, ignominy and ruin as well as ignorance, delusions, gloom, inertia, anger, frustration etc.

²*Ahankar*—This is the notion of having false ego, self-pride, self-assertion, vanity, boastfulness, self-righteousness, arrogance, haughtiness; a sense of hypocrisy, false prestige and false pride; to think that one is the doer and achiever; to erroneously believe that success is obtained by one's efforts alone, and that one is superior to others in many respects etc.

The notion of a separate and distinguished 'I'; the concept of 'I am'.

Ahankar from the metaphysical perspective is the erroneous concept that 'I' is the body and not the 'pure conscious soul', and this leads to a chain of undesirable consequences because of the grossness of the body as compared to the subtle and sublime nature of the soul. The ego that is generated due to the misplaced thinking of 'I am' as a distinguished entity from the rest of the creation leads to ignorance-based sense of false pride and prestige, called Ahankar (अहंकार), which in turn produces arrogance and haughtiness which are inseparable from Ahankar. The constant identification of 'I' (me) with the body and this material world of sense objects lead to the sense of possessiveness in the creature. 'Pure consciousness' mired by ego becomes 'a conditioned consciousness' and fails to remain pure.

This is why Ahankar has been likened to a minister of the king—it directs and regulates the actions of the consciousness which, under its influence, loses its independence. This 'conditioned consciousness', working through the mind-intellect-ego combine, is called, inter-alia, 'Chitta' (चित्त). The word also means sub-conscious and its memory bank. Hence this memory of the sub-conscious acts as a referral library for the intellect. The latter falls back on it and rely on it whenever it is in doubt. The quality of books in the library guides the student; similarly, the quality of inherent tendencies stored in the library of Chitta directly affects the inputs of the intellect, and through it, the mind and successively down the hierarchy to the body and its organs of perception and action.

Although the soul has nothing to do with this command chain involving Chitta (sub-conscious and memory)—Vrittis (inherent tendencies and inclinations, nature and temperament) and Vasanas (passions and desires)—Buddhi (intellect)—Mana (emotions and notions, the emotive thoughts)—Sharir (body)—Karma (action and deeds)—the result of deeds and actions—more experience—stored in memory—and the chain continues, but for all practical purposes the Atma/soul is deemed responsible for it because of its sovereign nature.

So, the sincere seeker/aspirant should delineate this conscious from the rest of the chain and break the nexus between them so as to allow the glory of the pure consciousness of the soul to shine through like the splendorous sun breaking through from behind a curtain of clouds.

It is like removing the various veils or covers from around the candle so that its light shines through the darkness of the room and illuminates all the corners of it.

Example of a sleeping man—Ahankar is generally associated with the body when the creature thinks that he has so many achievements to his credit and that he has achieved them with his body. He erroneously begins to have a notion of possessiveness and belonging to this world; he starts to conjure up imaginary relations that have their relevance only as long as there is the body, for once a man dies these relations snap even without notice, and even in the case the ignorant Atma wished to retain them it cannot because the same son and wife whom he loved so much are eager to get rid of the dead body which is causing pollution in the household! So, when a man snuffs out Ahankar from his mental radar, he becomes as indifferent and dispassionate as a sleeping man who is unconcerned with the external world.

For example, if the house is on fire, a sleeping man wouldn't be bothered at all as long as he is asleep because he is totally disassociated with the house. He does not bother because he is not attached with his 'possession'; a sleeping man just cannot think that the house that he had built on his own strength and effort is getting destroyed. But once he gains consciousness, he is struck with grief and dismay. Similarly, when a wise man realises that the world is not related to him, and his true identity is his Atma and not the body, then he isn't bothered either with the body or the world with which the body is related and the various relations that exist only because of the existence of the body. The Atma has no relationships whatsoever. Absence of Ahankar eliminates all these at one go.

For all practical purposes, a wise man is as good as asleep as far as the external world is concerned. Even as a sleeping person forgets all about the outside world because his sense of belonging to and identification with the world, of calling the world mine and your, of having love or hatred, of having attachment or detachment, of having animosity/enmity or endearment and friendship, of having happiness or grief—all such emotions are literally 'asleep' with him. Similarly, a person who does not have Ahankar is freed from such emotions that are directly related with his sense of involvement with the world through the medium of the body, though he appears to be awake and active in this world.

The Atma or soul is pure and these things have got nothing to do with it. But because there is the false belief that the creature is the gross body and not the pure consciousness and pure self which is called the soul or Atma, all the external actions done by the body appears to have been done by the creature which, in fact, is an erroneous conclusion.

The *Varaaha Upanishad* of Krishna Yajur Veda tradition, in its Canto 3, verse nos. 20 describes how Ahankar interferes with a man's judicious and intelligent thinking, compelling him to believe in and get entangled with things that are not the truth.

The *Varaaha Upanishad* of Krishna Yajur Veda tradition, in its Canto 4, verse no. 25 asserts that a Jivan Mukta person—i.e. a person who has attained spiritual liberation and deliverance even while he is still alive and goes about his routine affairs of life in a normal way—has no trace of Ahankar in him.

Ahankar has been described in the context of the Antahakaran (the inner self of the creature) as being one of its main components in *Shaarirak Upanishad* of Krishna Yajur Veda, verse no. 4; *Paingalo Upanishad* of Shukla Yajur Veda, Canto 2, verse no. 3; and *Trishikhi Brahmin Upanishad* of Shukla Yajur Veda, Canto 1, verse no. 6.

Paingalo-panishad of Shukla Yajur Veda tradition, in its Canto 1, verse 6 describes the concept of Ahankar in the context of the genesis of creation, and how it was able to influence even the supreme Brahm, in his grosser cosmic manifestation of Lord Vishnu, to get involved in the creation of this delusory world.

How Ahankar affects the creature's nature and temperament has been succinctly described in *Niralamb Upanishad*, verse nos. 11-12, 20. How it affects the path of spiritual liberation and deliverance of the creature, and why should it be controlled

has been explained in *Yogshikha Upanishad* of Krishna Yajur Veda, Canto 1, verse nos. 34-37, 150.

How the Mana (mind) creates the notion of Ahankar has been described in *Yogshikha Upanishad*, Canto 6, verse no. 60.

Other references—*Subalo-panishad*, Canto 9, verse no. 13 of Shukla Yajur Veda.

How the Mana (mind) creates the notion of Ahankar has been described in *Yogshikha Upanishad*, Canto 6, verse no. 60.

The concept of Ahankar has been elaborately described in *Adhyatma Ramayan*, Aranya Kand, Canto 4, verse no.38-39 as well as in Lanka Kanda, canto 12, verse no.19. Further, how Ahankar affects a creature has been elaborately described in *Adhyatma Ramayan* of Veda Vyas, in its Uttar Kand, canto 6, verse no.41-52.]

37. [Verse nos. 37-38 describe the weapons of Lord Vishnu. Refer also to Atharva Veda's Tripadvibhuti Upanishad, Canto 7, paragraph no. 67.]

In my hand that symbolizes the Raja Guna are held the following things:--

The first is the conch named 'Paanch-janya', so-called because it is from it that the five primary elements (earth, water, fire, air and sky) were created.

[The hands of Lord Vishnu represent the Raja Guna because it is with these hands that the Lord takes care of the world. The five elements are the fundamental building blocks of creation, and the Lord has used his hands to craft this world out of them.]

The 'Chakra' (serrated weapon known as the discus) that is in my hand symbolizes the Mana (mind and heart) that is as fickle, restless, unsteady, easily disturbed, easily attracted and as easily distracted, and ever-changing like a child.

[And like a child it needs constant vigil and proper training lest it would be spoilt like a child who has not been properly reared, creating not only a huge problem for the parents when he grows up but becoming a nuisance for the rest of the society. In the present context it means that the Mana needs to be controlled. Like the Chakra of Vishnu which continues to revolve around the Lord's fingers even if the Lord does not use it, the Mana too continues to be restless and fidgety; it continues to whirl and move from one object to another without any provocation or cause. The Mana is also like this potent weapon known as the Chakra which a creature can either use for his welfare or for his ruin.

So, while a wise and erudite man uses the powers of the Mana to overcome all spiritual hurdles and get over all moral obstacles, a foolish man would use the same Mana to gratify the urges of his sense organs, and to get entangled in the world voluntarily by allowing himself to be deluded by the temptations and charms of this material world.

The continuous rotation of the Chakra also signifies the continuous rotation of the wheel of this world. If the creature is not careful then the Mana also joins the whirling just like a leaf trapped in a whirlpool begins to rotate out of control.] (37).

38. The bow in my hand known as 'Shaarang' symbolizes Maya (the power of delusions which is so overwhelming that nothing escapes its battering).

[The twang of the bow is so loud and horrifying in the battle-field that it instills fear and threat of life in the heart of one's enemies. The sound of the Lord's bow is so awe-inspiring and formidable that it sort of leaves the world dazed and dumbfounded. This is exactly what Maya does when it wields its powers—it so stuns the creature so much that he is unable to decide what to do and what not to. Just like the strike of the bow, the stroke of Maya leaves one dazed and dumbstruck. The

creature who has been hit by the blow of the Maya begins to hallucinate and have nightmares just like a man who has seen the havoc the bow plays in the battle-field.]

The lotus in my hand symbolizes the whole creation that is under my control.

[It ought to be noted here that the visible creation has its origin in Brahma, the patriarch of creation, who himself was born atop a divine Lotus that emerged from the navel of the Viraat Purush which is the primary form of Vishnu. Hence, all creation can be traced back to a cosmic Lotus that emerged from the primordial gel of life symbolized by the celestial ocean of milk known as the Kshir-sagar.]

The mace that I hold in my hands represents the Adi-Vidya or the primary form of basic knowledge.

[The mace is used by the Lord to crush and pound those who have deviated from the path of righteousness and auspiciousness. It is much like the ceremonial gavel that a high court judge uses to restore order in a court of law. Just like a human being need not know the huge tomes of legal documents to lead a civilized life which is based on pure common sense and basic intelligence, the codes of basic behaviour that the Lord expects his subjects to follow, and be punished if not followed, are represented by the mace. The mace is primarily intended to enforce law and order in this creation.

It is like the gavel a judge uses in a court to restore order, a stick a teacher uses to discipline the class, and the baton a policeman employs to control a rowdy crowd.] (38).

39. The four fruits of all auspicious and righteous efforts, i.e. Artha (material well-being and financial prosperity), Dharma (the virtues of auspiciousness, righteousness, probity and propriety), Kaam (fulfillment of desires and aspirations), and Moksha (liberation and deliverance; emancipation and salvation), are represented by the ornamental and beautiful arm-bands that adorn my forearms.

My throat represents the virtue that is known as 'Nirgun'—i.e. an entity that is without attributes, qualifications, characteristics and features. It is like a garland that surrounds everything in creation. This entity that is known as Nirgun has no beginning and end, i.e. it is infinite and eternal.

[It refers to that form of the Brahm, the Supreme Being, which existed prior to the emergence of this visible world. It had no attributes like the world which subsequently came into being. The word 'Nirgun' means without attributes and qualifications, while the word 'Saguna' means one having attributes and qualifications. So while Brahm is Nirgun, its revelations as the Trinity Gods is Sagun, though of course this 'Sagun' is also very close to being a 'Nirgun' because these Trinity Gods are invisible and subtle as compared to the rest of the world which has a visible form and is gross. The terms 'Nirgun' and 'Sagun' therefore acquire a relative meaning. They represent the three basic steps in creation—the first being emergence of creation which is represented by Brahma the creator, the second being the development and growth as well as the care of the creation that has come into being which is represented by Vishnu the protector of creation, and the conclusion of creation which is represented by Shiva in his angry form of Rudra.

That aspect of creation which cannot be described or defined or qualified is termed as 'Nirgun', while that aspect which can be known and described, and to which attributes can be assigned, is called 'Sagun'. Since sound has no specific form and definitions, it is 'Nirgun'. On the other hand, words that can be understood come under the category of 'Sagun'.

Primarily these three forms are all Nirgun because they simply represent Brahm playing these three roles himself in a subtle form. But as this creation evolved, the need was felt to visualize things, and this need was made by the Purans which gave some specific forms to these Trinity Gods. But still they remained subtle and invisible to the eyes of the man, so later on came the concept of incarnations such as that of Krishna as detailed in the present Upanishad.

The throat is cited here to represent the Nirgun aspect of Brahm because it is in the throat that sound is produced if one wishes to speak. Brahm has been conceived as the cosmic Consciousness that makes its presence felt in the form of the cosmic sound known as Naad. This sound is generated in the ether by the virtue of the energy generated by this cosmic Consciousness. The same 'Consciousness' resides in the body of the living being as the Atma that speaks through the sound made in the throat. No one has seen Brahm like no one has seen the Atma, but their incontrovertible presence is known when they produce sound.

Besides this, the 'sound' has no form like the alphabets of any given language. The alphabets have some or the other geometrical shapes, but sound cannot be drawn into specific sketches or diagrams. This also proves that pristine and primary form of sound is 'Nirgun' while its more developed form as the alphabet and the written language are its 'Sagun' form. This is why the throat is regarded to represent the 'Nirgun' aspect of the Supreme Being in this verse.

As long as one does not speak clearly and only makes guttural or humming sounds in the throat, no one can know what he means. That is, his intentions and knowledge remain hidden from the world. This is a Nirgun aspect of the knowledge that he wishes to communicate. On the other hand, if he speaks clearly and coherently everyone would know what he wishes to say. This would therefore be equivalent to the Sagun aspect of the same knowledge.

There is another interpretation of this phenomenon. The throat of Vishnu is regarded as the cosmic conch in a symbolic way because it produces the cosmic sound that has been called the Naad in the context of Brahm. Lord Krishna who is preaching this Upanishad is an incarnation of the same Lord Vishnu. Therefore, the throat of Vishnu stands for the Nirgun aspect of creation and the throat of Krishna stands for the Sagun aspect of Krishna. No one has ever heard what Lord Vishnu has ever said to any God, but what Lord Krishna said is well known.] (39).

40. The garland around my neck (Vanmala) is a symbolic representation of the primary Maya (delusion creating powers of Brahm) which itself has no birth (because it is an integral part of Brahm which has no birth or beginning). This is why your (Brahma's) mental-born sons (such as Sankaadi) call 'Avidya' (ignorance having its genesis in Maya or delusions) a form of garland around my neck.

[This world is revealed from the Viraat Purush, the primary and primordial form of Vishnu. This world is characterized by a the dominance of ignorance that prevents the creature from being aware of the actual 'truth' of creation and his own 'self', thereby forcing him to remain trapped in this cycle of birth and death, and suffering from their accompanying horrors and agonies. This is due to the influence of Maya which acts like a millstone around the neck of the creature. Hence, the metaphor of the garland symbolizing Maya and Avidya around the neck of Vishnu is cited here because of the simple reason that the Viraat Purush has revealed himself as the creature, and Maya acts like a millstone that is worn like a garland around the neck of this creature.

The garland is also a metaphor for the stupendous responsibility that Lord Vishnu has as the care-taker, sustainer and protector of this creation created by Maya. This world is like a mill-stone around the Lord's neck, a bridle or a throat-latch which he carries with pleasure and without complaining at all.

Since the world is such a beautiful and enchanting place for the reason that it is created by Maya, this garland is also depicted as being bewitchingly beautiful just like the fascinating world it has managed to create.

This world is created by Maya, the power of the Lord to conjure up an extremely fascinating world from nothing, something which is not the reality, and is therefore deluding for those who think it to be real. The magic is that the Lord manages to maintain a fine balance between the two—he helps the Maya to perpetrate this creation, and at the same time keeps tight leash on its vagaries.

The garland is like an honour bestowed upon the Lord to mark the fact that the Lord has most expertly, avidly, diligently and wisely taken good care of the world with all its diversities and incongruities created by Maya, without ever complaining or failing in his duties, but miraculously remaining free from the effects of delusions that this Maya creates in this world.

From the perspective of the creature, if he falls in the trap of the attractions of the fascinating world around him, a world created by Maya, he wears this symbolic garland of Maya around his own neck that would act as a heavy burden on his chest. On the other hand, if he is wise and erudite to remain detached from the world inspite of doing his assigned duties diligently, he would be like Lord Vishnu himself. The former type of creature is trapped in this world of delusions, while the latter type is said to be spiritually liberated and delivered.]

My truthful form that is known as 'Kutastha' (i.e. an entity that occupies a high position, is unalterable, unchanging, steady, immovable and constant, and is most secret, enigmatic, hidden and esoteric) is symbolized by the glorious tiara on my head. This form of mine is like the crown-jewel or the tiara on my crown. It represents my most exalted and supreme form as the Lord of creation and the Supreme Being (or 'Brahm') (40).

41. The two aspects of creation, viz. one that is 'Kshar', i.e. one that is perishable, and the other that is 'Uttam', i.e. one that is the best and imperishable, are represented by the two earrings that shine and dazzle on my ears.

In this way, those who remember me and meditate upon my divine form, daily and constantly are able to find Moksha (spiritual emancipation and deliverance; liberation and deliverance from this world of delusions and ignorance). (41).

42. Such a devotee surely finds Mukti (liberation, deliverance, salvation and emancipation). Surely, I devote myself to him and his welfare for all times to come (42).

43. What I (Narayan) have told you (Brahma) is the truth. I have described to you my Sagun as well as Nirgun forms. [That is, I have narrated for you both my forms, one that has attributes and the other that is without any attributes.] (43).

44. Brahma asked, 'Lord, how can one determine the forms of yours that you have described to be with attributes (Sagun)? How do the Gods worship them? How do Rudra, Brahma, Vinaayak (Lord Ganesh), the twelve Adityas (Suns), the Vasus, the

Apsaras (celestial female dancers and singers), and the Gandharvas (celestial musicians) worship them?

Which is that esoteric and mystical entity that is invisible but steady in its exalted position in creation?

Who is that Lord, and how is he worshipped by humans?' (44).

45. Lord Narayan replied, 'My primary universal non-dual form however has twelve subtle forms¹ that act as the primary sources of origin of everything else in this creation. These twelve forms are the twelve basic virtues or characteristics that are present in this creation, and have been personified as different Gods and semi-Gods, as well as human beings. [These subtle forms represent the basic characters and the defining qualities that are characteristic of each unit of creation. This is explained below.]

One of my aforesaid forms is known as Shiva, and the other is Rudra. Though Shiva is a personified form of the virtues of calmness, tranquility, blissfulness, wisdom, enlightenment, meditation and contemplation, Rudra exemplifies anger, wrath and vehemence.

[That is, I change my form from one of being 'Shiva', the calm One, to one of 'Rudra', the angry One, depending upon the needs of the time and exigencies of circumstances. For instance, as long as the creation does not go out of control, I remain submerged in meditation and contemplation, letting the wheel of creation, which I have myself created and set in motion, take its own course; I give it a lot of freedom and flexibility. But when things begin to go out of hand, I assume the angry form of Rudra to clean-up the slate to start the process afresh and to punish the guilty. In other words, both Shiva and Rudra are none else but my form, albeit two diametrically opposite ones.]

This principle applies to all the other entities as well. That is, I am present in a subtle form as the Brahmi principle in Brahma the creator.

[The characteristic quality and the ability that is present in Brahma, the creator, that entitles and enables him to create this visible world of an ever-changing variety and an astounding diversity, as well as the Vedas which are repository of all knowledge in this creation, is actually a manifestation of the Supreme Being who lives in Brahma in a subtle form as the quality or virtue known as 'Brahmi' that enables Brahma to do what he is best suited to do and for which he is best known—that is to 'create'. Thus, creativity is one of the forms of Brahm, the Supreme Being.]

Similarly, I am present as the principle of holiness and godliness in the Gods, as the principle of humanity in humans, as the divine power that eliminates all hurdles and overcomes all obstructions in the path of auspiciousness and righteousness that is possessed by Lord Vinaayak (Ganesh), as the principal factor that illuminates and gives light and energy to the rest of creation that is the hallmark of the twelve Adityas (Suns), as the ability and skill needed to create and master the art and craft of music that is inherently present in the Gandharvas (celestial musicians), as the ability and skills needed to dance and sing that is inherently possessed by the Apsaras (celestial female dancers and singers), as the ability to fulfill all needs of the creation that are the characteristic attribute of all the Vasus and is represented by the cow known as Kamya (because it is said to be holy and the all wish-fulfilling cow of the Gods), and as the invisible and subtle form known as the 'Avyakta' which refers to the cosmic omnipresent Supreme Authority and Power that pervades throughout the creation in an invisible and subtle form, and which is the subject matter of all research into the unknown, the esoteric and the mystical.

I am eternally established in my exalted position as the Supreme Being who is immune to the fluctuations characteristic of this mortal world which takes a birth and dies, the creation that has a beginning and an end. I remain constant, steady and ever-present even while the rest of the creation oscillates between birth and death, the world that comes into existence and ends, the world that waxes and wanes, the world that swings between falsehood and truthfulness (45).

[Note—¹Upon close examination of this verse, we find the twelve subtle forms of the Supreme Being as follows—Shiva, Rudra, Brahma, Gods, humans, Vinaayak, Adityas, Gandharvas, Apsaraas, Vasus, Kanya (cow), and Avyakta.]

46. The form of mine that is present in the form of humans is marked by three qualities that are characteristic of all human beings—i.e. the qualities of Sata Guna, Raja Guna and Tama Guna. [That is, all human beings have these three qualities in varying degrees. These Gunas have been explained above in note of verse no. 36.]

My immaculate form which is known as ‘Sat-chid-anand’—one that is truthful, enlightened and blissful, is known only by having devotion for me. This form is a treasury of ‘Vigyan’—a fount of true knowledge, wisdom and enlightenment of the highest order, as well as of ‘Anand’—a fount of extreme bliss, beatitude and felicity. [Refer verse no. 23 of the Gopal Purva Tapini Upanishad which is section 1 of this Chapter.] (46).

[Now, in the following seventeen verses, from 47/1 to 47/17, the divine Mantras of Lord Krishna are narrated. It is to be noted that Krishna is regarded as no one else but Brahm personified. In this context, the reader should also refer to verse nos. 24/1 to 24/12 of the Gopal Purva Tapini Upanishad.]

47/1. OM Salutations! I repeatedly bow most reverentially and pay my sincere obeisance to the supreme transcendental Brahm who has revealed itself as my Atma (pure consciousness) that is my Pran (literally my life, here referring to my ‘true self’). It is the Truth that has also revealed itself as the Bhu (earth), the Bhurva (sky) and the Swaha (heavens). It is this same Divinity that has also revealed itself as my Atma (47/1).

47/2. OM Salutations! I repeatedly bow most reverentially and pay my sincere obeisance to Lord Krishna who is known as Govind and who is very dear to the cowherds and milkmaids (of Vrindavan). It is the same Lord who is the ‘truthful one’ (i.e. Brahm, the Supreme Being), and who has also revealed himself as the Bhu (earth), the Bhurva (sky) and the Swaha (heavens). (47/2).

47/3. OM Salutations! I repeatedly bow most reverentially and pay my sincere obeisance to the supreme transcendental Brahm who has revealed itself as the vital wind known as the Apaana which is a form of my Atma (pure consciousness) because it sustains life in my gross body. It therefore symbolizes that divine entity that is also the universal Truth in creation, and that has also revealed itself as the Bhu (earth), the Bhurva (sky) and the Swaha (heavens). It is this same Divinity that has revealed itself as my Atma (my true self). (47/3).

[Note—The *Apaana* is the wind that helps in digestion of food, thereby providing nourishment to the body, as well as eliminating waste from the body to prevent it from being poisoned by accumulation of toxic waste inside it.]

47/4. OM Salutations! I repeatedly bow most reverentially and pay my sincere obeisance to Lord Krishna who is known as Pradumna and Aniruddha. It is the same Lord who is the ‘truthful one’ (i.e. Brahm, the Supreme Being), and who has also revealed himself as the Bhu (earth), the Bhurva (sky) and the Swaha (heavens). (47/4).

47/5. OM Salutations! I repeatedly bow most reverentially and pay my sincere obeisance to the supreme transcendental Brahm who has revealed itself as the vital wind known as the Vyan which is a form of my Atma (pure consciousness) because it sustains life in my gross body. It therefore symbolizes that divine entity that is also the universal Truth in creation, and that has also revealed itself as the Bhu (earth), the Bhurva (sky) and the Swaha (heavens). It is this same Divinity that has revealed itself as my Atma (my true self). (47/5).

[Note—The *Vyan* is the wind that is responsible for accepting or giving away anything.]

47/6. OM Salutations! I repeatedly bow most reverentially and pay my sincere obeisance to Lord Krishna who is also revealed in the form of Lord Ram¹. It is the same Lord who is the ‘truthful one’ (i.e. Brahm, the Supreme Being), and who has also revealed himself as the Bhu (earth), the Bhurva (sky) and the Swaha (heavens). (47/6).

[Note—¹There are two Upanishads dedicated to Lord Ram, viz. the Ram Rahasya and Ram Tapini. They are included in this volume as Chapters 12 and 13.

Special note should be taken of this verse that affirms that Lord Ram and Lord Krishna are the same; they are two forms of the same Supreme Being.]

47/7. OM Salutations! I repeatedly bow most reverentially and pay my sincere obeisance to the supreme transcendental Brahm who has revealed itself as the vital wind known as the Udaan which is a form of my Atma (pure consciousness) because it sustains life in my gross body. It therefore symbolizes that divine entity that is also the universal Truth in creation, and that has also revealed itself as the Bhu (earth), the Bhurva (sky) and the Swaha (heavens). It is this same Divinity that has revealed itself as my Atma (my true self). (47/7).

[Note—The *Udaan* is the wind that is responsible for lifting the body.]

47/8. OM Salutations! I repeatedly bow most reverentially and pay my sincere obeisance to Lord Krishna who is also known as Devki-nandan (the son of Devki). It is the same Lord who is the ‘truthful one’ (i.e. Brahm, the Supreme Being), and who has also revealed himself as the Bhu (earth), the Bhurva (sky) and the Swaha (heavens). (47/8).

47/9. OM Salutations! I repeatedly bow most reverentially and pay my sincere obeisance to the supreme transcendental Brahm who has revealed itself as the vital wind known as the Samaan which is a form of my Atma (pure consciousness) because it sustains life in my gross body. It therefore symbolizes that divine entity that is also the universal Truth in creation, and that has also revealed itself as the Bhu (earth), the Bhurva (sky) and the Swaha (heavens). It is this same Divinity that has revealed itself as my Atma (my true self). (47/9).

[Note—The *Samaan* is the wind that is responsible for nourishing the body (as it takes the nutrients to all the parts of the body), and maintaining uniformity and balance in the body.]

47/10. OM Salutations! I repeatedly bow most reverentially and pay my sincere obeisance to Lord Gopal who is also known as Aniruddha. Both these forms are the divine forms of Lord Krishna personified. It is the same Lord who is the 'truthful one' (i.e. Brahm, the Supreme Being), and who has also revealed himself as the Bhu (earth), the Bhurva (sky) and the Swaha (heavens). (47/10).

47/11. OM Salutations! I repeatedly bow most reverentially and pay my sincere obeisance to Lord Gopal who is the chief Atma or the personified form of the cosmic supreme Consciousness of creation. It is the same Lord who is the 'truthful one' (i.e. Brahm, the Supreme Being), and who has also revealed himself as the Bhu (earth), the Bhurva (sky) and the Swaha (heavens). (47/11).

47/12. OM Salutations! I repeatedly bow most reverentially and pay my sincere obeisance to Lord Gopal who is also known as Indra (the king of Gods and representing the chief controller of all the sense organs of the body of the creature). It is the same Lord who is the 'truthful one' (i.e. Brahm, the Supreme Being), and who has also revealed himself as the Bhu (earth), the Bhurva (sky) and the Swaha (heavens). (47/12).

47/13. OM Salutations! I repeatedly bow most reverentially and pay my sincere obeisance to Lord Gopal who is the Bhut-Atma or the principal Consciousness that lives inside the mortal creatures as their individual Atma, and who has also revealed himself as the creature or the living being. It is the same Lord who is the 'truthful one' (i.e. Brahm, the Supreme Being), and who has also revealed himself as the Bhu (earth), the Bhurva (sky) and the Swaha (heavens). (47/13).

47/14. OM Salutations! I repeatedly bow most reverentially and pay my sincere obeisance to Lord Gopal who is a personified form of the chief Purush or the Viraat Purush (the cosmic form of Brahm that is all-pervading and all-encompassing, and from which the rest of the creation, including the creator Brahma, has emerged). It is the same Lord who is the 'truthful one' (i.e. Brahm, the Supreme Being), and who has also revealed himself as the Bhu (earth), the Bhurva (sky) and the Swaha (heavens). (47/14).

47/15. OM Salutations! I repeatedly bow most reverentially and pay my sincere obeisance to Lord Gopal who is the supreme transcendental Brahm, the Supreme Being. It is the same Lord who is the 'truthful one' who has also revealed himself as the Bhu (earth), the Bhurva (sky) and the Swaha (heavens). (47/15).

47/16. OM Salutations! I repeatedly bow most reverentially and pay my sincere obeisance to Lord Gopal who is the all-pervading and universal Atma or the principal Consciousness of creation that uniformly lives inside all the creatures as their individual Atma which is their truthful 'self'. It is the same Lord who is the 'truthful one' (i.e. Brahm, the Supreme Being), and who has also revealed himself as the Bhu (earth), the Bhurva (sky) and the Swaha (heavens). (47/16).

47/17. OM Salutations! I repeatedly bow most reverentially and pay my sincere obeisance to the Lord (i.e. Krishna) who is the one who prevails in all the states of consciousness, viz. the Jagrat or waking state, the Swapna or dreaming state, the

Sushupta or deep sleep state, and the Turiya or transcendental state of existence. It is the same Lord who is the ‘truthful one’ (i.e. Brahm, the Supreme Being) who has also revealed himself as the Bhu (earth), the Bhurva (sky) and the Swaha (heavens). (47/17).

48. The only one Lord known as Gopal is hidden as the ‘Antaryaami’ (one who lives in the inner-self of all living beings, and as such is privy to all their thoughts).

He is omnipresent and all-pervading.

He is the Atma, the pure conscious soul of all the creatures. [And therefore he is the truthful ‘self’ of the entire creation.]

He is the Lord who controls all rewards and fruits of all endeavours. [That is, he is the supreme Authority who decides which creature deserves what for his particular effort.]

He is the one who provides an abode to all living beings and acts as a foundation that supports the entire creation from all sides. [That is, all the creatures of this vast creation find succour and solace in the Lord. He supports them and provides them with shelter and refuge.]

He is a neutral witness for all and of all. [Nothing is hidden from him as he is omnipresent and all-pervading. He is non-partisan, and therefore the best witness one can ever find. That is why he sits in judgment for all the deeds done by the creature during his lifetime, as it is impossible to hoodwink him. He observes everything dispassionately like a neutral observer and is therefore a neutral witness to all that is happening in this creation. Nothing escapes his observation and reach.]

He is personified Consciousness.

He is ‘Kaivalya’, or one of his only kind. He has no parallel and match, and is therefore unique and non-dual. He is the ‘only’ destiny of creation in as much as everything in existence arises from him, lives in him, and collapses to finally merge with him at the end.]

He is ‘Nirgun’—i.e. he is the one who has no attributes, no definable qualities and no physical features (48).

49. Besides the forms enumerated herein above, all other divine forms of Lord Krishna are equally worthy of adoration, honour, reverence and worship. Therefore, I bow before and pay my sincere obeisance to the following Gods—Lord Rudra (the form of Shiva which brings about the conclusion of creation), Aditya (the legendary twelve forms of the Sun God), Vinaayak (Lord Ganesh who is worshipped before any other God), Surya (the celestial Sun who is a visible manifestation of the Supreme Being’s glorious and splendorous form), Vidya (personified form of knowledge as Goddess Saraswati and her revealed form as the Vedas and other ancient scriptures), Indra (the king of Gods and the one who controls all the organs of the creature’s body), Agni (the Fire God), Yam (the God who controls death and decides the punishment or reward a creature deserves for his life; also referring to the virtue of self-restraint personified), Niriti (one of the ten Digpaals or custodians of the ten directions of the celestial globe; he is the patron deity of the south-western direction and worshipped in that corner), Varun (the Water God), Marut (the Wind God), Kuber (the treasurer of Gods), Ishan (Lord Shiva), Brahma (the creator of this visible creation inhabited by living beings), and all other Gods, even those not mentioned here.

[All of them are the different manifestations of the same Supreme Being known as Brahm, like Lord Krishna who is one of the revelations of Brahm and to whom this Upanishad is dedicated.]’

Having finished quoting the conversation between Brahma and Lord Narayan, sage Durvasa said to Radha and other milkmaids, ‘After preaching Brahma—who was an image of Lord Narayan’s own self (as he was born from Narayan and therefore carried his divine genes in him and represented the creative aspect of Narayan)—this holy Gopal Tapini Upanishad, and empowering him with the authority and the ability to initiate the process of creation on his behalf, the Lord (Narayan; Vishnu) vanished from sight (49).

50. I (Durvasa) have narrated to all of you (Radha and other milkmaids) whatever I had learnt from Brahma, his sons Sankaadi and others, as well as from sage Narad.

Now, all of you must proceed to your homes.’¹

Thus ends this Upanishad known as Gopal Tapini Upanishad (50).

[Note—¹Sage Durvasa sought to remove doubts about the divinity of Lord Krishna that had cropped up in the minds of the Gopis. In the process he had also taught them the fundamentals of metaphysics and spiritualism. He had told them to recognize who they actually were (refer verse no. 27 of Gopal Uttar Tapini Upanishad; section 2 of this Chapter). This wisdom and enlightenment is fundamental to obtaining freedom from the snare of all worldly delusions and entrapments, which in turn means obtaining Mukti or liberation and deliverance.

This principle applies to all the living beings, and not only to the Gopis. Showing the correct path is the main duty of the Guru, and in this respect sage Durvasa acted as the wise Guru for the Gopis of Vrindavan.]

-----*****-----

----Shanti Paath----

-----*****-----*****-----

Chapter 28

Krishna Upanishad/ Krishno-panishad

This Upanishad reveals the divine aspects of Lord Krishna, the incarnation of Lord Vishnu that appeared on earth in the Hindu era known as Dwapar, which was the third of the four-era cycle of creation and conclusion. He followed the incarnation of Vishnu as Lord Ram in the previous era known as Treta-Yug.

There is a legendary tale that the great Gods and sages who lived in the heaven once approached Lord Vishnu, the sustainer and caretaker of this creation and regarded as the Supreme Being himself, and told the Lord that they were so overwhelmed by the Lord’s divine form during his incarnation as Ram that they wished to be very near to him and enjoy the privilege of his close company with an unrestricted access to him, the benefit they were denied during the Lord’s incarnation as Ram. At this request, Vishnu granted them their wish and promised them that during his next incarnation as Lord Krishna they would have this good fortune. This fact is revealed in verse nos. 1-2 of the present Upanishad.

The rest of the Upanishad is dedicated to explain the divine form of Krishna. It explains how Lord Krishna, along with his different companions as well as opponents, symbolized the various aspects of the Supreme Being alongside the auspicious and righteous aspects of creation as well as those aspects that are opposed to auspiciousness and righteousness. It establishes that Lord Krishna is none but Lord Vishnu in a visible human form. It stresses that a person who knows this secret and worships the Lord as such is able to get the reward that is equivalent to going to all pilgrim sites as well as obtain liberation and deliverance from this gross body and this entrapping world.

This Upanishad is dedicated to Lord Krishna, and therefore supplements and compliments the Gopal Tapini Upanishad which is Chapter no. 27 of this volume. The story of Lord Krishna's incarnation is however described in detail in the Bhagvat Maha Puran, in its 10th Skandha or Canto. Other sources are the Harivansha Puran in its section called Vishnu-parva, and in the Vishnu Puran in its 5th section.

----***----

----Shanti Paath----

Please see appendix no. 1 for the English of this Shanti Paath.

1. When the great Gods saw the divine, the most auspicious and the extremely charming form of Lord Vishnu (in his incarnation as Lord Ram), the like of which did not or would never exist anywhere in this creation, they were dumbfounded, absolutely astonished and completely overwhelmed by it. They said to the Lord (Vishnu, who had incarnated as Lord Ram), 'Oh Lord! We did not have any wish to live on this earth because we do not like it, but it was the once-in-a-lifetime attraction of having a chance to embrace (see, come close to and establish a direct connect with) your divine form that we gave our consent when Brahma, the creator, requested us to take birth in this world. Hence, we want to embrace you.'

[These Gods had manifested themselves as the different companions of Lord Ram to fulfill his mission to eliminate the evil demonic forces on earth led by their king Ravana of Lanka. This entire legendary story is narrated in the epic called 'Ramayana' of which several versions are available.]

[Lord Vishnu replied--] 'All of you would embrace me (i.e. come very close to me and play with me) in my next incarnation (as Lord Krishna).'

[Like the Gods, the sages and seers too requested Lord Vishnu—] 'Make us milkmaids and cowherd boys in that incarnation(of Krishna) so that are wish to embrace you (i.e. to be very close to you and have unrestricted access to you) can be fulfilled. We gladly accept to adopt any form of a body that gives us a chance to come in direct contact with your divine form.' (1).

2. Hearing this earnest prayer of Rudra and other Gods, the Lord (Vishnu) replied, 'Oh Gods! I shall definitely give you a chance to touch my divine form and derive spiritual bliss from it. I shall certainly fulfill your desire.' (2).

3. All the Gods were ecstatic and overjoyed on this assurance of the Lord. They exclaimed, 'We are contented and fulfilled.'

Soon, all the Gods presented themselves to serve the Lord during his incarnation as Krishna. [That is, they manifested as different cowherd boys and milkmaids of Vrindavan during Lord Vishnu's incarnation on earth as Krishna.]

The Lord's own form that was an embodiment of bliss and happiness had revealed its self in its fractional form as Nanda, the head of the cowherd community (of Vrindavan).

The personified form of Mukti (liberation and deliverance) revealed herself as his consort named Yashodaa (3).

4-5. Maya (the dynamic power of the Supreme Being to create delusions) is said to be of three kinds—viz. Satvic, Rajsic and Tamasic depending upon the ratio of the three Gunas that is dominant in any one of its three aspects. Out of these, the Satvic Maya is said to be the foremost and the first one, the Rajsic the second one, and Tamsic the third and the lowest one.

The Satvic Maya is the dominant character of Lord Shiva, also known as Rudra, who is the most ardent and the wisest devotee of the Lord. [This is why Lord Shiva is also known as Mahadeva, the Great God. In spite of his cosmic role as being the ruthless and uncompromising concluder of creation, he is known to be of an exemplary calm disposition and peaceful temperament, submerged always in contemplation and meditation. Sata Guna inculcates the great virtues of renunciation and enlightenment in the entity that possesses it, so Shiva is the most dispassionate and enlightened of all the Gods. This makes him the patron deity of ascetics.]

Brahma, the creator, has Rajsic Maya as the dominant character. [Raja Guna is concerned with creation and constant involvement in it. This is the function of Brahma.]

The demons had the Tamasic Maya as the dominant character. [Tama Guna creates the tendency to be evil and sinful, characters unique to the demons.]

Thus, Maya is said to be of three kinds, and since the entire creation is a product of Maya it too has these three characteristics in it.

Besides these three forms there is the Maya which is the primary form of Maya from which these three have evolved. This primary Maya is directly related to Lord Vishnu, hence called the 'Vaishnavi Maya'. It is sort of the parent of all the other forms of Maya. It is so powerful and so strong that no one can ever defeat it; not even Brahma the creator could overcome it. [This is the reason why Brahma, though being the creator of the Vedas—which are supposed to be a repository of all knowledge in creation—could not comprehend who Narayan or Vishnu was. This fact is amply clear in Gopal Uttar Tapini Upanishad in which Narayan himself taught the creator the truth of his (Narayan's) divine Self.] (4-5).

6. This Vaishnavi Maya that is worshipped by the Gods and is directly a part of the supreme Brahm is the one that revealed its self as Devaki.

The Vedas revealed themselves as Vasudeo, the husband of Devaki. These Vedas constantly worship me and sing hymns in my honour who is the complete Divinity.

The object of worship and adoration by the Vedas is the supreme transcendental Brahm, and it is this Brahm that had revealed himself as Krishna¹ and his elder brother Balraam (6).

[Note—¹The story of Lord Krishna appears in detail in the Bhagvat Maha Puran, in its 10th Skandha or Canto. Other sources are the Harivansha Puran in its section called Visnu-parva, and in the Vishnu Puran in its 5th section.]

7. This personified form of the supreme, transcendental and divine Brahm that is the eternal ‘truth’ and the essence of the Vedas is the one who had revealed it’s self on this earth in a personal form (as Krishna), and is also the one who played around with milkmaids and cowherd-boys in Vrindavan (7).

8. The hymns of the Vedas took a personified form and revealed themselves as the milkmaids and cows of Lord Krishna.

[Refer to verse no. 13 of the present Krishna Upanishad, and also to the Gopal Uttar Tapini Upanishad, verse no. 27 which appears as section 2 of Chapter 27 of this volume.]

Brahma had revealed himself as the lock of Krishna’s curly hairs, while Lord Rudra (Shiva) formed his flute.

The Sagosur (i.e. Indra, the king of Gods) had revealed himself as the ‘Sring’ (a musical instrument known as the ‘horn’ as it is made from the horn of an animal). (8).

9. The heavenly forest of Vaikunth (the divine abode of Vishnu in the heaven) had revealed it’s self as Gokul (where Lord Krishna was born).

The numerous trees in this Gokul stand for the uncountable sages, seers, hermits and ascetics who are doing Tapa (austerity, penance and other stern religious duties)¹.

The numerous faults and negative qualities in this creation represented by Krodh (anger) and Lobha (greed) had manifested themselves as demons and their kith and kin. These negative qualities are eliminated in the Kali Yug (the present era of the four-era cycle) by merely invoking the name of Krishna (9).

[Note—¹The various sages and other holy souls transformed themselves as trees to have proximity with the Lord when he took up his residence on this earth as Lord Krishna in Gokul. When one does severe ‘Tapa’, he is supposed to remain immobile like the trees, hence the symbolism is most appropriate here.

We have seen earlier in verse no. 1 that the sages and seers had left the choice of what form they could take, or the type of body in which they would be born upon the Lord. So, while some became milkmaids and cowherd boys, some became trees. Perhaps those sages and seers who were aged, those ascetics who did not like much physical movement or playing around, and rather preferred remaining submerged in meditation and contemplation, or those who had reached higher echelons of Samadhi where physical closeness with the Lord was inconsequential, were the ones who had turned themselves as trees.

It can also be said that these trees represented those great sages, seers, hermits and ascetics who had reached that transcendental state of super-consciousness which generated such strong pull—like the gravitational pull of a heavy planet or the magnetic pull of a strong magnet—that the subtle cosmic Consciousness embodied in the form of Lord Krishna got pulled towards them like so many cosmic bodies get pulled towards the heavy planet or so many pieces of iron get attracted to a heavy piece of magnet.

The Gopis and cowherd boys represented those sages and seers who were at different levels of spiritual awakening and spiritual achievement while pursuing their spiritual goals in life, they had covered different milestones in their spiritual paths but had yet to reach the pinnacle or the citadel of enlightenment when they no longer had to pursue their spiritual dreams any longer. They had different teachers, followed different paths and adopted a variety of means to find spiritual Mukti (freedom) and know about the ‘Absolute Truth’ known as Brahm; they were still in the process of

acquiring true wisdom and enlightenment. That is why the Gopis and the boys of Vrindavan ran behind Krishna, had different ideas of him, and looked at him with different emotions and views.

On the other hand, the ‘trees of Vrindavan’ represented those elderly ascetics and hermits who were steadfast and robust in their spiritual convictions, who had already achieved their spiritual goal in life, and who preferred to remain steady in doing Tapa (austerity, penance and sufferance), Yoga (meditation), Dhyan (contemplation) and Samadhi (state of transcendental existence which is like a trance). This made them literally ‘immobile’ as they remain steady and rooted firmly in their beliefs and faiths like the trees as compared to other spiritual aspirants who ran behind pursuing scriptural study or seeking guidance from learned teachers or visiting pilgrim sites in search of salvation which always eluded them. The term ‘immobility’ is a figure of speech and a metaphoric way of saying that such ascetics and hermits did not have to search for the ‘Truth’ any longer, for this ‘Truth’ came to them by its own self. When they became ‘trees’ they remained as rooted in their beliefs and convictions, as engrossed in meditation and contemplation which made them immobile as they were in their earlier lives. We can deduce that they continued to do Tapa and Yoga even when they assumed the body of a tree. So, the ‘spiritual Truth’ in the form of Krishna voluntarily came to them instead of them searching for it in this gross world like the Gopis and the cowherd boys symbolically did while they followed Krishna wherever the Lord went.

These are some of the obvious reasons why they became ‘trees’ and why Lord Krishna himself came to roam in their vicinity as compared to the case of the Gopis and cowherd boys who came to Krishna instead of the Lord going to them! The difference between the two situations is very clear and stark.

We can safely surmise that the ‘trees’ represented the enlightened beings of an earlier era, while the ‘milkmaids’ and the ‘cowherds’ symbolized those who were yet not up to the spiritual mark. This also explains why the Gopis had doubts about the real form and divine nature of Lord Krishna as narrated in the Gopal Uttar Tapini Upanishad.]

10. The supreme Lord known as Hari (Vishnu) had revealed himself in the form of Gopal (Krishna).

This mortal world is trapped in the delusions created by Maya, so it is very difficult for it to comprehend the maverick tricks played by Krishna in this world (10).

11. The effects of Maya are so overwhelming that even the Gods are not spared from them. It is this Maya that compelled Brahma to become a lock of curly hairs on Krishna’s head, and Shiva to become a flute. Say, how can an ordinary mortal creature ever expect to fathom (comprehend, know, understand) this Maya? (11).

12. Surely, the strength of wisdom, sagacity and erudition that the Gods inherently possess, and of which they are proud, has been trounced by the overriding power of Maya of the Lord.

Seshnath (the legendary serpent on whose coiled body Vishnu reclines on the surface of the celestial ocean known as Kshir-sagar) had revealed himself as Balraam. [During the incarnation of Vishnu as Lord Ram, this Seshnath had accompanied the Lord as his younger brother Laxman.]

The supreme transcendental Lord (Vishnu) had revealed himself as Krishna (12).

13. The sixteen thousand one hundred eight consorts of Krishna headed by the chief consort named Rukmini represent the numerous hymns of the Vedas and the Upanishads.

The countless milkmaids and cowherd-boys of Vrindavan who accompanied Krishna on earth too represent the hymns of the Vedas (13).

[Note—Refer verse no. 8 of this Upanishad and its accompanying note.]

14. The negative quality of ‘Dwesh’ (enmity, malice, ill-will) had manifested as the demon named Chaanur Malla, the negative quality of ‘Matsarya’ (jealously and envy that lead to anger and wrath) revealed it’s self as the invincible Mushtik, the negative quality of ‘Darpa’ (false pride, arrogance, haughtiness, hypocrisy, conceit, rashness, boastfulness, false sense of grandiose) had become the elephant known as Kuvalyaapeed, and the negative quality of ‘Garva’ (vanity, self-praise, haughtiness, arrogance, pride, ego, self-righteousness, self-importance) had come to become the demon Vakasur who could fly in the sky. [The symbolism here is very evident—when a person becomes haughty he is prone to talk beyond his means, which is expressed by saying that he is flying in the air or building castles in the air.] (14).

15. The auspicious and noble virtue known as ‘Daya’ (mercy and compassion) revealed it’s self as mother Rohini, while Mother Earth became Satyabhama.

The great horrors and torments of creation personified themselves as the demon named Aghaasur, while the Kali-Yug itself became the king of demons known as Kansha (15).

16. Lord Krishna’s great humble friend of childhood known as Sudama personified the auspicious virtue of ‘Sham’ (tranquility, bliss, self control over the senses, equanimity, forgiveness and tolerance).

Akrur represented the glorious virtue of ‘Satya’ (truthfulness), and Udbhav symbolized the noble virtue of ‘Dam’ (which is akin to the virtue of Sham, meaning self-restraint and control over natural urges).

Lord Krishna’s famous Conch is a personified form of Lord Vishnu, and since the conch is said to be brother of Laxmi (as both had emerged from the ocean at the time of its churning by the Gods and the demons in search of Amrit, the elixir of eternity and bliss) it is also a manifestation of Goddess Laxmi (16).

17. This Conch was produced from the Kshir-sagar, the celestial ocean of milk, and its sound is as resounding and awe-inspiring as the grave rumble and thunder of dark clouds in the sky.

The numerous pots and pitchers of milk and curd that Krishna had broken in his childhood days (while playing around in Vrindavan) represented the earthly flow of the Kshir-sagar, the celestial ocean of milk on which Vishnu had eternally reclined before coming down on earth as Krishna.

[In other words, Krishna had recreated the celestial ‘Kshir-sagar’ on earth in a symbolic manner by making milk and curd flow on earth by breaking the vessels in which they were kept. This ‘breaking of the vessels to release the milk and curd’ has another connotation—it signifies that only when a person breaks free from pre-set mental conditions, only when he breaks free from emotional obstructions and demolishes artificial boundaries created by this gross world and the equally gross body, only when he overcomes his imaginary inhibitions and worthless reservations, and instead lets himself go free like a bird, would he be able to taste the nectar of

freedom and deliverance. It is only then that he can truly enjoy the bliss that comes with realisation of the 'truth' and spiritual enlightenment. Otherwise he would remain bogged down for life in the quagmire of delusions and entanglements so characteristic of this mortal world of material objects.

By breaking the pots and allowing the milk, the butter and the curd to flow freely on earth, or sharing their hoarded stock with his friends, Lord Krishna gave the following signals—that he has come to let the rewards of Dharma (i.e. the benefits of righteousness, auspiciousness, probity, propriety and nobility) flow freely on this earth, to make them easily available to those who follow the right path shown by him, and to unlock the gates of salvation and emancipation so that even the ordinary masses can have access to them. The Lord always shared the milk, the butter and the curd with his cowherd friends to indicate that he has come to spread happiness, cheer and joy to all the creatures who decide to follow him, and to indicate that one must share all goodness and treasures of this world with his brethren. Goodness and joy must not be hoarded and locked in; the world must be made a prosperous and a joyous place to live with abundance of prosperity and wealth as well as robust health and nourishment for all as symbolized by the milk, curd and butter let loose by Krishna.] (17).

18. When Krishna played around in Vrindavan—playfully kicking around, stomping his feet, jumping and rolling over in the milk, butter and curd that spilled over from overturned or broken pots and pitchers, giggling gleefully while he threw them around, splattering the whole surrounding place with these things, and getting himself soaked, smeared and smudged all over the body in the process—he was actually re-enacting in this world his cosmic experience as Lord Vishnu who was splattered and drenched all over by the spray of celestial milk from the heaving waves of the ocean of milk, known as the Kshir-sagar, as it splashed against the colossus body of the Seshnath, the legendary celestial serpent on whose coiled body the Lord reclined before the creation came into being.

The Lord is ever-ready to trounce the wicked and the evil, and equally ever-ready to protect the holy, the pious and the humble creatures (18).

19. Lord Krishna had incarnated as a human being to show unbound benevolence and munificence upon all the mortal creatures, as well as to protect and uphold the laws of Dharma (auspiciousness, righteousness, probity and propriety) that has its origin in him. [This is because the Lord, in his cosmic role as the Supreme Being, is the one who had himself established Dharma, and therefore it is his duty and obligation to protect it just like he protects the rest of his subjects.]

The powerful Chakra (serrated discus) that was created by Mahakaal (the great God of Death; Lord Shiva) to give as a gift to Lord Hari (Vishnu) is held by Krishna in his hand. This discus is also a representative of Brahm, the Supreme Being (19).

20. The Vayu (the Wind God) revealed himself as the garland known as Vijayanti that is worn by the Lord.

Dharma assumed the form of the whisk.

The Khanga (sword), which is as radiant and dazzling as a fiercely burning fire, was created by Maheshwar (Lord Shiva). (20).

21. The ancient sage known as Kashyap became the pestle in the household (of Krishna's father Nanda). Mother Aditi (the mother of Gods) revealed herself as the

rope (that was once used to tie Lord Krishna to the pestle when he was being too naughty).

The various Siddhis (mystical powers) revealed themselves as the Lord's conch and discus.

The Bindu (the dot) that is placed on the top of Sanskrit letters as their crown-jewel is represented by the sky which acts as the celestial umbrella or parasol on the head of Krishna (21).

22. All the divine Gods and their various forms that are described by great sages and seers, and which are worshipped in various forms by all the ordinary creatures and the wise ones, find their only support and succour in Lord Krishna.

All these divine Gods and their forms are indeed the form of Krishna in their individual forms; it is Lord Krishna who is being worshipped and honoured in their forms—there is no doubt about it. [This is in consonance with the doctrine that all the Gods are actually the various manifestations of the same Brahm who has assumed their forms to carry out different roles and functions in the scheme of creation.] (22).

23. The Gadaa (mace) in the hand of the Lord is the destroyer of all enemies and is a personified form of Kaalikaa, the goddess of war and of destruction of enemies.

The Vaishnavi Maya (the primary form of Maya) has revealed itself as the bow known as Shaarang held by Lord Krishna (because this particular bow is held only by Lord Vishnu of whom Krishna is an incarnation).

The Kaal, the God of death, has revealed himself as the other bow held by the Lord (23).

[Note—It is to be noted here that two bows are mentioned. One is the bow held by Vishnu, and the other is the one held by Krishna. Since Krishna is a revelation of Vishnu it is to be surmised that the two bows are also the same, the second one being a visible manifestation of the celestial bow known as Shaarang.

The bow here is depicted as a personification of Death for obvious reasons—bow is used in battles, and it kills. Bow is never used to give birth to new life, and hence its depiction as an embodiment of 'death' is appropriate.]

24. The Padma (lotus) that represents the seed from which the entire mortal world emerged is held playfully by the Lord in his hands. [This Lotus represents the entire mortal and visible world because it is from it that Brahma, the creator, has first emerged, and who sub-sequentially gave birth to this creation, including the earth which acts as the fertile ground where the creation grew and developed into its present form. By holding this Lotus in his hand the Lord signifies that he has full control over this world; the world is virtually 'in his hands, under his command'.]

Garud, the legendary vehicle of Lord Vishnu, took up the form of the Indian Fig tree known as Bhandir.

The celestial sage Narad had revealed himself as Sudama, the humble childhood friend of Krishna (24).

25. The virtue of Bhakti (devotion for the Lord) has manifested as Vrindaa.

Buddhi (intellect) that acts as the light that shows the correct path to all the living beings had revealed it's self as the Lord's deeds and actions.

The different entities which accompanied the Vibho (the Lord who is almighty, all-pervading and supreme; Lord Vishnu in his incarnation as Krishna) during his sojourn on earth are entirely one with the Lord; neither are these entities separate from him nor is he separate from them. [This statement supports the non-dual

view of the Upanishads that everything is Brahm personified. It is the same Atma that lives in various bodies in this creation.] (25).

26. When the Lord (Vishnu) revealed himself upon earth (as Krishna), he had brought along with him all the inhabitants of his divine abode known as Vaikunth, the heaven (26).

27. Those who are well acquainted with this secret are the ones who are known as learned and wise; they are eligible to receive all the fruits that come with such divine knowledge.

They are able to find freedom from the shackling effect of the mortal body, and consequentially find spiritual liberation and deliverance or spiritual emancipation and salvation (called Mukti or Moksha). This is what this Upanishad says. Amen! (27).

-----*****-----*****-----

Chapter 29

Hayagriva Upanishad/ Hayagrivo-panishad

This Upanishad is dedicated to Lord Hayagriva, the horse-headed incarnation of Lord Vishnu. The word ‘Hayagriva’ has two parts—‘Haya’ means a horse, and ‘Griva’ means a neck or head.

This Upanishad was revealed to sage Narad by the creator Brahma when the sage requested him to preach Brahm Vidya, the knowledge pertaining to the supreme transcendental Brahm, the Supreme Being.

The Upanishad lists a number of Mantras of Lord Hayagriva, and emphasizes in its concluding verses the fact that the primary form of Mantras that were offered by the Gods to the Supreme Being were in the form of musical sounds resembling the neighing of a horse, instead of articulated words (verse no. 16-17). This is the genesis of the Beej Mantras of any given hymn.

When Brahm revealed it's self as Lord Hayagriva, the latter had ‘neighed’ to speak to the Gods, because a horse neighs and does not use words to speak. In other words, the primary form of all knowledge that was revealed in this creation was in the form of mere sound. This endorses the view that the cosmic sound known as Naad, and its monosyllabic conceptualization as the word OM is the basic root of all creation and the seed of all knowledge that is encapsulated in various languages.

-----****-----

----Shanti Paath----

Please see appendix no. 1 for the English of this Shanti Paath.

1. Salutations to Lord Hari who is the supreme Brahm represented by the word OM! Once, the celestial sage Narad¹ approached the creator Brahma and requested him, 'Lord, I want to learn about Brahm-Vidya², the knowledge pertaining to the supreme transcendental Brahm, the Supreme Being. This is an excellent knowledge which helps the knower to get rid of all his sins and their accumulated negative effects very soon. The person who reads and studies this knowledge of Brahm Vidya so as to become acquainted with its intricacies is able to achieve great acclaim, majesty and fame in this world.' (1).

[Note—¹Sage Narad—A detailed note on sage Narad is given in Canto 1, verse no. 1 of Chapter 8 named 'Narad Parivrajak Upanishad' of this volume. This particular Upanishad is regarded as the reference book for all Sanyasis.

²The concept of *Brahm Vidya* has been the chief subject of discussion of a number of Upanishads, especially the following:--

(a) Krishna Yajur Veda's = Kaivalya Upanishad, Brahm Upanishad, Panch Brahm Upanishad, Akchyu Upanishad, Tejobindu Upanishad, Varaaha Upanishad, Cantos 1-5, and Brahm Vidya Upanishad.

(b) Atharva Veda's = Mundak Upanishad, Mundak (Canto) 1, section 1; Mundak (Canto) 2, section 1; Mundak (Canto) 3, section 1-2; Shandilya Upanishad, Cantos 2-3; Atma Upanishad; Tripadvibhut Maha Narayan Upanishad, Canto 1, paragraph no. 4; Canto 4, paragraph no. 1; Annapurna Upanishad, Canto 1, verse no. 17-57; Canto 2, verse no. 37; Bhasma Jabal Upanishad, Canto 2, paragraph no. 19.

(c) Sam Veda's = Chandogya Upanishad, Canto 7-8; Keno-panishad; Avyakta Upanishad.

(d) Shukla Yajur Veda's = Brihad Aranyak Upanishad; Isha Vasya Upanishad, Adhyatma Upanishad. (e) Rig Veda's Mudgal Upanishad; Atma Prabodh Upanishad.

The Atharva Veda's *Bhasma Jabal Upanishad*, Canto 2, paragraph no. 19 defines succinctly what constitutes 'Brahm Vidya'.]

2. Brahma replied, 'If one knows certain hymns and Mantras¹ (esoteric and mystical divine formulas in the form of letters, monosyllables, words, phrases or hymns etc.) of which the Lord known as Hayagriva² is the patron deity, then certainly such a person is deemed to have the knowledge of (and be well acquainted with) the Vedas, the Dharmashatras (various scriptures that teach the doctrines and tenets of Dharma or righteousness, auspiciousness, probity and propriety), Itihasas (ancient Hindu histories), and the Purans (Hindu mythological histories).

Indeed such a person is able to achieve great fame and acclaim besides acquiring immense mystical powers (2).

[Note—¹The hymns dedicated to Lord Hayagriva are narrated in verse nos. 3-5, and the Lord's Mantra is given in verse no. 8.

²Lord *Hayagriva* is the horse-headed incarnation of Lord Vishnu. The word 'Hayagriva' has two parts—'Haya' means a horse, and 'Griva' means a neck. Hence, the Lord with the neck, and therefore the head of a horse is known as Hayagriva.

There are two main interpretations of this incarnation of Lord Vishnu. According to one, when sage Yagyavalkya was deprived of the knowledge of the Yajur Veda due to the curse of his Guru Vaishampaayana, he went and did severe Tapa (austerity and penance) to please the Sun God. Pleased, the Sun God taught him another version of the same Veda by assuming the form of a deity with the head of a horse. Since the Sun is a visible manifestation of the Viraat Purush, one of the more subtle forms of Lord Vishnu, it was actually Lord Vishnu himself who had taught the sage this Veda. Hence, Lord Hayagriva is regarded as the Lord of knowledge and learning, and is given the same respect as shown to Goddess Saraswati, the patron goddess of learning and wisdom.

According to another story, there was a demon with the head of a horse, and he was therefore called Hayagriva—the horse-headed one. He was the son of Diti, the mother of demons. He did severe Tapa (austerity and penance) on the banks of the river Saraswati and offered his worship to Goddess Jagdambika (Parvati, the divine consort of Lord Shiva and the cosmic Mother). The Goddess was extremely pleased by his severe Tapa and asked for a boon, upon which Hayagriva requested immortality. The Goddess told him that all who are born must die, so this grant was practically not feasible. She asked him to ask something else. The demon was cunning, so he re-phrased his request and asked that he be killed by someone who was exactly like him. He thought that since no two living beings are alike, he would indirectly get immortality. The Goddess granted him his desired boon. Thus armed, he let loose terror in the world, thinking that no one would now be able to kill him.

To get rid of him the Gods designed a strategy whereby Lord Vishnu lost his original head and was grafted with the head of a horse by the medicine men of the Gods named Ashvini Kumars. They are the twin sons of the Sun God. Thus, Vishnu also became a 'Hayagriva'. It was in this form that the Lord slayed the demon. This story appears in Devibhagwat, 1/5.

According to the third story, the Vedas had been stolen by two demons named Madhu and Kaitav who had hidden them in the eastern ocean. Lord Vishnu had assumed the form of Hayagriva to kill them and restore the Vedas.

The legend about the birth of these demon says that at the time Brahma the creator emerged atop a thousand-petal lotus that sprouted from the navel of Lord Vishnu, the Viraat Purush, two drops of water symbolising the two Gunas (qualities) of Raja and Tama (the medium and the lowest type of qualities) were present on one of the petals on which Brahma sat. Madhu was born from the drop of Raja Guna, and Kaitav from the drop of water representing Tama Guna.

Once they went up to the heaven and saw the Vedas in all their glorious form placed alongside Brahma who was engaged in the process of creation. The duo immediately stole the Vedas and hid them under the water of the eastern ocean. Brahma was confounded and requested Lord Vishnu to retrieve them as the Vedas were the former's eyes as they contained all the knowledge needed for all the aspects of creation. So Vishnu appeared as a deity with a head of a horse—i.e. as Hayagriva. The heaven was his head, the rays of the Sun were his glistening hairs, the sky and the underworld were his ears, the earth was his forehead, the river Ganges and Saraswati were the two halves of his chest, the oceans were his thighs, the Sun and the Moon were his eyes, dusk was his nostril, OM was his ornament, electric was his tongue, the Pittars (Spirits of dead ancestors) were his teeth, the Brahma Loka was his lip, and Kalratri (the night of the doomsday) was his neck.

Lord entered the ocean and went to the ocean bed, the nether world called the 'Patal Loka'. There, he began to neigh melodiously, singing the hymns of the Sam Veda. The two demons were so enchanted by this singing that they came out to hear it. Lord Hayagriva got an opportunity and he immediately took the Vedas and gave them to Brahma. After their restoration, he went back to the ocean and lived there for some time.

When the demons reached the place from where they had heard the sweet singing emanating, they found no one. So they got suspicious and rushed back to where they had concealed the Vedas to find them missing. Then they began frantically to search for the Vedas as well as the miscreant who removed the scriptures from the hiding place. They reached the surface of the ocean and found Lord Vishnu peacefully reclined on the bedstead of the celestial serpent named Sheshnath. They assumed that certainly the Lord was the one who had taken away the Vedas. They shouted and caused so much raucous that Lord Vishnu woke up from his cosmic sleep, and then there ensued a battle between the Lord and the demons which lasted for five thousand years.

Pleased by their valour and ardour, Vishnu asked them to request for a grant of a boon. The haughty demons retorted and sneered at the Lord, asking the latter to ask for a boon instead. The Lord asked that they be killed at his hands. [Markandey Puran, 81/74.] Taken aback, the demons said that they were also entitled for a boon as promised by the Lord himself. The Lord granted them permission to ask, and they requested that they be killed at a place where the earth was not submerged in water. [Markandey Puran, 81/76.] Vishnu immediately spread his thighs on the surface of the ocean, and deluded by the Lord's Maya the demons thought that dry earth has emerged from the ocean. Aside of this, they also found in this happening a chance of their own salvation and so willingly put their heads on it. Vishnu invoked his Sudarshan Chakra (the sharp weapon of Vishnu which is like a circular saw) to chop off their heads. This episode is described in detail in the Markandey Puran, Chapter 81.

Perhaps this episode describes how the continents and islands came into being during the process of creation.

Iconographically, Lord Hayagriva is depicted as having a human body and the head of a horse. This incarnation resembles the Nrisingh incarnation when the Lord had assumed a body whose lower part was that of human, and the upper part that of a lion.]

3. The hymns dedicated to Lord Hayagriva are the following—‘The Lord who is manifested as the entire ‘Vishwa’ (world) and is known in the form of the visible world, the Lord who is an image of consciousness, enlightenment and bliss, the Lord who is the patron deity of all knowledge (i.e. without whose blessings no knowledge can be acquired, and who is a treasury of knowledge himself) is the Lord known as Hayagriva. I repeatedly bow before Lord Hayagriva with the greatest of reverence, faith and sincerity, and I pay my obeisance to the Lord by saying Swaha repeatedly (3).

4. The Lord (Hayagriva) who had retrieved the Vedas stolen by the demons (Madhu and Kaitav—see note of verse no. 2), the Lord who has a majestic and magnificent form with the head of a horse, the Lord whose cosmic form is represented by the ethereal word OM (i.e. who is a manifestation of Pranav or Brahm, the Supreme Being), and whose divine form representing knowledge is manifested in the form of the Vedas (i.e. who is a manifested form of the Vedas)—I repeatedly bow most reverentially and pay my sincere obeisance to this Lord known as Hayagriva. I also offer my oblations to him by saying Swaha repeatedly (4).

5. The Lord who is a personified form of ‘Udgit’ (literally ‘a classical form of song’ representing the Sam Veda, so-called because this Veda is sung melodiously, incorporating all the finer tones and notes of music as compared to the other Vedas which are chanted differently in a monotone), the Lord who represents Pranav (the ethereal word OM that itself represents Brahm), the Lord who is the patron deity and the presiding Lord of all letters and sounds (and hence of language, the spoken word and all sorts of knowledge because the latter is taught and learnt by the medium of words and the spoken language), the Lord who is a personified form of all the Vedas (and not merely the Sam Veda), the Lord who is so esoteric, mysterious and enigmatic that he is beyond the reach of comprehension, imagination and thoughts, the Lord who is all-knowing and omniscient as he is an image of wisdom and enlightenment—I am delighted to become enlightened about this Lord known as Hayagriva, and I repeatedly bow most reverentially and pay my sincere obeisance to Lord Hayagriva. I also offer my oblations to him by saying Swaha repeatedly.’ (5).

6. This Mantra (narrated in verse nos. 3-5) has Brahma (the creator), sage Atri, Ravi, also known as Savita (the splendid Sun God), and sage Bhargava as its 'Rishis'. [The 'Rishi' of a Mantra is the first enlightened soul, whether a God or a great ancient sage or seer, who had first visualized, conceptualized or formulated any given Mantra. In the case of the Mantra of Lord Hayagriva, they were Brahma, Sun God, Atri and Bhargava.]

The 'Chandas' (style of composition of hymns) in which this Mantra was composed are Gayatri, Trishtup and Anushtup. [The *Gayatri Chanda* has 24 letters and syllables in all which are divided into 3 steps or stanzas of 8 letters or syllables each. Hence the total is $3 \times 8 = 24$. The *Trishtup Chanda* is a verse of 4 lines in which each line has 11 letters; $11 \times 4 = 44$ letters in all. The *Anushtup Chanda* is a verse with 4 lines, each line having 8 letters = total 32 letters. It was first conceived by an ancient sage named Anustuv, hence it bears his name.]

The 'Devta' (patron deity to whom the particular Mantra is dedicated) of this Mantra is obviously Lord Hayagriva.

The 'Beej Mantra' (the seed letter from which this Mantra is formulated) is 'Lohau' (or 'Hrisau').

The 'Shakti' of this Mantra (i.e. the divine mystical powers that this Mantra inherently possesses) is represented by the eclectic expression 'So-a-Ham'. [The Shakti is that aspect of the Mantra which gives it its dynamism and energy. In the present case, the expression 'So-a-Ham' enables the worshipper of Lord Hayagriva to attain self-realisation as this is the ultimate fruit of all spiritual endeavours. The expression is one of the great sayings or Maha-Vakyas of the Vedas. It literally means 'That supreme essence is me'. This 'me' refers to the Atma of a self-realised spiritual aspirant who has understood the metaphysical truth that the Atma of the individual is an image or a microcosmic form of the cosmic Atma known as Brahm which is the Absolute Truth in creation. The Atma as well as the Brahm are the same Consciousness existing in two planes—the former at the microcosmic level, and the latter at the macrocosmic level.]

In the eclectic Mantra 'So-a-Ham', the word 'So'— meaning 'that'—refers to the supreme transcendental Consciousness known as Brahm, while the word 'Ham'—meaning 'me'—refers to the spiritual seeker who has realised the 'truth of his Atma and of this own self' as being the same cosmic Consciousness that resides in his gross body. So in essence, the self-realised person honestly declares that 'he is a personified form of Brahm'.]

The 'Kilaks' of this Mantra are the same as the Beej (seed) Mantra 'Lohau' (or 'Hrisau').

It is invoked for the dual purpose of enjoying worldly comforts and pleasures as well as for obtaining liberation and deliverance from this world.

The 'Anga Nyas' (consecrating different parts of the body of the worshipper by invoking the powers of the Mantra) is done by saying the three letters of the Mantra of Brahm, which is the Mantra 'OM'. These three letters of OM are 'A', 'U' and 'M'¹. [It ought to be remembered here that it has been clearly said before that Lord Hayagriva is a personified form of OM or Pranav. Hence, by doing Anga Nyas with OM the worshipper virtually consecrates his body with the purity and holiness of the Lord himself.] (6).

[Note—¹The concept of OM is a subject matter of intense discussion and elucidation in the field of metaphysics, and a chain of Upanishads have very nicely described it.]

7. Now, Dhyān (how to do meditation and contemplation, and focusing one's mind and sub-conscious on the divine Being known as Hayagriva) is being described.

'Lord Hayagriva's divine form holds a Shankha (conch), a Chakra (discus, the circular saw-like weapon held by Vishnu), and a book (representing the Vedas and symbolizing knowledge). His hands are held in a special posture known as Maha-Mudra. The Lord has four arms. [This is because Lord Hayagriva is a manifestation of Lord Vishnu, the second of the Trinity Gods and the sustainer and protector of creation. The Shankha and the Chakra as well as the four arms are trademarks of Vishnu as depicted in the Purans and in iconography.]

I worship and meditate upon Lord Hayagriva's divine form which is as beautiful as the full Moon.' (7).

8. [Now, the esoteric Mantra of Lord Hayagriva that is used in formal worship and which has various Beej Mantras is being narrated.]

The esoteric form of Mantra dedicated to Lord Hayagriva is constructed as follows—'OM' and 'Sri' are the first two letters. 'Lohau' (or 'Hrisau') is the third letter. [See verse no. 6 also.] 'OM Namo Bhagwate' is the next part of the Mantra having seven letters. [OM + Na + Mo + Bha + Ga + Wa + Te = 7.] 'Hayagriva' is the next part consisting of five letters. [Ha + Ya + Ga + Ri + Va = 5.] 'Vishnava' is the next component having three letters. [Vi + Shna + Va = 3.] 'Mahayam Medhaam Pragyāam' is the next part having six letters. [Ma + Hayam + Me + Dhaam + Pra + Gyaam = 6.] And finally, the concluding part consists of the words 'Prayachha Swaha' which has five letters. [Pra + Pa + Chha + Swa + Ha = 5.]

The Lord referred to in this Mantra corresponds to the Turiya state of Consciousness. In other words, a spiritual aspirant who worships the Lord, who meditates upon him and contemplates upon the Lord with this Mantra attains the Turiya state of exalted existence.

Therefore, the full Mantra becomes 'OM Sri Lohau (or 'Hrisau') OM Namo Bhagwate Hayagriva Vishnava Mahayam Medhaam Pragyāam Prayachha Swaha'. [It briefly means 'Salutations to Brahm and his cosmic Shakti represented by OM and Sri respectively. The Beej Mantra for this combination revealed as Lord Hayagriva is Lohau or Hrisau. OM Salutations! I bow before the Lord known as Hayagriva who is none but Lord Vishnu. I am fully enlightened and aware of this fact. With this knowledge and wisdom, I offer my oblations to the Lord.'](8).

9. [Now, the second Mantra of Lord Hayagriva is being narrated.]

'OM' and 'Sri' are the first two letters. 'Lohau' (or 'Hrisau') is the third letter. [See verse no. 8 also.] 'Aim Aim Mai' are the three letters of the next part of the Mantra. 'Klim/Klin(g) Klim/Klin(g)' are the two letters of the next part. 'Sauha Sauha' are the two letters of the next part. 'Hrim/Hrin(g)' is the one letter that forms the next component of the Mantra. 'OM Namo Bhagwate' is the next part of the Mantra having seven letters. [OM + Na + Mo + Bha + Ga + Wa + Te = 7.] 'Mahayam Medhaam Pragyāam' is the next part having six letters. [Ma + Hayam + Me + Dhaam + Pra + Gyaam = 6.] And finally, the concluding part consists of the words 'Prayachha Swaha' which has five letters. [Pra + Pa + Chha + Swa + Ha = 5.]

This is the fifth Mantra of Lord Hayagriva. [The first three Mantras are narrated in verse nos. 3-5, the fourth one is given in verse no. 8, and therefore the present one is the fifth one.]

The final shape of this Mantra is as follows—'OM Sri Lohau (or 'Hrisau') Aim Aim Mai Klim/Klin(g) Klim/Klin(g) Sauha Sauha Hrim/Hrin(g) OM Namo

Bhagwate Mahayam Medhaam Pragyam Prayachha Swaha'. [The single letters Aim, Klim, Sauha and Hrim are Beej Mantras standing respectively for Vaak or the faculty of speech, Kaam Shakti or the power of desires, the fire element, and Maya or the power of delusions. The meaning of the rest of the Mantra is narrated in verse no. 8 above. In other words, the previous Mantra is further infused with the esoteric and mystical powers of these Beej Mantras to make it more powerful and energized.] (9).

10. Now I (Brahma who is narrating this Upanishad) shall describe to you (Narad) the Brahm Vidya or the knowledge that outlines how the word Hayagriva is one and the same as the word Brahm which refers to the Supreme Being.

The word Hayagriva is based on one letter, viz 'Ha'. It is the encrypted form of the Brahm-Vidya or the knowledge pertaining to Brahm. It was given (preached or passed on) by Brahma, the creator, to Shiva. Shiva gave it to Sankarshan; Sankarshan to sage Narad; Narad to sage Veda-Vyas; and Vyas narrated it for the rest of the creation. [This is because it was sage Veda-Vyas who had classified the Vedas and extracted their spiritual philosophy in the form of the Upanishads which teach about this Brahm Vidya.]

When the three Sanskrit letters 'Ha' (as in *hut*), 'Sa' (as in *son*), and 'Ma' (as in *mother*) are merged together, we get the Beej Mantra 'Hasaum'. [There is another alternative to this, and it is the Beej Mantra 'Halaum' consisting of 'Ha', 'La' (as in *luck*) and 'Ma'.]

By meditating upon the combined form of the two letters 'Ha' and 'Sa', which forms the monosyllabic Mantra 'Hans', one is able to have access to both Laxmi and Saraswati (i.e. one attains material prosperity and well-being as well as knowledge and expertise represented by these two Goddesses respectively).

[It should be noted here that the combined form of the two letters produce the word 'Hans' which literally means a Swan. But from the metaphysical perspective, Hans refers to the pure consciousness known as the Atma that resides in the inner-self of all living beings as their truthful 'self' and which is an image of the cosmic Consciousness known as Brahm. There is a chain of Upanishads that emphasis that the word 'Hans' is a divine form of Mantra that directly relates to Brahm, the Supreme Being.]¹

Those who become self-realised and enlightened by meditating and contemplating upon the twin letters 'Ha' and 'Sa' (i.e. the eclectic Mantra 'Hans') are indeed the ones who attain Videha Mukti—i.e. they obtain the final liberation and deliverance when they will not have to come back in this world to assume another body as a creature; they emancipation and salvation is final and complete.

They become so exalted that they have sway over the Dikpaals (the custodians of the world), the various Kings, the Naags (the custodians of the nether world) and the Kinnars (the custodians of the treasury of the Gods) (10).

[Note—¹Since the main thrust of the Upanishads is to ignite spiritual awakening and make the seeker see the 'Truth', they always strive to establish the fact that this 'Truth' is always the same and can be easily visualized and understood by the means of a number metaphors and instances, one of them being the 'Hans' or the divine Swan. The main objective is to establish that Vishnu, Hayagriva, Brahm, Parmatma and Atma, as well as OM, the ethereal sound representing Pranav, are the same universal divine entity known as the super transcendental Consciousness which is the Absolute Truth of creation.

Now let us examine how the concept of these three Sanskrit letters 'Ha', 'Sa' and 'Ma' fits into this picture. The word Hans has 'Ha' as its first letter, the divine Swan is called a Hans and it also has 'Ha' as the first component, and the name of Lord

Hayagriva, who is regarded as the first divine form of Brahm, the Supreme Being, to make sound, or 'speak', also has this 'Ha' as its first letter. Incidentally, the first cosmic causal body of Brahm is known as Hiranyagarbha which also has the letter 'Ha' as its first component. In the Mantra 'So-a-Ham', the second component 'Ham' refers to the living being, and the letter 'Ha' is its first part. The link is obvious—first came into being the cosmic form of Brahm as Hiranyagarbha, which transformed as Hayagriva. Since the living world came into being as a second step, the 'Ham' part stands for the living being.

Similarly, the second letter 'Sa' is also the second letter of word Hans, and is the first letter of the Mantra 'So-a-ham'. This is because Brahm, who is also given the name of Hans because of its purity and knowledge, has revealed itself as the Atma of the creature. The Upanishads have described this Atma as Hans along with Brahm. So, the second letter 'Sa' establishes a link between Brahm and the Atma of the living being.

Now we finally come to the third letter 'Ma'. This letter is the third letter of OM, the divine Mantra standing for Brahm, and symbolizes the conclusion of creation. It kind of establishes a bridge seamlessly linking the present and the future. OM represents the wide space of the sky where the Atma dissolves upon leaving the confines of the gross body of the creature. 'Ma' is also the last letter of the Mantra 'So-a-Ham' implying that once the wise and enlightened man becomes self-realised and recognizes that his 'self' is the Atma known as Hans, an epithet and an aphorism used for Brahm, he effortlessly leaves his grossness that is associated with the physical body to become sublime like these two divine entities, the Atma and Brahm. This achievement or knowledge leads to his Mukti—his liberation and deliverance from the fetters of ignorance and its attendant delusions.

For the concept of Hans (Swan), the reader should consult the following Upanishads—(a) Krishna Yajur Veda—Shwetashwatar Upanishad, Canto 2, verse no. 6; Canto 6, verse no. 15; Tejobindu Upanishad, Canto 1, verse no. 3-4; Dhyan Bindu Upanishad, verse nos. 24, 61-65; Brahm Vidya Upanishad, verse nos. 16, 20-28, 34, 60-64, 78-79; Yogshikha Upanishad, Canto 1, verse nos. 131-132, Canto 2, verse nos. 9-11, Canto 6, verse no. 20, 35-36, 53-54; Yogtattva Upanishad, verse no. 99. (b) Shukla Yajur Veda—Hansopanishad is exclusively dedicated to explain the concept of the pure conscious Atma by way of using the metaphor of a Hans. (c) Sam Veda—Yogchudamani Upanishad, verse no. 31-35, 82-83, 93. (d) Atharva Veda—Naradparivrajak Upanishad, Canto 5, verse no. 4; Pashupata Brahm Upanishad, Canto 1, verse nos. 4, 12-22, 26-27; Canto 2, verse nos. 1-3; Mahavakya Upanishad, verse no. 6.]

11. Those who do Japa (repetition) with this single-letter Mantra of Lord Hayagriva, i.e. the Mantra 'Hans', become so mystically empowered and authoritative that even the Sun does not violate its duties and rises at the appropriate time out of awe of him, out of respect for him.

[That is, they become as powerful as the Supreme Being himself. The Sun cannot violate the laws of Nature set by the Supreme Being, and since the worshipper of the Supreme Being also becomes as powerful as the Lord himself if he attains self-realisation, because this makes him one like the Lord himself, the Sun rises in promptly and efficiently in the allotted time so that he can offer worship to the Lord.

There is another connotation to this statement. Since the Sun is a personified splendorous form of Brahm, it keeps its words and rises in time to allow the worshipper to offer his oblations to the Lord at the correct time slotted for this purpose.

The third connotation is that he becomes as powerful and holy as the ‘fire element’ because the Sun is regarded as an eternal treasury of this element.]

This single-letter Beej Mantra of Lord Hayagriva is like a king amongst all the Mantras (11).

12. Similarly, the Beej Mantra ‘Lohaum’ also stands for Hayagriva.

The Mantras of Lord Hayagriva provide the worshipper with Amrit, i.e. he finds the elixir of bliss and eternity.

The worshipper urges Lord Hayagriva to bless him with this Amrit by saying ‘Kuru Kuru Swaha’. That is, ‘Oh Lord! Please do give me the elixir of eternity and bliss, and provide for my welfare and well-being. Please certainly do it (‘Kuru, Kuru’ is said twice to stress that the request is urgent and sincere). I am offering this oblation to you (by saying Swaha).’ [The word ‘Kuru’ repeated twice indicates stress on the request that the worshipper makes to the Lord. He pleads with the Lord not to neglect his prayers.]

For such a worshipper who does Japa with the Mantras of Lord Hayagriva, all sorts of welfare and prosperity represented by Laxmi (the Goddess of wealth), authority over the faculty of speech represented by Vaani (spoken word) and expertise in all knowledge represented by Saraswati (the Goddess of knowledge, speech and wisdom), and success in all the eight branches of Yoga become easily attainable. [The eight branches or limbs of Yoga are called ‘Ashtanga Yoga’. They have been explained in detail in the Upanishads dealing with Yoga. Briefly, these eight limbs or branches are Yam, Niyam, Aasan, Pranayam, Pratyahar, Dharna, Dhyana and Samadhi.]

‘Let the Beej Mantra ‘Lohaum’ (refer also to verse nos. 6 and 10) representing Lord Hayagriva entitle me to have authority and control over the whole world. Let it empower me; let it certainly do it (‘Kuru, Kuru’). I offer my oblations for this purpose (by saying ‘Swaha’).’ (12).

13. If one becomes enlightened about the divine and eclectic Mantras narrated in this Upanishad, he becomes purified, sinless and holy in spite of his being unpurified, corrupt, sinful and unholy previously.

Even he who has lost his vows of Brahmacharya (i.e. he who has lost self-control over his passions and lust by becoming indulgent and promiscuous) regains his lost exalted position by the good affects of these divine Mantras.

He is freed from the sins of having contact with a woman who is not worthy of being in contact with.

He is also cleaned of the corrupting influences of having entered into a conversation with a vile and corrupted man who has fallen from his righteous path.

Even such horrendous sins as killing of a Brahmin (or any kind of violence against other creatures) are pardoned by the positive affect of these Mantras (13).

[Note—This is a standard method adopted by the Upanishads to highlight their importance. It must be understood that merely reading some Mantra cannot wash off one’s sins. The hidden meaning is to stress the power of these Mantras. They are beneficial only when the sinner is sincerely interested in atoning for his sins; they are effective only when he sincerely wishes to repent and undo what wrong he had done in the past. It is then the Upanishads are of any help to him. Habitual offenders and sinners beware, for the eclectic and pristine philosophy of the holy Upanishads is not meant for them.

Refer also to other Upanishads of the Atharva Veda, for instance For instance—Mahavakya Upanishad, verse no. 12; Bhasma Jabal Upanishad, Canto 1, paragraph

no. 10; Canto 2, paragraph nos. 12, 21; Ganapti Upanishad, verse no. 17; Devi Upanishad, verse no. 32; Hayagriva Upanishad, verse no. 13; Dattatreya Upanishad, Section 3, stanza 4; Sharav Upanishad, verse no. 39; Ram Uttar Tapini Upanishad, Canto 2, verse no. 3; Canto 4, verse no. 14; and Canto 6, verse nos. 8-9, 13-18; Mahavakya Upanishad, verse no. 12.]

14. A wise, enlightened and realised person who does Japa with the Mantras of Lord Hayagriva and worships the Lord faithfully easily finds emancipation and salvation by merging his own Atma, i.e. his own 'self', with the Parmatma, i.e. the supreme Atma represented by the Supreme Being, when he leaves his mortal body upon death just like a man enters his own house without observing any formalities and without seeking anyone's permission.

[That is, such a person gets the right of way to his the liberation and deliverance of his soul upon death. He would not have to come back in this mortal world by taking birth again. This is possible because he would have merged his own Atma, which is his 'true self', with the cosmic Atma known as Brahm. This is due to the fact that Lord Hayagriva is no one else but Brahm personified.

In other words, such a worshipper finds 'Kaivalya Mukti'] (14).

15. These Mantras of Lord Hayagriva refer to the same entity that is implied in the great sayings, known as the Maha Vakya¹, of the Vedas. These Maha Vakya refer to Brahm that is supremely enlightened (Pragya) and blissful (Anand).

The first Maha Vakya is 'Tattwamasi'—i.e. that supreme essence or truth is you; the second Maha Vakya is 'Ayamatma'—i.e. that essence known as Brahm, the cosmic Consciousness, is my own Atma, my own 'self'; the third Maha Vakya is 'Brahm Aham'—i.e. Brahm is me; the fourth Maha Vakya is 'Aham Brahmasmi'—i.e. I am Brahm. (15).

[Note—¹Refer also to (i) Rig Veda—Atmabodha Upanishad. (ii) Sam Veda—Chandogya Upanishad, Canto 6, section 16, verse no. 3 (Tattwamasi). (iii) Shukla Yajur Veda—Paingalo-panishad, Canto 3, verse no. 2-3, 8; Mandal Brahmin Upanishad, Brahman 2, section 2, verse no. 5; Brahman 2, section 4, verse no. 4; Brahman 3, section 1, verse no. 6; Brahman 3, section 2, verse no. 2; Adhyatma Upanishad, verse nos. 2, 10 (So-a-Ham), 30-31 (Tattwamasi). (iv) Krishna Yajur Veda—Shuk Rahasayo-panishad, verse no. 22; Kaivalya Upanishad, verse no. 16; Sarwasaar Upanishad, verse no. 12-14; Varaaha Upanishad, Canto 4, verse nos. 32, 37; Avadhut Upanishad, verse no. 2. (v) Atharva Veda—Atma Upanishad; Naradparivrajak Upanishad, Canto 7, verse no. 8; Tripadvibhut Maha Narayan Upanishad, Canto 5, paragraph no. 15 ('So-a-Ham'); Canto 6, paragraph no. 22 ('Twam Brahmasmi'; 'Aham Brahmasmi'; 'Twamewaaham'; 'Ahamev Twam'); Canto 8, paragraph no. 5 ('Brahmaasmi' or I am Brahm; 'Ahamasmi' or Indeed it is I/me; 'Brahmahamasmi' or I am indeed Brahm; 'Yoahamasmi' or That is I/me; 'Brahmaamashmi' or Brahm is I/me; 'Ahamevaaham' or I am indeed I/me.); Ram Rahasya Upanishad, Canto 5, verse no. 13-14 (Tat Twam Asi—That Art Thou); Ram Uttar Tapaini Upanishad, Canto 3, verse no. 9-10 (So-a-Ham); Annapurna Upanishad, Canto 5, verse no. 8 (Brahmasmi—I am Brahm personified); Mahavakya Upanishad, verse nos. 6-8 ('Hans So-a-Ham'); verse no. 11 ('So-a-Hamarka'—that essence is me).]

16. [Before we narrate the next four verses, i.e. verse nos. 16-19, it is imperative to clarify certain points so that the reader can understand the finer nuances of these verses.

The best form of any Mantra has both the vowels as well as the consonants of the Sanskrit language built into it, but these are so subtle, hidden and silent that they are indiscernible to and understandable by the hearer of the Mantra. Nevertheless, the supreme Lord to whom the Mantra is offered understands the idea expressed in the Mantra. Hence, the best form of Japa (repetition) of the Mantra is that which is done continuously, without break between two letters or words, and in an indiscernible manner so much so that the person who does Japa himself loses track of what he says and becomes lost in the bliss created by the reverberations generated by the sound of the Mantra.

He communicates with the Lord in much the same way as Lord Hayagriva had 'neighed' in the heaven when he spoke to the Gods, and the way the Gods offered their prayers to him in return by singing the hymns in such a fashion that the words appeared slurred and telescoped into each other in a continuous stream of sound waves of varying pitch and tone. The words are not pronounced articulately and clearly, but in a series of nasal and throat sounds as in the case of the letters 'Ha' (as in *hut*), 'Na' (as in *nut*), 'Sa' (as in *sun*) etc. This is the classical method of saying hymns of the Vedas, the way they are done especially in the case of the Sam Veda.

It must be remembered that the primary function of letters and words or phrases is to express one's thoughts, and when extended to the Mantras to offer oblations to the Supreme Being. In its primitive form and in its most initial stage, all letters were merely in a 'sound form' that was undivided and unclassified into various letters of the vowels and consonants. In its subtlest form this sound was the un-manifest 'OM sound' of Pranav, which is the cosmic background sound in ether that is present everywhere but not easily heard by all and sundry. This ethereal sound of OM is a synonym for Brahm, the cosmic Consciousness that produced the vibration in the cosmic ether that resulted in the generation of sound waves which was later conceptualized by sages and seers as the monosyllable word 'OM'. When this same un-manifest Brahm revealed itself as Hayagriva, the horse-headed divinity, the sound that the latter made was that of a horse's 'neigh'. Hence, all that was meant and understood by the word OM was also meant by this Hayagriva's neighing. Neighing of a horse has no discernible words and phrases; it is simply a long-drawn series of sound waves that have the letters 'Hi' (as in *hill*) and 'Ni' (as in *nil*; *niece*; *neither*) as the dominant sound. In between is the sound of 'Sa' (as in *hiss*) when the horse breathes.

So, when Lord Hayagriva 'neighed' in the heavens, the ideas that he expressed were understood by the Gods who represented the primary form of the forces of creation and Nature. Likewise, the Gods prayed to Lord Hayagriva also in the same way—i.e. they sang hymns in the Lord's honour which were not in clear-cut articulate language consisting of words or letters as we understand the term 'spoken language' to mean in the modern world, but in an esoteric language consisting of merely long-drawn sounds of the vowels and consonants.

Sound is generated in the throat while the articulate language is produced in the mouth. The most primitive form of sound in the cosmos is Naad represented by the word OM, and it reverberates back and forth throughout the cosmic ether. The primary form of the cosmic Consciousness had produced this Naad, and when the creation began to take shape and the need was felt for expression, this Naad crystallized in the form of various sounds of the audible and the inaudible spectrum. When Brahm first spoke, it was a higher pitch of this Naad and it resembled the shrill sound resembling the neighing of a horse. It filled the entire creation from end to end. Since the sky is a hollow place where this sound was generated, it is compared to the

neck of the Supreme Being, hence the name 'Hayagriva'. 'Haya' means a horse, and 'griva' means a neck. Ancient sages and seers hit upon the idea of the 'horse' when they experienced this noise and its shrill tones when a horse neighed. So they created this idea of the cosmic form of Brahm as Hayagriva who first produced sound to make this world realise that the Lord is there and to help the creatures to express themselves and make their presence felt too. This is how the concept of Hayagriva evolved amongst many other reasons, and this is why all primitive forms of language consist of mere sounds made in the throat. This is best exemplified by the animals which are primitive forms of creatures in the evolutionary ladder as compared to humans, as well as in the language of the ancients and the tribal people who are cut off from modern civilization.

The fact that the first known form of Brahm is that of a 'horse' is endorsed in the Shukla Yajur Veda's Brihad Aranyak Upanishad, Canto 1, Brahman 1. From the first sound produced by the cosmic 'horse' in the form of 'neighing' evolved all the other tones and notes of sound which eventually evolved into full-fledged languages. The alphabets are nothing but geometrical shapes given to these sound by ancient sages and seers when they felt the need to write down their knowledge for future generations.

The process of expressing one's self was initiated by Lord Hayagriva by his cosmic neighing. This is how primitive language came to be expressed in the very beginning. It was in this way that the primary form of knowledge was revealed at the beginning of creation. Language and its fine nuances were later-day creation when the initial form of this language resembling a horse's neighing was too difficult for all the creatures to decipher and understand. It would be observed that animals do not speak in any man-created language; their language is the language of Mother Nature. A horse neighs, a dog moans and the serpent hisses; all express themselves clearly which another of their species would clearly understand, though what they wish to say is incomprehensible to us humans.

When the Gods prayed to Lord Hayagriva, and for that matter to the Supreme Being in his most primary cosmic form as Brahm, they did not employ any language. They simply 'neighed'. Perhaps this is how the Sam Veda came into being, as it is sung in the classical style of musical form with its unique long-stretched sounds with varying pitches and tones that are generated in the throat, instead of being chanted rhythmically in crisp and articulate words of the Sanskrit language which can only be pronounced by the tongue and the mouth as is the case of the hymns of the other three Vedas (Rig, Shukla and Atharva). The idea here is that the Lord understands what the creature wishes to tell him even if he has no words to express himself just like a mother would easily understand what her infant wishes to say though the child does not know how to express himself in words.

Therefore, two versions of offering prayers to the Supreme Being have been given in the following verses. One form, which was employed by the Gods and is deemed to be the best form, is narrated in verse nos. 16-17 when no words are employed but merely a musical sound is generated, and the other form is the one described in verse nos. 18-19 when articulate words are used for the same hymns. The latter form is adopted by those worshippers who are not experts in classical form of music. Both the forms are acceptable to the Lord.

The following verses would now make sense to the reader.]

The Mantra has both the vowel sounds and the consonant sounds built into it. [This is because the Mantra is made of letters as Beej Mantras, or as words and phrases.]

The Gods pronounce the letter 'Ra'¹ (as in *rung*) if it comes at the end of any hymn in much the same way as they would pronounce the letter 'Ni' (as in *niece*, *neither*, *nil*), or its various associated forms, such as 'Ne' (as in *nettle*, *nephew*) etc. [In other words, they added the long vowel sound of 'I' or 'Ee' to it. Hence, the bland sound of the consonant 'Ra' would become 'Ri' or 'Ree' (as in *rim*, *reel* or *ream*) when it is appended by the vowel sounds of Ee or I.]

This creates a resonating effect which so drowns them (the Gods) in its sound waves that they experience an extreme sense of exhilaration and ecstasy. [The resonance of this sound massages their nerves and they feel the sense of extreme bliss.] In other words, they taste the elixir of eternal bliss known as Amrit when they sing the hymns in this manner (16).

[Note—¹It should be noted here that the Sanskrit alphabet 'Ra' is also the Beej (seed) for the fire element as well as for Lord Ram who is one of the incarnations of Vishnu. The Fire God is amongst the first personified form of the Supreme Being, and one of the first Gods to be honoured in the Rig Veda, as the Fire God embodied and exemplified all the glories, splendour, radiance, energy, purity, powers, authority and vitality so characteristic of the cosmic Lord who needed all these virtues to initiate this creation, and maintain it once it came into being. The celestial Sun is regarded in the Upanishads as a living embodiment of Brahm, and the Sun is an evident cosmic cauldron of fire.

So the correlation is clear. Like the Fire, the first manifestation of Brahm was the sound resembling that of horse's neighing. The fact that it was the Sun God who had assumed the form of a divine Horse (Hayagriva) to teach the Shukla Yajur Veda to sage Yagyawalkya also go to reinforce this view.]

17. The Gods are immersed in an ocean of ecstasy and bliss when they sing the hymns in a Raaga known as 'Gauri' (which is a tune of classical music). These hymns can be of one stanza, two stanzas, four stanzas, eight stanzas, nine stanzas, or multiple stanzas of thousands of letters and words.

Such hymns exist and reverberate in the vast space of the sky (known as 'Vyom'). [In other words, the ether is pregnant with the hymns sung in honour of the Lord by the Gods. It is these hymns that were crystallized in the form of the Vedas, but their primary form in the heaven is merely a sound. Obviously, the ethereal sound of OM is being referred to here as many Upanishads clearly expound that all forms of sounds have their genesis in OM. The cosmic sound that produces OM is known as the 'Naad', the 'sound of cosmic music'. Just as classical music need not have words to be played on musical instruments, the prayers also need not have articulate language to be offered to the Lord and understood by him.] (17).

18. The Mantras should be pronounced clearly by employing the lips, the nose, the teeth, etc. [This is because some class of letters are pronounced by the involvement of the lips, such as Sanskrit letters 'Pa' (as in *pump*), 'Pha' (as in *fruit*), 'Ba' (as in *bulb*) etc.; others require the involvement of the nose, such as the letters 'Na' (as in *nut*), or the teeth, as in the case of the letter 'Da' (as in *then*), or the tongue as in the case of the other letters such as 'Ta' (as in *two*, *teeth*) and 'Cha' (as in *choke*) etc.]

The Mantras should be said continuously, in an unbroken stream of words and letters so that they appear to be like a wheel in motion. The worshipper should offer his prayers to Ishan (the Lord, the Supreme Being) in this way.

[It ought to be noted here that while verse nos. 16-17 emphasis that the Gods offer their prayers to the Supreme Being in a series of sounds, viz. like the neighing of a horse, the man is supposed to offer the same prayer of the Vedas in articulate

language. This is the case if he is not an expert in classical forms of music so that he can sing the hymns in the typical way the Gods had sung them. So such a worshipper articulately pronounces the words of the hymns. But the continuous pronouncing gives the Mantra a subtle hue of music because of the rhythm and tone involved in the incantation.

‘Ishan’ means an emblem (‘Nishan’) of the Lord (‘Isha’). The implication is simple—when a worshipper offers prayers or obeisance to Lord Hayagriva or even his own Atma, he is actually honouring the Supreme Being known as ‘Brahm’. All other forms and deities to whom worship is offered are actually emblems of Brahm; they stand for Brahm.] (18).

19. The creator and controller of this creation has established this great system of Mantras. He has enabled even the serpent to understand the language of music as is evident from the fact that by playing the Indian lute the serpent can be controlled as it is completely overwhelmed and enthralled by its music.

[The music emanating from the lute has no words, but it is sufficient to enchant the serpent. The serpent understands the music and gets so ecstatic that if the lute is played expertly it would raise its hood and sway from side to side in joy. The same music will mean nothing to the man or any other animal. It is believed that it is very easy to control even the most ferocious snake with the help of certain Mantras when they accompany the playing of the lute.

The snake actually does not understand what song is being played on the lute, but the frequencies generated by sound of this instrument are sufficient to massage its nerves to such an extent that the sense of ecstasy and exhilaration is aroused in the reptile.

The idea being conveyed here is that though one may not know the meaning of the Mantras fully, though he may not be an expert in the science of Mantras, or know the intricacies of metaphysics and spiritualism, but still if he repeats some given set of Mantras they are bound to produce their positive effects upon him even though he may be unaware of them, or he may be enjoying these benefits unwittingly.

There is one other significance of citing the case of the Indian lute vis-à-vis the serpent. The serpent is made ecstatic only by the sound or the music of this instrument, and it pays no heed to any other musical instrument. Therefore, if one were to attain Brahm and understand the potentials of his Atma, he must use the correct Mantra and follow the correct path as envisaged by the Upanishads. Wrong Mantra repeated wrongly will produce no effects like the serpent is not aroused by any other musical instrument except the Indian lute.]

This ‘wheel’ represented by the continuous chanting or singing of the Mantras is represented by the symbolic halo around the Sun that consists of its brilliant rays, and around the Gods that represent their divinity and holiness. [In other words, if the Mantras are incanted properly in the prescribed manner, the person also develops a halo of holiness around himself.] (19).

20. If this Brahm Vidya (Upanishad that expounds the knowledge of Brahm) is read with proper understanding on the Ekaadasi day (the eleventh day in the fortnight of a lunar day), the worshipper becomes an exalted being. This is the great spiritual blessing one gets by honouring Lord Hayagriva (because this Upanishad is dedicated to this Lord).

The worshipper obtains 'Jivan Mukti'—i.e. he finds liberation and deliverance from the cycle of birth and death even while he continues to live in this world with a gross body and continues to go about the routine affairs of his life.

One must therefore do Japa with the divine Mantra of the supreme Brahm, which is 'OM Namō Brahmanē Dhaarnam Me' (i.e. 'OM Salutations! I am accepting Brahm in my inner-self').

By accepting the Supreme Being, who has no forms and attributes, as being his own 'truthful self', one indeed becomes emancipated and delivered.

This is the edict of this Upanishad; this is its truthful teaching. Amen! (20).

----Shanti Paath----

-----*****-----*****-----

Chapter 30

Dattatreya Upanishad/ Dattatreyaopanishad

This Upanishad is dedicated to Lord Dattatreya who is believed to represent Lord Vishnu, the sustainer and protector of creation. The story regarding this form of Vishnu has been narrated in a note to stanza no. 4 of Section 1 of this Upanishad.

It has a total of three Sections or Khandas. The Mantras (hymns) of this Upanishad are in the form of a running prose, with only one in the style of a verse. For the purpose of narration, however, we shall divide the prose into convenient paragraphs or stanzas.

It is one of the revealed Upanishad as it was preached by Lord Narayan, the Supreme Being, when he was asked by Brahma, the creator, about the transcendental knowledge that is not only supremely enlightening but also a provider of liberation from the endless cycle of birth and death in this mortal world. The Lord advised him to meditate and contemplate upon the element of 'Sattva', the quality of eternal truthfulness and purity from which effuse equally eternal virtues of holiness, purity and divinity. Those who do so realise that the Lord to whom this Sattva refers to is a personified form of 'Datta', i.e. the One who gives the boon of the knowledge of the transcendental and the divine, the One who provides Mukti or spiritual liberation and deliverance. This knowledge pertains to Brahm, the Supreme Being that is the cosmic Consciousness and the Absolute Truth of creation.

On successful meditation as advised by Lord Narayan, Brahma was able to become realised as he experienced this Sattva principle, the principle of the eternal Truth. He then preached it to others.

After this preliminary introduction, a series of Mantras dedicated to Lord Dattatreya are given. These Mantras are of different categories, such as one-lettered, six-lettered ones etc. All this is narrated in the first Section.

The second Section gives the Mala-Mantra, the long Mantra used to turn the rosary by those who worship Lord Dattatreya.

The third and the final Section outlines the reward that the worshipper gets by practicing the teachings of this Upanishad, and offering his oblations to Lord

Dattatreya and meditating upon him. Such a person becomes Jivan Mukta, i.e. he obtains spiritual liberation and deliverance even while he is alive and active in this mortal world.

-----*****-----

----Shanti Paath----

Please see appendix no. 1 for the English of this Shanti Paath.

Section 1

1. OM Salutations! Salutations to Lord Hari¹!

Once, Brahma (the creator), approached Lord Narayan (Lord Vishnu, the Viraat Purush—who is universally regarded as the personified form of Brahm, the Supreme Being, and even the parent of Brahma the creator) in his divine abode in the Satya-Loka (the supreme abode situated in the heaven where only truthfulness exists)

The Lord is an Emperor of the great Universe that he has created, with the Satya-Loka as being the citadel where he lives.

Brahma asked the Lord—‘Oh Lord! Please tell me what is that which is known as ‘Tarak²’, i.e. one that gives liberation and deliverance to the soul from the endless cycle of birth and death and their accompanying horrors?’ [1].

[Note—¹The name *Hari* is one of the many names of Lord Vishnu, and the Lord is so-called because he virtually steals—or takes away, removes, eliminates—all the pains, agonies and misfortunes of his devotees; he makes them immune to the horrific consequences of the sins committed by them.

Usually in the scriptures, the names Vishnu, Hari, Narayan and Viraat Purush are synonymously used for the Supreme Being.

²*Tarak*— Tarak Mantra and Tarak Brahm—The *Tarak Mantra* is that which provides final deliverance to the soul of the spiritual seeker or aspirant. It is said in the Upanishads that the Mantras pertaining to Lord Ram are called the Tarak Mantra, and therefore Lord Ram is the *Tarak Brahm* (refer especially Ram Uttar Tapini Upanishad, Canto 1, verse no. 1, and Canto 5, verse no. 4/4).

Tarak Brahm is that divine aspect of the super consciousness known as Brahm which provides the spiritual aspirant with Mukti and Moksha—i.e. final liberation, deliverance, emancipation and salvation. The formula used to achieve this eclectic goal is known as the *Tarak Mantra*.

The Tarak Mantra is therefore a group of esoteric, ethereal and holy syllables, words or phrases having mystical powers and divine potentials that can achieve miraculous results for the adherent as they have the authority to bestow special spiritual abilities on the creature and help in his liberation and deliverance, his emancipation and salvation. The word ‘Tarak’ means an entity that takes one across some formidable obstacle that seems otherwise insurmountable and unconquerable. It is a medium by which all hurdles and impediments in one’s path that prevent one from attaining his spiritual goal are overcome easily. It is therefore an instrument that provides spiritual liberation and deliverance to the seeker, one that gives emancipation and salvation to the creature’s soul, a vehicle that can take a creature across the ocean of endless miseries and pains from which he is suffering in this world and from which he sincerely wishes to find freedom.

The word *Tarak* means to cause or enable to pass or cross over, to carry over, one that rescues, provides relief and succour, one that can provide liberation and deliverance to the creature from any bondage. Further, the word Tarak also refers to the ‘eye of wisdom that liberates one from the darkness of ignorance and delusions’,

and it has relevance here because meditation leads to the opening of the inner 'eye' of insight that leads to self realisation and enlightenment. 'Tarak' also means a meter of 4 x 13 syllables; hence it refers also to the various Mantras used for the purpose of meditation.

There are various Upanishads dealing with this aspect of meditation and spiritual deliverance—such as Advai Tarak Upanishad and Tarak/Tarsar Upanishad of the Shukla Yajur Veda tradition. These Upanishads describe *Tarak Brahm* in all its finer connotations.

Other Mantras can give him everything else in this creation, such as attainment of all types of Siddhis and other super-natural powers and abilities, or acquisition of other rewards such as Dharma, Artha and Kaam as mentioned in verse no. 3 of Canto 5 of the Ram Purva Tapini Upanishad, or other such great achievements that are rare, but they do not provide him with 'Moksha' so easily as does the Tarak Mantra.

There are various Upanishads dealing with this aspect of meditation and spiritual deliverance which is known as Tarak. For instance especial mention can be made of the Shukla Yajur Veda's *Advai Tarak Upanishad*, especially its verse nos. 7 and 9, and *Tarak Upanishad*. As the name itself suggests, these two Upanishads are dedicated to this theme of Tarak, and they describe *Tarak Brahm* in all its finer connotations.

References: Some of the important Upanishads, besides the present Dattatreya Upanishad, that are dedicated to this *Tarak* are the following—Tarak/Tarsar Upanishad; Ram Purva Tapini Upanishad, Canto 4, verse nos. 1-12; Ram Uttar Tapini Upanishad, Canto 1-2 (full); Canto 4, verse no. 14; Canto 5, verse nos. 4/1-47; Canto 6, verse nos. 1-3; Ram Rahasya Upanishad, Cantos 2-3 and 5 (full); the Atharva-shikha, 2/1; Atharvashir, Kandika (Canto) 4; Advaitarak, verse nos. 3, 7-11; Nrsingh Purvatapini Upanishad, Canto 1, verse nos. 15-16; Naradparivrajak Upanishad of Atharva Veda, Canto 8 which is fully devoted to this theme; Bhasma Jabal Upanishad, Canto 2, paragraph nos. 4 and 18 (Shiva's Tarak Mantra).]

2. Lord Narayan¹ replied—'Meditate upon my divine form which is Sat (truthful), Anand (blissful) and Chid (enlightened and consciousness) personified. This divine and eclectic form of mine is the Sattva essence (the Truth principle) where I live eternally. [That is, I live in truthfulness.] {This would enlighten you about your query.}

I am known as 'Datta'—one who gives. [Here it means that Lord Narayan is the Tarak, i.e. he is the One who provides—gives, bestows, grants—the worshipper with the fruit of spiritual liberation and deliverance; the one divine entity that helps the creature to find freedom from all his fetters pertaining to this entrapping world and the gross body in which his soul lives.]

Those who realise this fact, as well as those who preach this fact to others are no longer regarded as ordinary mortal creatures of the mundane and entrapping world of delusions, but are deemed to be liberated themselves as well as be a provider of liberation and deliverance to others.'

[That is, those devotees who meditate upon me and realise my truthful form also become my own image in as much as they are transformed from being a creature who is trapped in this delusory world to an enlightened being who has obtained liberation and deliverance himself, along with being empowered to liberate others. They are 'Tarak' themselves. Since I am known as 'Datta', as I am the provider—a giver, a bestower, the one who grants the boon of Mukti or spiritual liberation and deliverance to the devotee—the worshipper who attains me (Brahm; the spiritual Absolute Truth), becoming self-realised and Brahm-realised as a result, also becomes

a 'Datta' himself as he is empowered to show the path of Mukti (liberation and deliverance) and the path of Sattva (truth) to others.]

Hearing this advise, Brahma meditated upon Lord Narayan and realised the Lord's truthful form. This form of Narayan was the all-pervading and all-encompassing form that covered the entire universe in its ambit. This was the form of the Viraat Purush known as Narayan or Vishnu. It was this form which is known as the 'Datta'—the form which provides liberation, deliverance, emancipation and salvation to the creature not only from the cycle of birth and death with their accompanying horrors but also from the dark pit of ignorance and delusions in which all living beings are trapped. [2].

[Note—¹Narayan—According to the *Tarsar Upanishad* of Shukla Yajur Veda tradition, Canto 1, verse nos. 2, the Tarak Mantra is the following *OM Namoha Narayanaya*. To quote this verse in full—" Next, sage Bharadwaj asked sage Yagyavalkya, 'What is that Tarak Mantra?' Yagyavalkya replied, 'The Tarak Mantra is the following—'OM NAMOHA NARAYANAYA'. [This Manta briefly means 'OM salutations! I bow and pay my obeisance to the supreme Lord Narayan.] It refers to the supreme, eternal, omniscient, enlightened and transcendental consciousness known as the Atma (or Brahm). It is that divine entity that should be worshipped, adored, revered and honoured. [In other words, when one worships Narayan, he is deemed to be worshipping the supreme Brahm who has revealed himself as the pure conscious Atma of the individual creature at the micro level of creation, and as the Viraat Purush called Narayan (or Vishnu) at the macro level.]

[Now the sage explains the meaning of the three words of the Mantra--] The first word 'OM' represents the imperishable, immutable and eternal Atma. The second word 'NAMOHA' represents 'Prakriti' or Mother Nature. The third word 'NARAYANAYA' stands for the macrocosmic manifestation of the un-manifested transcendental Brahm. Anyone who understands this sublime and mystical fact is able to attain or acquire the essence of 'Amrit', which is the ambrosia of eternity, bliss and blessedness. This eclectic knowledge is the supreme form of knowledge.

[The entire Mantra has eight letters. Now the sage explains their significance in another way--] 'OM' represents the supreme Brahm. The 2nd letter 'Na' stands for Vishnu, the sustainer of creation. The 3rd letter 'Ma' represents Rudra or Lord Shiva, the concluder of creation. [These two letters combine to form the second word 'Namo']. The 4th letter 'Na' symbolises 'Ishwar', the macrocosmic causal body of creation. The 5th letter 'Ra' stands for 'Viraat', the macrocosmic gross body of creation. The 6th letter 'Ya' represents 'Purush', the macrocosmic Male aspect of creation. The 7th letter 'Ana' stands for 'Bhagwan', the great Lord. And the last letter, the 8th, is 'Ya' and it symbolises 'Parmatma', the supreme, transcendental Atma or Soul. [The 4th till the 8th letters form the third word 'NA-RA-YA-NA-YA' of the holy, sublime, ethereal and mystical 'Tarak Mantra'.] In this way, those who become enlightened about the sublime, subtle and esoteric meaning of this Tarak Mantra become great persons (honourable souls) who transcend the humdrum and become exalted, erudite, wise and superior to their fellow men. [2]"

The Mantra that has the astounding spiritual potential and mystical powers that can provide the soul of the frustrated, agitated and hapless creature trapped in the labyrinth of miseries and torments with final liberation and deliverance is called the Tarak Mantra. It helps him find freedom from all the fetters and delusions associated with this world and creation, and obtain final peace and rest for his soul.]

3. When Brahma thus meditated and realised the divine form of Narayan, i.e. when he became Brahm-realised and enlightened about the Truth, he exclaimed—"Da Hans". That is, the Lord who gives ('Da' standing for one who gives) is none but 'Hans'¹ (literally a divine Swan but implying the supreme transcendental Brahm who is the

Supreme Being for whom this epithet is used). [This phrase 'Da Hans' may also mean 'the Supreme Being who gives life and consciousness to the world lives in the form of the Jiva, the creature, as his true self known as the Atma or the soul'.]

The Beej Mantra of this 'Hans' qualified as 'Da' is 'Daam' (i.e. the consonant 'Da', as pronounced in *mother*, with the long vowel sound of 'Aa' as pronounced in *master*, resulting in the letter 'Daa', and its Mantra form is 'Daa(m) or Daam' where 'm' is silent). Hence, 'Daa(m)' is the one-lettered Mantra of the Supreme Being known as Narayan and Hans.

[That is, the Beej Mantra or the seed monosyllabic divine letter related to the Supreme Being, who 'gives' and resides in the individual creature as his 'Atma', is 'Daa'.]

This Beej Mantra 'Daa(m)' is the Tarak Mantra² of the Supreme Being known as Hans.

One should meditate upon it. It gives freedom from having to reside in a mother's womb and undergoing its accompanying horrors again. [That is, it frees the worshipper from having to take a birth again.] [3].

[Note—¹*Hans*—The divine Swan—References for the term 'Hans':

(a) Krishna Yajur Veda—Shwetashwatar Upanishad, Canto 2, verse no. 6; Canto 6, verse no. 15; Tejobindu Upanishad, Canto 1, verse no. 3-4; Dhyani Bindu Upanishad, verse nos. 24, 61-65; Brahm Vidya Upanishad, verse nos. 16, 20-28, 34, 60-64, 78-79; Yogshikha Upanishad, Canto 1, verse nos. 131-132, Canto 2, verse nos. 9-11, Canto 6, verse no. 20, 35-36, 53-54; Yogtattva Upanishad, verse no. 99.

(b) Shukla Yajur Veda—Hansopanishad is exclusively dedicated to explain the concept of the pure conscious Atma by way of using the metaphor of a Hans.

(c) Sam Veda—Yogchudamani Upanishad, verse no. 31-35, 82-83, 93.

(d) Atharva Veda—Naradparivrajak Upanishad, Canto 6, verse no. 4; Pashupati Brahm Upanishad, Kanda/Canto 1, verse nos. 12-15, 19-21, 23-26, and in Kanda/Canto 2, verse nos. 1-2; Mahavakya Upanishad, verse no. 6; Hayagriva Upanishad, verse nos. 10-11; Param Hans Parivrajak Upanishad, verse no. 1; Mahavakya Upanishad, verse no. 6.

An enlightened and self-realised person thinks of himself as a Swan and feels exhilarated that he is not an ordinary man bogged down by worldly fetters, but an exalted soul that is like a Swan.

The bird *Swan* or Hans is considered the most pure, clean, wise, erudite and clever among the birds. It is said to eat pearls, which means it picks up and accepts only the best amid the variety of things available to it in the form of an assortment of various gems and jewels representing the dazzling charms of this world. It is also reputed to drink milk leaving aside the water content in it symbolising its ability to imbibe the essence and the best, and leave the rest aside. It is also the vehicle of Goddess Saraswati, the patron Goddess of knowledge, wisdom, intelligence, speech and learning, indicating that it bears these glorious virtues. Hence, the reference to a swan while describing a creature conscious of the vital wind or Pran passing through him means the basic, inherent and intrinsic tendency of that wisened and intelligent creature is to be the best, most pure and divine, wise, awakened and enlightened, adroit, clever and sagacious like the swan, and pick all the goodness and forsake all that is bad in this world. Saraswati rides on a swan, symbolising the creature's inborn enlightenment and excellence of his mental caliber. Symbolically, Saraswati resides in his Pran because it rides on the swan, i.e. in his heart, throat and mind—that is, his heart has purity of emotions, he speaks well of all, and his wise words are sought after by all as priceless gems of wisdom, and his mind is intelligent, discerning and noble.

A wise man is expected to pick up the truth and leave aside the non-truths from the basket full of worldly charms of astounding proportions and myriad forms of temptations present in this creation.

Those wise men who have developed the level of wisdom, erudition and sagacity that they can discriminate between what is good and what is not, what is true and what is false, what is liberating and what is ensnaring for their soul are also honoured by the epithet of being a 'Hans' (Swan) because they are just like the Swan which has the legendary ability to pick up pearls from an assortment of gems, and drink milk leaving behind water and other adulterants in it. Even amongst such wise and enlightened men, those who have realised the 'truth' about their own self in the real sense, i.e. have become 'self-realised' and hence 'Brahm-realised' truthfully, and have consequentially attained the highest level of enlightenment and wisdom are called 'Param Hans'—literally meaning those who have accessed the 'supreme type of enlightenment'. The grand and auspicious virtues and characteristics of such an exalted Sanyasi who is self and Brahm realised has been described in detail in the *Param Hans Parivrajak Upanishad* of the Atharva Veda tradition.

This Atma is wise and enlightened. It is likened to the bird Swan because this bird is regarded as a metaphor for these grand virtues. Again, just like the Swan that floats majestically and with dignity on the surface of the water of a lake, remaining unaffected by the impurities present in the water, the Atma too lives in a body with the same attitude and dignity. A wise man understands that he bears the cosmic Consciousness in his inner-self as the Atma which is as immaculate and dignified as the Swan floating on the surface of a lake.

There is another reason why the metaphor of the Swan is used for a wise man who is lost in deep meditation on the 'self' and the 'truth'. The neck of the Swan is curved inwards like the alphabet U with its beak lying almost parallel to its abdomen as it floats calmly on the surface of the water. For a casual observer this posture reminds him of a person who is lost in some deep thoughts. Hence, when ancient sages and seers were searching for an instance to illustrate the state of existence of a man lost in deep meditation and contemplation they hit upon the metaphor of the Swan as being the most appropriate one.

The alphabet 'Ha' of the word 'Hans' is sounded by the vibration of the exhaled wind passing through the vocal cords present in the throat or the wind pipe which connects to the nose, while the alphabet 'Sa' is sounded by the root of the tongue which opens into the mouth when the breath is inhaled. Both the nose and the mouth open in the same cavity called the throat. Hence, the inter relationship between 'Ha' and 'Sa' is evident. The main objective of this Upanishad is to make the Yogi (a person who follows its tenets of meditation) aware that he is like the divine swan, but he was unaware of his own divinity and sublimity, his exalted and noble stature, till that was pointed out to him. So he must become one like a 'swan', remind himself constantly that he is like a swan, and he must not do anything or act in anyway which is not befitting his exalted and superior status which is equivalent to a wise swan.

During the twenty-four hour period covering a single day and night, a person inhales and exhales, or breathes, roughly twenty-one thousand times, because each cycle of inhalation and exhalation is equivalent to saying one Mantra 'Hans' consisting of the two syllables 'Ha and Sa' (refer Dhyandindu Upanishad, verse no. 63).

Hans, the divine Swan, is also one of the twenty-four incarnations of Lord Vishnu. Vishnu had once appeared as a divine Swan to preach the four celestial sages Sankaadi who were the mental sons of the creator Brahma.

Once it so happened that Sankaadi approached Brahma and wanted to know how can someone, who wished to have Moksha (final liberation and deliverance from this material world; freedom from attachment to the sense objects of this world; emancipation and salvation), effectively control his mind and sub-conscious and

divert them away from the material charms of the world and its sense objects, and towards the inner self where the Atma, the pure consciousness, resides?

Brahma was confused and did not have the answer. So they meditated upon Lord Vishnu, the Supreme Being, from whom Brahma was born. Thus Vishnu appeared as a divine Swan. The sages could not recognise the Lord in that form and asked who he was. Then Vishnu, in his form as a Swan, preached the great tenets of metaphysics and Vedanta to Sankaadi. Thus, this revelation of Vishnu as a Swan was an embodiment of the greatest and the most refined form of spiritual knowledge, erudition, wisdom and enlightenment. Henceforth, Swan came to be known as a synonym for these eclectic and divine virtues. This story appears in Srimad Bhagwat, 11/13.

The Swan is depicted as a vehicle of Saraswati, the Goddess of knowledge and wisdom. In other words, those who worship Swan ride on the crest of knowledge, wisdom, erudition, sagacity and enlightenment.

The concept of the 'Hans' has been elaborately dealt with in the *Pashupat Brahm Upanishad* of the Atharva Veda tradition, in its Kanda/Canto 1, verse nos. 12-15, 19-21, 23-26, and in Kanda/Canto 2, verse nos. 1-2. This Upanishad clearly stresses that '*Hans*' is a term employed to refer to the Atma as well as Brahm. While the Atma is the pure consciousness that is the 'true self' of the individual creature, Brahm is the cosmic Consciousness represented by the Mantra 'OM' or 'Pranav'. The Hans Mantra is the 'Sutra' or thread that links the Atma to Brahm.

It is from this Hans (or Brahm) that the entire creation, including its ninety-six Tattwas, the Trinity Gods etc., have come into being—refer: Purva Kand/Canto 1, verse no. 14-15 of *Pashupat Brahm Upanishad*. By due diligence and constant practice, an ascetic or the spiritual seeker can establish a seamless uniformity between the Atma and the Hans (Brahm)—refer: Uttar Kand/Canto 2, verse no. 2 of *Pashupat Brahm Upanishad*.

The Atharva Veda's *Mahavakya Upanishad*, verse no. 6 says that Brahm and the Atma are the same, and that since the term *Hans* (a divine Swan) is used for *Brahm* it means that it also implies the *Atma* of the individual creature. It also says that the word '*Hans*' refers to the breath that comes in and goes out of the body of all those who breathe.

The *Dhyan Bindu Upanishad*, verse no. 24 and 61-65, of the Krishna Yajur Veda tradition which primarily deals with meditation and contemplation on Brahm in order to obtain emancipation and salvation of the soul of the creature says that the supreme transcendental Brahm, known also as Pranav, resides in the heart of all the living beings in the form of a Hansa.

²The *Tarak* is that aspect of the Brahm, the Supreme Being, that bestows Mukti (spiritual liberation and deliverance; emancipation and salvation) to the seeker. Therefore, Brahm is called 'Datta'—'one who gives' Mukti. And the Mantra for this aspect of Brahm is 'Hans'.

The significance of the letter 'Da' or 'Daa' lies in the virtue of liberally giving away the things which are very dear to one. This means that a person renounces all his attachments and attractions with those things he gives away to others. It also implies abandoning all desires and yearnings for all things of this material world, abandoning or shedding all desires to gratify the natural urges or please the natural inclinations of the sense organs of the body, to snap all ties with the gross and entrapping world as well as the equally gross and entrapping body. Only a person who has snapped all ties with the world, a person who does not have any obligations and responsibilities to fulfill, a person who is stoic and not a serf of his desires and passions can feel himself free and untied. He is not under any bondage or compulsions to do this or that, or to please this world and keep it in good humour so that the world can provide him with the comfort and pleasures he expects in return for serving the world.

A man is tied in knots only till the time he has anything to expect from the world, and once this expectation is given away or abandoned, he becomes untied or 'free'.

The realisation of the ultimate spiritual Truth about one's Atma and the Parmatma, the supreme Atma, the understanding of what is the 'truth' and what is the 'falsehood', what is 'freedom' and what is 'entanglement' or 'entrapment', alongside total renunciation and detachment from this mundane and gross world of material sense objects which are perishable and non-eternal is a state of existence that takes a man across the vast ocean of known as the 'world', and gives or provides him freedom from all sorts of shackles. That is, spiritual realisation itself is the 'Tarak' in as far as the spiritual aspirant's needs for finding Mukti (liberation and deliverance) or Moksha (emancipation and salvation) is concerned. One of the primary reasons is that this realisation frees him from the formidable fetter of ignorance and its accompanying darkness of delusions.

Thus, a creature who has given up all attachments with this world and the body, and who has broken up all links with them, is the one who can be said to have crossed this vast ocean-like world in which the body acts as the millstone around the neck of his Atma which is his true self. This achievement is like the 'Tarak' for his Atma because it helps him to break free from their bondage.

So we see we have two connotations of the word 'Tarak'. One pertains to the Supreme Being—who in the case of this Upanishad is Lord Narayan—who bestows Mukti or Moksha to sincere spiritual seekers, and the other is the way of self-realisation which the seeker selects himself to break free from the strong shackle of ignorance and delusions, shackle that keeps him tied in knots to this world and the body. The various Mantras that are prescribed in the various Upanishads are merely tools in the process of realizing the 'Truth-principal'.

In both the cases it is the scriptures that come to his aid by showing him how to benefit from the Lord's benevolence and largesse, and how to go about attaining the exalted stature of self-realisation, how to do it in practical world.]

4. This Mantra has Gayatri as its Chanda (style of composition). Its Rishi (the sage or seer who had first formulated and tested the effectiveness of a given Mantra) is Lord Sada Shiva (the eternal Lord Shiva) himself. Its Devta (the deity to whom the Mantra is dedicated) is Lord Dattatreya¹ himself.

Just like the case of a huge banyan tree being subtly present in the small seed of the tree, the entire universe is hidden and subtly present in the single Beej Mantra (which is 'Daa(m)') of Lord Dattatreya.

This is the exposition of the single-letter Beej Mantra of Lord Dattatreya. [4].

[Note—¹Lord *Dattatreya*—Lord Dattatreya is regarded as a fractional incarnation of Lord Vishnu, the supreme Lord of creation in his cosmic form as the Viraat Purush from whom the rest of the creation, including the creator Brahma himself, was created.

The word 'Dattatreya' means 'one who was given to Atri', or 'the form of the Trinity Gods which gives or bestows or grants boons to his devotees'.

According to mythological accounts, sage Atri and his chaste wife Anusuya were childless, and having a desire to have a son they prayed and did severe penance. All the three gods of the Hindu Trinity, i.e. Brahma the creator, Vishnu the sustainer, and Shiva the concluder appeared before the couple and requested them to ask for a boon. Upon the couple's request, all the three Gods became their sons. Brahma became the sage known as Chandra representing the Moon God, Vishnu became the wise and enlightened sage Dattatreya, and Shiva became the angry sage Durvasa.

The *Shandilya Upanishad* of the Atharva Veda tradition endorses this episode with a slight change in its Canto 3, section 2, verse nos. 7-8 wherein it is said that the Supreme Being himself revealed in the form of sage Atri.

The word 'Dattatreya' has two parts—'Datta' and 'Treya'. The first half 'Datta' refers to the Lord who gives boons, and the second part 'Treya' refers to something that has three dimensions.

This latter part 'Treya' again has the following meanings—(1) It refers to Lord Shiva who has three eyes, and hence called 'Trinetra', because Shiva is also known as 'Maheshwar', the great Lord by which epithet the Supreme Being is honoured (refer Canto 3, section 2, verse no. 5-6 of Shandilya Upanishad). (ii) It refers to the supreme transcendental Brahm which has three forms known as Sakal, Nishkal and Sakal-Nishkal which incorporates in their ambit the entire creation, both the visible and the non-visible, the gross and the subtle (refer Canto 3, section 1, verse nos. 2-6 of Shandilya Upanishad).

According to another version of this story, the three Gods decided to check the chastity vows of the wife of Atri and came disguised to cheat on her. Anusuiya was no ordinary lady, and realizing their ill intentions she transformed them into her son with three heads and six arms, each head standing for one of the Gods.

Dattatreya is counted amongst the seven celestial sages called the Sapta Rishis. He is said to have created the Som Plant whose juice, called the 'Som Rasa', is used during fire sacrifices as an offering to Gods.

Iconographically, Dattatreya is shown with three heads and six arms holding the emblems of the three Gods, Brahma, Vishnu and Shiva, viz. a water pot, a conch and a discus, and a trident respectively. In fact, this great sage is regarded as a combined revelation of the Trinity Gods, i.e. Brahma, Vishnu and Shiva, in as much as he possessed the virtues of them all.

A bull representing Dharma (righteousness) is depicted as his mount. Four dogs representing the four Vedas are his constant companion.

The concept of Dattatreya is an attempt by ancient sages and seers to harmonize the three cults of Brahma, Vishnu and Shiva that had created an artificial and unwarranted rift in the edifice of religious unity amongst the Hindus.

Dattatreya is also credited with expounding the great characteristics of Avadhut Sanyas in Avadhut Upanishad of Krishna Yajur Veda tradition when he taught them to sage Sankriti.

The Jabal Darshan Upanishad of the Sam Veda tradition is also credited to Lord Dattatreya in which he has preached in detail the 8-fold path of Yoga, called the Ashtang Yoga, to Sankriti, his disciple.

He had also preached Prahalad, the great devotee of Lord Vishnu, about the eclectic state of Avadhut Sanyasi in the form of a huge python. He had taught King Alarka about Tattva Gyan (the fundamental knowledge of spiritual Truth and the quintessential philosophy of metaphysics).

Being a great Sanyasi himself, he was endowed with stupendous mystical powers called Siddhis. One of the sects of Siddhas regard him as their patron sage.

Sage Dattatreya had made *twenty four Gurus* or teachers. The remarkable thing is that none of these twenty four Gurus was a human being—he had learnt even from the elements (earth, water, fire, air, sky), animals (elephant, deer), birds (pigeon, hawk), reptiles (snake, worm), insects (moth, bee, spider), a fish, the moon and the sun, a child, a girl, a prostitute, an arrow-smith etc. These are very interesting episodes, and are being briefly summarized here.

The following are the twenty four teachers and what Dattatreya learnt from them. (1) Earth—the earth sustain all sorts of life and nourishes each creature, even those who virtually eat into her bosom by mercilessly and ruthlessly exploit her. The human race is the greatest exploiter of the earth by digging into her bowels and extracting whatever it can to satisfy its selfish vested interests without bothering for the future of earth much like a vulture digging its beak and extracting last bit of flesh from a cadaver. The earth is very magnanimous and forgiving. It goes on giving and giving without expecting any thing in return, and does not complain like a loving mother who would rather prefer to die than deny her child whatever she can afford.

The greatness is that still she does not complain! (2) Air—the wind moves everywhere, visits all kinds of places but never gets attached to any place or thing. The air is free from all attachments, relations and bonding though it touches all and pervades everywhere. It purifies everything and gives life to all in the form of ‘Pran’ or breath without any discrimination on the basis of gender, caste, race, creed etc. It gives life to a friend as much as it gives life to one’s enemy. The air taught him to be totally detached in his dealings with the world inspite of living in it and helping it by infusing fresh breath of knowledge and hope to the best of his ability. (3) Sky or Akash—the space of the sky accommodates everything and everyone in its vast bosom. This taught him to accept and accommodate all in life, but remain uninvolved in or unattached with them just like the sky which harbours uncountable number of things in its vast bosom but remains totally indifferent to them and unaffected by them. (4) Water—it is refreshing and cool and nourishing. No life is possible without water, and it is regarded as the only universal elixir of life. This taught him to sustain all and be soothing, comforting and refreshing for all the creatures. Like the inherent quality of water to act as the universal soother and lubricant of this creation, to cool down the heat and provide solace and succour to tormented creature, a true saint should also act as the one whose company gives happiness and joys to all, whose company provides the much-needed spiritual solace and succour to all. (5) Fire—it gives light, heat and energy. It is upwardly mobile—as is evident from the direction the flame of a raging fire takes. It is all-purifying on the one hand, and burns to ashes whatever impurity is put into it on the other hand. This taught him to welcome everything like the fire does, but purify them before finally accepting anything, and to reduce to ashes all that is impure and tainting that would affect the purity of the Atma. (6) Moon—it appears to wax and wane, but really it remains the same. This taught him the fact that the world and the body undergo innumerable changes but the true ‘self’ always remains unchanging, steady, uniform and immutable. (7) Sun—it is the ‘eye’ of the world and gives the latter light, heat and energy in a selfless and unbiased manner. The sun illuminates all but does not need anything to illuminate its own self, and neither does it get tainted by the dark and gloomy things it illuminates. On the contrary, the darkness of all things vanishes as soon as the brilliant light of the sun falls upon them. The glory of the sun is so overwhelming that no form of gloom and darkness can ever survive in its presence. This taught him to illuminate the world and remove its darkness of ignorance by the light of knowledge and wisdom while remaining immune himself to the darkening and spiritually denigrating affects that are caused by this deluding and corrupt world. (8) Pigeon—this is the typical story of a householder’s life. The parent pigeons went out in search of food for their young one day when a bird-catcher spread his nets and caught the offspring. When the parents returned, the mother pigeon saw the plight of the young one and jumped into the net. Then the male pigeon too jumps into the net because he cannot live without the family. The bird-catcher was overjoyed. This taught him that worldly attachments only lead to one’s ruin and downfall. (9) Python—it stays at one place and swallows any creature that happens to pass that way. He would not forage for food but wait for it to come to him. This taught him to be contented with whatever comes his way. (10) Ocean—The ocean is a vast and fathomless reservoir of water but it continues to continuously receive waters from all the rivers that incessantly pour their contents into it. In spite of this, the ocean never overflows with water, and it never breaks self-imposed restrictions of not submerging the earth. This taught the sage that no matter how much knowledge and wisdom one possesses or thinks that he has, he must keep on learning throughout his life; he must have an open and receptive mind that welcomes all sorts of knowledge. Again, as all the waters being poured into the ocean from different rivers having their sources in myriad of places becoming one and homogenous with the water of the ocean, the wise and enlightened man should accept knowledge from all sources but extract their essence and convert them all into one uniform body of knowledge that would not act as a distraction or a cause of

perplexity for him but would only add to his profound knowledge and wisdom. Like the ocean remaining within its boundaries, the wise man is one who never shows off his knowledge, or becomes haughty and arrogant because of his mystical powers and knowledge. The ocean harbours a complete marine eco-system inspite of its harsh salty waters—this taught the sage to be benevolent, compassionate, magnanimous and kind towards all inspite of the harsh conditions in which he might be forced to live; he must give shelter to all who come seeking refuge with him, and take care of his dependants to the best of his ability. Like the ocean, he too must be self-contented and aloof from the world, because the ocean never expects any water from the rivers, and is unconcerned with what is happening on land. (11) Moth—it gets attracted to the fire, and as a result of his infatuation with the fire and its light it gets caught and burnt. This taught him not to be tempted by the beauty and charm, the fascinating colours and magnificent forms of this artificial world of sense objects, for they would trap him and eventually drain him of all his energy and vitality, leading to his destruction. Any sort of worldly attachments would sear and scorch his soul and rob it of its peace and bliss. The attractions of the world are like the trap that would scorch his spirit by forcing it to lead a lifetime pursuing the sense objects of the world which keep on burning him with desires and expectations that are never fully fulfilled. Jealousy, hatred, frustration, animosity, malice and greed are its natural attendants. After having spent a lifetime in realizing the material objects of the world, a day would finally come when his worn out and descript body would die. Like the fire of the flame burning the moth, the attachments with this world and desire for it would also burn the man. (12) Honey Bee—it collects nectar from numerous flowers and converts them into one homogenous honey. This taught him to imbibe knowledge from whatever source available, and then convert it into one body of knowledge that is 'truthful'. A wise man is one who draws the essence, the nectar, from all sources of knowledge, and then deduces the 'truth' from it which would of any value for him like the 'honey' produced from the nectar drawn by the bee from various flowers. It also taught him that a mendicant should also collect a little bit of food from different households instead of relying on one house. (13) Elephant—it is notorious for the sense of touch. During the mating season they rub against each other. This weakness is exploited by hunters to catch them. This weakness taught the sage that he should be wary of the pleasures obtained by touching sensual things in this world. (15) Honey Gatherer—he stealthily takes away all the honey so painstakingly collected by the honey-bee over a long period of time involving immense labour. This taught him two things—it is useless to hoard things as one day death would snatch everything away, and second it is futile to hoard without sharing things with others because one day they are bound to be snatched away from us. (15) Deer—it is by nature attracted to music, a weakness exploited by the hunter to trap it. So, one should be wary of pleasant and sweet sounds emanating from this world because poison is more often than not laced with sugar. (16) Fish—it is attracted to the hook and got caught due to its desire to eat the bait. So, the fish taught him to have control over the taste buds of his tongue. (17) Pingala—she was a prostitute. One day the saint, during his wanderings, came to take rest under the tree on a street where she lived. He watched her eagerly waiting for a customer who never turned up. She finally gave up and went to sleep with the realization that if she had spent so much time invoking the Lord present in her own bosom, she would not have to wait for the Lord so long. This taught the saint that disappointments come to us when we expect something from this world and then hope that it would provide it to us. It is therefore an exercise in futility to expect the world to give real comfort and joy to anyone. The real happiness lies inside. (18) The Kurara Bird (a species of Hawk; an Osprey)—the bird had a small piece of flesh in its beak. Seeing it, other larger and stronger birds pounced on the unsuspecting poor Kurara bird. Distraught, the Kurara suddenly realised that the cause of its torments is the piece of meat, and so it dropped it instantly from its beak. The other birds swooped on the meat and stopped pursuing the Kurara. This incident

taught the saint that if one clings on to material things in this world, no matter how desirable they are, they would never let him live in peace. It is better to drop them at the earliest; it is better to drop all worldly attachments, and instead devote time in the search of the Truth of life. (19) Child—a child becomes so engrossed in his playthings that he forgets hunger and other bodily needs. Children fight with each other during the course of playing, but soon forget everything. This taught him to remain engrossed in contemplation and meditation on the ‘self’ and enjoy this state of existence like a child remaining engrossed in its playthings and being oblivious to anything else around him in this world. A wise ascetic should also be as deeply submerged in meditation as this child playing with his toys so much so that he becomes totally oblivious of the surrounding world around him. He should be immune to the world as well as even to one’s own bodily problems. A wise man must be innocent like a child—he might get angry at others but never takes anything to heart. The child plays with toys, but suddenly throws them away and wants something new. Likewise, the wise man enjoys the world, but he never gets hooked to it at the emotional and sentimental plane. (20) A Girl—some people had come to see the girl with a proposal of marriage. She went inside the house to prepare food for them. In the course of grinding spices her bangles clashed with each other and made a disturbing noise. She removed them one by one until one remained—then there was no noise. This taught him that when the mind is distracted by so many things, the man never finds peace. So the best way to concentrate the mind is to remove all extraneous distractions in the form of numerous paths and philosophies, and instead focus on one path that would lead him to the ultimate Truth preached by the Upanishads, the Truth that is absolute, uniform and immutable. (21) An Arrow-smith—he was so engrossed in his single-pointed devotion to his work of preparing the arrows and giving them the right contours, aerodynamic shape and sharpness to their tip that he was unaware that the king’s entourage was passing by. This taught the saint the importance of single-minded pursuit of one’s goal. (22) Snake—it never makes its own hole and lives in holes made by nature or other animals. A true saint should realise that the Atma has no body of its own but lives on borrowed bodies during its sojourn in this world. Again, the snake effortlessly leaves its dead cuticle, and this taught the sage that the Atma would similarly leave this body one day at the time of the body’s death, without any effort, pain or attachment to the older body, to find a new abode for its self. Hence, one should not be unduly concerned about the gross body which is bound to be abandoned one day. Another thing that the sage learnt was that the body is not one’s true identity as the ‘truthful self’; it is merely a temporary habitat for the ‘self’. This ‘self’ is the pure consciousness known as the Atma that would move to another body when the latter becomes too old and useless for it just like the snake leaving its dead cuticle and moving out into a new skin. (23) Spider—it creates a web from its own body, moves around it, and then swallows it. Similarly, the supreme Lord has created this world, sustains it, and finally retracts it into himself. Further, the spider creates the web and remains trapped in it much like the creature who creates this artificial world by his mind and then remains trapped in it for life. And finally (24) Worm—a wasp caught hold of a worm and kept it in a hole. The wasp kept humming around this worm that was so terrified of the wasp and continuously subjected to this humming that ultimately it became wasp-like itself. Similarly, when a man concentrates upon something continuously, whether willingly or unwillingly, he would become one like the subject on which he contemplates. If he contemplates upon the world, he would become one like other mortal ignorant creatures, and if he contemplates upon something that is sublime and divine, he would become sublime and divine himself.

5. Now, the six-lettered Mantra is being narrated.

‘OM’ is the second letter of the Mantra. [The first letter obviously is ‘Daa(m)’ narrated in stanza nos. 3-4.] ‘Hrim/Hrin(g)’ is the third letter; ‘Klim/Klin(g)’ is the fourth letter; ‘Glaum/Glaun(g)’ is the fifth letter; and ‘Draa(m)’ is the sixth letter of the Mantra.

This is the six-letter Mantra of Lord Dattatreya.

[This Mantra has only Beej Mantras. Its full form is ‘Daa(m) OM Hrim/Hrin(g) Klim/Klin(g) Glaum/Glaun(g) Draa(m)’. The six letters in this case are the following Beej Mantras—Daa(m) + OM + Hrim/Hrin(g) + Klim/Klin(g) + Glaum/Glaun(g) + Draa(m) = 6.]

The mystical divine powers incorporated in this esoteric Mantra are experienced by those who meditate and contemplate upon it successfully.

This six-letter Mantra has Gayatri Chanda. Its Rishi is Sada Shiva. And its Deva is Lord Dattatreya. [5].

6. Now, the eight-letter Mantra dedicated to Lord Dattatreya is being narrated.

This Mantra is ‘Draa(m) Dattatreyaaye Namaha’. [Draa(m) + Da + Ttaa + Tre + Yaa + Ye + Na + Maha = 8. It briefly means ‘I bow before Lord Dattatreya’.]

The word ‘Dattatreya’ means one who is ‘Sata’ or truthful, ‘Anand’ or blissful, and ‘Chid’ or a personified form of consciousness and enlightenment.

The word ‘Namaha’ refers to the eclectic state when one voluntarily bows his head before someone who is most exalted and divine. This state is full of bliss and ecstasy when one feels fulfilled.

This eight-letter Mantra also has Gayatri as the Chand, Sada Shiva as the Rishi, and Dattatreya as the Devta. [The *Gayatri Chanda* has 24 letters and syllables in all which are divided into 3 steps or stanzas of 8 letters or syllables each. Hence the total is $3 \times 8 = 24$. All the original hymns of the Vedas are said to be composed in this style as it is supposed to be the best and the most ancient form of composition style of hymns.]

The Kilak (peg or anchor) as well as the Beej Mantra of this Mantra is ‘Dattatreyaaye’. [That is, the divine power that infuses this Mantra with its inherent stability, and helps the worshipper to attain mystical powers relying upon it, is Lord Dattatreya himself.]

The word ‘Namaha’ is the Mantra’s Shakti or dynamic powers. [This is because it compels or inspires the worshipper to bow and submit himself before the supreme Lord voluntarily, on his own accord. It also makes others to whom it is preached to bow and submit themselves before the Lord voluntarily.] [6].

7. The twelve-letter Mantra dedicated to Lord Dattatreya is the following—

Its first letter is ‘OM’; its second letter is ‘Aim/Ain(g)’; its third letter is ‘Hrim/Hrin(g)’; and its fourth letter is ‘Krom/Kron(g)’. The fifth word is ‘Ehi’, followed by the two words ‘Dattatreya Swaha’.

This twelve-letter Mantra of Lord Dattatreya is regarded as the king amongst Mantras.

[Hence, the full Mantra is ‘OM Aim/Ain(g) Hrim/Hrin(g) Krom/Kron(g) Ehi Dattatreya Swaha’. The twelve letters are delineated as follows—OM + Aim/Ain(g) + Hrim/Hrin(g) + Krom/Kron(g) + E + Hi + Da + Ttaa + Tre + Ya + Swa + Ha = 12. It briefly means ‘OM Salutations! I offer my oblations to Lord Dattatreya who is honoured by the Beej Mantras Aim, Hrim and Krom’.]

Its Chand is Jagati; its Rishi is Sada Shiva; and Devta is obviously Lord Dattatreya. [The *Jagati Chanda* is a verse of 4 lines with 12 letters in each line, bringing the total number of letters to 48.]

The Beej (seed) of this Mantra is 'OM' (referring to the supreme transcendental Brahm). [That is, it is from Brahm that this Mantra originates; it is Brahm who is being honoured by this Mantra.]

The Shakti or dynamism of this Mantra is represented by the word 'Swaha'. [This word is pronounced while offering oblations to the chosen deity. It implies that when one has surrendered himself to the Supreme Being that he becomes entitled to enjoy the Lord's energy and powers.]

And the Kilak (peg or anchor with which this Mantra is established) is represented by holistic wisdom and enlightenment. [7].

8. [Now, how to do 'Anga Nyas'¹, or sanctifying the different parts of the body by invoking the Mantras as well as investing these parts with the powers of the Mantra is being narrated.]

The Beej Mantra 'Draa(m)' is said for doing 'Anga Nyas' on the heart (left side of the chest).

The Beej Mantras 'Hrim/Hrin(g) Klim/Klin(g)' are said for doing 'Anga Nyas' on the head.

The Beej Mantra 'Ehi' is said for doing 'Anga Nyas' on the tuft of hair on the top of the head (cranium).

The Beej Mantra 'Datta' is said for doing 'Anga Nyas' as a protective shield, called the Kavach, on the upper part of the body, stretching from across the two shoulders right up to the navel region in the abdomen and the whole length of the two hands. [In other words, 'Datta' is said while doing Anga Nyas to symbolize a shield ('Kavach') covering the body.]

The Beej Mantra 'Aatre' is said for doing 'Anga Nyas' on the two eyes-lids.

The words 'Swaha Astraaye' are said for completing the process by offering oblations to Lord Dattatreya. It symbolically empowers the body and invigorates or recharges its natural weapon ('Astra') against all attacks by evil forces. That is, it enhances the body's inherent stamina, strength, energy, vitality and vigour. It virtually acts as the invincible weapon to afford protection to the worshipper once he offers himself or submits himself to the Lord.

When successfully done, this helps the worshipper to be as empowered and divine as Lord Dattatreya himself. One must be fully acquainted with this fact along with the process and its glorious affects. [8].

[Note—¹Anga Nyas—There are two aspects of invoking any given Mantra and sanctifying the worshipper's body with them. They are known as (i) *Anga Nyas* and (ii) *Kar Nyas*. They are done with any Mantra using its seed or root called the 'Beej' of that Mantra, and are the two basic rituals of invoking the divine powers of the Mantras which are basically mystical formulas employed in religious practice, specially during occult rites and meditation of which this Khechari is a part. The word 'Kar' means hand, and 'Anga' means body, while 'Nyas' refers to an invocation, or vesting or assigning any entity with something, or entrusting an entity with some trust and responsibility; to deposit, repose, trust, pledge, entrust, keep, place, etc. This is a ritualistic process in which certain parts of the body are touched and certain Mantras are said. It also means the purification of the individual parts of the body and the installation of the individual letter of the invoked Mantra, complete with its full potentials, at those points. Therefore, Anga Nyas is a process of pledging utmost faith and conviction on the divine and holy Mantra's supernatural powers and potentials by

invoking it and reposting it on the various locations of the body and its vital parts, such as the limbs, the abdomen and chest, the throat and forehead etc.

In other words, the process of doing Anga Nyas is to symbolically establish the Mantra's divine mystical powers in the worshipper's own body and make it sinless, holy, auspicious, sanctified and empowered. The deity being worshipped is symbolically requested to come and take its seat in the body, thereby ensuring that the worshipper is not only getting constant protection from this godhead but also has been dutifully purified and made auspicious. The body is now the symbolic seat of Divinity represented by the deity, and from the metaphysical perspective it has been now officially made the abode of Brahm as all the Gods are nothing but manifestations of Brahm, the supreme transcendental Authority of creation. With the deity firmly established in the body of the worshipper, the latter is deemed to personify all the glorious, majestic, divine and magnificent virtues exemplified by the worshipped deity.

In the context of the Beej Mantras, it refers to invoking their divine cosmic dynamic powers and establishing them on various parts of the body, or assigning the patron Gods of these seed Mantras some specific part of the body so that they can establish themselves there.

Hence, doing Kar Nyas with the Beej Mantras would be to establish these symbolic Gods representing the cosmic, divine and mystical powers that are encrypted in the different Beej Mantras on the hand of the practitioner, while Anga Nyas would be to do the same on other parts of the body such as the chest, abdomen, shoulders, throat, forehead etc.

The locations on the body where Anga Nyas is done has great metaphysical significance. Besides the locations mentioned in the present Upanishad, there are other primary sites where it is usually done. According to *Ram Rahasya Upanishad* of the Atharva Veda tradition, Canto 2, verse no. 43, these ten locations are the following—Brahm-randhra (which is the hair-like slit on the top of the skull), the forehead, the central point of the eyebrows (where the symbolic third eye of wisdom is said to be located), the upper palate, the two earlobes, the heart, the navel and the two thighs = 10 sites.

Primarily there are six sites according to the same Ram Rahasya Upanishad's verse no. 23 where the primary seed or root words, called the Beej Mantras, are invoked. They are the following—the Brahm-randhra (top of the skull), the central point of the eyebrows, the heart, the navel, and the two thighs = 6 sites.

9. Now, the Mantra with sixteen letters is being narrated. This Mantra is so important and esoteric that its secrets should not be revealed to unworthy persons even if one is threatened that he would be forced to give his Pran (life), or his Mana (attention, mind and heart with its emotional and sentimental quotient), or his eyes, his ears, and even his head (by either bowing before the other or by severing it for refusing to divulge this Mantra).

It ought to be preached only to one's disciple who serves the teacher most diligently and faithfully.

Now, the details of the Mantra are being narrated as follows—

The first letter of the sixteen-lettered Mantra dedicated to Lord Dattatreya is 'OM'. The second letter is 'Aim/Ain(g)'. The third letter is 'Krom/Kron(g)'. The fourth letter is 'Klim/Klin(g)'. The fifth letter is 'Klum/Klun(g)'. The sixth letter is 'Hraam/Hraan(g)'. The seventh letter is 'Hrim/Hrin(g)'. The eighth letter is 'Hrum/Hrun(g)'. The ninth letter is 'Sau-ha'.

The tenth word is 'Dattatreyaaye' which consists of five letters (Da + Ttaa + Tre + Yaa + Ye). [Hence, the number of letters till now is $9 + 5 = 14$.]

And finally comes the word ‘Swaha’ which is the eleventh word (consisting of two letters ‘Swa’ and ‘Ha’). [Therefore, the total number of letters is now $14 + 2 = 16$.]

[The full Mantra of sixteen letters is as follows—‘OM Aim/Ain(g) Krom/Kron(g) Klim/Klin(g) Klum/Klun(g) Hraam/Hraan(g) Hrim/Hrin(g) Hrum/Hrun(g) Sau-ha Dattatreyaaye Swaha’.

The sixteen letters of this Mantra are the following—OM + Aim/Ain(g) + Krom/Kron(g) + Klim/Klin(g) + Klum/Klun(g) + Hrim/Hrin(g) + Hrim/Hrin(g) + Hrum/Hrun(g) + Sau-ha + Da + Ttaa + Tre + Yaa + Ye + Swa + Ha = 16.]

This Mantra has Gayatri as the Chanda, Sada Shiva as the Rishi, and Lord Dattatreya as the Devta (deity). Its Beej (seed part of the Mantra) is OM; its Shakti (dynamism and strength) lies in the word Swaha; and its Kilak (peg or anchor) is the word Dattatreyaaye (because it relies on the strength of Lord Dattatreya). [9].

10. The Anga Nyas with this Mantra is done as follows—

‘OM’ is said while doing Anga Nyas on the heart.

‘Klam/Klan(g) Klim/Klin(g) Klum/Klun(g)’ are pronounced while doing Anga Nyas on the Shikha (the tuft of hair on the head; the cranium).

The esoteric letter ‘Sauha’ is said while doing Anga Nyas to symbolize a shield (‘Kavach’) covering the body.

The word ‘Dattatreyaaye’ is said while doing Anga Nyas on the eyes.

The words ‘Swaha Astraaye’ are said for completing the process by offering oblations to Lord Dattatreya. It symbolically empowers the body and invigorates or recharges its natural weapon (‘Astra’) against all attacks by evil forces. That is, it enhances the body’s inherent stamina, strength, energy, vitality and vigour. It virtually acts as the invincible weapon to afford protection to the worshipper once he offers himself or submits himself to the Lord.

A worshipper who does meditation and contemplation upon Lord Dattatreya with these esoteric Mantras becomes a personified form of the virtues of Sata (truthfulness), Chid (enlightenment and consciousness), and Anand (blissfulness). He is able to attain sustained peace and happiness as well is entitled to Moksha or spiritual liberation, deliverance, emancipation and salvation. [10].

11. When the above Mantra (narrated in stanza no. 10) is suffixed with the Beej Mantra ‘Sauha’ it becomes a Mantra dedicated to Lord Vishnu. [This word ‘Sauha’ means ‘that is’ or ‘it refers to’. Hence, when appended to the Mantra dedicated to Lord Dattatreya it clearly means that the Mantra refers to the Lord who is known as Vishnu. That is, ‘He who is worshipped as Dattatreya is also worshipped as Vishnu’.]

When one uses this Mantra, he is deemed to be worshipping Lord Vishnu.

[The Mantra would be as follows—‘OM Aim/Ain(g) Krom/Kron(g) Klim/Klin(g) Klum/Klun(g) Hraam/Hraan(g) Hrim/Hrin(g) Hrum/Hrun(g) Sau-ha Dattatreyaaye Swaha (as narrated in stanza no. 9, followed by the word) Sauha’.] [11].

12. Now, I shall narrate the Mantra of Lord Dattatreya composed in the Anushtup Chanda style. [The *Anushtup Chanda* is a verse with 4 lines, each line having 8 letters = total 32 letters. It was first conceived by an ancient sage named Anustuv, hence it bears his name.]

All the parts of this Mantra are as epithets which describe the divine and exalted virtues of the Lord.

The Mantra is as follows—‘Dattatreya Hare Krishna Unmatt-ananddaayaka; Digambar Mune Baal-pishaach Gyan-saagar’. [It briefly means ‘Lord Dattatreya is no one else but Lord Hari (Vishnu) as well as Lord Krishna. He stays in a transcendental state marked with extreme ecstasy, and is a provider of blissfulness (to his devotees). He is in the form of an ascetic who remains naked and appears from his external appearances as if he is a wild child. [This indicates he is absolutely carefree and innocent.] He is nevertheless an ocean of Gyan or knowledge, wisdom, enlightenment and erudition.’]

Verily, this is what this Upanishad says. [12].

13. This Anushtuv Chanda has Sada Shiva as the Rishi (i.e. it was Lord Shiva who had first formulated this Mantra; he was the one who had first visualized the Mantra when he was meditating).

The Devta or the patron deity to whom this Mantra is offered is Lord Dattatreya.

Now, doing Anga Nyas is being described.

‘Dattatreya’ is said while doing Anga Nyas on the heart.

‘Hare Krishna’ is pronounced while doing Anga Nyas on the head.

‘Unmatt-ananda’ is said while doing Anga Nyas on the Shikha (the tuft of hair on the head; the cranium).

‘Daayak Mune’ is pronounced while doing Anga Nyas as the Kavach (body armour).

‘Digambar’ is pronounced while doing Anga Nyas on the eyes. [This is very significant in the sense that the worshipper asks the Lord to enable his eyes to see the ‘naked truth’ in creation, because the word ‘Digambar’ means to be naked.]

‘Pishaach Gyan-saagar’ is said while invoking the Mantra as the invincible weapon to protect and empower the body of the worshipper.

I (Brahma) have personally verified the effectiveness and dynamic powers and mystical strength of this Anushtuv Chanda (Mantra).

All sins that I might have committed even before my birth, and even those that I may have committed since my birth, are pardoned or eliminated or nullified as the great benefit of properly meditating upon and invoking the mystical powers of this Mantra.

Those who are well-versed in this knowledge can benefit others also. They obtain the spiritual reward of Moksha, i.e. they obtain liberation and deliverance from the cycle of birth and death. They indeed become highly wise and enlightened.

This is what this Upanishad asserts; this is what it expounds. Thus ends the first section. [13].

Section 2

[This Section describes the meaning of the various Beej Mantra used in Section1.]

The Vyahriti (primal word; the esoteric Beej Mantra) known as ‘OM’ refers to the Lord who is honoured and worshipped by the Mantra which has the following meaning—‘OM Salutations to Lord God Dattatreya. I bow before him.

By merely remembering him, one is able to get the four great fruits. [These are (i) ‘Artha’ or financial well-being, (ii) ‘Dharma’ or auspiciousness and righteousness,

(iii) 'Kaam' or fulfillment of desires, and (iv) 'Moksha' or emancipation and salvation; liberation and deliverance.]

The Lord removes the greatest of fears and horrors (by merely remembering him). The Lord is the giver or provider of the greatest of knowledge, wisdom, erudition, sagacity and enlightenment (by merely remembering him).

The Lord is a personified form of the cosmic Consciousness known as the Atma which is eternally enlightened and blissful.

The Lord's form as an ascetic is one like a child who is naked, wild, carefree and innocent.

The Lord is a great ascetic of the highest order, known as an Avadhut.

The Lord enhances the pleasure of Anusuiya (the wife of sage Atri and the mother hermitress for whom Lord Vishnu took the form of son known as Lord Dattatreya) by becoming the son of sage Atri (her husband sage).

The Lord is the fulfiller of all wishes and desires; he gives all the fruits requested by the worshipper.

Such a Lord is implied in the word 'OM'. [Obviously this means that Lord Dattatreya is Brahm personified as the word 'OM' is used to mean the supreme transcendental Brahm who is the Supreme Being.] [1].

2. The Beej Mantra or Vyahriti known as 'Hrim/Hrin(g)' refers to the Lord who removes or eliminates the snare or trap of Moha (worldly attachments, attractions and infatuations caused by delusions and ignorance). [2].

3. The Beej Mantra or Vyahriti known as 'Krom/Kron(g)' refers to the Lord who gives all sorts of Vibhuti (fame, majesty, renown, magnificence, grandeur, qualities, virtues, etc. that are great assets for any living being) to the worshipper. [3].

4. The Beej Mantra or Vyahriti known as 'Sauha' refers to the Lord who is so magnificent, kind, gracious, compassionate, munificent and benevolent that all are naturally attracted to him. [It also means that a worshipper of Lord Dattatreya acquires such divine virtues in him that the world is naturally attracted to him.] [4].

5. The Beej Mantra or Vyahriti known as 'Srim/Srin(g)' refers to the Lord who removes all sorts of grief and sorrows that burden the mind and the heart of the worshipper. [5].

6. The letter 'Ma' (as in *mother*) stands for Moha or worldly attachments, attractions and infatuations. It is also one of the forms of Beej Mantras or a Vyahriti. [6].

7. The word 'Vashat' is also a form of Beej Mantra or Vyahriti. It stands for the strength and power invested in the Mantra so as to enable it to be employed in the form of an invincible weapon. [7].

8. The words 'Vashi Kuru Vashi Kuru' (literally meaning 'to control something; to rein it in; to restrain it') is also a form of Beej Mantra or Vyahriti. It is said to request the Lord to control one's enemies and adverse circumstance. It refers to the ability of Lord Dattatreya to control everything and anything when requested to do so by his devotee. [8].

9. The Beej Mantra or Vyahriti known as ‘Hum/Hun(g)’ refers to the Lord who is able to attract as well as repel everything, no matter how formidable and awe-inspiring it might be. [9].

10. The letters pronounced by the lips such as the consonant ‘Pha’ (as in *fruit*) represent the quality of ‘Vidweshā’—i.e. malice, ill-will, hatred, enmity, jealousy etc. It is also a kind of Vyahriti because these are primal characters present in all living beings in a smaller or greater degree. [10].

11. The letters pronounced like the Sanskrit consonant ‘Tha’ (as in *ant-hill*) symbolize a grave or heavy tone employed during incantations of Mantras. It also means to be exceedingly ecstatic and exhilarated while chanting the Mantra aloud so much so that the mind loses awareness of everything else. This is also a form of Vyahriti as it is a primal form of emotion of a living being. [11].

12. The letter ‘Kha’ (as in *blockhead*; *khaki*) stands for the sky element. The sky acts as the pillar that supports the rest of the universe. The sky prevents the edifice of creation from collapsing into the nether world. All the planets stick to their designated places in the cosmos because of the support given to them and the restraint imposed on them by the buffer-effect of the sky. The sky is the primary form of support and pillar for the rest of the creation. Hence, its Beej Mantra ‘Kha’ is also a Vyahriti. [12].

13. I bow before the Lord who can kill and eliminate (my sins and enemies). I bow before the Lord who gives me prosperity and well-being. I bow before the Lord who sustains me in all possible ways.

This great Mantra can thrash to pieces (completely eliminate) all my slavery and compulsions. It can eliminate and nullify the bad affects of all the stars that are opposed to me. It can completely eliminate all my problems and troubles. It can remove all my sorrows and agonies. It can eliminate my misfortunes and poverty. It can eliminate all the diseases and torments that afflict my body and provide due nourishment and protection to it. It can give my mind and sub-conscious contentedness, peace and stability.

It is personified form of all the great Mantras; it is single Mantra representing the auspicious effects of all the great Mantras. OM Salutations! This is the best and the most beautiful and holy doctrine enunciated by this Upanishad. Thus ends the second Section (Khand). [13.]

----***----

Section 3

1. Now we shall describe the knowledge of this Mantra’s esoteric aspect.

It is in the Anushtuv style of Chanda. Its Rishi is Sada Shiva. Its Devta (deity) is Lord Dattatreya. Its Beej (seed) is the word ‘OM’. Its Shakti (dynamism and strength) is ‘Swaha’. Its Kilak (peg or anchor) is the Beej Mantra ‘Draa’. [1].

2. Eight Mantras of Lord Dattatreya have been narrated in this Upanishad. A worshipper who meditates daily upon Lord Dattatreya and studies these Mantras is blessed and made pure and clean by the Wind God, the Fire God, the Moon God, the

Sun God, Brahma the creator, Vishnu the sustainer, and Rudra the concluder of creation. [2].

3. Doing Japa with these Mantra is equivalent to doing Japa with a hundred thousand Gayatri Mantras and Rudra Mantras. Likewise, it is equivalent to doing Japa with ten-thousand-ten-million 'OM' Mantras.

The worshipper who does such Japa is able to provide liberation and deliverance to the spirits of his dead ancestors going back to one hundred generations, as well as the members of his family in the forthcoming generations extending to another one hundred generations.

He is deemed to be holy and purified amongst his peers and compatriots. [3].

4. Great sins committed by him, such as killing of a Brahmin or a cow, are pardoned by studying and following the teachings of this Upanishad.

He gets the auspicious fruit of doing such noble act as donating money and food-grains, as well as establishing places which provide drinking water to the thirsty.

He is exonerated from the sin of having to eat things not worthy of eating, either due to adverse and unavoidable circumstances, or inadvertently when he is unaware of what he has been offered to eat.

He is successful in practicing the different Mantras. He is indeed a true Brahmin. [4].

[Note—This fact that sins can be forgiven, or at least their evil effects can be done away with has been stressed in a number of Upanishads of the Atharva Veda tradition. For instance—Mahavakya Upanishad, verse no. 12; Bhasma Jabal Upanishad, Canto 1, paragraph no. 10; Canto 2, paragraph nos. 12, 21; Ganapati Upanishad, verse no. 17; Devi Upanishad, verse no. 32; Hayagriva Upanishad, verse no. 13; Dattatreya Upanishad, Section 3, stanza 4; Sharav Upanishad, verse no. 39; Ram Uttar Tapini Upanishad, Canto 2, verse no. 3; Canto 4, verse no. 14; and Canto 6, verse nos. 8-9, 13-18; Mahavakya Upanishad, verse no. 12.]

5. The esoteric knowledge of this Upanishad should only be preached to a devoted disciple. This knowledge gives countless benefits and rewards. It provides sure Jivan Mukti or spiritual liberation and deliverance to its practitioner even while he is alive in this world and goes about doing his normal duties.

This magnificent and great Dattatreya Upanishad was revealed by Lord Narayan himself to Brahma, the creator. Amen! [5].

----Shanti Paath----

-----*****-----*****-----

Chapter 31

Garud Upanishad/Garudo-panishad

This Upanishad is dedicated to Garud, the legendary bird Heron or Eagle which is regarded as the celestial vehicle of Lord Vishnu, the sustainer and protector of creation. Garud is no ordinary bird, but has divinity and greatness inherent in him, as otherwise he would not have been selected by Vishnu to be his mount. Being the only God in the closest proximity of Vishnu, Garud acquires special significance for the devotees of Lord Vishnu. He is invoked to neutralize all sorts of negative and horrifying circumstances in this world which resemble the poison or toxin contained in the bite of a venomous serpent that torment the spiritual aspirant endlessly. This special virtue and power of Garud is derived from the fact that he is regarded as the greatest foe of the poisonous snake. Therefore, the knowledge of the Mantras dedicated to Lord Garud are directly related to the mystical occult powers that help one to overcome the poison of snake-bite. This knowledge is called 'Garud Vidya'.

The Upanishad enumerates and describes in detail all the different Mantras pertaining to Lord Garud, how to do Japa with them, how to use them in practice (verse nos. 2-8), and what are the great benefits of invoking and mastering these Mantras (verse nos. 12-25) on the same pattern as done in the other Upanishads dedicated to different deities. The divine form of Lord Garud is also narrated (in verse nos. 5-7).

In the course of its narration, the Upanishad lists the names of different types of snakes (verse nos. 5 and 24) along with the exceptionally magnificent and miraculous power of Garud to neutralize all types of poisons (verse nos. 9-24). The worshipper of Lord Garud becomes immune from the bite of venomous insects and reptiles (verse no. 25).

This Upanishad was first revealed to sage Narad by Brahma, the creator. It was then passed down the line of sages and seers for the benefit of the creatures of this creation (as listed in verse no. 1).

----****----

----Shanti Paath----

Please see appendix no. 1 for the English of this Shanti Paath.

1. Now we shall describe the great mystical knowledge pertaining to Lord Garud. It is known as 'Gaarud Brahm Vidya'.

This knowledge was first preached to sage Narad by the creator Brahma. Narad revealed it to Brihatsen. Brihatsen taught it to Indra (the king of Gods). Indra preached it to sage Bharadwaj. And Bharadwaj taught it to those disciples who were called 'Jivat-kaam', i.e. the ones who were eager to acquire knowledge of the Divine in all its aspects and make their life worthwhile by helping others to overcome their worldly torments and miseries. (1).

2. The 'Rishi' (the sage who had first visualized or formulated the Mantras) of this Garud Maha Vidya (the great mystical knowledge related to Lord Garud) is the

creator Brahma. [This is obviously so because Brahma was the one who had first revealed it to Narad—see verse no. 1.]

Its composing style is known as ‘Gayatri Chanda’. [A ‘Chanda’ is the style in which the hymn was composed, and ‘Gayatri’ is the Chanda that has 24 letters and syllables in all. They are divided into 3 steps or stanzas of 8 letters or syllables each. Hence the total is $3 \times 8 = 24$. All the original hymns of the Vedas are said to be composed in this style as it is supposed to be the best and the most ancient form of composition style for hymns.]

The Devta (the deity to whom a particular hymn is dedicated) is obviously Lord Maha (great) Garud.

This Mantra (hymn) is invoked and used for the purpose of pleasing Lord Garud as well as doing Japa (repetition) with it so that one can overcome all the poisons and toxins (which are metaphors for all sorts of worldly torments, horrors, agonies and miseries, as well as evil consequences for sins and misdeeds) that torment and horrify the worshipper (2).

3. [Now, the Mantras and the process of doing Kar Nyas as well as Anga Nyas¹ with them are being described.]

The first Mantra is ‘OM Namō Bhagvate Angustaabhyam Namaha’. [Briefly, it means ‘I bow before Brahm (OM) and salute the Lord by touching my thumb’.] When this Mantra is said, the worshipper should touch the thumb with the first finger in both the hands.

The second Mantra is ‘Sri Maha-Garudaaye Tarjanibhyam Swaha’. [Briefly, it means ‘I offer my respects and oblations, by saying ‘Swaha’, to the great Lord Garud by touching my thumb with the first finger’.] When this Mantra is said, the worshipper should touch the thumb with the first finger in both the hands.

The third Mantra is ‘Pakshindraaye Madhyamaabhyam Vashat’. [Briefly, it means ‘I offer my respects and oblations, by saying the Beej Mantra ‘Vashat’, to the great Lord who is the King of Birds by touching my thumb with the middle finger’.] When this Mantra is said, the worshipper should touch the thumb with the middle finger in both the hands.

The fourth Mantra is ‘Sri Vishnu-Vallabhaaye Anaamikaabhyam Hum’. [Briefly, it means ‘I offer my respects and oblations, by saying the Beej Mantra ‘Hum’, to the great Lord who is very dear to Lord Vishnu by touching my thumb with the third finger’.] When this Mantra is said, the worshipper should touch the thumb with the third finger in both the hands.

The fifth Mantra is ‘Trelokya-paripujyataaye Kanishtikaabhyam Vaushat’. [Briefly, it means ‘I offer my respects and oblations, by saying the Beej Mantra ‘Vaushat’, to the great Lord who is worshipped, honoured and respected in the three worlds (i.e. in the terrestrial world, the heavens and the nether worlds), by touching my thumb with the fourth finger’.] When this Mantra is said, the worshipper should touch the thumb with the fourth finger in both the hands.

The sixth and the final Mantra is ‘Ugra-bhyankar-kaalaanal-rupaaye Kartalkarpristabhyam Phat’. [Briefly, it means ‘I offer my respects and oblations, by saying the Beej Mantra ‘Phat’, to the great Lord who is most ferocious, aggressive, fearsome, and like ‘death’ itself personified, by placing the back of both my palms against each other (by crossing my hands at the wrist-joint)’.] When this Mantra is said, the worshipper should place the back of the palms against each other by crossing the hands at the wrist-joint.

Each time these Mantras are said, the six cardinal points of the body, such as the heart etc., should be touched by the thumb and the relevant finger. This is known as 'Anga Nyas'. [The points are the heart, the forehead, the cranium, the eyes, the shoulders and the navel.] (3).

[Note—¹*Anga Nyas* and *Kar Nyas* with Mantras—There are two aspects of invoking any given Mantra and sanctifying the worshipper's body with them. They are known as (i) *Anga Nyas* and (ii) *Kar Nyas*. They are done with any Mantra using its seed or root called the 'Beej' of that Mantra, and are the two basic rituals of invoking the divine powers of the Mantras which are basically mystical formulas employed in religious practice, specially during occult rites and meditation of which this Khechari is a part. The word 'Kar' means hand, and 'Anga' means body, while 'Nyas' refers to an invocation, or vesting or assigning any entity with something, or entrusting an entity with some trust and responsibility; to deposit, repose, trust, pledge, entrust, keep, place, etc. This is a ritualistic process in which certain parts of the body are touched and certain Mantras are said. It also means the purification of the individual parts of the body and the installation of the individual letter of the invoked Mantra, complete with its full potentials, at those points. Therefore, Anga Nyas is a process of pledging utmost faith and conviction on the divine and holy Mantra's supernatural powers and potentials by invoking it and reposting it on the various locations of the body and its vital parts, such as the limbs, the abdomen and chest, the throat and forehead etc.

In other words, the process of doing Anga Nyas is to symbolically establish the Mantra's divine mystical powers in the worshipper's own body and make it sinless, holy, auspicious, sanctified and empowered. The deity being worshipped is symbolically requested to come and take its seat in the body, thereby ensuring that the worshipper is not only getting constant protection from this godhead but also has been dutifully purified and made auspicious. The body is now the symbolic seat of Divinity represented by the deity, and from the metaphysical perspective it has been now officially made the abode of Brahm as all the Gods are nothing but manifestations of Brahm, the supreme transcendental Authority of creation. With the deity firmly established in the body of the worshipper, the latter is deemed to personify all the glorious, majestic, divine and magnificent virtues exemplified by the worshipped deity.

Anga Nyas is therefore the process of ritualistic worship by which certain fixed points in the body are designated where the chosen deity is mentally invoked through the specific Mantra. This envisions that the mystical divine powers of the patron God or deity being worshipped by the Mantra are mentally invested in these fixed cardinal points of the body, thereby empowering the aspirant with their stupendous potentials as well as symbolically assigning the body to the tutelary God or deity to whom the particular Mantra belongs for his protection and blessing.

In the context of the Beej Mantras, it refers to invoking their divine cosmic dynamic powers and establishing them on various parts of the body, or assigning the patron Gods of these seed Mantras some specific part of the body so that they can establish themselves there.

Hence, doing Kar Nyas with the Beej Mantras would be to establish these symbolic Gods representing the cosmic, divine and mystical powers that are encrypted in the different Beej Mantras on the hand of the practitioner, while Anga Nyas would be to do the same on other parts of the body such as the chest, abdomen, shoulders, throat, forehead etc. The locations on the body where Anga Nyas is done has great metaphysical significance. Usually these six cardinal points are the following—the two legs, two hands, one head and one waist region. But according to the *Shuk Rahasya Upanishad*, verse no. 20 of Krishna Yajur Veda tradition, they are the thumb, the tip of the fingers, the heart, the shoulders, the tuft on the top of the head, and the palm of the hand. There are prescribed ways of invoking the Mantras,

and when done in a proper way it empowers the ordinary body of the worshipper with extraordinary divine and mystical powers.

According to Ram Rahasya Upanishad of the Atharva Veda tradition, Canto 2, verse no. 43, these ten locations are the following—Brahm-randhra (which is the hair-like slit on the top of the skull), the forehead, the central point of the eyebrows (where the symbolic third eye of wisdom is said to be located), the upper palate, the two earlobes, the heart, the navel and the two thighs = 10 sites.

Primarily there are six sites according to the same Ram Rahasya Upanishad's verse no. 23 where the primary seed or root words, called the Beej Mantras, are invoked. They are the following—the Brahm-randhra (top of the skull), the central point of the eyebrows, the heart, the navel, and the two thighs = 6 sites.

According to its verse no. 83-85, there are five sites for doing Anga Nyas for a warrior. These are heart (left chest), forehead/central point of the eyebrows, the top of the head where the tuft of hair is located and which is the site of the Brahm-randhra, the body armour or shield, and the arms and armaments of the aspirant warrior. This is also followed in the worship of Shakti, the divine dynamic powers of creation, such as Durga, Parvati and Saraswati (the goddess of speech, knowledge and wisdom). Refer also Saraswati Rahasya Upanishad, verse no. 4 of Krishna Yajur Veda.

However, the Dattatreya Upanishad of the Atharva Veda tradition, in its Section 1, Canto 1, stanza no. 8 says that the Mantra of Lord Dattatreya (a form of Vishnu) are used for doing Anga Nyas on the following parts of the body—viz. the heart, the head (forehead), the cranium (top of the head), the upper part of the body including the two shoulders and the arms, and the eyes.

The human body is a microcosm of the cosmos, because according to the genesis of creation, the Viraat Purush, the macrocosmic, all-encompassing and all-inclusive manifestation of the supreme transcendental Brahm, had metamorphosed in the shape of the human body, and therefore this body is a manifestation of the entire creation including all its Gods and all their astounding potentials.

The creation has been visualised as having three divisions which form the so-called three worlds—viz. the heavens represented by the head of the human body where the Brahm-randhra, forehead and the eyebrows are located; the terrestrial world or the earth symbolised by the heart and the navel; and the nether or lower world by the legs and the two thighs. It must be noted that the two earlobes stand for the two extreme directions of the cosmic globe. So, when the aspirant does Anga Nyas with any Mantra on these specific points, he symbolically purifies these points on his body and empowers them with the mystical and ethereal powers of the powerful forces of Nature which these Mantras embody as mystical formulas encrypting astounding dynamic energy and forces of creation. This is a perception which implies that the ethereal and mystical powers and potentials of the Mantras representing the stupendous forces of Nature that control creation, right from its conception to its development, growth, expansion, sustenance and conclusion, are invoked and established throughout the breadth and length of this visible creation manifested in the form of the body of the aspirant. In other words, the aspirant hopes that he would be empowered with all the glorious virtues and auspicious powers and stupendous potentials and majestic authority vested in the Viraat Purush at the cosmic level.

But at the same time this visualization of the body being a manifestation of the Viraat Purush carries a load of noble responsibility with it. If the worshipper is enlightened and wise enough so as to be doing the Anga Nyas with full understanding of its metaphysical and spiritual import, then he must also realise that he is not an ordinary mortal creature who indulges in the pursuit of worldly pleasures and comforts, or who thinks that success in this material world is the ultimate goal and criterion of success in life. On the other hand, he should endeavour to live a life of exemplary sacrifice and service, devoting his time on researching the ultimate Truth of his own self as well as the rest of creation; he must endeavour to fine out the way

to free himself from the endless cycle of birth and death, and ensure that he gets final emancipation and salvation in this very life itself. He must aim and find the source that would give him eternal peace and happiness as well as contentedness and bliss of fulfillment. Otherwise he would be wasting his precious time and energy in worthless and meaningless perfunctory rituals.]

The Dakshin Murti Upanishad of Krishna Yajur Veda, in its verse nos. 7, 9, 11-12, 14 describe the five forms of Shiva and how the five Beej Mantras dedicated to the different divine qualities that Shiva personifies are employed in doing Anga Nyas.

The Surya Upanishad of the Atharva Veda tradition, verse no. 1, says that the six basic vowel sounds of the Sanskrit language are used to do Shadanga Nyas when the worshipper prays to the Sun God by invoking the Mantras narrated in this particular Upanishad.

The Shuk Rahasya Upanishad of Krishna Yajur Veda tradition, in its verse no. 20 describes how the divine Mantra OM is used for this purpose.]

4. These Mantras should be tied in by saying (uttering) the three primal words, known as the Vyahritis, which are 'Bhu', 'Bhuvaha' and 'Swaha' representing the terrestrial world and its mortal creatures, the sky and its inhabitant creatures, and the heavens with their Gods and Spirits respectively. These Vyahritis should be prefixed with OM which is the greatest of Vyahritis.

[Thus, though not specifically mentioned in this Upanishad, the six Mantras of verse no. 3 would become as follows—

- (i) 'OM Bhu Bhuvaha Swaha OM Namō Bhagwate Angustaabhyam Namaha'.
- (ii) 'OM Bhu Bhuvaha Swaha Sri Maha-Garudaaye Tarjanibhyam Swaha'.
- (iii) 'OM Bhu Bhuvaha Swaha Pakshindraaye Madhyamaabhyam Vashat'.
- (iv) 'OM Bhu Bhuvaha Swaha Sri Vishnu-Vallabhaaye Anaamikaabhyam Hum'.
- (v) 'OM Bhu Bhuvaha Swaha Trelorkya-paripujyataaye Kanishtikaabhyam Vaushat'.
- (vi) 'OM Bhu Bhuvaha Swaha Ugra-bhyankar-kaalaanal-rupaaye Kartalkarpristabhyam Phat'.] (4).

5. [This verse is more in the form of a paragraph than being exactly like a verse in a poetry.]

Now, 'Dhyan', i.e. the process of meditation and contemplation upon the divine form of Lord Garud, is being described.

'The Lord's right leg is shaped like the symbol known as 'Swastika'. [The thigh bone, the shin bone and the foot are held at right angles to each other.]

The left leg is folded-in from the knee-joint. [The calf touches the rear of the thigh.]

The Lord holds both his hands in the Mudra (posture) known as 'Pranaam'. [It is sign of showing respect to others, and to welcome them. To do Pranaam, the person holds the hands in such a position that the flat surfaces of the two palms of the hands are placed against each other, with the fingers of one hand also touching the corresponding fingers of the other hand as the hands are bent at the elbow and held together in front of the chest.]

Lord Garud is very dear ('Vallabha') to Lord Hari (Vishnu).

He (Garud) holds the serpent known as 'Anant' in his left hand by wrapping it round his left wrist like a band.

The serpent known as 'Vasuki' is draped across his chest like a sacred thread.

The serpent known as 'Takshak' is worn by him like a girdle around the waist.

The serpent known as 'Karkot' is placed around his neck as if it is a garland or a necklace.

The serpent known as 'Padma' adorns his right ear like an ornament (an ear-ring), while the serpent known as 'Maha-Padma' adorns his left ear like another ornament (another ear-ring).

He wears the serpent known as 'Shankha' on his head like a crown, and the serpent known as 'Gulik' around his arms like an arm-band.

The two serpents known as 'Paundra' and 'Kaalika' are used as whisks.

He is being cheerfully served by such serpents as 'Ela' and 'Putrak'.

The Lord's eyes are coloured 'Kapil' (reddish-brown), and they glow with the radiance of pure gold. His arms are long. His shoulders are broad.

He is adorned by ornaments made up of serpents of various kinds.

His complexion is radiant like pure gold up to the knees, while the area around the waist is white like that of snow. The throat is red like 'Kumkum' (saffron mixed with vermillion). His face has the radiance of hundreds of full moons. The tip of his nose and mouth (lips) has a bluish hue.

He wears large ear-rings.

His mouth is horrifyingly fearful with ferocious jaws.

He wears a most brilliant crown on his head.

He has Kumkum smeared on his body, giving it a reddish tinge. His face is fair in complexion like the lily or lotus flower and the moon.

Oh the mount of Lord Vishnu! I bow before you. Please always take care of my welfare, protection and sustenance.'

The worshipper should meditate daily upon this divine form of Lord Garud, which is magnificently adorned with the ornaments of serpents, three times a day, i.e. at dawn, at noon and at dusk.

When Lord Garud is pleased with this worship he neutralizes all the poisons that may be tormenting the worshipper just as easily as fire burns a heap (bale) of cotton (5).

6. 'OM Namō Bhagwate Sri Maha-Garud'. [Briefly, it means 'I bow most reverentially to the Lord who is known as the Great Garud, the majestic Lord in the form of an Eagle or a Heron'.]

He is the king of birds. He is very dear to Lord Vishnu. He is worshipped by all the three worlds (i.e. by the terrestrial world, the heavenly world, and the nether world). He is very terrible, awe-inspiring, formidable, violent and sharp like the fire of the dooms day. He possesses hard, strong and unbreakable nails, beak, teeth and jaws. His tail is very sturdy and stiff. And the wings as well as the rest of his body are equally strong and sturdy.

You are most welcome, oh Lord Garud. Come and take your exalted seat that is reserved for you.

Remove or eliminate or neutralize the poison (in the form of negativity, unrighteousness, un-holiness, inauspiciousness, evilness and sins) that is being spread by those who are vile, wicked and evil.

Eliminate or neutralize the negative and horrifying consequences that accrue by even touching such poison. [That is, protect me even from the contact of such bad people.]

Remove from my vicinity and neutralize the venom of poisonous snakes (and other such reptiles and creatures) that creep or crawl.

Remove from my vicinity and neutralize even the poison that might be hidden from my sight. [That is, please protect me from poison of all kinds, whether it is visible or invisible.]

Destroy or neutralize all kind of poisons. Destroy them; burn them; neutralize them; eliminate them. Reduce all kinds of poisons to ashes (by burning them).

For this purpose, I (the worshipper) am offering this oblation to you (Garud) by saying 'Hum Phat Swaha'.

[After saying the above hymns to invoke the formidable power of Garud to neutralize all the bad effects of poisons of all kinds, the worshipper offers his oblations to the Lord by saying the Beej Mantra 'Hum Phat', which, simply put, means to crush anything and beat it to pulp or break it into smithereens. Here, it is the poison and its horrifying effects that are sought to be crushed and completely eliminated. Then, to wind-up the worship and the process of offering oblations, the word 'Swaha' is pronounced. 'Swaha' is believed to be the mouth of the sacred fire through which the latter accepts all offerings offered to the concerned deity by the worshipper.] (6).

7. You (Garud) are as radiant and splendorous as the full moon. [Or, you are surrounded by a divine halo that resembles the brilliant silvery light that surrounds the disc of the full moon.]

The sun is deemed to be present in your clenched fists. When you clench your fists, they radiate a high intensity burst of dynamic energy that resembles the disc of the sun in the sky which shines blindingly with an enormous amount of energy and splendour. [That is, when you clench your fists in preparation to strike or show your dynamic powers, they appear to be radiating so much energy and dynamism that one is extremely terrified to look at it just like one is terrified to look at the sun with the naked eye for fear of getting blinded.]

Similarly, the different Mudras (various postures of your body) that you adopt resemble the different contours of the earth. [The earth is not a smooth spherical ball. It is full of the profoundest variations in contours or features that one can ever imagine—for instance, there are sky-touching mountain peaks and ridges as well as deep gorges and valleys; there are flat lands as well as undulating mountain ranges; there are vast stretches of parched and dry land in the form of barren deserts on the one hand, and marshy and swampy land on the other hand; there are rivers and oceans; there are rich vibrant forests consisting of tall evergreen trees that are extremely attractive and enchanting, as well as algae, fungi, shrubs and plants of bland nature and stunted growth that do not seem to attract any attention towards themselves, or even endless stretches of barren rocks and boulders. The metaphor here is to indicate that like the features of the earth which are never the same at two places, the various Mudras in which Lord Garud sits are also never the same; they vary from time to time, and each time the Lord sits he adopts a new posture.]

Oh Lord Maha (Great) Garud! Please be kind to eliminate and neutralize all sorts of poisons. For this purpose, I am offering this oblation to you by saying the Beej Mantra 'Hum Phat Swaha'. (7).

8. 'OM Kship Swaha'. [The worshipper invokes the divine glory of Brahm, the Supreme Being, to offer his oblations to Lord Garud by saying OM and Swaha respectively. He requests Garud to throw away all the poisons far away from him so as to protect him from their horrible effects.] (8).

9. OM Salutations! All sorts of poisons that are being produced and have been accumulated over time in this world, poisons that are harmful to the other creatures ('Tatkaari') as well as for me ('Matkaari'), are neutralized and destroyed by the countering effects of the great knowledge that is narrated in this Upanishad. This is done by invoking the stupendous powers and dynamic energy of Lord Garud.

The most horrible of poisons that are produced and have accumulated over time in this world are neutralized and destroyed by the auspicious and countering effects of this esoteric and divine knowledge pertaining to Lord Garud. This knowledge as outlined in this Upanishad is so profound and a very powerful poison itself that no other poison can stand its onslaught. It is able to neutralize all other poisons and toxins effectively. This esoteric and mystical knowledge pertaining to poisons and how to neutralize them is in its self a great poison, for the simple reason that poison needs another poison to counter its ill and horrifying effects. [It is just like the case of one army being defeated by another army which is stronger than the first, or the case of the life-threatening effects of one wrong medicine being neutralized by another medicine that is its self a great poison if taken independently. This principle is used in the field of Homeopathy for the treatment of diseases, and also in the theory of vaccination.]

In helping to neutralize the horrifying poisons, this knowledge has proved to be as effective as the Vajra, the invincible and formidable weapon of Indra, the king of Gods.

I offer my respects and oblations to this great knowledge as well as to Vajra by saying 'Swaha'. (9).

[Note—Refer verse nos. 12-24 also.]

10. OM Namō Bhagwate Maha-Garudaaye! ['OM Salutations! I bow before the Lord known as the Great Garud'.]

He is the vehicle (mount) of Lord Vishnu. He is worshipped and honoured in the three worlds (i.e. in the terrestrial world, the heavenly world, and the nether world).

His strong, sturdy and sharp nails and beak are as strong, sturdy and sharp as Vajra, the invincible weapon of Indra, the king of Gods.

His body is adorned by wings which are equally strong and sturdy.

Oh Lord Garud! Please come; you are welcomed by me.

Oh Lord, please enter, and be kind to disperse, scatter away, throw away, neutralize, destroy or eliminate ('Chhindhi-Chhindhi') all poison that is present here.

For this purpose, I am offering this oblation to you by saying the Beej Mantra 'Hum Phat Swaha'. (10).

11. You (Lord Garud) have beautiful and magnificent wings. You are as dynamic as the Fire God.

The 'Stoms' (hymns or prayers that are incanted) having three stanzas or lines, known as the 'Trivitra Stoms', are your head, while the 'Stoms' known as 'Gayatra' are your eyes.

The two wings of yours personify the two types of 'Saams' (hymns that are sung) known as 'Brihat' and 'Rathanthar'.

The 'Yagya' (fire sacrifice or any other religious practice or deed) is represented by your inner-self where the Atma, the soul, lives. [That is, internally you are as holy and pure as the sacred fire of the sacrifice or the essential philosophy behind any religious act.]

All the 'Chandas' (style of composition of the hymns of the Vedas) are personified in the form of various parts of your divine body.

Your name is 'Yajur' signifying the fact that you personify the Yajur Veda itself.

The Saam known as 'Vamdeo' is your body, and the Saam known as 'Yagaayagi' is your tail. [That is, your body and tail are a personified form, and therefore as holy and sanctified, as these two hymns.]

The fire known as 'Dhishnaya' is personified as your nails. [That is, your nails are as scorching as this fire.]

Oh Lord Garud with beautiful wings! Please rise up and move up high in the sky towards the sun and attain the heaven (11).

12. This divine and most esoteric knowledge was revealed in some ancient time on the new moon and the full moon days.

All sorts of great poisons that harm other creatures as well as me are destroyed and neutralized by the auspicious and dynamic eliminating effects of the mystical and esoteric knowledge as narrated in this Upanishad dedicated to Lord Garud.

The most horrible of poisons that are produced and have accumulated over time in this world are neutralized and destroyed by the auspicious and countering effects of this esoteric and divine knowledge pertaining to Lord Garud. This knowledge as outlined in this Upanishad is so profound and a very powerful poison itself that no other poison can stand its onslaught. It is able to neutralize all other poisons and toxins effectively. This esoteric and mystical knowledge pertaining to poisons and how to neutralize them is in its self a great poison for the simple reason that poison needs another poison to counter its ill and horrifying effects.

In helping to neutralize the horrifying poisons, this knowledge has proved to be as effective as the Vajra, the invincible and formidable weapon of Indra, the king of Gods.

I offer my (respects and) oblations to this great knowledge as well as to Vajra by saying 'Swaha'. (12).

[Note—Refer verse nos. 9, 13-24.]

13. Oh Tatt-strayam! [Salutations to the knowledge and the deity of this knowledge which together are able to destroy and neutralize the horrifying effects of the most venomous of poisons and toxins.]

All sorts of great poisons that either may be a personified form of 'Anantak' serpent or a messenger of 'Anantak' that harm other creatures as well as me are destroyed and neutralized by the auspicious and dynamic eliminating effects of the mystical and esoteric knowledge as narrated in this Upanishad dedicated to Lord Garud. ['Anantak' is one of the forms of venomous serpents in creation.]

The most horrible of poisons that are produced and have accumulated over time in this world are neutralized and destroyed by the auspicious and countering effects of this esoteric and divine knowledge pertaining to Lord Garud. This knowledge as outlined in this Upanishad is so profound and a very powerful poison itself that no other poison can stand its onslaught. It is able to neutralize all other poisons and toxins effectively. This esoteric and mystical knowledge pertaining to poisons and how to neutralize them is in its self a great poison for the simple reason that poison needs another poison to counter its ill and horrifying effects.

In helping to neutralize the horrifying poisons, this knowledge has proved to be as effective as the Vajra, the invincible and formidable weapon of Indra, the king of Gods.

I offer my (respects and) oblations to this great knowledge as well as to Vajra by saying 'Swaha'. (13).

[Note—Refer verse nos. 9, 12-24.]

14. All sorts of great poisons that either may be a personified form of 'Vasuki' serpent or a messenger of 'Vasuki' that harm other creatures as well as me are destroyed and neutralized by the auspicious and dynamic eliminating effects of the mystical and esoteric knowledge as narrated in this Upanishad dedicated to Lord Garud. ['Vasuki' is another form of venomous serpents in creation.]

The most horrible of poisons that are produced and have accumulated over time in this world are neutralized and destroyed by the auspicious and countering effects of this esoteric and divine knowledge pertaining to Lord Garud. This knowledge as outlined in this Upanishad is so profound and a very powerful poison itself that no other poison can stand its onslaught. It is able to neutralize all other poisons and toxins effectively. This esoteric and mystical knowledge pertaining to poisons and how to neutralize them is in its self a great poison for the simple reason that poison needs another poison to counter its ill and horrifying effects.

In helping to neutralize the horrifying poisons, this knowledge has proved to be as effective as the Vajra, the invincible and formidable weapon of Indra, the king of Gods.

I offer my (respects and) oblations to this great knowledge as well as to Vajra by saying 'Swaha'. (14).

[Note—Refer verse nos. 9, 12-13, 15-24.]

15. All sorts of great poisons that either may be a personified form of 'Takshak' serpent or a messenger of 'Takshak' that harm other creatures as well as me are destroyed and neutralized by the auspicious and dynamic eliminating effects of the mystical and esoteric knowledge as narrated in this Upanishad dedicated to Lord Garud. ['Takshak' is one of the many forms of venomous serpents in creation.]

The most horrible of poisons that are produced and have accumulated over time in this world are neutralized and destroyed by the auspicious and countering effects of this esoteric and divine knowledge pertaining to Lord Garud. This knowledge as outlined in this Upanishad is so profound and a very powerful poison itself that no other poison can stand its onslaught. It is able to neutralize all other poisons and toxins effectively. This esoteric and mystical knowledge pertaining to poisons and how to neutralize them is in its self a great poison for the simple reason that poison needs another poison to counter its ill and horrifying effects.

In helping to neutralize the horrifying poisons, this knowledge has proved to be as effective as the Vajra, the invincible and formidable weapon of Indra, the king of Gods.

I offer my (respects and) oblations to this great knowledge as well as to Vajra by saying 'Swaha'. (15).

[Note—Refer verse nos. 9, 12-14, 16-24.]

16. All sorts of great poisons that either may be a personified form of 'Karkotak' serpent or a messenger of 'Karkotak' that harm other creatures as well as me are destroyed and neutralized by the auspicious and dynamic eliminating effects of the

mystical and esoteric knowledge as narrated in this Upanishad dedicated to Lord Garud. ['Karkotak' is one of the many forms of venomous serpents in creation.]

The most horrible of poisons that are produced and have accumulated over time in this world are neutralized and destroyed by the auspicious and countering effects of this esoteric and divine knowledge pertaining to Lord Garud. This knowledge as outlined in this Upanishad is so profound and a very powerful poison itself that no other poison can stand its onslaught. It is able to neutralize all other poisons and toxins effectively. This esoteric and mystical knowledge pertaining to poisons and how to neutralize them is in its self a great poison for the simple reason that poison needs another poison to counter its ill and horrifying effects.

In helping to neutralize the horrifying poisons, this knowledge has proved to be as effective as the Vajra, the invincible and formidable weapon of Indra, the king of Gods.

I offer my (respects and) oblations to this great knowledge as well as to Vajra by saying 'Swaha'. (16).

[Note—Refer verse nos. 9, 12-15, 17-24.]

17. All sorts of great poisons that either may be a personified form of 'Padmak' serpent or a messenger of 'Padmak' that harm other creatures as well as me are destroyed and neutralized by the auspicious and dynamic eliminating effects of the mystical and esoteric knowledge as narrated in this Upanishad dedicated to Lord Garud. ['Padmak' is one of the many forms of venomous serpents in creation.]

The most horrible of poisons that are produced and have accumulated over time in this world are neutralized and destroyed by the auspicious and countering effects of this esoteric and divine knowledge pertaining to Lord Garud. This knowledge as outlined in this Upanishad is so profound and a very powerful poison itself that no other poison can stand its onslaught. It is able to neutralize all other poisons and toxins effectively. This esoteric and mystical knowledge pertaining to poisons and how to neutralize them is in its self a great poison for the simple reason that poison needs another poison to counter its ill and horrifying effects.

In helping to neutralize the horrifying poisons, this knowledge has proved to be as effective as the Vajra, the invincible and formidable weapon of Indra, the king of Gods.

I offer my (respects and) oblations to this great knowledge as well as to Vajra by saying 'Swaha'. (17).

[Note—Refer verse nos. 9, 12-16, 18-24.]

18. All sorts of great poisons that either may be a personified form of 'Maha-Padmak' serpent or a messenger of 'Maha-Padmak' that harm other creatures as well as me are destroyed and neutralized by the auspicious and dynamic eliminating effects of the mystical and esoteric knowledge as narrated in this Upanishad dedicated to Lord Garud. ['Maha-Padmak' is the senior serpent to the one known as Padmak, and it is one of the many forms of venomous serpents in creation.]

The most horrible of poisons that are produced and have accumulated over time in this world are neutralized and destroyed by the auspicious and countering effects of this esoteric and divine knowledge pertaining to Lord Garud. This knowledge as outlined in this Upanishad is so profound and a very powerful poison itself that no other poison can stand its onslaught. It is able to neutralize all other poisons and toxins effectively. This esoteric and mystical knowledge pertaining to

poisons and how to neutralize them is in its self a great poison for the simple reason that poison needs another poison to counter its ill and horrifying effects.

In helping to neutralize the horrifying poisons, this knowledge has proved to be as effective as the Vajra, the invincible and formidable weapon of Indra, the king of Gods.

I offer my (respects and) oblations to this great knowledge as well as to Vajra by saying 'Swaha'. (18).

[Note—Refer verse nos. 9, 12-17, 19-24.]

19. All sorts of great poisons that either may be a personified form of 'Shankhak' serpent or a messenger of 'Shankhak' that harm other creatures as well as me are destroyed and neutralized by the auspicious and dynamic eliminating effects of the mystical and esoteric knowledge as narrated in this Upanishad dedicated to Lord Garud. ['Shankhak' is one of the many forms of venomous serpents in creation.]

The most horrible of poisons that are produced and have accumulated over time in this world are neutralized and destroyed by the auspicious and countering effects of this esoteric and divine knowledge pertaining to Lord Garud. This knowledge as outlined in this Upanishad is so profound and a very powerful poison itself that no other poison can stand its onslaught. It is able to neutralize all other poisons and toxins effectively. This esoteric and mystical knowledge pertaining to poisons and how to neutralize them is in its self a great poison for the simple reason that poison needs another poison to counter its ill and horrifying effects.

In helping to neutralize the horrifying poisons, this knowledge has proved to be as effective as the Vajra, the invincible and formidable weapon of Indra, the king of Gods.

I offer my (respects and) oblations to this great knowledge as well as to Vajra by saying 'Swaha'. (19).

[Note—Refer verse nos. 9, 12-18, 20-24.]

20. All sorts of great poisons that either may be a personified form of 'Gulik' serpent or a messenger of 'Gulik' that harm other creatures as well as me are destroyed and neutralized by the auspicious and dynamic eliminating effects of the mystical and esoteric knowledge as narrated in this Upanishad dedicated to Lord Garud. ['Gulik' is one of the many forms of venomous serpents in creation.]

The most horrible of poisons that are produced and have accumulated over time in this world are neutralized and destroyed by the auspicious and countering effects of this esoteric and divine knowledge pertaining to Lord Garud. This knowledge as outlined in this Upanishad is so profound and a very powerful poison itself that no other poison can stand its onslaught. It is able to neutralize all other poisons and toxins effectively. This esoteric and mystical knowledge pertaining to poisons and how to neutralize them is in its self a great poison for the simple reason that poison needs another poison to counter its ill and horrifying effects.

In helping to neutralize the horrifying poisons, this knowledge has proved to be as effective as the Vajra, the invincible and formidable weapon of Indra, the king of Gods.

I offer my (respects and) oblations to this great knowledge as well as to Vajra by saying 'Swaha'. (20).

[Note—Refer verse nos. 9, 12-19, 22-24.]

21. All sorts of great poisons that either may be a personified form of 'Paundrakaalik' serpent or a messenger of 'Paundrakaalik' that harm other creatures as well as me are destroyed and neutralized by the auspicious and dynamic eliminating effects of the mystical and esoteric knowledge as narrated in this Upanishad dedicated to Lord Garud. ['Paundrakaalik' is one of the many forms of venomous serpents in creation.]

The most horrible of poisons that are produced and have accumulated over time in this world are neutralized and destroyed by the auspicious and countering effects of this esoteric and divine knowledge pertaining to Lord Garud. This knowledge as outlined in this Upanishad is so profound and a very powerful poison itself that no other poison can stand its onslaught. It is able to neutralize all other poisons and toxins effectively. This esoteric and mystical knowledge pertaining to poisons and how to neutralize them is in its self a great poison for the simple reason that poison needs another poison to counter its ill and horrifying effects.

In helping to neutralize the horrifying poisons, this knowledge has proved to be as effective as the Vajra, the invincible and formidable weapon of Indra, the king of Gods.

I offer my (respects and) oblations to this great knowledge as well as to Vajra by saying 'Swaha'. (21).

[Note—Refer verse nos. 9, 12-20, 22-24.]

22. All sorts of great poisons that either may be a personified form of 'Naagak' serpent or a messenger of 'Naagak' that harm other creatures as well as me are destroyed and neutralized by the auspicious and dynamic eliminating effects of the mystical and esoteric knowledge as narrated in this Upanishad dedicated to Lord Garud. ['Naagak' is one of the many forms of venomous serpents in creation.]

The most horrible of poisons that are produced and have accumulated over time in this world are neutralized and destroyed by the auspicious and countering effects of this esoteric and divine knowledge pertaining to Lord Garud. This knowledge as outlined in this Upanishad is so profound and a very powerful poison itself that no other poison can stand its onslaught. It is able to neutralize all other poisons and toxins effectively. This esoteric and mystical knowledge pertaining to poisons and how to neutralize them is in its self a great poison for the simple reason that poison needs another poison to counter its ill and horrifying effects.

In helping to neutralize the horrifying poisons, this knowledge has proved to be as effective as the Vajra, the invincible and formidable weapon of Indra, the king of Gods.

I offer my (respects and) oblations to this great knowledge as well as to Vajra by saying 'Swaha'. (22).

[Note—Refer verse nos. 9, 12-21, 23-24.]

23. All sorts of great poisons that are represented by poisonous creatures such as the spider, small or big, the scorpion, the fast moving serpents, or any other kind of harmful and poisonous creatures that exist in this world consisting of mobile as well as immobile things, whether such poisonous creatures harm other innocent creatures of this creation or harm me who have done nothing wrong—all such poisons and their bearers (i.e. the poisonous creatures cited here as instances) are eliminated and destroyed by the dynamic powers inherent in this esoteric knowledge pertaining to Lord Garud as narrated in this Upanishad.

The most horrible of poisons that are produced and have accumulated over time in this world are neutralized and destroyed by the auspicious and countering

effects of this esoteric and divine knowledge pertaining to Lord Garud. This knowledge as outlined in this Upanishad is so profound and a very powerful poison itself that no other poison can stand its onslaught. It is able to neutralize all other poisons and toxins effectively. This esoteric and mystical knowledge pertaining to poisons and how to neutralize them is in its self a great poison for the simple reason that poison needs another poison to counter its ill and horrifying effects.

In helping to neutralize the horrifying poisons, this knowledge has proved to be as effective as the Vajra, the invincible and formidable weapon of Indra, the king of Gods.

I offer my (respects and) oblations to this great knowledge as well as to Vajra by saying 'Swaha'. (23).

[Note—Refer verse nos. 9, 12-22, 24.]

24. All the great serpents in creation, such as Anantak, Vasuki, Takshak, Karkotak, Padmak, Maha-Padmak, Shankhak, Gulik, Paundrakaalik etc. along with their ancestors and descendents, other poisonous and ferocious creatures that bite and spread poison, such as the ones having a poisonous beak, poisonous teeth, poisonous jaws, poisonous body or poisonous tail, other poisonous creatures that roam around everywhere in this world and spread poison by their bite, such as the poisonous scorpion, the poisonous spider, the poisonous rat, the poisonous musk-rat or mole, the poisonous lizard, the poisonous ants, insects, worms and maggots that infest households and live in crevices in the floor, the wall etc., the white-ant, those poisonous and harmful creatures that live on plants, trees and twigs, their leaves, stems, bark, roots, branches, flowers and fruits etc., those poisonous and harmful creatures that live in holes in trees or earth, other poisonous and harmful animals such as monkeys, dogs, cats, jackals, lions, wild boar, those harmful creatures that are born from an embryo (like mammals), or from an egg (like birds), or from seeds (like trees and herbs), or from sweat and slime (such as leech), other harmful creatures that attack either with a weapon held in hand (like one's enemy who hits with a baton or club) or by throwing the weapon (such as an arrow or spear), other poisonous and harmful creatures that live in festering wounds and injuries, all sorts of poisons which may be either naturally produced in Nature or are artificially made, all ferocious and cruel creatures that torment and terrify others without rhyme or reason such as ghosts, phantoms, ogres, vampires, goblins, demons, Satan etc.—no matter who they are and what type of poison or toxin it is, all of them are destroyed, crushed, eliminated and neutralized by the auspicious and dynamic energy and force of this esoteric knowledge pertaining to Lord Garud as narrated in this Upanishad.

This knowledge is so powerful that it sucks and destroys up all sorts of poisons or poisonous creatures that cause harm to others as well as to me. It crushes them; it vanquishes them; it burns them; it reduces them to ashes; it neutralizes them.

Let this great knowledge and its patron deity (Lord Garud) completely eliminate them all, destroy them, kill them and neutralize them all.

This esoteric knowledge destroys the most ferocious of poisons, whether they are out in the open and clearly visible (such as rats, lizards, snakes etc.) or are hidden from view (such as bed-bugs hidden in mattresses, or germs and viruses that infect wounds).

In helping to neutralize the horrifying poisons, this knowledge has proved to be as effective as the Vajra, the invincible and formidable weapon of Indra, the king of Gods.

I offer my (respects and) oblations to this great knowledge as well as to Vajra by saying 'Swaha'. (24).

[Note—Refer verse nos. 9, 12-23.]

25. A worshipper who reads, studies or hears this Upanishad on the day of the new moon is not bitten by serpents as long as he lives.

Success in practicing this mystical esoteric knowledge (that enables a person to neutralize the effects of snake bites or other poisonous creatures) is achieved by initiating eight other Brahmins in to this knowledge and using herbs and other medicinal twigs for the purpose of neutralizing the poison.

[The edict necessitating initiation of eight Brahmins is to propagate this knowledge, because in ancient times a great number of people perhaps used to die due to bite of snakes and other poisonous creatures due to lack of modern medical treatment. The term 'Brahmin' should not be taken too literally, for it implies anyone who may be interested to learn and practice this knowledge whereby he can serve humanity by anti-doting poisons and it's attending sufferance. The herbs and other medicinal plants were used for their great antidotal properties that countered the horrific effects of the poison.]

If a hundred Brahmins are initiated, then the person who practices this esoteric knowledge becomes so mystically empowered that he can neutralize the poison by merely his magical sight. [That is, if he merely sees a man bitten by a poisonous snake, the bitten man begins to recover as if by magic, such strong and effective becomes his sight. His sight acquires such mystical powers that they help to burn the affected cells and prevent the poison from spreading and harming the other parts of the body. In modern age we have examples of such rays that can help burn cancerous tissues in the body so that the rest of the body is prevented from undergoing more harm.]

If a thousand Brahmins are initiated, then the person who practices this esoteric knowledge becomes so mystically empowered that he can neutralize the poison by merely determining to do so. [That is, he would not even need to see the patient or use any kind of herbs in order to antidote the poison.]

The poisonous effect of a serpent's bite is not so easily countered or neutralized or anti-doted by merely the use of water, herbs, medicinal twigs and wood or bark of such medicinal plants (without the help of magical occult powers obtained by mastering the technique of doing so by becoming an expert in this Upanishad's esoteric knowledge). [That is, poison cannot be neutralized by merely washing the wound with water or applying any herbal medicines. Some divine intercession is necessary to actually give relief from the poison. And the Mantras of this Upanishad come in very handy here.]

This is how the creator Brahma had revealed this great Upanishad to the assembled sages and seers for the general good of the creation at large. Amen! (25).

---Shanti Paath---

-----*****THE END-----*****-----

Appendix no. 1

The Śānti Pāṭha of Atharva Veda:

ॐ_भद्रं_कर्णेभिः_शृणुयाम_देवा_भद्रं_पश्येमाक्षभिर्यजत्राः_।_।_
 स्थिरैरङ्गैस्तुष्टुवाꣳसस्तनूभिर्व्यशेम_देवहितं_यदायुः_।।_
 स्वस्ति_न_इन्द्रो_वृद्धश्रवाः_स्वस्ति_नः_पूषा_विश्ववेदाः_।_
 स्वस्ति_नस्ताक्ष्यो_अरिष्टनेमिः_स्वस्ति_नो_बृहस्पतिर्दधातु_।।_
 ॐ_शान्तिः_!_शान्तिः_!!_शान्तिः_!!!_

om bhadraṃ karṇēbhiḥ śṛṇuyāma dēvāḥ bhadraṃ paśyēmākṣabhiryajatrāḥ /
 sthiraṅgaistuṣṭuvāṁsastanūbhirvyāśēma dēvahitaṃ yadāyuh //
 svasti na indro vṛddhaśravāḥ svasti naḥ pūṣā viśvavēdāḥ /
 svasti nastākṣyo ariṣṭanēmiḥ svasti no bṛhaspatirdadhātu //

om śāntiḥ! śāntiḥ!! śāntiḥ!!!

The Shanti Paath has the following meaning—‘OM salutations! The disciples who are studying the scriptures at the place of their Guru (teacher, moral preceptor, guide) remember the Gods and pray to them for the welfare and good of their teacher, their fellow students as well as the human race as a whole— ‘Oh Gods! Let us hear auspicious and noble things with our ears. Criticism of others, finding faults with them, useless gossip, cynicism, cursing and use of foul as well as abusive language, profanities, expletives and all other types of non-righteous, uncultured, uncivilised and unwarranted sinful words should not enter our ears. Let our lives be devoted to and focused on the Lord God! Let us spend our time in his worship and honour. Not only the ears, but let our eyes too see good things only. Let not our eyes be ever attracted towards or enchanted by any sight or scene that is inauspicious, unrighteous, un-virtuous, detestable, abhorable, corruptible and degrading, perverting or depraving for the mind-heart-intellect complex. In short, let our views and sights be pure. Let our body, every part of it, be able, strong and healthy so that we can be fit enough to praise, worship, honour, serve and revere the Lord God (because an unfit, diseased and decrepit body is a great burden and hindrance in life of the seeker/aspirant). Let our age and life not be spent in the gratification of the sense organs or enjoyment of the materialistic world, or be frittered away in indolence and lethargy. Our lives should be used for the work of the Lord God (i.e., we can do righteous and selfless deeds of all kinds). They whose fame is spread in all the direction, i.e., the king of Gods named Indra, the all-knowing Pusha, the bird who can eliminate/remove all sorrows, misers, distresses, troubles and tribulations of all kinds, i.e. Garud, the legendary eagle/heron, as well as the Lord of wisdom and intelligence, Lord Brihaspati—all of them are the various manifestations and extension of the Lord’s excellence, majesty, magnificent glories, stupendous powers and supreme dignity. Let

them all sustain, enhance and nourish all that which is good for us. Their grace and kindness will give well-being and auspiciousness to all the creatures including us. Let all the torments pertaining to this existence be calmed down. [The so-called three 'Traitaps' are the torments that the creature is subjected to due to his body such as illness, old age; due to other worldly creatures such as fear from the king, thieves etc.; due to the malignant stars and opposed Gods.]

Let us have peace. Let us have peace. Let us have peace.'

-----*****-----

Appendix no. 2

Pran Sukta

The 'Pran Sukta' is the fourth Sukta (hymn) of the eleventh Kanda (Canto or Section) of the Atharva Veda. It has a total of twenty-six verses. In relation to the Upanishads, the word 'Pran' has a universal application and a special relevance and significance. Technically the word 'Pran' means anything that injects or infuses 'life-consciousness' in this creation. So all those entities that do so, and upon which life depends in this creation, come under the ambit and definition of 'Pran'. For instance, such eclectic entities as Brahm, Atma and the vital winds are implied when we use the term Pran. Since Pran also means something which is very dear to someone, something that is the essence and the fundamental basis or the foundation of everything else, these entities fit in very well with the definition of Pran. Nothing can live or survive without the Pran. It is the Pran that gives happiness, joy and cheer to the world. Personified as a supreme God, it is the center of creation around which the existence of the rest of the Gods personifying other factors of creation rests. The Pran is like the hub of the wheel of creation.

In the context of the present volume of the Atharva Veda Upanishads, this 'Pran Sukta' has special relevance to the Prashna Upanishad which is its Chapter 1. In this Upanishad, the importance and significance of the Pran in its different connotations has been explained.

In this Sukta, Pran, the life-conscious factor in this creation revealed in the form of 'vital winds', is treated as being synonymous with the Supreme Being and shown equal reverence because without Pran no life is tenable in this world. The Rishi of this Sukta, i.e. the sage who had first conceptualized or formulated this hymn, was Bhargava Vaidarbhi.

Pran has been lauded as the most exalted and powerful of all the elements in creation, as being all-pervading and omnipresent in the living world, as being the entity that injects life and consciousness in this creation, and as being the essence life-sustaining force present in all herbs and food that sustain life in this world. Therefore, it deserves the greatest of respect and honour.

This omnipresent and universal form of the Supreme Being known as the 'Pran' though assumes many forms, such as the main Pran, and other forms of it, such as Apaana, Samaana, Vyan and Udaan, in order to smoothly carry out multifarious activities of this creation. Obviously therefore, all the aspects of Pran are like various manifestations of the same Lord that he took to effectively regulate and keep the wheel of life turning without a hitch. Perhaps this was the first instance of the doctrine of 'delegation of authority' whereby the Supreme Being first appointed an entity known as Pran to supervise 'life' in this creation on his behalf, vested it with full powers and authority that were no less than the Lord exercising them directly, then created various subsidiary Prans to help the main Pran to smoothly carry out its functions and duties. All of them acted on behalf of the Supreme Being, and therefore represented him.

-----***-----

1. I bow before Pran on which the whole world is dependant for its survival. It is the Lord of all life in this creation; the entire world lives or survives due to it (1).

2. Salutations to Pran; I bow before you. I bow before Pran that roars and thunders. I bow before Pran that rumbles and reverberates as the thunder of the cloud. I bow before Pran that shines brilliantly and dazzles in the clouds as lightening. I bow before Pran that inspires rains to fall, or which itself falls as rain (to inject life in earth). (2).

3. Oh Pran! When you rumble and thunder in the clouds in the presence of medicinal herbs, the latter are invigorated; they feel a surge in their inherent curative properties, energy, strength and dynamism that sustains a healthy life on earth; they become pregnant (rich) with such virtues; they grow and develop in various ways.

[In other words, the plants with curative and medicinal properties, symbolizing all life-sustaining plants on earth, are rejuvenated when it is time for rainfall, or during the rainy season. The appearance of clouds that bring rain as a harbinger of life injects new cheer in them. They flourish in the presence of rains; they develop and grow when it starts to rain during the rainy season. In fact, all life on earth is directly dependant upon rainfall, and the rumbling in the clouds is a sign of the cloud harboring the unique life-conscious factor known as 'Pran' in its bosom. This ability of the clouds to inject life into this world makes them equivalent to the Supreme Being who does the same.] (3).

4. Oh Pran! As soon as the rainy season approaches, you become excited and active, roaring enthusiastically and girdling yourself to actively participate in activating and supporting the various life-sustaining elements that were hitherto lying dormant in the medicinal plants that sustain life on earth. [That is, with the approach of the rainy season, the vital life-sustaining factors in the plants find renewed energy and vigour. They are activated and the plants flourish with new life injected in them when the heat and parched conditions of the previous summer are replaced with abundant rainfall and vibrant greenery. All the life-supporting factors thrive and flourish during the rainy season.]

When this happens, all forms of life and whatever that exists on earth feel extremely fortunate, exhilarated and happy (because they are injected with fresh vigour and a resurgence of life-supporting energy) (4).

5. When Pran (i.e. the Supreme Being) showers his munificence and benevolence upon this earth in the form of rainfall, all animals are extremely exhilarated, thinking that now they would certainly be able to grow and multiply. [This is because with abundant rainfall, there would be an abundant supply of fresh grass and other green plants upon which the animals depend for food and nourishment that is needed for their survival and growth.] (5).

6. When rain falls upon the medicinal plants (herbs and other green plants that are essential for healthy life on earth), the latter offer their thanks to the Pran (the Supreme Being), saying, 'Oh Pran! You have enhanced our lives and made us fragrant. You have helped us flourish, rejuvenated us, and infused a fresh lease of life in us; we would have withered and died had there been no rain. So we thank you very much for your graciousness, compassion, benevolence and munificence.' (6).

7. I bow and pay my obeisance to the Pran that comes in, as well as the Pran that goes out. [This has reference to 'breath', both inhalation and exhalation respectively, that sustain life inside the creature's body.]

I bow and pay my obeisance to the Pran that does not move, and the Pran that sits quietly. [This has reference to the other forms of vital winds inside the creature's body that sustain life in it besides the vital wind known as 'breath' or Pran. These other forms of Pran are known as Apaana, Samaana, Udaana and Vyana. They are said to be 'sitting quietly' or 'not moving' because unlike the breath whose movement in and out of the body can be actually observed and experienced, the activities of the other Prans are very subtle, secret and indiscernible. Every one of us can actually feel the way the breath comes in and goes out of the body, and its movement is clearly marked by the expansion and contraction of the chest, but the movement of the other vital winds inside the body can never be experienced or felt, though they are also constantly active and perpetually on the move.] (7).

8. Salutations to Pran. I bow before you who do everything in this life and enable the creature to do everything that he wants to do. I bow before you (Pran) who does the work described as being done by Apaana wind. I bow before the Pran which moves forward and backward (as breath). I offer my obeisance to you who does everything in this world (8).

[Note—See note of verse no. 9 below.]

9. Oh Pran! Please grant me a long life by sustaining this body that is so dear to me. At the same time, keep your various forms or manifestations that are life-sustaining also active and performing in their prime shape for an equally long time.

[All the activities of the body are directly or indirectly controlled and regulated by the vital winds collectively known as Pran. So if one wishes to have a long and healthy life, it is imperative that his vital winds too function normally and healthily. Life and Pran go hand-in-hand; one cannot live divorced from the other.]

Please also bless me for lifetime with your curative and healing powers (9).

[Note—'Pran' is a general term used to designate the vital wind that is present in the creature's body and supports life in it. It has been given many names depending upon the functions that the vital wind performs inside the body. Basically, there are five names given to Pran—they are (i) 'Pran', (ii) 'Apaana', (iii) 'Vyana', (iv) 'Udaana', and (v) 'Samaana'.

(i) The 'Pran' wind is responsible for breath and expelling mucous in the form of cough. (ii) The 'Apaana' wind is responsible for expelling stool and urine from the body, thereby eliminating toxic wastes which would poison the body if allowed to remain in it. It also helps in the movement of food in the intestines and therefore its digestion. (iii) The 'Vyana' wind is responsible for accepting or giving away anything. (iv) The 'Udaana' wind is responsible for lifting the body. (v) The 'Samaana' wind is responsible for nourishing the body (as it takes the nutrients to all the parts of the body), and maintaining uniformity and balance in the body. (vi) The 'Naaga' wind is responsible for belching and excreting of contaminated or polluted wind through the throat and mouth. (vii) The 'Kurma' wind is responsible for closing and opening of the eyelids. (viii) The 'Krikan' wind is responsible for hunger and appetite. (ix) The 'Devadutta' wind is responsible for creating laziness, lethargy and inertia. (x) The 'Dhananjaya' wind is responsible for creating cough and other types of mucous that help to expel infection from the body (in association with the Apaana, the Naaga and the Pran winds.)

10. Just like a father lives with his sons who are very dear and compatible to him, the Pran too lives happily with all his subjects, whether they are mobile (such as animals) or immobile (such as plants). Pran is the de-facto Lord and God for all of them. [No life is tenable in this world without Pran. Hence, Pran is as revered and important as God, and is always shown the greatest of respect as one would show to one's Lord.] (10).

11. Pran is 'death' as well as 'the life and its strength, vitality and dynamism'.

[Pran is 'death' as proved when accumulation of wind inside the body makes it bloat and eventually cause death of the creature. If Pran leaves one single organ, it 'dies' or becomes paralyzed inspite of the rest of the body remaining alive and active. Pran also is the only factor without which the body would not be able to live and do anything, and therefore Pran is its life and vitality.

This fact has been excellently brought out in the Sam Veda's Chandogya Upanishad, Canto 5, section 1, and the Shukla Yajur Veda's Brihad Aranyak Upanishad, Canto 1, Brahman 3, and Canto 6, Brahman 1, verse nos. 8-14.]

This is why all the Gods pay their respects to Pran and offer their prayers to it. It is the Pran that takes a truthful person to the most exalted stature amongst his peers, or to an abode that is equivalent to attaining God-hood.

[This refers to various methods by which a spiritual aspirant performs auspicious and righteous deeds which enhance his spiritual stature. All activities need an active participation of Pran or vital winds in the body to enable the body to actually implement the desire of the creature. If the Pran fails to help the creature then no matter how auspicious and noble his thoughts and desires are he would not be able to implement any of them. Even to worship Gods, the Pran is needed; even to do Yagya (fire sacrifices) and Yoga (meditation), the Pran plays vital role.] (11).

12. Pran has special radiance and energy. Pran is the universal inspirer and motivator. This is why all worship and honour Pran. The Sun, the Moon and Prajapati (Brahma the creator or those senior Gods who look after the well-being of this creation) are manifestations of Pran. [This is because they help sustain life in this world.] (12).

13. Pran and Apaana are like rice and barley. The main Pran (breath) is like the bull. Barley is like 'Pran' while rice is akin to 'Apaana'. That is, both are the two sides of the same coin.

[Pran and Apaana are the two essential vital winds in the creature's body that help it to survive just like the cereals barley and rice that help the man to survive by providing the basic staple food and nutrition to him. The main Pran, i.e. the breath, is like a 'bull' as it is the breath that is the driving force inside the body that is primarily responsible for its life, for no one can live if the breath is suffocated, just like the bull which is primarily responsible for harvesting and thrashing of grain. It must be remembered that in ancient times when these hymns were written, the society was primarily agrarian, depending upon old methods of cultivation and harvesting of crops. The bull and the plough were the only means available to the farmer, and hence if there was no bull there would be no rice or barley because there will be no cultivation and no harvest. As a matter of fact, without the bull there would be nothing to eat as no crops would be grown and harvested.

The main Pran cited here is the 'breath' for obvious reasons—if one stops to breathe, the body dies and no other wind is able to keep it alive. A dead body neither needs any food nor has it got any value for the other winds. Therefore, the breath

known as the Chief Pran is compared to the ‘bull’ without which the plough of life cannot be pulled.] (13).

14. All living beings take and give (like a commercial transaction) the two vital winds known as Pran and Apaana while he lives inside a mother’s womb. Oh Pran! It is when you motivate or impel him that he takes birth as a new-born infant in this world.

[Just like people depend upon essential commodities for doing commerce in order to gain wealth and prosperity as well as for their financial well-being and survival, the creature depends upon the two vital winds known as Pran and Apaana for his own survival, growth and development in a mother’s womb. When the time is ripe for birth, the creature is ejected from the mother’s womb out into the world by the joint efforts of the vital winds of the mother’s body that generate sufficient pressure and energy to help the infant come out of the womb, and the vital winds present inside the body of the unborn infant which help him to make its own efforts to wriggle out of the dark cavern-like environs of the womb.

The vital winds continue to play important role in the newly born infant’s life as they enable the latter to survive independently once it comes out of the womb.

The body of the infant is very delicate and fragile, and had the vital winds not given it their support the infant would die within seconds of birth. No mother can save the child if the latter is not supported by the vital winds from the inside.] (14).

15. Pran is known as ‘Maatarishwa’¹, and vital winds (that sustain life) are collectively known as Pran. Whatever that existed in the past, shall exist in the future, and that exists in the present—all have their existence due to Pran (15).

[Note—¹*Maatarishwa*—He is one of the forms of the Fire God. The Devi Upanishad of the Atharva Veda, verse no. 14 asserts that he is one of the revealed form of Mother Goddess representing the dynamic powers of Brahm as revealed in the Fire God himself.]

16. It is only till the time you provide the energy, the impetus and the inspiration that medicines or remedies known as Aatharvani (those discovered by sage Aatharvan), as Aangirasi (those discovered by sage Aangiras), and as Daivi (those produced by Gods and Mother Nature), as well as those that have been described as human discoveries or creations give the desired result.

[That is, only when the Supreme Being in the form of Pran so wishes that any given medicine, no matter how well selected and potent it is, would cure a disease. Otherwise nothing works. There is another interpretation—it is only till the time that the vital winds function in a well-balanced manner in the body of the creature that any sudden afflictions of the body such as infections or injuries can be cured by administering of medicines. If the vital life forces in a man’s body have become sluggish or have stopped being active, then no matter which medicine is given to him he would never recover. It is not the credit or the discredit of a medicine that the man is cured or remains sick, but everything depends upon the grace and benevolence of the Pran representing the Supreme Being.] (16).

17. When Pran showers rain on this vast earth, all the herbs and plants develop and grow to their best abilities.

[Here, the word ‘Pran’ refers both to the life-infusing factors contained in rain-water as well as to the wind element because it is the latter that is responsible for

movement of clouds from place to place so that rain can fall on vast areas of the earth, thereby spraying it with the elixir of life known as water.] (17).

18. Oh Pran! Those who recognize your exalted position and dynamic powers, and in whom you are well established and active, such persons are indeed shown great respect and honour even in the highest places in creation (18).

19. All your subjects (i.e. all living beings) show great respect for you, and they show similar respect to those who are well-acquainted with your divinity and supreme authority, to those who attain great fame (as wise and learned ones) with the acquisition of the esoteric knowledge pertaining to you, and to those who even listen to your glories. These subjects offer their sacrifices (i.e. oblations, respects, regards, honour, obeisance) to you as well as to such wise persons (19).

20. The vital wind known as Pran that is extensively spread in all the organs of the creature's physical body, sustaining the organs and lending them life, energy, dynamism and vitality, is the same wind that is also present in the creature's nascent body while it is still in the mother's womb. It is the same Pran that had made its appearance as 'life' in the mother's womb which also takes birth or makes its appearance as 'life' in the external world. [Refer verse no. 14.]

It is the same Pran that 'lived' in the past, that 'lives' in the present, and would 'live' in the future. [This is because the world sans the Pran is a 'non-living' entity.]

Just like a father subtly lives inside his son (in the form of the genes that are transferred from the father to the son by the medium of the sperm, and which would eventually govern all the special character traits that the son inherits from his father), the Supreme Being enters the body of his off spring (creation) with his full force, authority and dynamism in the form of the Pran. [And therefore, 'Pran' represents the Supreme Being. We come to the conclusion that the factor that lives inside the body of any living creature or organism, a factor which is generally referred to as 'Pran' or 'life-consciousness' in the body, is actually the Supreme Being known as 'Brahm' personified in this subtle form.] (20).

21. When the 'Hans' (Swan) comes to the surface of water (on a lake), it does not lift one of its legs. [That is, it always keeps one leg inside water.]

Oh dear! Should it do so (i.e. should it withdraw its legs and take off from water to fly away into the sky), then there would be no 'today', no 'tomorrow', no 'night and day', and no 'light and darkness'. (21).

[Note—The word 'Hans' is a metaphor used in the Upanishads to imply the Atma or soul of the creature. This Hans is also regarded as a synonym of Brahm, the supreme transcendental Being, and the cosmic Consciousness representing the Supreme Being. The idea expressed here is that when this Atma or the 'self' of the creature decides to lift its self from the entrapping gross body as well as the surrounding world in which the creature lives trapped, and find permanent freedom from their snare, it has to do so comprehensively by lifting its self completely and finally, and not making a half-hearted attempt to find salvation and emancipation while still sticking to this body and the world or remaining uncertain which is the better option for him!]

This situation is metaphorically explained by the example of the Swan. When this bird attempts to lift in the sky and fly away, it cannot do so because it has the nasty habit ingrained into its mind which forces it, involuntarily though, to keep one leg anchored in the water, perhaps out of fear of falling or out of lack of confidence that it can actually fly in the air. The result is that it never is able to leave the water; it

remains grounded and stuck for life in the dirty water of the lake though the irony of the situation is that the same Hans is regarded as the wisest amongst the birds and cited as a metaphor for wisdom, the best of knowledge, purity and cleanliness. It is not without reason that amongst all the animals, the Hans is chosen by Saraswati, the Goddess of knowledge, wisdom and learning, to be her mount. In spite of such exalted status, the Hans is so stupid that it prefers to remain grounded and trapped for life in the unclean environment in which it has forced itself to live out of ignorance and its attendant delusions.

‘Hans’ is also regarded as a metaphor for Pran or ‘life’ in the creature’s body. This is because the Atma and Pran are two aspects of the same Divine Being known as Brahm, the Supreme Being, that actually lends both the factors of consciousness or Atma, and life or Pran to the creature’s body.

So simply put this verse means that when wise and enlightened persons decide to find true liberation, deliverance, emancipation and salvation, or what is known as ‘Mukti or Moksha’, they would have to completely cut-off all vestiges of contacts and connections with both the body and the world. This is like saying the Hans lifting both its legs from the water when it comes to the surface, instead of keeping one leg inside the water. Otherwise, they would remain trapped perpetually in the cycle of birth and death much like the Hans coming to the surface of the water umpteen numbers of time during its lifetime but still not being able to fly off to freedom.

Now, when true freedom is obtained by the Atma (Hans), when one is freed from the cycle of having to take birth and then dying, obviously there would be no night and day, no today and tomorrow, and no light and darkness for him. The physical world of which these are characteristic features would cease to exist and stop mattering for him. This can also happen even when a wise man is alive, as is the case when he becomes fully self-realised and enlightened. This is technically known as ‘Jivan Mukti’—or finding spiritual liberation even while one is still alive.]

22. The unknown and most mysterious divine entity (the supreme transcendental Brahm, the cosmic Consciousness) is surrounded by eight ‘Chakras’ (whirling wheels; energized circles of dynamic energy). All these Chakras have one ‘Nemi’ (circumference; the framework of a well) with thousands of bricks as building blocks just like the limited number of letters of any language, known as ‘Akshars’, help build thousands of words¹ of a language.

This Pran (life infusing vital wind) that creates the entire known creation with half of its fraction has one half still unknown. What does it refer to?² (22).

[Note—¹Refer also to the Atharva Veda’s *Prashna Upanishad*, Canto 6, verse no. 6, and *Naradparivrajak Upanishad*, Canto 9, verse no. 4, as well as to Krishna Yajur Veda’s *Shwetashwatar Upanishad*, Canto 1, verse nos. 4, 6; Canto 6, verse nos. 1-3.

From the perspective of Yoga, the word ‘Chakra’ refers to the subtle energy centers present inside the body. According to Yoga texts, when the vital energy trapped in these Chakras are activated, a person acquires immense potentials, including spiritual and mystical powers. They have been elaborately described in Upanishads dealing with Yoga and mystical forms of ritualistic worship involving meditative practices in order to enable to practitioner acquire astounding mystical and supernatural powers.

The Upanishads variously describe these Chakras as being *six to ten* in number.

The main six Chakras are the six main subtle energy centers of the body which act as power houses which supply energy for the various functions of the body. They are the following—(1) The ‘Mooladhar Chakra’ is located between genitals and anus in the area called the perineum. It is also here that the ascetic hears the Naad. It is said to be a symbol of Shakti or the dynamic powers of Shiva principle. The Ganapati Upanishad of the Atharva Veda, verse no. 6 says that Lord Ganapati or Ganesh is established here.

(2) The 'Swadhisthan Chakra' is located in the region of the groins of males and the Bhug (genital) area of females. It has a 5-headed male phallus like a sprouting seed and its counterpart in the female is the clitoris.

(3) The 'Manipur Chakra' is located in the navel area, is shaped like a gem and is surrounded by the network of Naadis (nerves) called solar plexus. It is also the site of the Sun energy.

(4) The 'Anahat Chakra' is located in the chest between the heart and lung area and it is shaped like a swan looking downwards. It is also assumed to be like an 8-petal lotus facing down. It is also called the Hridaya Chakra because of its close proximity to the heart and close association with it as the Atma or pure consciousness resides in the subtle space of the heart.

(5) The 'Vishuddha Chakra/Kanth Chakra' is located in the pit of the throat. To the left of it passes the Eda nerve representing the moon, to its right goes the Pingla nerve representing the sun, and in the center is the Sushumna nerve through which the Kundalini energy rises up from the base of the spine to the skull.

(6) The 'Agya Chakra or Bhru Chakra' is located between the eyebrows and root of the nose. It is also called the third eye of enlightenment and wisdom. It represents the 'Mahat' (that which transcends the elements) and its Beej (i.e. its root syllable) is the Sanskrit monosyllabic word OM.

Besides these six, there are some other important Chakras, and they are the following—

(7) The 'Brahm Rahandra Chakra or Sahasraar Chakra' is located in the head below the cranium and has the form of a grey cloud or smoke. It is the hair-like spilt in the top of the skull from where the vital wind called 'Pran' makes its exit from the body of a Yogi (ascetic) at the time of his death.

(8) The 'Vyom Chakra' is symbolic of the sky and it is shaped like a 10-petal lotus located at the top of the head.

There is another interpretation of this stanza. The word 'Nemi' in the text also means a person who observes strict religious rites or routine. If this meaning is taken into account, the stanza would refer to the worship instrument called 'Yantra' used in formal forms of worship and ritualistic practices. Some of such instruments have been elaborately described in various Upanishads of this volume—e.g. Ram Tapini Upanishad etc. Now, if we have a look at these Yantras we would observe that they are like wheels, having multi-layered circular structure. Usually, there are eight such circles—hence the reference to 'eight Chakras' in the present verse. On the outer periphery is a boundary that encloses the entire structure—this corresponds to the word 'Nemi' used in the text. The various 'Beej Mantras' or seed letters related to the deity worshipped as well as many other gods and goddesses are marked on the Yantra—which correspond to the word 'Akshar' or letter of the verse. The main deity that is offered worship has its Beej Mantra written in the center of the Yantra, which is then surrounded by concentric layers of rings or circles. This deity may have different names and forms, but ultimately it is the Supreme Being who is being offered worship. The presence of this deity representing the Supreme Being in this Yantra is what infuses 'Pran' or life, mystical strength, dynamism, occult powers and vitality to the otherwise lifeless drawing consisting of lines and letters. If the main Beej Mantra is removed then the whole structure loses its meaning and effectiveness. This is what is implied in this verse—if Pran standing for life-consciousness and the personified form of the Supreme Being is removed from the world, the latter would simply have no meaning. Put simply it means that the world follows the Supreme Being faithfully like the subjects that loyally follow the king or emperor.

²The 'known' part of the creation is the revealed half of the Supreme Being, and the other half is the unrevealed aspect of the Supreme Being that is transcendental and beyond imagination or comprehension. It is from the 'other unrevealed' or 'Avyakta' aspect of life-consciousness known as Brahm that the 'revealed' or 'Vyakta' aspect of life-consciousness has come into being. There is fundamentally no

difference between the two, except that one is revealed and describable with words, and the other is unrevealed and indescribable.]

23. You, the Pran, are the 'Isha' or the Lord that gives birth to all life forms in this creation, and to the whole world characterized by movement¹.

It is you who is the most agile, most active and quick to move amongst all the elements of creation (23).

[Note—¹'Movement' is a characteristic feature of life, while 'stagnancy' is tantamount to decay and ultimate death. Movement does not only mean physical movement of the body. Its broad implication covers all changes and transitions. The world is 'living' because it is known to be ever-changing. The term 'movement' therefore incorporates such concept as change, transience, impermanence, instability, volatility etc. Movement also means 'doing deeds and taking actions' which are an inseparable and an integral part of a living world—because not only do they require physical movement of the body but involves change of the present to something different in the future.

In the Upanishads, the creation has been compared to a wheel, and 'movement' is a typical character of the wheel. So if the world is like a wheel which moves continuously, the Pran is its hub around which it rotates.

Not only life on earth but even the unknown reaches of this creation show constant movement as proved by modern science that has established that the universe is constantly expanding and changing—or showing 'movement' instead of stagnancy.]

24. The Pran who is the Lord (Isha) of all entities in creation that take a birth and show movement, let that courageous, tolerant and patient Pran be free from all traces of indolence, lethargy, inertia and laziness. Let it be empowered with the dynamism and energy of the Spirit or the Atma that injects 'consciousness' in the form of the vital spark of life in me. Let such an exalted and mystical entity known as 'Pran' be my constant companion; let it never abandon me (24).

25. Even when the rest of the world sleeps, the Pran never sleeps. It remains standing, being always alert and wide awake (like a sentinel guarding the ramparts and the gates of the fort while the rest of the population sleeps peacefully in the city). It never feels sleepy or tired or exhausted so as to lose sight of its moral duty to guard life under its protection. It never totters; it never stumbles, it never falters or drags its feet and falls sideways out of fatigue, weariness, drowsiness, despondency or carelessness. [Even when the external organs become unconscious and inactive when the man sleeps as if the body was dead, the man is kept alive and well because the vital winds do not sleep but remain alert and active. They ensure that the man does not die when he sleeps and there is no physical activity. The Pran acts as the loyal sentinel who guards the fort even while the rest of the city sleeps soundly, or the body-guard of the king who guards the latter even while he sleeps. The Pran never drops its guard, it never compromises on its level of alertness, and it never ever lets its arms down or becomes careless in its duties of giving protection to its 'ward', which in the present case is the living being, while the latter rests.]

No one has ever heard that Pran ever sleeps or takes rest even while the rest of the creation needs sleep or take some rest to re-energize its self. [That is, Pran is never fatigued; it needs nothing to rejuvenate its self. It is perpetually energized and rejuvenated. This is why it is a synonym of the Supreme Being who never fatigues from the onerous task of taking care of this huge world full of complexities.] (25).

26. Pran, do not ever separate your-self from me. Do not go far from me. Like the 'water' that inherently harbours life in its bosom, I too harbour Pran in my body to protect life in it. [That is, Pran naturally lives inside my body to keep it alive just like it lives in the water to give it its unique virtue of conceiving and sustaining life in all its forms. Just like no life is thinkable without the presence of water, my existence is also not imaginable without the presence of Pran inside my body.] (26).

-----*****-----

Appendix no. 3

Neel Rudra Upanishad

This is a minor Upanishad belonging to the Atharva Veda tradition, having three short Khandas or Cantos. It basically narrates the 'Raudra' (angry) form of Lord Shiva who is known as 'Neel-Kantha Rudra' because of the fact that his throat is permanently tinged purple or dark blue.

In the first Canto, prayer is made to Lord Rudra to shed aside his angry form, and instead adopt a form which is calm, pleasing and auspicious.

In the second Canto, it is visualized that Lord Rudra is in the affectionate form of Gopal, one of the names of Lord Krishna, who is bewitching with the trademark peacock's feather stuck in the lock of hairs on his head. Rudra is also said to be Indra, the king of Gods. This Canto also narrates the most potent weapons of Rudra in his form as Indra because the latter needed these weapons to rule over this world.

And finally, Canto three narrates the 'Neel-Kanth' form of Rudra, or the form of Lord Shiva with a dark-blue tinged throat. This colour of the throat shows that the Lord is so merciful that he did not care about his own welfare but gulped the 'Halaal poison', the most corroding and fierce poison that was produced at the time of the churning of the ocean by the Gods and the Demons in search of Amrit, the elixir of eternal life and bliss.

Neel Kanth Rudra or Shiva with the blue/purple throat is also known by other names, such as Kedareshwar (the Lord of Kedar, the mountainous abode of Shiva), Virupaksha (the Lord with three eyes, hence looking most unconventional) etc.

-----*****-----

Khanda/Canto 1

1-3. Oh Lord 'Neel Griva' (i.e. the Lord with a blue or purple throat)! We visualize you coming down on earth from your divine abode in the high heaven. We have a divine vision of your cosmic form that is known as 'Rudra', literally the form that is most awe-inspiring, foreboding, formidable, furious, angry and uncompromising. This magnificent and most enigmatic cosmic form of yours bears the 'Antariksha' (the vast and fathomless recesses of the sky) on its head as if it was a crown adorned with a peacock's feather tucked in it. This is because you are the Lord of the earth (mortal creation) who bears this crown of the sky on your head. [This is the cosmic form of Brahm revealed in the form of Rudra.]

Oh human beings! Have a divine sight of Lord Neel-Griva with a reddish countenance.

Lord Rudra enters water and medicinal herbs as their magnificent ability to fight and defeat (cure) diseases. It is the Lord's desire to give protection to his subjects (creation)—by slaying (eliminating; destroying) formidable enemies in the form of countless diseases afflicting the creatures of this world—that has manifested itself as the dynamic curative powers that are inherently present in the water and medicinal plants which enable them to fight the menace of various diseases representing the evil consequences of sins and misdeeds of the creature.

[Diseases are caused by strong evil forces of Nature that are so powerful that they are able to overcome the resistance offered by the Gods who symbolically live in subtle forms in the body of the living being. Therefore if these evil forces are to be defeated then a force stronger than these evil conquering forces is needed. This countering force is represented by Lord Rudra who is the most powerful form of the Supreme Being as far as enforcing order and punishing the guilty is concerned.

Diseases are cured by the medicinal qualities of the various herbs as well as the ability of water to become a medium by which the curative ingredients of the herbs are transported to the various tissues of the body so that the negative forces that have created the disease can be nullified and dispensed with. The water then helps to eliminate the toxin left behind by the retreating enemy (representing the disease-causing factors) from the body, thereby restoring the general health and well-being of the Gods who were suffering previously.

Thus, Lord Rudra in this sense represents the formidable strength of Brahm, the Supreme Being, to overcome negative or evil factors of creation, and protect life that is being tormented by such factors.]

The Lord (Rudra), therefore, is a provider of solace and succour to all the living beings; the Lord is the basis and foundation upon which life rests in this world.

Let the Lord (Neel-Griva; Shiva; Rudra) arrive in our midst to end all our misfortunes, inconveniences, troubles and miseries, and instead provide us with all the conveniences, all the things and all the means that are conducive for our welfare and well-being which are not available to us or are beyond our reach at the present. [1-3].

[Note—One must clearly see the paradox of the situation—and the fact that the same Lord plays different roles, as well as the fact that the same action or deed can acquire different meanings under different set of conditions.

Lord Rudra is that form of the Supreme Being which brings about conclusion of creation. But when it becomes necessary to use the same ferocity, the same strength and the same power that the Lord employs to bring about the conclusion of creation in a swift move for the welfare of the same creation that he concludes, the Lord does not hesitate for a second. This explains the idea of the curative properties of the medicines and herbs as being personifications of Lord Rudra—these herbs and medicines have to fight formidable negative forces of Nature that bring about destruction and ruin in the form of various diseases. So the curative properties of herbs represent Rudra with all his potentials and powers employed to give protection to the creature instead of employing these potentials and powers to bring about death and destruction. For once, Lord Rudra plays the role of a sustainer and protector of creation like Vishnu, instead of being its concluder and annihilator.]

4-5. We bow most reverentially to Lord Bhava (Shiva; Rudra) who has an angry and formidable form.

We bow to Isha (Lord) who has two arms that hold arrows (and a bow).

Oh the Lord of the Holy Mountain (i.e. Kailash, the mountainous abode of Shiva). You provide auspiciousness, happiness and benediction to, and look after the welfare and ensure the well-being of all the living beings on this earth (i.e. on the vast stretches of the plains where the majority of the creatures live) though you live far away on the mountain.

Oh Lord Shiva who is known as ‘Giritra’ (the protector of mountains and their inhabitants)! The arrow that you hold for the destruction and the vanquishing of the wicked and evil ones—let the same arrow provide us humans with its protection, benediction and reassurance. Do not harm our kith and kin with it; let us humans be spared from the wrath of your arrow. [4-5].

6-7. Oh Lord Shiva who is honoured as the ‘Isha’ (Lord of creation) as well as the ‘Girish’ (the Lord of the Mountains; the Lord who has his divine abode in the mountains)! We sing your divine glories with all sincerity and devotion that our voice and words can command. With this song, the whole world around us becomes free from all miseries and misfortunes, and instead becomes favourable and helpful for us.

Your bow, its string and your arrow—all of them provide reassurance and auspiciousness to us. [That is, instead of feeling any sort of fear by their menacing presence, we feel reassured and happy that they are there to afford us with all-round protection and loving care against all evil forces of creation.]

Oh Lord Shiva who is also known as Lord Mrida! You are an image of auspiciousness, benediction and munificence. Provide our lives with all your arms and armaments.

[In other words, you are our patron deity. So whenever we are in distress and pain and need your help, you must come forward immediately with all your might to support us like an Emperor who makes all his armory and army available to his subjects when they need them for their protection against enemies.] [6-7].

8-9. Oh Lord Rudra Shiva! In spite of living high up and away in the mountains you still are eager in providing for and ensuring our welfare and happiness.

Provide us with light and illumination from all sides with your auspicious, divine and holy form that is benevolent and munificent as well as a vanquisher and eliminator of sins.

The numerous forms of yours that exist in all the different directions, forms that are of a copper colour, of a reddish hue, of a grey colour, of deep red colour like that of rusted iron as well as thousands of other forms that are as glorious, dynamic, radiant and splendid as thousands of the rays of the sun—we sincerely invoke them and offer our prayerful respects to all of them when we sing the hymns in your (Rudra Shiva’s) honour.

[This stanza has two possible inferences. One is that it refers to the numerous forms as Gods, or even Lord Shiva in his different forms having different names, in which the same Supreme Being is worshipped in this creation. Another inference is that all the creatures with numerous complexions and countenances that live in this world are actually an image of the same Supreme Being who exists in as many forms. The worshipper offers his respects to all of them.] [8-9].

----*---*---

Kanda/Canto 2

1-2. Oh Lord Neel-Griva (the Lord with a blue/purple throat; Shiva) who has a red complexion! We have had the good fortune of sighting your divine and glorious form as it descended upon the earth from heaven.

That divine and most enigmatic form of yours was seen by the cowherds (of Vrindavan), the milkmaids as well as all other living beings in this world.

[This stanza means that Lord Rudra Shiva was the one who had manifested as Lord Krishna of Vrindavan. Krishna is the Lord whose incarnation has been described in detail in the epic Puran known as Srimad Bhagwat. This has a great significance because Krishna is universally regarded as an incarnation of Lord Vishnu, the sustainer and protector of creation, and not of Rudra. Hence, the present Upanishad establishes that Vishnu and Rudra are the same Supreme Being known as Brahm in two different forms and having two separate names.

There is another very pertinent and important implication here. Vishnu is the universal protector and sustainer of creation, and not its slayer or killer. This latter role is that of Shiva in his fierce form as Rudra. Now, when we look closely we discover that Lord Krishna performed both these roles—on the one hand he offered his protection to the humble cowherds of Mathura and Vrindavan against the tyranny of his maternal uncle Kansha who was demonic in his temperament and nature, a role specific of Vishnu, and on the other hand Krishna had ruthlessly killed fierce demons with his bare hands, even as a child, without employing any weapon, something that only Rudra can achieve.

It is thus evident that Krishna embodied in his divine body the combined forms of Vishnu of whom he is usually regarded as being an incarnation, as well as of Rudra as proved by this Upanishad. Krishna combined in him the cosmic powers of Vishnu as well as Rudra.

When we compare Lord Krishna with Lord Ram who is another incarnation of Vishnu, we find a stark difference. Lord Ram had never killed any demon with his 'bare hands' like Krishna had done. Ram had always employed his arrows to slay the demons. Now, the question arises 'what form did Rudra take during the incarnation of Vishnu as Ram?' Well, the answer is 'Hanuman', the monkey-faced warrior devotee of the Lord who was instrumental in the Lord's slaying of the ferocious demons led by their king Ravana of Lanka.]

We reverentially bow before this glorious and divine form of the Lord (Rudra Shiva as Krishna).

Oh the Lord who wears the blue feather of the peacock (tucked in the lock of hairs) on his head (as a tiara)! [This has clear reference to Lord Krishna.] We bow most reverentially before you¹.

It is you who has revealed himself as 'Sahastraaksha' (literally the one with a thousand eyes; here meaning Indra, the king of Gods) who is most powerful and strong. Actually, Indra represents that cosmic form of yours which reveals its self before your devotees with thousands of eyes.

[This stanza refers to the Viraat Purush, the macrocosmic form of the Supreme Being known as Brahm. This form is the macrocosmic gross body of Brahm from which the rest of the creation has emerged. All the creatures are deemed to be microcosmic images of this Viraat Purush. The term 'thousands of eyes' is a figure of speech to imply that all living beings that have eyes—i.e. the creatures who can see—have the same Brahm residing in their gross bodies as their 'true self' known as the Atma.

It also means that the Lord sees everything everywhere, and nothing is hidden or secret from his eyes.] [1-2].

[Note—¹There are two Upanishads dedicated to Lord Krishna in this volume—one is the Gopal Tapini Upanishad which is Chapter 27, and the other is Krishna Upanishad which is Chapter 28.]

3-4. This divine form of yours that has a gross visible aspect and which is accompanied by cowherds and milkmaids with clean minds and hearts—we offer our obeisance to it, we bow before it.

We offer our repeated respects to, and we repeatedly bow before, all your arms and armaments that are very potent and powerful but are not being used by you at the moment. We bow before your formidable and powerful bow with folded hands.

Unfasten the string of your bow (i.e. deactivate this powerful weapon) and become neutral in relation to the creatures whom you had wished to protect with this bow as well as the creatures whom you had wished to punish and kill. That is, please become calm and graceful; please eliminate the chances of war, strife, violence, hatred, ill-will and animosity. [Let there be peace and tranquility along with happiness and brotherhood everywhere in this world.] [3-4].

5-6. Oh the Lord with thousand eyes who wears the peacock feather! Return the arrow in your hand to its quiver. You can mount hundreds of arrow on your formidable bow simultaneously. For our welfare and happiness as well as granting protection to us from our enemies, sharpen the tip of your arrow and mount it on your bow.

Once all our fears are dispelled and enemies vanquished, unfasten the string of your bow. Let the arrow abandon its natural habit of inflicting horror and torment (on the evil and wicked ones), and instead return calmly to its quiver. [Let there be peace and tranquility everywhere.] [5-6].

7. Let your most potent and powerful arrow that is so sharp that it easily pierces through huge mountains return to its quiver. [7].

8. Let your arrow that is mounted on the bow give us protection from all sides. Once this aim is achieved, return the arrow to the quiver. [8].

9. Oh Lord who is most merciful and benevolent! Protect us from all sides with your arrow that is formidable, indestructible and invincible, along with its companion, the bow.

We bow with respects to all the serpents (or all those creatures who inflict unnecessary miseries and torments upon others) that live on the surface of earth. [That is, we pay our obeisance to them and request them to spare us from their wrath, to grant us immunity from their bite as well as from all kinds of miseries and troubles they can cause for us. Since Lord Shiva is also regarded as the Lord of serpents as is evident from his image that shows him wearing serpents as garlands, arm-bands, head-gear etc., in this verse he is requested to grant protection to the worshipper from snake bite.] [9].

10-11. We bow to all the serpents (and other malicious creatures) who live in the sky as well as in the heaven. [This refers to all unfavourable stars, gods, spirits etc. that may create unnecessary problems for the worshipper.]

We bow to all the serpents (representing all evil and tormenting forces of Nature) that live in those worlds that are illuminated, as well as those that live in the rays of the sun and in water.

We bow to all the serpents that represent the arrows of demons (or of demonic, evil and wicked forces of creation) that live in crevices, furrows and holes as well as in trees, plants, shrubs and twigs etc. [10-11].

[Note—In connection with verse nos. 9-11 it is pertinent to note that the Garud Upanishad, which is Chapter no. 31 of this volume, also describes how the evil effects of various poisons can be countered or antidoted.]

-----*****-----

Khanda/Canto 3

1. The Lord (Shiva)—who is known as ‘Neel Griva’ (one with a blue/purple throat) because he had drunk the corrosive and fierce poison (known as ‘Halaal’ that had emerged when the ocean was being churned by the Gods and the Demons in search of Amrit, the elixir of eternity and bliss) to protect his subjects (creatures of this creation; or his devotees) from being scorched and scalded by its ferocity—is the same Lord who has also manifested as Lord Hari (Vishnu) who is the universal sustainer, protector and nourisher of the same subjects (creatures; devotees) of this creation.

[In other words, both the forms of the Lord, as Neel Griva or Neel Kantha as well as Hari or Vishnu, have one aim in mind, and it is to grant protection to this creation. Hence, Shiva and Vishnu are the same; there is no difference or dichotomy between them.]

Oh medicinal plants and herbs! Be quickly empowered with stupendous strength, energy, dynamism and vitality for the purpose of serving the one who has a black tail (i.e. the bull known as Nandi, which is the mount of Lord Shiva).

[This prayer is meant for the plants and the green grass upon which Nandi, the bull which is Lord Shiva’s mount, depends for its food. If the mount is well-fed, healthy, energetic and active, the master too would get immense happiness and pleasure when he sees it well-fed, healthy, happy and contented. Besides this emotional aspect, when the devotee ever needs the help of the Lord, it is this mount known as Nandi with the black tail that would bring Shiva to his aid. A healthy and well-fed bull is therefore most desirable as far as extending instant protection to this creation against evil forces is concerned where intercession of Lord Shiva is needed quickly.] [1].

2. The Lord known as Neel Griva (i.e. Shiva) has a blue/purple throat but the complexion of the rest of his body, including the ears, is fair¹. [Special reference is made of the ‘ear’ to highlight the fact that the blue or purple colour of the throat has not at all affected the Lord’s face and its parts, such as the ear.]

The Lord is all-pervading, all-encompassing and omnipresent. He is manifested or revealed in all forms in which this vast and multifarious world exists. [There is nothing that is not Lord Shiva.]

It is this Lord known as the Neel Kantha (i.e. the Lord with a blue/purple throat) who is the father of the Wind God known as Marut. [2].

[Note—¹It will be noted that here his complexion is said to be ‘fair’ while earlier in Canto 2, verse no. 1-2 it has been described as being ‘red coloured’. Well, there is no confusion if we take a broader and holistic look at what the colour of Rudra stands for. Canto 1, verse nos. 8-9 emphasizes the cosmic form of Lord Rudra is like the rays of the Sun, and the sunlight is known to consist of different shades of colours though overall it appears to be white.

The 'red' colour is associated with anger, while the 'white' colour is associated with peace that comes with enlightenment and wisdom. So, the form of Rudra with red colour was when he took the decision to get rid of the evil forces represented by the demons when the Lord manifested as Krishna as mentioned in Canto 2, while he assumed a white colour when he manifested as Shiva, the enlightened Lord with the third eye of wisdom as mentioned in the present Canto 3.]

3. It is this Lord with unconventional (odd) set of (three) eyes who slays or kills (i.e. trounces, eliminates or destroys) those who speak arrogantly and haughtily (i.e. those who are proud and egoistic, those who are boastful and pretentious, those who are arrogant of their strength and valour, are crushed or punished by Lord Shiva).

[Lord Shiva has three eyes, two normal eyes like all human forms, and one odd eye located in the middle of the eyebrows above the nose. This third eye gives Shiva a most odd, awe-inspiring and unconventional appearance. This third eye is however what makes Shiva so unique—it is called the eye of wisdom and enlightenment. It is here that the Agya Chakra, the whirling center of energy that opens the window of enlightenment, wisdom and knowledge in the creature, is located. That is why Shiva is regarded as the most wise and enlightened God amongst them all.

Since the Lord is highly self-realised, enlightened and wise, he is deemed to be an enemy of, or inimical to such negative character traits as pride, ego, arrogance, haughtiness etc. that are symbolized by the term 'speaking loudly' which means speaking boastfully and pretentiously. The Lord does not tolerate loud-mouthed people who are arrogant, haughty, boastful and deceitful. He immediately brings them to book.]

Oh brave people! One must always see him playing a subtle role in all deeds and actions. One must realise that it is the universal Lord who is the doer of all deeds.

[That is, one must not be boastful of one's achievements, but be humble and soft-spoken instead. One must do deeds dispassionately as if one is simply carrying out the Lord's orders. One must realise that it is the Supreme Being living inside the body as the Atma and Pran that enables the gross and inane body to do anything, and nothing can be done if the Supreme Being does not wish it to be done. So there is no ground and locus standi for being arrogant, haughty, boastful, pretentious and loud-mouthed.] [3].

4. One should discard all doubts and confusions about him (i.e. the Lord known as Neel Griva, i.e. Lord Shiva); one should abandon all inclination to enquire about the Lord and verify his authenticity and divinity.

It is out of ignorance and its attendant delusions that we treat the world as being separate and different from him; this is a completely erroneous notion. [This is because Lord Neel Griva is none but the supreme transcendental Brahm himself, and it is this Brahm who has not only created this world out of his own being but also pervades throughout it uniformly, completely soaking it from all sides. This world is but a visible and qualified image of Brahm that is otherwise invisible and unqualified.]

We bow most reverentially to Lord Bhava (who is the cause for this creation coming into being).

We bow most reverentially to the Lord (known as Rudra) who is the annihilator and concluder of everything that exists in this creation.

We bow most reverentially to the Lord who appeared as a young groom at the marriage venue in the city of Daksha Prajapati (his earlier father-in-law) where his

presence lent great glory, beauty, glamour, magnificence and majesty to the auspicious occasion, and gave immense contentedness, joy and happiness to the assembly. [The occasion was Lord Shiva's marriage with Sati, the daughter of Daksha Prajapati.]

It is from this Lord Neel Griva in his form as the divine Bull (known as the Nandi) that horses, donkeys and all those four-footed creatures who run around (roam) here and there on this earth came into being.

We bow most reverentially to this Lord Neel Griva, i.e. the Lord with the blue throat, who wears the blue-tinged feather of the peacock on his head.

We once again bow most reverentially to Lord Neel Griva, i.e. the Lord with the blue throat, who wears the blue-tinged feather of the peacock on his head. [4].

-----*****-----

Appendix no. 4

Surya Sukta

The 'Surya Sukta' is a hymn dedicated to the Sun God known as Surya. It lauds Surya as being the eye of the whole world, providing the latter with light and the consequent ability to see. Surya infuses life in this world by the way of providing it with energy, light, heat, vitality and dynamism without which no life is ever sustainable. Hence, it is equivalent to being the Atma or soul of the whole world; the world depends upon Surya for its survival and nourishment. Surya inspires the living being towards auspiciousness and righteousness as symbolized by the 'light' that it provides—i.e. it removes the darkness of ignorance and its attendant delusions and accompanying ghosts, and instead illuminates the correct path, symbolized by wisdom, erudition, knowledge and intelligence, for the creature to follow in order to reach his desired destination. The Sun blesses the creation with energy, vitality, health and nourishment; the Sun controls the seasons and rainfall; the Sun helps growth and development of plants and crops.

The Sun has special importance for those who seek to worship the 'Supreme Being' as it is the most splendorous and vivid evidence of the truthful Lord. Nothing else in this creation matches the Sun in its astounding dynamism and eternal energy, its magical life-injecting and life-sustaining abilities, its stupendous brilliance, radiance, splendour, majestic glory and magnificence that can be equated with those of Brahm, the supreme transcendental Being. In fact, for all practical purposes for this world, Sun is a visible manifestation of Brahm, the Supreme Being; it is a personification of Brahm.

The Sun, at the same time, is an excellent metaphor for the majestic glory, the magnificence, the brilliance, the splendour, the power, the energy and the authority of 'Truth'. The Sun is a brilliant image of the illumination and the light that 'Truth' provides this world. Therefore, those who seek the 'Truth' offer their obeisance to the Sun.

Hence, Surya is an object of great reverence and adoration for all living beings; Surya is the de-facto Lord of creation.

This hymn was first conceptualized by sage Kutsa Aangiras, hence this sage is its Rishi. Its patron deity or Devta is obviously the Sun God, and its style of

composition known as the Chanda is Trishtup. It has special relevance to the Surya Upanishad of the Atharva Veda tradition, which is Chapter 17 of the present volume. Since its primary formulator is sage Kutsa Aangiras who was one of the sages tracing their roots to the ancient sages Atharvan and Aangiras who are credited as being great exponents of the Atharva Veda, its relevance to this volume is evident though the Sukta itself belongs to the Rig Veda, 1/115.

-----***-----

1. All the divine Gods who are radiant and glorious, all the auspicious, holy, divine, glorious and sublime virtues in creation, all the virtues that 'Truth' represents, are rising and making their appearance visible in this world in the form of the rising Sun in the heaven.

The Sun God known as Surya is the symbolic eye of Mitra (a God who is friendly to all other Gods as well as to this creation), Varun (the Water God) and Agni (the Fire God), the eye that provides them as well as the rest of the world with light; the Surya is the one who illuminates the creation and enables these Gods to see and take care of it.

The Sun God has completely covered the whole creation consisting of the terrestrial world, the heavenly world and the nether world with his magnificent light, radiance and splendour.

The visible Sun seen in the sky is a manifestation of the almighty Supreme Being who is the inspirer and motivator (creator) as well as the sustainer of everything in this creation. The Sun therefore is a representative of the Atma or pure consciousness that is not only an image of this Supreme Being living inside each living entity in this creation but is also the driving force of all life forms in this world, both those forms that are mobile (such as the members of the animal kingdom) as well as those that are immobile (such as the members of the plant kingdom). [1].

2. Surya follows the virtuous and radiant Usha Devi (literally a goddess named 'Usha' who actually represents the brilliant rays of the light of the Sun which precedes the arrival of the Sun itself) like a man follows a virtuous and extremely beautiful lady.

When the goddess Usha makes her appearance, those who are faithful, dutiful and diligent rise up and engage themselves, faithfully and diligently, in doing duties assigned to them as a token of their respect for the approaching Sun God who follows this goddess.

[When the Emperor is about to come and the herald announces this, the subjects of the empire become alert and sort out their pending affairs to be ready to welcome their Lord. Similarly, all living beings who are of a noble temperament and character get up early in the morning when the first rays of sunlight, here called Usha Devi, appear in the distant horizon to herald the coming of the Sun and the approach of a new day as metaphors for new phase of hope and light in their lives. Such wise creatures girdle themselves up and prepare to welcome the Sun as a harbinger of change and a prophet of new lease of life that gives opportunity and hope. The Sun is a metaphor for light, energy and dynamism that drives the wheel of creation. The rays of the Sun represent the messengers of an Emperor who carry the orders of the latter to his subjects. The rays of the Sun carry the 'Shakti', or the power and dynamic energy of the Sun that infuse and sustain life on this earth, from the source, i.e. the

Sun God, to the subjects, i.e. the creatures of this world, for whom the Lord gives his Shakti and who are meant to be benefited from this Shakti.]

Surya is an image of, or a metaphor for auspiciousness, good fortunes, hope, opportunity, good tidings and all-round welfare. Hence, those who worship him, those who adore him and regard him as their idol and follow his ideals are also able to attain these glorious virtues for which Surya stands. [2].

3. The ring of brilliant rays which are extremely magnificent, splendid, magical and colourful as well as harbingers of welfare, happiness, good fortunes, auspicious and good luck that surrounds the Surya is like the horse (of an Emperor) that helps the Lord (the Sun God) to go and reach everywhere (i.e. to spread light, energy, warmth and other life-sustaining factors to all corners of this world).

[It is the rays of the Sun that take its light, energy, heat and the dynamic life-sustaining properties of the Sun to every nook and corner of the world though the disc of the Sun itself is located in a very limited area of the sky. It is just like the case of the horse of the Emperor that helps his trusted messenger to take his message faithfully, without distortion and as fast as is feasible, to the farthest corners of his empire.]

The Sun always treads carefully its well established path, without deviating for an instant from it. That is why it is worthy of worship and honour.

[This is a metaphoric way of saying that those who are righteous and noble always follow the correct path of truthfulness, morality and ethics as prescribed in the scriptures; they never deviate from it no matter what the provocation or temptation is. They are steady in their noble path and righteous pursuits; they are always truthful and honest. Such men are indeed worthy of respect like the Sun, and they show the rest of the world the path to follow by their own conduct like the Sun lighting up the world for the creature by its own light.]

The Sun inspires all the living beings to be humble and righteous, to lead the path or follow a life of truthfulness, auspiciousness, righteousness, probity, propriety, charity and magnanimity honesty that would act as a beacon for others to follow.

[The Sun is never proud of the fact that it is the only one who showers such huge blessings upon this world so much so that should it wink for a moment there would be absolute chaos and horror of death and annihilation in this world. Even if no one bothers to show any respect to the Sun and thank it for all the goodness that it gives selflessly to this world, the Sun would not stop showering its graceful and benevolent largesse of energy, warmth, light and dynamism upon the world, and would continue to do so eternally. The Sun is steady in its path, signifying that one should remain steadfast in his chosen path of virtuousness, righteousness and truthfulness. It should also be kept in mind while choosing the path that it should be holy, truthful and auspicious as well as inspiring for others as symbolized by the path of the Sun that is brilliantly illuminated instead of being dark, ominous and foreboding.]

The Sun lives high up in the Duloka or the heaven which is brilliantly illuminated.

[This is because the Sun possesses all the enormously glorious virtues as enumerated in this Sukta. Any person who possesses equivalent virtues would also be respected in the world like the Sun; he would also attain a high stature in life that would be as glorious and laudable as that possessed by the Sun high up in the sky.]

The Sun has such great stride and agility that it can go around the vast circumference of the earth as well as reach the deep corners of the vast space in an instant.

[This of course refers to the sunlight, because as soon as the Sun appears on the horizon, its light instantly covers huge swathes of earth and spreads to the remotest corners of the sky in an instant. From the perspective of the living being or a spiritual aspirant, the implication is that the light and glory of the knowledge and the virtues that he possesses, the fame that comes to him due to this knowledge and virtue, have a far-reaching impact and help to spread his good name and glories very quickly to even the remotest parts of the world where he may never be able to go personally.] [3].

4. It is a measure and sign of the Sun's total detachment from everything, its non-involvement in anything, and its profound neutrality that are equivalent to these grand spiritual virtues displayed by the Supreme Being (Brahm) that when it goes to rest and sets down in the horizon at the end of the day, it withdraws its rays into its self and dispassionately leaves behind the world which it had so meticulously and diligently cared for during the daytime as if it is not at all bothered about what would happen to this world or the life in it once it goes away and sets in the horizon at the time of sunset.

[The supreme Creator creates this world and fully engages himself in looking about its day-to-day welfare. But it does not mean that he is attached to this creation, for when the time comes to wind up he has no second thoughts and no compunctions before cleaning up the mess. The metaphor of the Sun setting in the horizon in the evening without looking back at the world which it had so assiduously looked after and fostered for the whole of the day is used to show how a wise and enlightened man does his assigned duties diligently in this world as long as he is alive, but remains internally unattached to the deeds done by him in the sense that he does not expect any rewards for these deeds nor does he wish to enjoy these rewards so much so that when the time comes for his departure from this world, i.e. when he dies, he has no desires left in him, he would never regret that some work was still incomplete or some reward was still due to him. Such a dispassionate man dies peacefully; he has no yearnings and frustrations at the time of death; he never weeps and wails or worries about his unfinished tasks or the fate of the kith and kin or the property that he leaves behind in the world.

He simply withdraws his 'self' from this world. Since his 'self' is represented by his Atma (soul that is his pure consciousness) as well as his Pran (which are the vital life-sustaining forces in his body), it means that the person leaves the gross body as one leaves a hotel room, and makes his exit from the body most peacefully. It is just like the Sun calmly withdrawing its rays and setting in the horizon as it leaves the world with its hustle and bustle behind.]

When the Sun God goes down in the horizon, he assigns his horses and the chariot to some other world. The result is that the night covers the world with its shroud of darkness. [In other words, if one loses wisdom and intelligence, he would be surrounded by an overwhelming thick veil of ignorance and delusions.] [4].

5. The universal inspirer that the Sun God is, his appearance in the eastern horizon is to show light and give inspiration to Mitra God, Varun or Water God, and Agni or Fire God, who are the guardians of creation, to become active and carry out their assigned duties diligently.

The brilliant rays of the Sun God are so sharp and the green horses of his chariot are so powerful and strong that they vanquish in an instant the darkness of the night and cut through its thick veil without the least effort. It is only when they go somewhere else that the world is plunged in darkness.

[From the perspective of the creature it means that only when the Atma or the pure conscious soul leaves the body of the creature does the latter dies. It can also mean that only when the light of wisdom and erudition leaves the man is he engulfed in the darkness of ignorance and delusions. And therefore, as soon as wisdom and erudition reappear, this darkness vanishes instantly.] [5].

6. Oh the splendid Rays of the Sun! [Here, the 'rays' are regarded as a personified form of the dynamic Shakti, or the authority, energy, power and strength, of the Sun God.]

Extricate us from sins and grant us your protection against them when you make your appearance and spread everywhere at the time of arrival of the Sun at dawn. Not only sins, but grant us your protection also from all that is unworthy, evil and denigrating, all that is unacceptable and worthy of abandonment, along with all sorts of sorrows, grief, afflictions, troubles and tribulations.

Whatever we have said (requested or prayed for) should also be endorsed by, accepted by and honoured by Mitra (the God who is a universal friend of all), Varun (the Water God), Aditi (the mother of Gods), Sindhu (ocean as a personified form of the Water God), Prithivi (Mother Earth), and the immortal Gods who inhabit the Duloka (the heavens). Let them also extend their patronage and protection to us. [6].

-----*****-----

Appendix no. 5

Griha Sukta

This Sukta or hymn appears in the Pippalaad branch of the Atharva Veda. In the context of our present volume of the Upanishads of this Veda it especially relates to Brahman 3, verse no. 11 of the Brihajjabal Upanishad which is Chapter 6 of this volume.

Primarily it is a prayer said by a householder for his all round welfare and well-being. It outlines and extols in brief the grand and auspicious characteristics of a noble and virtuous household. It has a total of six two-line verses.

-----*****-----

1. I come proudly to my house with a cheerful mind and full of energy. My mind has auspicious thoughts, and I have a good reputation and fame.

I look at my household with eyes which always look at others with a friendly and auspicious disposition. I employ my eyes to see and accept the invigorating sight that accompanies such thoughts and feelings.

[That is, I enter my home willingly and cheerfully to see happiness and well-being all around me. Since I am a righteous man, good and auspicious circumstances always surround me and follow me to my house. My home gives positive vibes; it

radiates happiness and effuses holiness. It is welcoming and comforting for me. The atmosphere of my house is light with smile, laughter and rejoicing, instead of one that is heavy with gloom and grief. When I come back home after the day's toil, I feel warmly welcomed and feel comforted. My house gives out positive signals of happiness, joys and cheerfulness because I have led a life of auspiciousness, righteousness, probity, propriety and truthfulness. I bring along only good energy inside the house, leaving negativity outside it.] [1]

2. Such households are full of pleasure, comfort and well-being; they are full of grains and wealth; there is no shortage of butter and milk (i.e. there is no dearth of wholesome food; the granary is always full, and so is the larder).

[That is, there is no shortage of anything in my household.]

Let these auspicious and beautiful homes be dear to us and welcome us; let them be close to us and be a part of our lives. Let us understand them better.

[That is, let us understand the secret reason why such homes are auspicious and friendly, why they are full of all the necessities of life, why we find great rest in them, why we find them auspicious and welcoming, why are we proud of them, and why do we generally feel most comfortable living in them. The answer is given in verse nos. 1 and 3.] [2]

3. Let there be no fear, agony and misery in those houses or homes (households) where the residents are friendly with each other, and speak courteously, sweetly and pleasantly among themselves, where all noble, auspicious and righteous virtues that bring all round welfare to its residents are found in abundance, where guests are most welcome and cordially invited to eat and drink, where there is happiness, joy, cheer and laughter in the atmosphere, and where there is no hunger and thirst (because of abundance of food and drink, as well as due to the charitable, friendly, compatible and compassionate nature of all its inhabitants). [3]

4. It is such a home (household) that we remember so fondly when we live outside and far away from it. Such homes that are welcoming and are literally mines (i.e. full of) the grand virtues of friendliness, brotherhood, amiability and cordiality—indeed, we remember such homes and long for them. Let such homes welcome us when we come back to them from the outside.

[That is, let there be a friendly atmosphere in the house where all its inhabitants live together happily like compatible brothers who care and love each other. Let there be no quarrels and fights in the household as it vitiates the atmosphere. So, when we come back after the day's toil, we feel happy and comforted to be home, instead of regretting to have to come to it or feeling scared at the prospect of having to go back to it for the night.] [4]

5. These households of ours have abundant milk-giving cows, besides other cattle such as sheep, goat and other domesticated animals which are in great numbers. All those spices and juices that make the food delicious and nectar-like are also available in these households in abundance.

[That is, there is either no shortage of livestock or of food in such households.] [5]

6. Many rich and well-off friends and guests visit such households. They join us (the residents) cheerfully and happily in sharing food and drink.

Oh our auspicious homes and houses (households)! Let all those who live in you be always free from diseases and miseries; let them have a long life; let them not be subjected to decay and destruction. [In other words, let there be peace and happiness in the family.

Let there be good health and all round well-being in the household.

Let us all enjoy prosperity, happiness, peace and comfort in our lives as a householder.

Let us not suffer from pain, death and miseries of any kind.

Let there be no dearth of food, drink, cattle, wealth, happiness and comfort of any kind in our homes.] [6]

There are countless books based on Indian scriptures and their spiritual, metaphysical and theological principles written in English by Ajai Kumar Chhawchharia with a missionary zeal as his humble service to his beloved Lord Sri Ram.

These books are a ‘book lover’s dream come true’ and stand out heads-over-shoulders in the realm of metaphysical, philosophical, devotional, spiritual and classical literature of India. Such as for example, there are Goswami Tulsidas’ myriad works with Sri Ram as the central theme which are glittering like gems, poetically told, stupendous in beauty, marvelously narrated and contain a treasury of fathomless wisdom and deep insight into spiritualism, metaphysics and philosophy. Then there is Veda Vyas’ glorious narration of the epic story of Sri Ram in Adhyatma Ramayan and Devi Puran Maha Bhagwat Ramayan. The Upanishads represent the epitome of Indian philosophical, metaphysical and spiritual treatises— the marvellous highest pinnacle that human thought can possibly reach. They are acclaimed the world over as highly evolved and intellectually enlightening books. The Vedas, on the other hand, are believed to be revealed books. The two form the two legs of Hinduism.

The author has presented a simple, day to day bilingual version (Hindi and English) of these stupendous texts. A huge array of information on Sri Ram and Hanuman culled from the Vedas, Upanishads, Purans, and myriad other sources have been systematically presented by the author in lucid, florid, easy flowing, vibrant and captivating English language— useful to a layman, a devotee, curious people, research scholars, casual as well as serious readers, plain book lovers or connoisseurs of classical literature. A must read for everyone.

All the books have original text with line-to-line easy flowing English version with necessary explanatory notes, appendices, etc.

The list of books are as follows:

Detailed English versions with commentary on Books of ‘Goswami Tulsidas’:

- * Vairagya Sandipani of Goswami Tulsidas.
- * Vinai Patrika of Goswami Tulsidas.
- * Geetawali of Goswami Tulsidas.
- * Kavitali of Goswami Tulsidas.
- * Dohawali of Goswami Tulsidas.
- * Janki Mangal of Goswami Tulsidas.
- * Ram Lala Nahachu of Goswami Tulsidas
- * Parvati Mangal of Goswami Tulsidas.
- * Barvai Ramayan of Goswami Tulsidas.
- * Ram Charit Manas, Baal Kand (Canto 1) [The other 6 Cantos, i.e. Ayodhya Kand, Aranya Kand, Kishkindha Kand, Sundar Kand, Lanka Kand, and Uttar Kand, are in the process of writing, and would be made available, one by one, as soon as they are ready for publication.]

Detailed English Books based on original texts of Goswami Tulsidas, with extensive commentary:
